Secondly, I will give a closer look to the framing of trafficking by the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location to the actor, the views on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way particular LS members manage to reconcile a moderate framing of trafficking with gaining audience and support in local contexts.

Poland will serve as a case study for the analysis of the interplay between framing of trafficking by activists and relations between NGOs and the state agencies.

RATHZEL, NORA* (Umea University, nora.rathzel@soc.umu.se)

Can Trade Unions (Be)Come Environmental Innovators?

Thinking of environmental movements in the 21st century, trade unions are not the organisations that come to mind. They are more likely seen as part of the problem creating environmental degradation, not as part of the solution. However, especially since 2006, when the first international trade union assembly on labour and environment took place in Kenya, many unions across the world have linked to the history of key mobility practices such as walking, cycling and car use. These milestones must in turn condition the delivery of goods and services and their subsequent consumption. Life events and life-course transitions can dramatically impact on people’s consumption practices. There is ample evidence that key life events (e.g. arrival of first child, relocation, transition from education to work, retirement) coincide with more or less radical changes in consumption patterns (cf. Schaefer, Jaeger-Erben and Bamberg 2012). Understanding the role and significance of such ‘tipping points’ in people’s consumption biography has the potential to significantly advance our knowledge of current patterns of (uns)ustainable consumption and how to either encourage or transform them.

At the same time, individual consumption biographies reflect wider structural conditions in society, including prevailing ‘systems of provision’ (Evans 2011) that organise the delivery of goods and services and their subsequent consumption. Linking individual consumption biographies to the histories of particular practices can thus cast new light on the causes and consequences of (uns)ustainable consumption and pave the way for more promising policies that work with rather than against people’s established socio-environmental practices.

This paper argues for the development of longitudinal theoretical and empirical approaches to the study of everyday physical mobility and the associated ‘consumption of distance’. The ability to adequately capture important mobility milestones across the life-course, that is, moments of radical change in how (much) people travel, must be central to these efforts. These milestones must in turn be linked to the history of key mobility practices such as walking, cycling and car use. Drawing on documentary evidence, policy papers and qualitative interview data from the Republic of Ireland, the paper identifies key mobility milestones in individuals’ lives and connects them to the development of the modern Irish transport system and its implications for different mobility practices.

Voluntary Risk-Taking As Habituated Action: How Can a Practice-Theoretical Approach Contribute to Risk Research?

Abstract

Within the sociology of risk, the last 25 years have witnessed a development from viewing risk as something to be avoided towards viewing risk-taking as part of one’s self-development. Researchers have argued that routinized everyday life compels us to make ‘escape attempts’ (Cohen & Taylor, 1992) in which we deliberately put ourselves at risk. Central in this line of theorizing is Stephen Lyng's notion of ‘edgework’ (Lyng, 1990; 2005); i.e. voluntary risk-taking which negotiates the ‘edge’ between control and loss-of-control (Lyng, 2005). The concept of ‘edge-work’ sheds light on important aspects of risk-taking – but it also leaves some aspects of risk-taking in the dark.

The empirical case under study in this paper is youth recreational drug use, a form of voluntary risk-taking that has often been viewed in terms of edgework. However, viewing recreational drug use as edgework also entails some limitations: First, not all practices defined as risk-taking are actually experienced as such by the people involved. Experienced recreational drug users do not necessarily view their own drug use as ‘risky’. And second, the concept of edgework builds on an underlying assumption about reflexivity; that risk-taking is a deliberate and carefully considered act. However, risk-taking is perhaps not always as well-considered; it may be more spontaneous or it may be non-reflexive.

To try to take these limitations into account, the present paper will allow for other views on risk-taking by drawing on insights from practice-theory, in particular notions of habituated action and embodied knowledge originating from the work of Bourdieu and Wacquant. In the paper I demonstrate how a practice-theoretical approach can contribute to our understanding of youth drug use focusing on the subjective perceptions of risk, and on the bodily and embodied practice of risk-taking.

Navigating the Myanmar–Thailand–Malaysia Border: The Escape Strategies of Burmese Refugees from Chin State, Myanmar, to Battle Creek, Michigan

Forced migrants who flee their home countries as part of a mass movement face significantly different realities than ‘refugees’, as conventionally understood and legally defined in the West. Forced migrants typically lack secure legal status and access to any form of welfare system. Additionally, because they lack social structures that support international migration, they often engage in ‘step-migration’. Before arriving at their final destination, they move to nearby countries where they can obtain assistance from other migrants, employers and smugglers who are absent in their native communities. Scholars who study forced migration and/or illegal migration focus especially on how migrants use resources at their points of origin or destination or both, but they always overlook the actual border-crossing experience of these vulnerable migrants.

Based on twenty-one biographical narrative interviews with Burmese refugees in Battle Creek, Michigan, in 2012–2013, this paper examines how illegal border crossing from Myanmar’s Chin State to Thailand and then to Malaysia (and later to the United States after migrants are accepted as refugees by the UNHCR in Malaysia) is a migration strategy rather than an ‘end state’ and, among other factors, is related to the enormous difficulties of migrating legally to Malaysia. The paper examines hazardous border crossing (which requires clandestine agents and smugglers for crossing and documentation) and ‘irregular migrant’ status – defined as the lack of legal residence in a nation-state – as essential components of forced migration, which is no longer related only to labor migration and is an expensive, much longer process. Thus, drawing on the concepts of increased border control, stricter immigration policy and definition of citizenship by nation-state, this paper considers the agency of Burmese migrants and raises the question of whether their ability to migrate ‘irregularly’ can be regarded as a resource in the particular context of forced migration.
Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women's safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers who perform intimate labor -- domestic workers and night nurses -- seek to navigate physical and "moral" risks as they move between their homes and their place of work.

To Violate with Impunity: Legal Constructions of Marital Rape

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender based violence everyday, law has not proved efficient mechanism to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. 'The Protection of Women from Domestic Violence Act 2005', does include sexual abuse within the definition of domestic violence, yet it does not clearly criminalize marital sexual assault. On the other hand legislations on "rape" including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of "marital rape". This paper attempts to understand such exemption of "marital rape" from Indian legal lexicon.

Legal constructions of "marital rape" is traced through analysis of legislations on "rape", observation of cases at two Mahila Police Stations (All Women’s Police Station) at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women's groups patriarchal notions continue to influence legal understanding of "marital rape". Patriarchal and parochial notions such as "wifely duties", "marriage as inherent consent to sex" "wife as property", "divine ordinance" and others are invoked to justify the exemption of "marital rape". It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far arduous. There is therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against "marital rape".

The proposed text will discuss some major political and social implications of the new medias in Bulgaria. The proposed text will discuss some major political and social implications of the new medias in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose - for sustaining the democratic standards. On June 14, about 10,000 people summoned spontaneously via the social networks to protest against the Parliament for the non-transparent appointment of a controversial media mogul as a head of the State Agency of National Security. Although the Parliament withdrew the appointment immediately, since then (nearly three months) hundreds of activists are every day out in the streets protesting against other controversial measures of the new government. Both events enjoyed extensive mainstream media coverage. The aim of the proposed research is to answer the question in what ways the ongoing audience transformations challenge the contemporary media mix in Bulgaria.

Democracy, Social Movements and Rights: The Challenge Of Pluralism

In recent years social movements around the world have been more and more explicitly related to the issue of democracy. Since the 90s and the triumph of neoliberalism, transnational movements have struggled for an idea of democracy focused on human rights and inclusive citizenship, and not simply on the freedom from state oppression or the consumption of political and economic goods. With the alter-global movement, and more recently with 15-M and Occupy, the focus of collective action has shifted from the search of individual freedom – as in many post-1968 mobilizations – to collective rights as main goal of a democratic project compatible with an idea of global justice in a pluralist world. On the one hand, digital technologies have enhanced transnational communications and cross-fertilization of mobilizations situated in contexts still deeply differentiated in terms of culture, history and politics. On the other hand, social rights and human rights have become a general framework of reference hiding different internal positions and interpretations about rights themselves. In this presentation I will focus on the theoretical issues raise by pluralism in the recent history of social movements fighting for democracy and rights.

Becoming Each Other: Interculturalisms, Grassroots Resistance and Cultural Creativity in Post-Colonial Trinidad and Tobago

In addition to the overarching context or grand narrative of ethnic competition and contestation over cultural space, resources and recognition in multi-ethnic Trinidad and Tobago, there is also a *little tradition* of working class and grassroots interculturalisms and structural convergences taking place at the same time. In this paper, I examine cases of subordinate level interculturalisms that occur below the surface, often with little conscious awareness by the majority of the society. These include the often unnoticed adoption /adaptation by all members of the society of common aspects of religious practice, language, food, music, styles of being, and celebration of special days. I argue that Trinbagonians construct and perform the narrative of plurality as well as that of hybridity or *creolisation* accepting the dissonance and contradictions as part of the everyday complexity of life. So while a grand narrative of differentiation and ethnic cleavages reveals the two major competing collectivities - Afro and Indo-Trinidadians are becoming more and more like each other.

Capitalizing on Nigeria's Demographic Dividend

Nigeria is the most populous country in Africa and the eighth most populous country in the world, and thus whether or not it realizes its potential demographic dividend is critically important. Nigeria is entering a period of potentially rapid economic growth due to the increase in the working-age population—the so-called *demographic dividend*. At first glance, Nigeria's age structure appears promising, with a large cohort of young people entering adulthood (and, presumably, the labor force) while fertility rates are presumably falling. The dependency ratio suggests that the working age population will support the dependents (children and elderly) of the population, and in fact produce a surplus. In order to do that, however, working-age adults must be employed. Unemployment has declined since 2003, but most of that decline is due in agricultural work, which of high productivity and ecologically sound. Unemployment rates remain high across nearly every region and every subgroup in the population, but with Nigeria's resources and oil wealth there is potential to invest in some creative forms of education, training, and job creation to realize the potential demographic dividend. Moreover, Nigeria's mortality and health indicators continue to lag far behind other countries as well. Life expectancy lags severely, due to the HIV/AIDS epidemic as well as other infectious diseases, and suggests a need for investment in public health infrastructure. Without a healthy population of workers, Nigeria cannot attain the demographic dividend.
Invoking the metaphor of the magnet, an oft-heard concern about the sustainability of the welfare state is that generous social welfare provisions serve as an important pull-factor in immigrants’ consideration of their preferred country of destination. With their accumulated social risks, immigrants are on average more likely to claim welfare benefits, fueling the idea that such generous provisions reverse emigration flows. If this concern would be justified, then an analysis of attitudes towards social welfare programs among immigrants would reflect such magnetism effect, namely that immigrants would exhibit stronger pro-welfare attitudes compared to the non-immigrant population, particularly in countries with higher per capita spending. To evaluate the extent to which immigrants reflect the idea of welfare magnetism, we analyze the 2008 ‘Welfare Attitudes’ module of the European Social Survey, fielded in more than 20 countries. This survey allows us to untangle the extent to which self-interest motivations determine welfare attitudes among immigrants equally as they do among non-immigrants. Further, we evaluate if pro-welfare attitudes are a function of the size of the welfare state immigrants reside in. While our analysis indicates that immigrants are indeed slightly more pro-welfare than the autochthonous population, it also shows that their welfare attitudes are an imprint of the welfare opinions of the majority population of the country they are living in. We conclude our contribution with the implications for the future of the welfare state, the theory of welfare magnetism, and the consequences for public policy.

Subjectivity and Social Change In Social Struggles In Mexico

Mexico is a key country to look at and analyze the forms of struggle and the projects of other sorts of life that are being put into practice in the Global South. The experience of Zapatista autonomous communities (since 1994), and the situatedness of Atenco and Oaxaca in 2006, and the processes of self-defense of villages in Guerrero and Michoacan, and other numerous indigenous struggles, whether rural or urban that are taking place in Mexican territory have been configured as a point of reference for the development of a new social imaginary in both the Latin American continent and other places around the world. In addition, these struggles have contributed a path to the self-consciousness and mobilizations in Mexico and also in Latin America, mainly led by social subjects that have outweighed the North-centered analyses of collective action and also the traditional conception of social movements.

In this paper, we will present a proposal of analysis regarding social struggles taking place in current Mexico, from below and from the point of view of the leaders. Our starting point is the Latin American literature on social movements and the ethnographic work carried out by the authors in various social protests in the country in the past decade. Among our purposes, we aim to analyze how in these struggles people reinvent and re-codify non-institutional forms of doing politics in relation to collective needs and desires.

With this paper we attempt to contribute to the construction of a dialogue between the experiences of struggle in the Global South and the Global North, where the starting point are not the theories far from social subjects nor their geographical location, but instead the everyday political practices of people.

Obesity and Social Inequalities : Public Health Campaigns and Their Implementation

In the context of a French “epidemic” of obesity, the question of social inequalities regarding the development of obesity and the implementation of nutritional recommendations coming from public health campaigns constitutes an important concern. Based on a statistical analysis of obesity prevalence (1), on a corpus of 65 semi-directive interviews (2), and on a wide corpus of texts related to the French epidemic (3), this contribution will analyze the strong inequalities regarding obesity in France related to social classes, gender and generations, and it will examine the several factors explaining this social gap, in particular the integration of recommendation related to diet and body along the social scale and the way obesities people reinvent and re-codify non-institutional forms of doing politics in relation to collective needs and desires.
Employment is one important aspect for societal participation as well as social well-being. Besides providing a living, employment gives access to benefit entitlements in case of unemployment or retirement, but it also provides social prestige and social recognition.

Vocational rehabilitation, as an instrument of the German social welfare state designed to support societal participation, aims at (re)gaining employment for people with disabilities. Due to a lack of data, there is little empirical evidence on the degree and quality of labour market integration of vocational rehabilitation in Germany.

Based on a three-wave panel survey of the Institute for Employment Research on vocational rehabilitation and the life course, our research focuses on rehabilitationists in the financial responsibility of the German Federal Employment Agency (FUA), who require reintegration into the labour market. These people already have several years of working experience, but cannot continue their prior occupation due to health problems and thus, mainly participate in further training, retraining and/or integrational measures. We analyse employment transitions and respective determinants for the re-entry into the labour market and the sustainability of employment using event history analyses.

Results show that two thirds of the population obtains (mostly subsidised) employment only a few months after vocational rehabilitation and on average stays employed for almost three years. The transition in employment is highly determined by structural factors, but also by the type of measure attended during vocational rehabilitation. Integrational measures, like e.g. employment subsidies, are most successful for the placement in employment. Surprisingly, the type of disability does not play an important role in labour market integration, but the subjective well-being appears to be of high significance for both the transition in and the sustainability of employment. Those who report a (very) bad health condition have significantly worse employment chances and thus, reduced chances of social well-being.
Recently, major newspapers began developing participatory platforms such as Asahi Shimbum's "Bilimedia". Newspaper reporters from the Asahi were also encouraged to open official Twitter accounts, converse with the audience and debate with their peers and competitors on-line.

Albeit limited, these actions are transforming the culture of news production, gathering and gatekeeping functions. Based on Japanese reporters interviews, my research focuses on these newly emerging participatory practices and the challenges they present to professional ethics and ideology. Employing concepts as user generated content, social curation or big data manipulation, Japanese reporters attempt to redefine professionalism in order to reclaim their credibility and jurisdiction at a time of crisis and uncertainty.

Muslims Social Exclusion in Canada and France: Does National Context Matter?

This paper compares the experiences of Muslim minorities in three contexts: France, Quebec, and English Canada, and in so doing helps illuminate a number of issues of significance to current debates on immigration and multiculturalism, including the role of public attitudes, national integration 'models' and advantages of transnational 'nations of immigration' over recent European experience, and language and culture. The rise of an anti-Muslim sentiment in most of Western European societies, and especially in France, has not reached the same level in Canada, however Quebec's is clearly distinctive in this regard and more like France. How these differences among public opinions and in political discourses affect social integration prospects of Muslim minorities in the three settings? Both quantitative and qualitative data are used. On the quantitative side, for France the new government-mandated "Trajectories and Origins" (Teo) survey conducted in 2009 (over 21000 interviews) overcomes many limitations in existing statistics for identification of ethnic minorities. The comparable Canadian source is the "Ethnic Diversity Survey" conducted in 2002 by Statistics Canada (over 42000 interviews). The paper also draws from structured encounters between Muslims and non-Muslims conducted in Paris, Montreal and Toronto.

REMES, JACOB* (SUNY Empire State College, jacobremes@gmail.com)

Transborder Disaster In The Progressive Era

What can disaster teach us about diaspora? What can diaspora teach us about disaster? This paper explores two early 20th-century disasters in the U.S.-Canada borderland: One, the Halifax Explosion of 1917, took place in a region that sent migrants south to the United States; the other, the Salem Fire of 1914, mostly affected French-Canadian immigrants to the U.S. and their descendants.

Each disaster illuminates experiences of migration and diaspora. The Salem Fire—which started at a Ricky's patent-leather factory and spread through the tenement district, eventually rendering 18,000 homeless or jobless—shows the relative unimportance of the Franco-American diaspora to the lives of its members. Contrary to what the historiographical literature would have us expect, Franco-American survivors mostly stayed near Salem, going neither to other New England centers of the diaspora nor back to Quebec. Local and regional communal organizations did little fund-raising or relief work. In contrast, the Halifax Explosion—which began as a fire on a munitions ship, killed 2,000, and left about 25,000 homeless or jobless—shows the importance of the Nova Scotia diaspora. Nova Scotian migrants to the "Boston States" donated money for relief and through their donations built a transnational political community that sought to influence relief and recovery efforts.

Likewise, attention to diaspora and migration can help us better explain the experience of disaster. As Eriksen (1976) and others have recognized, displacement is a key to the experience of disaster. "Displacement"—that is, migration—means that disaster refugees have more access to aid from outside the affected community and have a greater willingness and ability to relocate. These two historical disasters help shed light on the uses of diaspora and migration in disasters' aftermaths.

Intergenerational Coresidence and Electricity Consumption: Age Effect, Retirement Effect and Scale Economies Effect

Many studies have found that, even in the most modernized urban areas in China, intergenerational coresidence still account for a large proportion. Intergenerational co-residence, low retirement age, high female labor participation rate can make the household activity and the related energy consumption patterns different from western countries. In this paper, we analyze the impact of intergenerational co-residence on energy consumption. Taking electricity as an example, we find that there are significant differences between intergenerational co-residence household and single generation household. Electricity usage of single generation household is much higher than other intergenerational co-residence household.

The decomposition model shows that (1) the presence of "Scale economies effect", which means that the household per person electricity usage declines not only when household members increase, but also when intergenerational household members live together; (2) "age effect" and "retirement effect" can be found that female over 50 years old live in a household can increase household per person electricity consumption, and all the other age-gender-specific group live in a household can reduce household per person electricity consumption, especially for male at the age of 30-40; male consume less electricity in household than female at all age group, except for age 10-20. Energy policy makers can benefit from better understanding of these effects.

RENAUD, LÉA* (University of Potsdam, l.ea.renaud@etu-iepg.fr)

The Statistical Construction of Alterity: Governing National Population By Numbers in France and Germany (1860-1900)

This paper is aimed to contribute to the history of statistics as science but also an extension tool (Foucault 2004). This abstract explores the role of official statistics in the nation building process in the second part of the 19th century in France and Germany. Following the analyses of Desrosières and Foucault the study asks how science produced "imagined communities" (Anderson 1983) by using and constructing statistical categories on migration. By doing that official statistics contributed to produce differentiation between national and foreign populations, which both aim to be governed differently.

In the first step I will argue that the historical development of official statistics in the 19th century in France and Germany led to its use in both countries as a governing tool to administrate population, but in different national ways. In the second paper I will reconceptualize and deconstructs the statistical categories of foreigners and citizens, to show how official statistics took part in the historical process of nation building.

Scientific journals (Journal de la Société de Statistique de Paris, Zeitschrift des Königlich Preussischen Statistisches Archiv) between 1860 and 1900 form the empirical basis of the study. About 160 articles on migration statistics have been qualitatively analysed in order to sketch the statistical discourse about migration as well as the discursive construction of German and French nations by statisticians.

The author gratefully acknowledges the financial support of the Scientific Commission of the IEP Grenoble, the Doctoral School SHPT of the University of Grenoble and the Potsdam Graduate School.

RENAUD, MARIE-CHRISTINE* (Universidad Autónoma Chapingo, mcrenard@gmail.com)

Behind the Label: Always Fairly Traded?

Since Fair Trade entered the mainstream market, a label symbolizing the quality of being "fairly traded" has mediated between the producers and the consumers instead of the more direct relationship existing when fair trade was an alternative trade organizations business. With the lengthening and a larger opacity of the commodity chain, the label is supposed to give information and a guarantee to the consumers about the conditions of trade offered to the producers. A system of standards and certification has been developed to deliver the label.

On the other side, as the literature on Fair Trade demonstrates, the corporations have developed multiple strategies to occupy the promising market niche that fair trade represents, through favoring competing labels that induce consumers' confusion or being themselves certificated by the fair trade institutions for a small part of their purchases.

Based on a case study in the Sierra Madre de Chiapas, South of México, the papers pretends to demonstrate how a single label, the Fair Trade International label (or FLO), covers (or hides) very different and opposite realities on the side of production and supply: on one side, autonomous cooperatives of coffee peasants, that have sold under Fair Trade conditions to Alternative Trade and Fair Trade organizations in the North for long time; on the other side, producers organized and financed by one of the largest coffee trade corporations, engaged in a multi-label strategy in order to occupy all market niches, that buy up their coffee to be sold under the FLO label.

Table of Contents
We take three methodological steps: (a) using Geographic Information System, we select areas that are inhabited by the 10% richer extract of the population according to the 2010 Census data, provided that these areas also contain poorer populations; (b) conduct and analyze in-depth interviews with members of the elites and label them into groups according to shared lifestyles, as well as social, political and economic insertion; and (c) proceed to describe the relationship each elite group establishes with neighboring populations, focusing on the role of public space.

The paper focuses on a redistributive strategy that attacks poverty on one of its aspects – the impaired access to urban resources, specifically to mobility. It investigates two locally-designed São Paulo policies aimed at redistributing road space through the new possibilities of information technology and adopting a mindset of “need to share” instead of “need to control.” We take a methodology that goes beyond the redistribution of income.

The role of transportation in accessing other urban-life goods has been eloquently described as crucial by European literature. Research on the subject has been scarce in the Global South, however, with empirical data on mobility in São Paulo. This paper aims to make a contribution to the research agenda on strategies that go beyond the redistribution of income.

The Image of Male Immigrant in Radical Right Parties' Discourses: A Case Study on the French National Front

Based on a qualitative study (semi-structured interviews with party executives, analysis of public speeches, parties' programmes) and using iconographical analysis of party posters, this paper describes the construction of the threatening male immigrant in the discourse of the main French radical right party "Front National" in the recent years. Analyzing how the otherwise is constructed offers ways of understanding the symbolic boundaries of the national community drawn. Immigrants are represented as the outsiders who take advantage of the quotas and requirements for teachers coming from non-French countries which cannot be integrated into the French one, male immigrants especially are connected to delinquency and represent a threat for the welfare state.

Their cultural background is principally characterized by religion. FN leaders draw a strong -often implicit- link between immigration and a risk of "Islamization" of the French society. If FN executives avoid direct criticism, Muslims are associated to "communitarianism" and events from the news are used to stigmatize them. Those immigrants cannot be assimilated and hence represents a threat for national identity, and for European culture defined by Christian legacy.

Male immigrants are related to insecurity and "gang leader", systematically associated to poor suburbs subjugated by delinquency. Legacy of colonialism and animalization can also be observed since male immigrants are described as primitives, brutal, uncivilized people living in "ghettos" dominated by the "law of the jungle". Since the end of the 21st century this image has been reinforced by a criticism of their authoritarianism and violence against women in order to reach new women voters.

Unemployed, benefiting from social and health assistance, ready to welcome their families and many children, male immigrants are taking advantage of the French welfare state. Based on an opposition to cosmopolitanism and multiculturalism, the risks of being dominated by an overwhelming number of illegal immigrants and asylum seekers are constantly dramatized in FN discourse.

Competitive Edge of Filipino Teachers in Selected Countries

Recent history tells us that a number of Filipino teachers have extended their territorial milieu in teaching from the Philippines to various countries of Asia, the Middle East, and North America. This paper examined the global movement and experiences of Filipino migrant teachers vis-a-vis their competitive edge in the global labor market. It looked into the standards and requirements for teachers of receiving countries vis-a-vis the qualifications of the Filipino teachers as a result of institutional competencies of Teacher education Institutions (TEIs) in the Philippines. Most importantly, it explored as well the phenomena of gendered migration. As the Philippines looks forward to be more competitive, it is important to analyze the nuances of what makes a Filipino teacher globally competitive. Results of this research could be a good benchmark for improving the quality of teachers that the country produces.

There were four important migration phenomena about Filipino Teachers that were explored in this paper. First, it surveyed the migration and employment profile of teachers who usually worked in abroad as teachers. Demographic and socioeconomic profiles were also dealt with in this paper. Second, it analyzed the experiences of teachers as regards their motivations in working abroad, finding and applying for teaching jobs, teaching experiences, and adaptation and adjustments in a foreign country. This part was highlighted by competitiveness level of teachers and their perceived losses and gains while teaching abroad. Third, the standards and required competencies among teachers from home country and receiving country were analyzed. Lastly, this paper examined as well the competitiveness of Filipino teachers using gender lens.

Heritage As a Global Counter-Development Strategy to Fight Transnational Mining Projects in Wirikuta, Mexico

Wirikuta is a vast desert located in Northern Mexico. It is the place in which Wixaritari (Huichol) ethnic group have been depositing votive offerings for centuries in order to reproduce their worldview, named one of the purest amongst American natives since colonization. Wirikuta also hosts relevant desert flora and fauna. The region is protected as a Sacred Natural Site and Protected Natural Area by state laws; however its conservation is currently being threatened by the plans of two Foreign Direct Investment projects concerning gold and silver mining. Different kinds of resistance movements have appeared. Some of them have focused in creating global counter-development strategies to preserve Wirikuta from harsh environmental impacts related to large scale mining. A notorious resource used in struggle is to get Wirikuta inserted in the list of World Natural and Cultural Heritage Sites before UNESCO. Local actors believe this action can stop the extractive projects. Due to global pressures Mexican government has initiated and supported a counter-proposal, which would lead Wirikuta to be enrolled under an intangible Heritage scheme, putting aside the relevance of matter (nature) in conflict. This would give way to mining companies to drag the metals with any method, obviating particularities of territory and culture. By analyzing this case we aim to elaborate on: the role of institutional heritage in conflictive contexts, UNESCO's role and limitations of heritage schemes, state trends in solving –or not–local conflicts and social innovations that actors perform in policy-culture realms in order to preserve the environments they live in.

**Macro Conditions of Class and Micro Patterns of Social Interaction: The Problem of Studying Labor Migrants’ Discontent in the Time of Economic Instability**

Paper to be presented at the XVIII ISA World Congress, Research Committee on Sociology of Migration, RC 31

The paper aims to focus not only on the limited control over migrants’ external situation in host societies, cultural discrimination or accessibility to legal protection, but to examine the problem of migrants’ everyday life practices in their uncertain condition, specifically in the time of economic instability. We try to conceptualize this emergent experience within the framework of the sociology of emotions laboratory, which is understood as a long-term action, (a) determined by the structural conditions, (b) created by and transmitted through the everyday social interaction, and (c) capable to result into collective action. This analytical move allows us to study ‘discontent’ at both macro- and micro-levels without losing its specific content.

In terms of theoretical and methodological foundations the research is orientated toward ethnographic institutionalism. We try to provide theoretical groundings and empirical evidence to justify an approach that link the micro experiences with the macro institutional arrangements through the detailed studies of migrants’ everyday life practices.

The data come from the three longitudinal field research Projects jointly supported by Vietnamese state foundation (2008-2010), CARI - Greece (2010-2012), and Russian state foundation - RGNF (2013-2016). The field researches dealt with everyday life practices (including “alternate practices”) of transnational labor migrants in Athens, Greece and St. Petersburg, Russia.

**Constructing the Virtual and Material Public Spaces: The Cases of “We Are All Khaled Said” Facebook Page and Tahrir Square during Egypt 2011 Revolution**

Social movements use urban spaces for their representation. They demand a spatial setting for their full effectiveness. However, spatiality of social movements has entered into a new phase since the mid-1990s. The prevalence of the Internet as part of the daily lives of people has challenged traditional theories of social movement and political public space. Recent revolutions and social movements in the Middle East countries, such as the Arab Spring, has caused a reaction to the economic crisis and austerity programs of governments in different parts of the globe have created a new phase of research on the relationship between online activism and social movements. Scholars focus more on the role of social networking sites (SNS) and try to articulate their contribution to social movements. This essay has argued that Hannah Arendt's conceptualization of public space can contribute to the definition of material and virtual public spaces in contemporary social movements. By investigating Tahrir Square as a material public space and We are All Khaled Said Facebook page as a virtual public space during the Egypt 2011 revolution, this essay has studied the relationship between these two spaces and the events of the revolution. It has shown that Arendt's concepts of action and speech can theorize the virtual and public spaces of the Egyptian revolution.

children is worth closer analysis as it may fall beyond the categorizations usually applied to adults. To this end, a mixed methods research project with 245 children attending different primary schools in Portugal— one private school targeted at upper class children and one state-sponsored school located in a working class area— was developed. The results revealed significant differences by school and household typology.

What Makes Low and High Income Families Apportion Their Children's Education and Care to Early Childhood Education?

Why do families apportion their children's education and care to Early Childhood Education? Are there motivational differences between low and high income families? Prompted by these questions, research was carried out on four families—being 2 low income families and 2 high income families, who enrolled their children in Early Childhood Education in Brasilia, Distrito Federal, Brazil in 2013. Two interviews were held with parents addressing both family and Early Childhood Education topics. Using the concept of family arrangement (FONSECA, 2005) as a basis—which apart from the nuclear family, encompasses several other family structures and the idea that Early Childhood Education in Brazil is not only in the parents' right but the child's, one can observe tendencies towards change in the standard of education for children aged 0 to 3. Previously exclusive to the family environment, the trend now considers environments beyond the domestic parameters without considering the family a bearer of any social pathology (ROSEMÖR, 1995). The care and education process is neither natural nor exclusive to families. Given this scenario, it is possible to highlight some reasons for this change like alterations in peer relationships, modifications in the perception of children aged 0 to 3, universalisation of education in an institutional context—prior to mandatory formal education, co-responsabilisation of the State in care and education as well as socialisation processes beyond the family environment. This research discusses the reasons behind families apportioning their children's education and care to Early Childhood Education and seeks to pinpoint explanatory categories for the changes in the standard of education and care of young children. The final intention is to identify motivational convergences and divergences between low and high income families.

Workshop: Stolen Bodies, Reclaimed Bodies

Project Re-Vision is a Canadian Institute for Health Research funded research project that uses arts-based research methods (digital storytelling and drama workshops) to dismantle stereotypical understandings of disability and difference that create barriers to healthcare. We have completed two years of our project and have generated an impressive archive of over 70 digital stories from people living disabilities and differences and healthcare providers. The project emerges from a representational history of disabled people can largely be characterized as one of being put on display or hidden away. People living with disabilities and differences have been, and continue to be, displayed in freak shows, medical journals, charitable campaigns, and as evil or pitiable tropes in novels and films. At the same time, disabled bodies have also been hidden in institutions, hospitals, group homes, and generally removed from the public eye. In his essay from which we borrow our title, Eli Clare writes, “just as the disabled body has been stolen, it has also been reclaimed” (2001). In our proposed session, we screen and analyze a selection of digital stories on visible and invisible differences made through Project Re-Vision. We examine the ways bodies and experiences of difference are reclaimed in these films, which reveal the complexities—the pride, shame, pains, struggles for rights and wellness, and joys of community—of living with disability and difference. By pairing and sharing stories made by individuals and health professionals, we examine how our project helps to break boundaries and break down barriers between the disabled and non-disabled worlds. The interweaving of these stories encourages reflection on how failure to fit with ablest standards of normal might open up other possibilities and deeper appreciation of the uncertainty and ambiguity that is the basis of life.

On-Line Communities, Real Life Social Networks and Mental Well-Being in Senior Citizens: Results from a Two-Wave Survey in Three European Countries

It is widely assumed that going on-line and joining on-line communities will boost well-being and quality of life in senior citizens. However, the quantitative empirical evidence on this issue is scarce. Many studies either utilize a qualitative design or suffer from methodological shortcomings (e.g., cross-sectional design, small sample sizes). This paper reports results from a two-wave survey which has been conducted as part of the Third Age Online-Project (TAO) in the Netherlands, in Germany and in Switzerland. The research aimed at analyzing the psychosocial consequenc- es of going on-line and of joining social media. In the first wave of the survey, more than 3,000 participants could be recruited, and were then categorized as either ‘onliners’ or as ‘offliners’. The questionnaire contained sociodemographic variables, real life social inclusion variables and Internet usage variables. Mental well-being was assessed using the ‘Mental Health Index –5’ (MHI-5). Logistic regres- sion models were used to analyze associations with Internet usage and with social media usage. After one year, the same participants were again approached to provide data for the second wave of the data collection. 670 on-liners provided sufficient data that could be matched with the wave one survey. Logistic regres- sion models were again utilized to find out which variables from wave one would serve as predictors of wave two outcome indicators (mental well-being, real life social inclusion).
The results of the wave one data revealed that senior on-liners were very well socially included and had a high level of mental well-being. However, in the longitudinal analyses, Internet and social media related variables did not predict mental well-being and social networks. It was concluded that going on-line and joining on-line communities may, at best, help to maintain quality of life and social networks rather than enhancing seniors' psychosocial conditions.

Verbal Aggression Against Health Care Staff – Mixed Methods Study

Clinical staff in various settings has to cope with aggressive behavior from patients and visitors. In recent years, physical aggression has received a lot of attention and many prevention programs are available throughout Western societies. However, verbal aggression against health care staff is much more prevalent than physical aggression.

This paper reports on a mixed methods study which was conducted in the following settings in Germany: mental hospitals, forensic hospitals, acute care hospitals, nursing homes and residential homes for mentally ill residents. Eight focus group interviews were conducted with a total of 74 staff members (nurses, physicians, psychologists and nursing assistants). These interviews contained questions about any kind of verbal aggression which had been experienced, about the differences between physical and verbal aggression and about the coping strategies of health care staff. Subsequently, 1,053 staff members from the various participating settings answered a survey which focused on the frequency of verbal aggression and on the severity of aggressive acts.

The results revealed that verbal aggression is a very common phenomenon among health care staff. The following types of verbal aggression were identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff. 16 percent of staff reported having experienced verbal aggression on a daily basis during the six months prior to the survey data collection date. Threats were experienced as being the most severe form of verbal aggression, followed by refusal of cooperation. On average, verbal aggression is rated to be more severe than physical aggression.

Currently, prevention programs in healthcare institutions are focusing mainly on physical aggression. This focus needs to be altered by teaching staff how to cope better with verbal aggression.

Religion in the Public Arena in Southern Europe: Comparing/Contrasting Italy, Spain and Portugal

Observers of religious phenomena often tend to lump together Latin countries with Catholic roots – Italy, Spain and Portugal – excepting France, usually considered a separate case, a model of the secular State and of the society which characterizes it. Perhaps this is because there was in their past an epoch in which Catholicism exercised a hegemonic role in society, based on a quite normative ecclesiastical magisterium, over a widespread national network of parishes and a population totally exposed to clerical influence, after the pattern of militant commitment capable of getting a grip on the most dynamic and vital social sectors. Indeed, the these countries – in which Catholic culture is still prevalent – follow different paths through advanced modernity, and these can be seen in the forms assumed by the relationship between religion and civil society. In Italy, that relationship has in recent decades undergone three key moments which have paradoxically restored the Catholic church and its world to the centre of the public stage. This development was by no means inevitable, as is evidenced by the examples of Spain and Portugal who – although sharing analogous dynamics – have reached outcomes different from those of Italy. Drawing on evidence from an data investigation in the framework of the GERICR (Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux) project, the paper compares (and contrasts) three Southern European countries by analysing the evolution of the relations between religion and public sphere.

Ridgeway, Cecilia* (Stanford University, ridgeway@stanford.edu)

Cecilia Ridgeway: Framed by Gender: How Gender Persists in the Modern World

In an advanced industrial society like the United States, where an array of processes work against gender inequality, how does this inequality persist? Integrating research from sociology, social cognition and psychology, and organizational behavior, Framed by Gender identifies the general processes through which gender as a principle of inequality rewrites itself into new forms of social and economic organization. The book argues that people confront uncertain circumstances with gender beliefs that are more traditional than those circumstances. They implicitly draw on the too-convenient cultural frame of gender to help organize new ways of doing things, thereby re-inscribing trailing gender stereotypes into the new activities, procedures, and forms of organization. This dynamic does not make equality unattainable, but suggests a constant struggle with uneven results. Demonstrating how personal interactions translate into larger structures of inequality, the book offers a distinctive analysis of the troubling endurance of gender inequality.

Structural Coupling of Financial Markets and Media Coverage - the Case of the State Debt Crisis

In our project we focus on interdependent processes between financial markets and media coverage during times of financial turmoil. The main goal is to identify explanations for price movements on financial markets that are beyond the comprehension of crisis as a problem between the state and the market. Thus, it is not the question whether there is too much or too little market regulation, instead we emphasize the importance of information processing on financial markets and the subsequent entanglement of financial markets with mass media. From a systemics perspective, these processes are part of the structural coupling of two social systems, which perceive and implement new information, but only through their own systemic logic.

By examining the structural coupling we reveal patterns and causalities that are crucial for the understanding of financial market coordination through mass media products and vice versa. Especially the so called “state debt crisis” and its media coverage can be empirically viewed as the cause for major changes in the configuration of the financial markets. During that process state bonds get more and more volatile, deviating from the century old long-term investment cycles. No longer are interest payments the only way to gain profits with bonds, instead, short-term speculation becomes possible due to the heavily pending bond prices of crisis states like Greece, Portugal or Spain. The starting point for those fluctuations strongly correlates with the international media coverage about the possibility that states can actually fail financially. As a consequence, traditional evidence of financial stability like macroeconomic indicators or debt ratings have no measurable impact after the crisis on the increasing bond volatility. The process underlying this development is that media publications are much faster and already incorporated in the market prices when the reactions of states or rating agencies get published.

Towards a Science of Past Disasters

Extreme climatic events are forecast to become more frequent in the future. This contribution argues that the past may hold clues to efficient, cost-effective, and culturally sensitive adaptations to and relief measures following such events. It is widely recognised that disasters emerge in the interplay between extreme geophysical events and the human communities affected by them. Whilst detailed knowledge of a given event is critical in understanding its impacts, an equally thorough understanding of the affected communities, their economies, ecologies, religious structures, and how all of these have developed over time is as important. Many extreme events leave methodologically convenient traces in the formal historical and archaeological records. This contribution focuses on two volcanic eruptions that have significantly affected Europe – the eruption of the Laacher See volcano (Germany) in the 13th millennium BCE, the eruption of Thera (Greece) volcano in the early 17th century BCE and the eruption of Vulcán Ilopango (El Salvador) in the 6th century CE – to illustrate the power of a quasi-case-control compara-
The changes of international mobility are apparently visible in all immigration countries of the world. Today’s migratory movements challenge classical concepts of labour- or forced migration theories. The pattern of permanent immigration lost its long lasting predominance in describing individual changes of location between countries. One of the most influential competing concepts in migration literature constitutes the idea of transnationalism. In this approach, individuals engage in lives, cultures, and activities in more than one country to the same extent. Although Germany is one of the main immigration countries of Europe, quantitative studies seizing the relevance of this conceptually new phenomenon are scarce. This is mostly due to the lack of data as the appropriate identification of transnationals requires multi-sited, mixed methods approaches with specific, often non-randomized, sampling procedures. But what can be done if there is no such survey at hand? This study tries to answer this question by presenting and discussing strategies of quantitatively operationalizing transnationalism with existing, secondary survey data.

In this respect, the primary objective of this paper is to discuss the strengths and limitations of a strict distinction between transmigrants and immigrants in contrast to a more continuous definition of transnational lifestyles. To this end, the research is arranged in three stages:

In a first step a multi-item measurement is developed in order to distinguish between immigrants and transmigrants in the most unambiguous manner possible. In contrast, the second step aims at accounting for gradual differences in the individuals’ ways of living. To this end, a transnationalism index is constructed. Finally, results of bi- and multivariate analyses on the adaption of immigrants and transmigrants in Germany are presented. The paper closes with prospects for the future research of transnationalism.

RIEDEL, SASCHA* (University of Cologne, riedel@wiso.uni-koeln.de)

Drawing a Line Between Immigrants and Transmigrants

Parenthood and Subjective Well-Being within Couples: The Division of Work, the Relevance of Mutual Appreciation, and the Role of Partner Effects

Sociological and psychological theories point to parenthood as means to personal development and social embeddedness, discuss its function for societal integration and highlight its meaning in structuring people’s lives and providing purpose in life. But the widespread belief that parenthood promotes happiness and satisfaction with life seems to be contradicted by a bulk of research discussing problems of reconciling professional work and family life. Quantitative studies primarily report negative effects of children upon parental well-being and qualitative research often highlights that especially women are confronted with an additional burden and the second shift at home.

Current research argues that children have both, positive and negative effects on parental well-being. Analyses conducted by the author with data from the European Value Study 2008/2009 reveal that individual factors (e.g., the stage in one’s life, existing social and societal conditions (welfare state policy, dominant norms and values) contribute to variation in children’s effects. But consequences from parenthood directly affect the couple and the relationship between spouses. Therefore, effects of children on well-being and life satisfaction should also be dependent on the spouses capability of mutual perspective taking, and their support for each other.

The present research uses data from dual earner couples with young children to analyze the mediating role of (a) the division of household work, childcare tasks, and professional work, (b) positive and negative spillover from work to family and vice versa, (c) the appreciation spouses receive from each other, and (d) relationship conflict. In addition to actor effects, partner effects are also considered. Results are in line with the qualitative research that points to the importance of giving and receiving gratitude. Furthermore, the quantitative findings support what A.R. Hochschild wrote: “If men share the second shift it affects them directly. If they don’t share, it affects them through their wives.”

Life Strategies of Families in Marginalised Urban Neighbourhoods: Dealing with Social and Educational Inequalities

Migration families often face challenges in Europe: unemployment issues, low income and the threat of poverty as well as an unequal education system, whereby children and young people are disadvantaged and consequently, their access to higher education and job perspectives is limited, hindering their chances and opportunities with regard to participation in society. These families frequently live in urban areas strongly influenced by migration movements and faced with processes of marginalization.

In our research project (within the framework of a larger, European research project), we focus on life strategies of families in marginalized urban neighbourhoods in Germany. Migration families frequently form a family project, and family an important resource in dealing with educational, job-related and social challenges. In our theoretical approach, family members are seen as actively dealing and negotiating with societal circumstances and social meanings (Wacquant 2006). Their strategies are analyzed, taking relevant explanation contexts into consideration, which shape each person’s scope of possibilities (Holzkamp 1983). Our research project aims to transcend beyond the deficit-oriented perspective without neglecting the social and societal challenges families have to deal with (Riegel/Yildiz 2011).

In this paper we will present analyses from biographical interviews, group discussions, and ethnographic data, on how family members describe and interpret educational pathways and which life strategies can be observed. We analyze biographical meanings and dynamics within a family and with regard to experiences centered on education, an area accentuated by the intersections of migration, class, gender and generation. First findings show that family members develop strategies and creative pathways to deal with challenges posed by everyday racism and the education system, using unconventional ways to negotiate solutions for structural challenges, demanding participation and inclusion. The ambivalences of these strategies - dealing with processes of inclusion and exclusion – within circumstances of social inequality will be discussed.

A Reflection on the Main Challenges of Comparative Research on Global Consumption Studies

We face several methodological challenges once we are involved with comparative research. The scope of study to its phenomena demands a dialogue with writers from different nationalities, theoretical and methodological affiliations,
whose interests converge to collaborate in the comparison of different contexts. Specifically, the main discussion when comparing different contexts is whether to discover an underlying grammar to social life which is applicable globally, or to pay attention to the detail of local differences.

The complexity of social research on global consumption studies can be understood from the idea of a complex system that combines both issues related to the idea of a global culture, as well as specific characteristics concerning local contexts. Following Law and Mol (2002) ideas over complexities in social studies, it is necessary to face multiple domains and the complexity related to consumption practices that are research objects for sociologists today.

Comparative research on global consumption studies faces a changing significance of empirical research, as it happens with contemporary social studies. This means that traditional methods, and the most conventional ones are increasingly dated research methods, which are unlikely to provide a robust base for empirical sociological studies in the future. It is why it is important for sociologists to get involved with a ‘politics of method’, renewing their interests in methodological innovation, mixing methods and renewing critical reflection (Savage and Burrows, 2007).

Following this methodological discussion, the goal of this study is to discuss the main challenges of comparative research on global consumption studies, considering both the hypothesis of a global consumer culture (Ritzer, 2004) and of localization/heterogeneity of consumption practices (Featherstone, 1991). In order to present these challenges, I am going to analyze three different research projects focused on global consumption practices that aim to compare the reality of these practices in different countries.

**Global Consumer Culture: A Theoretical Discussion Between The Centrality Of Consumption In The Contemporary Society and Its Possible Localizations As A Result Of Cultural Differences**

How can we understand the theoretical discussion concerning global consumer culture? Is it possible to affirm that such culture exists as global representation, central to contemporary society? Or should we consider possible localizations of consumption practices as a result of cultural differences from different individuals? Early in modern social theory, consumption has been object of discussion and, with the advent of postmodernism, its centrality has become a topic in social analysis. Further, contemporary studies presented mainly two different perspectives: the centrality of consumption in society or localizations of this practice according to cultural differences. In order to understand global consumer culture, this paper proposes a theoretical discussion on the conceptual perspectives.

In the first perspective, there is a rationale that begins with modern social theorists, and their focus on production systems (Marx, Weber, Smith), and that moves to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or demonizing this practice. Postmodernists have detailed this critique in order to understand the structure of the consumer society (Baudrillard, Bauman, Lipovetsky), with consumption as the central practice of contemporary life. This centrality would also explain earlier studies that demonstrate the capillarity of consumption, not disjointed from the production system, but as a continuum that can be translated as consumption (Ritzer).

The second perspective, present in most contemporary studies of consumption (Bourdieu, Campbell, Featherstone, Miller) has tried to steer a middle course that reconciles pessimistic classical theories with a recognition of the fact that consumption is not only indispensable, but also a domain in which people can express themselves positively in our society. They develop the notion of a consumer culture that refers to norms, values, and meanings associated with a society dominated by consumption. In this culture, there is possibility to localizations and the development of individuals with their respective differences.

**Internet Usage and Socio-Cultural Change in Nairobi/Kenya**

Through technical improvements and cheaper access the Internet in Kenya is becoming more and more important. For many years mainly Internet cafés have been the most important source for Internet access. Nowadays there are more and more people who own a private Computer/Laptop or use their working place to access the Internet. But the most important change is the rapid spread of mobile use of the Internet in Kenya.

The Kenyan Internet- and Mobile phone market is growing fast and it cannot be ignored that thus the Kenyan society is changing. On the streets of Nairobi you can find Internet cafés nearly everywhere and you can pay nearly everywhere with M-Pesa. Mobile phone shops, repair services for computer and mobile phones and private computer colleges are an integral part of the road infrastructure. Nearly every Kenyan has a mobile phone; for younger people it is very important to have a Facebook account.

In my research I wanted to find out what people do with on the Internet and how this is changing the life of the users. I visited three different cybercafés in different areas in Nairobi. One cybercafé was in a big shopping mall, the second in the city centre and the third in the so-called slum area Mathare. The inequalities were obvious but it was also very surprising how widespread the Internet already was and how different the people used it.

Another aspect of the presentation will be the function of Facebook before, during and after the Kenyan elections in March 2013. During the post election violence in 2007/2008 over 1100 people were killed. Everybody was watching the election 2013 with worries and tension. After the results were announced everything remained more or less peaceful on the streets but on Facebook there started an ethnic war with words.

Subjective Time to Retirement in Older Workers: Gender Differences in the Role of Social Networks and the Importance of Reasons to Retire

Research has shown that males’ and females’ life course experiences in relation to work and family usually result in different retirement transitions and timing. Different retirement scenarios for males and females are mostly explained on the basis of childbearing and caring responsibilities on females’ labour force participation and retirement transitions. However, little is known about the influence of reasons to retire and social network characteristics –particularly social support and engagement–on older workers’ expected retirement timing and how these differ for males and females. Therefore, this paper aims to identify gender differences in the determinants of subjective time to retirement, with a particular focus on social networks and the importance of reasons to retire.

The present analysis used the first wave (2010-2011) of the SNAP survey (Social Networks and Ageing Project, based at ANU), a nationwide survey of 2,122 National Seniors Australia members through a postal or online questionnaire. The analytical sample includes 662 older workers aged 50 years and over. Multiple regression was used to identify the factors that have a significant effect on subjective time to retirement. (run separately for males and females.)

Results show that several variables on the importance of reasons to retire are significant, illustrating the priority that older workers have –differently for males and females – when they balance personal life, work and retirement. For males, only work-related reasons had a significant effect whereas for females, work-related, personal and family-related reasons were significant. In addition, a number of social support and informal engagement indicators had a significant effect on females’ subjective time to retirement. On the contrary, only formal engagement was significant for males. In sum, this study demonstrates that traditional gender roles are still present in the transition to retirement, particularly in relation to subjective time to retirement.

RIPPEYOUNG, PHYLLIS* (University of Ottawa, phyllis.rippeyoung@uottawa.ca)

Mandated Breastfeeding: Women’s Bodies as a Solution to Global Poverty

As a means to address high rates of child malnutrition, stunting, and infant mortality, Indonesia, in 2009, introduced an amended Health Law No. 36 stating that enacting parents have the right to be breastfed. Thus, exclusive breastfeeding is now mandatory until infants are 6 months old. To add teeth to the law, in 2011 the Indonesian legislature added stiff fines and potential jail time as penalties for employers, relatives, the general public or others who pose barriers to women’s ability to achieve this goal (Soejarjo and Zehner 2011).

In February 2013, the U.K. NGO Save the Children launched their campaign “Superfood for Babies: How Overcoming Barriers to Breastfeeding will Save Children’s Lives.” Like a superhero, breastfeeding was touted as one of the most important solutions to the problems facing the most innocent of all victims—infants in developing coun-

RIVERA, ROSELLLE LEAH* (University of the Philippines Diliman, rkriverra@upd.edu.ph)

Capabilities and Missing Users: Progress In Gender Analysis In Transport

The paper uses a normative framework of transport justice to recognize the link between mobility and "capability enhancement" as articulated in Sen’s writing and extend it to the field of transport (Bezayit, 2011) (Creed, 2004) (Martens, 2012). Transport justice reveals the mode of thinking and institutional mechanisms behind a nation’s transportation planning and delivery systems (Vasconcellos, 2001) (Litman, 2012) to elucidate how and why particular social groups (e.g. low-income women and minority communities) often face the brunt of negative impacts of transport investment and in terms of access and transport-related burdens of poor safety and environmental standards.

"Gender" is a key analytical concept used alongside transport justice to address a set of policy concerns to show how particular understandings and values of "gender" influence the construction of categories of analysis in transport and spatial planning (Levy, 2013). Empirically, the study documents the needs and perspectives of urban transport users in Davao City, Philippines as related to their access, or lack thereof, to transport and their access to employment, education and services. These findings are contrasted with the realities of power and political processes in decision-making to show how concerns of users from low-income groups and how gender differentials in preferences, choice and agency are yet to be taken seriously by planners.

Recognizing methodological pluralism as important in interdisciplinary research, the study uses a combination of methods which have distinctive roles. The survey captured similarities and differences among 360 transport users, mostly of women traders and workers. Focus-group discussions with various sectors, field observations and in-depth interviews with a subsample of 8 brought deeper insights on meanings of “safety” and “security” from the perspectives of women. Textual analyses looked into issues of misrepresentation and invisibility.

RIVIERE, CLÉMENT* (Observatoire Sociologique du Changement, clément.riviere@sciencespo.fr)

Ouvrir La Boîte Noire Des Peurs Féminines : Encadrement Parental Des Pratiques Urbaines Des Enfants Et Dimension De Genre

Une large littérature a mis au jour la spécificité de l’expérience féminine des espaces publics, au sein desquels « féminité » tend à rimer avec « danger » (voir notamment Warr 1985 ; Gardiner 1990 ; Ferrari 1996 ; Condon et al. 2005). Pos-

sédant « une connotation sexuée et sexuelle très claire » (Lieber 2008), un type de peur spécifique au genre féminin se distingue, qui tend à être naturelisé par les hommes mais aussi les femmes vivant en milieu urbain.

Interrogeant la spécificité urbaine dans le cadre familial, l’approche com-

prehensive de l’encadrement parental des pratiques urbaines des enfants per-

met de mieux saisir la genèse de cette différenciation genrée de l’expérience des espaces publics. Menée auprès de parents de 123 enfants âgés de 8 à 14 ans à Paris et Milan, une enquête par entretiens (n=78) montre ainsi que les filles font usage d’un encadrement parental fortement différencié. La forte prégnance de la représentation d’espaces publics à dominante masculine et hétéronormée conduisait à croire que la peur se concentre dans les quatre ans de vie de l’enfant. Nous avons ainsi mis en évidence que les mères étaient les parents à mettre en œuvre des précautions spécifiques pour les filles, qui recoupent largement celles prises par les femmes dans les espaces publics : évite-

ment de lieux, recherche d’une escorte, contrôle de l’habillement et de manière plus générale de la présentation des enfants.

Pour reprendre la typologie d’Albert Hirschman, les filles sont socialisées à l’évitement de l’exposition aux dangers, et à la discrétion (loyalty), mais pas à la remise en cause des normes de genre (voice). La transmission de normes genrées semble ainsi pouvoir être considérée comme une clé de voûte de la vulnérabilité ressentie et perçue des femmes dans les espaces publics urbains, l’encadrement parental contribuant dans cette perspective à la (re)production d’inégalités d’accès à la ville mais aussi à l’incorporation du genre par les enfants.

Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals’ willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the World Values Survey. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate between the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Road To Revolution and Egyptian Youth: Findings From The Value Surveys

The Arab Spring that began in late 2010 captivated the world’s attention, partic-

ularly in Egypt with the uprising that began on January 25, 2011 in Tahrir Square and ended Hosni Mubarak’s reign as president 18 days later. Before December 2010, protesting against repression and injustice was risky and often seen as futile. El-Ghobashy (2011) argued that it was when the main protest sectors of the first decade of the 2000s finally came together, united in their demand for “bread, freedom, social justice”, that Mubarak was forced to resign. Both the media and scholars alike have noted that youth were some of the key players in the uprisings in Egypt and across the Arab world. Because of this recognition, Moaddel and de Jong (forthcoming) argue that it is necessary for scholars to move beyond anec-

dotal anecdotes and the assumption that the young age structure of Arab coun-

tries to empirical research that documents the role of youth in the Arab spring. This includes shifting sociopolitical and cultural values over the past decade that led to the desire to mobilize for change. In Egypt, while the role of youth as key or-
ganizers of the January 25th uprising has been clearly documented, their changing values over the decade preceding the uprisings have not. This paper will examine how sociopolitical and cultural values that reflect the three demands of the January 25th uprising—bread, freedom and social justice—changed among Egyptians in the decade preceding 2011 and whether Egyptian youth exhibited attitudes that were more supportive of these goals than the rest of the population. We will use data from nationally representative value surveys conducted in Egypt in 2001, 2005 and 2008 to address our research questions.

Multinational Companies, Social Responsibility and Human Resources Manager

This communication analyzes the situation of six multinational companies’ policy of “social responsibility” and of “sustainable development”. The purpose of this communication is to define how these companies, especially the subsidiaries, are socially responsible and take into account environmental issues. This exploratory and qualitative study is based on the analysis of official discourse of six firms and those of human resources managers. We highlight different types of “social responsibility”, the “stakeholders” that are taken into account by companies and the mechanisms to achieve the policies of “sustainable development” and of “social responsibility”. Our purpose is to show, beyond the official discourse, which role the subsidiaries play and which autonomy they have in their policies’ implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new social responsibility and, conversely, if the new management involves the emergence of a new social responsibility. We will show that the types of responsibility, shown through the web site and in the HR discourses, are “ethical” (stands for the respect of the values, the standards and the requirements that stakehold- ers find fair) and “economic” (focusing on the production of goods and services). Those classifications depend on the firm’s sector. The Human Resources can be more regardful for the legal aspects or for the political aspects, especially in crisis situation. The human resources plan different roles and highlight different priorities: respect of fundamental values, actions of the subsidiary that are presented as models, transparent communication, gather the employees around values and projects.

The Embedded Economy and National Income Inequality

The ubiquitous growth of national income inequality in developed and less-developed countries has raised major concerns amongst academics, policy-makers, and the general public. In response to this trend, researchers have offered a multitude of explanations for the persistence and growth in national income inequality, which lead to substantial disagreement over the proximate and fundamental mechanisms of economic inequality. Drawing on insights for world-systems, world polity, and institutional theories of inequality, I develop and empirically evaluate an integrative theory of inequality. According to this perspective, the emergence global production networks indirectly affects income inequality by reshaping national labor laws and practices. This study evaluates this proposition using multi-level structural equation modeling and unbalanced panel data on 70 developed and less-developed countries over the 1985-2002 period. According to preliminary results, economic globalization exerts both direct and indirect effects on income inequality. In developed countries, global economic integration indirectly affects income inequality by inducing processes of de-industrialization and labor market flexibility. In less-developed countries, investment-based global economic integration indirectly reduces inequality by promoting the development of collective labor laws and practices which trade-based integration indirectly increases inequality by hindering the development of these laws. Overall, the study suggests that researchers need to account for the interaction of economic globalization and labor market institutions to explain the recent growth in national income inequality.

The World Has More Leisure! so What?

The sociology of leisure (and leisure studies more generally) were born amid confidence that leisure would continue to grow and become a larger component of people’s lives. This confidence has proved justified. Leisure has grown in time, spending on leisure goods and services, and hence participation rates in many leisure activities. Meanwhile, researchers have identified and distinguished the various ways in which leisure plays a role in people’s lives. Apart from re-creation – restoring body and mind to states fit to return to other social roles – leisure can enhance well-being (or ill-being), it can be a source of social bonds and belonging, identity, and capabilities that enhance performance in other social roles. However, this paper argues that the sole sense in which its growth has made leisure functionally more important is economic – as an object of investment and consumer spending, and as a source of employment. The paper explores the implications for leisure’s additional functions, and its future in the twenty-first century.

Youth and Leisure in Europe in an Age of Austerity

Despite young people’s above-average risks of unemployment in most countries, the evidence to date suggests that young people’s leisure has remained largely austerity-free. This is explained not in terms of historically novel features of the recession itself, but in terms of changes in youth’s leisure that occurred in preceding decades with the lengthening of the youth life stage, the advent of new leisure industries based on the latest information and communication technologies, and changes in the pattern of class inequalities. The evidence indicates that it is child-rearing households whose leisure has proved most vulnerable during the recession, which has implications for leisure socialisation during childhood, which will have lifelong consequences.

Focus On Fukushima: The Iaea's Response To Fukushima As A Focusing Event

What does it mean for the Fukushima disasters to be a “focusing event”? A focusing event provides a “little push” to bring a problem onto the policy agenda. It acquires its power by aggregating harms in a short timespan and large number (Kingdon 2003; Birklad 1997; Downs 1972). Some scholars use the term to describe the event itself, while others locate causal power in the symbol surrounding the event. For example, the Fukushima disaster is sudden, relatively rare, and brings aggregated harms to public view through the media, and yet not all such events lead to policy change. How the IAEA responded to Fukushima promises to shed light on why some focusing events lead to only very limited change. Birklad and others (Walgrave and Verhulst 2009) find that nuclear power is a domain where advocacy coalitions (roughly pro-industry versus pro-environment) are in competition and therefore policy change after a focusing event is not likely. Yet the IAEA had similarly divided advocacy coalitions in safeguards and security, and these policy areas still underwent dramatic policy change after a focusing event. My paper investigates in what deep sense policy change occurred in IAEA’s safety responsibilities in response to Fukushima. Preliminary research shows that some change did occur, especially relative the IAEA’s limited power compared to states. My paper will also examine how and why change occurred, paying attention to the advocacy coalitions in competition hypothesis, theories of framing, as well as to internal bureaucratic competition and the technological limits on what the IAEA can accomplish. The IAEA’s response to Fukushima may show that managers are able to shape the effects of some focusing events as much the literature suggests the media and policy entrepreneurs can do in other contexts.
concepts (what are age and ageing?) through to the aetiology of the dementias and their impacts on aged care resourcing. Our societies are struggling to catch up with the consequences of two centuries of efforts to manage population. While spatial studies of ageing have been researched for several decades, these have largely remained particular to geography and to some interdisciplinary crossovers such as geographical gerontology. In the meantime, spatial technologies have developed at a staggering pace. Goodchild coined the term ‘giscience’ in 1992 to flag the fact that many disparate spatial endeavours now constituted a shared scientific domain of activities, practices and theories. We now take for granted the capacity to spatially enable quantitative and qualitative data and to visually map, describe and inquire on outputs. We address these emerging issues using work we have conducted on population ageing phenomena in Australia and internationally which utilise spatial technology to engage with ageing in augmented, virtual and ‘real’ research encounters.

ROBINSON, KERRY* (University of Western Sydney, k.robinson@uws.edu.au)

Schooling the ‘Vulnerable’ Child

Based on qualitative research with children (aged 4-11), parents, and educators, as well as historical socio-cultural discourses, this paper explores the relationship between ‘childhood innocence’, children’s highly regulated access to knowledge of sexuality and the constitution of children as ‘vulnerable’ subjects. Incorporating a post-developmental framework and drawing on Foucault’s concepts of governmentality and power/knowledge, this presentation highlights how censorship and moral panic, reinforced through discourses of childhood innocence, operate in communities, families, schooling, and within children’s peer groups, to define and regulate ‘normative’ childhoods and adulthoods. I argue that regulating children’s access to knowledge and knowledge production – associated with sexuality in particular – essentially in the name of protecting ‘childhood innocence’, operates to inscribe children as ‘vulnerable’ subjects.

This discussion framework within an examination of children’s sexual subjectivities – how children have been discursively constructed as sexual subjects, how children view and constitute themselves as sexual subjects and how children regulate the sexual subjectivities of their peers. Children actively engage in making meanings about sexuality and relationships from the limited information (often misinformation, stereotypes and myths) that they receive – bits and pieces of information of which they try to make sense. In order to help counteract children’s vulnerabilities and to build strong ethical and respectful relationships early in life, children’s access to knowledge, to open and frank conversations about sexual subjectivity, and the nurturing of children’s agency are critical.

Everyday Life and News Forms of Production Knowledge on Nuclear Power: A Study of Case Caetité – Bahia

The nuclear issue in Brazil is not a recent problem. Since the first half of the 20th century the country has conducted research related to energy production based on the model of nuclear fission and the location of the first uranium reserves in Brazilian territory date this same period. The construction of reactors for energy production based on this technology was realized with the construction of Angra I, located in the State of Rio de Janeiro. The two nuclear power plants, Angra I and Angra II, started construction even in dictatorial government and its operation only after the process of political liberalization in the country when it was achieved and guaranteed by the Federal Constitution that the country would not produce nuclear weapons. The uranium needed for nuclear power production was withdrawn from prospecting in Minas Gerais, in the city of Poços de Caldas. In 1995 the Nuclear Industries of Brazil began beta testing and implementation of mine near the city of Caetité, Bahia, being operated for commercial purposes only in late 1999. The District of Lagoa Real is the only operating in the region, located in the State of Rio de Janeiro. In the research phase, this work aims to investigate the ways in which residents living near uranium mine producing knowledge on the uncertainties generated by the presence of the mine. From a perspective of actor-network-theory seeks to understand the heterogeneous networks that make up before the presence of the mine in the region.

The Impact of Drug Trafficking in the Dynamics of Homicides and Robberies: Causal Relations in 32 Metropolitan Areas in Latin America

This paper presents an empirical verification of the influence of narcotics trafficking in the crimes of murder and robbery in 32 cities in Latin America, through the analysis of crimes reported by newspapers of those cities in the years 2006 and 2011. The aim of this study was to measure the impact at a continental level of illegal drug trade in prevalence to other crimes, taking also into account contextual variables. From the understanding that urban crime has a strong endogenous component, the central hypothesis was that drug trafficking was the main factor of the outbreak of violence experienced in this region of the planet. To measure the weight of this illegal activity on other crimes, we used a quantitative methodology. Through multivariate statistical analysis, the rates of the three offenses were tested with control variables exogenous in relation to them. The sociological findings are that there is a significant influence of the drug trade in the dynamics of the two crimes. In the case of robberies, the relation between crime rates was positive and strong in both periods studied. Homicides, however, were influenced by the drug trafficking only in the first period of time researched. In the second period researched, the rate of robberies (influenced by drug dealing) was the variable that impacted most in the prevalence of murders at a continental level.

The DNA of Happiness and Satisfaction: Comparison of Logistic Models in 44 Countries

The focus of this article is the causation and possible models of Happiness. Thinking on Happiness takes us above the individual and towards the dynamically social spaces generated by social interaction. In that way we are able to move beyond the classical points of view of material satisfaction from economy or the psychologist ground well-being. We specify the social dimension of Happiness with indicators of social interaction and social action. We propose a basic general model based on three dimensions: Love, Money and Health. We contrast this general model in 44 countries with data from the fifth wave of the World Values Survey. Given the close relationship between Happiness and Satisfaction, we want to test two rival models to explain Happiness and Satisfaction separately. In order to do it, we use binary logistic regression with its standardized coefficients. We discuss the social sciences' role in this one. This approach leads us to a sort of DNA of social models of Happiness and Satisfaction. We use the Social Network Analysis as a way to explore the existence of different explanatory structures and their features. We conclude that, despite the close conceptual relationship between Happiness and Satisfaction, the explanation of Happiness is more complex and accurate. Love is a necessary condition for Happiness while to explain Satisfaction material and volatile aspects as Health and Money are more relevant. That points to a differ-

pharmaceuticals, and their relation with other options, such as traditional herbs or other substances. Medicines constitute a privileged object to analyze lay conceptions and practices towards biomedical technology, due to their intrinsic characteristics that not only enable a private and individual consumption, without the presence or vigilance of a health professional, but also increase the perception of certain causes in relation to personal history. In this paper, we analyze the recent development of the sociology of global mega-events and their implications for social inequalities requires the further development of a 'contextual' approach to event analysis. This approach is concerned with what will be referred to as, on the one hand, 'event-immanent' or 'backstage' contexts, and on the other of 'trans-event' contexts, like the 'legacies' (Moragas et al eds. 2003; Kassens-Noor and Teixeira-Assis eds. 2011). This paper is concerned with the heuristic utility of a 'spectacle'-based perspective on mega-events (Kellner 2010). This perspective is useful as far as it goes. However, the paper will argue that a 'spectacle' perspective is, nonetheless, essentially limited and ultimately unhelpful in relation to the sociological exploration of aspects of sport mega-events which are centrally important in understanding their general social nature, their long-term significance, and their implications for social inequality. Rather, drawing on work including my book 'Mega-Events and Modernity' (Roche 2000) this paper argues that these aspects require a contextualized perspective, in which the event is embedded in the social context.

The findings presented in this paper result from the conduction of individual and group interviews to community members and health professionals, as well as from a household survey applied in Maputo.

**Constructing Transnational Polynesian Identities: Soldiers, Sportsmen and Illegitimate Masculinities**

For the small Polynesian island states of Tonga and Independent Samoa, their biggest export is labour – their people. Six out of ten Tongans and Samoans are born outside their home countries. In a climate of transmigration and globalization, Polynesian men are sought out as sportsmen, heavy manual workers and standover men. They also have the highest over-representation of any racial group in the US military. This paper argues that contemporary Polynesian masculinity has been externally constructed through the physicality of Warrior in a colonial and post-colonial context and questions whether internalization of this representation as a “regime of truth” leads to an embodiment of race, class and cultural identity that is inherently informed by the physical. Through this lens of heightened and exaggerated physicality, acceptable expressions of Polynesian masculinity are readily acknowledged through work and sport. However, its illegitimate expression – as gang member - is less understood. Polynesian gangs have an extremely high profile in New Zealand and are now the fastest growing ethnically-identified gang population in the United States. Proportionally, this population group is progressively over-represented in the penal systems of these two countries. This paper will explore how this narrow range of acceptable masculinities, when combined with increasing socio-economic marginality, contributes to low civic engagement and greater interface with agencies of law and order. As conventional employment opportunities are reduced for unskilled labour, more young Polynesian men are at risk of being drawn into gangs and are likely to engage in other forms of criminal behaviour. This paper will therefore discuss how popular perceptions of Polynesian strength and aggression, so valuable as sporting commodities, are regarded as threatening and violent outside of sporting domains. Interviews were conducted with 48 Polynesian men aged 18-60 in two studies.

**Desafíos De La Adaptación Para La Prevenión De Desastres En México**

La vulnerabilidad social se incrementa en condiciones de variabilidad climática asociada con el cambio climático antropogénico; los desastres asociados a fenómenos hidrometeorológicos ocurridos durante el siglo XXI en México nos dan la oportunidad de cuestionar teóricamente conceptos tales como “eventos extremos”, “lluvias atípicas”, pero principalmente “desastres naturales”, que de plano la realidad desde las ideologías tecnocrática y naturalista.

El fracaso del desarrollo sustentable, dio lugar a la irrupción del cambio climático como uno de los efectos más perjudiciales para la humanidad, sobre todo para los sectores excluidos, sobrevivientes de la pobreza, en los territorios donde la vulnerabilidad social y el acceso a la sanidad de la vida son condición necesaria para la convivencia.

Con base en los postulados internacionales de adaptación y reducción de riesgos de desastres el gobierno mexicano ha asumido formalmente compromisos para diseñar y ejecutar políticas y programas orientados a fortalecer la resiliencia colectiva de la ciudadanía, sin embargo las decisiones privilegian la resiliencia institucional, con énfasis en la política de protección civil, orientada a la atención cuyantural de emergencias, desatendiendo la prevención de desastres como eje de política pública. Recientemente el Plan Nacional de Desarrollo 2013-2018 define los lineamientos programáticos en materia de cambio climático, sin incluir la adaptación y la crisis de vulnerabilidad social.

Los desastres plantean el desafío de reducir la desigualdad social como premisa para también reducir la vulnerabilidad y los riesgos a la población. Se propone trabajar investigaciones futuras con las experiencias populares de autogestión social y comunitaria, mismas que requieren apoyos institucionales y académicos para consolidar procesos de planificación popular del territorio, fortaleciendo las capacidades locales para mejorar la calidad de vida y la preparación colectiva frente a los riesgos asociados a cambio climático, con experiencias en comunidades de los estados de Tabasco, Chiapas, Veracruz y Guerrero.

**The Insecure Attachment of the Organization Theorist: Present Day and Past Responses to Health Care Scandals in the NHS**

In this paper I present a dramatic health care system collapse and scandal in the UK. I analyse the story about appalling suffering of a large amount of patients at Mid Staffordshire NHS foundation trust between 2005 and 2008, and the subsequent public inquiry in 2013 of the Stafford hospital and the trust's professional staff and directors. On this background, I discuss present day response to the scandal and show how this response departures from a preoccupation with operational truths, such as world-class management, regulatory transparency and openness, and culture of compassion. I argue that organization studies and work that critically reflect upon the context in which clinical malpractice occurs have been largely absent from this discussion. This is peculiar since the scandal seems to be an open invitation to organization theory and organization concepts to take on a life and role in the discussion. In addition to this, I argue, the scandal invites organization theorists to contribute to a discussion of how we choose to organize treatment and care of vulnerable citizens in our society. To follow this line of thought, I revisit the work of Isabel Menzies Lyth (1959, 1988) and central analyses of The Tavistock Institute of Human Relations (Jaques, 1951; Trist and Bamforth, 1951; Rice, 1958; Winnicot, 1958). I scrutinize whether, in light of the hospital scandal and the numerous failures of care, these classical endeavours add something to present day theorizing on organizations and how we think about and approach the activities and relations of organisations. To conclude, I argue that classical organization theory in the early Tavistock tradition provides us with old-new ways of thinking about and acting upon contemporary scandals in the NHS.

**ROGERS, PETER** (Macquarie University, Peter.rogers@mq.edu.au)

**Transparency & Visible (Dis)Order: Surveillance and the Riots**

This paper links the UK riots of August 2011 to citizenship and the subject through the lens of risk and resilience. It suggests that the rhetoric of respon-
sibilisation and observational techniques/tactics in response to the riots reveal a moral ordering of the ‘legitimate’ citizen/subject at odds with the rhetoric of inclusive resilience. The visibility of the disorderly citizen was used to objectify the ‘risky subject’; turning the riots from a societal reaction (to the negative impacts of neoliberalization) into wanton criminality inherent to the ‘worst 100,000 families’ in Britain. This paper situates the disorderly and ‘risky’ citizen/subject within a critical reflection on risk, order and surveillance. It is argued that a complex interplay of thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

Protest, Conflict, and Class Struggle in South Korea: Two Cases of Urban Redevelopment in Incheon

South Korea has suffered from major economic dislocations under the pressures of globalization, marketization, and economic restructuring particularly since the Asian Financial Crisis of 1997-98. Labor responded in the last decade with a wave of labor militancy that receded with the decline of the labor movement and a period of labor peace during the recent economic crisis. At the meantime the public has asked for more welfare spending. Throughout the period, though, there has remained resistance to capital in the form of protests against urban redevelopment. In recent years, urban protests have even taken a similar form to labor protests, with both involving sustained occupations and a common protest culture. This study reviews the recent trends in resistance against domestic (and foreign) capital and then looks at the specific cases of housing protests in the Kajwa and Dohwa neighborhoods of Incheon. In both cases, a lower-income community was displaced by landlords seeking profit by building more expensive housing in a pattern common throughout Korea despite plenty of housing stock that could be rehabilitated at lower cost. The capital drive to redevelop has in spite of a collapse in the luxury housing market, and a lack of affordable housing. The course of the occupations and protests are reviewed and linked to broader issues of class conflict in Incheon and South Korea.

Being a Housewife – Is It a Traditional or Progressive Female Gender Role? Understanding Gender Role Constructions in a Transcultural Russian-German Research Setting

This paper is based on a PhD project investigating the au pair migration from young Russian women to Germany. Two aspects of this project will be discussed: 1) What kind of biographical research design may be employed in a transcultural research context? 2) How does this design help to reconstruct the socio-cultural constructiveness of social categories such as gender. The methodological design of the research project consisted of data collection with biographical narrative interviews mainly done in German language (to lesser extent in English or Russian with interpretation). Data were analysed by the method of sequential analysis with a group of researchers, who belong to German and Russian backgrounds, enabling the reconstruction of cultural specific social categories. Concerning the question of gender this project depicts how this category not only in everyday knowledge but also in research is formed by socio-cultural and historically shaped contexts.

« Je Fais Ce Que Je Peux ». Les Pratiques d'accompagnement Et Assistance Aux Pauvres Au Chili

Cette contribution porte sur les politiques contemporaines d'assistance au Chili. Plus spécifiquement, sur l'analyse des pratiques d'accompagnement psychosocial à familles vulnérables. Ce travail est le résultat d’une enquête ethnographique réalisée au refuge de visitation et d’hébergement des migrants de Santiago. J'interroge les enjeux de la pratique assistentielle contemporaine ainsi que les limites d'action tant des intervenants comme des sujets assistés dans un contexte d'intervention précaire et précarisée. Cette politique a été associée à la nouvelle vague de politiques sociales inspirée dans l’approche de la Banque Mondial : la gestion du risque social. Elle aspire à articuler des mécanismes de transferts monétaires conditionnés (+Conditional Cash Transfer Programs+) avec des pratiques de traitement de type assistentiels et promotionnels. À partir d’un approche de genre, l’analyse va se concentrer sur la gestion et le gouvernement du social au niveau local, notamment, à partir de la configuration sociologique des rapports assistentiels (entre assistants et assistés), je propose discuter les formes de circulation et de transference des contraintes liées à la gestion assentielle (bureaucratiques, administratives, financières) entre les familles et les intervenants et voir comment les mécanismes d’adaptation des uns, mettent en tension leur assignation sociale, et quels sont les enjeux de cette relation.

Social Psychology of Relationships of Domination in Hegel, Nietzsche and Fanon

Social Psychology of Relationships of Domination in Hegel, Nietzsche and Fanon

Social Psychology of Relationships of Domination in Hegel, Nietzsche and Fanon
This paper explores the writings of G.W.F. Hegel, Friedrich Nietzsche and Frantz Fanon on the dynamics within relationships of domination and subordination. Although the three authors held quite different political perspectives, there are commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the mimesis of the objects involved in such relationships. Nietzsche and Fanon also discuss the role of resentment and the importance of physical coercion and repression in maintaining and then undermining domination. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three writers concur that the destruction of the inequality is an inevitability.

The Financialization of Housing and Spatial Segregation: New Frontiers in Brazilian Cities

Urban space plays a crucial role in the contemporary processes of capital accumulation, which is essential to analyse transformations on social housing policies and their impacts on patterns of socio-spatial segregation in the cities. More than mere effects of the financialization of the world economy, changes in the production and consumption of urban space have figured as driving forces of a new economic order, characterized by deep connections between financial markets and real estate.

Cities in general and the housing sector in particular have not only become fertile fields for commoditization of social needs and expansion of market relations, but also immobilized as guarantors of financial assets. Social housing was not the sub-sector to be affected firstly by such phenomena, which has gone further where the expected rates of return are higher such as corporate buildings or luxury residences. However, it stands as a terrain of strategic relevance for business due to its large scale.

In this context, rather than ways of providing social rights, housing policies have been progressively conceived as means of opening new frontiers of financialization in low income residential markets. Like in many other countries, this is the case of “Minha Casa Minha Vida” program, the main housing policy implemented in Brazil, which subsidize homeownership to low income households.

With the protagonist role of private developers in the formulation of social housing projects, their spatial dimension are conditioned by cost calculations made by economic agents seeking to maximize profits. Without taking into account urban policy goals, the definition of the projects' location is mainly guided by the criteria of the cheapest land available - generally also the most precarious and real estate.

This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the work-family conflict research literatures. The study examines experiences of lone mothers regardless of social class. They also show that lone mothers typically experience high levels of work-family conflict. Opportunities to reconcile paid work and family lives are constrained for lone mothers from different social backgrounds we explore i) how the views with lone mothers from different social backgrounds we explore i) how the struggles that are faced by lone mothers in different social backgrounds, ii) the proper relationship between motherhood and paid work is conceived of, ii) the views with lone mothers from different social backgrounds and iii) the strategies employed in negotiating paid work and family lives.

Lone Mothers and Long Hours. Work-Family Conflict In The Everyday Lives Of Lone Mothers In Sweden

The gendered nature of the struggle to integrate caring, family and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the capabilities approach, which emphasizes that the options of an individual depend greatly on institutions and relations with others. Drawing on 38 in-depth interviews with lone mothers from different social backgrounds we explore i) how the proper relationship between motherhood and paid work is conceived-of, ii) the institutional and relational factors that influence lone mothers' opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. Results show that paid work is integral to good motherhood to all mothers regardless of social class. They also show that lone mothers typically experience high levels of work-family conflict. Opportunities to reconcile paid work and family depend on employment conditions, accessibility to social support networks, the role of the absent father, household composition, and access to public childcare on irregularly hours. In the case of middle class mothers, blurred boundaries between work and family life and late meetings restrict opportunities to attain work-family balance. For working class mothers temporal employment, irregular working hours and low earnings are significant constraining factors. Reducing working hours, negotiating working schedules, and asking relatives and friends for help are examples of strategies used to reduce work-life conflicts. Reducing travel time between the job and the home by moving from one place to another, and moving closer to relatives to increase the chances to get practical support are other examples. While middle-class women typically used flex-time at work to alleviate conflicts between different responsibilities, several low-income mothers changed jobs in order to improve their situation.

Age, Gender and Migration Status on the Labour Market – a Case for Accumulation of Advantages and Disadvantages

The analysis addressed in the presentation will show the situation of the older workers from the perspective of their minority status, namely belonging to the group of migrants, as well as from the perspective of gender. We will present the problem of the accumulation of certain advantages and disadvantages during the life-course of individuals with regard also to their socio-demographic characteristics. The questions this presentation will answer are the following: Are there significant differences in labour market outcomes between the workers with migration background and the workers without migration background? Do these differences increase with age? What is the impact of those two dimensions – age and migration status – on the major labour market, namely the wages? and finally, what is the role of gender in determining the changes in employment status?

The analyses in this paper draw on data from the SOEP (German Socio-Economic Panel) which is a representative, interdisciplinary, and longitudinal survey of the German population. For our analyses we apply the SOEP data from 1991 to 2011, distinguishing between population with and without migration background. To investigate wage differences between individuals we use the methodology developed by Oaxaca and Blinder (1973).

In the empirical analysis we have found that initial disadvantages in education of men with migration background cumulate across the life span resulting in large differences in labour market outcomes between older men with and without migration background. In the case of women we do not observe these increasing differences but mainly because both women with and without migration background have a pronounced negative development. Furthermore, the wage analysis reflects that wage differences between individuals with and without migration background are due to their different endowments and not an effect of direct discrimination.

System Trust and Cooperation: The Case of Recycling Behavior

In this paper, I develop and test the hypothesis that system trust – trust in the reliability, effectiveness, and legitimacy of social institutions – promotes cooperation in social dilemmas and the provision of public goods, focusing here on the example of recycling. I discuss three models that can explain recycling behavior (rational choice, low-cost hypothesis, dual-process theory) and show how they link incentives and attitudes. All three models claim that incentives are an important factor mediating the attitude-behavior link, but they develop contradictory hypotheses about the direction of this effect. I use survey data collected by Sanders and Daugbjerg (2011) to advance an empirical test. I find a positive and significant interaction between the attitude of system trust and recycling costs, as well as a negative and significant interaction between system trust and recycling benefits. The data rule out the rational choice and low-cost hypothesis explanation of recycling behavior. Instead, they indicate that attitudes moderate the impact of the incentive structure, increasing cooperation in collective action dilemmas irrespective of the costs associated with compliance.

Trust and Adaptive Rationality: Towards a Causal Explanation of Conditional and Unconditional Trust

This paper provides a theoretical framework to reductively explain conditional and unconditional trust; it also presents an experimental test of the correspondingly integrative model and its predictions. Trust research has neglected the importance of (1) an actor’s context-dependent definition of the situation and (2) individual-level adaptive rationality. The diversity and fragmentation of trust research is caused by a flexible and dynamic degree of information processing: trust is as “multi-faceted” as there are cognitive routes that take us to the choice of a trusting act. The degree of rationality involved in interpretation and choice is a fundamental aspect of trust. However, adaptive rationality has not been treated as an independent and orthogonal dimension of the typological space of trust. By allowing for both automatic and rational modes of information processing, the model demonstrates the impact of a flexible and dynamic degree of rationality in interpretation and choice on trust. It describes a finite set of parameters that guide the selection of the processing mode and provides a causal link between an actor’s definition of the situation, individual-level adaptive rationality, and the behavioral outcome of trust. I predict a closed set of admissible interaction patterns in an experimental context using a measure of chronic norm accessibility (interpersonal trust scale) and two situational parameters. In a 2x2 factorial design, I vary the context and initial endowments in a standard investment game. The data show that negative incentives effects on trust in high-cost situations (SE vs. 50€ real initial endowments) can be mediated by high norm accessibility or a positive social context. Decision-times analyses reveal a consistent pattern of interactions.
specific form of the phenomenon: right-wing populism. Other forms of populism, such as left-wing populism or liberal populism, have received far less attention in comparative research. This paper conceives of populism as a set of ideas that can be combined with every political ideology. Moreover, it is assumed that political parties can employ the populist set of ideas to a larger or lesser extent. As such, populism becomes a matter of degree: parties — on both the left and the right — can be more or less populist. This raises the question as to how the success of the populist message can be explained. Why and under which circumstances do citizens vote for parties that employ a populist discourse? In order to answer that question, I focus on both micro-level explanations (socio-demographic characteristics and political attitudes on the individual level), and macro-level variables (corruption, social inequality, party system polarization and the electoral system).

The paper combines the results of a computer-based content analysis of election manifestos with the European Social Survey (2002-2010). By means of multi-level analyses conducted in 15 Western European countries, it is assessed how the success of parties that employ a populist discourse can be explained.

**Skills Exchange: The Politics of Collaboration and Co-Production**

This paper identifies the ethical and methodological significance of this project and discusses the productive blurring of the overlap between arts and visual research practice.

**Skills Exchange: Urban Transformation and the Politics of Care** was a collaborative art and social research project that took place over 6 years. It investigated the elderly in the city, relations of care and the civil spaces available for older people to participate in. The project is a question that artists, researchers, older people, care-workers and others might exchange their skills and, in this process, alter roles and identities through processes of creative exchange. Skills Exchange challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. These methods were oriented towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes arts works and social initiatives, opening events and manifestos in addition to interview transcripts and social mappings, each oriented towards the cultural and socio — political changes groups hoped to enact.

**This Is Not a Toolkit: Reclaiming Critical Evaluation of Participatory Arts**

This paper argues that ‘evaluation’ is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. In considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the ‘norms’ and ‘forms’ of evaluation. The histories of and motivations for evaluation include a governmental impulsion to encourage culture as a resource that can be put to work as part of a wider global project of managing social change (Yudice 2003, Bennett 1995) and a genuine desire to learn from and improve the effectiveness and possibilities of arts-based social interventions. This paper argues that in the current policy context evaluation has become a technocratic ‘hoop’ for arts organisations to jump through. There have been a number of critical evaluations but did not lead to changes in health promotion/prevention or healthcare providers. The theory of uncertainty management suggests that patients reduce healthcare uncertainty by increasing their understanding of disease etiology or treatment options, improving patient-doctor communication, and enhancing disease self-management knowledge through HI seeking. My prior research found African Americans and Whites were similar in seeking and using HI when they talked with their doctors, but Latinos were significantly less likely to do so. However, both African Americans and Latinos were significantly more likely than Whites to seek and use HI to change their approach to maintaining their health and better understand how to treat illnesses. We examine if race/ethnicity is related to HI use outside of medical encounters by CC. We use data from the 2007 USA Health Tracking Household Survey, a nationally-representative survey of civilian, non-institutionalized Americans (n=12,549). Descriptive analysis showed Whites were more likely to seek HI from the Internet (35.7%), while a higher percentage of African Americans sought HI from books or magazines (33.3%) and friends or relatives (32.3%). Latinos were more likely to get HI from friends or relatives (24.0%) and books or magazines (23.1%). Logistic regression models using a knowledge/beliefs scale about care for CC, and alternatively stratifying by any CC or not, will aid our understanding of the self-care practices and needs of racial/ethnic adults with CC as they age.

**Work after Retirement or Work Instead of Retirement?**

Work after retirement or work instead of retirement? In Europe the problem of population aging has aroused much worry. The debates on aging populations in need of care, consuming lots of resources, have been common. Consequently, the raising of the retirement age has been one of the themes in the discussion. There is strong opposition against increases in the retirement age. Therefore, alternatives are needed. There are also spontaneous developments which affect the retirement age debate. One alternative which has been tested is the elimination or raise in the upper age limit for retirement. In Finland people may retire already at 63 or 65, but they have to retire at 67 or 68. This upper limit could be raised to 70 without much protest, or eliminated completely.

Another new development is the combination of retirement and (paid) work. This has involved very quick developments in some countries. One explanation is the level of pensions and/or need for good health coverage. But in countries where the level of pensions is decent, the reasons for working are mainly on the pull side. The retirees are healthy and wish to stay in the work life. This means that they do not wish to work full time, but on the other hand are not primarily interested in remuneration. In fact, there seems to be also an increase in the unpaid work, which is difficult to follow statistically.

In our Finnish Generational Transfers study we follow the Finnish baby boomers (born 1945-1950) and their activities. From our data we can see that working when retired is quite common and has interesting correlations with education, income, happiness etc. The paper will present these results and compare them to data from other European countries. On the basis of these results some recommendations about retirement policies are made.
immense political challenges from its opponents, many of whom currently constitute ruling governments. Leaders and or opposition parties in Switzerland, Germany, the United Kingdom, France and the Netherlands have made strong public statements against multiculturalism and linked this rejection to the presence of Muslim populations. Banning and Kymlicka note that even though multicultural policies remain in place in many of these nations, the ‘delegitimation of the word multiculturalism is not just a change in discourse, but jeopardises the very conditions under which multicultural policies can actually work.’ It would be easy to consider that in this context, multiculturalism has a dim future.

This paper, based upon extensive research conducted for an Australian Research Council funded study examines the ‘retreat from multiculturalism’ in Australia through the debate about sharia, legal pluralism and Islamic finance. It offers important insights into the dimensions of a new neoliberal multiculturalism in Australia.

**Biography**

Joshua M. Roose (L.Roose@uws.edu.au) is a senior research officer of the Religion and Society Research Centre at the University of Western Sydney, Australia. Working on an Australian Research Council-funded study examining sharia and legal pluralism in Australia and the United States. In 2013, he served as a visiting scholar and researcher on the same project (with Professor Bryan Turner) at the Committee for the Study of Religion at City University of New York. He is also a co-convenor of The Australian Sociological Association (TASA) ‘Ethnicity, Migration and Multiculturalism’ thematic group with a focus on religion and multiculturalism.

**Muslim Elites in the Neo-Liberal Sphere: Implications for Citizenship and the Future of Islam in the West**

In recent years there has been a vast array of studies examining Muslims in Western contexts at the level of radicalisation, impacts of negative representations and civic engagement. However, little research has examined the emergence of Western born Muslims into the elite professions that are central to the operation of the neo-liberal free market and that serve as a central location of economic and political power. Less research has examined how this ‘new Muslim elite’ is shaping citizenship amongst Muslims and the future of Islam in the West (and the tensions this produces with traditional Muslim community leadership). This study aims to reveal important empirical and theoretical insights into these developments. Significantly, this study shifts the focus from the ‘Muslim question’ to how Muslims are actively contributing to a Muslim ‘solution’.

This paper is based on findings from a three year project (2012-2014) funded by the Australian Research Council and conducted by a multidisciplinary team (Law, Sociology, Criminology and Political Science) from the University of Western Sydney (UWS) and City University of New York (CUNY). Empirical research was conducted in the global cities of Sydney and New York with Muslim attorneys, Islamic finance specialists, Imams and community leaders. The study aims to explore the intersection of sharia and the secular legal system, as well as gaining a broader insight into how sharia’s shapes the daily lives of observant Muslims.

**ROSA, HARTMUT** *(University of Jena, hartmut_rosa@uni-jena.de)*

**The Temporality of the Good Life: Resonance As a Key-Concept in Critical Theory**

The modern reality of ethical pluralism implies that we cannot define the substance or content of a good life. However, perhaps it is possible to identify the temporality, or at least some of the crucial temporal aspects of a good life? The paper sets out to explore just this. In the first part, it identifies three time-levels that have to be brought in ‘resonance’ or coherence within a life: The temporality of one’s age or epoch (historical time). In its second part, the paper seeks to establish the argument that the good life is achieved through a mediation between singular ‘moments of resonance’ (as opposed to situations of alienation) and stable ‘axes of resonance’ that allow for such moments. The crucial point here is that a prolonged or repeated period of such axes of resonance may be the necessary condition or absence of a certain level of security and stability that is potentially threatened or undermined in an era of incessant social acceleration.

While moments of resonance are rare and short-lived, what subjects need are stable and reliable ‘Axes of Resonance’ which give access to such experiences. In modern society, such axes can be love and the family, work, but also nature, art and religion. I will explore these ‘Spheres of Resonance’ by contrasting them to ‘Spheres of Alienation’ which mirror the former and might be on the rise in a late-modern world governed by the imperatives of speed and competition.

**Can International Framework Agreements Facilitate Transnational Labor Cooperation?**

Marx & Engels predicted that globalization would lead workers of the world to unite. Indeed, the world economy is today ‘global.’ However, globalization seems to have hurt workers’ organization as labor unions have lost membership and influence almost across the board. But in the past decade global unions have even been able to persuade more than 100 multinational corporations employing over 8 million workers to sign so-called international framework agreements (‘IFAs’). At a minimum, all IFAs must submit to the ‘core labor rights’ of the International Labor Organization (‘ILO’), to wit, the right of freedom of association and effective collective bargaining, the right to be free from discrimination at work, the right against compulsory labor and the right against the worst forms of child labor. Could Marx & Engels have been correct, after all, about an international formation of workers acting in a class-conscious way for fundamental social change around the world? After doing empirical field research for about 6 months in Europe and the U.S.A., I do not think that IFAs yet signal a significant and new labor upsurge. First, I found out that the mostly German, Nordic, and French labor organizations seem to determine the specific meanings of the IFAs. These specific national labor organizations break the IFAs and the relations that give IFAs meaning and life. In this sense IFAs are not truly ‘global.’ They have important national roots. Second, unions across economic sectors seem to have conflicting interests. No brokerage seems to mend those ruptures, leading some global unions and their IFAs to clash with others. The paper concludes by arguing that the ILO may help to broker these conflicts to propel IFAs forward.

**Communicating the Challenges of Climate Change Adaptation in the International Red Cross and Red Crescent Movement**

The paradigm of climate change adaptation (CCA) plays an increasingly important role in various types of civil society organizations (e.g. World Vision, 2012; Hall 2013). The International Red Cross and Red Crescent Movement discussed the topic of climate change as a humanitarian challenge for the first time in 1999. The foundation of the Red Cross/Red Crescent Climate Centre (RCCC) in Den Haag in 2002 institutionalized this new organizational commitment to address climate change induced challenges in disaster preparedness and the securing of livelihoods. Today, CCA is being discussed as a cross-cutting issue in humanitarian...

Innovative Strategies to Cope with Climate Change Across Time and Space - Local Preparedness As a Humanitarian Challenge?

This paper addresses an innovative climate change adaptation strategy in the area of disaster preparedness developed by the German Red Cross in cooperation with local partners in Africa such as the Ugandan and the Togolese Red Cross. Discussing the concept of "early warning/early action" and its practical implementation, this paper addresses organizational learning processes in transnational organizations from an actor centered perspective. By looking at a new project approach in the area of indicator based disaster preparedness systems, the importance of knowledge creation and transformation across time and space is highlighted. Time is important to respond adequately before a disaster strikes which requires new forms of institutionalized cooperation (for example, with meteorological departments and other stakeholders), while the spatial dimension refers to processes of organizational learning across borders and hierarchies from the local to the regional and transnational level. The role of both local communities and organizational change agents, meaning key persons within and outside the organizations, is addressed systematically to analyze the possibilities to foster climate change adaptation projects and their successful implementation in the long run.

Talking about Sexuality in Order to Deal with Discrimination? Gay Men in Palestine

In the context of a German-Israeli-Palestinian research project, we conducted biographical-narrative interviews with Palestinians in the West Bank and Jerusalem. We asked our interviewees to tell us their family and life histories without suggesting any other topic during the first (and main) part of the interview. In all our research settings we had several interviews with men who define themselves as homosexual or who experienced serious discrimination because of being defined as homosexuals. It became obvious that these men wanted to speak with us because we represent, from their perspective, the so-called Western culture and (ostensibly) post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada’s imperialist, colonial legacies are a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives.

Imperialism In a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

Imperialism in a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

National currencies, especially paper notes, are emblems of the nation-state and its power. This paper builds on these literatures to explore iconic representations of Canada’s Aboriginal Peoples in its monies, using examples of colonial and (ostensibly) post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada’s imperialist, colonial legacies are a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives.

PEARCE, REBECCA (University of NSW)

Climate Uproar: An Ethnography of the Climate Movement

In this paper we report on a project analysing the emergence of a grassroots social movement dedicated to direct action against the root causes of climate change. The project investigates the dramatic turn in climate politics that occurred in the mid-2000s. Engendered by mounting evidence of climate change, and by the rise of international level politics schemes under the United Nations Framework Convention on Climate Change, and rejecting the pragmatism of professionalized non-government environmental organisations, this grassroots-based political movement launched a radical programme for climate action from below. Through public protests, civil disobedience involving direct actions, counter summits, and deliberative events that created a sense of community, solidarity and personal political agency, climate activists sought to translate climate science into politics. The climate movement sought to build a political vision and the political capacity to challenge the elite politics of climate change, the ‘climate pragmatism’ that had dominated climate politics from the 1990s, and the legitimacy of the carbon-intensive economy. The paper explores this significant moment, when a radical climate politics introduced a new dynamic to the landscape. The authors are to publish this work in 2013 as an ethnography of the search for climate agency, based on the authors’ involvements in the climate movement and in-depth interviews with climate activists from 2007 to 2010. Focusing particularly on the climate movement in Australia, a country reaping the economic benefits of the coal and gas boom, the book charts both the possibilities and pitfalls revealed by the upsurge, interpreting it as a prefigurative moment for an anti-systemic climate agency.

When 150 Becomes 100: Conversions and Denominations In Grocery Shopping

When 150 becomes 100: Conversions and Denominations In Grocery Shopping

This paper explores two aspects of expatriate money practices with Russian rubles, focusing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currencies like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing ‘sticker shock’, a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of value and price for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish krona – often talk of curious conversion negotiations, under a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handy conversion to assess prices, but also adjusting to new arithmetic based on...
different monetary denominations, even when the base unit may be the same. I will argue that conversions are slowly adjusted to better match not official rates of currency conversion, but notions of worth and value that are linked to available denominations of money at ‘home’ and abroad.

ROSSAL, MARCELO* (Universidad de la República, mrossal@yahoo.com)
Ethnographic Studies Approaching Violence and the Transaction of Illegal Drugs in Montevideo, Uruguay

The present work is a result of a process of ethnographic investigation that took place in three different social locations: the downtown area (with a population composed by homeless teenagers and young adults); a peripheral suburb location in Montevideo (focusing on consumers of cocaine paste base); and, pris- on (within a system created for people with no criminal records). The focus of this study discusses the social interrelations and the transactions of illegal drugs. Given the general assumption that the foundation of social interrelations is exchange itself, the case of an exchange that occurs within an outlawed background will be debated: an illegal market which is necessarily (re)producing violence; a market that is illegal due to the fact that those merchandises are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug modelled.

In and out of the Mass Media System: Crisis Microblogging in a Social System Theory Perspective

The large diffusion of social media platforms, together with the diffusion of mobile connectivity, has generated, during the last few years, a growing amount of real time production of user generated content. This broadband phenomenon is even more marked when it comes to crisis related communication. During crisis events traditional mass media communications might be slower less efficient and less accurate than user-generated information. This is why, over the last few years, we are seeing a growing number of research projects aiming at using these data for rescue operations or other civil protection activities. We are facing this kind of data from a different perspective. Within this paper we will claim that – within specific circumstances – user generated communication will act surro- gating the traditional Mass Media System in its function of self observation of the Social System (Luhmann 2000) by applying the same operational selection between information and non-information. In addition we will claim that, as soon as the initial conditions disappear, user generated communication will evolve into a new – and still largely unexplored social function.

To support our thesis we will use Twitter data collected during the first five hours after the earthquake that struck Emilia Romagna region in Italy on May 20th 2012 monitoring the #terremoto hashtag. By focusing on the first 5 hours of the Twitter stream we have been able to detect the early user-led phase of the phe- nomenon, showing which type of users has been the first to fill the information gap and, by then, what happened until the early morning when traditional media came on stage. We will show how in this time span it is possible to observe how specific social network analysis metrics (Brans, Stiegitz 2012) evolve from a spec- ific mass media like structure toward a more conversational structure.

Unions and Childbearing: Converging Gender Roles in Finland

Where Participation is Negotiated: New Media in Everyday Life

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and consti- tuted.

Relating to Cultural Studies the domestication approach argues that every- day life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being re- produced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-oriented, inter- view-based long-term study “The Mediatized Home” analyzing the integration of the different New Media Technologies into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that due to a technological framing, inequalities in internet use and skills are especially tied to gender roles and practices. Although the technological framing and thereby these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples, which is evidently affecting the use of internet-based ICTs.

In order to understand the ways in which internet-based ICTs interact with questions of social inequality, it is crucial to ask for its latent implications. Our study shows that looking at everyday life from a domestication perspective allows us to not only identify latent implications of internet-based ICTs, but also to un- derstand how they unfold their effects on social inequality.
One distinguishing trait of Finnish fertility during the last decades is the increase in the proportion of families having three or four children. We study how socio-economic status (SES) and numbers of unions relate to above-average (3+) parities among Finnish men and women across age cohorts. In previous studies of wealthy low-fertility countries, both male SES and number of unions has often been shown to increase fertility, while their effect on women is mixed or negative.

We use the FINNUNION data, a 11% sample of all Finnish-born persons resident in Finland during 1970–2010 and covering the fertility of age cohorts 1930–1960. It includes data on coresidential unions and marriages, childbearing and central sociodemographic indicators of the couples on an annual basis. It also includes sociodemographic indicators and childbearing history of all partners in marriage or cohabitation of the index person.

Results show that across all male cohorts, higher social status increases the proportions of 3+ children. There is no comparable clear trend among women, although the negative effect of female education on higher parities diminishes over time. Interestingly, the gender differences appear to diminish among younger cohorts. We discuss reasons for the shift towards gender equality in mating patterns in families with many children.

ROULLEAU-BERGER, LAURENCE* (CNRS, Laurence.Roulleau-Berger@ens-lyon.fr)
Plural Modernities and Post-Western Sociologies: Individuation in Europe and in China

In a context of plural modernities we have entered in a period of Post-Westernization of knowledge and construction of the construction of situationed knowledge. We are in the midst of a “global change” which is distinct from previous changes and their ephemeral nature and which appears to be a turning point in the history of the social sciences. In this communication we will consider the diversity of epistemic injustices and reticular dominations, the emergence of Post-Western sociology through the dialogue between European and Chinese sociologies; finally we will be focused on theoretical continuities and discontinuities between Chinese and European sociologies through the analysis of the process of individuation in Europe and in China. The concept of the individual is not very highly developed in Chinese sociology, whereas it has assumed a central position in European sociologies. On the other hand, various theories of the guanxi have been developed; some Chinese sociologists advance the ‘we’ is produced, on the one hand, by guanxi, which delineate the particular boundaries of the ‘self’ in the construction of the individual, and, on the other hand, by categorizations, identifications and social affiliations. Over the past 20 years or more, it has been interesting to observe that in European sociology, and particularly French sociology, the contemporaneous individual, whether he appears uncertain, reflexive or autonomous, lies at the heart of sociological thinking, whereas he is scarcely visible on the Chinese sociological scene. This phenomenon highlights the affirmation of the process of individuation as a process of civilisation – in Norbert Elias’s sense of the term – and shows that, whereas in the past it was social structures that sustained the individual and the level of reflexivity was consistent with the social structure. We would consider discontinuous continuities and continuous discontinuities between Chinese and European sociologies.

“Equality and Challenge: The Case of ‘Lysistrata’ in Ancient Greek Drama”

This paper concerns with the successful revival of the ancient Greek drama through the study of “Lysistrata” by Aristophanes. The educational and recreational character of the ancient Greek drama gives the audience messages for
equality, a notion useful in building sound personalities, ready to participate in a democratic state. In this paper I will present the analysis of "Lysistrata" through the mask/prosopoeia of the ancient Greek drama. The results were acquired after going through and studying elements from a variety of sources, such as masks form pottery, bas-reliefs, sculptures, frescoes, statuettes and texts. Aristophanes, who is considered to be the best ancient Greek comedy writer, was well aware of the social problems faced by the Athenian republic during and after the Peloponnesian War and thus felt challenged to present these problems through his writings. One famous persona he made up was "Lysistrata", an audacious, viv-id, power-hungry "Lysistrata" is taught in philosophy schools and played in theatres around the world. The messages conveyed involve idea of the equality, peace, reconciliation, dialogue, human rights. The educational activities deriving from the ancient masks presented masks could take the form of articles, lectures, e-lectures, workshops, interactive programs, videos etc.

Epistemological Standpoints and Steps in Social Sciences. Intersectionality in Gender Studies

Human and social sciences are the subject of a long lasting confrontation between the ideal-type standpoint of the researcher's neutrality and the inevitable subjectivity in everyday life situations, between positivism and subjectivism. As a result of these paradigmatic oppositions, we encounter a cleavage between statistical quantitative methods applied to experimental data, "objective methods", and qualitative research methods, "subjective methods". Since 1980s, in information and communications sciences but also in management and gender studies, we are talking about the reliability of qualitative methods, the role of experience, memory and standpoint. The objectivity is actually non-achievable, so the subjectivity must be assumed, explored, transferred. Feminist studies (sociological first, then communicational, discursive, historical) are designed to reveal the women's perspectives, as the feminist approaches had been ignored over the centuries. The main operator for the methodological change was the women's testimony through methods like life story, narrative analysis, and ethnography. It will be improper to talk about the exclusion of the quantitative paradigm from the feminist research, but of the intersectionality of problematic and methods. What makes a quantitative or qualitative approach feminist is the focus on the topic of women and their issues. The feminist research prefers the individualization and not the generalization, the correction of the view from nowhere postulated by positivist research. With this new orientation towards a "situated knowledge" (see D. Haraway), with the triangulation of methods and the intersectionality of sociological parameters, the traditional separation between the subject connaisseur and the object to be known is abolished and the group or community perspective can replace the neutral, individualizing perspective. Suffering and Aesthetic Identification in Cosmopolitan Cinema

Looking at specific film examples of cosmopolitan cinema, this paper is concerned with both theorizing and probing how different modalities of aesthetic identification with the suffering hero – sympathetic, cathartic and ironic – are consequential for the ways in which the viewer is capable (or not) of detaching herself from the immediacy of the emotions underlying her identification (e.g. compassion, sympathetic tears, tragic emotion, estrangement) and rise to moral judgment and reflection about what is represented. It is through the fictional exercise of the imagination that audiences are invited to identify and empathize with the fate of individual characters and to consider the moral implications of their suffering in their own lives. If fictional characters can become ‘real’, personalized and tangible as subjects experiencing pain, it is also because the suffering ‘other’ is perceived not as a distant object of pity but as a fully-fledged subject just like ‘us’. We will see that some modalities of aesthetic identification with suffering characters have the potential to trigger cognitive linguistic deliberation- and, therefore, new cultural meanings of suffering - in a discursive ethical space where a range of interlocutors - audiences, filmmakers, creative personnel and critics – enter into conversation with each other about what constitutes human dignity and its violation. It is argued that cosmopolitan cinema challenges the idea that suffering is ‘unrepresentable’ by personalizing suffering and bringing its visual presence before us in ways that verbal representation cannot.

ROWE, DAVID* (University of Western Sydney, d.rowe@uws.edu.au)
Changing Society, Changing Sport? Social Diversity, Civic Engagement and the Sporting Nation

Sport is routinely evident as a key signifier of nation around the world. But in Australia the unusually elevated place of sport in ‘official’ and popular national culture means that questions surrounding sport, citizenship and national identity have an especially deep resonance. For example, sport is more prominent in the popular information for Australia’s citizenship test, and more closely connected to its characterisation of national cultural identity, than in equivalent documentation of comparable countries such as Canada and the United Kingdom. Key national sports events are also protected for free television viewing by the world’s most rigorous ‘anti-siphoning’ regime in the name of safeguarding ‘events of national importance and cultural significance’ from less accessible subscription television platforms. Affinity with sport, and to the nation through sport, is likely to be less secure as global population mobility alters the demographic composition of Australia’s citizenry. It is for this reason that its most dynamically diverse region, Greater Western Sydney (GWS), was selected as the primary research site for a current project addressing sport’s relationship to cultural citizenship in Australia. GWS has an estimated resident population approaching two million, with almost a third born overseas and of non-English speaking background, approximately half of whom arrived in Australia during or after 2001. With almost forty per cent residents speaking a language other than English at home, over a half aged below thirty five and approximately a fifth in low income households, GWS is a highly appropriate context for exploring the process of ‘nationing’ through Australia’s sporting system and its relationship to socio-cultural inequality and exclusion under conditions of advancing globalisation. The paper reports on this research-in-progress, and analyses the preliminary findings of its qualitative exploration of the sport-nation-culture nexus.

“State-Formation From Below”: Social Movement Of The Dam-Evictees and ‘Legal Transformation’ Of The State In Maharashtra (India), 1960-1976

Dam-evictees’ movements in Maharashtra have a long history. Peasants in Ma-harashtra fought the first struggle against dams in early 1920s, which opposed
the Mulshi dam built by the Tatas. Significantly, this is the first known move ment organized by the dam-affected persons in India and throughout the world. However, for various reasons, this movement failed. From 1960 onwards, the dam-evictees’ movements in Maharashtra are being led by a federally structured organization named, Maharashtra Raoye Bhargarava va Prakalpargrastha Shetkari Parishad (MRDPS). Due to the dam-affected cultivation, the organization has expanded to 26 districts in Maharashtra and has been working towards the welfare of the dam-evictees. Over 10,000 Gécamines employees employed for more than 25 years service. Based on ethnographic research among these employees – the former Union minière du Haut-Katanga – the former Union minière du Haut-Katanga, nationalized in 1967 – went into a steep decline in the 1990s. To address the situa tion, the World Bank advocated, in the early 2000s, the sale of company assets – rather archaic – to private investors, and the dismissal of 10,000 Gécamines employees with more than 25 years service. Based on ethnographic research among these employees made redundant, this paper aims at reflecting upon the future of paternalism and institutional employers. To avoid conflicts with workers, local communities – and to be used as a reference – in their relationships with public authorities, make clear, these models, or norms, continue to influence workers’ expectations and institutional employers. To avoid conflicts with workers, local communities – and public authorities, the mining companies that came in Katanga during the last decade have but no choice to take such expectations into account. By doing so, they contribute to the emergence of a new form of paternalism, distinct from the one developed by Gécamines in the 20th century.

Birds of a Feather—a Study of Social Networks of Mainland Chinese Students in Hong Kong

Our study addresses the issue of network building processes of mainland Chinese undergraduate students in Hong Kong, especially in terms of the homophily tendency in their social networks. Mainland Chinese students account for 10% of the university undergraduate student population in Hong Kong today. Like all newcomers, they need to adjust to the new environment, and their social network members play a very important role in this process.

We shall study choice homophily: the type of homophily produced by individual preferences. Although people in mainland China and Hong Kong share the same culture, they are under very different political and economic systems. We shall also study induced homophily: the type of homophily produced by the opportunity structure. We want to find out why mainland students associate with, mostly, mainlanders, given the fact that there are plenty of opportunities for them to come into contacts with local students.

The data comes from a 2011 survey of mainland undergraduate students in a Hong Kong university, and from in-depth interviews with them. Preliminary findings reveal three sets of factors that promote establishment of in-group contacts (discouraging out-group relationships) for mainland students in Hong Kong. First, differences in values, beliefs and behavior are major obstacles in establishing cross-group relations. The second factor is status homophily. Most of the mainland students are from upper-middle class or upper class families; whereas the majority of local students come from middle class or lower middle class families. The two groups differ not only in terms of consumption patterns but also in terms of future career aspirations, making cross-group relationships more difficult. The third factor is about contact opportunities. Our findings show that it is not just the presence of opportunities that makes a difference. The timing, that is, when these opportunities become available, is also very important.

volucra autoridades civiles y agrarias, así como pueblos ikjó y Zapotec. En este caso, la implantación de la nueva tecnología se da en un escenario tentador signado por problemas entre núcleos agrarios y entre grupos étnicos que desde hace ya muchos años mantienen una relación tensa de dominio y representación.

Mediante la discusión de este caso, el trabajo desarrolla la idea de que los proyectos de inversión han reactivado viejos enfrentamientos y promueven un realineamiento de los actores, así como permiten la reconstrucción de demandas de autogestión y autonomía local que, bajo la política y el discurso del agrarismo nacional habían sido eficazmente acallados. Nociones tales como zonas de refugio, colonialisación y Ura/Liberación, se vuelven visibles para comprender la complejidad de un proceso que difícilmente se agota en, aunque no excluya, ideas sobre resistencia, despojo y desposesión que son hoy las herramientas conceptuales centrales con las que se abordan los conflictos étnicos y socio ambientales en el sur global.

**Markets in Life Itself: Transnational Surrogacy in India As Intimate Labor**

Are the babies born through commercial surrogacy commodities or are they gifts? Based on interviews with seventy surrogate mothers and thirty-one egg donors who live in Bangalore, India, and twenty families who reside in various parts the U.S. and Australia and have engaged in surrogacy in Anand, Delhi, and Mumbai, I pose three interrelated questions:

1. What do surrogate mothers make of the commodification of their pregnancies? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?
2. If the newborn baby is a gift to the commissioning family residing in India or elsewhere, then what is the ongoing relationship between surrogacy donor as gift-giver and commissioning parents as gift-receivers?
3. Conversely, if pregnancy is wage labor, then how does one make sense of the baby as commodity, a product of market pregnancy?

Beginning with Tittmuss’s seminal _The Gift Relationship_, where he endorses the virtues of blood donation in the U.K. versus the demerits of blood distribution as a commodity in the U.S., the social circulation of bodily fluids, tissues and organs is well examined (Rabinow, 1999; Schepers-Hughes and Wacquant, 2003; Waldby and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1923; Levi-Strauss, 1969; Rubin, 1975; Bourdieu, 1977; Appadurai, 1986; Strathern, 1988), and mother as gift-giver and commissioning parents as gift-receivers?

This paper contributes to the growing literature on intimate industries (Parrenes and Silvey, forthcoming) through examining the meanings attached to markets in life itself among both Indian surrogate mothers and commissioning parents from the U.S. and Australia who travel to India for surrogacy purposes.

**Social Innovations for Sustainable Consumption – a Typology for Their Political Promotion and Further Development**

The current political debate in Europe ascribes importance to social innovations in regard to the transformation toward a sustainable society. Social innovation refers to utterly diverse phenomenon like citizen’s communities, cooperatives, transition towns and intercultural gardens, new forms of participation as well as user- and consumer-driven innovations. In regard to consumption there is the hope that carbon-intensive and non-sustainable patterns will be transformed towards more sustainable practices. However it is often not clear how to understand the term social innovation – most definition-estems fall short because they are not different from usual economic definitions or rely on an obsolete idea of technique trying to mark a difference between social and technical innovation. Before looking at sustainable consumption one has to answer questions about the meaning of social innovations, which are the criteria for the observation and analysis of diverse innovative consumption phenomena.

These questions are currently investigated by the project “Sustainable consumption by social innovation. Concepts and practice” funded by the German Federal Ministry of Environment and the Federal Environment Agency. Hereby 50 cases of social innovations within several consumption fields are closely investigated.

This paper presents considerations on the understanding of social innovation as the base for a typology of social innovations for sustainable consumption, which will be introduced. Social innovations are understood as novel social practices which differ from former routines, constitute solutions for social problems, and entail far reaching structural changes in society. Beside these structural effects of social innovations one has to consider the dynamic of change processes to make up criteria. An essential result of the analysis is the identification of five types of social innovations (do-it-together, strategic consumption, community based consumption, do-it-yourself, new offers for consumption), which are the basis for political intended promotion strategies and strategies for further development of the change agents.

**RUÍ, SANDRINE** *(Université de Bordeaux, sandrine.ru@u-bordeaux2.fr)*

**Coping with Discrimination, from Subjective Experience to Social Consequences of Discriminations**

To what extent studying discrimination from the subjective experience of discriminated persons throws new light on the sociology of discrimination? Whereas most of the studies aim to measuring discriminations (usually with quantitative methods) or aim to evaluating policies implemented to reduce them, the point of view of those who are discriminated or susceptible to be discriminated is less often analyzed. This last perspective is at the core of the research this communication is based on. Our research has been led in France using 4 sociological interventions and 220 interviews with persons concerned by discriminations due to their origin, their culture, their sexuality or their sex. (Dubet F., Cousin O., Macé E. et Rui S. (2012), *Pourquoi Moi ? L‘expérience des discriminations*, Paris, Seuil.)

Our study emphasizes the gap between the subjective experience and the objective situations people go through. The experience of discrimination is therefore determined by structural and individual factors, by institutional, economic and social origins of discrimination. We will focus on the way people cope with the discriminations, the way they avoid, resist, abdicate or adapt, the way their strategies are successful or entail perverse side effects, in order to understand the effects on individuals as well as the collective consequences of discriminations. Ambivalent and uncertain, the experience of discrimination is all the less adjusted to its definition as a public problem since the links between discrimination and domination, discrimination and stigmatization, discrimination and inequalities are not obvious.

Regarding theoretical and methodological issue, we will insist on the relevance of sociological intervention (Touraine, 1978 ; Cousin & Rui, 2010) for the study of the discrimination’s effects at the same time on individuals and on society.

**Exploring the Less-Educated and Lower-Income Migrant Young People's Experience of Transition to Adulthood – a Qualitative Research in Shenzhen, China**

In recent decades, many researchers have found that young people’s transition to adulthood is greatly prolonged in terms of finishing education, entering job market, getting married and having children. Accordingly, they suggest that contemporary young people’s transition trajectories have become radically different from those of their previous generations. Among researchers on youth transition, Jeffery Arnett even contends to regard this prolonged transition to adulthood as a separate and normative life stage – emerging adulthood – between adolescence and young adulthood. However, other researchers criticize that the prolonged transition is not a universal phenomenon for all the young people. They believe that those who are socially disadvantaged and excluded incline to enter adulthood at an earlier age. On the contrary, local researchers in China find that it is just the increasing life pressure that forces the young, especially those who lack of social resources, delaying their transition to adulthood. The contradictions among existing studies indicate that transition to adulthood does not obey a normative rule, while other works, individual transition to adulthood is socially constructed. Individuals under different social and cultural contexts may have various transition experiences. This study seeks to explore the transitional experiences of the less-educated and lower-income migrant young people (with age from 18 to 33) in Shenzhen, a migrant city in China’s southest coast as well as how their transition experiences are socially constructed. Qualitative in-depth interview is used to collect information as rich as possible from the life stories of the participants. Grounded theory is used to analyze the data and develop new understanding of transition to adulthood. Implications of the findings for social welfare services and policies targeting disadvantaged young people are discussed.

**The Influence of Political Inequality in Vulnerability to Natural Hazards: An Analysis of Selected Mexican Municipalities**

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The susceptibility of different territorial units to be affected by natural hazards has been usually associated with the nature of the hazard itself, together with the socio-economic conditions of the local population. However, the political conditions that underlie planning and emergency response are usually overlooked. We argue that vulnerability varies in relation to the political inequalities regarding law enforcement, effective planning, land use control, environmental knowledge and resources availability among different territories in response to hazards; and these inequalities would significantly influence vulnerability outcomes of municipalities subject to similar hazards. This paper reviews the debates of political inequalities and their spatial effects. It also discusses the differences in vulnerability outcomes in different territorial units in Mexico, associated with such inequalities, from a qualitative comparative approach.

Participación Social Ciudadana. Reflexiones Desde El Pensamiento Comunitarista De Amatí Etzioni

La participación ciudadana, desde la aparición de las Tecnologías de la Información y la Comunicación (TIC), ha experimentado una radical transformación. Las teorías clásicas sobre participación social y creación y desarrollo de comunidades, se encuentran con el reto de adaptarse y contrastarse con los nuevos fenómenos de desarrollo tecnológico. Internet y las herramientas 2.0 tienen en común la participación colectiva mediante procesos de colaboración e intercambio con otros usuarios. El cambio de mentalidad que supone esta nueva forma de comprender y utilizar Internet desarrolla interacciones peculiares. Los individuos establecen relaciones de roles y las redes personales se convierten en lo más importante, creando comunidades antes insoportables.

Esta comunicación se centra en el estudio del pensamiento de Amatí Etzioni, uno de los principales investigadores sociales sobre la creación y desarrollo de comunidades, y pone en relación su pensamiento clásico sobre participación con sus aportaciones recientes a la luz de las nuevas posibilidades de participación ciudadana.

Cycles of Contention Post-Apartheid: A Challenge to Current Theory

Since 2004 South Africa has been undergoing a wave of protests predominately led by the unemployed within South Africa’s impoverished townships and informal settlements. This protest wave reached a peak in 2012 where it has been estimated there was an average of three protests a day (IRIS, 2012). Furthermore, there has been a discernible rise in industrial unrest with an increasing number of wildcat strikes occurring as workers choose to take their demands outside organised trade unions and collective bargaining processes. The intensity of this movement and the hostility of the State to it was tragically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a wider global cycle of contention. This paper uses the South African experience in order to challenge Tarrow’s theory of cycles of contention in order to advance social movement theory from a Southern perspective. It will be argued that Tarrow’s framework, and social movement theory more generally, pays insufficient attention to the specificities of capitalist development. This paper seeks to expand social movement theory and the analysis of popular protest through an examination of the specificities of capitalist neoliberal development and how this has shaped the working classes post-apartheid. The paper will demonstrate how a greater emphasis on the role of capitalism within social movement theory has much to contribute not only to the understanding of protest and social movements in South Africa but also for the analysis of the global cycles of contention.

Independent Cultural Centres As Amenities in Urban Regeneration

This paper reports results of a research project on 15 independent cultural centres around Europe. These specific sites, promoting culture and arts and related industries, have often acted as “urban pioneers” in their neighbourhoods, converting spaces considered “difficult” in size or because they are listed properties. The centres involve combination of different creative actors and action. They are professionally managed, and agree that visionary leadership is essential to succeed. They are usually organised as independent associations, but require acceptance and partnering of cities, often as owners of the properties. However, not all of them are dependent on subsidies, even in the form of land rent, but illustrate other examples how to organise such activity.

The paper discusses the role of independent cultural centres in urban regeneration. The current literature acknowledges both the supportive role of such activities in place-making and providing spaces that the market otherwise does not, but also highlights the paradox that if a development becomes commercially successful, rising rents may lead to their displacement, which eventually also lessens the character of the whole area. This study argues that instead of transitional activity in a particular property, planners should consider independent cultural centres as new kind of civic activity supporting heterogeneity and mix in changing urban areas. This use of vacant spaces should be conceptualised as amenity—non-profitable venue that has broader significance for area’s atmosphere and liveability.

RUSER, ALEXANDER* (Hertie School of Governance, ruser@hertie-school.org)
It’s Climate Change, Stupid! the Role of Think Tanks in Maintaining a Knowledge Divide in Climate Politcis. Evidence from Germany, the United States, Japan, and South Korea

‘Global environmental inequalities’ are often used synonymously for the asymmetric tragedy of the commons problem posed by anthropogenic climate change: polluters (mostly countries in the developed world) are less affected and more capable to deal with the consequences of global climate change than the less developed countries in the global south. An important aspect of this problem is the rejection of national responsibilities or the outright denial of climate change by important emitting countries.

The consequences of environmental degradation and climate change can be felt directly at the local level. In contrast, public awareness as well as an understanding of the complex interplay of local and global aspects by national electorates is highly dependent on the production and distribution of scientific knowledge. While the production of relevant knowledge is institutionalised at the international level (e.g. IPCC), national level knowledge production and modes for distributing it to political elites and the wider public differ considerably. To explore the impact of diverse patterns of knowledge production and distribution on ‘climate scepticism’, I will focus on the influence of environmental Think Tanks. Think Tanks are said to provide applied research and impartial advice as well as political advocacy in ‘scientific disguise’. It’s therefore important to analyse their network ties to government authorities and among each other in order to estimate whether they are part of an epistemic community or forming advocacy coalitions instead. Linking the findings for selected countries (Germany, the United States, Japan, and South Korea) with the theoretical framework of differing ‘knowledge regimes’ helps estimating the consequences of an unequal access to and the distinction between a biased and a more ‘neutral’ presentation of scientific findings for national climate politics and international burden sharing alike.

RUSH, MICHAEL* (University College Dublin, michael.rush@ucd.ie)
SEWARD, RUDY RAY (University of North Texas)
Fathers, Welfare and Gender

This paper examines macro-level social policy influences on national variations in men’s roles as fathers across different ‘worlds of welfare’. It begins by identifying a paradox. On the one hand, the paper illustrates that the mid-1970s represented a historical turning point in social policy responses to the changing nature of fatherhood. On the other hand, national variations in the social politics of fatherhood have been largely overlooked by comparative welfare state analysis, with the notable exception of Hobson et al (2002), who proposed a typology of ‘policy regimes and fatherhood regimes’. The paper addresses this paradox by locating fatherhood as a central element of what Orloff (2010) identified as the “two intellectual big bangs” of social policy comparison: namely ‘gender studies’ and ‘welfare regime analysis’. It does so through historical analysis of the social policy treatment of fathers and non-resident fathers in selected Nordic, Anglo-Saxon and East-Asian regimes and at the meta-level of European Union patent law and gender equality directives. The analysis serves to illustrate the idea of a continuum of ‘two worlds’ of father regimes, typified at one end by the gender-egalitarian ‘father friendly’ regime in Sweden and at the other end by the targeted regime in the USA, which impacts most forcefully on a residuum of non-maintenance paying fathers. The paper concludes by discussing whether and how welfare states served to erode the patriarchal power of fathers during what Therborn (2004) identified as the long process of ‘de-patriarchalisation’, and by considering to what extent we are witnessing a feminist backlash in new discourses of re-patriarchalisation.

Consuming Cuteness: The Visual Code Of Youth In Kawaii (cute) Fashion Subcultures

The kawaii (cute) fashion subcultural scene of Harajuku, Tokyo, presents a complex visual sphere in which youth produce and circulate images through the consumption and design of clothing products. This paper examines the power that the image can have in bringing together young designers and consumers. Using visual data from Harajuku and qualitative interviews with key cultural producers, it unpacks the idea that aesthetics in fashion subcultures can be used to signify wider thematics in the subculture. This paper aims to revive the use of semiotics in the study of fashion subcultures, working under the Birmingham Centre for Contemporary Cultural Studies’ premise that there is resistance within fashion subcultures which is symbolic and counter hegemonic. It also integrates a discussion of cultural industries to map out how these images and their related mythologies are produced and circulated in the subculture. It combines the literature from these three fields to examine the ways in which kawaii fashion subcultures engage with residual and emergent social cultural forms, particularly pop culture. Youth in kawaii fashion subcultures claim images of childhood, and arrange them into a system of signs mediated through fashion styles as a form of symbolic resistance to hegemonic norms of Japanese adulthood. The clothing of kawaii fashion subcultures allows for self-transformation, as prints, motifs and textiles are used to signify individual identities and collective dreams centered around cuteness and passive doll-like archetypes. The streets of Harajuku become a public theatre in which participants act out these identities, utilizing a complex code of cuteness to communicate ‘authenticity’ to other subculturalists. Over the past decade, the subculture has been commercialized, and new codes are mediated through specialist magazines and shop fronts. This raises further questions around the extent to which subcultural resistance is formulated around active image making or consumption.

Bologna Process in Russia: Common Rules or Inequality Chance?

Russia joined the Bologna process in 2003. It has to become a full partner of the European system of education, but it has not happened. Europe joined the Bologna process through the objective processes taking place in contemporary European society (the emergence of transnational production and scientific associations, the formation of a single labor market, migration etc.). For the Russian education system the accession to the Bologna process is an artificial process. From seven major provisions of the Bologna Declaration, Russia realized only one. A two-tier system of education has established: Bachelor’s and master’s programmes. The research focuses on the problems of convertibility of the Russian master’s degrees with European diplomas. The major research objective was to examine the quality of higher education and the possibility of convertibility of Russian higher education diplomas. The research methodology combines qualitative and quantitative methods (depth interviews with experts and questionnaire).

Findings and discussion. Transition to the new system of higher education does not guarantee the majority of domestic graduates of universities the same equal opportunities for employment that graduates of European universities have. It was selected several federal universities that were competitive in the global job market before Russia’s accession to the Bologna process. The other universities must meet the needs of the local labor market. It is the main reason for the low level of training of graduates. The domestic industry is a major consumer of the graduates and it lags behind the European standards. That’s why there is no sense of raising the bar of education. In addition, the provincial universities have a large number of extra students who are poorly trained. It leads to the gap in the level of training of graduates of European and national universities and it reduces the chances of successful employment for graduates of Russian universities.

Local Dynamics on Women’s Economic Empowerment in Global Context

Local Dynamics on Women’s Economic Empowerment - In A Global Context

Submitted by: Dr. Ida Ruwaida

This paper focuses on the dynamics of women’s economic participation at local level in decentralization era. Based on Indonesia’s case, it has been reflected that local policies as well as programs on economic empowerment have not perceived women’s participation as their basic right. The policies or programs do not focus on stimulating women’s critical consciousness and their capacities to articulate their interests invidually as well as collectively. It’s indicated that women’s roles as economic actors are being positioned as instrumental roles, not substantive/transformative ones. The main root of this issue refers to the weakness of local government commitment and capacity which can not be separated with the national agendas on economic development. And the agendas might be based on economic assumptions (blinders) that tends to disadvantage women’s conditions as well as positions. It’s has been reflected from several regions in Indonesia.

Refraining to Chafetz (1988), empowerment as structural transformation efforts – which only possible if local (also national) economy policy responsive to women’s economic right. In term of relation between state and women, the other crucial issue is to enhance or to empower women’s commitment as well as their capacities as a collective/interest group. This paper also raises women’s strategies for organizing and enhancing their economic roles at local level.

Key words:
Women’s economic participation, local economic empowerment, institutional or structural transformation, women’s collective action.
in particular on the growing support for populist demands of nationalization of key industries and natural resources, voiced in particular by a right-wing populist party “Svoboda” as well as by the Communist party. The paper questions long-term perspectives for the labor movement if populist politics take on a right-wing flavor, and a left-wing populist alternative is lacking. Futhermore, it discusses the role that these anti-social scientists can play in evaluating labor movements alliances with various political projects and in strengthening workers’ associational power.

RYAN, LYN* (Macquarie University, Australia, lyn.ryan@mq.edu.au)

Ageing, Ageism and Discrimination

In Western society our populations are ageing, and even developing nation countries are showing increases in elderly populations. This is due to declining fertility, advances in medical science leading to greater longevity, immigration rates not keeping up with ageing, and also the Baby Boomer generation began to turn 65 in 2011. Older age is an inevitable part of life but some people use stereotypes of older people to discriminate against them due to their biological age. People hold views about ageing people which are not consistent with their views about other people and this forms the basis of prejudice, discrimination and ageism. While respect for elderly people has been a prominent part of Asian cultures which upheld Confucian principles, respect for the elderly has not been given such a prominent place in the history of Western society or its discourse. Issues around egregious abuse, such as financial abuse have been commanding the attention of most social science researchers studying the maltreatment of older persons since the late 1970s. The more subtle, everyday experiences of disrespect, which arguably is a precursor to more notorious forms of abuse and violent behaviour; or respect which, arguably, can prevent such abuse from occurring, are less researched. Therefore, respect for elders is defined and disrespect versus respect, ageism, personhood and the quality of life of elderly people are all discussed.

Society categorises older people into socially constructed age groups. It is important to recognise that while age has a biological meaning, income, work and retirement construct groups and meanings about age that may reflect negatively on older people and, therefore, lead to experiences of disrespect amongst our older population.

The Doctor-Patient Relationship and Type 2 Diabetes: What Can We Learn from a Cross-National Comparison of Three Qualitative Datasets?

Background: Evidence suggests that higher levels of patient involvement results in more beneficial care. Patient involvement can be higher in long term conditions, such as type 2 diabetes, where self-management is important. But we need to better understand what happens in the shared decision process and which factors contribute to the inherent inequalities. In this paper, we explore models of doctor patient relationship in three qualitative datasets from Germany, Spain and the UK. The data were originally collected to explore the experiences of patients with type 2 diabetes. Lay summaries are published at www.krankheitserfahrungen.de, http://www.dipex.es, www.healthtalkonline.org.

Methods: A secondary analysis of the datasets using a two strand approach. First, a thematic analysis of the individual datasets to identify models of doctor patient relationships, and examine what factors may contribute to these models. Second, a comparison of these findings to identify similarities or differences across the datasets in order to enhance our understanding of shared decision making.

Results: Early analysis suggests the importance of a trust within the doctor-patient-relationship and an enduring paternalistic model in the management of diabetes. While UK patients may suggest some partnership working in the way they articulate their self-management, in practice, they do what the doctor tells them. In contrast, German participants emphasize a desire to preserve a certain level of autonomy. This was most obvious with eating and weight management, where participants reported enjoying pleasures that their GPs regarded as unhealthy. Several Spanish interviewees experienced some lack of control from their professionals and felt their treatment was routine rather than an individually tailored process.

Conclusions: While management recommendations of diabetes are largely standardized, patient experience and expectations may differ according to cultural and national peculiarities. Interestingly, a paternalistic model is not necessarily experienced as a contrast to self-management.

Postsekularizm of Modern Society: Russian Option

We observe a social request for religion and religious values comeback in the present social space today. This can be observed by the example of protests actions in defense of traditional family in France, protests actions in defense of keeping crucifixes in Italian schools, the Christmas tree as a Christian symbol of Christmas in the Benelux countries, etc. etc. The Russian society lost faith in the communist ideas at the turn of the 80’s and 90’s, and later liberal ideas - which were approved during the epoch of liberal democratic reform of 90’s - had become nothing for the vast majority of people. This happened due to the fact that neither one nor the other idea contained the core of cultural and spiritual traditions of Russian society.

At what point and why the ‘Orthodox believer’ in Russia becomes the dominant force, the movement of social change? At the time of the Soviet Union collapse, the destruction of Soviet type societies institutional structure, during the state of anomic. At this point, the fabric of social relations becomes loose, able to sense even a small impact as triggers for deep and large-scale social change. At this point, the ‘Orthodox believer’ is gradually becoming a carrier of dominant Orthodox identity and ceases to be a ‘stranger’. During the 90’s and early 2000’s the number of carriers Orthodox identity and Orthodox believers, including churched Orthodox believers increased several times. ‘Generation in the way’ are those who have experienced religion and found a new identity for themselves after 1991.

‘Generation in the way’ is a notion which more or less accurately captures a new social set, which is characterized by varying degrees of perception by this Orthodox identity: from the identity of the Orthodox by self-identification to deeply churched orthodox believer.

Chinese Migrants in the Russian Labor Market Competitors or the Driving Force of Economic Development?

This presentation shows trends in labor migration from China to the Russian Federation for the period 2000-2010, including the regions and industries of employment of Chinese migrant workers. Described economic “niches” that are Chinese migrant workers in the Russian labor market. Chinese migrants adapted to the Russian labor market quite well. Mostly of them working in Chinese companies. Social and economic component of their integration can be considered particularly successful - they have jobs, relatively high level of income for labor migrants in Russia. Chinese are known as great farmers, who know perfectly well the characteristics of agro-climatic conditions, they are much more efficient, professional, and disciplined workers than Russians. The examples of ethnic Chinese business in Russia, including those identified a strong correlation between investment and labor migration from Chinese in Russia. Currently Chinese investors in Russia are represented by investments made by large Chinese state-owned companies which purposefully invest their funds in basic projects related to development of transportation system, communications, and exploration of mineral resources in Russia. This type of investments goes through official channels, legally, based on official contracts. The second type of Chinese investments includes private investments in development of business with quick pay off - trade, food service, restaurant and tourist business. In this part of investments Chinese private business is oriented at semi-legal and illegal methods of penetration in the Russian market. The presentation also discusses the features of labor migration and trade between China and Russia in the border regions of the Far East. It also describes features of the regulation of labor migration between Russia and China.

Integration of Vietnamese Migrants in the Countries of Eastern Europe and Russia: A Comparative Study

Questions of migration and integration of the Vietnamese migrants into social and economic processes of Russia, Ukraine and countries of Eastern Europe will be considered in presentation. Results of research revealed significant differenc-
es in the number of Vietnamese in comparison with official statistic data. So in Russia according to 2002 census number of Vietnamese made 26 thousand people, however, study results suggested 100-150 thousand people. Part of Vietnamese was "veiled" by integration process. Based on the methodology developed by the authors, assessment of extent of integration of the Vietnamese migrants in host countries was given. The technique is based on allocation of integration components of Vietnamese in host countries, namely civil, economic, ecological, social and psychological, religious, cultural integration. Research was conducted in Russia, Ukraine, the Czech Republic, Hungary and Poland by 400 private institutions of higher education, business, they were offered to put points from 1 to 10 to each component. Results showed that integration proceed differently. Vietnamese are most integrated in the Czech Republic and Hungary. According to experts, total score made 50 points out of 60 possible. State policy in the Czech Republic and Hungary was directed to the need for integration of Vietnamese in society through development of integration programs. In Hungary and the Czech Republic much of the Vietnamese citizens received citizenship in host countries, they became citizens. The success of economic integration is associated with high entrepreneurial activity, professional qualifications and access to the labor market of Vietnamese. Much less successful is integration of Vietnamese in Russia and Ukraine, civic, environmental, and socio-psychological component integration is low there. Evaluation of Russia is 40 points, Ukraine is 34 points. Over the past few years, neither Russia nor Ukraine has developed mechanisms for integration of Vietnamese. Bureaucracy, absence of standard and legal base strongly complicated integration process.

Higher Education and the Labour Market: A Polish Perspective
The structural conditionality of normal sciences, including state ideologies and financial support, is essential for the structure of higher education. The system's transformation in Poland, based on the neo-liberal ideology, involved the dependent development model not only to the economy but also to science, with its dramatic decrease of expenditures. This reinforced a negative selection of the scientific cadres, who, by the inter-generation transmission of values and norms, were unable to adopt the traditional scientific ethos. The official ideology tends to transform the structure of academia in the market-oriented corporate manage- ment model. A difference in private institutions of higher education that were established, based on the ideology of "practical" knowledge, which changed edu- cation in a commodity and the education process in a vocational training. The overproduction of formally well educated young people, hardly able to abstract thinking, resulted in a high unemployment of the youth. The government's reme- dy is to apply this model of education/training to public universities, which are ex- pected to teach for the needs of the current market, notwithstanding the fact that the needs change faster than the education cycle. Instead of teaching students the ability of life-long learning in a flexible labour market, much governmental effort is made to produce formal education by bureaucratisation of universities.

Management of Russian Organizations in Terms of Moving to Neoclassical Organization-Management Paradigm
In the article there were considered features of the classical and neoclassical organization-management paradigm. The analysis of the up-to-date Russia's organizations management state was performed due to criteria of two management paradigms. There were revealed basic features of the management transformation model of Russian organizations from classical to neoclassical management paradigm. There was performed the analysis of functional directions of Russian organization management based on essential features of the above mentioned transformation model. Special attention is focused both on the organizational democracy development and participating methods of taking management decision in Russian organizations. The author of the article revealed main barriers and ob- stacles on the way of the organizational democracy development and in present day Russian organizations on the basis of managers' and employees' sociological polls as well as considering his own consulting practice for many years.

RC04-79.20
RYSAKOVA, POLINA* (Saint-Petersburg State University, vost5@yandex.ru)
Global Citizenship – New Pedagogical Aim or Market Strategy?
The development of education in the globalization context poses a lot of ques- tions, being quite a challenge for scholars. The analysis of such new trends as integration processes in education, the growth of educational migration, the in- volvement of international organizations and NGOs, and the education policy of national states leads to referring to the seemingly established concepts of particular features of education.
The urgency to implement educational reforms is stressed by various inter- national organizations. One of the promulgated aims of these new educational projects is bringing up global citizens.
In recent years the concept of "global citizenship" came into a broad use in European and American educational and public discourses. However, its meaning remains blurred, and its content is interpreted very broadly.
Analysis of the global education concept takes into account current sociopolitical and political science discourses on the concepts of citizenship, nation and state. Previous understanding of citizenship as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.
The concept of education for global citizenship captures in what way this new understanding of citizenship and identity is interpreted in pedagogical discourse. Global citizenship is treated as a social engagement with the voluntary obliga- tions undertaken, and priority is given to civil rights of the individual. It still stays unclear in what way state educational system as the key element in nation state building process should foster global identity formation.
Besides for many educational institutions and so called international students the engagement in “global citizen” educational programs is only a pragmatic tool to improve economic chances in the global educational and job markets.

RYUO, TAKAYOSHI* (Yokosuka Nursing School, tak.ryuo@gmail.com)
Against the State-Centered Model of Social Policy: The Moment of Schaffle in the Sociology of Durkheim
Emile Durkheim, one of the founders of sociology, started his academic career in an interdisciplinary struggle. He refuted Spencer's self-interest based conception of society in the Division of Labour in Society, and rejected psychological approach for social studies in the Rules of the Sociological Method. But in order to acquire the institutional independence of sociology from neighbouring intellectual fields, he had to fight in another battlefield other than against economics and psychology, that is against the state-centred model of social policy.
In order to reinterpret the sociology of Durkheim in a broader interdisciplinary context, focusing on the moment of Schaffle is a helpful clue. Albert Schaffle was a German Staatswissenschaftler, economist, forerunner of sociology, and staunch opponent of authoritarianism. Durkheim reviewed the main work of Schaffle, the Construction and Life of the Social Body in his earliest academic article, and endorsed Schaffle's attack against state-directed socialism thereafter as in the Suicide and the preface to the second edition of the Division. The protest against the hypertrophic tendency of state bureaucracy is not a mere manifesta- tion of political adherence of Durkheim, but a careful strategy to define sociology as a distinctive science in the light of historical and intellectual circumstances of the epoch.
That was the time Durkheim was contending for sociology when French gov- ernment embarked on implementing modern social policies. By contrast to free market policy favoured in the 1880s, the turn of the century France welcomed state-led intervention measures originated from Imperial Germany under Bis- mark. The concern of Durkheim over the state-centered model of social policy and his alarm for the peril of individual liberty under the authoritarian regime is a theoretical response to the ongoing transformation of the state and society and to the state-oriented social thought at the time in France.

Changing Patterns of Spending on Leisure? Case of Finland, 1998-2012
* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In the 2000s, the landscapes of leisure consumption have changed dramatically in the Western societies. Many traditional industries such as tourism, sports, and cultural activities continue to flourish. In addition, the new information and communication technologies (ICTs) have become widely adopted in everyday life. Access to ICTs is often considered as essential while at work, home, and even when spending free-time outdoors. As the alternatives for productive leisure activities have increased, we have also witnessed a trend of narrowing population disparities in the consumption patterns. Against this development, it is possible to argue that engagement in various leisure activities has become more versatile and less connected with individuals' socio-demographic background. But does this assumption also apply to older consumers, people living outside urban and densely-populated areas, economically less well-off people, single parents, and the less educated population segments? Or, is it possible to argue that the expenditure patterns of the many disadvantaged population segments have changed differently from those of the better-off segments during the past decades? The paper examines temporal changes in leisure consumption by examining Finnish household expenditure patterns between 1998 and 2012. The data are derived from nationally representative set of household budget surveys (N= 17,412). Empirical analyses will concentrate on money allocation on cultural services, books and magazines, and household media and technology. In particular, structural disparities by educational level, economic background, age and life-stage, gender, and place of residence will be compared.

How Can Decision-Makers Cope with the Heterogeneity of Values in Public Innovations

In the last two decades the concept of innovation has been taken from Schumpeter's logic of competition at the market to the public sector. In the private sphere the making of profits is essential, and added profit can be seen as added value. For the public sector this is much more complicated, and it has been a large debate about the concept of "public value" since the publication of Moore's book "Creating Public Value" (1995). Values in the public sector can both be inputs (public ethos) or some sort of outcome (efficiency, improved quality etc.). But both for input and outcome there will be a heterogeneity of values. Beck Jørgensen & Bozeman (2007) are mentioning a "universe of public values". In the invitation heterogeneity is understood as the "coexistence of different rationales". We will argue that different set of values can be seen as different rationales. Creating new and innovative solutions in the public sector is part of the struggle for power in society. Different actors will use different parts of the "universe of values" to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about "public values", but especially on the case-studies in our edited volume "Framing innovations in Public Sector Services" (Fuglsang, Rønning, Enquist (eds.) (Routeledge Oct.2013)

Innovation in Nordic Elderly Care

Innovations has for some decades now been seen as the engine for success in the competition at the market. Now the concept of innovation has made its way into public sector and even into elderly care. This paper is about the efforts to innovate elderly care in the Nordic countries.

In many European countries there is a worry about the demographic changes in the populating process. The declining fertility rate and numerous cohorts from the after Second World War baby boom fading out of the labor market, is a challenges for the pension system and the economy, as well as for the caring system. Different actors will use different parts of the "universe of values" to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about "public values", but especially on the case-studies in our edited volume "Framing innovations in Public Sector Services" (Fuglsang, Rønning, Enquist (eds.) (Routeledge Oct.2013)

Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict

The principle of food security is in recent agricultural policy documents in Norway being used to re-legitimize increasingly neo-productivist farming policies and systems. Thus conservation of agricultural land is once again prominently positioned on the political agenda. With only very limited availability of farmland, only 3% of the land area is in productive agriculture as use, the issues of agricultural land conservation and food security have become more or less inseparable in Norway. Further, Norway, as a non-EU member, has insisted internationally on maintaining a very protectionist agricultural policy to meet the objective of being 50% self-sufficient in calories produced from agriculture.

A large proportion of the best quality farmland is within the vicinity of the country's major urban areas. While Norway was urbanised relatively lately by European standards, there is now a very strong centralisation tendency with in migration from rural areas. This, combined with increasing in-migration from abroad, is placing considerable pressure on the remaining farmland – particularly fertile land on the outskirts of major cities. Conflict between agricultural policy objectives for conserving farmland and an increasing financial interest following the demand for housing, roads and infrastructure is thus becoming a major issue in the public and political arenas. Based on a Norwegian case study, this paper will look at the provision of food security as collective goal and how this goal is framed and positioned in discursive struggles on land between localizations, globalisation and urban growth.

Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today

Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today By Abdul-Mumin Sa’ad Professor of sociology (Criminology) Provost, Federal College of Education, Yola, Nigeria And Ruth Bulus Iganus Medical Sociologist, Department of Sociology and Anthropology University of Maiduguri, Maiduguri, Nigeria Abstract Health care delivery refers to the work done in providing primary care, secondary care and tertiary care, as well as public health. Health care is delivered by practitioners in medicine, chiropractic, dentistry, nursing, pharmacy, allied health, and other care providers such as medical social workers, clinical sociologists, etc. Constitutionally, health care provision in Nigeria is a concurrent responsibility of the three tiers of government. However, private providers of health play a visible role in the country's health care delivery. The federal government's role is mostly limited to coordinating the affairs of the tertiary health care (university teaching hospitals, Federal Medical Centres) while the state government manages the secondary health care (the various general hospitals) and the local government focuses on primary health care (dispensaries). In spite of this clear constitutional provision there are myriad of challenges regarding healthcare delivery in Nigeria. Of course health issues have always been issues that nations grapple with. Added to this is the fact that natural and manmade disasters are becoming frequent, catastrophic and unpredictable and these are posing great challenges to healthcare delivery. Nigeria, being an underdeveloped nation is even more vulnerable to these challenges. This paper therefore identifies and discusses those challenges and proffer solutions to them from clinical sociological perspective with a focus on the need and strategies for active collaboration of all stakeholders (especially the Clinical sociologists, healthcare professionals, the government, the organized private sectors and the society generally) to effectively surmount the challenges.

SABBAGH, CLARA* (University of Haifa, csabbagh@edu.haifa.ac.il)

The present study identifies major preferences for combinations of rights and duties (henceforth, citizenship orientations), as reflected in the political worldview of Israeli junior-high school students. Two distinct orientations were found, termed here, “liberal” and “ethno-republican.” In order to contextualize the examination of citizenship orientations in the deeply divided Israeli society, the study compares three educational sectors which represent these rifts. Findings suggest that citizenship orientations are context-bound, in the sense that they depend upon the educational sector. As expected, ethno-republican orientations were more salient among religious Israeli Jewish students than among either secular Israeli Jewish or Israeli Arab students. Secular-Jewish and Israeli Arab students tend more strongly to endorse the liberal orientation, a propensity that is especially manifest among Arab adolescents. This trend supports the perception that Israeli Jewish population is bifurcated.

Betwixt and Between Global and Domestic Forms Of Justice: The Israeli Case Over Time

This article elaborates on the global/domestic binary division in the social psychology of justice judgments. We analyze the interplay between global and domestic perspectives on justice behavior and theoretically represent and empirically examine the dynamics of a society’s domestic system of distributive justice within a global context. The intersection of these two contesting, though intertwined, perspectives of justice is explored in the case of Israel. Integrating conceptualizations of neoliberal globalization, social justice, and the socio-cultural and historical conditions of Israeli society, we gauge the effect of macro-level globalization trends on the Israeli domestic ‘spheres of justice’ as evaluated by a representative sample of secular youth. We find that neoliberal globalization trends present a considerable challenge to Israeli Zionism’s foundational pioneering ethos. Yet the 2011 cohort of Israeli adolescents have not unanimously embraced

The Changing UAE Family

Emirati families have been changing since the advent of oil and wealth. However, the recent socio-economic shifts in the society have affected the family on many levels. What the UAE family has endured recently in term of outside and inside pressure due to globalization is probably not comparable in many parts of the world. In no other country has the proportion of foreign nationals in a society been boosted so high in so short a time as in the UAE. As a consequence, Emiratis are no longer the largest national group in their own country, and have had a hard time trying to sustain a culture among a continuously growing pool of foreigners. As communities from around the world have mushroomed around national families in both the public and private spheres, UAE households have turned global within. Although one could make comparisons with families in other Gulf States, the UAE’s pioneering economic model and speed of change have had an unprecedented impact on the globalization of families. This paper focuses particularly on women in the family (mothers and daughters) who are considered the gatekeepers of culture and social wellbeing. It looks Emirati women in the UAE are facing a new challenge. They are facing a challenge from different parts of the society and the state to perform to a role becoming increasingly difficult. The paper looks into such difficulties using a combination of quantitative and qualitative data gathered from National families of Zayed University students.

Mapping Filipinos’ Knowledge, Understanding, and Actions on Climate Change

A recent Climate Change Vulnerability Index identified 16 out of 170 countries as extremely vulnerable to climate change; of this set, the Philippines was ranked sixth (Maplecroft 2010). Despite advancements in technical strategies to adapt to the impact of a changing global climate, understanding the complex socio-behavioral dimensions of climate change remains a challenge. Using the data from a survey module on climate change commissioned by the World Bank and implemented by the Social Weather Stations (First Quarter 2013 National Survey), the study aims to know: (1) What factors shape Filipinos’ awareness and knowledge on climate change? (2) In a more qualitative sense, how do they conceptualize or understand the effects of this phenomenon? (3) What factors affect citizens’ participation in efforts to address climate change? Do awareness and knowledge actually translate into tangible efforts? Correlation analyses reveal significant relationships (moderate to strong) between awareness and knowledge on climate change and these variables: locale (higher among urban dwellers), socio-economic class (higher among upper class and educational attainment (higher among those with greater education). Climate change resonate to average Filipinos as a public health issue. When asked to identify the effects of climate change, half of them cited “increased incidence of illnesses”—significantly greater compared to other responses such as degradation of natural resources, ozone layer depletion, and rise in sea level. Participation in efforts to mitigate climate change is higher among those who are aware of the problem and the youth (with moderate to strong correlations). There exists very weak relationship between awareness on climate change and participation. However, there is moderate evidence to support that those with more extensive knowledge on climate change also have greater tendency to participate in actions on climate change.

SABOUR, M’HAMMED* (University of Eastern Finland, mhammed.sabour@uef.fi)

Social Inequality, Power Legitimacy, and the Future of Democracy in the MENA Countries

In spite of their relatively similar religious, cultural and linguistic foundations, the MENA (Middle East and North Africa) countries consist of a diverse set of particularities in terms of their geography, socio-economic structures, human capital, and political institutions. As far as their governments and governance are concerned, these countries are often characterized as authoritarian and autocratic regimes. Such governments have ruled autocratically and suppressed pluralism, limiting or totally denying fundamental societal, economic, and political
Nature and (pop) Culture Tourism in Hokkaido

For more than a decade now, the worldwide diffusion of Japanese pop culture has been analyzed as a soft power phenomenon, questioning the consequences of this success on the international image of Japan. Many studies have examine whether or not Japan is really gaining positive influence thank to contents exports, while the Japanese officials acknowledged the idea of coolness associated to the Japanese cultural tourism. For foreign tourists, festivals are mostly associated to cultural events that present a colorful and picturesque image of a different and exotic culture. This work is then an attempt to question new forms of tourism, in order to draw a parallel between festivals and other types of gatherings that attract foreign visitors. This study is lying on the idea that tourism is made significant by a specific imaginary of the visited place. The travelers choose and comprehend their destination and its culture through the picture they have before and during the trip, a picture elaborated from references. When enjoying festivals in a foreign country, tourists can see a concretization of their imaginary about the culture they discover, and sometimes, participating to the event, they feel immersed in that exotic universe.

The aim of this presentation is to show that this process is also at work in the case of contents tourism, when the travelers experience media pilgrimage (i.e. visiting places with significance in media narratives, Couludry 2005), guided by a fantasy built on pop culture and media references. Taking the case of Japan, this comparative study intends to show the similarity between the experiences of traditional festivals and pop culture events. In addition to data collected among French tourists in Tokyo, fieldwork will be conduct during specific events in 2014. Then, some traditional matsuri will be compared to events like the Comic market matsuri, which mixes playful aspects of traditional festivals and pop cultural influences, will be compared to events like the Comic market matsuri.
ny is estimated (Afentakis, Maier 2010). Additionally, the problem of fluctuation in
the geriatric care sector causes a competition about qualified personnel among
care-providing organizations.

Other sectors already use the idea of organizational commitment to keep their
employees. The basic concept of commitment (Allen, Meyer 1990) distinguishes
two components: affective, continuance and normative commitment. These
components are not mutually exclusive but rather coexistent. So far no specif-
cally study has researched the concept of commitment considering the specifics of
geriatric care.

This paper is based on preliminary results from a qualitative research project
looking at this topic from an inner-organizational perspective. As geriatric care
in Germany is provided by non-profit organizations as well as for-profit organiza-
tions both types will be looked at.

Results from interviews with elderly-home managers give an overview of prob-
lems about keeping qualified employees. The range of instruments, which are
already used by organizations to strengthen organizational commitment and
problems in everyday work, will be illustrated. In addition determining factors,
which restrict human resource management in the geriatric sector, are identified.

Besides general factors also organization-linked factors are included.

Furthermore, results from problem-centered interviews with elderly care nurs-
es provide reasons and conditions for why they work for their current organiza-
tion. These results will be set into context with the Allen/Meyers organizational
commitment model to specify the three commitment components in the context of
geriatric care.

Finally a guideline based on the research results is presented. It will help or-
ganizations in the geriatric care sector to strengthen the organizational commit-
ment.

Education Inequality Among Shrinking Cities and Regions in East
Germany

When birth rates drop the education system is the first social field to be con-
fronted with new challenges. Due to compulsory schooling the size of birth co-
HORTS affects the general school system quasi-automatically with dwindling en-
rolments. Newspapers in shrinking regions announce regularly school closings,
a topic which is highly controversial both among the decision makers in charge and
the affected communities. Pupils do not only have to cover larger distances to
school but also the affected places fear to lose their attractiveness as a business
and housing location. As the number of shrinking cities and rural areas (especially
in Europe and East Asia) increases, it becomes crucial to investigate which con-
sequences declining cohort sizes have for the school system. Are declining birth
rates increasing inter-regional education inequality?

The basic assumption of the proposed paper presentation is that some cities
and rural areas are more resilient than others when their schooling infrastructure
has to cope with declining birth rates. Cities and rural areas have different eco-
nomic bases. This is not only true when cities and rural areas are compared with
each other but also within these broad spatial categories. From this point of view
it can be suspected that school infrastructures in more affluent regions will be
more resilient to declining birth rates than those in economically poorer regions.

However, as schools are part of public infrastructure in many countries, this theo-
retically plausible relationship might also be modified by political decisions.

The analysis is based on micro-level data from East German regions for the
1990 and 2000 years. This regional focus is especially interesting for East Ger-
many faced a very steep decline in birth rates during the early 1990s. The Univer-
sity of Halle is an interesting case in so far as in this East German university the
societal context varies between monarchy, democracy, fascism and communism.
The empirical material focuses on published and unpublished work of Friedrich
Hertz and Rudhard Stollberg, as well as archive material to their activities and con-
icts. Specific dead ends of forms of historical sociology and empirical sociology
are compared with regard to the guiding question, whether there is a structural
tension between forms of totalitarianism and sociology.

sadamatsuatsushi@hotmail.com)

Dioxin Risk Controversy in Japan

In this risk society, we are confronted to many kinds of environmental risk
and involved risk controversy. Whether the risk is small or large, we have right to
choose that risk or not. But we sociologist should try to grasp the quantitative size
of the risk to analyze the discussions of scientists or experts in the public sphere.

So I try to propose the sociological analytical method of symmetrical scientific
controversy through the case study. The case I focused in this paper is Dioxin risk
controversy in Japan.

Dioxin had caused a great deal of public concern in the 1990s. It was exhausted
from industrial waste incinerators and municipal waste incinerators all around Ja-
pan. People around the incinerators started anti-pollution movements. And some
of dioxin researches in Japan helped them and measured the exhaust of dioxins
in environment. At last those movements resulted in the enactment of anti-diox-
ins law. However, risk studies in Japan consisted that dioxin’s risk is not so large,
according to their own risk comparative studies.

On the context of environmental movement, this kind of risk studies may be
often criticized; “they are political.” But in many cases it is not clear how it is po-
litically and what point it is political. In this study, I analyzed the scientific paper
of risk studies and compared those of dioxin researchers. As a result, several
assumptions were found in the “scientific” paper of risk studies. Especially, av-
average values they used are different from that of dioxin researchers. We can say
this is political. And we have to pay attention to the point that this is not derive
from the risk study, but it is from the attitudes of risk studies. This distinction
is important in the debate in public sphere. Symmetrical analysis can make this
distinction possible.

Between Citizens and Municipality

Since 2006 Tehran municipality has started a pilot environmental and urban
development project in Beryanak, an old southern and popular neighbourhood
particularly exposed to seismic dangers. This new urban experiment, part of a
wider environmental-seismic prevention project, aimed at implementing a partic-
ipatory urban renewal based on a dialogue with inhabitants, the neighbourhood
council, local associations and with a scientific mediation of a research unit of
anthropologists and town planners.

This project involving professional and social dialogue was innovative in Teh-
ran, where a centralized and technical approach was traditionally favoured. More
broadly, it reflects the participatory shift in urban policies illustrated by the de-
centralization law of 1997 and the creation of elected neighbourhood councils in
Tehran in the 2000’s.

This paper will examine this complex dialogue and the way neighbourhood
councils have progressively positioned themselves as key actors of urban devel-
lopment in Tehran. Indeed these collaborative and participatory organizations
designed to integrate ordinary citizens to the definition of their city’s public pol-
cies, have encountered many difficulties to fit in the local political space. Thus,
this paper will focus on the different conditions and modalities of mediation and
cooperation in the Beryanak project and how they evolved through time. We will
both study the structure of the dialogue, mainly the habitus, backgrounds and
representations of the actors (town planners, neighbourhood councils, munici-
pality, etc.), and the tensions, conflicts or the asymmetry between them in terms
of positions, knowledge, power and other resources.

This paper is mainly based on a long-term field study conducted in Beryanak
(Tehran) since 2006 (participant observations of deliberative experiences, proj-
ect’s meetings observations and semi-structured interviews with City advisors,
neighbourhood councillors, citizens, researchers, state representatives, religious
field actors, etc.).
The Impact of Sentencing Decisions about Similar Cases and Others’ Opinion on Sentencing Decision

In 2009, Lay judge system started in Japan. Under this system, lay judges and professional judges determine guilty of crimes and sentences to the convicted criminals. After the determination of introduction of this system, some scholar have explored how that decision making is done by psychological experiments –mock trial study. However, the research which employed this method focused on private lay judges’ decision, not outcomes after deliberation. It is due to the difficulty of conducting mock trial study with deliberation.

Of course, the results of this research are useful when thinking about modification of trial procedure. However, the determination of sentences to the convicted depends on deliberation, but is done through deliberation by lay judges and professional judges. In this paper, the impact of information which is given to lay judges is examined. In trials and sentencing deliberation, lay judges look graphs about past similar cases. This is basically shown in the form of graph of distribution, and it has powerful effect on lay judges’ sentencing decision. In a psychological experiment, the impact of that graph and participants’ opinion about how useful that graph is and how respectfully we should treat that graph are explored. In addition, there might be conflicting opinion with regard to sentencing outcomes by other lay judges. In the same experiment, reactions to those different opinions are also examined. This psychological experiment did not include sentencing deliberation itself, but due to that experiment, some important aspects about sentencing deliberation can be explored.

In this paper, the results of the psychological experiment are shown. Then, some practical implication about trial procedure is discussed based on the results. Especially, to incorporate general public opinion into judicial system is one of the goals of Lay Judge System in Japan. Therefore, the results are examined from this perspective.

The Demographic Transition and Subsequent Transitions: The Case of the United States

The United States has experienced major demographic shifts throughout its history. Like many other developed countries around the world, the traditional demographic transition associated with declining mortality and declining fertility has spawned subsequent demographic transitions. These transformations have included the urban transition, the marriage transition, the household transition, the aging transition, and the race/ethnic transition. Of these transitions, the two most prominent at the beginning of the 21st century are the latter two—the aging transition and the race/ethnic transition. In particular, the country is in the process of aging rapidly as the large cohort of baby Boomers start reaching age 65 between 2011 and 2029. In addition, as the white population begins to decline due to low fertility and major aging, the Latino population due to its youthfulness will dominate the nation’s population growth. Indeed, population projections suggest that the Latino population will more than double from 50.5 million in 2010 to 111.7 million in 2050 compared to a 5 percent decline in the white population from 196.8 million to 186.3 million during this period. These major demographic transitions will have major impacts on demographic, social, and economic trends in the coming decades and in many ways is likely to lead to varying experiences between the United States and those of other developed countries. The implications of these trends in the future of the United States will be discussed.

The End(s) of Diversity: the Struggle Between Nationalism and the Hyperdiverse City

In the framework of the FP7-project Divercities, we investigate how urban pol- icymakers deal with the increasing hyperdiversity in European cities (Tasan-Kok, van Kempen, Raco & Bolt, 2013). In reaction to immigration and the intense di- versification of the population, nationalist parties have gained electoral success in several Western-European cities. As a political ideology that focuses on con- structing and maintaining a homogeneous nation-state, nationalism seems to be at odds with the hyperdiversity in contemporary Western-European cities. Char- acterized by the coexistence of people with very diverse socio-economic and eth- no-cultural backgrounds, the hyperdiverse city is an anomaly to most theories of nationalism. While authors like Anderson (1983), Gellner (1983) and Smith (1986) explained nationalism on a countrywide or regional scale, little has been written about the relationship between nationalism and the city. In this paper, we want to address the question how nationalist policies deal with hyperdiversity in the city.

In order to answer this question, we take the example of Antwerp in Belgium. As the largest city of the Flemish region, Antwerp is an interesting case because of the electoral success of Flemish nationalist parties on the one hand and the diver- sity of its population on the other hand. While extreme right-wing Flemish nation- alism has long been relegated to the opposition, a moderate Flemish nationalist party recently came to power in Antwerp. Based on a critical discourse analysis of policy documents and interviews with policymakers, we compare past and present integration policies regarding immigrants in Antwerp. This comparison illustrates how urban integration policies have shifted away from multicultural to assimilationist policies. Serving nation-building ideals rather than the pragmatic inclusion of immigrants in the city, the nationalist assimilation policies seem to be ill-equipped to deal with the increasing hyperdiversity in the contemporary Western-European city.

Context specificity of stratifying factors is often alleged, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu’s ideas on cultural consumption and leisure practices were lucky in this respect. Due to their centrality for the late XX century sociology of culture and stratification, and general framing that they have specific French flair, their applicability has been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low-leisure activities find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu’s concept to the Russian context. As Bourdieu’s gradualist aspect of this notion which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu’s work, but in largely the same vein, produce results more fitting with Russian context. As Bourdieu’s gradualist aspect of this notion which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

The Academic Empires: The World-Society Argument and Colonial Legacies in the International Student Migration System

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This paper tests the world-society theory by applying it to data on higher education students’ migrations between countries. The expectation derived from WS theory is that (a) the migration flows will manifest in three ways. (b) that particularistic cultural-institutional variables (e.g. common language, similar institutional structures caused by belonging to common political units) will have minimal or diminishing significance in predicting size of student flows. Volume of international student migration between pairs of countries (UNESCO statistics) in 1998-2012 is used to reconstruct the flows system. Network measures were calculated for each of the years to observe the dynamics of student migration system. For evaluating significance of cultural-institutional variables, negative binomial regression with historical experience of belonging to the same political system (colonial empire typically) was performed as an independent variable controlling for proximity, economic affluence, and size. Historical measures of dependence are calculated for each of the years. This paper tests the predictions of this puzzle.

Legacies in the International Student Migration System

The Academic Empires: The World-Society Argument and Colonial Legacies in the International Student Migration System

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This paper tests the world-society theory by applying it to data on higher education students’ migrations between countries. The expectation derived from WS theory is that (a) the migration flows will manifest in three ways. (b) that particularistic cultural-institutional variables (e.g. common language, similar institutional structures caused by belonging to common political units) will have minimal or diminishing significance in predicting size of student flows. Empirical Measurement of Integration & Cohesion

The Daasanach in the border regions of Ethiopia, Kenya, and the South Sudan have fought with neighboring pastoral groups, viewed as “enemies”, for more than a half-century. The Daasanach claim that their primary motive for going to war is the demarcation of masculinity, allowing men to be recognized as “brave” by community members. Various cultural mechanisms praise the “brave man” who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the youth are drawn to the destructive power of the automatic rifle, and their behaviour is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to “renounce war”. Two main types of experiences contributed to such decisions. First was the bodily (including “physical” and “mental”) pain of war, such as being grazed by a bullet or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanetch during the course of a war. In wartime, the unity of “we Daasanetch” could break down under the violence. Many persons who “renounce wars” said, “I became cowardly” as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.

Migration impacts on cohesion, namely how migration affects neighborhoods, and how people reflect their pain and suffering in the battlefield to their life. The empirical measurement of the integration and cohesion impacts of migration throw up key conceptual, practical and sociological challenges. The paper features the findings of a study of such impacts in the UK commissioned to develop evidence-based public policy. Integration and social cohesion are elusive concepts that are defined in different ways. There are impacts on national identity. Measures here refer to perceptions of feeling or belonging to a national society. In the British case, the trend over time is of a move from an ancestral understanding of identity, couched in ethno-cultural fixtures, to one based more on civic values and responsibilities. Secondly, migration impacts on integration, defined as group outcomes set against the societal average. Here migration’s impact assumes a great deal of importance—as migration and policies that modulate migration have impacts on trajectories. Notwithstanding that the choice of measure is critical, it is clear that different immigrant groups perform very differently. Finally, migration impacts on integration, namely how migration affects neighborhoods, and is defined by people’s perceptions of how people get along with each other in their local area. The paper reports UK empirical measures of this in two ways, first by perceived positive or negative changes in neighborliness and in respect and interaction between social groups; and second by levels of trust in local institutions (such as the police). The findings suggest that new migration does not notably affect cohesion but pre-existing diversity and high levels of poverty are predictors of lower social cohesion. There are important insights for social researchers examining issues around the size of migrant communities and for policymakers in respect of managing the pace of change in neighbourhoods.

Changing Food Consumption Practices Among the Emerging Middle Classes in Metro Manila

This paper will present preliminary research results from an ongoing research project that considers the dynamics of food consumption among the middle classes in Bangalore and Metro Manila, including consumption patterns, practices and policies. Asia is often seen as the center of gravity for the “new consumer” phenomenon, where a rise in affluence can translate to consumers who enjoy better diets, private transport, throwaway products, and fashionable versus functional clothing (Myers and Kent 2004). The focus of this paper is on Metro Manila and the emerging middle classes, who may not necessarily be experiencing ‘better’ diets, but where there does seem to be a trend towards ‘organic’ and ‘local’ food consumption and production among some people. This paper wishes to highlight the emergence of organic and/or local food and composting as entry topics for environmental concern, as well as the influence of globalization on environmental initiatives.

One main finding is that changes in food consumption practices are not only related to a rise in affluence, but to changes in other practices, such as changing the location of your home, joining a new workplace, or the employment of a domestic worker. Specifically, a change towards organic food consumption seems to be motivated by a different set of reasons, not directly related to environmental concern: certain people interviewed as part of this research project and who have chosen this kind of diet claim to do so because of health reasons, proximity to certain markets, as well as the influence of travels abroad. Looking upstream at organic farming and further downstream at composting, people engaged in these new practices had all been ‘elsewhere’ and brought new ways of doing back with them, upon returning to the Philippines. The significance of demonstration projects towards more ‘sustainable’ practices will be discussed.
ing body of research in ‘sustainable consumption’, tackling the related themes of air-conditioning consumption patterns, practices and policies, as well as the potential for change. Research was conducted among three socio-economic groups: households based in low-income housing, the growing middle classes in new housing developments, and affluent households based in gated communities. As a backdrop, the paper provides information on the environmental impact of household electricity consumption, in relation to economic and population growth. The history of cooling practices and air-conditioner manufacturing is also briefly discussed. The central theme of the paper is how current practices are tied up with a complex consumption, from staying cool at night, to dressing fashionably. The material dimension of air-conditioning is discussed, specifically in relation to ‘west is best’ housing trends in Metro Manila: certain housing styles may be locking in the need for artificially cooled air for years to come.

General trends in the region will no doubt contribute to an increase in air-conditioning consumption, yet current consumption patterns are not homogenous: how people go about keeping cool in Metro Manila varies greatly. This paper considers what the future might hold for keeping cool in one of the hottest regions of the world – hot, both in terms of economic development and temperature levels. The conclusion provides insights, which may be relevant to other mega-cities in the region.

SAHED, IMAINE SAHED* (EHESS/Cadis, imaine-s@hotmail.fr)
Voluntary Risk Taking and Individual Emancipation

Background: In France, the important proportion of teenagers who develop a repeated consumption of cannabis, tobacco or alcohol consumption worries the security and public health authorities. The consumption practices among young people are recognized by public and scientific discourse as a risk behavior. Many scientific researches try to explain why they develop a health, social and penal risks behaviors. However, very little one has analyzed the way that experience of consumption is lived by youth. How do teenagers perceive their consumption behavior, what meanings that they attach to their behavior?

Methods: In order to apprehend the subjective experience of drugs consumption, we have led a qualitative investigation. We carried out 42 biographic interviews with young people, twenty-one girls and twenty-one boys between seventeen and twenty years old. They live in Ile-de-France. These interviews have permitted us to apprehend subculture around their consumption experience and analyze the dynamic by which the have developed the substances use.

Results: The public health categorization on consumption by youth does not tally with what happen in reality. The perception of the teenagers on their consumption moves away from the epidemiologic categorization. The drugs use means to the participants festivity or conviviality. Moreover, teenagers, who are currently looking for an autonomous identity, develop consumption, not to oppose to their parents or social and penal norms, limits. We observe that if the youth people develop the consumption of cannabis, alcohol and tobacco it is especially to build a personal and individual identity: it is in a context of individual emancipation (Kaufman, 2004) that we consider voluntary risk taking is part of individualization process.

Conclusion: There is a contrast between the collective and scientific perception and perception of teenagers on drugs consumption. Voluntary risk taking is a subjective and positive experience which responds to his quest for identity.

CIVIL Society and Development Perspectives

Civil Society and Development Perspectives

Voluntary action is an age old phenomenon in the Indian social landscape. In the past, say before colonial era it was embedded with cultural view, traditional values, social ethos which commonly atomized as humanistic, idealistic commonly act as bridging the gap of unjust social system. But in recent years, especially with the initiation of liberalisation, globalisation and privatisation, the formal Voluntary Organisation (VO) is emerging as key players in the plan development process initiated by the government. Currently, they have acquired as ‘third sector’ for innovative approach, flexible structure, ability to reach the unreached, dedication, committed, capacity to mobilise the local initiatives. In light of such scenario, the analysis also draws on earlier studies on vulnerable and precarious workforces in the context of the privatisation of public services and the commodification of care. The paper explores working conditions under ZHCs in the care sector and aims at shedding light on how precariousness of the workforce affects in particular BAME women in a segmented labour market. Concepts such as institutional racism, ethnocentrism, and intersectional discrimination inform the analysis. This paper also looks into the role of trade unions in supporting their members on ZHCs and informing the public debate.

Whilst being empirically grounded in an on-going fieldwork with trade union officers and BAME workers, this paper is expected to be completed in February 2014, and the analysis also draws on earlier studies on vulnerable and precarious workers (TUC, 2008; European Foundation, 2010; McKay et al., 2012), ethnic penalties (Heath and Cheung, 2007; Raymond and Modood, 2007), as well as class and gendered work (Pflau-Effinger and Rostgaard, 2011; Dahl et al., 2011; Simonazzi, 2009; Bettio and Plantenga, 2004).
Development Induced Protests in Contemporary India: Response from the State and Civil Society

The issue of forced human mobility has been receiving much attention from the government, policy makers, civil society organizations, activists and academia in contemporary India. Social scientists interpret forced human mobility as involuntary migration and internal displacement. The desire to take control over a certain territory and its resources becomes a cause of conflict which forces its residents to leave their current homes. The most visible are displacements associated with conflict over resources or antagonisms based on ethnic background. In the case of development-induced displacement or conservation-induced displacement, territory becomes an arena of specific conflicts between the interests of the public or private sector and the needs of people displaced or affected by particular development decisions. Development-caused displacement is often associated with conflict over resources which have led to landlessness and consequent problems.

The paper attempts to analyze the contemporary Indian society and development-induced displacement from a class-caste-gender perspective. The lower one is on that ladder, the greater the negative impact of changes introduced in their lives without their consent. The marginalised communities especially Dalits and tribals feel it more than the others do, and women among them are the worst affected. They are deprived of the resources that were basic to their survival and are denied access to education, health services and nutrition. It forces them to deny their children right to childhood and to a decent adulthood. Women are deprived of any freedom they had. Development cannot be real till such failures are remedied and its benefits reach those who pay its price.

Democraticization of Art Production and Voicing Subversive Vision of the World

Tunisian youths are experiencing new form and styles of art production. This is especially true for rap music ans graffiti. Facebook and you tube networks are the predelements of meaning of the products. Onr can see in this a wave of democratization of the production of art which sappers the old rules of ranking popular and mass arts. In the other hand, the content of these products are more and more subversive especially after a massive youth participation in the revolution which did not keep a real change. This widespread disappointment enhanced practices of anger and refusing. A subversive imaginaire is more and more inspiring the youth vision of the world. Authorities are facing these new manifestations of the youth rebellion with police controle of the scences of shows, trials... Is this a new stylist of telling the crisis ? Why does the social narration of inequalities take this form?

Spousal Violence Among Rural Women: A Sociological Study in North-East India

Spousal violence is a grave challenge to a happy marital life. When proclivity of violence takes place in dyad relationship, it crushes the bond of family. Therefore, spousal violence has been considered as one of the most serious social problems throughout the world. Hence, this issue has a sociological significance. The theoretical arguments regarding spousal violence can be classified into different categories. But in this study specific focus has been laid upon wife-battering only. This paper seeks to know the nature of violence and to find out the causes and consequences of spousal violence in rural areas of North-East India. Apart from these two objectives, awareness, knowledge and likelihood of the victims towards legislative measures to save them from spousal violence have also been investigated with proper method. The field of the study concentrates around a village namely Gooskata in North-East India. Keeping in view the objectives of the study, basic information about spousal violence was gathered from 100 married women out of 208 households of Gooskata village. The data were collected purposefully and in this context accidental sampling procedure was followed. The findings of this study have revealed that rural women of North-East India have been suffering spousal violence. The relationship in between the husband and wife became more and more crucial and complex in rural areas, but it is also true that most of the violence have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.

Leisure in Spiritualism : Alien to Mole-Folk

The present paper intends to make a comparison between the male and female members of the Marwari community in terms of their participation in socio-religious gatherings. Marwaris are known to have two religious sects: the first comprises idol-worshippers, like the Agarwals, Maheshwaris and Oswals, and the second, the non-idol-worshippers, like the Jains. Active involvement in religious gatherings is a commonplace characteristic of the Jains and this particular custom is seen improving social relations both within and outside the community.

The role of Marwari Jain women is noteworthy in this context. For most of the time they are found tied to their apron with little or no association outside the threshold. Obstuseness of husbands also adds to their misery. In such circumstances, religious organizations, mostly named ‘GOSTIS’ prove beneficial in venting their shriveled up emotions to other female peers and building ties with them. These women, irrespective of any predisposition, regularly gather in such meets, where through prayers and incantations (precisely, chanting of ‘Samayak’) some remarkable pleasant time is spent. Often, such assemblages are followed by refreshment at a member’s place, where children of the member families also participate. Inter-generational ties are thus strengthened with such initiatives taken predominantly by these women.

Men, however, remain aloof from such settings and only partake when their ‘Guruji’ visits at any juncture. Marwari women thus, enjoy an upper hand in all
cases relating to spiritualism, and enjoy this authoritative position as it gives them the opportunity to spend their leisure in a healthy manner. A considerable demarcation thus separates the Marwari men and women in connection to their notion of leisure in spiritualism and this is what this paper intends to throw light upon. A detailed survey-work has been undertaken with some in-depth interviews to represent this field as accurately as possible.

SAITO, HIRO* (University of Hawaii at Manoa, hsaiao@wcfia.harvard.edu)  

Two Visions of Cosmopolitics  
This paper explores how Ulrich Beck's world risk society theory (WRST) and Bruno Latour's actor-network theory (ANT) can be combined to advance theory of cosmopolitics. On the one hand, WRST is good at illuminating how relevant political actors interact with each other to deal with global risks while negotiating the two logics of politics, cosmopolitanism and nationalism. On the other hand, ANT is good at showing how scientists participate in the construction of global risks and helps to elaborate how science and politics are intertwined in cosmopolitics. By combining the strengths of WRST and ANT, it becomes possible to examine simultaneously the tension between the two logics of politics and the co-constitution of science and politics, both of which, I argue, are crucial for theorization of cosmopolitics. The proposed synthesis of WRST and ANT also force sociologists to critically reflect on their role in cosmopolitics and envision a new form of critical theory.

Nation Consciousness and “Multiracialism” of the Singaporeans: Focusing on the Concept of “Racial Difference” and Their Interactions  
Singapore is well-known as a ‘multi-racial’ society, but then, how they form their identity as ‘Singaporean? Considering this problem, ‘multiracialism’ becomes an important concept in making ‘Singaporeans’. However, its purpose is to make ‘racial differences’ obvious and emphasized. Therefore, how do people create Singaporean consciousness in these kind of society? The aim of this research is to study this problem by using free talking interview and observation data carried out by the speaker. We can say that the government of Singapore reinforces the ‘races’ in order to make differences among ‘races’ highly visible by emphasizing the differences among the ‘races’. In Singapore, differences among ‘races’ are visible even though people from different ‘races’ interact with each other daily. Moreover, a sense of community or even of being a ‘Singaporean’ begins to grow and maintains; at the same time, differences among ‘races’ are maintained.

Rainfall Variability, Coping Strategies and Livelihoods: Case Study from Godavari Basin, India  
Natural resource-dependent rural households are likely to ensure a disproportionate burden of the adverse impacts of climate change -- droughts, famines, floods, variability in rainfall, storms, coastal inundation, ecosystem degradation, heat waves, fires, epidemics, and even conflicts. In some parts of the world, these effects may already be in play with potentially disastrous consequences for the poor. Reliance on subsistence agriculture means the impact of stresses and shocks (such as droughts or floods) are felt keenly by rural poor people, who depend directly on food system outcomes for their survival, with profound implications for the security of their livelihoods and welfare. Variability in rainfall had been plaguing the farmers of Andhra Pradesh during the recent past resulting in crop failure and indebtedness. It would be important to find out the coping mechanisms that are being developed by the farmers to deal with variability in rainfall and the support being provided by the government. In some parts of the state, farmers are opting for cultivation of commercial crops instead of food crops as they are finding better returns from these new types of crops which could lead to issues like food security and loss of livelihood for certain communities.

This paper focuses on identifying livelihood adaptation strategies of cultivators in Nizamsgar project, where farmers developed new water sharing mechanisms and brought about changes in farm practices to deal with rainfall variability.

Social Inclusion of Disabled People and Two Models of Risk  
In his article “From Dangerousness to Risk”(1), Robert Castel described the contemporary society as a “two-speed society”. It is a speed which consists of hyper-competitive and marginal sectors, and assign people to either of the two according to their abilities. Castel illustrates this strategy with sheltered employment of disabled people.

Unlike eugenics, according to Castel, confinement and sterilisation is used no more in the “two-speed society”. In addition, special care becomes unnecessary by assigning disabled people to less competitive activities. Thus, Castel argues that the “two-speed society” enables risk prevention which can dispense with both repression and assistance.

Risk in Castel's argument refers to a combination of factors and is detached from personality. Once an individual comes to have certain risk factors, however, s/he receives a special treatment like sheltered employment. In this sense, risk here effectively makes specific people the “Other”.

On the other hand, risk in Ulrich Beck's argument(2) is universal, in that people all over the world more or less share the same risk. For instance, he points out that people who are able-bodied at present can be disabled at any time. Such common risk, once recognised, can engender solidarity.

In the context of disability, interpreting disability as a universal risk is quite popular, though such limiting understanding of disability as Castel's certainly exists. This presentation first locates some researches and programs concerning social inclusion of disabled people in reference to these two different approaches to risk and disability. Then the presentation goes on to examine the different consequences of these approaches.

What Drives Growth of Jobs and the Arts? a Chicken and Egg Analysis  
In the classical economic view, jobs attract workers to a city. The new workers patronize amenities, such as restaurants, shops, and entertainment, which in turn expand. Thus, in this view, jobs are the main factor for city growth. However, in our study, we add the hypothesis that the arts and related amenities may also attract people to a city. Arts and amenities may serve to attract workers, shifting where they choose to live. This in turn increases the growth of non-arts related industries in the region. Thus, do cities grow primarily due to the jobs created by non-arts industries, or also due to the presence of arts amenities and entertainment? This is the chicken and egg question.

We use zipcode data from the American census to analyze the relationship between the growth of the arts as related to other industries. We use cross-lagged regressions on fifteen years of data in more than 30,000 zip codes in the US. The analysis crosses data from different years and time spans, using the number of arts jobs as a reference to the growth of arts related-industries. Preliminary results show that arts and non-art industries take turns in influencing primarily the growth of cities, thus, providing evidence that both arts and other industries are relevant for the growth of cities. However, analyses are still being done to obtain more subtle results.

Still Facing High Barriers? the Factors Affecting Birth Experience Recognition of Female Workers in Japan  
Even though Japanese government implemented a lot of countermeasures, declining birth rate is still a serious problem in Japan. Previous research found that husband's socioeconomic status and housework support have strong impact on fertility behavior of females both with and without work. Over the last two decades, Japanese female workers have been facing a difficult trade-off between career continuity and the first child birth. This study focuses on female workers in Japan and examines empirically the factors affecting the recognition of birth experience.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their workplace, upon the recognition of birth experience. Our results indicate high housework frequency of the husband decreased their first birth hesitation. On the other hand, positive recognition toward birth experience is influenced by the support in the workplace. Smooth communication with both family and workplace members is a possible solution to this problem. These findings advance our understanding of how Japanese companies can take specific measures to improve low fertility.

The Effects of Using ICT on Work-Family Life: an Empirical Study Based on the Work-Family Border Theory

One of the features of ICT use is greater alleviation of time and location restraints in communications. Although positive effects of ICT for improving work-family life have been reported, much of the ICT literature stresses negative effects on work-family life through increased extra work. Sakamoto and Spinks (2011) found that a higher degree of using ICT tools directly related to higher work-family conflict of Japanese workers. This study explores the effective mediating factors that can reduce the negative impact of ICT use, applying work-family border theory to measure the concepts and propose hypotheses.

Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their workplace, upon the recognition of birth experience. We analyze the mediating effect of domain identification, influence and across-the-border communication. Our findings advance our understanding of how we manage the permeability between work and family life.

Work and Private Life of University Professors in Japan and Positive Action Taken By Japanese Universities

This presentation will examine the work and private life situations of female and male university professors in Japan, and offers some examples of positive or affirmative action taken by Japanese universities and discuss its effectiveness.

In Japan, the ratio of female researchers is low, as is the case of other countries. In 2011, just 13.6% of university professors (full professor, associate professor, lecturer, assistant professor) were female. From around 2006, the Japanese government started a positive action policy to increase the ratio of women. The government grants subsidies to offer about 10 universities each year for three years. The universities offer support centers for women, gender equal office, childcare centers and so on.

The presenter has worked in one of the gender equal offices as a staff member. My observation there and a questionnaire research for university professors are the main data source of the presentation. First, the presenter will discuss their work and private life situations. Many researchers have shown that male productivity tends to be higher than that of females. However, the results show gender does not appear, scientific output when we control other variables. Next, they have specific marriage patterns. For example, many female professors tend to be single or have partners who are professors. Many couples live separately. However, women tend to shoulder domestic work and child rearing, as is the case with other occupations.

The presenter will show examples of them and discuss effective ways to support both sex and foster gender equality in universities.
Broken Promises. Temporary Labour Migrants' Experiences of Working Conditions and Social Security in Finland

West European countries, including Finland have started to recruit more labour migrants to low-income sectors in hope of a partial solution to the consequence of rapidly aging working population. This paper demonstrates how highly skilled labour migrants from non-EU member countries face social disqualification in their efforts to become part of the Finnish labour market. Particularly, African and South-Asian male workers find mainly cleaning or dish-washer jobs despite their academic background. Our study explored the temporary-labour migrants' experiences of acquiring opportunities to working rights and social security. The results show that the majority of the interviewees had been reluctant to look for information either due to the fact that they were working only temporally in Finland or due to their week bargaining positions. The information of recruitment, working rights, the Finnish taxation system, and of the Finnish social security rarely reaches the labour migrants. These features can partly be explained by labour and migration policies, and by the natives' strong creation of 'otherness' between the native Finns and the non-white foreigners. In the analysis an intersection of gender, ethnicity and class has been applied to describe the unequal and sometimes precarious position of the labour migrants. The research material consists of documents, memos based on ethnographic observations and of seventy-eight semi-structured interviews, of which forty-nine were conducted among cleaners, bus drivers, and seasonal agricultural workers.

Re-Creating Mutual Belonging: Filipino Labour Migrants' Local and Transnational Practices Between Finland and the Philippines

This paper demonstrates the unequal embeddedness of transnational Filipino labour migrants in the Finnish and Filipino society. My study of Filipino labour migrants' working and living conditions in Finland explored the migrants' adaptation strategies in their efforts to become integrated in the Finnish society and in staying in touch with the ones left behind. The analysis showed how the integration of Filipino labour migrants to their new host society is influenced by their adaptation strategies, such as of the migrants' local and transnational practices and contacts. The active participation in sociocultural and religious practices helps the Filipinos to find their way of being in Finland without losing their contacts to the Philippines. The migrants' adaptive strategies strengthens the Filipinos ethnic identity and its mixture their ethnic belonging to an ethnic minority community in Finland as well as to a transnational community. These two communities should not be perceived as two opposites but as dual sites of mutual belonging consisting of a hybridity of transnational and ethnic collective identities. At the same time, the migrants' opportunities to become familiar with the Finnish society and to learn the Finnish language have been vague. There is a risk of segregation from the Finnish society if the Filipinos do not become familiar with the Finnish society and language. The research material consisted of open-ended interviews conducted among twenty Filipino cooks, nurses and cleaners and of memos based on ethnographic observations.

**Occupying Gezi: From an Uprising to a Social Movement?**

Occupy Gezi started as a small protest to oppose the demolition of a park in Istanbul and quickly transformed into a national grassroots initiative against the government's authoritarianism and a hybrid democracy, which locks political action into the ballot box. After a month of intense street protests leaving 5 dead, dozens wounded and under arrest, it has shifted to "park forums" as thousands gather in their neighborhood parks to discuss the future and come up with a game plan. This lecture will look into how the OccupyGezi experience opened new social and political possibilities, spaces of political action (online and off) and a new kind of political language; what shook the so-called "apolitical" generation out of their comfort zones to the streets; and brought people from all walks of life and political spectrums together. It will also look into the chances of Occupy Gezi becoming a full-fledged social movement and the limitations it faces in the process.

**Mysteries of the Discourses That Encourage Cooperation. Ver. 2**

Mysteries of the discourses that encourage cooperation. Ver. 2 - Another important constant number on the human societies added to "Dunbar's Number":

**Methods** I use a multi agent simulator. The structure of the pay-off of the game is composed by a kind of 'social dilemma' in her neighborhood, and other orientations with their costs. Each agent has a strategy which has two kinds of output values; [act cooperatively / act not cooperatively] and [speak to advocate cooperation / not speak]. There is also another parameter, threshold for speaking to advocate cooperation parameter. Each agent will speak to advocate cooperation with 'a cost'; when and only when the 'cooperative actor rate' of her neighborhood is UNDER her 'threshold for speaking to advocate cooperation parameter'.

**Results/Conclusion** I tried to check whether "speaking to advocate cooperation" or "not speaking to advocate cooperation" has effects on the cooperators rates in the whole universe. The results are in Fig.1. Next, I tried a parameter survey on how values of the ‘neighborhood radius’ have effects on the cooperators rates. I did 100 trials where the ‘neighborhood radius’ were randomized with equal probability from 0 to 130. The result is in Fig.2. As the figure shows, in the cases that the ‘neighborhood radius’ ranges from 10 to 25, the ‘cooperators rate’s seem to be distinctly high. It seems that there is a ‘threshold value’ around 25 by which the ‘cooperators rate’s are discriminated between being high and being nearly zero. I think that these models are interesting in several points. We will discuss some at our conference.
Results and discussion: The passage from regions to individuals in a large municipality confirms the validity of the model for people 65+ years old. ADL disabilities are the main disability dimension with highest association with the worsening of the SE condition, also due to the effect on the social relations dimension. The public strategies seem to better protect individuals and families, with the help of the informal network of support for the family care. The indicators in the models could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could extended wherever these kind of data are routinely collected.

What’s the Impact of Coverage Error to the Study of Social Inequalities?

In some European countries, including Italy, survey organizations use the Directory of Landline Phone Numbers as sampling frame to survey the general population and study social inequalities (Häder and al. 2012). Under certain conditions, the use of this sampling frame may be problematic.

In Italy, with the only exceptions of Callegaro’s work (2004 and 2008), there is very little research on this topic. Little is known, for example, on the extent to which coverage error occurs and its impact on survey estimates, although in 2011 only 50% of households are included in the sampling frame (e.g., the directory of landline phone numbers). We believe a clear understanding of the nature of coverage error is urgently needed (households may be excluded from the sampling frame for different reasons) to develop appropriate strategies to tackle the coverage problem.

The overall aim of the paper is to evaluate the impact of coverage error on the accuracy of the survey estimates for a set of key socio-economic variables and, should evidence be found to exist, to discuss possible strategies to correct for it.

We first describe changes over time in the pattern of coverage error by focusing on three groups of Italian households (household included in the sampling frame, households excluded from the sampling frame as they do not have a telephone, households excluded from the sampling frame as they do have a telephone but the telephone number is not listed). We then explore whether there are any differences in these groups in their socio-economic characteristics, including indicators of general trust and, for a selection of survey items (including income, health, income and social class), investigate the impact of coverage error on bias.

We use the 1997-2012 Multiscopio survey (“Aspetti della vita quotidiana”) run by the Italian Statistical Institute (n=20,000 households).

RADL, JONAS (Open University UNED)

Research on preschool education and day-care programs is gaining momentum since the discovery of its potential to reduce social inequalities in education and other areas of life. Much of this research relies on case studies to measure mid and long term effects of preschool attendance on academic performance and school transitions. In this paper we adopt a broader focus and a comparative approach by exploring the extent to which early (pre-primary school) child stimulation can reduce background differentials in learning outcomes across 28 countries from the Americas, Asia and Europe.

Particularly we seek to unveil the relative impact of direct parental involvement and preschool education, as different ways of child rearing, on educational disadvantages that stem social origins, and the extent to which this applies to all the countries in our sample. Are the effects of both practices (institutional vs. at parental home; formal vs. informal) substitutive or complementary? Are there measurable cross-country differences in the learning benefits of preschool education? Is kindergarten attendance equally stimulating for children from different socio-economic origins? Is the impact of different parenting practices sensitive to national contexts? How do institutional characteristics of the educational system affect performance at this stage?

To answer these questions we use PIRLS 2011, an international data source clustering students of primary education (4th grade) across countries. PIRLS provides a standardized measure of reading literacy among 4th graders. We estimate random constant and random-coefficients multilevel models to assess the effect of the type of child care adopted by families on educational outcomes. This approach enables us to decompose the observed variance in reading skills into its constituent parts at the country and student level. Beyond our substantive findings, we discuss the potential for a broad comparison of multi-layered processes that result in unequal life chances among children.

Climate Change Discourse and Action in the Philippines: Views, Voices, Vignettes

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In the Philippines, there has been some amount of talk and, fortunately, some amount of action too, about climate change. We ask: What is being said and done about climate change in the country? How is climate change being framed and acted upon? Why are these developments unfolding the way they do? How do these discourses and practices reflect and influence sociocultural dynamics? The paper presents some views, voices, and vignettes from the country. It attempts an understanding of these realities by drawing from social constructionism, critical discourse analysis, and social movement theory.

Managing NGOs for Older Persons in East and Southeast Asia: Lessons and Good Practices from the Field

The paper reviews the roles and experiences of non-governmental organizations for older persons (NGOs-OPs) in East and Southeast Asia. It is based on case studies of selected NGOs from Hong Kong, Japan, Korea, Indonesia, the Philippines, Singapore, Thailand and Vietnam. The study finds an increasing number of NGOs-OPs present in the region, working in diverse areas of service delivery, education, research, training, and advocacy. Community-based older persons' organizations or senior citizens associations are also becoming more active, with some organizations taking on social and political activities and venturing into policy advocacy and other areas traditionally served by non-community-based NGOs. Most NGOs are taking on multiple roles simultaneously, e.g., adding advocacy to their other programs, while a few are beginning to focus on a specific target group, activity, or service. On the organizational and management side, NGOs-OPs are also becoming more accountable and are taking creative and innovative steps in meeting the challenges of management. To be sure, NGOs-OPs need to address important gaps, notably the lack of capability-building at the community level, the lack of follow-through in policy implementation, and the need to solicit critical, hopefully constructive feedback from the older persons they are serving. Nevertheless, like the older persons they are working for and with, NGOs-OPs themselves are getting more active and growing wiser with age.

An Experimental Study Of The Relationship Between Knowledge, Attitudes and Recycling Behavior In Iran

Study on Mazandaran province, Iran in 2013 to investigate this premise. A survey method was utilized to extract neighborhood change. The data was analyzed using SPSS. We examined two types of knowledge: knowledge new programs and knowledge about recycling. We also hypothesized that attitude about the recycling would be a predictor of recycling behavior. The results showed a significant positive relationship between attitudes towards recycling and recycling behavior. We used data from a survey on Mazandaran province because they lead to increasing values (both monetarily and symbolically) that ultimately fuel further demographic transitions. Using a comparative and mixed methods approach, this project examines neighborhood change in New York, Los Angeles, Chicago, and Detroit. Data from these findings and made some suggestions for future research.
processes, namely to consider the “specific strategies of representation and commodification and the context in which they are represented” (2000:21), or the critics to the regressive aestheticization of politics (and economy) by the politicization of art (W. Benjamin, 1985). We will analyze the use of these strategies in the practices of artists, entrepreneurs, experts, dwellers and their conflictual context - involving real estate boom and heritage practices (Pereira, 2010; 2013); the formation of gated communities (Caldeira, 1997) and the resistance against them (ibid., 2012). How they give new meanings to identities, places, revealing the tensions and complementarities between advertising-driven aestheticization and politicization of art and problematic the construction of a singular public space: a heterogeneous urban landscape and a democratic political sphere, both institutional and non-institutional (Arendt, 1991; Habermas, 1984) in the city of São Paulo. We will use the methodology of visual sociology (Ferro, 2005), problematizing it in an interdisciplinary approach.

Can Outsourced Workers Organize? a Case Study from the Philippines

This presentation will detail an attempt by outsourced workers in the Philippines to form a labor union. These workers are in the “knowledge process outsourcing” sector, meaning that they possess significant human capital and do skilled tasks for firms of the Global North. The case immediately presents two puzzles. First, given the many structural barriers known to impede unionization by outsourced workers in the Global South, how did a union campaign emerge? Second, why did this unionization attempt ultimately fail? My ethnographic research inside the outsourcing facility provides answers to these questions. Representation struggles were initiated by highly-skilled workers and in response to new, driving tactics on the part of local management. The latter were reacting to pressures put upon them by their Western clients. The unionization campaign appeared to have caught local managers by surprise, and throughout it they were very concerned to keep news of it from reaching the government, the press, and Western clients. In short, employees possessed significant structural and workplace power in their attempt to gain recognition. Ultimately, however, it was local management’s ability to harness greater associational power that led to the defeat of the union. One general implication is that studies of labor in global supply chains should theorize and examine empirically the vendor-client relationship. In these supply chains, vendor firms and client firms have different interests and resources.

Foxconning Science: The Globalization of Academic Publishing

This paper presents ethnographic work done inside an outsourcing firm in the Philippines. This firm is part of the emergent knowledge process outsourcing, or KPO, field. It contracts with publishers wishing to outsource such work as copy-editing, typesetting, authorial communications, and more. Most major scientific publishers now contract with such firms. I present evidence that the nature of these arrangements supplies the impetus to adopt despotic tactics for organizing work. Suppliers lack basic knowledge of the overall field of production (in this case, academic publishing), and so judge themselves against unknown competitors. They compete on price, rather than quality, and so continually engage in various “low road” techniques of management. Most notably: wage suppression, the “driving” of workers, and forced overtime. I conclude the paper by discussing at length one incident that produces a prism into the entire labor regime: a unionization dispute that took place at this facility. Global pressures induced worker resistance which was then channeled into a unionization campaign. But ultimately, management was able to disrupt this campaign by mobilizing local networks and traditions. In this case, global and local forces collided to control the hidden workers in the new global production of science.

SALLÉE, NICOLAS* (University of Montreal, nicolas.salle@umontreal.ca)
Changes in Status, Reconfiguration of Identity. the Case of Educators in the French Youth Justice System

In the aftermath of World War II, the French Youth Judicial Protection Service (YJPS), responsible for the rehabilitation of young offenders, gained its autonomy from the prison administration, and became an autonomous agency of the Ministry of Justice. The YJPS now employs 8500 people, of which 4500 are educators. The latter, trained in a division of the YJPS, have the exceptional feature of benefiting from French civil servant employment status. For a long time, this protective employment status has been interpreted as a sign of distinction and prestige. Represented by the YJPS national union (YJPS-UN), created in 1947, the YJPS educators have cultivated this prestige by demonstrating their unconditional attachment to the political purpose of their administrative agency: the construction of a justice model based on the rejection of youth imprisonment. However, in the current years, the YJPS has been subject to another ideological shift, which requires the implementation of punitive-oriented policies. This has changed the interpretation of their employment status, less perceived as a sign of prestige, than considered as an instrument of subordination to these new policies. The legal obligation to pressures put upon them by their Western clients. The unionization campaign remains firmly wedded to the political purpose of their administrative agency: the construction of a singular public space: a heterogeneous urban landscape and a democratic political sphere, both institutional and non-institutional (Arendt, 1991; Habermas, 1984) in the city of São Paulo.

Rehabilitation and Punishment. a New Model of Rehabilitation in the French Youth Justice System

According to recent research in policy transfer studies, youth justice systems across Western Europe are taking a “punitive turn” (Muncie, 2008), marked by the emergence of a new “culture of control” (Garland, 2001). This process is particularly significant in the United States and Great Britain, however it appears that other European countries are following suite (Baillee & Cartuyvels, 2007). A closer look, however, reveals complexities: the level of youth incarceration, a commonly adopted indicator of punitiveness, differs considerably between countries. The French youth justice system, analyzed in this paper, does not escape these complexities: since 2002, the youth incarceration rate is decreasing, while the content of public discourse and legislative changes seems to fuel the increase of a new punitiveness (Baillee, 2008). To understand this apparent paradox, we will describe how political injunctions aimed to “get tough” on young offenders, are translated and reworked, at a lower level, through the activity of the administrative agency responsible, in France, for the functioning of youth centers: the judicial Protection of Youth (JYP). This analysis will allow us to highlight the crystallization of a new model of rehabilitation under constraint. First, using qualitative data, we will describe the increasing use of semi-closed youth facilities as an alternative to prison. Tied to the development of new prisons for youth, supposedly “rehabilitative” (Chantrain & Sallée, 2013), this evolution is changing the decrease of the level of confinement than its meaning. Formerly perceived as anti-rehabilitative, confinement is now legitimized as an inseparable feature of rehabilitative processes. Second, we will analyze knowledge production production practices, particularly child psychiatric and psychological knowledge, mobilized by the JYP to support this legitimation process. This paper will defend the idea that this new knowledge underpins old disciplinary practices, and symbolizes the growing concern surrounding, in France, the institutional fabric of socialized individuals.

The Notions of Otherness and Critical Construction Sites: Theorizing Professional Boundaries within

This paper is about social and symbolic boundaries (Lamont & Molnar 2002). The aim of this paper is to suggest a theoretical way to understand constructions of 'Otherness' within professional boundaries. I draw on the empirical case of the doctors with immigrant backgrounds in the Swedish medical profession and use the notion of critical construction site by Cornell & Hartmann 2007. In order to bridge the gap between structure and agency the study started with a review of the Swedish research literature in order to see how ethnicity, 'race' and 'Otherness' had been received in research. In this review I found that 'Otherness' is often something that is ascribed to patients and not doctors. I then went on reviewing the professional debate around the issue of doctors with immigrant backgrounds in Sweden I found something I theorized as underlying assumptions of 'the Other'. This ethnic 'Otherness' was not about doctors' 'ethnicity' nor about 'race' instead it had to do with that the doctors had immigrated and was perceived as something sable and predetermined. This notion of 'Otherness' was later also found in interviews with doctors with immigrant backgrounds. In the interviews I expectedly found stories of discrimination, prejudice and even racism but also found stories of agency, and coping strategies where the 'Otherness' they were ascribed with was used a way to construct their role in the Swedish health care system; to take care of patients with immigrant backgrounds.

The paper raise issues as doctors with immigrant backgrounds seem to be using a primordial definition of the Other in circumstantial ways in order to find their place within the Swedish medical profession which I argue, is a critical construction site.

SALMONSSON, LISA* (Uppsala University, lisa.salmansson@soc.uu.se)

The Other Doctor: When Professional Boundaries Conflate with Notions of Ethnic ‘otherness’

The paper suggests that field of Sociology of professional groups need to consider social position theory in order to theorize boundaries of ‘Otherness’ within them. The paper is based on some of my concluding remark from my dissertation where I interviewed medical doctor with immigrant backgrounds in Sweden about their feeling of belonging to the Swedish medical profession, among other things. The thesis is that the medical profession in general and the Swedish medical profession in particular have been successful in controlling the number of new doctors that are accepted to Swedish medical schools. Sweden has also experienced and increased in doctors with immigrant backgrounds working in the Swedish health organization. In my interviews with these doctors they often told me about something that could be understood as hierarchies within the profession on the basis of who are the outsiders within. I have chosen to theorize this as ‘ethnic Otherness’ as it seem to have to do more with that they are ascribed with ‘non-Swedishness’ than about what ‘ethnicity’ they have. These divisions I argue are linked to ideas that can be found in EU legislation, in the Swedish research on ethnicity and health as well as in the Swedish Medical Association and can therefore be a case of another successful boundary making.

Set in the City: Condominiums As Settings of Technological Innovations Toward Sustainable Consumption

One of the tangible signs of growth in Metro Manila, a Philippine megacity of about 11.7 million people, is the proliferation of condominiums. A condominium is a form of housing tenure whose cost of land is prorated due to multi-story building and which makes it possible for many people to live closer to the work-place and shopping centers. This paper lays out the proposition that the condominium is both medium and outcome of technological innovations that either stimulate or stymie sustainable consumption. Technological innovations embodied in the design of spaces and rules of condominium living provide the material setting that defines interactions and images relating to inhabitants’ consumption of technologies in the home and consequent social constructions of sustainable consumption. The paper focuses on social practices relating to the use of information, communication and entertainment technologies as well as domestic technologies by condominium-household members. The take off point is a body of data and insights from key informant interviews, direct observations, and secondary data analysis.

Spatial Indicators of Right-Wing Extremist Attitudes

Prevention programs for right-wing extremism in East Germany have been systematically conducted for the last decade. Recently, however, there have been increased efforts to tie local prevention programs closer to the up-to-date research in this field. Nevertheless, the exchange between social scientists and the organizers of prevention measures revealed a gap: Whereas the former rely on survey data to identify who, i.e. which socio-demographic groups show high risks for developing far-right attitudes and why, prevention programs need to know where – in which towns, rural communities or areas – these high risk groups are likely to be found. It therefore seems necessary to ascertain spatial indicators for right-wing extremist attitudes.

The analysis is based on cross-sectional survey data from the eastern German state Thuringia aggregated to the level of rural districts and up to three measurement points between 2001 and 2013, supplemented by corresponding spatial characteristics of these districts, describing them in respect to their economic, social, cultural and political status. To assure valid estimations for the effect sizes of spatial characteristics, it is necessary to choose a statistical approach that allows a) to test spatial characteristics against known predictors for right-wing extremist attitudes on individual level, b) to account for different roles various spatial characteristics are supposed to play (predictors, moderators) in regard to predictors on individual level and c) to ascertain to what extent changes in attitudes between measurement points can be ascribed to (changes in) the status of the rural districts.

As can be demonstrated, ‘conventional’ path models accompanied by latent-change models meet this demands. Their adequacy and limitations for analysing effects of spatial characteristics on (aggregated) individual characteristics are then discussed. As well as the validity of the implemented research design in relation to the expected practical use of the results for preventing right-wing extremist attitudes.

SALVATORE, ARMANDO* (National University of Singapore, salvatore@fors.net)

Contending Modernities and the Sociology of Islam

The sociology of Islam has become a vital track of original research, in both historical and contemporary perspectives, on Muslim majority societies and Muslim minorities since after the 1980s, through establishing significant links to wider conceptual debates in social theory and cultural studies. This research program paralleled a larger sociological trend that privileged a comparative perspective in the exploration of modern developments and dilemmas in the West, East Asia, and the Muslim world, while also questioning (and reconstructing) the controversial notion of civilization.

The paper will argue that while the sociology of Islam benefits from a comparative perspective and a corresponding theoretical revision of Eurocentric postulates, it cannot be completely satisfied by them and should place its endeavors in a more explicit context of exploration of not just parallel and multiple, but of contending modernities. This field of study has thus the potential to unsettle evolutionary conceptions of modern society even more than purportedly anti-Eurocentric approaches and immanent critiques of modernity within social theory are able to do. This specific potential of the sociology of Islam is implemented by questioning the comparative perspective itself, to the extent it focuses on parallels and diversities more than on the complexity of entanglements (which are as much cultural as they are economic and political) between articulations of Western modernity and concurrent developments in the Muslim world.

The suggested path is to take charge of what is specific to Islam and Muslim actors and revisits the parameters of Western-centered modernity without exceeding in any anti-essentialist immunisation, which if pushed too hard (e.g. as many scholars and analysts are doing under the impact of the recent and ongoing revolts in the Arab world) would bring us almost back to square one, i.e. to an absolutization of state Western parameters of political, economic and cultural modernity.

Decent Work and Social Justice for Informal Sector Workforce in South Asia

The increased economic integration during the last decades of the twentieth century coincided with rising income inequality in some countries and increasing unemployment among the low skilled mainly on European continent. Community based schemes are springing up everywhere in the developing world, most frequently in Africa and parts of Asia.
The international labour Organization unanimously adopted the ILO Declaration of social justice for a fair Globalization on 10th June 2008. The declaration expresses the universally of the Decent work Agenda. All members of the organization must pursue policies based on the strategic objectives, employment, social protection, social dialogue, and rights at work.

This paper examines the present position of the informal sector workers in South Asia. The study is based on information collected through secondary data.

At present, Multinational Corporations have entered in the global market; therefore, the nature of capitalist production has been changing. It is effect of weakening traditional social institutions in developed and developing countries. In the era of globalization, right to life and livelihood has become the central issue not only for organized sector workers but unorganized workers also. South Asian Association for Regional Cooperation (SAARC) is an economic and political organization of South Asian countries, which includes India, Sri Lanka, Bangladesh, Pakistan, Afghanistan, Nepal, Maldives, Bhutan.

Informal workers include all workers in the informal sector as well as in the formal sector performing informal jobs. Labour laws in the countries of the region are not universally applied and excluded several groups of workers or groups of establishments from their scope. It is generally the formal or organized sector that is covered by labour laws. As a result many labour laws apply only to a small proportion of the workforce.

There is a need to implement the ILO Declaration of social justice for a fair globalization.

SALZBURGER, VERONIKA* (University of Cologne, salzburger@wiso.uni-koeln.de)

Does the Transition to (grand-)Parenthood Change Intergenerational Relationships?

Existing studies suggest a close relationship between the presence of grandchild and intergenerational relationships. For example, studies on grandparental involvement in parenting show that the birth of a child increases opportunities for associative solidarity between generations as well as it increases the demand and supply of functional solidarity, both with regard to material help or childcare as well as information and advice. This, in turn, may also result in increased affective solidarity. But it might also operate in opposing directions: If the demand for intergenerational solidarity meets supply from the grandparental side, this may enhance the existing intergenerational relationship; in case of incongruency, the event may result in increased intergenerational conflict or detachment. Yet, more research is needed on how intergenerational relations adapt to the new family structure and needs of family members after the generational transition.

Past research mostly concentrate on the presence of grandchildren regardless of their age, consider only one direction (parents or grandparents perspective), or are analyze cross sectional data. The present study examines the transition to first parenthood and the associated development in intergenerational relations over a two year period concerning various dimensions of the Bengston-Silverstein-solidarity-model. The German Family Panel (pairform) is chosen as the appropriate data-set to addressing the research question, including reports from both perspectives, gathered in 2010 and 2012. Using difference score regression, N=7,163 dyads were analyzed. The analyses suggest an increase in the frequency of contact and practical support only from the elder to the younger generation. No changes were found for financial transfers. Regarding the frequency of conflicts, the generational transition has a decreasing impact.

SAMBE, MICHIKO* (Ochanomizu University, chikosam2012@gmail.com)

Invisibility of Sexual Minority “Women” in Japan

There are no existing laws that either discriminate against or guarantee the rights of sexual minorities in Japan. It is partly because the proportion of the informal sector workers in Japan are quite invisible in every day life in Japan, except on TV shows. It is not strange to see a gay man or a man who appears to be so on TV. They often talk like women, crossdress, and are expected to be teased or to play the fool. However, we hardly see a lesbian or a woman who can be seen as an FTM (Female to Male) transgender even on TV.

In a LGBT community, some says the number of lesbians is less than that of gay men, because they don’t see them so often, and others mention most women are bisexual, so there not so many lesbians in Japan. Why do they appear to be fewer “lesbians” than gay men? Do most of them recognize themselves as “bisexual”? In their presentation, I will compare interviews of sexual minority men and women focusing not on “the number” but the invisibility of the sexuality of women in terms of three points; the first is their different experiences when coming out, the second is a sexual double bind, and the third is ambiguity of sexuality which is beyond description in binary categories (e.g. homosexual and heterosexual). By introducing narrative, I will discuss how these elements make it difficult for “women” to talk about their sexual orientation and sexual identity.

Wasted Opportunities - the Production of Power and the Challenges to Organizing Informal Reclaimers

Movements and organizations attempting to organize informal workers are confronted with the challenge of overcoming social divisions and power relations between informal workers. And yet, the burgeoning literature on organizing informal workers pays curiously scant attention to the ways in which power relations between informal workers shape the ways in which they organize and circumscribe their terrain for political action. This paper explores how the informal workers' stories that reclaimers (waste pickers) develop in order to govern their labour process produce power laden social identities and relations that hinder their ability to organize collectively to transform their place within the value chain. Although grounded in an ethnographic study of reclaimers on a garbage dump in Soweto, South Africa, it draws on comparative experiences in Asia and Latin America in order to draw out the broader implications for the theorization and practice of organizing informal workers.

Franchised Central America: Migration and Labor Dynamics

Malgré d'contestables progrès économiques et politiques au cours des deux dernières décennies, l'Amérique Centrale continue d'être une terre de forte émigration. Certes la recrudescence de la violence et de la criminalité dans la zone n'est pas la seule cause qui contribue à creuser la tendance, mais la plus grande intégration des économies centraméricaines dans les circuits de la mondialisation des activités productives laissait espérer aux populations de meilleures opportunités. Afin de comprendre les raisons d'une émigration quasi structurelle, nous invitons le lecteur à faire un petit détour par l'histoire de l'économie coloniale et des divers modes de production et d'exploitation des richesses. Ce regard historique indique quelques pistes pour comprendre les formes productives adoptées à l'heure actuelle mais celles-ci seront principalement analysées à partir d'une cartographie de ses principaux flux migratoires. Cette cartographie tiendra compte de la diversité de la population et des espaces productifs locaux, ruraux et urbains, les premiers étant porteur de nombreuses mutations sociales, dans la famille ou le travail par exemple; les seconds donnant l'occasion d'évoquer la place qu'occupent certains secteurs productifs dans la mise en mouvement des centr'américains, ceux de la maquila, de la construction ou encore du tourisme. Mais c'est bien à l'articulation de ces dimensions, à la fois géographique, économique et sociale que cette communication entend défendre la thèse d'une mise sous franchise de l'isthme centraméricain, bande de terre devenue réceptacle d'activités productives, légales ou illégales, le plus souvent déléguées et sous-traitées, et où la transnationalisation des espaces n'est pas tant symbole d'ouverture que d'enclavement.

Exploring Age and Aging Via the Life Course Perspective: A Filipino Perspective

Aging is a natural and universal human phenomenon. It is natural as it is part of the human biological process and universal as it exempts no one, across time and space. The naturalness and universality of the aging process indicate a spectrum of how human beings experience it. It is both a collective and an individual experience, at the same time. As individuals add on years to their lives, the population also ages. This brings to mind the famous sociologist C. W. Mills’ (1959) position that a person's biography is linked with world history. The sociological imagination, the frame of mind that Mills believes could enable one to understand the said linkage, reminds us to look into how social structures bear on one's personal life, how personal troubles can become public issues.

The institutionalized life course as conceptualized by Kohli (2007) lends a distinct tool in understanding how external forces such as social institutions, social structures and cultural elements interact with each other and with society’s individual members thereby predicting actions and promoting relative stability. How do these forces and an increasing population age and space. The naturalness and universality of the aging process indicate a spectrum of how human beings experience it. **Building Global Worker Communities: The Case of Filipino Migrant Workers**

Building global worker communities: The Case of Filipino Migrant Workers. Filipinos overseas are not wanting of associations or organizations to belong to wherever they may be. Commonplace are social organizations around common professions, faith/religion; also based on geographic regions or ethnolinguistic origins in the Philippines to name a few. These formations are meant to provide support to the members, enhance their profession, religion/faith, ethnolinguistic identities and the like. Rarely do they get in conflict with the laws and policies of the host countries; neither were they inclined to have sustained campaigns critical of policies in the Philippines.

Fast forward, 4 decades later, we see an expanded and varied landscape of migrant communities. In Hongkong, migrant domestic workers are joining and forming their unions and merging into coalitions of different migrant nationalities. In the Gulf Council (GCC) countries where organizing of workers-local or migrants-in whatever form and orientation is almost a taboo, there is no stopping the migrant Filipinos from organizing cyber communities. Their membership knows neither boundaries nor time limits.

In other nations such as Taiwan, what is feasible are support groups such as Church/faith-based migrant formations that are spread out around the country. Every Sunday, these formations touch base with more than a thousand Filipino migrants who congregate in the churches for the worship service. Off and on the pulpits, migrant issues are raised; activities and campaigns are undertaken.

Increasingly, the ways and ways of organizing migrants pave the way for more direct involvement of migrants on issues that impact them; for more consolidated actions and responses and for support and solidarity between migrants of one country and with migrants of other nationalities. Indeed, migrant worker organizing is the future, once that challenges the boundaries of nation-states in more ways than one.

**SANCHEZ, FÁBIO** (Universidade Federal de São Carlos, sanchefabio@uol.com.br)

**New Configurations of Informal Work in Brazil: Besides the Informal, Short of Rights**

This work aims to examine the non-wage based labour relations and understand its implications for the State and Society. These kinds of labour relations have been referred to as “informal” or “non typical”. In this sense, they have been viewed academically and politically as lacking or unviable.

However, it is true from the perspective of the traditional labour institutions (Unions, State, and the juridical forms of labour regulation) these labour relations are aliens and cannot be characterized but for absence of the key attributes that traditionally have defined labour, in the context of political and economical changes that took place in the past decades, these labour relations are an important part of the accumulating history and have generated new fields of conflict and have been trying to get politically organized, building identity and pushing forward with their agenda.

The first part of the work focuses on understanding the theoretical and political implications of the non-wage based relations for labour relations in general. On the second part, we try to understand the emergence of this new reality and the development of new political subjects with their own agendas and identities. However, although these labour relations and its workers are not informal, they still not recognized in their relation with the State as having rights.

**SANCHEZ, FÁBIO** (Universidade Federal de São Carlos, sanchefabio@uol.com.br)

**The Solidarity Economy and the Social Struggles in Brazil: The Right to Associated Labor**

One of the most important examples of a collective subject rising in the public arena in Brazil is the solidarity economy, which for several years has been sharing itself as an autonomous social movement. In this process, it has been trying to build new social rights for Associated Labor. It is a description and analysis of this process that this work intends to develop.

With this objective, it starts by rebuilding the history of the Solidarity Economy in Brazil, then in the next chapter that despite its long history and connection with the Brazilian social struggles for more than a century, it is only in the last thirty years that it has assumed a new configuration and new meanings as a result of the social and political changes that took place in Brazil after the eighties.

The second part of this work focuses on showing how the Solidarity economy today has become a new social, economical and political reality in the Brazilian society however; the subjects of the Solidarity Economy still lack the institutional recognition of its rights.

Lastly, we analyze how the subjects involved with the Solidarity Economy have been for years mobilizing and requesting the rights to Associated Labor and have achieved some successes in this process such as the creation of the National Secretariat of Solidarity Economy and the approval of laws for the Solidarity Economy. As a result, the analysis of this movement in Brazil demonstrates that there are no natural rights but rights are political constructions consolidated from processes of social struggles that aim to expand democracy and transform society. It is some of these political agendas that we try to explore in this work focusing on showing the arenas where the struggles and debate around the development the right to Associated Labor take place.

**From Hara to Midam: Public Spaces of Youth in Cairo**

After the revolutionary events it is possible to appreciate a transformation in the uses of public space in downtown Cairo. That is no longer surprising to see in public walls—even those of Cairo’s administrative Megama building or private houses—political graffiti represented this transformation, and converted the public space both as a site and instrument of revolutionary struggle. This transformation takes place against the backdrop of urban planning that sought to limit the availability of open spaces in which citizens might congregate, and the development of gated communities for the wealthy that, along with exclusive private clubs and privatization of space. During last years, often these globalized spaces are remade by creating local and regional ties and design features that were not anticipated by the planners. The appropriation of public space—squares and streets—by youth groups for different uses that which it was conceived and planned, have become in physical manifestations of a different Egypt. This different Egypt had roots in the understanding, production and living experience of public space of the traditional cairoennes harras and ashaybat—informal neighborhoods—where, also, the young people even has a significant role. Their living experience or urban space in the quarter permits to transform the public in a comunal space in the cosmopolitan areas that they transit. In this paper, I try to present the different manners of living both, the cosmopolitan and traditional urban spaces by youth groups.

**La Divulgación Del Conocimiento a Traves De Lo Gadgets. Caso: Usabilidad Del Multimedia y La Hipermedia En México**

El presente trabajo se sustenta en el desarrollo de proyectos de investigación desde 2004 a la fecha del Cuerpo Académico Diseño y Cultura de la Universidad de Guanajuato, integrado por investigadores de diversas áreas (diseño, arquitectura, biología, educación, derecho) los cuales están enfocados a la divulgación del conocimiento en los niveles de preescolar hasta posgrado en el Estado de Guanajuato. Los productos realizados integraron el multimedia como punto de partida para ampliar la divulgación del conocimiento hasta interactivos para PODCAST y IPOD, actualmente se están llevando a cabo propuestas de hipermedia con la finalidad de utilizar la cultura tecnológica para incrementar el número de usuarios.

La idea de implementar las nuevas tecnologías surge como respuesta a las modalidades de educación abierta y a distancia que actualmente se han constituido en una herramienta en la que no existe la coincidencia espacio-temporal entre alumno, contenido y profesor como tradicionalmente ocurre. Por tanto, el diseño de los materiales de apoyo se considera el uso de los medios de comunicación alternos como los PODCAST que se han convertido en objeto de uso común entre los estudiantes, así como la audioconferencia, que permite la comunicación sincrónica e interactiva con el apoyo de imágenes para optimizar el logro de objetivos. La utilización de estos recursos tecnológicos aumentó el número de receptores significativamente en los años 2010 a 2012 situación que ha impulsado el desarrollo una metodología que integra las fases de concepción de ideas, desarrollo de estrategias educativas en simuladores, determinación de parámetros multimedia, y desarrollo de prototipos.

Coffee, Certification Schemes and Standards in the Reshaping of Sustainability Markets, Tracing Global-Local Tensions

In the last fifteen years, certification schemes (and the standards they enact) for producing sustainable products have become one of the most important strategies for enhancing sustainability into commodities (such as coffee) market. Similarly, certification schemes are introducing important changes in the governance of agriculture systems. Such transformations have been the focus on a wide set of works that critically highlight how certification schemes are embedded into a new “global” as well as the city-regions of becoming part in the context of a moral economy. Although many of these approaches isolate technical and social dimensions as separated realms relative less attention have been put on how certification schemes are enacting sustainability in terms of trust, a key element in the material shaping of any differentiated market.

Following Buschi (2011) contributions on standards, enacted in the Certification schemes (Van Der Kamp, 2012), and trust I explore how certification schemes can produce two version of it in two different locations. First, trust as consistency in the International Coffee Organisation (ICCO). Here I describe how certification schemes are designed to produce trust in the market related to the transparency and the consistency of coffee production according to international environmental standardised criteria. This trust, then, is limited to the boundaries of a certificate. Second, I describe the experience of a small coffee roaster and retailer with certification schemes in the UK. J. Atkinson & Co. What emerges there is a concept of trust as trustworthiness. Certification schemes are framed in terms of coffee relationships, these involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

SAND, ANN-BRITT** (Stockholm University, ann-britt.sand@anteriora.se)

Caring Responsibilities and Gainful Employment in Middle Age: A New Population Based Study in Sweden

The Swedish welfare model is based on the premises 1) the society, not the family, has the main responsibility for care and 2) all adults are gainfully employed, from the time of employment until retirement. Sweden has a high proportion of women in the workforce, also in their 50-60ies. Nonetheless, it is estimated that about 70 percent of all elderly care is performed by relatives. This study is a mixed method study and focus on caring responsibilities for elderly parents or other family members. An enquiry was made during spring 2013, of a random sample of 6000 individuals 45-66 years old (61.1% responses) and interviews from 40 carers in various caring situations has been made. It focuses weather the caring responsibility have any impact on paid work, maintenance and everyday life as well as their experience of public care, possibility to leave job and payment for care. Theoretically the study is connected to feminist welfare research. Of central value is to analyse gender, class, ethnicity and age. Early results shows that over 40% of the respondents give help and 30% of women and 27% of men, help and old, disabled or ill family member at least once a week and 15% and women and 12% of men help daily or several times a week. Care affects life in different ways; feeling mentally and physically exhausted, having difficulties to focus on work, less time for leisure. More women than men have made changes in their working life in order to manage the situation. Corresponding to 7% of women and 4% of men 45-66 years in population we can see that 100 000 women and 50 000 men has made changes in their working life; reduced working hours, stopped working, take early retirement as a result of caring.

Work-Life Balance. Welfare State, Family and Caregiving in Japan and Sweden

Japan and Sweden share comparable situations. Both countries have a high and growing part of elderly in the population and high ambitions to handle the needs for care, even if they have different directions when it comes to organization and financing. Still the family is the main care giver for the elderly in both countries. This makes it interesting to compare and highlight the effects of care for family caregivers.

Until the early 1990’s the Japanese policy on eldercare was based on the family as the main caregiving unit. In 1989 a ten year plan for institutional and home care marked a policy shift. Though family support was added into the Japanese system, cash reimbursement to family caregivers was not included, a deliberate decision, when the National care insurance was implemented in 2000, to secure that municipalities would not choose to lean on family carers instead of developing formal care services.

Japan has a long policy on elder care, in which the formal services constitute the basic and family care the supplement. The economic crises, during the 1990ies led to cutbacks in the formal care and since then there is an increased focus on caregiving roles of families, and the Swedish government have support development of carer support. Despite eldercare being a societal responsibility the share of family caregiving has increased while the economic support to next of kins has diminished.

We are comparing results from a survey in Sweden and from secondary data in Japan on the perspective of family carers. In Sweden women and men give help to about the same degree. However, if we look to the consequences of family important policy issues, especially those relating to urban sprawl. The result in many countries is a search for the perfect municipal structure to enable effective city-region policy making.

But what is forgotten in this kind of analysis is that, if city-regions are becoming relatively more populous in relation to small towns and rural areas, then our national and sub-national legislatures are becoming increasingly dominated by urban voters. In countries with one dominant city (France, England) and in federations and countries with strong devolved regional legislatures, urban policy for city-regions will not be made at the municipal level, whatever the municipal boundaries and structures might be. We are used to hearing that “all politics is local.” What we need to consider is the likelihood that “all politics is urban.”

Although examples will be drawn from around the world, particular attention will be paid to the Toronto city-region (the Greater Golden Horseshoe) and Ontario, the Canadian province in which it is situated. Despite Ontario's vast territory, two of the three largest cities (Toronto and Hamilton) in the city-region. Ontario's politics is urban politics. Although the main argument of this paper derives from my 2008 book, The Limits of Boundaries: Why City-regions Cannot be Self-governing, the paper modifies the analysis in light of recent developments.
The first large-scale research on living conditions in Norway was conducted in 1973/74 by a group of social researchers led by sociology professor Gundmund Hernes at the University of Bergen. The research project was initiated and sponsored by the Norwegian government. The study of living conditions was the first comprehensive study of living conditions in Norway focusing on how the conditions of children's upbringing affected their education, which in its turn affected other social resources and thus the income and living conditions of people. Gundmund Hernes (1941) had studied under James Coleman at John Hopkins University and was heavily influenced by the latter. Hernes, who later on also led the investigation on power and democracy in Norway, became a great entrepreneur of clinical sociology in the country. The study on living conditions became the first of a number of large-scale, government sponsored research projects, based on mathematical models, large sets of data and an economic approach to sociology.

**Living Conditions and Education**

The objective of this paper is to focus on popular literature written about Japan in post-Soviet Russia. Japan has for long time occupied a special place in Russian and Soviet people's consciousness: this neighbor country was, and still remains, the object of numerous books depicting practically every aspect of Japanese society and culture. The peak of such literature was in 1970s-1980s, when the rapid economic growth was put in the focus of many writers, journalists and travelers. At some point Japan was even considered to be a model country for perestroika. Concerning the general tone of those publications, they were ideologically critical of the "capitalistic blunders" of Japanese society, at the same time giving an adequate evaluation of the positive moments such as high standards of life etc.

**Oil-Drilling in Arctic and Ecosystem-Management Plan of the Barents Sea**

In the High North, The Barents Sea has large resources of petroleum and sustainable populations of fish. The international challenge lies in implementing the conservation of marine biodiversity, at the same time managing sustainable exploitation of natural resources in the Arctic region. The Norwegian government has tried to solve conflicts of interest by the making of a large scale ecosystem-based national management plan for The Barents Sea and Lofoten Islands. The national goals are sustainable use of petroleum, fishery resources and conservation of the structure of the marine ecosystem. In this paper, I present an empirical case study of Norwegian national decision-making in ecosystem-based management of The Barents Sea. This new system of planning is implemented as the second sea area in the world. Australia has implemented a large ecosystem management plan at the east-coast with the Great Barrier Reef. In the paper, I discuss in a critical perspective of sociology of knowledge the social effects of the new environmental policy and environmental institutions of problem-solving of management of large sea area in the Arctic region. In the paper I want to investigate the social effects of the development of national planning of the sea ecosystems in the Arctic area. The question is: Does the government eco-system management planning of the Barents Sea provide a suitable institutional framework for solving the social conflicting interests between oil-drilling and conservation of nature in the Norwegian societies?

**Integration and Belonging in Two U.S. New Destinations**

The extension of border politics, and specifically, a politico-economic context characterized by increased surveillance of immigrant populations and the hardening of immigration controls, is concomitant with the emergence of new destinations (Massey 2008). In this sense, the border has been "pushed inward" (Coleman, 2007). Additionally, a growing number of state and local governments have proposed and/or enacted a wide range of policies with consequences for the lives of immigrants and their families. Some such policies are aimed at local policing and enforcing of immigration controls while others regulate access to jobs and housing, and more generally, the provision of services. This "variegated landscape" of local policies (Walker and Leitner, 2011) results in contexts of reception that vary significantly across U.S. spaces. From a research standpoint, questions about the interaction between socio-spatial scales (the global, the national, the regional, and the local) in the shaping of the conditions facing Latin@ immigrants gain centrality. How does the broader context interact with local contexts to shape the conditions facing immigrants? How do policies, social relations (shaped by power, as they are), and institutional arrangements at these various scales interact to produce particular outcomes for immigrants? We investigate these questions by exploring the experiences of Latin@ immigrants in two rural new destination communities in the U.S. Midwest region. We draw upon a theoretical framework that understands immigration and integration as racialized and gendered, political-economic processes. We utilize quantitative and qualitative data gathered through original research in rural new destinations in Southwest Kansas and Central Iowa.

Youth in Social Transformation Through Education
India, known as a country of youth, with the potential to help build a stronger democracy through social entrepreneurship. There is a need of enthusiastic and pro-active youth for any transformation. They need a balance while addressing country's growth and social issues.

Education is a progressive approach for transforming society. Existing education policies has many shortcomings. There are many discriminatory practices applied at ground level. However, despite this adverse situation the young generation is engaged in creating an atmosphere for change in rural Maharashtra, India.

Idea of bringing change in the mainstream of education has been established. But, due to distress & seasonal migration of deprived sections of the societies with family, education of students gets affected badly. Some experimental learning centres such as SAKHARSHAALA for sugarcane workers and PASHANSHAALA for stone crusher workers have been started for the education of deprived communities.

In tribal area, language is a big issue which cuts masses from education. In Gadchiroli (Indian Village), youth started translating the formal text books in Gondi, a colloquial tribal language, which was successful, and tribal students continued in school that there are three modes of moral reflexivity that have various implications for charitable giving, moral obligations and civil society. First, moral con-ventionalists, who value familial and social networks, use charity events as an opportunity to socialise and have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society. The paper draws upon an ESRC-funded investigation into charitable giving that involved 41 semi-structured interviews with men and women of working and middle class social backgrounds, mostly white interviewees. Each interview lasted on average 2.25 hours, divided into two parts: the first part asked the interviewees to recount their life history, describing the twists and turns in their lives, their personal goals and their everyday practices, and in the second part, they recalled significant acts of giving and volunteering, describing their feelings and motivations.

Everyday Morality and Moral Concerns and Their Implications for Charitable Giving in the UK
This paper examines how individuals are morally evaluative beings, who interpret the social world in relation to things that matter to them, and how charitable acts are embedded in their lives with different degrees of meaning and importance. The paper offers some criticisms of the Bourdieusian theory on giving, which depict individuals lacking reflexivity, emotions and disinterestedness. Drawing upon various literature that view individuals as evaluative beings, I will suggest that there are three modes of moral reflexivity that have various implications for charitable giving, moral obligations and civil society. First, moral con-ventionalists, who value familial and social networks, use charity events as an opportunity to socialise and have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society.

The paper draws upon an ESRC-funded investigation into charitable giving that involved 41 semi-structured interviews with men and women of working and middle class social backgrounds, mostly white interviewees. Each interview lasted on average 2.25 hours, divided into two parts: the first part asked the interviewees to recount their life history, describing the twists and turns in their lives, their personal goals and their everyday practices, and in the second part, they recalled significant acts of giving and volunteering, describing their feelings and motivations.

SANGHERA, BALIHAR* (University of Kent, b.s.sanghera@kent.ac.uk)
Social Justice, Liberalism and Philanthropy in the UK
This paper examines how charitable and community foundations as normative institutions relate to issues of social justice, legitimacy and accountability. We will argue that grant-making foundations use their resources to support basic liberties and to assist the most disadvantaged groups in society, pursuing a Rawlsian liberal form of social justice, foundations have to change their institutional practices and routines, aiming for justice and a socialised and democratic production system, rather than regulating economic and social inequalities.

The paper draws upon an ESRC-funded investigation into philanthropy that involved 34 semi-structured interviews with executive directors or senior project managers of charitable and community foundations and grant-makers. Each interview lasted on average 1.5 hours, divided into two parts: the first part asked the interviewees to describe the history of their organisations, and to outline their current strategic themes and priorities; and in the second part, they explained the use or the lack of the concept 'social justice' in their organisation. In addition, further interviews were conducted with sixteen participants from the first round either via Skype or emails to collect extra information.

Increased Precarity and Widening Disparity of Youth Transitions, and Inclusion in the Labour Markets
The Youth Cohort Study of Japan (YCS) was a major programme of longitudinal research undertaken to monitor transitions from school to work in Japan from 2007–2011. The first survey was undertaken when respondents were aged 20. The respondents, who were selected nationally through random sampling, were
followed up annually for five years. The achieved sample size and response rates of the YCSJ are as follows: 1678, 40.2% (2007); 1361, 82.0% (2008); 1141, 86.2% (2009); 1009, 90.7% (2010); 891, 88.3% (2011). Based on the datasets of the YCSJ, we explore four main topics in this paper.

First, we analyse youth transitions to work, documenting the increasing precariousness of youth labour markets. Here we have used indices such as low income, irregular jobs, and unemployment, to examine the extent to which vulnerable situations in youth labour markets have expanded. Second, we investigate which cohorts are more likely to become precarious. Against precarious indices, we found key variables of disadvantage in relation to individual attributes, family socio-economic backgrounds, residential area, and current jobs were relevant to risk factors with statistical significance. Third, we consider forms of disparity in working conditions including work content and developmental opportunities. Here we find that there remains a significant structural disparity between genders and amongst transition types in working conditions.

Fourth and finally, we investigate the mechanism of inclusion in the labour market. We find amongst most of the transition types, irrespective of gender, that demands for high commitment to work – such as acceptance of long working hours and heavy responsibility – has increased every year despite an apparent disparity in many aspects. We propose two key factors to enable inclusion in labour with high commitment: discretion and participative involvement; and positive human relationships in the workplace.

**SANO, MAYUKO* (Fukuoka-prefectural university, sanomayyu@fukuoka-pu.ac.jp)**

**Economic, Social Change and Son-Preference in Nepal**

The purpose of this study is to clarify the promotion factors of son-preference, such as the neglect of female child, trafficking of girls and the interruption of the female fetus, in Nepal. According to UNDP (2010), the number of the “missing women” in Nepal is estimated to be about 0.1 million. Republica, local newspaper, on 29 Nov 2012 reported that the female population is 2.3 percent less than male in the 0-10 year age group in the latest census.

In this study, the findings of the ongoing research implemented in seven districts in Nepal, during March 2012 – March 2014, will be shown. The questionnaire survey of 1500 men and women both married and unmarried 18-80 year-old were selected based on a multi-staged random sampling technique. The data will be analyzed by modified framework of sustainable livelihood approach. This framework consists of three components such as livelihood assets, policy institution-process and livelihood outcome (Chambers and Conway 1992). This leads to analyze consequences among these three components. Livelihood assets, furthermore, consist of financial capital, natural capital, physical capital, human capital and social capital.

Former studies reveals the correlation between the property (financial capital, natural capital), relatively high educational level (human capital) and son preference (Clark2008; Banerjee2012; Republica 2012). In this study, the correlation among social institution such as family structure, 5 capitals and son preference, will be analyzed, in addition to the former studies.

As the result, following three findings have been verified; (1) Even though lack of some of capitals, those who has variety of network does not tend to be son preference, (2) Even though abundant in capitals, those who live in extended family only tend to be son preference, (3) Those who have female family member who almost monopolizing the analysis when violence and women are connected. An opposite emphasis is seen in the biographical and biographical narratives approach that stresses the disruption of norms and legal rules, neglecting this way another component of the practice of violence, that means, a subjective interpretation of reality. Biographical narrative approach permits to offer other possible interpretations to the engagement of young female in violent and in criminal activities. Based on preliminary findings of a research that are investigating direct and indirect experience of violence of young females, the paper presents the main antagonist positions founded, that means, between the subordination to dominant males and a more relevant and protagonist role played by women. The results show that using this kind of “inside” approach is possible to obtain new elements for the interpretation of the experience of violence in which the women role as victims and perpetrators are not always well defined.

**Unequal Identities: The Attainment of National Identity and Ethnic Identity Among Children of Immigrants in Canada**

Despite growing interest in “the new second generation,” quantitative analyses on the psychosocial adaptation among non-white offspring are limited, especially in Canada. This study addresses this gap by assessing the impact of ethno-racial characteristics among children of immigrants on the establishment of self-identified national and ethnic identities using a nationally representative survey, the 2002 Ethnic Diversity Survey. Results from logistic regression suggest that while white children of immigrants are more likely to form national identity, ethnic identity is more likely to be established among their non-white counterparts. While this is consistent with the segmented assimilation theory, the study also reveals that the level of parental education does not explain the results, countering the assimilation theory. The study concludes by highlighting the impact of ethnic concentration, home language, and experience of discrimination on the identity formation and discussing implications for immigrant integration policies and future immigration research.
strategies used by those living in favelas to deal with this reality, having their own perspective as the starting point for our analysis. The narratives of children aged 6 to 8 years old were collected through a discussion on drawings about their families and their communities, and then submitted to the discourse reconstructive analysis as proposed by Gabriele Rosenthal and Bettina Völter. The biographical narratives of two generations of three families were constructed and analysed according to the approach proposed by Gabriele Rosenthal. The results showed that using this kind of “insider” approach enables access to new elements for the interpretation of violence experiences, in which the roles of victims and perpetrators are not very and always well defined.

SANTOS-HERNANDEZ, JENNIFER* (University of Puerto Rico, jennifer.santos@gmail.com)

Social Vulnerability to Disasters: An Outlook of Evolving Structural and Behavioral Forces

The study of social vulnerability to disasters has generally focused on understanding how social stratification relates to disasters and how social forces can create the possibility of a hazard to become a disaster. Ben Wisner and his colleagues assembled a working definition of social vulnerability as they were studying the famine that unfolded in the Sahel from 1967 to 1973. In the book At Risk: Natural Hazards, People’s Vulnerability and Disasters (2004), Wisner and his colleagues defined social vulnerability as “the characteristics of a person or group and their situation that influence their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard”. Their definition includes the difficulties and chances that people may encounter as they mitigate, prepare for, deal with, respond to, and recover from the impact of a natural hazard. However, there is no firm definition of social vulnerability. Rather, it can be considered as an evolving concept. Despite its focus on processes, applications of the concept of social vulnerability in research often fall short in capturing the elements and dynamics of social vulnerability. This research uses Puerto Rico as a case study in which social vulnerability is conceptualized as steaming from evolving structural and behavioral forces. This research presents a dynamic situational approach to social vulnerability and explores how the practice of emergency management may impact, address, or fail to address the needs of impoverished marginalized communities and their contrasting perceptions. The findings provide insights that could assist emergency management practitioners and disaster researchers and practitioners working in the areas of marginality, development, emergency management, bureaucratic change, rationalization, decision-making, and policy making.

Personal Networks and Changing Openness Toward Immigrants: Social Network Analysis Measurement Versus Traditional Survey Instrument of Personal Networks

Recent literature underlines the surprising integrative role of the family (DiPrete et al., 2011). The growing heterogeneity of families produce family based social networks that are less segregated on a number of dimensions than the other social circles. Heterogeneous family networks might favor changing norms and more open attitudes. The aim of this paper consists in comparing two instruments measuring family networks and in testing their predictive power on norms and attitudes such as the openness towards immigrants. In MOSAiCH2013 survey, including both ISSP modules 2012 and 2013 in Switzerland, respondents were asked to answer to two distinct personal network instruments. The first one has a classical survey format and consist to interview respondents on the proportion of immigrants in their family network, on the frequency of contact with the immigrants in their family networks and on the importance of their relations with them. The second instrument follows a social network analyses perspective, letting respondents define themselves the boundaries of their family network, asking about several characteristics of the networks members, such as their nationalities, and finally measuring the complex web of relationships between network members. Results are discussed from the perspective of the strengths and weaknesses of both approaches.

Green Capitalism and the Global Environmental Policy-Planning Network

The Rio+20 conference that took place in June 2012 confirmed the hegemony of green capitalism to address the global environmental crisis. Supporters of the “green economy” believe that putting a price on ecosystem services will allow to internalize environmental costs into the capitalist process of production. In the case of climate change, this involves the creation of greenhouse gases emissions trading markets. For their part, critics of green capitalism describe this process, including carbon trading, as the commodification of nature and as a new system of accumulation by dispossession that mostly benefits large corporations with little effect on actual greenhouse gas emissions.

Corporate-led policy-planning groups such as the World Business Council for Sustainable Development or the Global Development Finance Group have long been active to promote carbon markets and green capitalism. In this paper, I use a purposive sample of eleven such policy groups as an entry point to explore corporate involvement in the field of climate and environmental politics. At the level of organizations, the analysis of board interlocks reveals the structure of the environmental and climate policy network that links the corporate sector, the NGO sector and the transnational state, and emphasizes the mediating role played by policy-planning groups. At the level of individuals, the linkages between members of the global corporate, political, and scientific elites involved in producing and maintaining environmental knowledge link the capitalist class fraction, whose ascendency nevertheless remains highly uncertain.

School Divide and Social Fragmentation in Mexico

Inequality seems to be endemic in Mexico. After a decade of moderate economic growth and improvements in some social indicators, the country continues to show very high levels of social inequality. In a context of contradictory trends, a new model of “unequal inclusion,” is emerging. Privilege and deprivation exist side by side, ignoring each other and even tacitly accepting each other. Inequality has taken a qualitative leap towards fragmenting the social structure through spaces of inclusion that are not only unequal, but also socially and culturally distant. This paper will explore the contribution of educational segmentation to this broad process of social fragmentation. Access to education in Mexico has increased substantially in the past few decades. Between 1990 and 2010, basic education coverage became almost universal, and the average years of schooling of youth age 25 to 29 increased from 7.9 to 10.2. In addition, there were several constitutional reforms that extended compulsory education, most recently, in 2011, making it compulsory until the age of 12. But, parallel to this process, the educational system has experienced a deep fragmentation. Thus, privileged children and youth attend the same private schools, have more and better resources for learning at school and at home, and receive an education of higher quality and greater variety. Among poorer groups, children and youth also attend socially homogenous schools, but with a more precarious infrastructure and fewer pedagogical resources to support students that come from homes with little social or cultural capital. The consequences of this segmentation are not limited to educational achievement; they extend to school experiences and the meaning of education. During qualitative fieldwork, interviews and focus groups with privileged and disadvantaged youth in Mexico City, This paper explore the consequences of this process in terms of social fragmentation.

SARBU, MIHAI* (University of Ottawa, msarbu16@uottawa.ca)

Transcending Frontiers: A Contribution to Overcoming Instrumental Rationality in Our Relationships with Nature and with One Another

Environmental sociology is uniquely positioned to analyze the relationships between humans and nature and examine the societal factors that lock our civilization into carbon dependence; it can also analyze why the issue of climate change is becoming increasingly politicized and divisive. Moreover, it can examine how social inequalities—ubiquitous in this era of unemployment and economic decline—compound environmental crises and aggravate the suffering of the most vulnerable. This paper argues that the social and environmental hierarchies prevalent in the world today can be meaningfully analyzed using the theoretical framework of instrumental rationality, in a nutshell, using instrumental rationality means applying the means of reason short-sighted to solve a problem without considering the larger context—burning fossil fuels to fulfill most of our energy needs is a prime example.

Instrumental rationality has been linked to the drive for self-preservation and using this as a conceptual tool can offer new insights: The first insight is that paradoxically—we often hurt nature because we are (partially) from nature; the second insight is that our drive for self-preservation can be easily fused with an apparent and shallow (instrumental) rationality, leading to a substantially irational state of mind which is very dangerous for nature as well as for other human beings.

The challenge then becomes to find ways to overcome instrumental rationality and this is the main purpose of this paper. It is an arduous task and one that needs to be assumed urgently to help us escape from the unsustainable path we currently follow.

Between the Corporate and the Government Responsibility: The Livelihood Issues Experienced By the Local Community in the Surrounding Conservation Forest in West Java, Indonesia

Until about ten years ago forest had ever been the primary source of income for the community living in the surrounding area of the Halimun-Salak mountain, West Java. This situation has been changing since the government launched the new regulation that prohibited people to get anything from the forest because the area was designated as forest conservation. Since that time the community has been experiencing a decline in their standard of living, especially who were only had the forest as their source of income. Besides, for many years, the community has only been provided by inadequate basic infrastructure (i.e. health, education, transportation) that supposed to be the government’s responsibility. The situation becomes increasingly critical when the people knew that there was a multinational company that has been exploring geothermal energy within the conservation area which has further caused anxiety and uncertainty in local people livelihood. The latest development seemingly has been overlooked by the local government since it has not been taken any significant action to help the people. Moreover, the conflict between local people and the MNC sometime has been raised as critical issues for the economic or political interests of certain actors in the community. Pressures to the company have been increasing since the government regulation stated that the company should perform the social and environmental responsibilities. Based on the ongoing research in the area of Halimun-Salak mountain, this paper analyzes the relationship between, market and society (Martinsen, 1997) that might be applied in the case of the production of geothermal energy in West Java, Indonesia. This paper also examines the issue of local conflicts over foreign investment and the corporate practices when the host country government has the tendency to corrupt or indifferent to environmental protection and community development (Vogel, 2006).

Meanings Of Friendships in Substance Abuse Clients’ Talk In The Probation Service

Although several studies have examined the influence of friendships on clients’ substance abuse and treatment outcome, there is a paucity of research examining tourists’ talk about their experience of the meaning of friendships. This paper explores the meanings substance-abusing clients attach to friendships during motivational treatment sessions in probation service. By using semiotic framework, this paper examines client’s change-related talk utterance about friendships as a symbolic sign. The analyses are based on videotaped data consisting of 98 motivational counseling sessions. This database involves the first two sessions of 49 client-counselor pairs. Sessions were videotaped in 12 Probation Service offices in Finland in 2007–2009. In general, the findings of this qualitative study indicate that the friendships play an important role in the substance-abusing clients’ motivation to change. The results of the study display that the meanings of friendship were divided into four categories: a support to change, a reason to change, an obstacle or a threat to change, and a surrogate obstacle to change. The study also suggests that the personal meanings of clients’ utterances in motivational counseling sessions could be seen as potential predictors of their future behavior.

Comparison of Leisure Activities of Children of Tea Garden Community and Other Groups in Anganwadi Schools: A Case Study of Dibrugarh District, Assam, India

Dibrugarh is an easternmost city situated in the banks of the river Brahmaputra. The place has the highest number of tea gardens giving it the status of 'Tea Capital of Assam'. Though tea is a big industry, the children of the tea garden community do not get adequate facility of good education, health and leisure facilities. There are Anganwadi schools in the tea garden areas which look after the mental, physical, and emotional development of children between the age of 0-6 years. They also provide nutrition and value based education to children in the age group of 3 to 6 years. The conditions of these schools are not satisfactory to provide the pre-schoolers the pleasure of enjoying their childhood as compared to the Anganwadi centers for children in other parts of the city.

The dropout rate from the schools in tea gardens is very high, as a large number of the children are engaged in child labour and some help their parents to look after the younger siblings or help in the household work. Some children, go to school, go there for the food provided as the mid-day meal. The leisure time activities of these children include playing with other children or helping their parents. They play in groups but very few have access to playing equipments.

The facilities provided at school are not adequate as compared to other Anganwadi schools and in some cases, the teacher do not come to school regularly. These children are thus deprived of quality education, satisfactory leisure activities etc. as compared to the schools and Anganwadi centres in the city.

The paper attempts to do a comparative study of education and leisure activities provided by Anganwadi schools to tea garden community and other children in Dibrugarh.

Leisure, Tourism and Environmental Degradation—a Study Based on Assam, India

Tourism in Assam holds large prospects as the land is bestowed with natural beauty and resources. Tourism in Assam is essentially nature based. Assam has a rich cultural and ethnic heritage that has also made it a favourite tourist-spot. It is counted as one of the prime Eco-Tourism destinations in India. The rich bio-diversity of the region encourages eco-tourism. But compared to some other states in India, eco-tourism is not yet developed in the real sense in Assam.

A lot of tourists come to Assam for different leisure activities as the region is still less explored and provides for peaceful existence with nature. The eco-camps set up in areas like Nameri in Sonitpur, Tipam Phake village in Eastern Assam, camps islanded around Kaziranga National park, famous for the one horned Rhino, attracts lot of foreign as well as domestic tourists. They are provided with facilities like boating, fishing, trekking in the wild etc. and misuse of these can lead to severe environmental degradation. Illegal destruction of forests to set up hotels for tourists near Kaziranga, excessive boating and fishing etc. has also been increased.

The land has the opportunity to develop several leisure activities based on eco-tourism where the rich bio-diversity of the region can be explored without environmental degradation. But activities like using the areas as picnic spots and then leaving behind plastic waste has already destroyed some of the natural spots. A systematic development of tourism involving local population, who can look after the protection of environment, is needed to increase the inflow of tourists.

This paper attempts to analyse the tourism scenario, development of eco-tourism inspired leisure activities and how tourism can be used positively to lessen social inequality, and lead the way towards a more socially and environmentally responsible tourism practices.

What Was All That Growth for? Explaining Chinese Decreasing Well-Being in Times of Economic Growth

China is one of the countries that experienced the most impressive and sustained rate of economic growth. Since 1990s its economy has been increasing on average by 9.7% each year. Arguably, economic growth allowed a general improvement of several social, economic and sanitary dimensions of people’s life. However, in the same period people’s satisfaction with their life decreased.

What does explain this outcome? And who are the winners and the losers from economic growth? Finally, if economic growth did not improve the human lot, did it at least reduce well-being inequalities?

Using data from the World Values Survey, this paper identifies the determinates of change in people’s life satisfaction in China between 1990 and 2007. Results suggest that the erosion of social capital and social comparisons are the two main factors explaining why economic growth did not turn into higher people’s well-being. Moreover, economic growth resulted in higher well-being disparities among people: those in the lowest three deciles and the middle-class experienced a significant reduction in well-being, whereas richer people substantially improved their conditions.

"the Influence of Institutional Framework on Local Community Schemes in the Period of Economic Crisis 2011-2013: The Example of the Municipality of Athens"

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The aim of the paper is first to present the institutional framework concerning the role of participative action in Greece. The institutional foundation for cooperatives and unions is primarily set by Article 12 of the Greek Constitution, while specific laws provide the role of Social Cooperatives in Greece. After a short analysis of the legal framework the paper will examine the main sectors of activities of NGO's and other bodies (organizations) that belong to the civil society, especially those acting in Athens.

More specifically this paper examines the schemes of the municipality of Athens to promote specific policies and volunteerism in order to contribute to the solution of problems that vulnerable social groups, who live in the city of Athens in the period of economic crisis 2011-2013, face. An emphasis is given both to Law 4071/2012, which concerns the possibility of local authorities to set up social supermarkets, and the possibility of collaboration between local authorities and NGO’s. Structural impediments to such policy developments are also elaborated. Overall, the paper will attempt to answer the main critical questions of how the top-down and bottom-up models can co-exist in the implementation of public policies at a local level, and of how ways of cooperation concerning everyday problems can emerge from the economic crisis.

Micro-Motives and Collective Action: Measuring Individuals’ Reasons for Participate in the #YoSoy132 Movement in Mexico

Individual’s political mobilization has been explained by rational choice theory according to the general tenets of its approach to human behavior (Becker, 1968; Olson 1971). Following the well-known distinction between the narrow theory and the broad theory of rationality (Elster, 1988), this paper presents a more extensive view of political mobilization, considering the individuals’ strategic calculus for their participation in a contentious collective action (Tarrow, 1997). Following the broad theory of rational choice, the work incorporates cognitive, normative and emotive factors to the explanation. So, first we propose that the movement can be treated as a production function with two phases, where in each of them there are different mechanisms and games that help to explain the process of collective action. The first phase, which we call accelerative, is triggered by a political opportunity, incorporates elements such as coordination between groups, high expectations, and a focal point equilibrium. The second phase, called not-accelerative, arises once the election finishes and it is characterized by a lack of coordination, internal conflicts between groups, and lack of participation. From a set of third wave activists involved in the movement #YoSoy132 Mexico City (14 women and 16 men), the findings show the variety of reasons present in the interviewees, and that some actors may have a predisposition to behave according to a kind of reason (i.e., instrumental vs. normative). The main conclusion we arrive is that the two versions of rational choice allow a better approximation to the individual and collective action in the movement #YoSoy132 in Mexico.

Clinicians in Governance: Evidence for Hospital Performance from the Italian NHS

The study explores the effects of clinicians’ involvement in governance on hospital performance through an empirical investigation in the Italian NHS. By drawing on the board human capital literature (Hillman & Delziel, 2003; Kor & Sundaramurthy, 2008; Kroll et al., 2008) and the empirical evidences on clinicians in hospital governance (Dorgan et al., 2010; Goodall, 2011; Molinari et al., 1995; Veronesi et al., 2013), we develop our research hypotheses. More specifically we conjecture that hospital chief executive officer (CEO’s) (i) clinical expertise, (ii) previous governance experiences in the NHS, (iii) public health specialization, and (iv) business/administration specialization, have individually a good effect on the organizational performance. We focus on these four variables. Data are collected for 3 years and the sample is composed by 278 observations. CEO’s expertise, experience and specialization are main independent variables. Six indicators in terms of financial/non-financial performance are instead used to measure the hospital performance. We employ a panel data approach and we estimate different empirical fixed/random effect models.

Main findings report a positive (negative) effect of clinical CEOs on non-financial (financial) performance. By contrast, non-clinical CEOs negatively (positively) influence the non-financial (financial) dimension. Paper argues a differentiation in the provision of skills to the strategic process, as well as in the relationships with the clinical/non-clinical staffs. Findings also report good effects of CEO’s previous governance experiences and public health specialization.

Paper contributes to research in different ways. First, we corroborate the relevance of human capital in governance for the organizational performance. Second, we discuss the dissimilar effects of clinical/non-clinical expertise by arguing their reasons in setting peculiarities. Finally we investigate never explored effects of clinical/non-clinical specializations and experiential background.

For what concerns the practice, we suggest policy makers to pay more attention to the expertise legal requirements for CEO candidates.

Cultures, Strategies, and Organizations for Mobilizing Social Movements: Divergence and Convergence Between Social Movements and Labor Movements

There have been few comparative studies of social movements and labor movements. Social movement studies have examined the conditions, development, and outcomes of social movements using various theoretical frameworks. In contrast, largely driven by Marxist and post-Marxist theories, labor movement studies have often focused on whether and how workers have organized themselves as a coherent force—i.e., as a class. In brief, in labor movement studies, workers’ movements have often constituted a sub-topic of the study of class, and the ways workers have organized as workers. How but exactly do these two movements differ? Or what do these movements share? By examining a Japanese social movement, the protest against the revision of the U.S.-Japan Security Treaty (commonly referred to as the 1960 Anpo protests, named after the acronym of the treaty in Japanese), this paper explores divergence and convergence of movement cultures, ideologies, and strategies, and the organization of social movement and labor movement groups. I compare two groups that participated in the 1960 Anpo protests—the Bund, a new left student movement group that became prominent during the 1960 Anpo protests, and a new left faction of the Osaka Central Telegraph union that became prominent among new left labor unions in the 1960s. This paper argues that despite similarities in ideology between the two groups, external constraints on their organizations shaped different strategies for mobilization. Furthermore, the two groups never merged nor worked together, although they explored possibility, despite their common political goals and similar ideologies. This was due to intergroup culture differences, as well as problems with mutual trust acting as a wedge between them. The empirical data collected from interviews, for instance, show that while knowledge was a key issue for mobilizing student movements, trust was a key issue for organizing the workers’ movements.

Alternative Art-Production Networks in Lower Manhattan in the 1960s-1970s: An Organizational Account of the SoHo’s Gentrification

This paper deals with an early period of an artists-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo’s gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolic and institutional boundaries of art districts. These former studies contributed to examined that the artists’ spaces and their aesthetic images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo’s gentrification; alternative arts-production-networks in downtown also critically contributed to construct physical and symbolic bases there.

To explore this issue, I will focus on artists’ activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourish of art museums and commercial galleries in uptown. These anti-uptown ideologies consisted of organizational fields of art productions in downtown. Analyzing the arts-productions-networks in downtown in the 1960s and 1970s, this paper focuses on especially collaborative galleries and alternative spaces. These alternative arts venues were critical aesthetic bases in SoHo.

Historical Overview of Migratory Flows Between Brazil and Japan

This paper will present an historical overview of the migratory flows between Brazil and Japan. The first part discusses the immigration of Japanese to Brazil at the beginning of the 20th century. During this time, their presence in the country sparked a heated debate among the politicians of the Brazilian elite as to whether or not they should be accepted. The Japanese were labeled as “not white”, an undesirable state according to the eugenistic policies of the time. At the same time, Japanese government closely accompanied the entire migratory process, helping to establish the general order that would govern immigrants in Brazil. In the second part, I will focus in the inverse route, upon the ending of the 20th century and beginning of the 21st century, when Brazilians of Japanese descent began to migrate to Japan. They were favorably contemplated in Japan’s 1990 immigration reform law, a factor which contributed to the increase of the population, especially during the first half of the 1990s. From that time on, the Brazilian presence began establishing itself and consolidating social networks within the host country, losing sight of its original temporary expectations and intensifying the flow of people moving between Brazil and Japan. However, after more than two decades, the Brazilian population in Japan began decreasing in 2008. At this time, the world financial crisis resulted in a rising unemployment and one third of the Brazilians in Japan returned to Brazil. They are facing great difficulties as they try to reinsert themselves into a new or different social and cultural reality in their own homeland, encountering problems in linguistic and educational fields as well as the local labor market.

The Meaning of the International Marriage in Korea

Nowadays in Korea, international marriage has increased since 2000 rapidly. Increase in this international marriage is not the change of the marriage from the influences of globalization. Because Korean people have protected their blood principle rigidly for a long time. It is a big change increasing to international marriage in Korea, and it is shaking now family value from the bottom. In this report I ask why has international marriages increased in Korea rapidly these days? Also, who and why do people choose an international marriage? I pay attention to the change of the marriage and the family in Korea today and intended to consider the meaning of international marriage.

This study developed the result of the data analysis of the census (1995, 2010) that I analyzed before. In the former analysis, I compared the change that was in the marriage form with the census of 1995 and 2010 according to sex, age, and educational background. The result implies from the rapid increase of international marriage today in Korea that it is due to the increase in high educational background of the woman from the 1990s and the economic power drop of the man from the late 1990s. Based on these findings, I will include variables such as economic activities state, occupation, educational position and compare and contrast according to the man, woman and combination of couples who chose international marriage using census data. Furthermore, I will use the ‘dynamics data statistics’ and cast the education level between the couples who married a person from a different nationality, the variable such as the nationality of the partner and consider the meaning of the international marriage in Korea these days by clarifying the sociodemographic characteristic of the couple who choose to international marriage.

Expulsions: When Complexity Produces Elementary Brutalities

The past two decades have seen a sharp growth in the number of people, enterprises, and places expelled from the core social and economic orders of our time. This tipping into radical expulsion was enabled by elementary decisions in some cases, but in others by some of our most advanced economic and technical achievements. I use the notion of expulsions to go beyond the more familiar notion of growing inequality, and get at some of the more complex pathways of today’s global capitalism. It brings to the fore the fact that forms of knowledge and intelligence we respect and admire are often at the origin of long transaction chains that can end in simple expulsions.

The talk is based on Saskia Sassen’s forthcoming book Expulsions: Brutality and Complexity in the Global Economy (Harvard University Press 2014)

The results show that there are clear gender differences in the career paths among Japanese youths. Younger men’s career is more likely to be unstable, whereas younger women’s career is more likely to be stable. Educational attainment does not predict career paths among men, whereas highly educated women’s career is more likely to be stable. Men whose career path was unstable are less likely to make money and get married, and more likely to be unhealthy and unhappy. Women whose career path was stable are more likely to make money but be unhealthy, and less likely to get married. Recent economic recession and the popularity of higher education are presumed causes of diversified career paths among Japanese youths.

**Food Sovereignty and the Solidarity Economy Alternative**

This paper explores the relationship between food sovereignty and the solidarity economy. It brings out the extent to which food sovereignty as an attempt to address corporate control of food systems, engender adaptation to and mitigation of climate change and ensure popular control of food systems embraces and articulates with the solidarity economy. The solidarity economy in this paper is not understood as a codified definition but rather a transformative practice emerging from below with an emancipatory utopian dimension, a new conception of common property and a commitment to deepening democracy. This exploration is carried out through the prism of two case studies. The CECO-SESOLA worker cooperative movement in Venezuela and its attempts at popular control of a food economy and the emergent food sovereignty movement in South Africa.

**Women’s Empowerment Beyond ‘Smart Economics’: A Transnational Feminist Perspective**

Since the economic crisis of the last decade, integrating women into development has become the major ‘smart economic’ strategy. UN Women states that “equality means business” and the year 2012’s World Bank report set gender equality as their top priority. Today, in the global South, Northern private corporations, like Coca-Cola, aim to empower women in their value chains or at “the bottom of the pyramid” by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming ‘ethically’. The aim of this panel session is to outline the changing practice of the Japanese employment system. The Japanese system has been classified as an organization-oriented, the key feature being the security of long-term employment within the same firm. The main feature of the Japanese industrial relations system is the enterprise union, which appears to have reinforced the employment security. The Japanese practice of offering new recruits work straight after completing their education enables students to immediately begin their work-life as ‘regular employees’. The Japanese employment practice, however, is also faced with different employment practices of other countries due to globalization, and it is becoming more difficult to maintain the high level of job security for various types of work in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

**SHIFTING RISK PERCEPTION AFTER SHOCKING EVENTS: COUNTER-TERRORISM IN THE UNITED STATES AND ENERGY POLICY CHANGE IN GERMANY**

Risks are not objective “facts” that are directly experienced. Our risk perception not only changes in social and political contexts but is also mediated through pre-existing cultural patterns. By investigating an American and a German case, we would like to show how risk perception brings about decision shifts in our risk perception and governance and how specific cultural patterns frame those shifts. In both cases, a minimal risk ceased to be a mere theoretical possibility and turned into a real “threat” which imposed a political “necessity” to act. After 9/11, the hypothetical “ticking bomb scenario” became a matter of national security that justified US-led wars, US detention and interrogation policies as well as extensive global surveillance. The anticipated threat of terrorists in possession of biological or nuclear weapons had to be averted – whatever it took. Similarly, the shocking accident at the Fukushima nuclear plant following the big earthquake and tsunami as well as the concern over an alleged risk of nuclear energy in Germany and potential utilization of nuclear energy in Germany and changed the government policies. A “residual risk” (Restrisiko) of nuclear energy, which had thus far been regarded as controllable by means of science and technology, became an allegedly life-threatening danger to be eliminated at all costs. But these discursive and political shifts cannot be thought of as a direct consequence of these events. It is rather the specific framing of events in particular national contexts that leads to shifts in risk perception and governance. This is particularly clear in the German case: the recent energy policy change was mediated through a discursive pattern of nuclear resistance, which is deeply rooted in the German political culture. Similarly, the American response to 9/11 was shaped by national memory and popular culture, for example “Pearl Harbor”, the “phantasm of bioterror” and the “law-defying hero”.

**Health Discourse, Ruling Relations and Work Knowledge**

Research in Institutional Ethnography (IE) has increasingly shown how institutional discourse frames the way individuals think and act within their everyday practices. For example, Luken and Vaughen provide compelling evidence that state-affiliated organizations created a discourse about family housing that structured parents talk and actions concerning their living arrangements (2006, 300). This further highlights those ruling relations that served to organize parent’s daily family life.

This presentation will argue that an analogous case can be made in relation to modern discourses involving the use of health and ‘physical activity’. It focuses on the case of rural female workers who live outside the mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim is...
is to explicate some of the ruling relations that organize work activities in relation to women's health in these different cultural settings. A key resource for this research is the concept 'work knowledge'. 'Work' in IE points to anything that requires time and effort, that is conducted under specific conditions with specific resources and which may need to be thought about. This view helps the institutional ethnographer stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the kind of work and physical activity that they engage in. I further demonstrate how in such rural communities and the kind of contributions that women make in these environments. My aim will be to show how sport is largely absent from these females lives but that physical activity is central for how they conceive of their work and health. A key resource for this research is the conception of 'work' found in institutional-ethnography. In IE points to anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about. This view of work helps researchers to stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in such rural settings work, health and physical activity are interconnected and not isolated as in their urban counterparts. The importance of a healthy lifestyle is then a product of the physical activity that is part of their overall work life and is not derived from sporting activities or government policies and recommendations.

SATO, SHIHO* (The Norwegian School of Sport Sciences, shiho.sato@nih.no)

**Rural Life, Physical Activity, and Health**

It is often the case that sport and sporting activities are presented as preventing various health risks due to inactive lifestyles. This type of lifestyle is perhaps most readily seen in urban settings where both work and leisure can encourage a sedentary routine and an unhealthy life. This presentation examines the possible connections between sport, health and risk from the alternative perspective seen within rural communities. It focuses on the case of rural female workers living outside of the more mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim will be to show how sport is largely absent from these females lives but that physical activity is central for how they conceive of their work and health. A key resource for this research is the conception of 'work' found in institutional-ethnography. In IE points to anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about. **Meta Rational Choice Analysis of Social Action**

Various behavioral models have been proposed to explain human behavior. However, it seems to be under way to create a general theoretical framework that deals with the models in a coherent way. This paper proposes a theoretical first step toward such a framework. More concretely, I propose a mechanism that shifts the two mode of rational action: Forward-looking rational action and backward-looking rational action. In conventional rational choice theory and game theory in particular the former model has been used. The model assumes that an actor chooses his/her action based on his/her calculation of expected utility. The backward-looking rational action model, in contrast, has been used in evolutionary game theory and assumes that an actor chooses his/her action based on his/her experience in the past. Although both of them are plausible models of human behavior, an actor uses both of them in reality. Suppose, in contrast, that the person is diagnosed with lung cancer during an annual checkup. He/she would collect as much medical information on the cancer as possible and try to find the best doctor who would properly deal with the cancer. The same person uses the backward-looking rational action model in the first case and the forward-looking rational action model in the second case. In other words he/she swings between the two models. How do we explain this shifting? My argument is that an actor chooses one of the two models depending on the cost of searching for the information and the benefit of the result of the search. I will try to generalize this idea and present a more comprehensive theoretical framework.

**Meta Rational Choice Analysis of Social Action**

Various behavioral models have been proposed to explain human behavior. However, it seems to be under way to create a general theoretical framework that deals with the models in a coherent way. This paper proposes a theoretical first step toward such a framework. More concretely, I propose a mechanism that shifts the two mode of rational action: Forward-looking rational action and backward-looking rational action. In conventional rational choice theory and game theory in particular the former model has been used. The model assumes that an actor chooses his/her action based on his/her calculation of expected utility. The backward-looking rational action model, in contrast, has been used in evolutionary game theory and assumes that an actor chooses his/her action based on his/her experience in the past. Although both of them are plausible models of human behavior, an actor uses both of them in reality. Suppose that a person catches a cold and needs to go to a doctor. Then he/she would visit his/her family doctor without serious consideration. Suppose, in contrast, that the person is diagnosed with lung cancer during an annual checkup. He/she would collect as much medical information on the cancer as possible and try to find the best doctor who would properly deal with the cancer. The same person uses the backward-looking rational action model in the first case and the forward-looking rational action model in the second case. In other words he/she swings between the two models. How do we explain this shifting? My argument is that an actor chooses one of the two models depending on the cost of searching for the information and the benefit of the result of the search. I will try to generalize this idea and present a more comprehensive theoretical framework.
political parties. I will call those civil organizations here as infrastructures for a post-nuclear society. They were, however, rather isolated before the Fukushima Daiichi accident. Whether was the situation changed or not?

To analyze it, Study Group on Infrastructure and Society conducted a survey during February and March in the year 2013 on 304 civil organizations, and got 326 answers from them (the collection rate was 32.6%). We find that firstly organizations which worked in the nuclear energy policy domain increased more than two and half times than before the Fukushima accident. Secondly, those new comer organizations handle new issues such as recovery from the disaster and measuring radiation level. Consequently, they widened the context of the nuclear related issue and broadened the connection between civic life and policy. Thirdly, those organizations discuss the policy based on data and information and sometimes collaborate with public sectors, which are crucial criteria for the post nuclear society. Fourthly, however, a coalition between the organization often failed when they succeeded to set a clear enemy such as the government and TEPCO, but they do not share the concrete image of post new clear society.

SATOMURA, WAKAKO* (KYUSHU UNIVERSITY, w.satomura@gmail.com)
Handmade Housewives : Between Production Labor and Reproduction Labor
The aim of this presentation is to clarify and better understand the relation between production labor and reproduction labor. I focus on Japanese housewives who make handmade goods and sell them. Since enforcing Basic Law for a Gender-Equal Society at 1999, the Japanese Government switched a "kind treatment" policy to the housewife and has aimed at making women work force. But it is difficult to continue working due to not only the heavy burden of parenting but also the unsupport system of raising children. Therefore women cannot help being a housewife through a birth. In other words women hold dilemma between the difficulty to participate in production labor by child care and the pressure which they should do production labor. In such a dilemma, what kind of compromise do housewives have? To clarify the question, I paid attention to "Saak-san" and their group who are not only housewives but also making and selling handmade goods which are fabric accessories, leather crafts, woodworks, knits, etc. I investigated the reason of the act why they produce and sell goods through the field work to them. As it turned out, it might be the act from the gender division of labor at first, but they transcended that unawares and present the new way of labor to us.

The Influence of Drug Characteristics, Social Environment, and Personal Characteristics on Cognitive Enhancement Drug Use
Cognitive enhancement (CE) via pharmaceutical agents has been intensively and controversially discussed by scientists and the media. We investigate several drivers of and obstacles to the non-medical use of prescription drugs to augment brain capacity by using an extended version of the Rational Choice Theory (RCT). We conducted a web-based study among 2,877 students from randomly selected disciplines and German universities. Via a factorial survey, respondents expressed their willingness to take a hypothetical CE drug described by five experimental varied drug characteristics (costs and benefits) and three varied characteristics of the social environment. Personal characteristics and demographic characteristics were measured.
We found that 65.3% of the respondents strongly refused to use CE drugs. The results of a multivariate negative binomial regression indicated that drugs promising strong augmentations of brain capacity (benefits) and a high probability of achieving this amplification increased respondents' willingness to use CE drugs. A high probability of side effects (costs) and a high price decreased this willingness. Prevalent CE drug use among peers increased willingness, whereas a social environment that strongly disapproves of these drugs decreased it. Regarding the respondents' characteristics, strong academic procrastination, high cognitive test anxiety, low intrinsic motivation, low internalization of social norms against CE drug use, and experiences with CE drugs increased willingness. No effects were found for the severity of side effects, social recommendations about using CE drugs, risk preferences, and competencies.
The application of the rational choice theory and our findings contribute to the understanding of factors influencing CE drug use. They support the assumption of instrumental drug use and may contribute to the development of prevention, policy, and educational strategies.

Comparing Climate Policy Networks in the Germany and the UK
This paper compares, contrasts and accounts for the different outcomes of the climate policy networks of two western industrialised nations: Germany and the UK. Both are generally considered to have undergone changes in their environmental policy discourse from end-of-pipe solutions to more integrated forms of environmental management associated with ecological modernisation. Yet the two countries differ in terms of their climate policy networks. In Germany, the most influential policy actors are drawn mostly from policy arenas, industry and science. This is typical of what we might expect under conditions of ecological modernisation. In the UK, in contrast, the most influential actors represent either government or quasi-governmental institutions or the NGO sector. The UK has probably the most ambitious climate change legislation across the world, instituted in the Climate Change Act (2008), which calls for cuts in carbon dioxide of 80% on 1990 levels by 2050. However, little serious effort is underway to make headway towards achieving the targets. Thus, climate policy in the UK represents what one might anticipate given the nature of the policy network: the presence of strong advocacy coalition calling for large-scale cuts in GHG emissions, but one that has relatively little influence compared to climate policy network actors advocating business as usual. What is surprising, though, is the relative lack of influence of the energy giants. In Germany, less ambitious targets for reducing emissions and a set of more discrete concrete actions to address climate change could be considered the result of a policy network of ecological modernists, where pragmatic realism pervades.
The Changing Profiles Of Inequality and Exclusion In Australia

Despite evidence that income inequality has increased and is of community concern, Australian policy makers have emphasised their commitment to the Fair go but recent features in political debate, reflecting the fears of a voter backlash in the face of reforms that involve losers as well as winners. Both major parties favour ‘growing the pie’ over ‘dividing up the slices’ yet fail to recognise that even a larger pie must be distributed fairly. Establishing how inequality has changed is complicated by definitional changes that have undermined the comparability of income distribution data, and the confusing picture portrayed by public opinion data on attitudes to inequality provides little guidance about how much actual redistribution (as opposed to how little inequality) the community is prepared to support. The emergence of social inclusion as a policy priority has given rise to new knowledge, often in isolation and in combination, and the subjective well-being of those affected. The paper will conclude with some reflections on the implications of the emergence of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

Contesting Time and Space in Istanbul: Differential Civic Activism in Urban Development

The paper explores the re-appropriation of urban space as a practice of collective contestation against established frames of time and space in urban policy making. Crisis and uncertainty in the governing of urban form have showed the spillovers of a rational model of spatial organization, based on long term future prediction of city growth and supply-oriented urban policy making. Civic society and urban users have been generally regarded as customers or users of urban space, while sometimes become choreographed practices of cooptation. We argue that contemporary urban policy making are too much framing urban agency as a ‘governmentally designed object’, through preconstituted notions of space and time despite few attempts to enable self-organization. These linear models of space and time are evident in the social policies of urban development, that compartmentalize collective action into rigid boundaries of intervention and programming timelines. The paper explores the features civic political activism as a practice of opposition against these space-time frames in urban policy making. It defines urban activism as the creation of differential space-time frames in urban policy making, driven by the objective to manipulate ‘tempo’ and ‘pace’ of urban intervention. These borders constitute the major coordinates of contested urban agendas. The paper discusses how practices of creative resistance are targeted at governmentally defined time-space borders and underline that emerging conflicts lead to specific problems, which we call of spatial disaggregation. Early movements in Turkey are sometimes have been formalized practices of cooptation. The recent wave of protest in Turkey have been linked to a restructuring of urban activism against authoritative governmental policies. Despite its broad social and economic implications, we will particularly focus on the practices of framing urban interventions in the city and on the conflict between the modern logics of governmental intervention and the emerging relational spaces of urban activism.

Family Structure, Socioeconomic Well-Being and Elderly Chronic Illness In Thailand

Thai culture which is related to caring of the elderly has been named as one of a very strong one throughout the world. The family, in general, has to look at their elderly in every perspectives. This study focuses on Thai elderly ages between 65 and 84 years old quality of life, under the rapid changing of Thai society that moving from agricultural form to industrialize one. The research examines effect of family structure, household socioeconomic well-being on elderly quality of life that measured from chronic illness. The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Finding shows that the elder who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and lonesome when compare to those who live in extended family. Family support is more likely depending on household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would to receive support from the government need to have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elderly, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.

ICT As a Communication Tool for Older People (aged 80) in an Urban Area

While ICT (Information and Communication Technology) has been spreading dramatically in Japan, little is known about how seniors use it as a tool to communicate with non-relatives. The authors conducted interviews with residents (aged 80) of Suginami City, Metropolitan Tokyo, in October and November 2013, regarding communication with non-relatives. A total of 513 people responded.

About 60% of the respondents met and spoke with “friends” and “people they have known from childhood”; men were more likely to do so than women. In all types of relationships, a conventional phone was the most popular choice as a usual communication tool, followed by “letter” for “people they have known from childhood”, as well as “face-to-face meeting” and “cell phone” for “friends” and “people in the group they are members of.” In all types of relationships, 10% of the respondents chose “e-mail.” Men were more likely to send e-mails from a computer.

In North American urban sociology, there is great interest in how the faster communication, resulting from the increasing availability of affordable and efficient transportation and ICT, affects interaction among individuals. As the usage of ICT becomes more common among seniors, the ways the very old persons communicate with others are also expected to change.

Social Policies and Political Identity: Analysis of Bolsa Familia Program in Brazil

There are few studies analyzing how policies impact on political identity construction. Following the cognitive approach in policies, recent studies show that State actions creates new social actors: individuals that become beneficiaries but who didn’t constitute their identities in relation to the State before. Therefore the State is a space of cultural and symbolic production, where new identities are constructed and new political lessons are learned.

The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contentions that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policies design. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, govern and political approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way benefits are understood and their space in the political sphere.

This paper analyzes the social construction of image between beneficiaries from the national conditional cash-transfer Bolsa Familia Program in Brazil as a dimension of the political identity. It analyses the role of the State, the media and social actors. The research examines two main dimensions for SCTG: political power and image. The research examines two main dimensions for SCTG: political power and image. The three elements are tightly connected and the beneficiaries are aware of the constant contention around the program's legitimacy. They react actively to the negative image constructed by the media and that is reproduced inside their sociability relations.

A New Middle Class? Challenges for Inequality in an Emerging Country

The changes in the contemporary world have been quick and frequent, particularly in countries considered as emerging nations. They have an impact on the living standards and consumption, creating new social groups, resulting from those dynamics. Recently in Brazil, the debate on the emergence of a new class “average” gained relevance and academic crossed the borders, having an enormous impact in the public arena. Some economists define this “new middle class”, from their income. While recognizing the importance of this element in the study of inequality, the concept of class demand more complex analyzes that include socio-occupational factors, as well as perceptions, values, expectations and worldviews regarding personal projects and processes of distinction.

As the task of studying multiple and varied dimensions of social life can not be restricted to a specific focus, either theoretical or methodological, we have been working with qualitative and quantitative methodologies. The work we propose to present is based on the fieldwork we carried out in Rio de Janeiro with individuals who fall into the two groups that we are defining “traditional middle class” and “new middle class”. Our goal is to understand their trajectories, as well as, their projects for maintaining or improving their living conditions in the future.

Multilevel Climate Governance In Europe: Are Cities Undermining Nation-States Role In Climate Policy?

Global environmental problems are increasingly showing the nation-states lack of will, as well as their inability, to take the path of sustainability. Climate change is probably the best example of the downsizing role of the nation-state in the pursuing and diffusion of environmental policies and actions. That’s the case in Europe, where the European Commission is becoming a global leader in this field, and, at the same time, an increasing number of cities and regions are getting involved in climate governance. Furthermore, climate initiatives like Covenant of Mayors are showing how sub-nationals and supranational institutions interact with each other by circumventing national governments. Starting from these considerations, this paper presents an empirical study on the involvement of Italian cities in the Covenant of Mayors. A multi-level governance perspective, its aim is to understand the role of the nation-state with respect to that of a supranational institution like the European Commission. Our results show that the inaction of the Italian government in the past years related to environmental and climate issues, as well as the proactive role of the European Commission, explain the massive participation of Italian cities in the Covenant of Mayors. The Italian case is paradigmatic, to the extent that of 5000 signatories of the Covenant, half of them are Italian. However, even if the role of Italian cities in climate and energy sectors is shifting from that of policy-takers to that of policy-makers, and that what it means to be the “citizen” is being reconfigured and contested, the nation-state remains a key actor, notably with respect to national policies that can foster and strengthen local and global climate actions. Nation-states scope and powers remain crucial in climate policy, and the day when local institutions take their place in the environmental domain still seems distant.

The Standardized Transition to Parenthood: How Standardized Practices Produce Gendered Subjects at the Transition to Parenthood

The transition to parenthood in Austria is constituted through a set of standardized practices that includes medical care, legal processes, public discourses on women’s health and decisions around public aid affect every pregnant women and most of their partners. In Austria the transition to parenthood leads to more traditional role configurations and to an increase in unequal distribution of labor. However, since young women in Austria are in general very highly educated, have full access to the labor market and value and demand gender-equality, it seems crucial that throughout all levels of education women experience a retraditionalization of gender roles during the transition to parenthood. A focus on standardized practices is a sufficient way to show how even highly educated, career oriented and breadwinning women become non-working mothers during the transition to parenthood and how they are embedded into standardized practices.

We Have Never Been Individuals – New Materialist Ethnography

In 2011 I finished an ethnographic project on the transition to parenthood from the perspective of new materialism (Schadler 2013a, 2013b) and started another empirical project on definitions of family from this perspective. My talk will summarize the theoretical principles and onto-epistemological foundations of these theories and how they are transformed into an apparatus (Barad) that act as a tool for actual empirical research. I will also discuss how the researcher, research and a research field are established within this process. Theoretically we can perceive the researcher as a subject acting on a filed, but the researcher is becoming with and figured with it during research. However, this process is also producing research outcomes, which are therefore not a product created by the actions of the researcher, but a part of the practice of researching. The researcher is formed as the part of the practice that assembles outcomes and provides them in writing and talking to research communities.

In particular I rely on the work of Karen Barad, Rosi Braidotti, Donna Haraway and Stefan Hirschauer. In my talk I also want to provide information how I derived a concrete method of analysis from the principles of new materialism. To collect data I used interviews, observations, documents and self enactments. For analysis I developed a coding process, that reconstructs practices and the establishment of the boundaries, which separate components/participants in order to make them perceivable. The consequence is an ethnographic transcription of the figurations of interest (e.g. becoming parents) and the worlds they are becoming with. The researchers’ tools become an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the “object”, while we study how the object is figured.

Ethnic Inequalities in Educational Returns: Overeducation, Language Skills and Social Capital

According to existing studies, the persistence of ethnic inequalities on Western labour markets is largely due to ethnic differences in educational attainment. Emotionally less important, but socially more relevant are differences in educational returns: why is education less beneficial for immigrant minorities in meritocratic societies? Apart from taste based and statistical discrimination, we argue that missing language skills and a lack of social capital could explain why immigrants and their children cannot make full use of their education. For income, we additionally argue that the “lagged” consequences of lower employment returns to education: Because education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

Using data from the German Socio-Economic Panel 2006-2009, we show lower educational employment and income returns for first and second generation Spätaussiedler as well as persons of Italian, Greek and Turkish origin as compared to native Germans. Results of simultaneous conditional quantile regressions show similarly stark percentile and median differences for first and to a lesser degree also second generation immigrants. Missing language skills and social capital seem unlikely candidates, given the equal pattern of differences for different percentiles. Yet, these differences in educational returns are largely accounted for by the larger degree of overeducation among persons of immigrant origin. The results also show that lower returns to education have two sides of a coin: The returns are lower, but the costs of overeducation are less disadvantageous. If education counts less, so does its lack.
The All-Pervasiveness of Racism in Germany: Difficulties and Challenges in Addressing Racism

Racism is a societal imbalance relationship which structures social order, with social practices of difference, the construction of social groups and social meanings and inclusions and exclusions.

When looking at the mechanisms, attributions and manifestations of racism in Germany, global, European and national "lines of tradition" and histories of racism have a powerful effect. If one talks about racism in Germany, its specific expressions and effects, the history of racism in Germany needs to be taken into consideration.

Studies show that racism today is institutionalised. For example in state employment agencies with regard to social security allotment or in institutions of education and social work and in the actions of professionals (Melter 2006, Flam 2007, Gomolla/Radkte 2007).

The focus of this paper will be on a reconstruction of a racist normality in Germany, constantly present as a societal relationship in the every day life of people to whom a migration history is attributed, as everyday occurrence and manifest in the normative practices of differentiation, isolation and exclusion. The analytic perspective of this paper will be on the subjective experience and interpretation and consequent strategies of action and negotiation of young people, whose everyday life is negatively impacted by racism.

In the international context of the conference it will be interesting to discuss with other researchers on different cultural visions to normative orders of racism and their influence on today’s understanding of and acting on racism in the world.

The research presented in this paper is based on group discussions, and problem-centred interviews with eight young adults (age 14-20). Part of the data was collected during a 4-day workshop with young adults with a migration background, where reflections and discussion about experiences and strategies among participants took place.

Nonreligious Actors and Their “Others” – How Questions of Justice Become Matters of Identity

Whether in a highly secular context, as in Sweden, or in countries where religion plays a more influential role in the public sphere: Nonreligious groups, like humanist or atheist organizations, often construe “religion” and/or religious actors as obstacles to social progress. In social conflicts and public debates, e.g., on education, gender equality, religious freedom etc., such processes of “othering” and the various imaginations of state, secularism, social justice and modernity intersect and manifest themselves in concrete ways. They thus provide an ideal framework for analysing the complex dynamics and multiple entanglements of (non)religious actors to different social and cultural traditions and their institutional setting.

In my paper I use the debate about religious education in Sweden as an “entry point” for exploring those dynamics and relationships from a sociological perspective. In my paper I use the debate about religious education in Sweden as an “entry point” for exploring those dynamics and relationships from a sociological perspective. In my paper I use the debate about religious education in Sweden as an “entry point” for exploring those dynamics and relationships from a sociological perspective.

The contribution will first present quantitative evidence on these relationships, based on the English Longitudinal Study of Ageing and the German Ageing Survey. In a second step, evidence from qualitative interviews with working pensioners from the UK and Germany will be presented. This evidence helps to elucidate the (complex) subjective mechanisms “behind” some of the quantitative relationships. The interviews suggest that the experience of work beyond retirement age is overall positive, with paid work being seen as a way to do something meaningful, to stay in touch with other people, or to structure one’s day. In the final discussion these results will be connected to the country-specific debates around work in old age.

Naming and Framing the ‘problems’ of Minority Youth. A Comparative Analysis of Teachers’ Discourse on Ethnic Difference in Europe

To what extent are teachers’ perceptions of ethnic minority students influenced by the national framework of majority-minority relations and the educational tradition prevalent in their particular country? The paper will address this question using some of the result from the EDUMIGROM comparative project on issues of race and Roma minorities and secondary-schooling which was carried out in nine western and central European countries. By adopting an analytical framework informed by comparative education research, it will analyse how teachers in the various countries approach the “problems” of minority students and the arguments the teachers put forth in order to explain the situations and attitudes of these students. How do teachers’ perceptions of difference (racial, cultural, social, linguistic?) and the labels used by teachers to name minority students, as well as the arguments put forth to make sense of the difficulties and challenges they encounter in schools with high concentrations of ethnic minority, vary widely depending on the national and to a lesser extent the local context. While in certain situations, such as those encountered in Germany, in most of the Central European countries, teachers emphasise divergences in cultural and educational styles between minority families and the dominant group, in other contexts, such as in France or in the Scandinavian countries, school personnel downplay such issues, focusing rather on minority students’ disadvantaged socio-economic backgrounds or on their particularities as bilingual students. The paper will underscore how much the frameworks for discussing, explaining, and resolving difficulties in school based inter-ethnic relations vary between countries. For this reason the experiences of minority students offer insight into the cultural traits of the majority students since they reflect both the national history of frameworks of minority-majority relations and the manner in which student-teacher relations are conceived within the particular society.

Many defense organizations are comprised of both military and civilian personnel working towards defense goals. Civilian personnel in defense organizations often work closely with their military counterparts. The issue of civilian-military personnel collaboration within defense organizations is an important issue that affects both operational and organizational effectiveness.

Personnel collaboration also has significant impact on civil-military relations theory. Civilian and military institutional separations has been the hallmark of the civil-military relations field since the post-World War II era. Focusing on the need for greater collaboration among civilian and military personnel in defense organizations challenges the traditional focus on separation. Objective civilian control does not exist at all levels of the civil-military relationship spectrum. The reality is that civil-military relations may call for broad institutional separations as well as more fluid and collaborative roles within defense establishments. Personnel relationships in defense organizations, often warrant more integrative dynamics and directly affect the development and execution of military strategy as well as operational and organizational effectiveness. Enhancing collaboration between military and civilian personnel points to a theoretical model, such as concordance theory, which embraces broader institutional separations as well as cultural conditions requiring more flexible civilian and military relationships. This presentation is created within the context of a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative.

Governments at multiple levels have ambitiously committed to transforming India's metropolises. In this context formal electoral politics increasingly favor the so-called 'new middle class,' while the urban poor are typically excluded from formal politics and the formal economy. While scholarship tends to compartmentalize the politics of the new middle class and ethnicity urban poor by focusing on how they interact with the state, little is known about inter-class relations. In this talk I present original research on relations between workers in the informal service sector (i.e. street hawkers and waste pickers) and associations that represent the new middle class (i.e. resident welfare associations and market traders' associations). I show that in the case of Delhi, conflict between these groups is typically over the terms of use of urban space rather than zero-sum conflicts over space. Furthermore, the analysis shows that these classes are interdependent; the poor depend on demand for services from the new middle class for their livelihoods, and the lifestyles of new middle class are enabled by services provided by the informal service sector. However, both groups also require access to space; it is the most important means of subsistence for the poor working in the informal service sector, while members of the new middle class require the production of 'world-class' spaces where they can practice cosmopolitan lifestyles that serve as the basis of class membership. This paper explores how through their labor the poor undoubtedly enable and participate in Delhi's transformation into a so-called 'world-class' city. However, the reconciliation of competing visions of urbanization – one geared toward subsistence and the other social reproduction – is what is at stake in contemporary inter-class relations in Delhi.

**Making Delhi world-Class**: Relations Between Informal Service Sector Workers and the 'new' Middle Class

Governments at multiple levels have ambitiously committed to transforming India's metropolises. In this context formal electoral politics increasingly favor the so-called 'new middle class,' while the urban poor are typically excluded from formal politics and the formal economy. While scholarship tends to compartmentalize the politics of the new middle class and ethnicity urban poor by focusing on how they interact with the state, little is known about inter-class relations. In this talk I present original research on relations between workers in the informal service sector (i.e. street hawkers and waste pickers) and associations that represent the new middle class (i.e. resident welfare associations and market traders' associations). I show that in the case of Delhi, conflict between these groups is typically over the terms of use of urban space rather than zero-sum conflicts over space. Furthermore, the analysis shows that these classes are interdependent; the poor depend on demand for services from the new middle class for their livelihoods, and the lifestyles of new middle class are enabled by services provided by the informal service sector. However, both groups also require access to space; it is the most important means of subsistence for the poor working in the informal service sector, while members of the new middle class require the production of 'world-class' spaces where they can practice cosmopolitan lifestyles that serve as the basis of class membership. This paper explores how through their labor the poor undoubtedly enable and participate in Delhi's transformation into a so-called 'world-class' city. **Climate (F)Acts. Climate and As The Social**

This paper investigates the ways in which 'climate' can be considered as social assemblage. It does so by showing how climate facts and factors have often been construed as climate acts and actors. This is illustrated by considering three ways in which climate has historically been construed in relation to the social. The first is to consider climate as a causal factor. This has been prevalent from classical authors such as Hippocrates and Ovid to modern authors such as Montesquieu, and has persisted up until the origins of modern climate science. This is illustrated with historical examples. The second construes climate as an enrolment assemblage. Here, climate becomes an assemblage of various heterogeneous factors working together with human actors to produce what we now call climate. This is illustrated in this paper using data from an ethnographic field study among paleoclimatologists.

The third way to consider climate as social assemblage is to construe climate as medium of relationality. In this view, inspired by authors ranging from Watsuji Tetsuro to Tim Ingold, climate is a relational web that is the space in which life unfolds. The paper concludes by illustrating climate as medium in a speculative way, arguing that this conception implies a significantly different social ontology from that which has characterized modernity.

**The Art of the Other. the Paradox of Universality in Western Conceptions of 'Japanese Art' (1860-1940)**

The era of the rise of modernism involved the emergence of art as an autonomous and universal category. This paper argues that, given the universal claims of modernist art, it saw an expansion to Asia in general and Japan in particular. This expansion, shaped through various orientalist categories of ‘Asian’ or ‘Japanese’ similarity and commonality as juxtaposed to ‘the West,’ helped to provide...
plausibility for modernist conceptions of art. It universalized the category of art by giving it a global meaning both in spatial and in temporal terms. At the same time, this universalization meant that cultural hierarchies informed by western hegemony were threatened. This paper looks at the ways influential western observers of Japanese art between 1860 and 1940 dealt with this by contributing to the simultaneous universalization of the category of art and the particularization of the concept of 'Japanese art'. This 'paradox of universality' involved a differentiation between on the one hand particular, local, traditional and most often historical realizations of what was nonetheless a universal category of art, and on the other hand its truly modern and advanced contemporaneous realizations of universality. At the height of the modernizing movements in the west, Japan proved to be the site of an 'exemplary expansion' of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as an autonomous and potentially universal category, which was logically bounded. This exploration of the emergence of which has been analyzed by, for instance, Bourdieu, Heinich and Luhmann.

SCHLEICHER, NORA* (University of Applied Sciences, nschleicher@bkf.hu)

Impression Management for Diverse Audiences: Identity Performances on Facebook

In my presentation, I pose the question: how can we apply the concept of impression management as outlined in Goffman's (1959) seminal work to the context of social media? Particularly, Goffman claimed that we perform certain roles for certain audiences and attempt to keep these audiences separate. However, on Facebook, audiences become mixed in the form of diverse 'friends' potentially consuming the multimodal messages users of the social media site share with others.

How do Facebook users perform identity performances on Facebook? What strategies they use to deal with this situation and how these strategies are reflect in their stance taking practices? Does the lack of physical contact with their audiences offer more freedom and agency in constructing their 'fronts' resulting in more diverse and potentially subversive identities or, on the contrary, self-censorship characterized by identity performances result in more conformist, more socially acceptable identities on Facebook?

The data I use to attempt to answer these questions come from a representative survey on Hungarian high school students (aged 14-18), from focus group interviews as well as from discourse analysis of Facebook profiles of members of the same nationality and age group.

Preliminary analysis of the data suggests the existence of a variety of strategies used including the creation of double profiles, a control over the publicity and content of the posts, 'defriending' certain people including parents, deleting earlier profiles and leaving Facebook completely.

The analysis focusing specifically on gender identity performances on Facebook suggests, on the one hand, strong peer group pressure, but, on the other hand, affordances of Facebook are also used to break away from traditional constraints of femininity.

WEINMANN, NICO (University of Kassel)

Two Crises, Two Cycles of Contention. Workers' Protests in Western Europe in Comparison

The paper compares two cycles of labor unrest and its relationship to capitalist crises in Western Europe. In the first cycle, starting around 1968, workers were able to mobilize high power resources and to push for wage increases and new institutional rights on the plant level. However, the offensive phase of the Western European workers' movement was eventually stopped by the crisis of 1974/75, thus raising unemployment and weakening labor's workplace bargaining power. As a consequence, since the 1980s, Western European trade unions lost members, and faced increasingly complicated economic and institutional conditions. With the global financial crisis 2008, a new cycle of labor unrest has started, and the nature of social conflict has changed. First, the uneven and combined development of European integration has led to a spatially uneven distribution of workers' protests. While countries such as Germany and Austria are characterized by low protest activities, social unrest in Southern European countries has increased significantly. Also, workers' repertoire of contention seems to have changed throughout the crisis period: In the current wave of conflict, forms of "non-normed conflicts" such as plant occupations ("bossnapping" in France) and riots (London, Stockholm) have soared, indicating not only the severe consequences of the crisis but also trade unions' growing representation gap. The paper draws theoretically on the "Jena power resource approach" and empirically on a database on social conflict (JenaConDa).

The Worldwide Outlook for Children: A Model for Monitoring and Studying Children's Rights?

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. It may serve as a tool for formulating rights research, particularly for investigations of experiences and statuses of indigenous youth. WOC is designed for use by scholars to policy makers to young people, and will be available in multiple languages. WOC is a useful resource for identifying, understanding, and explaining young people's experience across the world. WOC presents vast evidence about children, including indicators of their physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. WOC will raise awareness as well about indicators of children's wellbeing that are not yet available for many countries. As such, WOC may be instrument for identifying what we do not know about vulnerable young people's wellbeing, rights, and interests. Over time, WOC will work from a global perspective to share information regarding young people's wellbeing, rights, and interests.

SCHMEECKLE, MARIA* (Illinois State University, mhschmee@ilstu.edu)

The Worldwide Outlook for Children: A Web Resource of Young People's Wellbeing, Rights, and Interests

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. WOC is available to social scientists who seek to identify, understand consequences of, and explain differences and inequalities young people experience. WOC presents evidence designed for use by everyone, from scholars to policy makers to young people, and is available in multiple languages. Recent innovations in the Sociology of Childhood have focused attention on children as active agents with interests and perspectives worth knowing about. WOC presents evidence on the rights of the child has led to a greater focus on children's rights and on many aspects of their wellbeing. WOC demonstrates how social scientific evidence can sharpen our awareness about the variety of structural disadvantages children experience worldwide and the countries and regions in which multiple disadvantages and inequalities young people experience. WOC presents evidence on children's physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. As sociologists learn more about children's legal and informal rights, interests and aspirations, psychological wellbeing, social interactions, choices, levels of resilience, and spiritual beliefs, we become aware of much more that we want to know about young people and the range of inequalities they experience from a global perspective. During this presentation, we will discuss methodological challenges and substantive gaps in global knowledge of children's wellbeing, rights, and interests, and how we might move forward to develop more comprehensive and holistic understandings. We will consider how measurement, theoretical, and cross-cultural questions challenge sociology's ability to grasp outlooks for young people worldwide.

The Influence of Real Life and Online Peer Groups on Caring Fathers at the Transition to Parenthood

While the transition to parenthood is still linked to a retraditionalisation of gender roles, a small but growing number of fathers aims at taking up an equal or major share of care-work, and reduce their work hours or take parental leave to do so.

Our analysis of in-depth 20 interviews with fathers-to-be, bulletin boards and website shows how those fathers reflect, organize and perform this work within a structural framework that (in Austria) still favor breadwinning fathers. Our data derive from two different pieces of work: a study on fathers on parental leave and a study on the "gendered transition to parenthood" (within the consortium FamiliesAndSocieties, funded by the European Commission FP-7).
Contacts to other fathers that are or have been in the same position play an important role for those “new fathers”. Some fathers already have access to other caring fathers within their peer group. Some try to find contact to other fathers through the use of new and social media. They attend “new fathers” groups on Facebook, are members of bulletin boards that are crowded mainly by fathers, or use blogs focusing on the fathering process. On these sites, they often share their opinions, the everyday obstacles they encounter being stay-at-home fathers, or happy times and events with their children. In our talk we explore how those communities help fathers to maintain their role as caring fathers, within sometimes hostile or non-encouraging environments. The ability to share their experiences interplays with their wellbeing, their persistence against structural disadvantages and adverse comments, and the quality of the father’s relationship to the mother and the child.

Sociotechnics of Economy

Joachim K.H.W. Schmidt
Sociotechnics of Economy

Revisiting my sociotechnically informed economic theory on autonomous humans (Göteborg 2010), Onati and Athens (2B11), not any longer based on Capital, Market, etc., as done by mainstream economists who failed for several hundred years. Mainstream theories have been spatially based, time only occurred as space-time as well as properties as measurements within space, and humans only as objects like game pieces. - My present paper will enlarge the common Factors of Productivity, traditionally Land, Labor, and Capital, by Time. Autonomous humans are characterized by Time as duration of their life which they have again and again to invest in portions as resource for their reproductive survival. An economic theory ignoring real time must fail, cutting out some holes being sold for inauthentic slavery work. Excesses of present financial markets condemn the inefficiency of traditional economic theories responsible for such perversity. - Sociotechnics as empirical science designs and implements institutions, and these going concerns are dramatically changing; we move out of an age predetermined by analogous Greek ideology focusing on the organs of reproductive closed spaces, cf. Plato's Parable of the Cage, without time and movement, becoming manifest in positions, prohibiting time and movement. Greek world: A GIVEN one circling around positions. In opposition to this autonomous humans succeeding to leave Plato's Cage of perverted time to be confronted with a digital reality, and experience themselves as homeless, being asked to construct their homes themselves by way of computation. Greek-Western institutions must necessarily be replaced, since nearly all passed down institutions of analogous Greek-Western world prove inadequate in present digital age, including presently still prevailing economic theories. In digital age social life will not any longer turn around positions, but will happen in networks in which being will be replaced by relation.

SCHMIDT, JOACHIM K.H.W.* (SoReGa EV, jkhws@aol.com)
The Cultural Influence on Social Intuitions

The Cultural Influence on Social Institutions
Joachim K.H.W. Schmidt, Berlin/FRG

Social institutions are culturally predetermined, the going concerns of people express beliefs in way of reality-perception. Cultures are different round the globe. Diversity of cultures contains a gigantic richness of human resources. Cultures actualize in human relations via common actions, and/or communication. Every culture has developed an own language for its communication. Western languages – especially Anglo-American languages, have presently become globally dominant, including Western civilizing culture which they embody. - The powerfulness of Western languages is subject to Greek ideology, its assumed fiction of identity of thought and being, first expressed by Parmenides 2500 years ago. Greek ideology circles around an absolutely perfect and analogously conceived spatial Being, a fictive replication of an ideal world excluding change by Time and Movement. Greek ideology gets manifest in fictive positions: its operational base. All Western languages share the COPULA as constitutive element, expressing that everything will be defined either as this that or that, e.g. either Greek or barbarian, or e.g. Nazis defined Jews as non-human and sent them into the gas chamber, or e.g. formerly Christians victimized heretics on auto-da-fé, and presently victimization of humans labeled terrorists by obama, are killing drones as killing machines. And we should not forget the multiple bio-, culture-, and genocides committed by Western people under the influence of Greek ideology. - As can be not overlooked by everyone, Western analogous civilizing and culture is decaying with dramatic speed, getting its deathblow by digitalization of Western societies, and consequently all central institutions have to be redesigned, adapted to starting digital life of Western populations in the Third Millenium. My paper will create awareness of the problems to be faced in near future: A job for sociotechnicians.

SCHMIDT, LISA-MARIAN* (Alice Salomon Hochschule Berlin, schmidt@ash-berlin.eu)
Circulating Ideas and Visualizations in Educational Transition Discourses

Circulating representations of knowledge have been a central concern of Science and Technology Studies (STS). Depending on the conceptual approaches, they highlight either the stabilizing or flexible aspects of distributing and bridging knowledge through social worlds (e.g. Latour, Griesemer/Star).

For conceptualizing the circulation and transformation of ideas and knowledge (Latour), I will focus on commonly used circulating visualizations (maps, lists, graphs, charts and related practices that visualize and facilitate the transition from school to work. Visualizations can be conceived as mediators, instruments and symbols of specific social orders and related knowledge formations. They typically serve to stabilize the relationships in which they are embedded. As representations and material artifacts they enable and/or constrain the distribution of knowledge. For a systematic analysis and a deeper understanding of the relationship between ideas, knowledge, and their visualizations I will combine STS concepts (e.g. immutable mobiles and boundary objects) with a discourse perspective from the sociology of knowledge (Keller).

The study of the circulation of ideas, knowledge, and symbols needs to take these aspects into account. In addition, it should focus on the practices of translating and transforming the visualizations between different social worlds or the strategic use of certain communicative forms e.g. in arenas, where the constitution of relevant topics or problems are negotiated.

RC35-610.2

SCHMIDT, LISA-MARIAN* (Alice Salomon Hochschule Berlin, schmidt@ash-berlin.eu)
Producing Individually: How Occupational Trajectories Are Embedded in Educational Practices

Referring to the pragmatist process perspective of social order and the constitution of self (Dewey, Mead, Strauss) I’d like to propose a conceptual suggestion and present empirical findings, that combine this perspective with a socio-historical understanding of the subject matter (Foucault). The concept will be presented in interplay of theoretical considerations and empirical results that derive from a current research project about the transition preparations in school and mentoring projects (school to work transition). I will specifically focus on schools because they are major institutions for the organized production of subjects.

Mead and Strauss described the different processes, phases and social inter-relations that shape identity/the individual. On this perspective, identity is a constant course of action and interaction between different concerned actors, things and the work of the individual on the integration of the plenty “me” s to a self. This process can be conceptualized as a trajectory of the subject that helps to study this ongoing transformation. The trajectory concept allows the analysis of two perspectives. On the one hand all the situated and participating actors and (inter-)actions come into focus. On the other hand the perception and experience of the subject in this process can be understood.

Intertwined with these practices of the self are typical historical knowledge formations of the subject itself. In contrast to the pragmatist process perspective Foucault offers such a historical conceptualization about the emergence of the individual. This includes sensitivity towards questions of power and their productive effects in specific institutions. Linking pragmatist concepts with a discourse approach will enable a balanced theoretical conceptualization of individuality in modern societies and elaborate analytical tools for research.

Do Tertiary Dropout Students Really Not Succeed in European Labour Markets?

Tertiary education has been expanding hugely over the last decades, so that tertiary dropout students will constitute a growing distinctive group in future labour markets. University dropout is regularly discussed as a 'negative' indicator in terms of reinforcing socio-economic inequalities and being a sign of university inefficiency. However, research on actual career trajectory of dropout students is virtually non-existent. Using data from the 2011 Programme for the International Assessment of Adult Competencies (PIAAC) this study first validates the uncommon self-reported measure of dropout used and compares the percentage of adults with tertiary dropout experience between OECD countries. Second, we examine whether tertiary dropout is a permanent decision as a considerable part of dropouts go on to drop again. In a third analysis we investigate the characteristics of adults with dropout experience. Finally, we estimate the effect of dropout in terms of their employment status and success of entering managerial professions comparing results of logistic regressions and propensity score matching taking individuals' socio-economic and demographic background, work experience and cognitive skills into account. Results indicate that consistently across countries dropout is repeatedly a 'positive' indicator in the labour market. This is first due to the fact that the dropout decision is often not a permanent one as well as that for those adults who do not reenrol into tertiary education labour market chances are better than for equally educated adults in about half of the countries examined.

How the Prison System Affects the Health Care System

United States incarceration rates have increased fivefold in the past four decades, placing untold pressures on other social institutions. Using state- and individual-level data, this article tests whether the number of former inmates affects the functioning and quality of the health care system. The aggregate-level results show that a within-state increase in the number of former inmates is associated with growth in the uninsured population, more frequent use of emergency rooms per capita, and a decline in the supply of hospital beds. Similarly, states that incarcerate more people also report fewer ambulatory visits per capita, fewer mammograms, and lower levels of essential diagnostic tests among diabetic Medicare enrollees, all indicators of a lower overall quality of care. Similar processes are evident even when examining behavioral outcomes in individual-level data. Results from a nationally representative survey, show that individuals residing in states with a large number of former inmates report more unmet need, lower utilization, and lower quality care. These patterns are found even among those far removed from the prison system, including women, the insured, and the well-educated. The implications of broad spillovers from the prison system to the health care system are discussed.

Comparison of legal aid in Belgium, France and the Netherlands: do remuneration systems influence the evolution of contentious mass?
Frédéric Schoenaers, Kathleen Adelaire, Christophe Mincke, Laurent Nisen, Jean-François Reynaert

In Belgium, the current system of remuneration for legal aid causes dissatisfaction both among government authorities and lawyers. In addition, the adoption of the “Salduz law”, which allows any person heard for the first time by the police or a judge to be assisted by a lawyer, is going to weigh on the use of the legal aid. Legal aid has experienced strong growth in recent years in Belgium (+ 229.26% of closed cases between 1998 and 2011). It is useful to observe whether this growth is present in other European countries. We selected France and the Netherlands. This contribution presents a comparison of the modes of organization of legal aid in the three countries as well as of the modalities for financing it. Secondly this contribution aims to compare the evolution of the mass of disputes benefiting from legal aid. We see that beyond the differences between the three countries, the use of legal aid is constantly growing. We will attempt to provide an interpretation of this fact by mobilizing the following explanatory factors: higher income limits allowing more people to access to legal aid with a strengthening effect due to the current economic crisis in northern Europe, a better information of the citizens (by media or advertising by lawyers), a new “grammar of responsibility”, a phenomenon of juridification, the development of new public policies and the development of new “rights.”

Detainee and mother... What is the situation in Belgium?
Frédéric Schoenaers, Marie-Thérèse Casman, Stéphanie Linchet, Salim Megerbhi, Laurent Nisen
University of Liège - Belgium

In recent years, the penitentiary institution seems to be changing. Following constant criticism from all origins (European Parliament, Council of Europe, European Court of Human Rights, International Observatory of Prisons), Belgium has adopted in 2005 a “Principle Law” about the prison administration and the legal status of inmates. The will to limit the negative effects of detention introduces a principle of “normalization” that “involves the creation of a framework of existence closer to the general standards of living (…) closer to the current reality.”
Features such as: changing, contemporary researches about women tend to focus on the situation of incarcerated men, leaving somewhat the theme of female detainees.
In Belgium, they represent 4% of the prison population. This contribution aims to study the situation of sentenced women who are mothers of children (0-6 years old) in a twofold perspective. First, we propose to clarify the legal framework and the current situation and will question the place and effectiveness of the 2005 law. Second, we develop a sociological analysis declined in two stages. A quantitative approach will take into account the number of children whose mothers are incarcerated in Belgium, the number of incarcerated mothers and socio-demographic data of the study population. Then, in a perspective of multilevel analysis of public policy, we question the role and involvement of the (internal and external) stake holders involved in this problematic.

Labour Market Returns of Higher Education Drop-Outs: Human Capital or Signalling?

In Germany, around one fourth of all first year students leave university without a degree. While reasons for drop out are well examined, the consequences are rather unknown, especially in terms of labour market outcomes. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but complected vocational training after upper secondary education. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. We also examine in which way the lack of formal qualifications can be compensated by alternative resources like social capital. In a first step we study the probability of entering the labour market. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about social capital to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with
Graduates from tertiary education have good labour market perspectives but it is not well examined yet how the career perspectives of tertiary drop out differ from those of graduates. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. The focus will be on the different returns of different educational levels. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. Especially in economic crises we expect that tertiary education drop outs will have huge difficulties in entering the labour market as jobs are scarce and the competition is hard. In a first step we study the probability of entering the labour market and job search durations of the different educational levels. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about economic crises to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. In times of economic prosperity job search duration of tertiary graduates and non-completers are the same, while tertiary education completers fare better in economic crises.

Debating Alternative Conventions and Defying False Friends: The Concept of Crisis in the Rational Choice Theory of Institutions and Historical Social Change

Although the term „crisis“ seems to be ubiquitous, there are historical phases when it more abound than in others. For the years since 1989, or the 1930s, the term has (in most parts of the worlds) a higher importance than for the 1950s and 1960s. This can be understood from the fact that these times are phases in which institutional change is both going on and being prepared.

In rational choice perspective, institutions are added game elements in the game structure of human interaction, and they have both conventional and normative aspects. This perspective allow to study institutional change as characteristic depending on the complexity of organizational interaction: Independent organizations allow for early and smooth institutional change, as in the case of changing family concepts. However, there are cases as economic regulation, where organizations act in strong interdependencies and finding a new institutional setting becomes a question of social debate while the performance of old institutions determines: These are crises. In crises, many solutions are discussed, including those with biased consequences and „false friends“ for which lower adaptation costs go together with a lower long-run adequacy. Hence sociological imagination and the deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and desastrous consequences for solving crises.

For the purpose of the economic regulation of industrial society it can be said that unexpected consequences of the disaster (i.e. experiences of modern warfare) did probably the larger part of preparing the Post-War solutions. For the case study of introducing non-smoking policies, that was not the case. The currently greater degree of population access to information may explain the difference, giving rise to the hope that sociological imagination in the general public may add to solving the current transition problems.

SCHOLTZ, HANNO* (University of Fribourg, hanno.scholtz@unifr.ch)

The Two-Step Nature of Modernity

Over the last decades, the discourse over the end of industrial society and the coming of a second modernity has found evidence in recent phenomena that resemble parallels between 1850 and 1945, as globalizations, economic crises, democratizations, violence, social inequality, and global shifts in resource distribution. An understanding of the mechanisms behind these phases of crisis would be socially helpful since it is rather probable that the current one has not yet ended. The rational choice theory of institutions offers the tools to do so, but has not yet been applied to this question. The proposed paper (part of a larger book project) intends to fill the gap.

The paper develops a model of the two step nature of modernity by concentrating on the following arguments: 1. Modernity increases the availability of resources. 2. This results in changes in information relations, i.e. between positional and situation-specific information. 3. Multi-actor decisionmaking has two focal points of either relying on positional (domination / authority) or on situation-specific arguments. 4. A rational-choice understanding of tradition and modernity hence equates the two with applying the two focal points. 5. Not all games of human interaction are created equal, since organizations offer social structure and the transformation of situation-specific in positional information. 6. Hence an intermediate phase arises, with authority within and argument between organizations. This modelled intermediate phase is equated with the historical phase “industrial society”.

Additional arguments analyze the nature of institutional innovations in the transitions between the phases, allowing for the confrontation with empirical evidence and for the prediction of upcoming institutional changes.

The Hidden Patients - a Qualitative Study on Informal Caregivers in Germany

Regarding the aged population, we also detect a parallel growth of age related illnesses like dementia, Alzheimer’s disease or the like. In many countries worldwide, the majority of care for people suffering from these illnesses is realised at home by informal caregivers – their spouses, family members or close friends – due to cost or personal reasons. Often, the caregivers themselves are also at an advanced age. Both, elderly and still working-age family carers bear the heavy physical, psychological and emotional burden of taking care of their beloved ones at home. They are then at increased risk for psychical and physical morbidity like depression or burnout and can be described as our society’s “hidden patients” (Schulz & Beach, 1999). The contribution will present first findings from a sociological qualitative study (observation and open interviewing) with this special group of elderly, informal caregivers in a rural area of Germany (Siegen and surroundings). The study is part of a larger, international and interdisciplinary research project called TOPIC (The Online Platform for Informal Caregivers), funded by European Commission and the Federal Ministry of Education and Research with partners in Vienna (Austria) and Troyes (France). First observations focussed on the every-day activities and routines within the households and underline the above-mentioned challenges for the informal caregivers in respect to time, energy and attention. Beyond that, the caring persons expressed the need for help in our talks, and not only in terms of financial assistance as often proposed by social institutions, but also for information and emotional support. This point is especially interesting from our point of view as we observed some people’s difficulties to express their feelings respectively their own needs.

Looking for a Balanced Treatment of Successive Generations: What Can Social Policy Learn from Perspectives on Sustainable Development?

This paper argues that social policy scholars have good reasons to engage with the literature on sustainable development when analysing the challenges of how to transform welfare states and policies. While many analysts have discussed the need to ensure the sustainability of welfare states and concerns for future generations, they rarely spell out the conditions for achieving welfare sustainability or provide an adequate theory of what such sustainability involves. Attempting to address these shortcomings, the paper asks what the scholarship on social policy can learn from perspectives on sustainable development.

In a European context, current debates on the need to create sustainable welfare states and how to promote sustainable development both raise difficult issues of intergenerational fairness and governance problems including tensions between decision making and democratic legitimacy. The mantra is: ‘for a better future, citizens must make sacrifices today!’ Thus, the proposed paper is premised on the view that these areas intersect in important ways. However, they also differ, since generally questions about the welfare state are treated as problems of social/economic policy while debates about sustainable development put both economic and environmenal concerns on the centre. Hence, linking the rich literature on sustainable development and the notion of sustainable welfare states, promises to bring new conceptual and empirical insights into the debate about welfare state futures.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The paper first introduces the notion of sustainable development. Next, we discuss how we can enrich the conceptualization of welfare sustainability by taking on-board a broader sustainable development perspective. In addition, we ask how we might transform this improved definition into operational indicators which enable cross-national comparisons. Third, in view of the framework developed we tentatively compare a set of European countries. In conclusion we address the implications our framework has for the question of intergenerational fairness, and we highlight avenues for future research.

*(How) Does “Home Hospitalization” Transform The Relationship Between Patients and Healthcare Professionals?*

“Home hospitalization” was officially instituted in France by an act of parliament in 1970. It has been largely developed over the last ten years.

Two major arguments are advanced in its favor of this mode of healthcare. The first, is that this form of hospitalization is chosen by patients who prefer to undergo long-term treatment (often with a fatal outcome, as many of those concerned are undergoing palliative care) surrounded by their families. The second is that of its cost-effectiveness. This factor is important in a traditionally public-dominated health system where it is urgently needed to comply with managerial objectives more often found in private enterprise.

Our ongoing empirical study, carried out between 2012 and 2014, in a service of home hospitalization situated in a French province, has revealed the complexity of the situation which, among other things, transforms the domestic environment, exerts pressure on the carers (usually other members of the family) and transfers running costs to the home. As far as professionals are concerned, it is sometimes difficult to conciliate professional practice and the domestic environment. Various pressures on practitioners seem to reinforce prescription of this mode of care.

If home hospitalization does transform the relationship between healthcare staff and patients, this does not necessarily “empower” the latter or otherwise reverse hierarchical relations. As is usual in human relationships, inequality is not a two dimensional phenomenon. On some counts home hospitalization may reinforce structures of inequality, whilst modifying them on others. With reference to a two-dimensional phenomenon. On some counts home hospitalization may reinforce structures of inequality, whilst modifying them on others.

*In The Shadow Of Alfred Schutz: Two “Ordinary” Sociologists In Extraneous Circumstances*

Peter Berger (interviewed at Boston 22nd October 2010) has qualified the three lecturers at the Graduate Faculty who most influenced both him and Thomas Luckmann as the “Holy Trinity”. The triumvirate was composed of Carl Mayer, Albert Salomon and Alfred Schutz. Though the latter has acquired a considerable reputation posthumously, Mayer and Salomon, apart from a short mention in the introduction to The Social Construction of Reality have been very little published and have remained almost entirely unnoticed. It is in this sense that they can be qualified as “ordinary” (that is to say not renowned) sociologists.

Their ordinariness contrasts with the extraordinary circumstances which affected their lives. Both Mayer and Salomon studied and eventually obtained positions in German universities during the first decades of the 20th century and both emigrated to the United-States at the beginning of the 1930s to become members of the Graduate Faculty of the New School for Social Research (Salomon was Jewish and Mayer married to a Jewish woman). Archival material, the few published documents available and my interviews with Berger and Luckmann lead me to suggest that the reasons for the lack of impact differ. Though Mayer headed a research project on religion in Germany he never succeeded in publishing the results of his study. Salomon’s work was largely theoretical and did give rise to some publications; others were rejected as inappropriate for American audiences.

By contextualizing the production of these two men I will try to explain some of the reasons for their academic in-success. Where they really so “ordinary”?

This will of course lead me to examine the criteria by which success is established in academe.

**SCHREYER, FRANZISKA** (Institute for Employment Research, franzi.schreyer@iab.de)

*Legal Status and Inequality: Young Tolerated Refugees and Vocational Training in Germany*

Young migrants unsuccessful claiming refugee status may be ‘tolerated’ in Germany. This specific legal status positions them in the host society nearly at the end of a vertical model of civic stratification, implying restrictions in accessing central institutions of the society such as the education system or the labour market. Besides, they are constantly facing a high risk of being deported to the country of origin.

However, the impending shortage of the skilled workforce in Germany enforced a new political discourse. As a consequence young tolerated refugees hesitantly have been re-defined as educational subjects and labour market resource. Despite the still persisting inequality in the access to vocational training of tolerated youths as compared to young citizens or migrants being granted a residence permit, legal changes at the federal level have been introduced since 2009. They are to reduce vocational training boundaries for these residents with the highly precarious tolerated status across Germany. But empirical evidence from our ongoing research project reveals heterogeneous applications of the new regulations. Especially migration authorities may act as institutional gatekeepers either supporting or constraining their access to vocational training. This results in regionally unequal vocational training chances for tolerated youths that cause new inequalities within this group.

What does the twofold inequality regarding the access to vocational training mean for other spheres of the social life and future prospects of tolerated youths? This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative regional case studies. Besides, we present the results of individual interviews and group discussions with experts. The findings argue for an enhanced consideration of institutionalized inequalities that are bound to a person’s legal status in the sociology of education.

*Organized Movement or Moving Organization – the Case of the World Social Forum*

Since the 1990s there has been a significant growth in the number of Non-Governmental-Organizations (NGO) operating on a transnational level. This was called “the NGO-Boom” and was largely considered as a positive sign towards an emerging global civil society (Keck und Sikkink 1998). Some of these ‘new’ transnational civil society actors organized themselves to influence the politics of international institutions and to challenge multinationals. Doing ‘lobbying’ requires an effective and efficient way of organization to compete with transnational companies. The organizational forms of these actors are often comparable to those of private business companies (Mintzberg and Westley 2000). Other civil society actors deny any form of hierarchical organization and experiment with horizontal ways of organizing themselves. One example is the World Social Forum (WSF) with its open space ‘movement-organizing’ (Whitaker 2007). In 2001 a transnational coalition of semi-structured individual interviews and group discussions with experts. The findings argue for an enhanced consideration of institutionalized inequalities that are bound to a person’s legal status in the sociology of education.

*Breaking the Silence at Spanish Universities*

This paper focuses on the impunity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem and has been acknowledged as a serious issue, the Spanish context is still relatively unexplored (Schiavi and Valls 2011).

This paper focuses on the impunity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem and has been acknowledged as a serious issue, the Spanish context is still relatively unexplored (Schiavi and Valls 2011)."
ish universities and has also suggested evidence-based actions to fight against it. Once the results had been presented on a national level, universities increasingly started implementing actions to address VAW, asking CREA research for support. As a result of this process some faculties have introduced protocols for cases of harassment. This is also due to the political impact of the results since the Law for effective equality between women and men (Spanish Government, 2007) obliges all public offices to establish procedures on cases of harassment. Even if there is still resistance to changing these dynamics, the article in the Spanish law for equality is an important step to challenging the dynamics of gender, power and knowledge at Spanish universities.

Preventive Socialization from Zero Years
In this paper, we present the violence prevention programs implemented in Schools as Learning Communities. These schools have been analyzed under the INCLUD-ED project (FP6 of the European Commission) and are outstanding for the great results in very diverse social areas going beyond positive academic results. Research on violence against women (VAW) highlights that patterns linked to it are included in the socialization processes. The results presented here stem from research on preventive socialization that emphasizes the social character of love and the attraction towards violence (Gómez, 2004; CREA, 2010-2012). According to this research line, the existence of a mainstream socialization that promotes the model of attraction linked to violence implies the need to socialize from early childhood in attraction to relationships that reject any kind of violence. Socialization in accepting violence that can lead to future VAW is prevented. According to a common analysis of violent actions in early childhood such as a bite is considered as an emotional expression and as a consequence the victim is forced to receive a kiss from the perpetrator as a sign of excuse and forgiveness. These actions socialize in the acceptance of the violence and set the bases for future gender violence. Zero tolerance of violence from zero years is the premise to socialize into relationships without violence and to ensure the development of childhood free of violence. In this line, in Schools as Learning Communities any kind of violence is rejected and children are socialized in this general rejection of violence and learn to avoid violent behaviors. They also learn the values of respect towards others and to insist themselves in being treated with respect. Consequently Schools as Learning Communities contribute to preventing the mainstream socialization in attraction towards violence.

SCHUERKENS, ULRIKE M.M.* (École Hautes Études Sciences Sociales, uschuerkens@gmail.com)
Globalized Management Practices and Local Cultures
The paper will give an overview of management practices in different world regions based on the existing literature in the social and economic sciences and case studies. One of the main questions will be: What is the future of “management”? The global discourse on management focuses on the principles of the market that have been introduced in all spheres of social life through university programs, training seminars, organizational strategies, government policies, and personal counseling literature. This knowledge is produced, distributed, and consumed by social actors in the South, North, and East. These forms of disciplinary knowledge have contributed to the creation of a world controlled by managers and management technologies.
One of the most important societal influences in the last quarter of the 20th century was this growing importance of the management discourse. There was a spread of the idea of management from large firms to the professions, NGOs, the public sector, and the daily lives of social actors. This management discourse consists of a language and practices that global players produce in the socioeconomic world. This discourse is so widespread today that it seems difficult to escape its grip.
This paper gives an overview of its increasing propagation in non-western societies. One aspect of this research is: How do groups cope with the global discourse? Is the discourse of management and its functioning in global companies in order to better plan future developments of the socioeconomic world.

JS-52.2
SCHUERKENS, ULRIKE M.M.* (École Hautes Études Sciences Sociales, uschuerkens@gmail.com)
Social and Civic Dialogue: Confronting The Challenges Of The Post-Neoliberal Economy
This paper will show that social dialogue establishes a balance of bargaining power in the employment relationship. Globalization has changed the labor markets and contributed to a decline in union membership in a number of countries. It seems that the expansion of global production and the increasing mobility of capital has caused a shift of bargaining power in favor of employers. Growing inequality globally and within a number of companies and the growth of insecurity among those excluded from social dialogue are the empirical expression. In this situation, social dialogue remains a mechanism to protect workers and ensure stable labor relations for employers. Several countries have been able to use it to find ways out of the recent financial crisis; they were able to preserve jobs and to facilitate adjustment of companies.
The analysis of social dialogue in the world realized in this paper will reveal new aspects of social dialogue closer to civic dialogue. If we concede that the current democracy can not be limited to the distribution of resources, but should also include a discussion of the means of production, the dominant idea is that the business world can not be separated from society and that it must therefore participate in the discussion on the objectives of the economic world. The increasing flexibility of the labor market requires what A. Sen and Hirschman called the capability to express oneself so that workers and capital owners together may introduce new thinking about the business world. If social Europe becomes a reality, a new model of prosperity must be built with ideas and actors from civil society. To do this, the organizations of employers and workers and the states should create new initiatives and adapt new strategies to meet the challenges of the 21st century.

SCHUH, CORA* (Emmy Noether Project, schuh@em.uni-frankfurt.de)
Christian Enclaves, Freedom of Education and the Quality of Time: Contested Secularity in the Netherlands
The Netherlands are highly secular – only one third of the population being a church member; euthanasia and same sex marriage are broadly supported against recurrent religious opposition. In some areas though, one finds an almost religious secular-cultural setup: in the Dutch ‘Bible Belt’ orthodox and reformed groups strongly influence the organization of public life. Here it is not about accommodating religious minorities – rather, given the majority religions, Christian legal traditions and the structural pluralism of Dutch secular order, these places can be considered religious counter publics.
At the same time – due to e.g. population mobility – these places are changing, thereby becoming contact zones (Pratt, 1991) of religious and secular lifestyles. Central sources of conflict are Sunday rest and religious schools. The secular-religious divide becomes more complex with regards to non-western migrant populations and their (socio-economic) integration.
These secular-religious conflicts help discussing two central questions regarding the public sphere in religiously diverse countries: 1) what are (competing) notions of the public and how are they related to religious-secular history and 2) in what way can the state allow for multiple publics without failing to maintain social cohesion.
I discuss the conflict around Sunday openings and religious schools with regards to a changing Dutch secular model. Further I sketch how local contexts become arenas for conflict over secularity, and how these conflicts differ according to context. Based on my empirical findings I discuss the relation of secular models with religious/secular majority relations as well as the functioning of contact zones in stipulating secular identity formation.

Transforming Struggles: Organizational Modes, Mobilization Outcomes, and Occupy Wall Street
Encampments at Zuccotti Park and elsewhere have been violently dismantled, the mass media spotlight moved on, the spectacle stopped. Fissures between different tactical and organization approaches widened. Yet, the mobilization continued through manifold spin-offs, ranging from Occupy Sandy, which provided rapid relief in response to a devastating hurricane, to groups such as the Alternative Banking Working Group, which worked on new policy proposals, and Strike Debt, which developed new kinds of direct action. Although Occupy Wall Street inspired public debate and imagination, there are hardly any tangible policy achievements while recent data point to even further increasing socio-economic inequality. Assessments of the leaderless, General Assembly-based organizational form were divided over whether these were the essence of a prefuggative politics for real change and attracting participants or whether the lengthy, consensus-requiring deliberations prevented tactical efficiency, liaisons with large unions and NGOs,

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
and negotiations with the political establishment to win concrete legislations. What lessons can be drawn from the Occupy experience so far? How can social movement theory help to explain the rise, fall, or metamorphosis of the mobilizations? How do existing theories need to be revised in light of the new empirical experiences and the challenges ahead? Multi-method focus on the experience in select cities shows not only enormous local variation but also varied modes of connecting sites of struggle. The paper concludes with a discussion of options for future action.

Bothering Pays for Sociologists

Bothering pays.

Segmentary societies bear inequality. All of them. Urbanized even more. Cities have proven to be inequality carved in concrete and stone.

The more abundance of material culture, the more inequality. Chiefs in tribes have to bother.

They remain chiefs only if they impress bothering and solving conflicts. Bothering glues even the smallest tribe.

Today's large scale social units call themselves 'modern' to claim their qualitative difference to chiefdoms and the like. Here, nobody even considers an end of inequality, it is purely unthinkable as necessarily linked with the total dismissal of the material abundance (which could and should be achieved, plans have been made).

More, bothering has become a specialized task, a branch, a profession. Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother.

This is why we bother about inequality - sometimes. Have a happy conference!

SCHUSTER, FEDERICO* (Universidad de Buenos Aires, ffschuster@gmail.com)

Social Movements and the Political Invention of Future. Considering Recent Argentina

During the 1990's, neoliberal policies drove Argentina to huge transformations of the state, economy and labour. The process left a large number of poor and unemployed people and concluded with a monster crisis in 2001. During that time, there was a very important change in the field of social movements. As a consequence of the neoliberal policies, labour movement (which has been the most important movement in whole country contemporary history) diminished roughly its statistical presence in social mobilization. This happened in 1993 and in 1995 a new kind of movements grew up. That was the case of territorial movements, established in the poor neighbourhoods and small towns in a few provinces. They were composed mostly by unemployed, who asked for elementary rights to live for those who bother.

It's a story about the surplus value and the struggle for the survival of the working class. It's a story about the power of the people and the power of solidarity. It's a story about the future and the hope.

’Bastards’ in a Globalizing World: Subverting Ethno-Racial Hierarchies

Whether phenotypical or cultural, perceived human difference spawned boundaries of belonging and exclusion along hierarchical lines. The binary or rigid categorization created through essentialist conceptions of ‘purity’ was and still is intolerant of intermediate forms. These are generally seen as subversions of the prevailing classificatory scheme. The ensuing defense of a rigid classificatory scheme, especially by authoritarian societies, range from nihilation to the enforcement and assignment of place to these ‘deviants in the existing hierarchy’. In a globalizing world of dense patterns of human communication, interaction and movements across geographical, social and cultural boundaries these schemes are manifestations of entrenched power relations that have lost their meaning. Hybrid humanity and immigrants who do not fit pre-existing categories are socially and legally forced into denigratory niches symbolic of their low status and diminished life-chances. The paper examines the resulting alienation of ‘misfits’ and the ways they resist and change authoritarian hierarchies in a globalizing world.

Global Garlic and Its Labor Consequences

This paper investigates the dynamics of China’s integration into global commodity chains and a simultaneous race to the bottom. I explore this globalization-labor topic with a case study of garlic. Even in the garlic kingdom, the race to the bottom is visible.

1) China took off as the global exporter of garlic around 1982 and has been the dominant exporter since then. In 2009, 84 percent of the globally traded garlic came from China.

2) China’s 2002 adherence to WTO allowed it to export to previously closed or high-tariff markets such as the United States. In 2002, China surpassed Mexico in capturing the U.S. market.

The race to the bottom began with North-South competition. As the U.S. economy continued to contract, firms sought even cheaper labor, moving significant parts of the production process to Asia. Such moves threatened to undermine Mexico’s payoff from NAFTA. This capital mobility unleashed a race to the bottom in labor standards and working conditions. It is not possible for every nation to be a net exporter: one country’s gain is another’s loss. Although they do not initiate the race, governments become complicit because they, as much as foreign investors, want to hold onto their “competitive advantage” of cheap labor, lax working conditions, and lenient environmental regulations.

The South-South competition is reflected in the shifts in trade and investment flows. China’s export and foreign investment gains and Mexico’s losses are not simply those of two nations acting independently.

Labor conditions are oppressive, but firm owners, processors, exporters, and governments are not alone in their responsibility. ‘Bottoming out’ is a response to global importers who search for better prices.

In this research I investigate the conditions of garlic workers in China and Mexico as they relate to U.S. producers and the import market.

From Statistical Category to Social Category: Organized Politics and Official Categorizations of ‘People with a Migration Background’ in Germany

Social scientists disagree over whether it is acceptable for states to collect statistical data on the racial or ethnic composition of their populations and thus institutionalize these differences. Seeking to reconcile normative concerns with political desires to combat discrimination and reduce social inequality, some countries, like Germany, have chosen the ‘migration paradigm’ (i.e. using phenotype of birth and parents’ place of birth to focus on the act of international migration) over the ‘ethnic paradigm’ (i.e. using phenotypical markers and/or cultural and linguistic links to a particular national group) as a ‘color-blind’ measure of difference. However, while much attention has been paid to categorizations deriving from survey and census variables, debates about whether and how to measure immigrant-elated population differences often ignore other processes of categorization operating at the national-state level, such as interactions in the arena of organized politics.

In this paper, we expand the terms of the debate by examining the relationship between statistical classifications and their mobilization in political interactions, in order to examine the validity of the distinction between the ‘migration’ and ‘ethnic’ paradigms in population statistics. The category of ‘persons with a migration background’ (Personen mit Migrationshintergrund), which was introduced in the German microcensus in 2005, serves as our case study. Drawing on a qualitative content analysis of 60 parliamentary documents originating in the years 2005 to 2013, we show that the way the migration paradigm is deployed by representatives of the state differs from the statistical categorization: it is implicitly ethnic, with strong class associations. Insofar as the social categorizations created by elected representatives out of statistical categorizations facilitate the construction of a stigmatizing public image, they may be of personal and material—not just symbolic—consequence to individuals thus categorized.

SCHWARZ, CHRISTOPH* (Frankfurt University of Applied Sciences, schwarz@e-mail.de)

Educational Policies and Questions of "Inclusion" in the Middle East: The Case of the Palestinian Refugees

Palestinian refugees are the only ethnically defined refugee group worldwide that has an UN organization dedicated exclusively at its needs: the UNRWA (United Nations Relief and Works Agency), whose mandate originally was limited to a three year relief program for the 750 000 Palestinian refugees who fled the territories of Mandatory Palestine in 1948. By now, UNRWA has expanded its operation to the third generation of those refugees, which, due to the demographic development, today comprise almost 5 Million persons.

Regarding questions of inclusion and educational policy, UNRWA represents a unique case: financed by Western governments, the agency has set up 700 schools in the West Bank, Gaza, Jordan, Syria, and Lebanon, thereby providing free education to almost 500 000 children and youths – separated from the respective national school systems, and drawing on a staff of 22 000 teachers who are mainly refugees themselves. The international debate on inclusion has also had some repercussions in UNRWA, and in January 2013 the agency presented its own concept of inclusion. However, because UNRWA is officially an aid organization without a political mandate, the paper does not explicitly broach the issue of the social exclusion and (victimhood to) violence of their clients in the “host states”.

This presentation aims at depicting an outline of the paradoxes of UNRWA as an organization when it comes to “inclusion”; excerpts from interviews will illustrate the biographical relevance of UNRWA education and the exclusion of Palestinian refugees.

SCHWARZ, CHRISTOPH* (Frankfurt University of Applied Sciences, schwarz@e-mail.de)

The Only Constant Thing Is Change? Education, Adolescence, and the Need for Innovation in Late Modernity

Educational policies in many countries increasingly aim at preparing pupils for a globally competitive, world of permanently accelerating social change; the ideal type of subjectivity they produce is a skilled, self-employed entrepreneur, flexible enough to adapt both life plan and identity to the always changing needs of global markets. For a sociology of education which aims to analyze all aspects of these contradictory processes, a socio-psychological concept of adolescence offers an interesting perspective: here, adolescence is considered the life phase most directly associated with individual change as well as social innovation. Educational institutions in the classic modern nation state aimed to contain and channel the dynamics of adolescence by offering youths a “psycho-social moratorium” (Erikson) or “potential space of adolescence” (King). In contrast to rituals of initiation in traditional communities, modern nation states thus made use of the innovative potential of adolescence. Following debates about education in Germany and other European countries it seems that on the one hand adolescents are expected to be “innovative”, while at the same time curricula demand an always increasing workload and integrate working and learning more intimately or anticipate work environments, which makes it more and more difficult to consider high school any kind of “moratorium” – especially as it is a decisive phase for social mobility.

I want to present and discuss several theses regarding the relationship between educational institutions and the dynamics of adolescence, both in Western and (de)colonized societies.

The Symbolic Economy of Authenticity As a Form of Symbolic Violence: The Case of Middle-Class Minorities

In contemporary societies, the language of authenticity has become central to the organization of work, manners, social ties, and most interestingly: social and moral evaluation. The paper explores how the ethic of authenticity informs symbolic economies of worth in Israel and the US. These new symbolic economies differ from Bourdieu’s: mastery of legitimate practices and dispositions may indeed enhance the social worth of some actors, but also devaluate other actors, whose those class habits and identity are considered ‘inauthentic’ independently of their performance. Based on analysis of wide empirical literatures on raced and classed identities in Israel and the US, the paper explores how this symbolic economy advantages s-Palestinian minorities. When dominant ethnic groups monopolize the symbolic recognition of authentic middle-classness, middle-class members of dominant ethnic groups are at risk of being accused of mimicry (‘acting white’, ‘Ashkenazification’). This also applies to second-generation middle-class actors: following the racialization of class, their deeply entrenched middle-class tastes and dispositions may be suspected as inauthentic. While dispositions are often acquired in classed contexts and their distribution is hence class-based, the recognition of authenticity often follows race/ethnicity lines. In some cases, middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Far from being an emancipatory power that disembs whimsical actors from social structure, the ethic of authenticity is embedded in structures of unequal recognition, and may thus encourage actors to participate in their own subjection. Inequalities in recognized authenticity are discursive products of the same symbolic power that naturalize hierarchies, yet they rely on ascriptive categories more than embodied habits. Studying these inequalities as a unique form of symbolic violence necessitates expanding the Bourdieuian framework while sticking to its mission.

Submit, Exit or Change: Strategies of Coping with Generational Order(s) in a Transition Society

This paper aims at conceptualizing problematic conditions of transitions to adulthood in the Central Asian country of Kyrgyzstan. Previous research in Kyrgyzstan has revealed that the social order in this society comprises a strong age- and gender hierarchy. Such restrictive generational order shows as well in my qualitative study of young Kyrgyz adults. Respondents describe experiences of inter- and intrapersonal conflict when their freedom of choice (concerning study subject, marriage partner, lifestyle) is confined by their parents. While this can be said to match Kyrgyz traditions and notions of “collectivist” culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyz cope with such conflicts in a variety of ways which I divided into three categories: “submit”, “change” and “exit”. The first category refers to strategies with which young people are obedient to their elders' rule and decisions of the elders (mainly parents or parents-in-law). “Change” subsumes all those strategies with which the young manage to follow through with at least part of their personal aims, engaging in compromises, trade-offs or negotiations. With the last category “exit” I labeled attempted ful of partial escalation and withdrawal from the existing social order. Furthermore, my analyses indicate, that certain narratives are used to legitimize the respective strategies: While people who engage in “change”-strategies (paradoxically often relate to traditionalized narratives, those who submit under others' demands in most cases deploy an individualized and self-related explanation. In the paper I wish to present the above concepts more closely, and to discuss the seemingly paradox patterns of applying and legitimizing solutions of intergenerational personal conflicts. Beyond that, I would like to discuss which implications such patterns have for the potentials and barriers of social change in a so called “transition society”.

Vertical Occupational Sex Segregation: Comparative Analysis

GOTTSCHALL, KARIN (University of Bremen)

RC02-55.2

The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across 21 European Countries

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. During the last two decades a whole set of EU and national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While there are seen as separate, the first addressing discrimination, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

We will address this lacunae by looking at the impact of work, family and gender equality policies on vertical occupational sex segregation. The study starts with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 21 European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

The Tourist Experiences of Fathers

The lack of research into fathers on holiday is a reminder that understandings of masculinities and gender relations in tourism are absent compared to other disciplinary areas such as family studies. Research on family holiday experiences is largely informed by feminist gender representations rather than examinations of femininities and masculinities. Previous studies highlight the never-ending physical and emotional work of motherhood both at home and when traveling with little acknowledgment of any gender-related constraints that fathers might face. True gender scholarship requires a more critical appraisal of gender relations that is inclusive of the male voice in family tourism. There has been whole-family research highlighting the role of fathers in taking on primary responsibilities as entertainer of the children and facilitator of mothers’ own interests (Schanzel and Smith, 2011) which requires further inquiry. However, research into fatherhood also needs to be more inclusive of diverse family forms and a range of fathering experiences, such as, solo-fathers, non-resident fathers and gay fathers. This study extends previous research into nuclear families and focuses on the family holiday experiences of fathers travelling with their children without the mothers. The process of semi-structured interviews involves a range of solo and non-resident fathers in Auckland, New Zealand and conducted after the summer holidays in January/February 2014. Because of the explorative nature of this research an interpretative paradigm and in-depth interviewing is chosen. The aim of this study is to understand the experiences and meanings gained by single fathers travelling with their children. The findings of this research and comparisons to earlier research on nuclear families will be presented.

European (Social) Science Policy-Making: Setting the Agenda of the Social Sciences and Humanities in the EU Framework Programmes

The social sciences and humanities (SSH) funding schemes of the European Union (EU) framework programmes are the largest of their kind in Europe (Kastrianos, 2010). The larger EU policy context has had direct impact on EU SSH research policy and indirect impact on national research funding strategies. Setting the agenda of research policy takes place on two levels in the European Union: first, the definition of large thematic priorities, funding instruments, rules of participation and the overall budget available to the different domains are defined in the multi-annual EU Framework Programmes. Second, the precise topics, research questions and favoured approaches are defined in the regularly updated work programmes.

This paper will discuss how the agenda is set in EU SSH research policy and in particular focus on the role of the Treaties (Rome, Amsterdam, Maastricht, Lisbon) in framing SSH research policy since FP4 (1994-1998), when a SSH priority was first introduced. It will be shown that the (geo)political landscape of Europe and the degree of European integration has first limited and later facilitated SSH subjects. It will also consider how changes, first in discourse and later in governance, affected practices of stakeholders (researchers, research associations, funding bodies) and public participation in setting the agenda for the SSH. The process of setting the agenda is understood on the one hand as a social practice of knowledge production, in the sense that setting research priorities and especially defining more precise calls for proposals on a political level also influences the approaches and results of SSH research. On the other hand it is understood as a form of political bargaining, where public and stakeholder participation is taking place in the political sphere. The research relies on existing studies, interviews with SSH Commission officials and national contact points, participant observation and document analysis.

Leaning Towards The Middle? Collective Manifestations Of Normative Beliefs In Developed Countries and Their Implications For Developing Countries

There is a vast and ongoing debate on the middle class in the field of political sociology. Undoubtedly, studies on its role and functions should not be restricted to developed societies as the global importance of developing countries (with emerging middle classes) will definitely be growing.

We would like to take up this understanding by contributing a piece of ground-work research that focuses on the middle class in comparatively developed countries because it may serve as some sort of reference frame for an improved understanding of socio-structural driving forces perceptible in developing countries.

With these preliminary reflections in mind, we use data of the International Social Survey Programme (2009; module "social inequality") in order to compare perceptions and evaluations of stratification realities and aspirations. On the basis of five distinct types of stratification, respondents of 26 primarily European countries were asked for their assessments regarding the current and the desired stratification of their respective countries. By performing multinomial logistic multi-level regressions we identify individual- and country-level determinants.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Concerning stratification realities gender, age, education and (subjective) socio-economic status prove to be significant predictors. On the country-level, the objective socio-structural shape (income-based percentage of lower, middle and upper class), the GDP per capita and social expenditure (as a percentage of GDP) turn out to be relevant. With regard to stratification aspirations results indicate that respondents in the majority of countries under study opt for a society with a broad middle segment – in fact, irrespective of any stratification realities. Thus, context effects impact solely on perceptions of stratification realities, whereas we observe a universalistic preference for the ‘middle class society’. In our view, the choice towards a normative leaning towards the middle class in developed countries may improve the comprehension of mental mechanisms and orientations in developing countries.

Le "Libre Choix Des Patients Dans Une Relation Plurielle Et Diachronique"

Le droit des usagers au « libre choix », tel qu’il est formulé dans la loi du 2 janvier 2002 en France, semble sous-tendre que les patients s’inscrivent dans une relation duale avec les médecins au sein de laquelle ils seraient des sujets singuliers, rattachés à eux-mêmes dans leurs décisions. Les travaux sociologiques ont cependant montré d’une part que la réalisation de ce modèle bute contre des obstacles notamment liés à aux positions de classe, genre et âge des patients et aux situations de crise qu’ils rencontrent ; d’autre part que les maladies sont rarement les seuls parcours de soins mais souvent aidés par des membres de l’entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous faisons donc l’hypothèse que les décisions de soins doivent être analysées dans le cadre d’une relation plurielle autour du patient, qui questionne la voix au chapitre de chaque acteur. Par ailleurs, les choix sont théoriquement révocables à tout moment, ce qui invite à les analyser de manière diachronique.

In the Middle or in a Muddle: Socio-Cultural Politics and the Indian Middle Classes

The state of middle class culture and politics in India is complex and often contradictory. While many among the estimated 200 million middle class have entered upward economic and social mobility over the past 20 years, large numbers of salaried professionals in government service and small companies have seen their status and incomes decline relatively over the same period of time. As such, we see notable schisms within the middle class: the new rich and the entrepreneurs as compared to traditional salaried workers; the middle classes in India’s many regional towns, as opposed to those residing in vast urban metropolises; and differing cultural outlooks from generation to generation, region to region. Interesting political differences are also evident with many of the “traditional” middle classes, for instance, exhibiting a cultural conservatism while holding politically progressive views. Based on extensive research among the Indian middle classes over the past 15 years, I contend in this paper that the middle classes are not homogenous, are deeply divided politically and culturally but nevertheless they remain significant as brokers of political and cultural change within India. Examples drawn from Kolkata and Darjeeling in West Bengal will be the basis for the discussions in this paper.

The Paradoxical Politics of South African Labour: Unions and the Fight Against Precarity

As neoliberalism has undermined formal wage work across the global South, labor scholars have increasingly turned their attention away from organized and formally employed workers and towards the growing sections of the “precariat”. A large literature has blossomed examining the politics of precarious, informal, and self-employed workers. Behind this precarious turn in labor studies is an assumption that these workers will be the primary source of new labor politics that looks beyond issues of wages and working conditions and towards broader questions of livelihood and social reproduction. However, in South Africa, while precarious workers’ movements have remained disparate and unorganized, formal workers unions have taken up a range of issues—such as a universal national health insurance, a basic income grant, and land reform—that constitute new politics of the precarious. This is surprising given that many of the policies that unions advocate would involve the subsidization of precarious workers’ livelihoods by the minority of formally employed organized workers. In order to explain this paradox the paper draws on nationally representative household survey data as well as one year of fieldwork in three rural areas and one major urban center. The data show that the decline of formal wage labor has led to an increasing social and economic interdependence between large sections of South Africa’s precarious and formally employed workers. The case shows the importance of understanding the ways in which the rise of precarity has reshaped not only work, but also workers’ house-
holds and broader social lives. It also shows the role that “old” organizations can play in the “new” politics of labor.

The Triangular Relations of Society, State, and Market in the Context of the Processes of Contestations Between Globalization and Decentralization: A Sociological Perspective

This paper gives a general description of the triangular relations between Society, State, and Market from a Sociological Perspective. Within the context of this triangular relations, a major challenge facing contemporary Indonesian Society will be explained, which is the social problem of Poverty and Social Exclusion. Before understanding the relations between the three pillars (Society, State, Market) as a conceptual tool for explaining poverty and social exclusion, there are several important caveats to be addressed. These important caveats are related to the relations between Nation-State, and Nationalism within the context of the processes of contestations between globalization and decentralization (democratization on the local level). The discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. The paper is based on primary data using qualitative methodological approach and a specific case study from Indonesia.

When There Is No State

The Decentralization processes in the context of this case study have not yet resulted in a more flexible and decentralized structural relations between the Central Government and the Local Governments (both at the Provincial and at the Regency Levels) generally and also specifically in the Industrialization Strategy in The Oil and Gas Sector (1999-2009). The triangular relations between State, Market, and Society are fluid and internally fragmented within each pillar and externally contested between the three pillars.

Inclusive policies by the local governments have not yet been effective and efficient in targeting the most marginalized and socially excluded members of the local communities. The local governments need to have a clear and more affirmative policies focusing on the local communities welfare, including immigration policies. The MNC (BP) Programs need to take into reconsideration the categorization of DAV and IAV local communities and the internal fragmentation within these communities.

The relations between the local communities and the local government are not as strong nor as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, so far only the IAV local communities have done so against the MNC (BP). At present, there is no indication yet of any process of social movement in the making.

The condition of no real role carried out by the State in the context of decentralization on the local level) is, the discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. 1980s are also well documented (Webster 1985, Sitkas 1983). However, what most analysts have failed to capture is the shift from this highly formalised and disciplinary migrant labour regime, historically framed through government-to-government agreements, to the current reality of deregulated labour migration to South Africa. Following restructuring in the mining sector and political pressure to recruit locally, the share of contract workers plummeted in the early 2000s while at the same time, emerging sectors such as outsourced construction, hospitality, and domestic work started relying increasingly on foreign labour. This structural shift largely caught South African unions unprepared and very limited organised labour has taken place. Drawing on research undertaken within NMIWORC (www.miworc.org.za) over the past two years, this paper explores more specifically the mobilisation challenges posed by this regime shift and strategies developed by both unions and migrant workers. While some micro-local experiences of mobilisation point to unions’ ability to conceptualise new forms of transnational solidarity, the study shows overall that current fragmentation in the South African union movement is a major obstacle to migrant workers’ organisation, particularly in those critically precariously sub-sectors of the economy. In this context workers develop multiple solidarity networks (ethnic, religious, and at times political) and strategies to circumvent exploitative and discriminatory practices, albeit in a fragmented and mostly underground manner, including through deliberate avoidance of the historical unions.

The Partner's Role in Immigrants' Labor Market Outcomes: Explaining the Mechanism

This paper explores why and how partnership impacts labor market outcomes of immigrants over the life course. Drawing on household specialisation and social capital theory, the study takes on state and the effect of an education on a partner’s occupational outcomes. I then explore the specific resources spouses provide differentiating between instrumental support and emotional support. Instrumental support refers to the provision of labor market information, ability to employ own spouse and help with the application writing. Emotional support implies willingness to discuss important matters and encouragement of the spouse’s career. These forms of social capital have been linked to occupational outcomes only theoretically and, mainly due to lack of data, not empirically.

1 First hypothesis that partnership has a direct positive effect on occupational outcomes due to their higher ability to provide these resources. Secondly, I assume that instrumental support has a stronger positive effect on occupational outcomes than emotional support. Lastly, I argue that partnership also has an indirect effect on occupational outcomes by facilitating important immigrant-specific processes such as recognition of foreign credentials and post-migration investment into education.

To test my hypotheses I use novel data from the German National Educational Panel Study (NEPS) which provides detailed biographical information about migration, education, occupation and family formation, thereby allowing for causal inference. First results show that partnership increases the likelihood of post-migration investment in education, however, only if the partner holds at least higher secondary education. Also, having a native spouse who is highly educated provides the most labor market related resources in terms of information, reference and help with application writing compared to lower educated and co-ethnic spouses. Education and social resources then both positively affect occupational status.

Extending Regulation to Protect Vulnerable Workers

Sociologists of labor have long recognized the central role of the state in setting rules for collective bargaining, yet in the past few decades, surprisingly little attention has been paid to state efforts to reform labor institutions. This paper compares state efforts to reform collective bargaining institutions in several emergent/democratizing countries, exploring the obstacles posed by existing institutional legacies, and current efforts to extend new protections to vulnerable workers.

Maintaining Identities of Distinction in Taiwan through the Foregrounding of Linguistic Abilities

In his seminal work Distinction: A Social Critique of the Judgment of Taste, Pierre Bourdieu demonstrates how the cultivation of taste serves to reproduce class differences. In the paper, I argue that class divisions are similarly being reproduced today based on proficiency in languages of wider communication - particularly English. After discussing the mechanisms by which identities of distinction (or any identities, for that matter) are produced in interaction, I will present interview data from a longitudinal multi-case study illustrating how this process of practices and performance indexing dominant ideologies play out in Taiwanese society. The study's multilingual Taiwanese participants repeatedly point out instances in which they have distinguished themselves from those around them through their use of and (relative) proficiency in English (and to a lesser degree, French). For these participants, images of themselves as more worldly and sophisticated than their peers started to be nurtured quite early in life through tuition classes and private tutoring, and from that point on, they continuously struggled to maintain these identities of distinction, often resorting to performativity to foreground their linguistic practices. These participants, however, viewed their differentiated status as socially precarious, for accompanying their repeated reports of attempting to stand out through English use was a frequently expressed anxiety about the fact that their English abilities alone might not continue to adequately differentiate them from others, particularly in the employment arena, as more and more Taiwanese gain English proficiency.

A Paradox of Coercive Power: Institutionally Founded Power Relationship and Rationality of Action

Reviewing the literatures on social power, it is found that so many different kinds of power concept as well as measures of magnitude of power have been proposed. Hence, without an appropriate specification of power concept, no meaningful analysis is possible. This research focuses on the coercive power which is defined as follows; an individual A is wielded a coercive power by B when A is forced to choose an action x which she/he would not choose if B’s action following A’s action were somehow different. In other words, B forces A to choose x by preparing a punishment to A’s non-x choice. (Strictly speaking this is “negative” coercive power. There is also “positive” one in which B prepares a positive sanction to A’s choice of x.) This concept of coercive power involves individuals’ rational choice of A is forced to choose x because it is her/his rational choice under a given situation.

It is frequently supposed that a power relationship is asymmetrical in which the power holder and the power subordinate are fixed. If A is the power subordinate in relation to B in one situation, this asymmetrical relationship applies to other situations. Especially, if the relationship is institutional, that is, if it is institutionally stipulated that B is entitled to control A’s action by preparing a punishment to A’s normatively deviant action, B is identified as the power holder in relation to A. However, there are paradoxical cases in which the presumed subordinate A can control B’s sanction schedule in such a way that B is forced to choose a sanction which does not punish A’s deviant action. This happens because B also has to choose the sanction rationally. This study shows the mechanism of this paradox and analyzes mathematically the conditions that this paradox emerges.

Income Disparity Among Elderly People in Japan: Life Course Factors on Retired Life

With societies being increasingly aged, the inequality among the retired population should be more focused in stratification study. My previous study (Seiyama 2009) had analyzed, using 1995 SSM data, the reason for the larger income disparity among the elderly in Japan to some extent, but there were two serious defects in the data: that is, people aged more than 70 were excluded and the information on income sources including pension were not available. This is a new analysis on the income disparity among the elderly, based on a new nation-wide survey conducted in 2010, headed by Shirahase, with effective 6,442 respondents from

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
50 to 84 years old population, comprising various stratification variables such as income source. The main results are: (a) in Japan the income of the male elderly is mainly composed of working income and pension, while capital income is quite negligible. (b) Gini coefficient within age group is larger for the groups aged 60 or more than for two groups of 50', mainly because of the fact that for the elderly the proportion of those with only meager income is large. (c) After 65, the main source of income becomes pension (more than 2/3 of total income), though exceptional cases are blessed with significant amount of working income (mainly administrative or self-employed.) (d) The overall income inequality among the retired reflects the inequality in pension. (e) The main factors on the pension inequality are education and occupational career characteristics at working age, but controlling for the latter the effect of education is largely reduced. (f) The important occupational career characteristics are the size of company and the experience of executive post. (g) Because the single earner family model had been prominent for the cohorts of our survey respondents, a basically similar conclusion is derived for household income.

Labor Relations, Neoliberal Agri-Food Policies and Disasters in Japan

This paper probes the issue of changes in the agri-food labor structure under neoliberal globalization. Employing two cases from Japan, the paper documents the extent of independent farmers and their replacement by hired labor. This process, it is argued, was accelerated by the implementation of neoliberal policies and by the effects of natural and human made disasters that affected Japan in recent years. More specifically, this work illustrates:1) the manner in which neoliberal agri-food policies engendered changes in agri-food labor relations; 2) the characteristics of the new forms of social relations under neoliberalism and 3) the specific alterations of labor relations that occurred in the aftermath of recent disasters in Japan. In the first of the two cases presented, labor relations in farms controlled by the transnational corporation, Dole Food Company, are illustrated. The second case analyzes the neoliberal agricultural reforms introduced in the aftermath of the March 2011 earthquake. Also considered in this case are labor relations in the fishing sector and the responses of fishermen to the neoliberal reforms of the sector.

CEDAW As an Instrument to Foster Women’s Political Equality in Central and Eastern Europe?

All countries of the Central and Eastern European region adopted the Convention for the Elimination of All Forms of Discrimination Against Women. Its implementation in these countries can be seen not only as a fulfillment of the promise of social justice but also as one of the mechanisms of democratization. Based on the comparative analysis of the official country reports and information delivered by non-governmental organizations the impact of CEDAW on the implementation of gender equality in new European democracies will be assessed. The special attention will be devoted to the problem of the enhancement of women’s political rights in Central and Eastern European democracies. What it means to implement the provisions of the CEDAW concerning political and public life in these countries? Can there be seen progress in their implementation? Is the Convention (and if yes, in what ways) used by women’s organizations in order to demand institutional measures to strengthen women’s representation in political institutions? Is CEDAW a point of reference for those who argue for legal changes – including gender quotas and zipper system – to help increase women’s political representation? Is the Convention a tool used by these actors who engage in supporting women deciding to be politically active both on local and national levels? What are the similarities and differences between the countries of the region in implementing the Convention and its promotion as a tool of effective social change leading to women’s political empowerment?

SELIGMAN, ADAM* (Boston University, seligman@bu.edu)

Trust and the Problem of Boundaries

This paper analyse the boundaries of trust which divide communities of belonging, moral credit and risk, from communities of knowledge, strangeness and security. It will discuss the ambiguous and hence threatening nature of bound-aries and the consequences of this on constructing trust and solidarity across communities of difference. It will further query the sufficiency of liberal individu-alist models of personhood and community to overcome what is one of the most serious social challenges of our time.
However, the complete recording of one's life brings up new questions about personal information management and emerging inequalities. Cases studies of methodological, epistemological and social aspects of lifelogging already show fundamental concerns about the relationship between one's own life and the data set created by liflogs. Critics warn that people using lifelogging and producing large amounts of information might become unwitting subjects of surveillance.

The critical discussion of lifelogging refers to the theory of "shifting baselines". Three main shifts have to be considered: 1. From subject to object (loss of individualism), 2. From action to function (loss of autonomy or agency). 3. From privacy to post-privacy. "Technoapartheid", "over-diagnosis", the standardisation of human behaviour, the emergence of new social norms and the shame punishment of deviant people are examples of new inequalities caused by extensive lifelogging. Against a background of research projects on media of the future and empirical data, this paper discusses lifelogging as a controversial issue, focusing on the role of recently developed digital devices. Even if related developments in the area of lifelogging are not yet in the public domain, important questions about shifting boundaries are emerging and need to be discussed.

International Tourists at a Japanese Festival

The paper concerns the experiences of international tourists visiting a traditional festival in Japan. The festival, Tsukuda Ōmatsuri, is a shrine festival held every third year in August in an old neighborhood in Tokyo, and attracts thousands of spectators and tourists. I have had the privilege to observe this festival for thirty years. Over the years the festival's relationship with tourists has changed. At one time during the 1990s, when the local area was threatened by urbanization, tourism was encouraged to boost political support and protection. Once the area avoided demolition, the crowds of tourists were seen as disturbing to festival performances, and the festival was no longer advertised for tourism. In spite of this, tourists continue to visit the festival in great numbers, mostly Japanese, but not to promote the festival or encourage tourism has not diminished its value for tourism.

The situation of social inclusion could be considered as situation of 'entering' into community that brings the sense of individual/collective solidarity. The virtual community and internet forums could serve as example to follow and investigate that mechanism as the Internet provides a social space in which people can construct participation in different types of social groups (Mann and Steward, 2000). These groups could construct sub-cultures (Williams, 2006) or small cultures (Holliday, 2004). The culture of each community is based on members' lived experiences in various communities. Digital community has some specifics: in forms of participation, social status of participants, modes of identity and behavior, etc. (Mann and Steward, 2000). Researcher do not have any cultural mediation and cultural language reveals. Nevertheless these disembodied forum participants pass their subjective meanings and solidarity moods by digital texts as cultural markers and construct different forms of social (virtual) solidarity. So the mechanism of forum solidarity could serve as a source for analyzing the nature of solidarity through linguistic approach.

Facing Inequalities: Internal-External Labour Market Interplay

From the theoretical perspective the paper aims to revisit the traditional theory of labour market segmentation and its key model based on insiders-outsiders divide. The development of a new paradigm supported by original empirical evidence of
an increased interdependency and competition between external and internal la-
bour markets is proposed.

More than forty years later we reconsider the relevance of Internal labour mar-
ter theory (Doeringer, Piore 1971) from a contemporary perspective. The stra-
tegic use of core-periphery has shifted towards market-mediated employment
relationships and affects indifferently high and low-skilled sectors.

This issue is part of the wider socio-economic debate on inequality associated to
labour and ranking and sorting process in labour markets (Granovetter, Tilly 1988).

Many European countries have undertaken reforms in order to increase flex-
ibility. From this perspective the framing refined by Varieties of Capitalism (VoC)
literature has been evolving, as companies situated in different countries -facing
the global competition- seem to be adopting similar employment practices.

Recent studies (Herrmann 2008) showed the ways by which firms can compete
circumvent pragmatically their own rigidities though functional equivalent practic-
es, by using flexible employment contracts or rearranging the required skills from inter-
national labour markets. Firms seem to be doing what their institutional contexts
do not encourage.

We consider new forms of division and distribution of labour between firm-
based and market-based labour force and their social implications, from the key
point that skills and competences are crucial factors of productivity and competi-
tiveness.

Following Streek's contemporary Durkheimian interpretation that “economic
efficiency is to an extent conditional on the effective enforcement of social con-
straints” (Streek 1997) we aim to better understand if there is a sort of collective
awareness of the reduced social value of work or if, in alternative, companies are
implementing new and still unclear cost-effectiveness strategies.

Globalization of production has yielded contradictory consequences to the lives
of women workers which question about gender justice. Supporters argue that
internationalization assure gender justice because it brings positives changes to lives of
women workers in various forms, like, expansion of employment opportunities leading
to income earnings (Barrientoes, 1995; Razavi, 2001; Kabeer, 2004), break-
ing patriarchal bond (Lim, 1997), growth of self-awareness about rights and duties
and participation in collective bargaining association (Gills, 2002), shifts in gender
roles and value structure, reconfiguration of the public-private and production-re-
duction dichotomies (UNI, 2002). On the other hand, critics reject the claim of
economic benefit of women; rather state that it is pushing women into more vul-
nerable situation than they were before (Boserup, 1970; Elson and Pearson, 1981,
1997; Nash and Fernandez-Kelly, 1983; Acker, 2004; Caraway, 2007). They argue
that working conditions and labour rights in global factories are characterized by
unjust labour practices, such as insufficient wages, extremely long working
hours with minimum compensation, lack of occupational safety and health, little
access to maternity and childcare benefits, arbitrary punishment and workplace
harassment, absence of union and low workers’ participation, presence of forced
and compulsory labour, persistence of workplace discrimination. Based on
interview evidences from Readymade Garment Industry of Bangladesh, this paper
explores gender justice is yet to achieve at the global factories following the concep-
tual framework of social justice by AmartyaSen (Sen, 2009). This paper concludes
that labour justice can be ensured if all local-global actors (state, employers, em-
ployees, corporations, NGOs, consumers’ groups) play responsible and ethical
roles towards unfortunate workers.

This paper focuses on UJ students’ views on remaining or leaving South Africa.
This is based on the degree of trust students perceive the government of being
worthy of and the degree of engagement in the affairs of the country students are
prepared to expend in the context of perceived threats to SA citizens. A survey
was conducted in 2011 on the basis of a stratified random sample of 1214 un-
dergraduate students on all four UJ campuses. The data is analyzed in terms of a
typology that considers the extent to which people either respond to real or per-
ceived threats on the basis of trust in the government’s ability and willingness to
protect their interests as citizens and the derived trust in the future of the country
or from a position of distrust in this regard. On this basis they could furthermore
either engage the threatening reality or disengage from it altogether. The paper
analyses the extent to which patterns can be identified among different groups of
UJ undergraduate students with regard to the four possible responses that
emerge: Trusting engagement, trusting disengagement, distrusting engagement
and distrusting disengagement. The paper concludes by briefly considering the
possible implications of the four responses for the long term stability and pros-
perity of South Africa.
as in science fiction the methodology is based on empirical socio-spatial findings (knowability), technological projection, epistemological growth and speculation regarding potential tangents and tipping points. The ability to act positively towards desirable futures is deeply embedded in possibilities of change, identifiable trajectories and an acknowledgement of the fact that cities and society continually transform. For positioning urban change in context of resilience (Walker et al., 2004)(Holling, 1996), adaptation and assemblage (DeLanda, 2006), potential urban futures become the space of socio-spatial speculation and resultant action.

“What I Want to Do” As a Form of Strategy to Survive on the Job-Hunting Process: The Case of Japanese University Students

In Japan, university students are facing challenges to get a job today. For example, only 60 percent of university graduates can find a full-time job now. Many quantitative researchers conducted research on job-hunting for university students to understand how social structure impacts the job-hunting process. These studies pointed out that the labor market requires university students not only to have a better educational background but also to have higher motivation, like “yaritaikoto” (what I want to do), because the labor market requires them to work for other reasons besides money. However, no one has analyzed how the word “yaritaikoto” has been used by students.

My research aims to describe the job-hunting process for Japanese new graduates by analyzing the use of word, “yaritaikoto.” I conducted interviews with 11 students who were in the middle of job-hunting activities. Each person was interviewed two to four times during February to July in 2012. Using Goffman’s “warm-up” and “cool-down” theory (Goffman1952) as an analytical framework, I shall raise the following points. First, they used the word “yaritaikoto” to warm themselves up to get into job-hunting mode; however, many of them failed in job competitions. Second, they let themselves cool down their “yaritaikoto.” Third, I changed the meaning of “yaritaikoto,” reinterpreted it and warmed their “yaritaikoto” up again for the next competitions. Therefore, students have to continue to change their “yaritaikoto” during the process until they get a job. It is hard for them, however, to deny their “yaritaikoto” and adapt to the job market. Students need the competition only to survive job competitions but not in their real lives, which means, interestingly, that they are not able to meet the expectation that the labor market has for them as long as they use the word.

Consolidating Patients’ Rights in South Korea: The Case of the Breast Cancer Patients’ Movement

The promotion of patients’ rights and quality care have been rapidly spreading in South Korean hospitals since the 1990s. The most conspicuous method of spreading these two concepts has been the breast cancer patients’ group. This paper will treat the evolution of the breast cancer patients’ movement since 2011, focusing on an organization that claims to represent female breast cancer patients in South Korea, the Union of Korean Breast Cancer Patients (hereafter UKBCP). Established by Korean women with breast cancer, the distinctive characteristics of the UKBCP will be presented and analyzed; these characteristics derive from the birth of patients’ self-help groups promoted by biomedical professionals in university hospitals.

My theoretical approach is indebted to the present scholarship on the sociology of individuals, particularly Danilo Martuccelli’s work on subjectivity(2002) and the theoretical framework of Health Social Movements (Brown, Zavestoski et al., 2005). In my analysis, I will refer to materials collected from different sources: web information provided by the UKBCP, participant observation and in-depth interviews.

The study will lead to a better understanding of objectives and strategies of the UKBCP. My hypothesis is that the heteronormative femininity has developed with the current regime of breast cancer. In this perspective, I will further examine the impact the regime has had on the biomedical world and the life of patients. I will also explore actions specifically concerning the rights claimed by patients and the relational context already given by breast cancer, which resonates with the cultural and political characteristics of reframing a South Korean welfare state and particular elements constituting the subjectivity of breast cancer patients.

SERCOMBE, HOWARD* (University of Strathclyde, howard.sercomeb@strath.ac.uk)

Youth Work in the Context of a Global Sociology of Youth

This paper explores how modern youth work has arisen through the social construction of “youth” as a delineated category of adults through a range of key processes. The youth category is created through the exclusion of this group of (biological) adults from the workforce and their incarceration in age-streamed cohorts in educational institutions. This is systemically supported by a scientific discourse of adolescence that resides clearly within a deficit paradigm with a wide range of associated cultural artifacts to disempower young people. The elimination of relationships with older adults and the exclusion of young people from economic life feeds and maintains youth cultures while simultaneously marking young people out for prejudicial and discriminatory treatment. The resulting economic dependency in young people, their incoherent social role, the emergence of distinct youth cultures and the generation gap provides the ground for disproportionate public fear rooted in young peoples’ “otherness”, and the “social problem” of youth is created and maintained.

This leads to simultaneous and contradictory pressures for the control and containment of young people and for their social and economic participation and agency. This occurs in a social context by class and other contradictions, the technological and industrial transitions involved in the collapse of ‘heavy’ modernity and the emergence of more ‘liquid’ forms, and by globalization, including global modernisation and the globalisation of capital. Youth work emerges in the flux of those contradictions. The paper explores the responsibility for youth workers to partner with young people to manage and challenge the conditions of their disenfranchisement and to find compensatory processes which facilitate young people’s renewed agency.

The Movimento 5 Stelle (M5S) Between Populism and Direct Democracy

This article presents a study on the Movimento 5 Stelle (M5S), founded in Italy in 2009 by the comedian Beppe Grillo. The elections of February 2013, established the success of this movement that with a result of 25.5 per cent, has placed 163 members in Parliament between Deputies and Senators.

The Movimento 5 Stelle promotes initiatives to bring citizens at the center of public life through practices of direct democracy, while underlining the crisis of representation of the traditional political parties.

The study is aimed at understanding the political, social, cultural meanings of this movement and in particular it examines the way in which its members oppose to and are distinguished by the traditional parties, in facing and developing interventions through participation and direct democracy in the fields of interest of the movement, namely energy, water, waste collection, connectivity, social services.

The Movimento 5 Stelle will be analyzed through three dimensions: the space represented by the online Beppe Grillo’s blog, the online and off line meet-up tools and the institutional places. The work is also interested in showing the controversial elements of the movement in relation to the presence of a charismatic leadership, the intolerance towards dissenting voices, the emphasis on the democratic nature of the network, as well as some populist features such as the opposition people versus elite, the simplification of the social and political reality.

The study suggests an interpretation of the Movimento 5 Stelle as a controversial political and cultural movement that in some ways can be considered populist.

Strategies of Mobility Among Romanian Roma and Its Contribution to the EU Citizenship

The Spanish RTD project “TRANSROMA. Strategies of mobility, return and transnational practices between Romanian Roma people” funded by the Spanish Ministry of Science and Innovation from 2012 to 2014, is aimed at analyzing strategies for mobility and return and transnational economic and political practices developed by the Romanian Roma in Spain and Romania. While the EU is defining a common political strategy for their inclusion, the Romanian Roma population has been involved in episodes of European history have deeply questioned the effectiveness of anti-discrimination legislation and the preservation of freedom of movement among EU citizens, as well as basic principles of living together and social cohesion. The economic recession and the scarce scientific knowledge about this group have reinforced the stigmatization and infringement of fundamental rights, ignoring their contribution to the societies of origin and destination. From a transnational vision that goes beyond methodological nationalism, this paper aims to present some of the results obtained by this RTD project. Specifically it aims to provide new scientific knowledge on migration processes such as circular migration and transnational spaces of the Romanian Roma, and analyze how they contribute both to origin and host societies and the process of construction a EU identity.

Managerial Doctors: Medical Technocracies Revisited

Across European countries, the relationship between professionalism and managerialism indicate new emergent configurations of hybrid professionals and mixed forms of governance in health care. Studies concerning Portuguese case (Serra, 2010; Carvalho, 2012; Correia, 2012; Kuhlmann, et al. 2012) show a specific situation due to the power the medical profession stills to exert over health regulation. Definitely, doctor’s influence on state regulation seems to counter the dynamics that have been described in sociology of professions and organisations, which point out the increasing criticism of medical autonomy, the growing managerial control over medical authority and the state regulation of medical procedures.

In Portugal, the control of technologies is an example of the intersection between state and medical regulation. Serra (2010) had already described different systems of governance based on the physician’s technical skills in a given medical area of expert knowledge (medical technocracies); systems in which medical experts are in control and where decision-makers are selected on the strength of their degree of skill and qualification.

Also, the need for public investment coexists with the relative inability to maintain the state’s regulation over the effective control of medical technologies. For hospitals and medical specialties in particular, the domination of a technology is important insofar as it boosts the self-regulation mechanisms of the profession whilst also allowing the organisation to attract investment that brings greater financial sustainability. From the notion of medical technocracies (Serra, 2010) the aim of this paper is to look to key question of technological dependence and the control of management instruments by medical profession, which allows medical procedures to meet the demands of the 3Es – economy, effectiveness and efficiency (Rhodes, 1994) and, simultaneously, boost the self-regulated professional power, defined as medical technocracy. To a certain extent, it is the increasing introduction of NGP criteria that strengthens medical technocracy.

Privileging The Postcolonial: Emerging Epistemologies in the Sociology of African Religions

Privileging The Postcolonial: Emerging Epistemologies in The Sociology Of African Religions

(Religious Migrants and Marginality in South Africa)

For more than a decade South Africa has seen an enormous influx of migrants from across the continent. Significantly, these migrant communities have visibly influenced the fabric of South African public culture through language, economy, social, and religion. In the context of South Africa, Ethiopian Orthodox Christians and Nigerian Pentecostals have respectively devised strategies for navigating their distinct national and religious identities. These strategies offer a lens through which to examine how such groups variously mediated their distinct transnational identities through the re-configuring ritual and liturgical practices. Thus I ask, to what extent do such practices reduce the migrants’ marginality. In particular, I am concerned with how migrants’ religious practices produce new forms of knowledge.

In examining how the embodiment of ritual practice relates to the everyday experience of the migrant, I propose that we turn our gaze and our method to
the reading of the migrant body as site of knowledge production in the African context. Situating my sociological practice in the context of postcolonial theory, I draw on the work of Donna Haraway (body in performance and resistance), Bryan Turner (corporealization) and Frantz Fanon (lived experience of the black body) to analyse the various ways in which bodies are regulated, managed and disciplined. Thus, the ways in which migrant bodies also serve as sites of resistance – sites for the production of new epistemologies.

Quiet significantly, the case studies of the Ethiopian Orthodox and Nigerian Pentecostal migrant communities, point to the multiple ways in which the religious body in ritual performance also act in resistance to the mutating and governing practices of social exclusion, xenophobia and nationality, while simultaneously forging transnational identities.

Redefining Gender Reform in Indonesia: Oligarchy and Exclusion of Marginalized Women

Gender reform is regarded as a precondition for democratization since it results in women’s empowerment. In Indonesia, gender reform implicated in gender mainstreaming policy and affirmative action policy which assure women across classes and ethnicities as significant beneficiaries of democratization that is currently taking place in the country. This study examines the impacts of gender reform policy toward marginalized women. Using Banten, a province headed by a women governor, as a case, this study employed a qualitative method (i.e. FGD and in-depth interviews) for its data gathering strategy. This study indicates that gender reform has largely benefited women. They have captured local discourses on women political participation and gender mainstreaming programs through the practices of oligarchy and control over resources in various domains. Moreover, the elite women have used their access to political power for continuing practices of nepotism, corruption, and the accumulation of the ruler’s wealth. As the consequences, marginalized women, particularly the poor, have been excluded from the access to political and economic resources. Gender reform policy has not yet contributed to the transformation of marginalized women to have a better living. This study contends that women are not a homogenous entity. Their gender identity intersects with class, ethnicity and other identities. Accordingly, women have various interests and regard gender reform as opportunities in different ways. Hence, the practice of oligarchy done by women elites has confirmed the heterogeneity of women based on their intersectional identities. Therefore, gender reform policy promoted by the Indonesian government, does not necessarily benefiting all women citizens in equal basis.

The Limits of Ethnic Politics in Indonesia: A Case Study of Riau Politics

Revitalization of ethnic identity has signified the implementation of Indonesian decentralization and democratization. It is marked by competition over political and economic resources among ethnic groups at the local level (provincial and district levels). The dominant ethnic group utilized ethnic politics to control over political power. This study examines the impacts of ethnic politics in Riau-Sumatra, an Indonesian province, after more than 10 years decentralization. The Malay as the dominant ethnic group exercised ethnic politics through various channels including in the political, economy and socio-cultural domains. The study employed a qualitative approach. The results found that cartel politics, fragmentation of Malayness, and the weak of local activism in Riau has weakened the strategy of ethnic politics that previously promoted by the Malay ethnic group. Thus, local politics dominated by coalition among elites regardless their ethnicity, Political party and access to economic resources became the main influential factors in Riau politics. This coalition has caused the gap between elite and non-elite groups. Hence, political activism involved only the elite and excluded non elite citizens (both Malay and non Malay). Meanwhile, heterogeneity of Malayness has fragmented the ethnic group and caused the lack of solidarity among Malay in employing the ethnic politic strategy in local politics. This study illustrates class as an important dimension in the way the ethnic politic work at the local level. Thus, ethnic politics has benefited elites regardless their ethnic background and been positioning the lower class at the margin. The findings argue that political cartel, fragmentation of Malayness, and the weak of local activism have caused the limit of ethnic politics.

Knowing Society through Literature

It was in the 19th century that novelists such as Honoré de Balzac and Émile Zola, two leading figures in French and European realistic-naturalistic literature, saw their own literary creation as an imaginative or “experimental” way of studying society. At this stage, sociology - literature's competitor in the field of sociocultural knowledge - was a dawning discipline whose position in the academic world was insecure. At the beginning of the 20th century it became a legitimate discipline, still it would not gain a monopoly in relation to questions regarding societal knowledge.

In addition, literature offers insights into society. In his Temps et Rétic (1983), Paul Ricoeur speaks about triple mimesis. In their social interaction people create institutions, rules, common meanings, myths, and representations of the world (mimesis 1). At the next level (mimesis 2), popular stories, literature and other arts describe the first level and take material from it when creating fictional or alternative worlds. Thus, these cultural products give us representations of society and a more or less critical sense of alternative worlds, whose order differs from the normal societal order. Finally, readers or receivers (mimesis 3) recognize that these products function simultaneously as representations of the real world and as critical deviations from it.

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 883
Literature's cognitive function does not, however, limit itself to representation-
al knowledge and alternative or utopian world models. Literature is not a mere
description of society; it also shows how people experience their lives in society -
or how they experience society's economic and political structures that cannot,
as such, entirely be an object of literary description.

Consequently, literature is a fruitful research object for the sociology of knowl-
edge and the study of ideologies. Likewise, it can be utilized as a documentary
material in social-historical research.

Pierre Monbeig: Les Différents Traits D’Un Entrepreneur Scientifique

En 1957 la création à l’Université de Paris de l’Institut des Hautes Études de
l’Amérique Latine visait à donner plus de visibilité scientifique aux études sur cette
aire culturelle jusque-là peu développée. Depuis sa création et jusqu’à 1977, cet
institut a été dirigé par Pierre Monbeig. Géographe de formation pionnière, il a été
ensuite futur Directeur Adjoint pour les Sciences Humaines au CNRS et créateur
d’une importante plateforme institutionnelle pour les études latino-américan-
nistes en France, le Centre de Recherche et Documentation sur l’Amérique Latine.
L’analyse de la trajectoire de Pierre Monbeig est particulièrement révélatrice des
dynamiques, à la fois sociales et scientifiques, visant à développer les échanges
entre la France et le Brésil. Notamment lorsqu’on se penche sur sa participation
dans la création des institutions responsables pour des échanges scientifiques et
universitaires. D’une part, son rôle précurseur pour la géographie humaine au
Brésil grâce à son séjour avec la mission française ou encore son mandat com-
me président de l’Association des géographe brésiliens entre 1936 et 1946, sont
révélateurs d’un projet qui visait le rapprochement scientifique et institutionnelle
entre les deux pays. On peut s’interroger également sur son rôle particulièrement
actif en tant que maillon fort d’une « chaîne de savoirs » de toute une généra-
gle des géographes brésiliens et français et « patron » d’une école de pensée sur
les franges pionnières qui est loin d’être négligeable. D’autre part, son séjour au Bré-
sil ne le permet pas de participer activement dans le processus d’autonomisation
de la géographie en tant que discipline universitaire vis-à-vis de l’histoire. Or, l’hy-
posèse est qu’en occupant une position marginale dans le champ en raison de
ce cette expérience à l’étranger, Monbeig s’est orienté vers l’international. L’analyse
de sa trajectoire offre l’occasion de saisir les mécanismes institutionnels à l’œuvre
dans la création des nouveaux réseaux scientifiques.

Model Of Happiness In The Former USSR Countries

The phenomenon of happiness being studied by scientists from different fields
of science, the concept of “happiness” is multifaceted and polysemantic. Hap-
piness is determined not only satisfaction of primary human needs for food, cloth-
ing, shelter and security, but also in meeting the spiritual needs, the internal state
of the person. At the same time happiness can be characterized by opportunities
for citizens to participate in public and political life of their country, attached to
the masterpieces of world culture, the possibility of complete rest.

In this work will be presented comparative data from sociological surveys con-
ducted in framework of the project HITT-CIS - Health in Times of Transition, it
is an international research project supported by the Seventh Framework Pro-
gram of the European Union (FP7-Health). Field works were conducted in 2010,
across nine former Soviet Union countries except for Tajikistan, Georgia,
Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine. The objectives of this re-
search were to study the conditions of lifestyle, health, social well-being, political
views and their relationship. A total 18,000 respondents were surveyed by stan-
dardized personal interview. Sample represents the population at the age of
18 years older, also represents distribution by region and type of settlement.

Results of the regression analysis will be presented, where the dependent vari-
able is subjective feeling of happiness, measured on a ten-point scale, as well as
influencing variables - number of variables, including not only the socio-demo-
graphic characteristics, but also the level of satisfaction with various aspects
of social and political development of countries.

Changing Nature of Conflict in Post 2014 Situation and Its Implication in South Asia

Pakistan emerged as the frontline state during the Cold War era and especially
Afghan conflict (1979 – 1988). Pakistan remained the focus of attention during this
time. After the 9/11 and later in war against terror, Pakistan again became part of
this new war. But the nature of country’s involvement in both wars was totally
different. In the mean time during 1989 to 2001, Pakistan developed its own par-
allel agenda to play at different fronts simultaneously. But that policy miserably
proved faulty, resulting killing of more than 45,000 civilian and 3000 soldiers and
police officials. Despite that, Pakistan continued its policy of supporting all
contingent forces.

This paper analysis Pakistan’s future policy in the post 2014 scenario and how
it plans to move forward. Will this policy be helpful in resolving conflict or it would
further sharpen the existing conflicts. Paper also focuses how regional and in-
ternational forces may play their constructive role to help Pakistan to get out of the
crisis and how much Pakistan itself tries to pursue the agenda of global and
especially regional peace.

War, Conflict and Human Rights Violation: New Debates and Discourses in Pakistan

Eventual aim of human beings is to have a peaceful society where human dig-
nity and human rights are well respected. But during the war and conflict times
situation totally rejects the concept of such values and norms and especially in
situation when conflicts persists for decades on asymmetric pattern. Situation
becomes more complex in those cases where states provide covert support to the
non-state actors to further toe their agenda. Pakistan’s military developed nexus
with the jihadist with the financial backing of other countries, but eventually the
jihadists are now haunting the patron itself.

Now conflict between militants and state has turned to situation that where
the level of violence has reached to new zenith. In this situation, abuse of human
rights from both sides becomes a very common issue. But due to protest of civil
society bodies and judicial activism at least debate on human rights violation is
being taken place in public domain. Human rights organizations and judiciary are
pursuing the agenda of missing persons and other sensitive situation vigorously.

Paper discusses how with the strengthening of democratic traditions and
emergence of free media debate on human rights violation is getting strong voice in
Pakistan.

Who Participates in Encompassing Protests and Why Does It Matter? Israel and Spain in 2011

In Spain and Israel in the spring and summer of 2011, multiple demonstra-
tions each mobilized hundreds of thousands of participants in the framework of
Occupy-type protests. The Spanish indignados (15M) and Israel’s social justice
movement were instances of an unusual variety of protest, labeled “encompass-
ing” because it combines massive mobilizations with high levels of public support.
Such encompassing does not necessarily imply society-wide solidarity, but
may instead be based on what are in effect multiple parallel protests in which
some social sectors are under-represented or even altogether absent. This paper
reports analyses of national sample surveys carried out in both countries, show-
ing the effects of political cleavages and other social divisions on the passive and
active engagement of individuals in these instances of encompassing protest. For
Israel only, these conventional sources are supplemented by data collected via
mobile phone signals, which make it possible to paint a reliable portrait of the social,
cultural and political characteristics of demonstrators.

Hoping for More: Renewing and Redeveloping Public Housing without Marginalizing Low-Income Residents

Since the 1980s, politicians, government officials, and real estate developers
have popularized the strategy of building mixed-income housing to replace trou-
bled public housing projects in the United States. Although the term is used to
describe a growing number of developments, “mixed-income” has never been
officially or consistently defined. Drawing upon a newly-constructed database
of income-mixing in projects completed under the HOPE VI program since 1993, as
well as on other initiatives, this paper investigates selected public housing sites
that have been redeveloped into so-called mixed-income housing in order to
understand what qualifies as mixed-income and to develop a more analytically
precise way of describing these projects. We reveal that the mixed-income label
is applied to a wide range of income mixes, from projects that try to minimize
the presence of low-income housing (less than 1/3 of total units), to projects that
attempt to preserve a substantial majority of units for low-income households.

Field works were conducted across nine former Soviet Union countries: Arme-
nia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia and
Ukraine. The objectives of these researches were to study the conditions of life-
style, satisfaction, health, social well-being, political views, and trust to govern-
ment and state institutions. A total 18,000 respondents were surveyed by standard-
ized personal interview. Sample represents the population at the age of 18
years and older, also represents distribution by region and type of settlement.
The following reports may play their constructive role to help Pakistan to get out of
further sharpen the existing conflicts. Paper also focuses how regional and in-
ternational forces may play their role to help Pakistan to get out of the new war.

‘to Foster the Spirit or to Secure One’s Future’: Competing Models of Field of Study Choice Among Middle-Class Students

The growing interest in horizontal stratification has led researchers to recog-
nize qualitative differentiation in the choice of academic fields of study (FOS),
mainly along the lines of professional and non-professional fields. Still, adopting
either rational action theory or Bourdieusian perspective, most researchers still
evaluates FOS through their future utility, and accordingly assume a calculative or
strategic choice process. This portrayal may reflect the stratifying effect of high-
education and its ongoing professionalization. Nevertheless, higher-education and
choice are associated with autotelic and expressive cultural ideals, such as
the ideal of ‘pure knowledge’, the model of liberal-arts education and models of
choice as an expressive action. To date, these ideals and their relationship with
FOS choice have been mainly overlooked.

Drawing upon ‘culture as tool-kit’ perspective, I argue that when choosing
FOS, students use dominant cultural perception of higher-education, as models
through which they make sense and assign value to their choice. Accordingly, I
show how the choice of professional or non-professional fields, reflects two dis-
sect cultural models of higher-education and choice.

This paper is based on in-depth interviews of middle-class students from
professional and non-professional fields. In light of a review of cultural represen-
tations of higher-education, two ideal-types of FOS choice are elucidated. The
first, draws upon the ideal of acquiring knowledge as a tool for the future; charac-
terized by a calculative FOS choice; and a utilitarian approach towards studying.
The second, draws upon the ideal of knowledge for its own sake; characterized
by an expressive FOS choice process and an autotelic approach toward studying.
Moreover, all students experienced their choice as a tradeoff between the two
models - between success and personal authenticity. These findings support re-
cent challenges to current line of explanations, and their implications for present
and future research are discussed.

One Country Two Realities: Work Values of Jews and Muslims in Israel

This study examines work values of 909 Jews and 219 Arab Muslims, (or Palestinians that have Israeli citizenship). The sample is a unique study since there are very few studies on cultural values and no studies on work values, which compare between different ethno religious groups who have been living in the same country/land for more than century and shares a long ethnic conflict. The findings reveal a significant difference between the two ethno religious groups regarding the importance of all life domains and in most of the preferred work goals and the regression analysis of the main demographic variables cannot explain these differences. The MD5 of Jews and Muslims also demonstrate different perceptions and Internalization of work values among the two ethno religious groups. The value gaps can be explained by the cultural differences (individualistic Jewish culture vs. collectivist Arab culture), by the degree of segregation, by the employment discrimination and primarily by the Israeli- Arab/Palestinian conflict.

SHARAPOV, KIRIL* (Central European University, ssharapov@ceu.hu)

Global Dis-Connectedness of Labour: ‘Living Well for Less’, Class, Race and Trafficking in Human Beings in the UK

By reflecting upon the impact of the current recession on the continuing commodification of migrant labour in Europe, this paper will contribute towards the sociological exploration of the re-emerged tensions and ‘dis-connects’, along the lines of race, class and gender, between people who produce and people who consume, between those who profit and those whose reward for their back-breaking labour is just enough to get going. It will question how the neoliberal orthodoxy of production, circulation and consumption operate within the context of inflated racist, sexist, islamophobic and anti-immigration rhetoric, and how they serve to legitimise and normalise the continuing dismantling of the welfare state and labour market de-regulation to accommodate the governing ideology of our times: ‘living well for less’. The paper is based on the current research exploring the links between anti-trafficking policies in Europe and public knowledge and understanding of human trafficking. It will focus on the role of current anti-trafficking policies in the UK in reducing the complexity of human trafficking to the issues of illegal immigration and criminality. In describing human trafficking as ‘modern slave trade’ with the blame firmly placed on ‘ruthless criminal gangs’, the current UK government approach reduces the problem to the individual behaviour of devious criminals and of naive and passive victims. Within this context, any suggestion that human trafficking remains epiphenomenal to class, race and gender, and directly responds to the growing demand for exploitable and disposable, usually immigrant, labour to satisfy the appetite of Western consumers to ‘live well for less’ seems so hard to fathom, so ‘not-Wilberforce’ and ‘not-democracy’, yet so close to neoliberal reality.

SHARMA, NANDITA* (University of Hawaii at Manoa, nsharma@hawaii.edu)

Categorical Divisions: The Hostilities Between ‘Indigenous’ and ‘Immigrants’ As a ‘State Effect’

Nationalist politics has increasingly become one of the main ways that people constituted as ‘natives’ have attempted to overthrow colonial domination. Together, the state language of ‘sovereignty’ and the national language of ‘self-determination’ have shaped notions of identity and have tended to anchor such identities to particular places. All this has figured into how contemporary ‘indigenous’ nationalisms have staked their claim to a place within a global system of national states. Over time, a stark differentiation between ‘Natives’ and ‘non-Natives’ has been asserted. Today, a growing number of scholars who identify as indigenous, as well as those who position themselves as their allies, portray all ‘non-Natives’ as colonizers. In this paper, I examine how a nationalized politics of decolonization has come to mark ‘Natives’ and ‘migrants’ as mutually antagonistic positions. Focusing on such politics of place in the national states of Canada and the United States, I question the conflation of processes of colonization with those of migration. I historicize such politics within their social, political, economic context by looking at the continuation between colonial state practises and contemporary indigenous nationalisms. I also contrast contemporary indigenous nationalisms with other political strategies of decolonization, particularly politics...
that have refused the differentiation of "race" and "nation" and the Leviathan of national sovereignty.

SHARMA, RAJIV* (Human Settlement Management Institute, hrsml rs@yahoo.co.in)
Making Housing Affordable for Urban Poor- Approaches Adopted in India

Housing is one of the basic necessities of an individual. However, the dream of having a house remains distinct for than one-third urban population. They remain marginalised in terms of civic services, housing and other socio-economic parameters. The cost of this marginalisation is often very high and many studies have shown that it may be upto 2-3 times of the formal system.

By 2030, an estimated 5 billion of the world’s 8.1 billion people will live in cities. About 2 billion of them will live in slums, primarily in Africa and Asia, lacking basic services, unsecured tenure, congestion and surrounded by desperation and crime. In India, the urban housing shortage has been estimated as 18.78 million, of which almost 96 percent pertain to urban poor. Affordable housing has been considered as the only option to meet this challenge. A Task Force on "Affordable Housing for All", constitute by the Government of India, Ministry of Housing and Urban Poverty Alleviation, defined affordable housing in terms of (a) multiples of household income; (b) size of the tenement; and (c) percentage of household income, in case of rented accommodation.

3.0 Approach of this Paper
This paper will address the following issues, in the perspective of earlier discussions:
1. The need for a multi-pronged strategy for housing delivery to all sections of the society. This includes housing delivery system, target group and housing typology.
2. Incentives and subsidies to make housing within the reach of target group and mechanisms to retain the ownership. Right policy instruments for subsidy transfer are needed to make people shop for their dream house, without any restraint on size or location.
3. The access of urban poor to sources of institutional lending.

SHARMA, VEENA* (Indian Institute of Advanced Atudy, vsharma136@gmail.com)
Equal Leisure in an Unequal World

Equal Leisure in an Unequal World Though the globe today is characterized by deep and different layers in in terms of capital accumulation and resource appropriation, the leisure experience may display a different type of demarcation – one that may have the possibility of enriching different social groups if they drew from each other. Societies in which leisure has come to be characterised by the consumption of the fruits of production individuals may appear to be bound by a stimulus-response mode of leisure behaviour. What should be ‘done’ during ‘leisure time’ is fed into the psyche through media pressure and socialisation resulting in activities that may or may be not self-enhancing even thought they feed into the leisure industry. In conventional understanding of leisure, there continues to be a simplistic dichotomy between work and leisure and ‘free’ and ‘occupied’ time as though these were easily separable categories. In this same layered global society there are groups of people who still live with values that recognize the organic unity of all things, are aware of a sense of continuum, as a movement from matter to spirit and vice versa, and see an interconnectedness of all things. As a result there arises a tendency to respect the environment and other beings. The ‘leisure’ of such societies need not be time abstracted from other day to day activities but a mindset that characterizes the whole. The presentation will look at the interconnection of these segments on each other so as to enable a more holistic attitude to the environment and to other existents on earth.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s.sharonova@mail.ru)
The National Russian Model of University in the Era of Academic Capitalism

The transformation of the national model of Russian university is under the influence of academic capitalism. The very same academic capitalism born in the depths of the neo-liberal capitalism. The basic principles of the neoliberalization fully implemented within the transformation of national educational systems:
- the creation of conditions of accumulation of capital and power of the economic elite;
- the denial of a nation, and therefore the promotion of the idea of the dangers of government intervention in the economy (in this case is to minimize the interference of the state in education);
- promoting free and stable functioning of the education system is not in general, and of its individual elements (schools, institutes, universities, etc.).

In Russia, and in other countries, this leads to the destruction of national educational systems. Yet Durkheim said that in society there are many cultures of each of them has its own education system. Simmel argued that cultural diversity enriches the world community. However, the implementation of neoliberal policies in the field of education under the slogan of "globalization" ignores the law and seeks to simplify the interaction between the educational systems in order to achieve clarity and transparency of market exchange. Author analyzes the example of Russia are the trends that are happening as a result of the modernization of the education system that implements neoliberal principles and creating academic capitalism. Virtually all non-liberal utopian promises of the project, in practice, lead to quite the opposite of the expected results.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s.sharonova@mail.ru)
The Spiritual Capital As a Fundamental Element Of Cultural Capital

Cultural capital is usually regarded as a mechanism of influence on personal identity. Largely contributed to this study Coleman, although Bourdieu introduced the concept of a theoretical understanding of capital varieties. He was interested in the convergence of social, cultural and economic capital. We propose to focus on the cultural capital of both the qualitative characteristics of the state of society. The problem is that in the presence of cultural capital as a funded system of values enriched the image of the face of society. The cultural capital based on traditional religious values. This does not mean the broadcasting of religious themes in works of art, although it excludes, but rather a philosophical position of artists and researchers, through which the public receives the interpretation of events, their assessment of a certain value-regulatory system of coordinates. This element is the movement that is happening as a result of the modernization of the cultural capital. Qualitative state of society, its morality depends on the amount of spiritual capital, which he occupies in the field of cultural capital. A striking example of how the degradation and spiritual revival of capital in society can serve as the processes that took place during the last century.

JS-59.3
SHAW, VIVIAN* (University of Texas at Austin, Vivionshaw@utexas.edu)
Energy and Identity: Women, History, and Anti-Nuclear Social Movements in Japan

Since March 11, 2011 (3/11), some Japanese citizen have responded to the ongoing Fukushima nuclear crisis by staging large protests against the use of nuclear energy in major metropolitan areas. Within this revival of anti-nuclear collective action, scholars and global news media have argued that the prominent role of women, who have been observed leading “tent city” occupations in Tokyo and organizing rallies in other cities, signals an important evades with potential implications for the changing status of gender in Japanese public politics.

Applying a historical frame to the contemporary case of women’s leadership in post-3/11 activism, this paper challenges a simplified narrative of feminist emergence, instead arguing that contemporary anti-nuclear politics must be read as part of a larger context of women’s organizing in Japan throughout the twentieth century. Moreover, this history of social movements also reveals important divisions within Japanese women’s movements across lines of race, coloniality, and citizenship. In this paper, I deconstruct the concept of “anti-nuclear” and examine how this politics converges with other histories of post-war women’s collective organizing, particularly examining the roles of Japanese women in the related histories of peace and anti-militarization social movements.

In arguing how gender has politically and rhetorically functioned as a method of organizing Japanese public politics, I challenge notions that Japanese women, in the context of social movements, should be viewed simply as a formation of collective identity. Rather, the different meanings of women’s identities within these cases suggests the importance of reading Japanese women’s social movements in relation to various political contestations at the “local” and transnational levels and moreover, in terms of what they are able to signify about race, coloniality, and citizenship.

JS-44.13
SCHERBAK, ANDREY* (Higher School of Economics, pscherbak@hse.ru)
Nationalism in the USSR: Historical and Comparative Perspective

The late 1980s and early 1990s were characterized by the sudden rise of nationalist politics in almost all Soviet ethnic regions. It is argued that the rise of political nationalism since the late 1980s can be explained by development of cul-
tural nationalism in the previous decades, as an unintended outcome of communist nationalities policy. The Soviet political and cultural nationalism is studied in historical and comparative perspective. All ethnic regions are examined throughout their entire history of the Soviet Union (49 regions, 1917-91), using a structural equation modeling approach. This paper aims to make at least three contributions to the field. Firstly, it is a methodological contribution for studying nationalism: a “quantification of history” approach. Quantitative values are assigned to historical trends and events. Having constructed variables from historical data, I use conventional statistical methods like SEM. Secondly, this paper contributes to the theoretical debate about the role of cultural autonomy in multiethnic states. The results challenge the concept of ‘cultural autonomy’ as solution to interethnic conflict. Cultural nationalism matters, it indirectly reinforces political nationalism. Concessions in the cultural domain failed to stop the growth of political nationalism in the late 1980s. Finally, the paper statistically proves that the break between early Soviet and Stalinist nationalities policy explains the entire Soviet nationalities policy. In fact, the late Soviet nationalities policy was inherited from the Stalin’s rule period. This finding revealed in other studies now gets statistical evidence.

SHEN, JIE* (Chinese University, jie.shen@hotmail.com)

Chinese Youth's Post-Materialist Values in an Era of Multi-Morality

Today's China's society is in a compound of multiple dimensions of time and space. Chinese cultural characteristics are late and dramatic differences. When the mainstream direction of China's social development is manifested as the transformation from traditional society to modern one, the developed Western societies that have completed the modernization goal constitute the environmental conditions affecting the development of China's society. As a consequence, China's society more clearly than ever in the history is at the same time being affected by three dimensions of time, or, put another way, in the present there are three dimensions of time -- traditional, modern, postmodern -- coexist in the same space.

If so, although the total direction of social psychological changes in the course of China's modernization is the transformation from tradition to modernity, this is not intended to preclude the possibility that the present Chinese social psychological changes will present a more complex pattern than in any previous eras and societies.

Just as using Inglehart's two important theoretical tools -- scarcity hypothesis, socialization hypothesis can attest that when China entered the take-off stage of its modernization, changing from a society of scarcity to one of prosperity, the spiritual world of the social members is undergoing rapid and profound changes, along with gradual improvement of their hierarchy of needs. It is Chinese youth who first shows these changes. In China, the post-materialist values have begun to emerge in these people born in the 1980s, and have further manifested by these groups born in the 1990s.

Occurrence and development of the post-materialist values among Chinese young people will definitely lead to changes in their activities of daily life and ways of social participation, and to affect the appearance of China's society especially when they enter the society in an all-round way.

SHEN, JING* (University of Toronto, jing.shen@uleth.ca)

The Value Of Mixed Methods: How Does Certifiability Of Job Requirements Determine The Channels Of Job-Person Matching?

Using qualitative collected in three representative Chinese cities and quantita-
tive data drawn from the 2003 China General Social Survey, in this study I have built up a theoretical framework to understand the interdependence of formal and informal employment channels. I argue that a job-person matching process should be understood from a dual perspective of the employer and the job applicant. From the employer's perspective, requirements for certain job positions are composed of two parts, namely, certifiable and uncertifiable qualifications. The variation in the relative importance of these two types of qualifications determines that employers' recruitment strategies vary from formal channels only, to formal-informal joint-channels, and then to informal channels only. From the job applicant's perspective, quantitative analysis shows that an applicant's pre-hiring resources—human capital, political capital, and social capital—match up with the targeted employer's expectations of both certifiable and uncertifiable qualifications in a successful job-person match. By articulating the three typical scena-
arios of employment activities, I highlight the great importance of joint formal and informal employment channels. I argue that studies on employment need to take a formal-informal-joint-approach, instead of focusing on formal or informal employment channels alone.

Two Decades of Educational Expansion in Taiwan: Social Equity Concerned

During the past two decades, Taiwan experienced a movement of expansion of senior secondary education and higher education (the expansion in brief), in the meantime the entrance system of higher education institutions and senior high schools has changed accordingly in response to the open enrollments demands from the public.

One of the causes of the expansion was to achieve social equity in terms of of-
fering more educational opportunities to those students from the disadvantaged groups. However, until 2013 even though the gross enrollment ratio of upper secondary education and tertiary education reached 98.33% and 84.43% separately, those students with disadvantaged background were still left far behind with their counterparts from better family background in terms of educational achievements, such as being admitted into the academic senior high schools and universities with good reputation.

The central argument here is the increase of senior high schools and higher education institutions (HEI) actually enrolled more students from the disadvan-
taged groups. Concessions in the cultural domain failed to stop the growth of political nationalism in the late 1980s. The legacy of traumas has reverberated along many generations of peoples while simultaneously rolling out colonial policy targeted at causing harm. The oppressor uses many strategies to thwart healing and resilience of Indigenous culturally appropriate healing in a manner that would meet their needs. The western Australia most Indigenous Australians have been prevented from receiving cultural context with their ways of knowing. However the dominant culture's exclusion of other cultural consciousness has created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market's inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market circuited across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

Exploring Reactions to Risk and Uncertainty in the Context of Smoking and Lung Cancer

Research examining the sociology of diagnosis has demonstrated how the provision of a clinical diagnosis from a health professional can promote identification of illness or disease, facilitate behaviour change, and enhance adoption or resistance of illness identities (Jutel and Nettleton, 2011). Further examination of such frameworks could contribute towards achieving a richer understanding of health communication compliancy, thus enabling better management or avoidance of ill health and disease.

The current study examines such frameworks within the context of a Stop Smoking Service (Fagends, Liverpool) and the study has been designed to replicate a recognised model of diagnosis. However, rather than a clinical diagnosis, smokers receive a personalised lung cancer risk assessment - especially providing them with a diagnosis of uncertainty. The primary aim of this study will be to ascertain whether provision of personalised lung cancer risk information alongside health advice, will enhance smoking cessation.

This mixed-method paper will disseminate the findings of a randomised controlled study consisting of ~300 smokers, in which the control arm receive generalised lung cancer risk information and the intervention arm receive a personalised lung cancer risk assessment, using the Liverpool Lung Project risk model (Cassidy et al., 2008). It is anticipated that provision of personalised lung cancer risk information may encourage behaviour change i.e. smoking cessation and long-term maintenance of this change at six-month follow-up. In support of the aforementioned quantitative survey, qualitative interviews will also be conducted with a selection of participants (N=30), which aims to provide further explanation as to the impact of receipt of a diagnosis of uncertainty and the subsequent behaviour and attitudes of which it may entail. Overall, it is anticipated that the findings will contribute towards our understanding of the sociology of diagnosis and may help to inform the development of future health risk communications.

Complex Trauma a Conduit for Inequity

Over the last century we as citizens of a united world Nation have been appalled by the atrocities that have been meted out to our brothers and sisters living in all corners of the world by their enemies or colonisers. Similarly we have been moved by the grief and loss of survivors of climatic disasters that frequent this planet. The mental health profession has sought ways to assist those who have experienced these deep life-changing terrors. Trauma has been an event and part of every cultures story line. The recovery and healing from such traumas has been dealt with successfully over a millennium by Indigenous communities with their ways of knowing. However the dominant culture's exclusion of other cultural consciousness has created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market's inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market circuited across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

Online Marketplace

My research reveals that tensions continually arose in the market because, rather than creating a horizontal relationship between buyers and sellers, the firm had created a triangular market in which its own interests frequently differed from those of buyers or sellers. Maternal Health In Rural India: Consequences For Gender Inequality

Maternal health is a critical topic in global development. Maternal ill health and deaths impacts families, communities and societies and has far reaching effect across socio-economic strata. Despite recent data showing a positive turning point in the battle to keep mothers alive through pregnancy and child birth, the maternal mortality rate are still high in India and significant gender-based health disparities remain in India. With limited access to education and employment, high illiterates and increasing poverty level in India making health improvements for women exceedingly difficult. Female disability is especially in attributable to maternal causes and maternal deaths. The present paper is an effort in understanding maternal health and care in rural parts of Karnataka.

The objectives of the paper are to know the status of maternal health and consequent problems and also to analyze the socio-economic factors that act as barriers to access good health facilities. The data for this paper are based on the complete birth histories collected from the 200 ever married women age 20-49 years, selected from 4 villages of Dhawar district in Karnataka. The findings suggest that inspite of the Government's efforts in improving maternal health in rural India, women have been suffering from health problems resulted from complications during pregnancy and child birth and also anemia and malnutrition. Hence the existing health facilities need to be strengthened to improve such health problems of pregnant women.

Key Words: Maternal Mortality, Maternal Health, Autonomy, ANM, Sex and Gender, Gender Inequality.

Forced Migrants and Their Connection to Their Homeland: A Case Study of Inter-Country Adoptions and Cultural-Discursiveness in Second Modern Transformation in East Asia

The forced migrants, as Castle (2008) noted, have dramatically grown in numbers in proportion to the changing global order. The partners of forced migration we should take note of is the trafficking of people across international boundaries for the purposes of exploitation, which includes the children expected to fill the "vacancy in a family" through inter-country adoptions. Meanwhile, human security counts on culture as having an initiative role in establishing the stability of permanent peace. The Hague Convention insists that it is in the "best interest of the child" to keep the inter-country adoptees in touch with the culture of their origin. However, some Korean adoptees have found themselves in another situation. Their culture transformation has been such that they perceive themselves as having become "forced to be separated from their biological mothers and to relinquish their Korean nationality." This had led them into forming a global movement that demands legislation of the Dual Citizenship Act and rights for unwed mothers in Korea.

The objective of this research is to show the process how the forced-migration groups, that here will be referred to as inter-country adoptees from East Asia, came to be the subject in a cultural-discursiveness of "second modern transformation" (Han and Shim 2010), which incorporates global risks, individualizations and cosmopolitizations. In particular, I will examine the reasons why the adoptees can be counted as forced migrants while referring to the Korean adoptees' statements in the movements. I will also draw attention to their values and social capitals acquired in the Western countries and their influence on Asian traditional cultural beliefs through the movements, which could be a potential to reform the social structure. Based on this discussion, I will make an implication on their leading roles in the second modern transformation in East Asia.

Japanese “Solidarity” Experience: A Suggestion for Polish Disaster Preparedness

The paper suggests effective use of the socio-political culture of “Solidarity” as a potential basis for disaster preparedness in Poland from the perspective of Japanese experiences.

Poland holds a cultural tradition known as the Solidarity Movement, whose potential for mobilizing society continues to this day. Through a unique mechanism of self-organization, it unifies individuals with diverse interests and beliefs to concentrate the impact of different regions and local communities; the “subjectivized” activities of Polish citizens attained its primary aim of a change in the country's political system at the end of the 1980s, while presenting its operative revitalization in the face of prolonged European economic crisis in the 21st century.

Crucially, Japan's disaster experiences, especially those of the Great Hanshin-Awaji Earthquake (1995) and the Great East-Japan Earthquake (2011), show the rise of its own solidarity. In the two contrasting disaster-hit communities, i.e. Kobe City and the rural Tohoku Area, activists call for the mobilization of the cultural tradition of “bounds kizuna.” These bonds have been functioning not only in the first phase of collective euphoria, but also in the long-term process of building social subjectivity and community rehabilitation to see the rise of sustainable civil society after disaster situations.

Through the lens of Japanese experiences, the paper suggests a conscious awareness of the socio-political culture of Solidarity in the approaches of disaster policy in Poland, due to its lack of preparedness despite frequent damage from different natural and human-caused catastrophes including flooding. By analyzing cases of cooperation among Japanese citizens, social organizations, and local as well as national governmental institutions, the paper presents the option of transferring Polish Solidarity experiences from the field of polarized politics to that of potential disaster policies to fortify Poland's future resilience.

"Japanese" Approaches to the Music of Frédéric Chopin

The paper examines the "Japanese" understanding of the music of Frédéric Chopin as it appears in the narrative discourse of Japanese pianists who have studied in Poland and France.

The works of Chopin occupy an undoubted position in Japanese music institutions for their accomplished artistry in piano techniques. Musicological studies show that having quickly appeared as crucial in concert repertoire before the first years of the twentieth century, Chopin became an icon of "Western" culture to which the "civilized" Japanese should aspire. Japanese music universities came to emphasize the importance of his technically demanding works, e.g. Etudes, Ballades and Scherzos while mostly neglecting Mazurkas and Waltzes.

The paper sheds light on critical thoughts regarding "Japanese" education held by some of the country's contemporary musicians who have formulated their professional identities vis-à-vis "French," "Polish," or "European" traditions of Chopin's music. Semi-structured interviews with Japanese pianists who underwent studies in France and Poland are put through a method of critical discourse analysis that draws upon structuration theory and allows effective inquiry into an agency's narrative in the face of established institutional discourse.

What is the general view on the teaching of Chopin's music nurtured in Japanese music institutions? How does it affect individuals' approaches to Chopin's works? How do pianists confront or develop the "Japaneseeness" of their performance after education in France or Poland? What are the renovated "Japanese" elements in the understanding of Frédéric Chopin's music after study in Europe?

Analysis conducted under the umbrella of such questions attests to several things including pianists' recognition of "delicate" Japaneseess resonating with Chopin's works, notable critique on the "Japanese" pursuit of sophisticated techniques extracted from the fuller universe of Chopin's music, and the unique refurbishment of a sense of nature through the performance of Mazurkas.

An Exploring Study on Networked Market Disruption and Resilience

The main objective of this study is to explore the core of socially restrained buying trends of the agricultural foods and products made from Tohoku Area. Actually these cases mean that many people do feel something unfavorable and they are not going to buy foods made from Tohoku Area. And these trends are still often observable anywhere ever since the Fukushima Nuclear Disaster of the Tohoku Quake (11th, Mar. 2011). Certainly, this social phenomenon is rational to understand the social anxiety and unsafely suspicions of naive people for nuclear polluted contaminations within foods. Of course, these safety matters were temporarily, but some consumers still feel unsafely sentiments now.

In this concern, I presume that these social trends are underlying in the information-asymmetry as the market for 'Lemons'. And I define this presumption as an agent-based model on social cascading, social uncertainty, networked market disruptions and percolation process. As results of simulating runs, I clarified my hypotheses and these are possibly actualized in configured conditions. Namely I can conclude that the emergent cascading of socially restrained buying trends of agricultural foods made from Tohoku Area can be engendered by information-asymmetry as the market for 'Lemons', and its networked market is also crucially ruled in the percolation principle. Finally, I will show these details and discuss the relatives.

Intimate Economies of Rehabilitative Work: Policing Sexuality through Wage Labor and Re-Education through Labor in China

This paper begins to theorize the intimate labor regimes of the "rehabilitation industry" in China. It examines the collusion between transnational interests, the state and the market through two types of vocational training programs for sex workers in China. In state-sanctioned rehabilitation through labor (RTL) programs serve as mandatory sanctions for prostitution offenses; at the same time, American evangelical Christian missionaries recruit sex workers to work as jewelry makers, and label them as victims of human trafficking to transnational consumers and activists. These programs aim to generate economic alternatives to labor migration and sex work. However, the focus on labor training and re-education as the animating force of social mobility ignores the complex labor, gender and ethnic hierarchies that exist within the intimate labor industries. Opening the black box of this new industry, my work will investigate the connections between the local and global and question the optimism around the transformative potential of good work.

This paper is based off 28 months of ethnographic participant observation at an evangelical Christian vocational training center in Beijing, China, and pairs this with preliminary analysis into the historical and contemporary practices of rehabilitation through labor in China.

Culture As the Parenting Toolkit: Class and Globalization in East Asian Families

By using ethnographic documents in Taiwan, this paper aims to examine how three different formats of local and global cultural capital are constructed and distributed unequally between the middle and working class families, particularly via their management of afterschool activities for elementary school children. I use interviews with family members (N=72) to examine how parents' cultural capital is transmitted through the popular routines of Taiwanese children: the afterschool activities, such as piano playing, English lessons, or math lessons, or through the fabric of their family life. Lareau and P. DiMaggio both employed Bourdieu's "distinction" approach to childhood inequality: the former derives from Melvin Kohn's theory on child-rearing values and treats art participation as part of the middle class "concerted cultivation" pattern; while the latter pinpoints children's art activities as a form of status culture participation. In this paper I imply culture without national boundaries and present the Taiwanese case to show how global/western culture are adopted and embedded in contemporary Asian parenting, which intersects with the local structure of class reproduction. I find three fields of child-rearing: Educational achievement, talent development and the western cultural capital. These fields are closely related to parental class position in a univore-omnivoire spectrum. All families emphasized core-value on academic success: the middle class and upper class families focused on talent development as the upper class families emphasized "being international."

This paper further reveals that, in East Asian societies, the local families are adopting western culture in their child-rearing, which further generates "western cultural capital", a rising field of distinction for upper class children in East Asia. With lowest fertility rate in the world at 2009, Taiwan is a unique case to understand class variation of child-rearing.

Freedom Markets: The Moral and Political Economies of Human Trafficking in China, Thailand and the U.S

This project is a global and multi-sited ethnography of the transnational social movement to combat human trafficking through state- and market-based approaches to managing low-wage labor migration and women's work. Empirically, this project compares faith-based and secular approaches to anti-human trafficking efforts in China and Thailand. From 2008-2013, I completed 40 months of ethnographic participant observation at an evangelical Christian vocational training center and secular anti-trafficking governance project in both Beijing and Bangkok, and their sites of movement organizing and consumer activism in Los Angeles. Across these sites, the dissertation--a work-in-progress--presents three "global connections" as well as disconnections between transnational social movement activists, global governance institutions, states, markets and movement subjects—low wage women workers, inclusive of both those who are identified and unidentified as trafficked.
Current Crimes and Major Issues of Policing in Japan

The number of reported crimes has been decreasing since 2002 in Japan. However, the Japanese society faces to some new crimes, including cybercrime, domestic violence, and stalking. The Japanese Police are now struggling with these new crimes and constructing new rules and practices to deal with them. Current policing and countermeasures against these new crimes in Japan will be illustrated.

«Cellular Globalization» and Communicative Inequality

In view of high speed of development and inculcation of the new informational technologies, growth of consumerism, space globalization in the contemporary societies the high level of social dynamics remains. At present the world community experiences increasing influence of the informational and communication technologies. At the beginning this changes weren’t very visible, but now we already don’t imagine our life without social networks and connection which is available constantly. Our friends are increasingly not real people, but simulacrumms. New trends of world development, their orientation on an innovation and modernization create the conditions for new social phenomena formation, one of which is communicative inequality. Communicative space is constantly changing, and with the emergence of advanced communicative technologies new vectors of its formation have appeared. Between those who have the technical capacity and the necessary educational level for using the Internet and those who have no such possibility the border lies. The new mobile communication potential influence the individuals’ behavior. Communicative inequality develop in the new telephony using and in obtaining information from a variety of sources including the media which price isn’t available for wide range of customers. Recently they gap between rich and poor in the sphere of information has become more and more conditioned by the technological characteristics, when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

A Sociological Approach to Varying Treatment Outcomes of Complementary and Alternative Medicine

Social sciences of medicine have not given much attention to the variations in the real-world treatment outcomes of CAM situated in different social contexts yet. This neglect is surprising, because the wisdom has long existed in social sciences of medicine that the effects of medical interventions are significantly influenced by social and cultural circumstances. Along with this neglect, a problematic view seems to be revived and reproduced among the medical science community that any deficiency or efficacy in the treatment outcomes of acupuncture and herbal medicine is attributable to the characteristics of the treatment in itself detached from its medical and social environments. However, the limitation of this view becomes clear when acupuncture or herbal medicine of the identical quality and design leads to varying treatment outcomes in different trial sites. As a way to consider these puzzling variations and to propose a sociological explanation of the varying effects of acupuncture and herbal medicine, this paper examines systematically how divergent treatment outcomes are in acupuncture and herbal medicine in Japan, U.S. and how they are related with the social environments of these medical interventions. In particular, this paper highlights the significance of coordinating these CAM treatments with the mainstream biomedicine at multiple levels in order to get tangible health care benefits. It concludes the necessity of coordinating these CAM treatments with the mainstream biomedicine at multiple levels in order to get tangible health care benefits. It concludes the

Family-Related Risk Perception and Individualization in East Asia

Based on a survey research conducted to citizens of three capital cities of East Asia, Seoul, Beijing, and Tokyo, this paper is aimed at comparing the family-related risk perception in the three cities with a perspective of individualization theory and a typology of risks developed for East Asia. More specifically, it is aimed at revealing how the citizens of the three cities feel about the recent changes in the family such as divorce, low fertility, decrease in the parent’s role in home education, isolation and suicide of the elderly, individualist tendency, decrease in mutual help in the family, and conflict in the property distribution. The research questions are as follows: First, how do the citizens of three cities perceive about the various family-related risks? Second, what influences the family-related risk perception? As to the first question, it turned out that perception of the first modernity-related risks are higher in Beijing, while that of the second modernity-related ones are higher in Seoul and Tokyo. As to the second question, it turned out that not only the family-related macro changes as revealed in law and policy changes and statistical indices in the area of fertility, divorce and marriage, but also individualization turned out to be significant. This suggests that the three cities seem to be in different stages of development and that the three cities have both the first modern and second modern risks.

Estimation of Hedonic Single-Family House Price Function Considering "Scenes"

In this study, hedonic house price functions are formulated using the single-family house market in the 23 wards of Tokyo as the subject. In the formulation of the models, the inclusion of omitted variable bias is thought to occur in cases when, in addition to locational factors (i.e., factors involved in decision making when buying a property) and building structures which affect the house prices, local environmental variables or "scenes" and the individual characteristics of house buyers, such as their income, are not taken into consideration.

However, since it is difficult to obtain permanent data on the local environment in a small neighborhood unit using a geographic information system (GIS), I demonstrate that, without considering these variables, non-negligible levels of omitted variable bias are generated in the variables that are major factors in determining house prices, such as area ground, road width, distance to the nearest station, and the travel time to the central business district. Results showed that, in the model considering neighborhood effect variables or "scenes", the explanatory power was improved compared with the simple linear model. At the same time, each of the neighborhood effect variables or "scenes", which served as subjects of urban policies, was adopted with statistical significance.

About World Championships in Athletics and TV Broadcast

This study examines changes in the nature of Japanese TV broadcasts of the World Athletics Championships from 1997-2013 using a qualitative methodology. Specifically, the study examines the changes in the Tokyo Broadcasting System coverage between the 1997 Athens event and the 2013 Moscow event. The results indicate that TV broadcasts became more professional from the point of the Berlin event in 2009. Up until the 2009 Berlin event, broadcasts featured much screaming-like behaviour from television commentators such as Yui Oda. However, the screaming-like broadcasts decreased after the Berlin event and the screaming of Yui Oda was not seen in Moscow in 2013. In addition, the nicknames of the players were not used in the Moscow TV broadcasts. This may be due, in part, to the request of the Japan Association of Athletic Federations to the Tokyo Broadcasting System to eliminate the use of nicknames. The nature of live coverage of sports events varies according to different events. In addition, they are dependent on whether or not there are Japanese players involved, and depending on whether or not there are star "foreign" players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

Why Does Inequality Keep Rising In South Korea?

This paper explores the rise of economic inequality in South Korea, focusing on changing income distribution of individuals and families after financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual's wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. In addition to impacts of financial crisis, under the poor social welfare system, endogenous social changes such as fast aging of population and family dissolution, partly associated with neoliberal economic reforms, have contributed to the drastic rise of family income inequality in the 2000s.

Medicalization and Demedicalization of Mild Depression in Japanese Occupational Health

From 1999 to 2008 the number of patients with depression in Japan is thought to have increased by 2.4 times. Overdiagnosis of depression has attracted much attention both from the health professionals and the public. Previously, the concept of mild depression did not even exist until the 1990s in Japanese psychiatry. Some experts argue that the introduction of the DSM and ICD as a diagnostic tool is a possible factor increasing depression in Japan. In this study I analyze the conflict between the medicalized and demedicalized views of mild depression in Japanese occupational health from the viewpoint of conflicting diagnostic contexts in Japanese psychiatry.

I conducted several interviews with physicians and psychiatrists active in the field of occupational health and attended various conferences and meetings of experts dealing with mild depression in occupational settings. Two findings are especially of significance to understand the current trend of depression epidemic.

1) There are double contexts in which depression diagnosis is made. Whereas the DSM or ICD is used as a tool to diagnose depression, they do not explain any etiology of the disease but just provide the criteria of the symptoms. Thus in those cases for which the explanation of the disease causes is needed, conventional Japanese psychiatry is referred, in which depression is modeled by major depression rather than by mild depression. 2) Major depression model in Japanese psychiatry includes a moralistic judgment about the "industrious" personality of the patient. As this aspect does not coincide with the mild depression patients, there is a strong tendency to demedicalize the mild depression on the side of psychiatry.

The same tendency is also found in the media coverage of the disease. Thus the status of mild depression patients especially in occupational settings is unstable and vulnerable to the moral criticism on them.

SHIMIZU, SHINSUKE* (Morioka University, shimizu@morioka-u.ac.jp)

Daniel Bell As Post-Cold War Intellectual: The Idea of Triunity Beyond the Cognitive Frameworks of the Cold War

Interpretations of Daniel Bell's works are typical cases of cognitive bias in Cold War social sciences. Bell has been regarded as an anti-communist ideologue, a conservative sociologist, and a neoconservative intellectual. Today, therefore, his works are not discussed in earnest. This study reevaluates Daniel Bell by clarifying that he held post-Cold War perspectives.

As Bell himself noted, The End of Ideology is better known for its title than for its content. During the Cold War era, attention was paid not to what he said but the sensational title. Because readers took “the end of ideology” to mean that all ideologies would vanish despite severe ideological conflicts, Bell was considered a business sociologist, and a neoconservative intellectual. Today, therefore, his idea of triunity did not even exist until the 1990s in Japanese psychiatry.

With him, they conflicted with the sensational title. Because readers took “the end of ideology” to mean that all ideologies would vanish despite severe ideological conflicts, Bell was considered a business sociologist, and a neoconservative intellectual. Today, therefore, his idea of triunity did not even exist until the 1990s in Japanese psychiatry.

Certainly, he criticized Stalinism and the Communist Party of the United States. He recalled that members of the Communist Party did not know about Kronshtadt in which Trotsky shot rebels in 1921. His criticism was based on experiences from his youth.

movement organizations has shown ambiguous attitudes toward the democratic regime. The consecutive defeat of democratic political parties in the presidential elections has severely undermined the social bases of both movements in the 2000s.

The Economic Partnership Agreement (EPA) has initiated healthcare worker migration from Indonesia to Japan since 2008. Issues and challenges concerning regulations and cross-cultural understandings of healthcare have emerged around such EPA healthcare work and workers in both societies. What issues have arisen and been reported in Indonesia and Japan? How do the media, policy makers, healthcare institutions, and other stakeholders react and respond to such new issues and challenges? In what way do Indonesian and Japanese social and workers’ understandings of healthcare work and worker migration differ? Our paper shows how national contexts affected by globalization shape and re-shape social understandings of healthcare migration and their policies in Indonesia and Japan over time. Analyses of the national media reporting, information from the governments, and interviews in Indonesia and Japan reveal a contrast of social responses to healthcare worker migration. In Indonesia where healthcare workers have been sent to Japan and other countries, this tends to be understood positively, overall, as economic benefits and Indonesian professionals’ contributions to the care worker shortage in Japan. In contrast, Japanese are more likely to respond negatively to these issues; yet, they intend to face cross-cultural challenges, although slowly, making revisions in the language and license examination policies. We pay particular attention to social issue construction and policy institutionalization processes around EPA healthcare workers in Indonesia and Japan. Our study contributes to our sociological understanding of healthcare worker migration, cross-cultural understandings of healthcare and related concepts, and how national contexts and globalization construct and re-construct social issues and policies toward a new social change.

What does “medicalization of death and dying” precisely and really mean? This paper tries to focus on the medicalization of death and dying, and tries to show 1) the historical processes of the social transformations surrounding death and dying in Japan, and then 2) theoretical reconsiderations concerning the concept of medicalization itself. Medicalization of death and dying has been customarily and representatively meant to be “hospitalization”. The radical change in the place of human death recalled the sense of something familiar being lost, and the medical-hospital environments coupled especially with the high-tech medical treatment in the 1970s have long been viewed as something unfamiliar, unhuman, and even anti-human. Cultural interpretations regarding this process as “denial of death” or “pornography of death” in modern societies have been presented, and prepared for the seemingly backlash movement tentatively called the de-medicalization. However, what does these medicalization and de-medicalization really mean? Japanese situation could present strategically suggestive one, partly because it is the heaviest aged society and partly because it is also the most densely crowd-ed society with medical facilities. It seems to follow that the medicalization of death and dying would advance most in Japanese society. The situation is complicated. The health policy have tried to de-medicalize/de-hospitalize the aged, and promote nursing home care and community care ever since 1980s. The people in general wish for sudden death, or for natural death in home, and both of them share in common one element: with lesser medical interventions. It is both interesting and somewhat paradoxical. Interesting, because the directions aimed seem to be converged/de-medicalization. Paradoxical, because the intentions fundamentally diverge between the two.

This paper tries to contribute to broaden the scope of the discussion of medicalization empirically, and to enrich it theoretically by re-examining the validity of the concept of medicalization.

According to Zygmunt Bauman, since mid-20th century modern society has been experiencing a gradual shift toward a “consumer society”, whose main characteristic is the transformation of consumers into commodities. In this context, the objective of consuming is to grant social status to individuals, who worth as much as they are able to consume. Bauman posits that people consume to invest in their own social affiliation. By consuming, individuals become a more valuable commodity, recasting themselves as products capable of drawing attention and standing out from the monotony and dull invisibility of ordinary things. Those who do not have enough resources to consume are considered invalids, commodities that will never be noticed or coveted, and that can only resign themselves to their invisibility. However, by analyzing Brazilian human-billboards, this study intends to show that even those individuals are salvageable in the world of consumption.

In the city of São Paulo (Brazil), legislation has established several restrictions on advertising placement in order to avoid visual pollution. The real estate sector has circumvented that legislation by using the so-called “human-billboards”: men and women from under-age to elderly who remain standing for periods up to 8 hours without breaks and regardless the weather, in corners of upper middle class neighborhoods with signposts hanging in their necks. For this job they are paid under 10 dollars a day, with payment discount if their supervisor finds them sitting. In principle these people would be considered “invalids” in the society of consumers. Nevertheless, they end up being “recycled” and become functional to it. The case study intends to reflect on how the society of consumers absorbs the dysfunctions that it produces itself. In this case, people’s invisibility is not equivalent to death: it is also turned into merchandise.

The Effect of Environmental Education at School and Home on How Students Behave Towards the Natural Environment in Japan

Several studies on the factors that promote pro-environmental behavior have found the importance of environmental education. A number of environmental educational programs that aim to nurture ethical behavior towards the environment have been developed worldwide. For example, in Japan, some students in a junior high school take part in diving programs to study marine environments. The aim of this study is to examine the effect of environmental education at school and home on students’ pro-environmental behavior. In November 2010, we conducted a quantitative survey of all third-year students and their parents at all the junior high schools located in the city of Minamata, Japan. Pollution has had a severely detrimental effect on the health of the residents of Minamata since the 1950s, and the disease caused by pollution has come to be known as Minamata disease. The negative experiences with pollution have led to the implementation of various interesting environmental education programs in all the junior high schools in the city.

The analysis of the results indicates the important factor that effects on the pro-environmental behaviors of students: It was their perception of the contributions their parents made to address environmental challenges, instead of the actual contributions or behavior of the parents. The pro-environmental behavior that students took had a mediating effect on the way students’ perception on their parental contributions to the environment. The results also indicate that experience-based environmental education, such as related volunteering activities at school, promoted students’ pro-environmental behavior significantly more than classroom-based environmental education that focused on knowledge creation.

Career Strategies and Spatial (im-)Mobility Among Skilled Migrants Between Asia and Europe: The Role of Gender Power Dynamics in the Work-Family Interaction

This paper aims to unravel the gendered career strategies of skilled migrants in Germany's financial and academic sectors, which are being developed not only in tandem, but also often in negotiation, with gender relations in the family. Much of the current scholarly effort in the field of skilled migration and mobility has concentrated on the principal migrant and work-related context, treating the family as a rather secondary, separate and essentially "female" terrain. Drawing on participant observation and interviews with highly skilled mobile workers from Asia, this paper shows that these two terrains, work and family, are closely interrelated in building skilled migrant workers' careers. Germany has lately joined the "global war for talent" to seek out highly skilled migrant workers, but although the number of skilled women entering through Germany's skilled migrantory regime may in fact be small, the experiences of migrant, dual career couples show that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. The overall aim of this paper is to show the contrasting – and often gendered – strategies devised by highly skilled couples, which can widen our understanding of the role that the family plays in international skilled mobility.

Conceptualizing Spatial Ambivalence Among Migrant Academics: The Dimension of Temporalities in Understanding Career Strategies

Highly skilled migrants are often deemed to have 'mobility capital': extant studies have shown that for career advancement they mobilize the capacity to be spatially mobile across borders, grant their cultural, social and economic capital. In policy, too, the debate around "gain and retain" has popularized the construction of mobile skilled migrants. In fact, Germany, the country which this paper focuses on, has been widening its channel for skilled and highly skilled migration streams and opened a route for long-term and permanent settlement for migrants entering through its skilled migration regime. This new, skill-biased migration governance radically rewrites the established understanding of German citizenship, based on "Selecting by Origin". Recent scholarship has brought about a nuanced understanding about spatial mobility capital and its negotiated nature, by considering the work-family interaction. While these studies put forth ambivalence and gendered power dynamics in realizing career aspirations among highly skilled migrants, I argue that less attention has been paid to the temporal dimension in capturing spatial ambivalence and career strategies. By focusing on migrant academics in three German cities, this paper analyzes their temporal ambivalence, which is influenced by three temporal points in their own and family lives: past, present and future. However, rather than treating these three points in isolation from one another, I want to make sense of them in a continuum, that would together affect migrant academic's decision/orientation to stay, move on, or return. Drawing on a quantitative survey and problem-centered interviews, I aim to demonstrate that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. Thus, the Labor government guaranteed their human rights. Thus, the Labor government developed the Community Detention program and expanded of the number of asylum seekers who were issued a Bridging Visa E (BVE) and released into local communities. While human rights lobbies and refugee service providers tended to welcome the policy change because it released asylum seekers from detention centers, the advancement of the Community-based approaches was also a response to the need to bring down the high costs of the existing asylum seekers policy. In other words, the Community-based approaches for asylum seekers can be recognized as a segment of the neoliberal reforms of Australian social policy. In this paper, I will examine the details of the Community-based approach to asylum-seeker policy in Australia from 2007-2013, using policy and discourse analysis from a sociological point of view. I suggest that the policy aimed to promote freedom for ethnic minorities can result in their neglect when the discourse of neoliberalism and spatial management are utilized to justify the policy.

Fundamental Paradoxes of the Theory and Practice of the Criminal Law

The "crisis of punishment" as well as negative phenomena of the modern system of justice determines to the ideological handicap. Let's focus only on two mainframe ideas. Understanding of the social justice. Social justice is a measure of public benefits from laws and other regulators based on an agreement which establish and maintain the life order of individuals and institutions. This order promotes the survival and development of the society, as well as provides integration and decent life of its members. The "decent life" is a compilation of all the benefits proclaiming in modern society: freedom, equality, social security, etc. Therefore the justice system should be aimed primarily at preventing crime, restoration of the rights and rehabilitation of the victims, and only then – on the prosecution, punishment and / or rehabilitation of criminals. Economic pragmatism of the "social protection" concept. The concept of punishment stakes on the state control based on a quality management underlining efficiency and effectiveness. In this regard, in Western societies are widely discussing concepts of "safety" and "protection". However, they are discussing without an analysis of what, in fact, should be protected. So "reliability" becomes symbolic notion and goes back to the "retribution". In order to still expect the state to provide the whole system, it is necessary to decide from which perspective we should evaluate its quality. From producer's perspective? But what exactly it produces: improvement of criminals, retribution, or citizens' safety? From consumer's perspective? But who is consumer? Prisoner, society, State? From market's perspective? But what are the objectives of the government regarding to prisoners, actual and potential victims, or crime policy? These estimates could differ, as well as the answers to the questions. The elimination of these paradoxes could fundamentally change the concept and practice of the law in modern society.

Intergenerational Transfer within Families from the Perspective of Social Inequality in Japan

As in Europe and the US, Japan’s ageing population, and the accompanying generational imbalance, has become one of today’s most pressing social policy issues. My paper principally examines the relationship between social and private intergenerational transfers in Japan. I will discuss how intergenerational transfer within families takes place, and whether this process contributes to expanding inequality between families.

I focus on three kinds of private intergenerational transfer: co-residency, remittance, and asset inheritance. In particular, I intensively discuss different directions of transfer, both from parents to children, and from children to parents. The aim of my research is to identify similarities in determinants of all three types of intergenerational transfer, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People’s Living Conditions (CSLC), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-Age and Elderly People (PSMPEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. The survey, with a sample size of 6,442, includes detailed information on financial and care support between parents and children, and on household assets and savings.

According to my preliminary results, the meaning of co-residency has changed. The elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic support to younger family members. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

The Japanese General Social Surveys project conducts a nationwide social survey every two years since 2000 to study the attitudes and behavior of Japanese people. As the U.S. GSS, the JGSS questionnaire covers a wide range of topics including family issues.

Working with Korean General Social Survey, Taiwan Social Change Survey, and Chinese General Social Survey, JGSS shares some modules of questions with East Asian Social Surveys (EASS). The theme for the first EASS (EASS 2006) is Family, for the second (EASS 2008) is Culture and Globalization, for the third (EASS 2010) is Health and Society, and for the forth is Network Social Capital, and for the fifth (planned in 2015) is Work and Life. EASS aims to continue valid and reliable cross-national surveys by using repeated research that has already generated robust results.

In this presentation, we will illustrate the change in Japanese family and capture the whole picture based on the results of cumulative JGSS data. The overall trends between 2000 and 2012 will be described. While swayed by unstable job climate, both individuals and families suppress dissatisfaction and come to grip with reality. The number of unemployment and contingent employment among youths has been enlarged, the percentage of unmarried people has increased, and unmarried children have increasingly been living together with their parents. A growing number of women in all ages entered into labor force and the unemployed parents who have given up their job. For their standpoint, the people’s will has not been rightly reflected on the governments even in advanced societies because of their imperfect election and party systems, while the world economy has been controlled by their corporate and globalized enterprises. The advanced societies have not been sufficiently democratized, so that most of the citizens still remain actually substantially as subalterns. Rejecting any academic imperialism and not being afraid of multi-versalism, we must create a sociology to democratize all national societies and the international society. For this, we need not only a political sociology to promote the right reflection of the people's will on the government, but also an economic sociology to facilitate people's non-profit enterprises and organizations such as co-operatives, trade unions and others. A cultural sociology, integrating these political and economic ones meaningfully, will sublate the old paradigm onto a new highly qualified democrat society paradigm.

SHIVELY, KIM* (Kutztown University of Pennsylvania, shivelye@kutztown.edu)

Investing in the Afterlife: Inequality, Charity, and Hopes for Salvation in the Hizmet Movement

As Turkey’s economy has liberalized over the last 20 years, economic inequality has intensified and become a major focus of public concern and discussion. A response to this inequality has been an increase in the number of charitable non-governmental organizations, including faith-based benevolent groups spearheaded by upwardly mobile, pious Turks who seek to “do good” for society as a form of religious devotion. One such religiously oriented Turkish philanthropic association, the Hizmet (“service”) movement, is organized by followers of the influential Islamic preacher, Fethullah Gülen. Based on ethnographic research among members of the Hizmet movement in Turkey and the United States, this paper will demonstrate how Gülen’s teachings on economic activity and social responsibility suggest that a path to salvation for the wealthy emerges from the plight of the poor. More specifically, the movement has promoted an idea that individuals and groups may serve as a type of worship which the believer gains God’s reward in the afterlife. However, this conversion of economic success into religious merit depends on the believer’s intentions (niyet), in that economic activities are recognized as worship only if the believer maintains the proper spiritual dispositions toward God. This includes the acknowledgment that a person’s economic attainment is only partially attributable to the individual’s own efforts, but ultimately it is God’s blessing (ihlas) that is responsible for success. Reciprocally, an affluent individual should repay God’s benevolence with material beneficence to society through zakat (alms-giving) and other charitable activities organized by the Hizmet movement. These charitable acts will potentially earn that philanthropist a place in heaven. Such a notion that the wealthy rely on the needy for salvation serves to reinforce inequality, even as the effects of that inequality may be mitigated by acts of pious benevolence.

Policies That Shape How Australian Patients Navigate the Healthcare Maze: A Critical Discourse Analysis

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Governments around the world are endeavouring to work out how to meet patients’ expectations regarding universal health coverage. Even wealthy nations such as Australia that formally enjoy universal health coverage experience gaps and inequities in access to health care. Not all patients enjoy an equal capacity to choose. Inequities in access to care, long waiting times for surgery and increasing out-of-pocket expenses are creating a divide in healthcare between those who can afford to pay either out-of-pocket or via private health insurance, and those who cannot. The aim of this project is to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

The study is informed by a critical discourse analysis of selected Labor and Coalition Federal policy texts to examine how patient choice is spoken about, shaped and enacted at the federal level in Australia. The content of speeches and statements by the key politicians was accessed through the database services of the Commonwealth Parliamentary Library. The sample comprises speeches and statements pertaining to health policies made by Prime Ministers, Ministers of Health, and Opposition Leaders and Health Spokespersons.

Critical discourse analysis reveals the core policy messages that emerged during the Howard Coalition (1996-2007) and Rudd/Gillard/Rudd Labor (2007-2013) governments. Our study compares and contrasts Labor and Coalition policies in relation to access to health care in order to explicate the underlying assumptions regarding patient participation and choice within the context of universal health coverage.

Education Reform in Lebanon: Nationalism Versus Social Justice As Means for Building Social Cohesion

The paper will examine education policies in Lebanon post the civil war period (1989) up to 2010. This period witnessed two education reforms: 1995 and 2010. The main priority for these two reforms was building a sustainable peace and cohesion amongst the various sectarian groups. A nationalistic citizenship education was proposed as a means for building social cohesion in 1995 reform. The importance of the French language as a means for unifying cultural differences in Lebanon was overlooked. Twenty years later, this approach proved to be of limited effect as sectarian fractions in Lebanon continued to grow while school drop-out rates soared particularly amongst disadvantaged groups. In 2010, a new education strategy was developed. Promoting Lebanese nationalism again occupied the priority. However, access to education featured too in this strategy. My analysis will focus on the current understanding of equity and equality of education in this new reform plan and its consequences on the disadvantaged and marginalised groups in Lebanon and consequently on the social cohesion of Lebanon. In the paper, I criticise the neo-liberal and distributive notion of social justice which characterises the new education strategy in Lebanon and argues for a more coherent concept of social justice.

SHUCKSMITH, MARK* (Newcastle University, mark.shucksmith@ncl.ac.uk)

Crofting Is the Future: Small Farms after Agricultural Modernisation

This paper discusses crofting reform as an instance of the emergence of locally-rooted alternatives to agricultural modernisation and neoliberalism. Crofting is a distinctive and highly regulated form of land tenure specific to the northern half of Scotland; it is also a cultural heritage of major international significance, under threat from marketisation. In 2007-8 an independent review of crofting (which I chaired) proposed a major reformulation of government policy. Instead of agricultural modernisation, this proposed an approach based on concepts of neo-endogenous rural development and place-shaping, with local mobilisation encouraged by the generative power of the state and other actors, harmonising managerial technologies, addressing the challenges of multi-scalar governance and vertical integration, regulating land occupancy, and releasing new potentialities. Using the neo-endogenous approach, this sought to build the capacity of crofting communities to mobilise strategically and collaboratively, empowering communities at various levels. This approach was broadly adopted by the Scottish Government, with new legislation in 2010 leading to tighter regulation of land use and absenteeism, a map-based land register, and local elections for the regulatory body. Finally the paper considers what wider relevance this case might have, given that the Crofting Inquiry report was recently translated into Japanese.

Is There an Emerging Transnational Advocacy Network in Opposition to Weaponized Drones?

The use of unmanned aerial vehicles (UAVs) or drones by the United States for carrying out targeted killings in territories throughout the Middle East, South Asia and Africa has by now become routine, but controversial, American counter-terrorism practice. In recent years, these drone strikes have been regularly denounced by human rights organizations and have also drawn the critical attention of United Nations special rapporteurs on account of the civilian casualties such attacks frequently cause in apparent violation of international norms governing the use of international force. Perhaps just as significant, however, in continuing to resist the normalization of drone warfare, has been the increasing activism of a variety of like-minded norm entrepreneurs involved in the production and dissemination of knowledge about its legal aspects and realities created on the ground. Volunteer lawyers representing victims/victims of drone attacks have been pursuing litigation in different national jurisdictions, most notably in the United Kingdom and in Pakistan, to identify liable parties and publicize their alleged complicity. Concurrently, the epistemic community of international law scholars and practitioners has been engaged in public intellectual debates concerning the legality and morality of drone warfare, while investigative journalists have (often at their own peril) continued to document attack incidents and play a significant role in bringing these facts to public attention. This paper explores whether, and to what extent, these separate, yet complementary, initiatives may be indicative of an emerging transnational advocacy network opposed to the use and proliferation of weaponized drones.

The Democratic Peace Debate: Theory and Fact

The concept of a Democratic Peace (DP) is a major theoretical strand within International Relations (IR). Depending on precisely how democracy is defined, the number of wars between such states over the last two centuries varies from zero to a handful. Moreover, democratic states have never fought on opposing sides in a general war involving all, or nearly all, the great powers. Such a record cannot be claimed by any other form of government – monarchies, Communist and authoritarian states have all fought against one another. The only zone of peace that is grounded in a shared political system is that of liberal democracies. In a field in which there are relatively few empirical regularities of even modest strength, scholars were eager to validate or invalidate the findings. Thus, DP provides an almost perfect focal point to grapple with contentious issues involving theory in IR. First, DP will be differentiated from the liberal (or Kantian) peace, a concept with which it is often conflated. Second, the main debates about theory within IR that DP helps to illuminate will be discussed. These debates can be categorized as follows: 1) Rationalist vs. Reflexivist (paradigm debate); 2) Quantitative vs. Qualitative (methodology debate); and, 3) Methodological Unity vs. Methodological Pluralism (philosophy of science debate). Hence, concerns about theory-building in IR (as reflected through DP) are delineated: defining variables, confounding of variable effects, and fleshing out causal mechanisms that connect the variables to each other. The position taken here is that methodological pluralism is a pre-requisite and, furthermore, such a flexible and wide-ranging approach should also prove highly beneficial for delineating real-world connections.

Gender Inequalities and Socio-Cultural Themes of Leisure in Contemporary Societies: Illustrations from Pakistan

This paper takes into account the cultural and social themes of leisure that explicate how women’s leisure has been marginalized in a contemporary society. It is important to understand and explicate the perspectives of gender dynamics. At leisure experiences of women and women’s own perceptions and experiences with respect to leisure and social transformations. Reflecting the intersection of social and cultural themes of leisure, and progress towards the Millennium Development Goals, this paper views gender disparity paradox and contradictions within the gender segregation and disparity is found in hetero-social dimension in Pakistani society. Equal rights to leisure are given in a range of UN declarations even if it is frequently viewed as less important than basic human needs of food and shelter. Its purpose is to suggest how women’s participation and perception be included as central concepts in studies of leisure and leisure. This paper aims to inform and understand the implications of our findings and enrich analysis and characterization of contemporary global society. The studies on gender inequalities have given theories and methods; therefore, this paper argues that women having developed different educational and organizational talents and have the capacity to make a distinct and positive contribution to contemporary global societies. The paper will try to narrow down to types of theories, methodological and ethical challenges and present a model for more equitable
leisure policies and new resolutions for more leisure opportunities for women that enable leisure to serve as a force for human growth. Finally, in drawing together some themes of leisure and gender equality, the paper will indicate how these realities have the capacity to add to our understanding of the complexity of contemporary global society. Leisure and gender inequality will be seen in a socio-cultural framework.

Inequalities of Gender, Violence and Dehumanization in Multiple Forms in a Conflicting Cultural Values Outlook in Pakistan

This paper provides a theoretical framework of understanding, experience and struggle of gender and pursuit of women rights concerning inequality, violence and dehumanization, and how multiple forms of such disparities overlap and interrelate with social categories and cultural values. The paper’s main theme will be a theoretical inquiry into the way violence is conceptualized in relation to the conflicting cultural values in traditional and modern theories. Theoretically and methodologically the paper will be designed so as to allow the interpretation of maltreatment of women with reference to sexual and gender options concerning violence, class, and discrimination in the background of conflicting cultural values. It will focus on Pakistani society since it got its independence in 1947 and build its argument on previous research conducted among indigenous groups in Pakistan. It will be discussed here that an examination of multiple forms of inequalities of gender, violence and dehumanization in the lives of women in Pakistan, the interpretation would be that of a society surrounded with violence. Central to this theory of violence is accounts of the ways Pakani women find themselves between being modern women and traditional women to illustrate the limits of the dichotomy of the theories of traditionalism and modernism. This paper will focus on the rights of the women who suffer from violence and dehumanization. These rights will include socioeconomic rights of getting jobs, social security, health facilities and shelter. In the end the paper will give a model of gendered approach for rehabilitation of the women who have faced such inequalities considering into view the legal Act against women victimization in Pakistan.

Crisis of Labour: Macro- and Micro-Level of Social Analysis

The report focuses on the phenomenon of labor crisis and its macro- and micro-level analysis. At the macro-level labor crisis is a transition to a postindustrial society; one of its features is a weakening of the need for hard work for industrial production. Labor in its classic sense is a thing of the past. Due to globalization, the processes of labour mobility across countries and the emergence of the international labor market play an important role in the contemporary world. And at this level the study focuses on the problems of prospects of labor as an activity, changing the nature of work, etc. Therefore a researcher faces new challenges such as: identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of

L’accompagnement Des Mobilités Résidentielles Des Salariés à L’épreuve De La Crise : La Perte D’Efficacité D’Un Dispositif De Conciliation Des Trajectoires Professionnelles Et Personnelles

Les mobilités résidentielles liées à l’emploi posent directement la question de l’articulation de la vie professionnelle et de la vie privée des salariés. Sous l’impulsion de l’organisation paritaire du « 1 % Logement », des dispositifs ont été mis en place en France au début des années 2000 pour faciliter cette articulation, notamment en favorisant l’accès des salariés à des prestations professionnelles d’accompagnement des mobilités résidentielles. Cette initiative a su séduire les employeurs comme les salariés. Elle aide à mieux concilier les dimensions professionnelle et privée des trajectoires de ces derniers par la prise en compte des enjeux territoriaux liés aux mobilités géographiques et par un réel soutien aux salariés les moins bien dotés pour y faire face. On verra comment le contexte économique de la fin des années 2000 en France a remis en cause ce dispositif. La fragilisation institutionnelle du 1% Logement a joué un rôle, mais aussi le changement de comportement des employeurs eux-mêmes qui exercent une forte pression à la baisse sur les prix des prestations. Dans un contexte de lassitude économique général, et donc de recul des mobilités géographiques liées à l’emploi, les prestataires adoptent eux-mêmes des pratiques commerciales de plus en plus agressives qui mettent progressivement au second plan l’accompagnement des salariés à proprement parler. L’évolution de l’accompagnement des mobilités géographiques des salariés en période d’austérité se fait donc au détriment des salariés les moins bien dotés, encourageant désormais les trajectoires de départ d’abord privée et vie privée. Elle les resserre sur des choix plus tranchés, par exemple entre l’immobilité et le sacrifice de la vie personnelle et familiale. On verra cependant que le contexte d’austérité est aussi propice aux tentatives d’innovation de la part des salariés mobiles, notamment par le recours à la multilocatior résidentielle.

Building a Hybrid Culture in Multinational Military Operations: The Perceptions of Eufor Peacekeepers on Collaboration and Negotiation for a Better Information Sharing

Information sharing describes the exchange of data between various organizations and people. A hybrid culture based on collaboration and negotiation may pave the way for better information sharing within an organization. In the meantime, the nature of the organizational work is changing with the help of globalization, technological developments, complexity and today’s sophisticated social and political problems. To remain competitive and to gain an advantage of these developments by solving conflicts effectively (Hocker and Steiner, 2009), some new “multinational collaborative work arrangements” are being established both in civilian and military multicultural working environments. These working environments are also in place for military multinational military operations (Petersen, 2001). In fact, if the cultural diversities are being managed well, organization can use advantages of this situation. In this case, the concepts “collaboration” and “negotiation” have become much more vital to manage the intercultural process effectively, to prevent some misunderstandings and create a better information sharing between the partners.

*From ‘Absent-from-Home Father’ to ‘Committed Father’: Changes in the Model of Fatherhood in Poland and Role of Mothers-‘gatekeepers’*

The current situation of fathers in Poland is an excellent example of the gap between the one hand - the level of social expectations, and on the other hand - everyday practice.

Social expectations have tended to climb as a result of the promotion of a new fatherhood model, extensively discussed by the media and by experts, which has led to the creation of new social patterns and a new model of the ‘father’. The majority of press, radio, and TV programmes present the idea of the committed father, involved in childcare in a very positive way, as an opportunity for men to benefit from developing close relations with their children.

In the same time, Polish fathers rarely get involved in dealing with children, do not spend a lot of time with them, do not decide on matters that are important for children, etc. The question is: why?

There are many reasons for that, one of them is the attitude of some Polish mothers which could be described as ‘Gatekeepers’.

Many of mothers admit that the fathers of their children are able to look after children, but they treat them as if they were children themselves. They claim that men need detailed instruction, and when faced with a task of taking care of a child, the mother has to prepare everything for him. Due to this, many women prefer to have fathers ‘under control’ even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously ‘push men away’ from children, because male commitment threatens their identity as built between on the one hand - the level of social expectations, and on the other hand - everyday practice.

Due to this, many women prefer to have fathers ‘under control’ even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously ‘push men away’ from children, because male commitment threatens their identity as built on being the mother, and thus the sole caregiver and expert in children’s affairs.

The main purpose of my presentation is to describe the situation of fathers in the context of matthers’ attitudes and behaviors.

*Community Responses to Drug Related Violence in Mexico*

The violent conflict that emerged in Mexico – due to drug trafficking and the Government response - has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuenavaca and Jiutepec in the state of Morelos, Saltillo and Torreon in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees –men and women- from lower middle class neighborhoods. Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens’ rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens’ linkages to public security and justice institutions. These changes are expressed in the form of decreased or increased participation in public life, in the formal and informal, and in the weakening of community networks.

*Police and Excessive Use of Force in Mexico City*

In Mexico City, excessive use of force by police officers from different police forces is a problem acknowledged by the public and some political actors. This concern resulted in the enactment of a 2008 law governing the use of force by police forces of the Federal District. However, there is little research and systematic information about situations in which police abuse is concentrated. In developing democratic societies civil control agencies has been one of the most important efforts to constraints police abuse and achieve a better level of compliance of basic rights. The main mechanism is the assessment of complaints against illegal police behavior. In Mexico City this responsibility lies with the Federal District Human Rights Commission. Since its founding in 1993 around a fifth of all registered complaints involve policemen (either from the Secretary of Public Security or the Attorney General of the Federal District). Based on the analysis of 600 complaints regarding police abuse between 2007-2011, this study describes the main characteristics of abuse in the use of force, and accounts for its severity by looking at social, spatial, situational, and individual factors. Police abuse is concentrated in a limited set of situations linked to the specific functions of each corporation, the motives and interests of police officers, as well as in spatial patterns.

*Questions, Answers and Pleas in Portuguese Exams during Seven Decades*

Keeping in mind the central part national exams have been performing in the design and implementation of learning and curricula, the analysis of the evolution of the Physics and Chemistry national exams shows the dynamic implications between the exams (different contents and learning) and the curricula, in the realm of the curricular reforms that happen every ten years plus.

The paper reports and provides examples of questions, answers and pleas in Portuguese exams from 1940 to 2010. As it is never too much to highlight, it is not possible to reflect on the exams focusing exclusively around the students and the technical concern of measuring their performance without keeping in mind the factors in play regarding learning, such as curriculum, Portuguese cultural characteristics, the organization of the School Community, and the educational legislation driven by several national and international historical factors.

This approach does not aim at showing a compilation of the negative moments of the reforms throughout those decades, but to show that nowadays our school system has a higher demanding level, both at the teaching level and at the curricular level, highlighting a higher level of competence in abstract thinking.

*“If You Were a Man, You Would Be a Captain”: Observations, Strategies and Experiences Of a Woman Anthropologist Among The Military In Brazil*

This presentation aims to explore the relationship between the researcher and the researched perceptions in ethnographic approaches of the military in Brazil, showing methodological features and general practices in this field, together with observations from my own background and experiences of research in military organizations from southeastern and north of the country. The way the military reality is classified and arranged is, to some extent, revealed in contacts between anthropologists and military personnel which are initially marked by the experience of the anthropologists’ perception as “civilians”, i.e. “outsiders” of the “military world/environment”.

There are a lot of positions and relations being built and acquired in the development of research, that refer to the poles “military / civilian”, and that, far from being fixed categories, reveal themselves as relational and contextual regarding the position of the researcher (Castro & Leirner, 2009). By addressing issues such as women in the Armed Forces and military families in my studies, this paper aims to compare the entry in the fieldwork into units that are military academies in relation to other garrisons, as border platoons in the Brazilian Amazon. I will present the strategies for approaching and contact, positions acquired in the research context, experience as a researcher and “friend of the Army” and extend the reflection to the gender issue that permeates my research trajectory.

How Is Time Organised By and for Babies?

By and large, time studies have been carried out in the sociological area, concerning in the theoretical as much as methodological aspects when analyzing time use by adults in contemporary western societies. However, research on time use by children is still incipient and until now the main topics addressed refer to daily socialisation experiences (Larson and Verma, 1999), the differences in time use considering social class and gender differences (Carvalho and Machado, 2006), childhood life in urban and rural areas (Christensen and James, 2008) and the comparison between activities developed over different decades (Cruz and Teix- eira, 2008). It is important to emphasise that such research only considered children over 6. For this reason, the present undertaking seeks to understand time use by and for babies under 12 months old, and hence complete the gap found in studies based on this age range. Firstly an instrument to record daily time use was elaborated, for completion over 24 hours in observation of both baby and parent. This instrument was used twice - once on a weekday and the other on a weekend. Interviews were later carried out with the parents in order to further ex- plore the information recorded. The sample comprised two babies - one girl and one boy and their respective parents. If on the one hand, babies receive recurrent external determinations leading us to understand time as an instrument of social regulation (Elías, 1998), despite such impositions they also determine their own time use on the other.

Sweeping Floor and Building Identities: Centrality and Contradictions of Paid Work for Women in Brazil

The XXI Century Brazilian Society has undergone several transformations, whether in the political, economic, technological or social aspects. This new situ- ation has led to changes in gender roles and labor relations, including women’s work. Inserted in this context, this research presents a retrospective of Brazilian women’s struggle for the conquest of their labor rights and interprets these changes empirically. We conducted a comparative case study on two organiza- tions- one public another private- of Higher Education in the South Region of Bra- zil, with women that work in a cleaning sector for at least five years. We sought to understand how these women construct their identities at their social space of work and at home, as housewives. The data were collected through semi-structured interviews and focus group. It was found that for these women, the paid work has a centrality that builds contradictory feelings and actions. At first glance, the work promoted financial independence and increased self-esteem of these women. On the other hand they have experienced an invisibility as citizens and a lack of recognition of their activities in the organizations and at home. The conse- quence of this process has been as a conflict in the construction of their identities as workers and as housewives.

The Unequal Distribution of Employer-Provided Training. Empirical Findings and Sociological Conceptualisations

The aim of this paper is to analyse learning and training opportunities, and par- ticipation in employer-provided training (in-company training, in-service training, personnel training). Which employee groups are trained the most? And who are those who do not participate in workplace training at all and who lack the learning opportunities? Employer-provided training has been theorized mainly by econ- omists (originally Gary S. Becker [1964] Human Capital; Jacob Mincer [1962] On the job training: Cost, returns, and implications.) In economical literature employ- er-provided training has been conceptualized as human capital. Today when skills are the most important single asset an employee has in the labour market, so- ciological theorizing on employer-provided is needed. How should employer-pro- vided training be conceptualized and theorized in relation work place hierarchies and class structure? What kind of capital workplace training is (e.g. Bourdieu?) The question is about class based skill strategies.

In international comparison the participation rate in employer-provided training is very high in Finland. What is typical for Finnish workplace training is its uneven distribution among employees. In the long run the participation in em- ployer-provided training has grown. However, the differences in participation be- tween levels of hierarchy (social classes) have been remarkably persistent. The differences have not diminished in 30 years.

The empirical data used in the study are the Adult Education Surveys by Statistics Finland. Adult education surveys study not only participation in education and learning and skills among the adult population; in addition, they produce data about people's opinions and experiences of adult education, their motivations and willingness and need to participate in it, and obstacles to and preconditions for it. The data from the survey are based on face-to-face interviewing of a sample of more than 5 000 people. The survey 2012 was a part of a European co-opera- tive project co-ordinated by the Statistical Office of the European Communities.

Geopolitical Turmoil and the Fate of the Labor Movement in the 21st Century: 10 Years after Forces of Labor

My paper revisits the conceptual framework elaborated in Forces of Labor as a tool for understanding the roots of (and prospects for) the recent global upsurge of labor. We see this upsurge in a variety of forms from strikes by workers in China and fast food workers in the United States to protests against austerity in the European Union and by unemployed and previously employed
workers in various parts of the world. I deploy a theoretical perspective that sees historical capitalism as a system characterized by ceaseless change—"all that is solid melts into air"—and therefore as a system that is recurrently making, unmaking and remaking working classes on a world scale. The paper traces how various capitalist "fixes"—spatial, technological, product and financial—reshaped working classes locally and globally in recent decades; strengthening or weakening labor, creating challenges and opportunities. The paper develops several arguments that can be found in embryonic form in Forces of Labor. One, the combination of technological and financial fixes has been destroying livelihoods faster than it has been creating new livelihoods, leading to a generalized crisis of subsistence for workers, and a crisis of legitimacy for capitalism. Two, the profitability of the financial fix results almost entirely from the redistribution of income from labor to capital. Redistribution was key to resolving the 1970s crisis of capitalist profitability, but at the cost of an intensifying crisis of legitimacy. Three, financialization, crisis of legitimacy and hegemonic decline go hand-in-hand. We are at the end of the neoliberal era and of the era of US world hegemony. Thus, the geopolitical terrain is critical for understanding what is to be done; including the prospects for labor solidarity across borders and status divides in the very unequal world bequeathed to us by centuries of world capitalist development.

Reshuffling of the World Proletariat

A Reshuffling of the World Proletariat

The transformation of historical capitalism over the past several decades has resulted in a "reshuffling" of the proletariat and proletarian movements on a world-scale. In my previous writings, I focused, among other things, on how the rapid industrialization of parts of the global South has led to the emergence of large new working-class forming in existing classes. The existing working-class in China are the latest manifestation of this dynamic process of capital mobility and new working-class formation. These writings focused on the "active industrial army". Another important dynamic underlying the contemporary reshuffling of the proletariat is the secular trend toward increasing capital intensity, and thus the growing mismatch between global labor supply and demand. As such, a deep re-theorization of the concept of the reserve army is imperative—a concept which is both critical to and distressingly unexplored in volume 1 of Capital. This paper seeks to contribute to this task by theorizing (1) the distinction between, and the relative historical importance of, exploitation and exclusion in the development of capitalism; (2) the ways in which capitalist accumulation has depended historically on the externalization of the costs of reproduction of labor and nature, and therefore some of the ambiguities of exclusion; (3) the unevenness of these processes in space and time, and the resulting deep divisions within the world proletariat along lines of gender, race and citizenship; (4) the ways in which this unevenness is reflected in the patterning of world labor unrest in recent years; and (5) the implications of all this for moving toward a post-capitalist world system which guarantees a decent and secure livelihood for all.

Placing Panethnicity: Performing Arab Space on Sonnenallee

The multicultural Berlin district of Neukölln is home to a large number of very diverse foreign-born and migrant-background residents. Some 140 nationalities make up 40% of the population in 2010. Among the migrants least welcome by the dwindling, sometimes xenophobic, native German majority are the asylum-seekers from the Middle East. Unlike their Turkish neighbors, the Arabic-speaking refugees from Lebanon, Egypt, Syria, Afghanistan, Iran, and other countries in the region have a precarious foothold in Berlin. Establishing a small business, even if it is unprofitable, demonstrates self-sufficiency to the authorities. Ironically, immigration laws partly account for the "parallel societies" so deplored by the likes of Thilo Sarrazin, who characterized Turkish and Arab immigrants as lacking "a productive function, except for running fruit and vegetable business." This research looked into the ethnic enclave of distinctively Arab businesses and institutions clustered around a segment of the five kilometer long artery, Sonnenallee. These businesses do not sell fruits and vegetables, but rather goods and services that demarcate a specifically Arab space. The Arab businesses are frequently engaged in illicit or off-the-books activities to make ends meet in an economy from which they are formally excluded. Based upon field work and interviews with shopkeepers and customers, religious and ethnic association leaders and members, government officials, and Turkish competitors who cluster along a different Neukölln street, I report on the place-making activities of Arab Berliners. I find this street offers a "safe" public space for Arab political and cultural expression, a forging of "pan-ethnic" community. Beyond common Arabic language, this street and nearby square is the location of pan-ethnic demonstrations and the center of ethnic associations, mosques, and predominantly Arab parks, schools, and other institutions in which solidarity crosses national lines. The symbolic boundaries of pan-ethnic space separate Arabs from both Turks and Germans.

New Experiences of Inclusion: Affirmative Action for Blacks and Natives in Brazil

After several decades of black social movement struggles for rights in Brazilian "racial democracy," it was recognized by the nation-state the practice of racial discrimination in the country, as well as affirmative action as a policy to correct inequality. In this scenario, the passage of Law 12.711 on Affirmative Action, in 2012, presumes a set of substantive changes that alters the access to public high education in Brazil. To understand the social context that has led to the introduction of which implies the handover on racial and ethnic relations as well as African and African-Brazilian history and culture for school system requires analysis of the democratization process of the Brazilian State. This paper focuses on three aspects: 1) the change in state policy related to inclusion of blacks, native population, and poor people; 2) the impact of these actions in the academic debate; 3) the role of black social movement in this process. The research fieldwork gathers the legislation that have changed the normative field in relation to the ethnic and racial issues after the Constitution of 1988; collects official data on the expansion of blacks, natives and poor people to public high education; and review the literature on racial affirmative action and black social movements producing a typology of the arguments.

Filial Piety Expectations of Older Adults in Urban and Rural China

Due to declining fertility rates and growing life expectancy, China will have one of the world's oldest populations by the middle of the 21st century with more than one in three individuals over the age of 60. Reductions in family size—the result of the one-child policy in urban areas and 1.5-child policy in rural areas—will also lessen the viability adult children who currently serve as the backbone of the elder-support system. Although China's older population is still predominantly rural, little is known comparatively between urban and rural elders in terms of filial support expectations and the factors that may differentially drive the strength with which filial piety is valued and enacted by older adults. This presentation will make use of 2012-13 pilot data from the Chinese General Social Survey of Aging, a national study of older adults (60+) in China that yielded 1,126 individuals about evenly divided between urban and rural locations. Questions in the survey about filial expectations concerned whether children should be financial providers to their parents, whether children should live close to their parents, whether children should live with their parents, and the special obligation of sons to ensure the old age security of their parents. Descriptive and multivariate statistics will be presented to determine if aging in urban and rural China is truly a tale of two family types and identify the social, economic, and health factors that may be responsible for any differences detected.

Crime Control in São Paulo/Brazil: Military Police and Criminal Justice System

This paper discusses the State actions of crime control in São Paulo State/Brazil in the last decade. We seek to analyze how institutions and State agents engaged to crime control and criminal justice management are affected by the emergence of new "criminal organizations." An expressive growth of the incarceration rates, a decrease in the number of prisons, is linked to the emergence of the "Primeiro Comando da Capital – PCC", bringing a new dynamic to the relations inside the "world crime". Research (under data collection) has identified two main strategies of crime control to face the new crime dynamic: i) a militarized combat based on lethal confrontation led by the Military Police against supposed criminals and ii) a classic judicial control producing both imprisonment for specific population and low rates of punishment, especially for homicides and police violence, showing the high selectivity of the penal system. Two empirical cases exemplify each strategy mentioned, and allowed to describe some of their characteristics. First data indicates some affinities between classic crime control and police violence.

SIM, CHONKIA†* (Showa Women's University, simsimshowa@swu.ac.jp)
Slow Birth and Fast Growth of a World-Class Post-Secondary Education in Singapore
This paper examines the background and strategies behind the slow start but fast expansion of a world-class post-secondary education in Singapore and presents an overview of its current trends and future directions.

When Singapore gained its sudden independence with its separation from the Malaysian Federation in 1965, one of the legacies of the British colonial heritage was its low level of investment in its infrastructure, schools and teacher training. This is reflected by the low literacy rate of 73% in 1970, and a high 83% of population aged 25 years and above having qualifications below secondary level even in the year 1980, based on data released by the Department of Statistics.

However, the city-state transforms itself from an entrepot to an industrialized economy, rapid school construction and large scale teacher development were initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least post secondary education were about 6%, 23% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010. Apart from expanding enrolment at the post-secondary level, Singapore also had to shift its efficiency-driven education to an ability-driven one in the past decade, to respond to growing educational aspirations among the young and the deep impact of the digital knowledge-based era. This paper will conclude with a discussion on the new challenges, opportunities and measures to adapt to the ever-changing landscape of post-secondary education.

The Forbiden Discipline: The Impact of the Pinochet Dictatorship on Chilean Sociology and Sociologists

In 1972, during the height of Allende's presidency, Santiago de Chile hosted the Conference of the Latin American Sociological Association (ALAS). The conference would not return to Chile for 41 years, until September 2013. At the time, Chile was the Latin American center of social scientific exchange and collaboration (Franco, 2007). Besides, Chile's path towards socialism and its changing society attracted many sociologists from Latin America and overseas. This golden era of Chilean sociology immediately came to a halt with Pinochet's coup d'état on 11th September 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociologists and sociology as leftist ideology, with many having to migrate to save their lives (Barrios and Brunner, 1988; Brunner, 1988; Garretón, 1997, 2005). At the same time, with the forceful implementation of neoliberalism in all areas of life under the guidance of the Chicago Boys, neoliberal economics became the queen of the social sciences, leaving little space for what seemed to be 'ideology' and thus the standing of accepted knowledge in the social sciences. This paper studies the fundamental transformations of Chilean sociology and sociologists' lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship altered sociology and sociologists' lives: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two most recent waves of the Brazilian feminist movements: third wave of the 1980's and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist and workers' movements encompasses the civic participation of Brazilian women in the transition from a military dictatorship to a democratic regime as well as participation in the transnational women's movement and Brazil's ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of women's rights through public policies for women; the creation of executive and managerial organs for such policies at the national (the national Special Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building the agenda for transnational feminism –currently reflected in the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism
operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

Reflecting on the role markets play in shaping the interests and actions of social life, this paper presents the argument for how institutional ethnography furthers our understanding of the discursive creation and enactment of markets as part of daily life. Drawing on data emerging from an ethnographic study of financial institutions within the City of London, this paper asks how markets are created, maintained and ideologically positioned though the everyday actions of economic actors located within key financial institutions.

Informed by Goffman's (1961; 1963) work on the body as a site of cultural inscription, it is argued that markets are essentially constructed and managed through the production of dominant cultural sensibilities. This blinded approach of cultural economics identifies the market as an enacted phenomenon, bounded socially and spatially within institutions of finance. By focusing on the embedded cultures, enacted through the daily practices within the City's financial institutions, we can explore how the market operates in terms of its agenda, practices and conflicts, with the outside world.

Through exploring the lived experiences of those working within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market agents, seek to utilise existing technologies, architecture and habits to create a more efficient market - one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social and spatial consequences of action. Reflecting on the study of the risk management of economists, institutional ethnography serves to ameliorate our understanding of how embedded cultures of finance actively create and manage markets.

By focusing on the embedded cultures, enacted through the daily practices within the City's financial institutions, we can explore how the market operates in terms of its agenda, practices and conflicts, with the outside world.

Through exploring the lived experiences of those working within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market agents, seek to utilise existing technologies, architecture and habits to create a more efficient market - one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social and spatial consequences of action. Reflecting on the study of the risk management of economists, institutional ethnography serves to ameliorate our understanding of how embedded cultures of finance actively create and manage markets.

SIMONOVA, OLGAA* (Higher School of Economics, olgsimon@gmail.com)

Reflecting on the role markets play in shaping the interests and actions of social life, this paper presents the argument for how institutional ethnography furthers our understanding of the discursive creation and enactment of markets as part of daily life. Drawing on data emerging from an ethnographic study of financial institutions within the City of London, this paper asks how markets are created, maintained and ideologically positioned though the everyday actions of economic actors located within key financial institutions.

Informed by Goffman's (1961; 1963) work on the body as a site of cultural inscription, it is argued that markets are essentially constructed and managed through the production of dominant cultural sensibilities. This blinded approach of cultural economics identifies the market as an enacted phenomenon, bounded socially and spatially within institutions of finance. By focusing on the embedded cultures, enacted through the daily practices within the City's financial institutions, we can explore how the market operates in terms of its agenda, practices and conflicts, with the outside world.

Through exploring the lived experiences of those working within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market agents, seek to utilise existing technologies, architecture and habits to create a more efficient market - one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social and spatial consequences of action. SINCLAIR, GARY* (University of Stirling, gary.sinclair@stir.ac.uk)

Music As Leisure in the 21st Century: The ‘sportisation’ of Music Fandom

The term ‘sportisation’ (Elias and Dunning, 2008) is used by figurationalists in a general sense to document the development of rules and regulations for previously chaotic games (e.g. boxing and football) into the commercialised, controlled ‘sports’ that occupy such an important position in modern society. King (1997) focuses on the role that commercial forces, in particular the introduction of modern all-seater football stadiums, have had on the emotional management and masculine identities of sports fans. This paper readdresses the focus on leisure (in this case music fandom) in the figurational sociology of sport and leisure, charting the impact that ‘sportisation’ processes and marketplace influences have had on the live music experience of heavy metal fans. Drawing from a three year study of heavy metal subculture which incorporated data from participant-observation and interviews, this paper examines how transformations in modern music ‘arenas’ has significantly diminished the quality of the live music experience. This is encapsulated by the problematic issues raised in terms of emotional management and identity projection that that fans have experienced in the context of such transformations. In particular, focus is attributed to the importance of the heavy metal rituals (moshing, crowd-surfing) which have previously been facilitated in ‘controlled’ environments that allowed for the ‘de-controlling’ of emotions and exaggerated displays of masculinity. Following the changes in such subcultural spaces, particularly the increased seating in large music venues, the strategies used by fans to re-conceptualise ‘established’ notions of masculinity within the scene and to demonstrate their heavy metal identity are explored.

SINCUZH, MARCIN* (Military Center of Civic Education, m.sinczuch@uw.edu.pl)

Focus Group Interview As Research Method inside the Military

In the proposed paper I would like to focus on the several dimensions, as shape, establishing and duration of relationship between different groups in the military institution perceived in the context of chosen research methods. The starting point of the paper is the reflection on the use of Focus Group Interview as a tool for qualitative research in the Polish Armed Forces. The history of use of FGI starts in military studies in Poland begins in the mid of 90. XX c.). FGI as a method was used in the research mainly focused on the issues of women in the service, conscripts and lowest rank professional soldiers. The social process, that is activated as a result of use of FGI includes the re-creation of social relations and identity construction in the group of respondents of given kind. In the case of marginalized target groups, the situation of research creates an friendly environment, where the process of building a positive group definitions appears. The reality of the research and its consequences may form the forum for the subordinated and/or marginalized group in the institution. In this context it influences the social actions and processes inside the institution, finally affecting the organizational culture of the military.

SINDRESTEAN, ALEXANDRA* (University of Vienna, alexandra.sindrestean@univie.ac.at)

Developmental Logics Beyond the Divide

Developmental projects have been the common denominator of the post-1945 global order irrespective of political divides and divergent economic systems. Whether we look at the emerging postcolonial states of the South, state socialist Europe or the Decolonisation of Africa, developmental policies directed at industrializing ‘homogenous’ national spaces were adopted across the globe. However, by the 1970s this model showed signs of exhaustion. At the time when ‘Limits to Growth’ came out in 1972, the Romanian state was implementing a new strategy for economic progress: it had negotiated with IMF and EBRD the ‘developing country’ status in order to facilitate foreign-debt financed investments and embark on export-led growth. This paper aims to shed new light on a particular kind of developmental continuum in an effort to question the wide-spread assumptions about the relationship between local variations and global structural constraints, namely the tendency in terms of explanatory frameworks to emphasize only particular local specificities, and to ignore external factors for certain socio-spatial formations. Drawing on extensive fieldwork in a Romanian Danube-riparian port city, I argue that it was the contingency of the 1977 earthquake that turned the city and the surrounding region into a laboratory for a new kind of developmental logic. After the downfall of the socialist regime in 1989, the very same region became yet again part of a new understanding of development. In accordance with pre-accession criteria for EU membership, Less Favor ed Zones have been established in 1998 in order to attract foreign direct investment through long term tax exemptions.

Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize ‘contingent development’ as a way to look into improvement schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.

Beyond the Stereotype of ‘Slum’: A Sociological Study of a Slum in Amritsar (India)

The slum in a city is considered as a poor area and it is assumed that all slum dwellers are alike. The present paper is an attempt to study the micro level discourse related to the issue of inequality within a slum. Inequality has been studied at various levels: such as national, regional and city, but not within a slum. A slum, like a city, is a heterogeneous entity, in which various categories of people share the same space and dwellings. The findings suggest that there are clear-cut inequalities among the slum dwellers in social, economic and political spheres.

SINGH, JAGSIR* (CSSS/SSS, JNU, jagsirbrar1@yahoo.co.in)

Urban Inequality and Health

This paper is a modest attempt to underline the urban inequality and its impact on health. It describes the health implications of social inequalities within city. It also describes the health problems from which low-income groups in urban areas suffer more than richer groups including those that are not linked to poor sanitary conditions and those that are more linked to relative poverty (and thus the level of inequality) than to absolute poverty. Study on the health of rich and poor households within cities show the much larger burden of disease, injury, and premature death that low-income groups face. Most of this burden is easily prevented because it is a result of their unequal access to homes which have provision for piped water, sanitation, drainage and garbage collection, and adequate health care. Thus with this we can say that health inequality never been an independent phenomenon. By using health and social impacts of urban inequality as a focal point of the discussion, the paper also intends to provoke thought on some of the fundamental issues of human development trajectories.
Critical Policy Studies: The Contribution of Basil Bernstein’s Knowledge Code Theory

Critical policy studies adopts a discourse analytic approach to policy research, drawing specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panoptic surveillance principles), and subject positions; and the Bourdieuan concepts of field, capital and habitus. A core aim of critical policy studies is to analyse the ways in which supranational organisations, such as the OECD, increasingly regulate official national curriculums given their role in the development, administration and reportage of tests which are ‘closely linked with the debate about national standards’ expressed as comparative performance on basic mathematics, scientific and literacy skills (Tyler, 2010: 145). However, drawing from such theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein’s sociological theory of education. This approach, Bernstein (1975-1995) maintained, distinguished his ‘particular corpus of work from that of Foucault or Bourdieu’.

This paper undertakes three tasks. Firstly, it critically reviews the literature that has compared and contrasted the sociological approach of Bernstein to Bourdieu (Maton, 2008; Harker and May, 1993, Hasan, 1999) and Foucault (Diaz, 1984; Tyler, 1990). Secondly, it draws specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panoptic surveillance principles), and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula) (Kim, 1998). Thirdly, it tests the usefulness of Bernstein’s theory of knowledge codes to analysing policy enactment around standardised national testing drawing on examples from two contexts, namely Queensland, Australia and New York, New Jersey, USA.

SINGH, PARLO* (Griffith University, parlo.singh@griffith.edu.au) SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

Totally Pedagogised Societies. Sociologies of the Pedagogic Communication of Knowledges

Basil Bernstein (2000: 365) asks: How real is the contemporary pedagogic panopticon? And then suggests that a new sociological project might focus on the diverse sites, generating both claims for change in knowledge forms and displacement of and replacement by new forms, creating a new field of knowledge positions, sponsors, designers, and transmitters’ (2000: 368). Bernstein’s ideas have been the springboard for an analysis of: (1) the intellectual field of the new sociology of education (Moore, 2012); (2) the possibilities of a social re-alist project on knowledge (Moore, 2013) and geographies of knowledge (Pasias & Roussakis, 2012); (3) the transformation of teachers’ work (Robertson, 2013) and teacher professionalism (Beck, 2012); (4) the bio-politics of education and health policies (Evans, 2012); and (5) lifelong learning and new apprenticeship discourses (Gerwitz, 2008; Poulet, 2010).

Our paper aims to build on this work in two ways. First, we undertake a meta-analysis of the research literature drawing on Bernstein’s concept of the totally pedagogised society, as well as literature forging a new direction for the sociology of education on the basis of Bernstein’s work. Second, we distinguish between (1) knowledge codes – the structuring of curricula and (2) pedagogic codes – the structuring of specialised communication for teaching. In so doing, we propose an alternative intellectual trajectory for the sociology of education. Specifically, we are interested in analysing new modes of global governance through pedagogic communication devices taken up in a range of formal and informal agencies to construct 24/7 spaces of learning, particular modes of learning engagement, and pedagogic identities. Our objective here is to simply lay out the possibilities for developing a sociology to examine new modes of pedagogic governance and the new spatial and temporal configurations of new pedagogic modes (see Tyler, 2001).

Globalization, ICT and Professional Education in India

The process of globalization has posed new challenges in every sphere of social, economic and cultural life of both the developed and developing societies. The transnational mobility of professionals has been increased in last two decades throughout the world. The professional education in India is also under process of transformation as a result of the pressing demands of globalization of professions. Apart from the existing professions, new categories of professions with new work ethos and work atmosphere have been emerged. The professional education in India also needs to transform in order to compete at the global level. It also demands the homogenization of certain basic elements of the professional education on the one hand and a thrust to include the context of the socio-cultural milieu of the given society on the other. As the professional education requires huge financial resources, the quality of professional education and institutions varies between and within the developed and developed societies. The poor countries have invested more on the expansion of basic professional manpower rather than on the post-secondary professionals particularly in the field of education and health looking into their pressing development needs. The rich developed countries, however, have focused more on the expansion of post-secondary professional manpower in order to stop outsourcing from their countries. In India, however, there have been expansions of both the basic professional training as well as of the post-secondary professional education. E-learning therefore is an essential component of professional education in the globalized unequal world. The present paper analyses the various dimensions of intricate relationship between globalization, ICT and professional education in post-globalization era.

Religion and Colonial Encounters in the Straits Settlements: From Self-Governance to Institutional Regulation

The interface between non-Christian religions in the colonies and the British Empire has attracted considerable scholarly interest and produced by now exciting social science and historical literature from all corners of the globe. In comparison to the rich and nuanced African and Indian material, one struggles to find similar works on the former British colonies in Southeast Asia. This paper attempts to redress this imbalance by turning the gaze to the religious landscape of the Straits Settlements, an administrative unit of British colonial initiative under which these rather diverse and scattered geographical entities were united between 1826 and 1945. I demonstrate that the adopted method of dealing with the religious pluralism of colonized populations was an adherence to the broad articulated principles of religious tolerance and non-intervention, but which often could not be followed through in practice. Through the 19th century, the colonial context in the Straits Settlements was not, by and large, detrimental for expressions of non-Christian religiosity. The absence of restraints and control in this arena, undoubtedly, enabled expressions of non-Christian religions and facilitated their early institutionalization in this region.

I thus argue that from the mid-19th Century onwards, the colonial context in the Straits Settlements was enabling for religious communities in the Straits Settlements. We see in these times a vigorous sense of religious solidarity and community, witnessed in intense institution building and founding places of worship, cultural and religious organizations across Hindu, Muslim, Christian, Buddhist and Sikh communities. However, by the early decades of the 20th Century, this ‘liberal’ attitude was supplanted by a new vocabulary of regulation, supervision and administration of non-Christian religions. With this shift, new institutional structures, laws and mechanisms were established for managing non-Christian religions in the Straits Settlements signaling a move away from self-governance towards greater institutional regulation and supervision.

Institutional Conflict Settlement Field in Brazil: Four Levels of Justice System

The paper proposes an interpretation of the operation of the State conflict settlement field in Brazil. It takes the perspective of disputes among corporations, knowledge and practices that take part of this field. A reflection on the Brazilian case proposes the coexistence of at least four conflict settlement logics (or four in interaction levels) which correspond hierarchies of rituals, proceedings, persons, types of conflict and places. The study is based on eight years of ethnographic analysis of courts and State informal services of justice. The observation on ordinary courts proceedings, informal courts, extra-judicial techniques, formal and informal police proceedings (including illegal ones) leads to an analysis of the coexistence and disputes in a field that produces unequal treatment of the citizens.

**Intergenerational and Life-Course Determinants of Upward Mobility**

Offspring originating from families with fewer socioeconomic resources are in a generational disadvantage, gaining lower social positions and attaining lower educational qualifications. Also life events in early adulthood may have an effect on socioeconomic attainment. These effects, however, may be weaker among those with higher compared to lower parental background.

This study examines the intergenerational and life-course mechanisms of upward mobility. We observe which life-course characteristics in early adulthood (such as educational attainments, unemployment, living arrangements, marital status and health) decrease the risk of entering upper non-manual social class among those who originate from other social classes. Second, the contribution of factors indicating parental resources is analyzed in order to find out whether higher parental background protects from the effect of risky life-course characteristics.

The longitudinal register-based data-set used in this study is a representa- tive 11 % sample of the whole Finnish population. We follow a birth cohort born between ages of social 1987 till full-time from adolescence till the age of 30+ offers a chance to estimate the processes of accumulating disadvantages among individuals and households. Analyses will be conducted in event history model framework. Our objective is to broaden the perspective on intergenerational transmission of inequalities by describing the life-course mechanisms of occupational attainment in more detail.

**Childhood Inequalities in French Speaking and Anglo-Saxon Sociologies**

Childhood inequalities in French speaking and Anglo-Saxon sociologies According to academic traditions or sociopolitical context, the issue of inequalities in childhood has been addressed in different ways. The French speaking sociological discussion has been quite specific compared to the Anglo-Saxon. These differences will be presented and discussed. Paradoxically, it is in putting aside the question of democratization and inequalities of opportunities that the child emerged as an actor in French speaking sociology, on a first step. As in the French context, the “Republican Universalism” has been the main reference, childhood inequalities have been mainly studied in terms of social stratification. On the other side, in the Anglo-Saxon context, diversity has been the main reference, priority being given to problematics as gender or ethnicity. We intend to examine how did those differences influence the way childhood inequalities are studied and how these categorizations are transformed, and their intersectionality addressed.

The question of the inequalities of the French childhood is posed as a matter different from the traditional, with the effect of the traditional and the context of the political. The purpose of this study is to present and discuss the life-course mechanisms of the inequalities of the childhood. It is in the perspective of the French sociological society that the research is conducted. The purpose of this study is to examine how did those differences influence the way childhood inequalities are studied and how these categorizations are transformed, and their intersectionality addressed.

**Projection of Family in Representation of Intellectual Youth in Russia**

Russian demographic health should be based on development of positive trends fertility, marriage and family relations of young generation of the country. Considering that the generation born in «new» Russia, characterized by new ideas about life strategies, value orientations, enters in reproductive age, it is impor- tant to assess similarities and differences between role of families and chil- dren in this generation representations regarding previous historical period. The study aims to determine specifics of modern marriage and reproductive behavior of young people receiving professional education in Russia. This group of young people is more demanding to high standards of living, thereby extending these requirements to sphere of marriage and family. This specificity necessitates more detailed study of their attitudes and motivations in marriage and reproduc- tive behavior. Identification of possible limits of marriage and family and repro- ductive student’s attitudes is scientific problem of this study.

In 2012-2013 Center of Social Demography and Economic Sociology, Institute of Socio-Political Research conducted a survey of students in higher and second- ary education full-time. The survey was conducted in form of distribution questionnaire prepared by the Center. The survey was conducted in the cities of Central, North Caucasus, Urals and Volga federal districts.

The study had a multidimensional nature, and it is focused on identification of general and specific issues of reproductive behavior of most educated part of Russian society to clarify the state family policy for more effective implementa- tion and stabilization of demographic situation in the country. On this basis, were selected areas (subjects) to conduct the survey, which allowed us to identify the specifics of students ideas and their reproductive and matrimonial intentions between metropols and provinces, between different regions of the country, between subjects of different types of administrative-territorial formations.

**Social Work Discretion between Professionalism and Managerialism in Denmark**

Professionalism and managerialism is important and conflicting concepts in the study of professionals working in public service organizations. By focusing on street-level social workers and social work discretion, it is possible to see how welfare-to-work policies are practiced as well as how organizational guidelines frame discretionary powers. This paper seeks to account for how management organizes, supervises and seeks control over social work discretion. The paper also addresses how management influences the discretionary powers of social workers in a Danish municipality working with clients who are unfit for work or labour market due to health problems. In Denmark the local municipal Job Centre delivers services related to welfare-to-work. Here values, interests and policies, transformed into rules and regulation, meet the concrete practices of welfare-to-work service inside the specific street-level organization. This is a fundamental democratic process of implementation. It makes discretion inevitable and crucial as professional judgments and decision making, determines the cli- ent’s eligibility to benefits and need for special attention or intervention before returning to work. Here professionalism is institutionalized in bureaucratic orga- nizations. Hence the social workers must control clients’ legal access to sick leave programmes and at the same time deliver individualized services to promote the workability of the client in order to help them become self-supporting after sick leave. As well as examining how social work discretion is made possible in the job centre, the research behind the paper discusses the issue of new forms of profes- sionalism emerging in social work. In the light of policy changes and reforms of welfare services a new type of social interventions towards people on sick leave is demanded. This can place pressure on the street-level organization to develop new or more professionalism.

**The Rule of Law in the Globalizing World. Polish Investors Abroad**

According to the famous argument of Max Weber, emergence and establish- ment of the rational legal order and formation of law-based political authority present important factors which explain rapid economic growth. These theses of Weber, as it is believed, are 1975 and 1977 from 1987 till 2007: a 20-year follow-up from an embedded European (or broader - Western) legal cultures and mentalities, characterized by the high value of the rule of law. Therefore processes of “new comers” west-
ernization are often conceptualized as “learning” i.e., as formation of pro-legal cultures based on an unquestioned value of the rule of law. Empirical research on the Polish investors abroad put in question such simplistic views. Firstly, in light of this research, the processes of learning are much more complicated, multidimensional and multidirectional. Secondly, the state and its agencies play here an important role - both in form of protection of rights and interests of domestic actors (national markets), and in form of protection of rights an interests of investors abroad (rights and interests of its citizens and companies). Therefore, the rule of law in a globalizing world presents a complicated negotiation game not only of values, but also of interests, between strong and weak agents, private and public.

Risk, Rumour, Radiation: Japan’s Nuclear Catastrophe and the Politics of the Apolitical

This paper analyzes the particularities of the Japanese approach to risk communication around radiation after 3/11. Radioactive contamination in Japan was first measured and its results published by the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the Japan Atomic Energy Agency on March 14, 2011, three days after the Great East Japan Earthquake ravaged the country. Counting thousands of dead and missing, more than 30,000 were officially confirmed. Official radiation monitoring in the following weeks continued in an haphazard manner, yielding vague and at times misleading data that failed to provide actionable information on the necessities of evacuation to the local population. Within a week, various groups had hacked Geiger counters to enable collective radiation monitoring, resulting in a higher degree of granularity of data available to the affected population. Still, while the provided data was more transparent and comprehensive than that which had previously been made public, the groups made few attempts at interpreting the data for the public. Why should we think that their actions were complementary to, rather than antagonistic to, those of the government and TEPCO and that they therefore should not be seen as political.

The paper explores the role of digital media and technology in altering the production of and access to vital information after disasters.

PLEN-8.2

SKEGGS, BEVERLY* (University of London, B.Skeggs@gold.ac.uk)

A Global Sociology of Value and Values: How to Move beyond the Analytic of Capital?

Many theories adopt the metaphysics of capital to explore power (e.g. Bourdieu), and to analyze personhood (via human capital), or action (via rational action theories), leading some sociologists to suggest that not just capital but the capital analytic has subsumed all areas of life. The relationship between quantification and qualification has been complicated further by the incursion of calculation (via algorithms) into many aspects of our daily life.

Whilst, no doubt, capital behaves according to its own logic, finding new lines of flight, converting affects such as sentiment and suffering into value, making multi-culturalism marketable, generating new forms of bio-capital, and making many of our actions subject to the logic of calculation (academic writing for instance), why should sociologists do likewise?

If we only understand the world from the perspective of capital relations what do we miss seeing? Are there any values remaining or remained? How do we understand the relationship between value and values?

The Motivations of the Opponents of a Social Memory Implant. the Re/Building of the Royal Castle in Poznań (2010-2014)

In 2010 began the re/building of the Royal Castle in the city of Poznań, which was demolished in 1796. The process, which was initiated by the Committee for the Rebuilding of the Royal Castle arouses strong controversy. The builders of the castle are accused of falsifying history (it is not sure how the building looked like before being taken to pieces) and destroying the original remains of the old castle. However, the committee was able to reach both political and social support for the re/building and collect money for this aim.

Due to a very long absence of the castle in the urban space and lack of any confidence when it comes to its outlook, the object which is being built can be called an implant of social memory. An implant of memory is an object, which function is to construct a particular knowledge of the past, becoming the carrier of this knowledge through its own form - imitating forms of ancient objects, buildings etc.

The speech will be devoted to the motivations of the people who publicly criticize the re/construction process and take part in different protests against it - the opponents of the Committee for the Rebuilding of the Royal Castle. There will be presented strategies with the help of which those people explain their engagement in the protests and their resistance to the re/building process. Conclusions will be presented on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

SKOGHEIM, RAGNHILD* (Inst Urban & Regional Research, ragnhild.skogheim@nibr.no)

Architects and Urban Planning

This presentation discusses to what degree the architect profession is able to define what counts as relevant knowledge in urban development and urban planning processes, based on material from Norway. Urban planning is a field constituted by numerous actors/stakeholders representing different knowledge traditions implying that they do not always speak the same language. However, in order to handle environmental problems, transport and other infrastructure and land use, multidisciplinary knowledge and cooperation between different sectors are required. In Norway, the architectural profession has long had a key role in urban planning and positions as heads of urban planning administrations have been a power base for architects. However, architects’ judgments and forms of knowledge are no longer hegemonic and their power base is thus weakening. This is partly caused by an increasing proportion of planning propositions (like zoning plans) prepared by private actors. Moreover, local authorities increasingly seem to depend on private funding to accomplish housing and infrastructure projects.

RC52-833.9

SKOGHEIM, RAGNHILD* (Inst Urban & Regional Research, ragnhild.skogheim@nibr.no)

Architecture As a Hybrid Profession

Hybrid organizations and professions are characterized by conflicting goals, which may cause tensions. For architects, such tensions are typically between art and market, and between ideal ideas and concepts of design, and preferences and claims from clients/principals and others. Although market dependence is intrinsic in the role and history of the profession, this still forms a tension for architects. When dealing with this tension, some architects are quite pragmatic and accept and adjust to prevailing conditions. Other architects are more uncompromising and insist that creativity requires freedom from external constraints.

Particular architect “heroes” espouse autonomy and distance from the service part of the profession. This may seem like a paradox as architects more than most other professionals depend on, and have to adjust to, the power, wealth, favor and money of their clients.

SKOVAJSA, MAREK* (Charles University Prague, marek.skovajs@soc.cas.cz)

Rockefeller Foundation’s Role in Promoting Social Sciences in Interwar Czechoslovakia

This paper discusses the place of geopolitical concerns in the policy of the Rockefeller Foundation towards social sciences in Czechoslovakia between the two world wars. The RF provided scholarships for Czechoslovak social scientists (around 35) and sponsored social science work at various Czechoslovak institutions. The scholars supported by the RF were sociologists, lawyers, and economists, both German and Czech-speaking. Their individual fates display wide variation: several perished during WWII, others escaped and became recipients of displaced scholars grants, still others were exiled after 1948, a handful joined the Nazi and later the Communist structures. Only those who chose emigration produced academic work of some importance. The dominant geopolitical concerns were reflected in the effort of the RF to maintain a balance between German and Czech scholars and institutions supported or in promoting research in areas that were expected to contribute to maintaining the stability of the Czechoslovak state or Central Europe such as unemployment and social welfare, interethnic relations or the so-called Danubian studies. Key among Czechoslovak institutions in social sciences that received support from the RF was the Social Institute, affiliated with the Ministry of social welfare, the incubator of innovative ideas that directly influenced Czechoslovak social welfare legislation and policies. RF also funded a large research project on the urbanization of Prague that became the first major empirical study in Czech sociology while another study on German-Czech relations could not materialize due to the dismemberment of Czechoslovakia. The RF made a significant contribution to the development of empirical social research and social policy in Czechoslovakia, but the overall impact of its funding was virtually erased by adverse geopolitical conditions and turbulent political developments in the period 1938-1948.

The Elusive Code: Anomalous Cultures of Civil Society

This paper attempts to add new evidence and theoretical insight to the literature on anomalous cultures of civil society inaugurated within cultural sociology by Jeffrey Alexander and Philip Smith. It argues, first, that unlike the US case, the codes of civil society in ethnically heterogeneous places are the product of multiple external oppositions which can, in certain cases, result in alternative or contrary codings. For instance, some currents in the Czech, Polish and other Slavic nationalisms in the 19th century construed the Germans, their principal “other,” as rational and efficient, taking pride in the contrary in being emotional and unpractical. Second, the paper shows that civil societies are fragmented and the general code of civil society is appropriated differentially by different social groups whose interpretation of the basic binaries is dependent on their particular social experience as well as their relative position to other groups. For example, as pointed out by Marada, Buchowski and other authors, the cultural codings characteristic of the heirs of the anti-Communist dissent in East Central Europe are in some aspects, including the role of formal procedures and professionalism, completely at odds with the codes, reinforced by Western-style social movement organizations. With its roots in a conspirative underground community this dissident culture doesn’t code personal ties and secrecy as counter-democratic. On a general level, the paper argues for a more historically-oriented approach to the study of cultural structures of civil society that recognizes that the generalized codes are embedded in ongoing interpretive traditions and, as such, are unstable, contested and often ambiguous.

Medical and Legislative Gatekeeping in ART: Narrow Trajectories in the Realm of Miracles

The techniques of assisted reproduction have the potential to free us from the bodily limitations and open the physical reproduction to people who would not conceive without medical intervention. The access to this type of treatment is regulated by numerous ways, both formally and informally. Reproductive medicine, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients. The Czech Republic’s long tradition of infertility treatment, wide network of infertility clinics, competitive success rates and liberal regulation of the ART regarding the range of procedures allowed, became one of the most popular destinations of reproductive tourism. On the other hand, there is a strict regulation of the access to the ART based on the characteristics of patients such as their age, love and partnership. The paper will focus on the process of the legislative and medical gatekeeping as a genuine example of the Foucauldian biopower, as a control over bodies, interaction and norms of population performed by the medical professionals and by the administration and regulation of treatment. The paper is based on the two sources of data: interviews with 15 medical professionals working in the field of ART and the analysis of the Czech parliament debate over the new legislative limits of ART (2011). The analysis focused on the following questions: what is the position of various actors in the process, how is nature and normality, in the context of ART, discussed, what kind of citizens/patients are defined by the clinicians and parliament members as deserving candidates for infertility treatment, and, how these regulatory mechanisms can be reflected in the context of “biotech age” and globalized biopolitics.

Causes and Consequences of Time Investment in Friendship Networks: A Dynamic Analysis of the Polish Panel Survey PolPan 1988-2013

Time investment in one’s friendship network depends on the utility function $U = \alpha \log y + (1-\alpha)\log \theta$, where $\alpha$ is the social tie parameter (between 0 and 1) measuring the $i$-th actor’s taste for bonding with friends, and $\theta$ refers to the other leisure-time activities. In the theoretical part of the paper, we connect this utility function with time investment in friendship network (I) assuming that the numbers of friends and the density of their contacts are crucial for the amount of time that people actually spend with friends. The Polish Panel Survey POLPAN 1988-2013 contains information on how frequently respondents meet with friends ($I$), our main leisure-time variable, numbers of friends ($N$), density of their contacts ($D$) and several socio-demographic characteristics of respondents for the period of measurement ($t$) and earlier periods ($t-1$, $t-2$, $t-5$, where the period-units are 5-year waves of the POLPAN study). In the empirical part of the paper we examine main determinants of time investment in one’s friendship network, focusing on family formation and work. We show that time investment, as well as the change in number of friends and the change in density of contacts among friends, depend on marital status, number of children, and number of people in the household. In addition, we confirm previous findings that having relevant ties among friends’ influence income attainment and that having friends with entrepreneurial experience increases people’s chances of establishing their own businesses, independently of the number of potential bridges between friends. The paper concludes with a discussion on meeting friends as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

Hazard Vulnerability and Housing Inequality after the Tuscaloosa, Alabama Tornado: A Critical Analysis of Rebuilding Efforts

The tornadoes that struck Tuscaloosa, AL and surrounding areas on April 27, 2011 caused tremendous destruction to both residences and businesses. The highest levels of damage occurred among low-income residences, both single and multifamily. In this paper, we apply hazard vulnerability theory to the rebuilding of Tuscaloosa, Alabama. Hazard vulnerability theory focuses on how social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We extend this perspective into the recovery process, particularly on the availability of low-income, multifamily housing approximately two years after the storm. Data from multiple sources, including city planning resources, apartment websites, and interviews with city personnel, indicate that multifamily residences that have been constructed to replace destroyed or damaged housing complexes generally demand higher rents and have fewer units available for rent than the complexes that existed before the storm. Additionally, even as a residential construction boom has occurred in Tuscaloosa, Hazards vulnerability theory focuses on how social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We conclude that low-income residences of Tuscaloosa were doubly vulnerable to natural disasters; not only were they more likely to be living in structurally flawed housing before the storm, they were also left out of the rebuilding process after the tornado. We discuss some of the potential consequences of the reconstruction of Tuscaloosa, and propose suggestions that can limit social inequality in the rebuilding process for Tuscaloosa and other cities that have been harmed by natural disasters.

SMEBY, JENS-CHRISTIAN* (Oslo and Akershus University College of Applied Sciences, Jens-Christian.Smeby@hi.no)
Professional Knowledge and Expertise

Professions are according to Abbott the most important way expertise is institutionalised in modern societies. Sociologists have studied the characteristics of professionalism as well as the role of professionals in society. Even though an abstract knowledge is considered a core if not the core characteristics of professions, sociologists have examined the characteristics of professional knowledge used in occupational practice only to a limited extent. In my paper I discuss professional contributions within the literature on expertise and argue that some of these perspectives are highly relevant to complement sociologists understanding of professional knowledge.

While sociologists have emphasised that abstract knowledge acquired in higher education is an important characteristics of professionalism, practical training and profert knowledge is found to be the most important prerequisite in the literature on expertise. Sociologists do not deny the need for practical training, but tacit knowledge is a somewhat mysterious term often considered as opposed to abstract explicit knowledge. Based on questioning why knowledge is tacit, Harry Collins (2010) distinguishes between three types of tacit knowledge. This distinction opens up for a more nuanced perspective on the relationship between tacit and explicit abstract knowledge. His perspective also implies that explicit knowledge play an important role in the development of expertise and transmission of knowledge.

Professional work is characterised by uncertainty. Inspired by Collins different types of tacit knowledge, I distinguish between three types of uncertainty that have significant importance for the reliability of professional expertise: 1) Explicit uncertainty related to uncertain knowledge; 2) Cognitive uncertainty related to
characteristics of the human mind (heuristics and biases) and; 3) Interactional un-
certainty related to interpretation and interaction. An explicit abstract knowledge
base is an important resource in handling all these types of uncertainty, but these
uncertainties can never be totally abolished.

Tap Water and the Public Policy

Water is the source of life on the earth and the driving force of human devel-
oment. The diamond-water paradox presented by A. Smith shows the underesti-
imated economic value of water. However, it has its social value that can be viewed
from human dimension perspective.

The knowledge of how citizens perceive the drinking water is essential to un-
terstanding the political, economic, technological context of the public policy. Ac-
cording to social-scientific survey, 82% of citizens in Saint-Petersburg are not satisfied
with the quality of tap water. These figures demonstrate, that despite the fact the
city water is cleaned by ultraviolet and has biomonitoring system to meet the high
requirements of international water standards, there are some hidden issues ex-
plaining this situation.

SPb water is a nexus of generations inhabiting this place: it keeps the memory
of past times, preserves the spiritual fabric of the society and gives an incentive
to new generations for further development. However, the industrialization has
destroyed this consciousness. The growth of scientific knowledge has enabled
experts to make a strict distinction between bad natural water that had adverse
effects on people health and good filtered water that had the status of paid public
services.

It is believed, SPb water is rusty and dangerous to drink, because city officials
take bribes and do not provide the modernization of water infrastructure system
in time. Public dissatisfaction takes the form of disagreement with the public poli-
cy. It prompts citizens to buy bottled water sold by water transnationalals, although
it is the same tap water, in fact. As a result, SPb water market is showing 12%
anual growth.

Basing on the citizens’ concerns on the water problem, one can construct the
Index of tap water as an indicator of the level of public confidence in the public
policy.

Daily Practises of Home Making and Belonging Among Owner-
Occupiers and Tenants in a Disadvantaged Neighbourhood in the
Netherlands

In this period of globalisation daily practises of local home making and feeling
at home are considered important. In order to illustrate such practices the fo-
cus of this paper is on a street in a disadvantaged neighbourhood in a Southern
city in the Netherlands. In this street tenants and owner-occupiers with a differ-
ent ethnic background – including native born - are interviewed and observed.
In this natural laboratory, the street was divided into clusters; those with only
renters, those with only owner-occupiers, and those having a mix of both. This
offers insight into the role class and ethnicity play in the homogeneous and mixed
micro-settings and its impact on physical and social practices of home making
and belonging/ feeling at home. Therefore attention is paid to narratives and the
informal organisation of different living spaces, territory-making activities, and
practices in the different domestic clusters. This shows that the domestic space
can be experienced as a vehicle of intimacy and sociability and in other clusters
as encouraging alienation. Such practices can also take place in the same cluster,
resulting in mechanisms of inclusion and exclusion which in turn go together with
boundaries between public, private and community spaces.

Future of Democracy in The Modern World

Democracy is one of the ancient forms of social self-government, which pos-
sesses many advantages and democratization of a society is a progressive pro-
cess. However, today mass media spread illusory ideas about democracy as the
-terminal value which presence will provide the peace and well-being on the Earth.
Relying on this illusion, Western democracies, headed by the USA, stimulate de-
mocratization process in the world, using ideological, political, economic and mil-
tary means.

However the facts of real history disprove this illusion. Democratic states are
not less aggressive, than authoritarian ones. Athens, Sparta and Rome, all Euro-
pean democracies during epoch of colonialism and the USA (during all its history)
were aggressive.

We consider democracy as an instrumental value. It appears to be effective
and naturally arises when society reaches sufficient consent in regards to basic
values (one God for everyone, nation, person, society, etc.). When such agree-
ment not exists, a dictatorship provides the minimum order in a society. For ex-
ample, dictatorships of Cromwell, Napoleon, Stalin, Pinochet, etc.

There is no consent regarding basic universal values in the modern world.
Hardly a man and his rights will be recognized as the highest values by billions
of people in the near future. The policy of Western countries aimed at their pro-
motion, leads to anarchy and violence. Therefore it is difficult to expect peaceful
expansion of democracy on a global scale. Today’s biggest task for social scientists
is to reveal basic values in regards to which mankind can come to the consent.

Transnational Family Life from the Perspective of Zimbabwean
Male Migrants in South Africa

The early years of the new millennium saw a rise in the influx of Zimbabwe-
ian migrants to neighbouring South Africa. Due to the growing economic turmoil,
political crisis and human rights violations in Zimbabwe many citizens from this
country have crossed the border into South Africa to find employment and/or seek
political refuge. Using qualitative data collected from in-depth interviews this
paper seeks to gain a better understanding of the reality of transnational family
life from the perspective of Zimbabwean men who have migrated to South Af-
rica and live in the inner-city area of Johannesburg. Close family ties both ‘here’
(the country of destination) and ‘back home’ (the country of origin) were mapped.
The focus fell on how the respondents sustain families across these transnational
spaces and what impact their transnational experiences have on their relation-
ship with their wives/partners and children. Moreover, attention was paid to the
role high-speed information and communications technology (ITC) play in main-
taining family relationships and acting transnationally in a digital age. In light of
the challenges these Zimbabwean men face on a daily basis in South Africa, where
there are xenophobic sentiments and a relative high unemployment rate, the at-
tention also fell on how these men view their multiple family commitments and
the significance of remittances in maintaining a sense of self within the ambit of
the family. The respondents’ reflections on family dynamics across transnational
spaces show a variety of experiences and their narratives provide a window into
their different lived realities as migrants with family ties across borders.

Emotion Work in the Practice of Medicine: The Case of Physician
Assistants of Color

We focus on the concepts of emotional labor or emotion work and white racial
framing to describe the experiences of Physician Assistants (PAs) of color as they
navigate racialized barriers in the medical field. We first present results from a na-
tionally representative sample of 15,275 PAs and then examine the more detailed
personal experiences of PAs of color from an online survey. Finally we use the
personal narratives of ten African American PAs. We identify and analyze emo-
tion themes resulting from work-related experiences and stressful encounters
that arise from interactions with faculty, staff, nurses, physicians, and patients in
the workplace. Odds ratios from the online survey show that African Americans
experience more emotion work than other groups. African American PAs were 26
times more likely than white PAs to report patient refusals to treat them. When
we examined only Black women PAs, they were 46 times more likely to report
patient refusals. Other ethnic groups experience elevated levels of emotionally
negative experience, but they were not always statistically significant when other
variables were included in the analysis. Women in general experienced a variety of
discriminatory behaviors. Narrative accounts exhibit large amounts of emotion
as the African American PAs detailed their encounters with patients and medical
providers.

The Art of Governing in an Age of Revelation: On the Biopolitics
of Biovisuality

This paper examines the transforming value, resolution and vitalism of the
social body as it is increasingly informationalized, visualized and anatomized by
multivalent systems of exposure. Multiplex biopolitical interests influence and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
incite these practices: wills to discern and direct consumption habits; ambitions to inscribe structured meanings upon somatic territories; and desires to better identify, verify and assess corporeal components. An emerging confluence of bio-visual imperatives, practices and flows are placing unique demands on embodied subjects, specifically concerning (a) the control, ownership and arrangement of personal data derived from bodily interference, and (b) the types of performative exertions and authentication protocols that are now routinely requested and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshly topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivizing effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confidences and revealing subjective states in the form of informatic particles (Foucault 1988). In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)

Civilizational Discourse and Models Of Modernity In The Meiji Revolution

During the Meiji revolution, Japanese writings on international arena, Western empires and the Western tradition nourished a discourse on civilization. At the same time, Japan's civilizational works also reflected debate on models of modernity. Over the course of consolidation of the Meiji regime, deep engagement with different foreign traditions produced an exceptionally intense phase of inter-civilizational discourse which left a significant legacy. In this paper, we develop the episodes of interpretation of civilization and modernity are explored: the construction of an urban public sphere in which this civilizational discourse emerged, creation (through conceptual and linguistic translation) of entirely new vocabularies for philosophy and sociology, and the conflicts around political perspectives expressed by the popular democracy movement of the 1870s. In the urban public sphere and the popular movement, Japanese intellectuals actively interpreted and relativized the cultures, religions and ideologies of other civilizations against a native cultural core. The famous Meikokusha publishing house and its journal Meikoku also participated in this process. Within that public sphere, the Meikokusha set in train historically and culturally specific processes of translation of Western thought which included translation of the concept of 'society' itself and the development of Japanese vocabularies for philosophy and sociology. Social and political conflict around modernity manifested also in the wider movement for popular rights that arose in the 1870s and then subsided. A main claim of the paper is that consolidation of Japan's imperial polity in the 1890s superseded all three sets of interpretations developed by the Meikokusha intelligentsia and the popular movement, but not the civilizational discourse that they instituted.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)

Debating Civilizations: Sociology and The Inter-Disciplinary Field Of Civilizations Analysis

In the early twentieth century, civilizations analysis combined perspectives from anthropology to archaeology through to world history. Founding thinkers in sociology contributed greatly to this inter-disciplinary field. In a phase that stretched from Weber, Durkheim and Mauss to Sorokin and Elias, a ‘classical era’ of civilizations analysis generated a program of research problems that was productive in critical and interdisciplinary ways and limited in scope and vision in others. The field was lost as a suppressed tradition during the postwar institutionalization of disciplines. This paper will examine what was gained for sociology in the early traditions of civilizations analysis as well as what was displaced when it subsided. Potential paths for renewal of multidisciplinary scholarship involving sociology will be sketched out based on the contemporary experiences of new attempts at revival of civilizations analysis in the work of Benjamin Nelson and S.N. Eisenstadt. The paper will also identify intrinsic limitations in latter-day approaches.
first cohort analysed graduated in 1986, the last in 2000) and, within cohorts, the changes in the differences after graduation; ii) to determine the extent to which field of study continues to cause a gender difference in pay; iii) the factors other than field of study that cause a gender difference in pay, including family responsibilities. The paper reports i) analysis of the effect of gender on labour force status, focusing on changes in the probability of entry into the labour force and of exit from the labour force; and ii) the impact of union density on wages, controlling for educational attainment and occupational prestige.

One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (Footprints, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; vii) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis. Rajan provides little evidence in support of this interpretation. This paper addresses the following questions: i) Did incomes stagnate or decline in the lower part of the income distribution in the decades leading up to the crisis? ii) Did distributional conflict cause the liberalization of credit in the form of sub prime mortgages? iii) Was it the provision of mortgages to low income house buyers that caused the boom and subsequent bust in house prices. iv) To what degree was increased risk in the financial system caused by policies encouraging the issue of sub prime mortgages? On the whole, the evidence raises doubts about the rising inequality account of the financial crisis.

SMITH, MICHAEL* (McGill University, michael.smith@mcgill.ca)
Did Rising Inequality Cause the Recent Financial Crisis?

SMITH, PHILIP* (Yale University, philip.smith@yale.edu)
On Dry Othering

Existing theories of Othering can be thought of as ‘wet Othering’. They focus in metaphorical and material ways on the slimey and ambivalent. In such theories Othering is associated with intense emotional reactions. Those perceiving the ‘Other’ feel intense hatred, disgust and dread. This paper introduces the new concept of ‘dry othering’. This involves a completely different logic. Those doing the Othering feel - or are believed to feel - nothing at all. The victim of Othering is a mere object to them - one that does not evoke emotional responses. The logic of action is not symbolic as in wet othering but rather overly-instrumental. Victims of this kind of Othering are traumatized not by an awareness that others think they are disgusting and enjoy their humiliation (an emotional response) but rather by realizing that they are mere objects to the Otherer (who has no emotional response). Social theory on the gaze is used to make sense of this situation. The theory is illustrated with reference to accounts of unethical medical experiments, Alien abduction narratives, animal attacks, torture and serial killing.

TOM W.* (Cardiff University, smithtj3@cf.ac.uk)
HALL, SARAH KATE*
The Urban Fabric, Repair and the ‘Good Enough’ City

This paper considers the work that repair might do in mending and smoothing over matters of care and repair by filling the physical damage or the acknowledgment of care. Repair can seem inconsequential in the face of the global risks that menace the modern city and the brutal conditions, exclusions and exploitation that some of those cities are home to. Yet a humanist sociology might be sympathetic towards piecemeal and everyday activities which aim to put right, one step at a time, things gone wrong - deviant occurrences, ugly moments when life in the city breaks down or does not play out as we might want it to. Ken Plummer’s recent call for a sociology of hopes takes this line, insisting on the need for ‘a down-to-earth pragmatism of empathy, justice, kindness and care’ and inviting sociologists to ‘think small in a big way’.

Something similar – thinking small, in a big way – can be found in the writings of human geographer Thrift, though differently inflected. Thrift directs attention to mundane activities of urban care and maintenance – street cleaning, roadside repair, emergency call-out – and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the material, mutable, mute – fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift’s thesis neglects this history.

The Origin and Diffusion of Comparative Survey Research

Cross-national, survey research emerged out of and developed along with many seminal megatrends of the 20th century including globalization and democratization. It was also shaped by such major historical events as World War II, post-bellum collective multi-lateralism, and the spread and collapse of Communism. The development of cross-national, survey research is an example of what Rogers calls the diffusion of innovation. Public opinion polls were created in the United States in the mid-1930s and spread to other countries. Like all diffusions, its development was innovation specific and was both aided and hindered by particular characteristics of survey research. Its expansion was part of the general process of globalization. For survey research, globalization involved considerable interaction between the global product (survey research) and the local markets and cultures.

Additionally, as Oberschall has noted “(the) expansion of surveys in general and public opinion polling in particular was part of the general growth of democracy within and across societies.” Surveys in general and public opinion polls in particular typically develop and only thrive in open, democratic societies. Democratization in general and decentralization in particular opened up more countries to surveys.

Besides being shaped by these megatrends, the development of cross-national, survey research was influenced by historical events such as World War II, post-war collective multi-lateralism and the founding of the UN, and the Cold War. This paper examines 1) the emergence of cross-national, survey research including the role of early adopters (e.g. survey-research organizations), 2) the initial diffusion of survey research, 3) foundational survey-research meetings and associations, 4) the impact of World War II, 5) the role of the UN and other international organizations including the International Sociological Association, 6) initial comparative surveys, 7) the contributions of international exchanges, 8) later developments, and 9) impediments to development and diffusion.

The Role of Assistive Technology for Personal Care Activities of Daily Living to Enable Families to Care for Relatives with Dementia in Their Location of Choice

The UK’s National Dementia Strategy objectives include: i) ensuring that people with dementia live well (whether in their own home or in a care home) and ii) a call for more research on the role of Assistive Technology (AT) to address the social care needs of people with dementia (PWD) and their carers. This research focussed specifically on AT for personal care Activities of Daily Living (ADLs); bathing and washing, dressing and grooming, toileting and continence and feeding tasks. Examples include low-cost grab rails, raised toilet seats, easy-use tap heads, and easy-grip cutlery. Such AT is now provided by some Local Authority Social Services in the UK. This research aimed to determine the extent to which PWD and their familial carers were provided with AT for personal care ADLs by formal social care services, or sourced by themselves, and utilised whilst they lived at home in the community. The same individuals were also assessed whilst living in a care home for their AT use for personal care ADLs. Furthermore, the study examined the role AT can play in enabling those caring for a relative with dementia to make choices about their location of care (particularly, whether the use of AT could delay an institutionalisation decision).

An in-depth multiple contrasting case study design explored perceptions and experiences of formal (care home keyworkers) and familial carers of care home residents with a clinical diagnosis of dementia on AT use for personal care ADLs. The results pointed to ascension of the difficulties and preferences carers of PWD have when attaining, using and maintaining AT and its contribution to the quality-of-life of such individuals. This method also enabled comparisons and similarities between individuals residing in different geographical locations to be compared and establish whether inequality in AT provision exists in the UK.

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle

Alvin Y. SO and Yin-Wah CHU**

After the collapse of Maoist socialist regime in 1978, China has experienced rising social equality and class conflict. Within a short span of 40 years, China has transformed itself from one of the most egalitarian to one of the most unequal societies in the world. Within the rising social inequality, it is only natural that rising social inequality is accompanied by rising class conflict. The number of “mass incidents” has skyrocketed from 8,700 in 1993 to more than 200,000 in 2011.

What is surprising is the fact that despite the explosion of class conflict and civil unrest, the Chinese communist party-state is highly resilient and is not under any threat of regime change. There is no large-scale national labor protest, no violent peasant rebellion, and no robust democracy movement to challenge the legitimacy of the communist party-state.

The aim of this paper is to interpreting this Chinese puzzle of resilient party-state in the midst of rising social conflict from the workers, peasants, and the middle class. Why the rising social conflict and civil unrest did not lead to any political instability and regime change, like it did in other post-socialist societies?

This paper argues that the Chinese communist party-state has done an excellent job in managing the class conflict among the workers, the peasants, and the middle class in the Chinese society. Indeed, the Chinese party-state not only was able to stay in power, but it also was able to formulate and implement all sorts of developmental policies propelling the rise of China at the turn of the 21st century.

‘Housing-Based Welfare? Empirical Perspectives from the UK

Economic crisis, fiscal austerity, conservative policies and the new demography of ageing societies have given rise to the idea of ‘asset-based welfare’ as a key complement of the UK’s shrinking welfare state. For instance, concerning elderly care, retirement and education, housing wealth has become central to family welfare security challenges the potential for housing to become an asset-based welfare system. The affluent have various assets to engage in the provision for their own and their children’s welfare with no need to resort to the welfare state in their home. For marginal homeowners, relying on housing wealth might result in spirals of debt and drop them out of homeownership whereas long-term tenants are least able to afford alternative welfare provisions. Yet, numerous participants pursue (re)-active strategies of ‘housing-based welfare’ by traditional routes – building up housing careers in order to live rent-free and eventually downsize – or increasingly by letting out buy-to-let or inherited property. However, many of these participants are unsure of the potential of ‘housing-based welfare’ in the long term since they have ‘no crystal ball to look into the future’ in order to manage complex personal, familial and societal risks; this, in turn, reinforces social and familial solidarity.

‘Why Should I Trust You?’ An Empirical Investigation of Determinants of Trust and Distrust in Romanian Post-Socialist Urban Society

Trust is a key factor in the development of collective action, and thus in the performance of communities, institutions and society. Seminal scholarship has given surprising social virtues of trust and to a lesser degree those of caution. Consequently, scholars have expressed concerns regarding the social ‘legacy’ of distrust, which have negatively influenced processes of democracy and development in the post-socialist states. While quantitative measurements of trust have become standard in cross-national surveys, in depth qualitative research has provided exceptional but helpful. By employing a mixed-method design of cross-national analysis of secondary data and qualitative examination of 69 in-depth interviews in a post-socialist city, this paper investigates the determinants of (dis)-trust in post-socialist Romania. The analysis draws attention to the intertwined social and rational origin of trust and distrust. Findings show that institutional trust has risen from post-socialist communism to a greater tolerance and freedom to express opinions. However, institutional trust has remained low due to perceptions of widespread bribery and favouritism – not necessarily experienced but reinforced through social learning and the media – and to a greater discontent with some institutions, particularly the police, the political elite and the judiciary. Conversely, interpersonal trust has been rapidly declining though
it had not entirely vanished and has remained generally confined to families and bounded groups. By growing social distrust, people have reacted to the increasing social inequality during the post-socialist transition and its associated figures of the insular individualist and predatory capitalist. This does not invalidate the thesis of socialist "legacy of distrust," but significantly adds to it. Data quantification suggests that the effect of increasing social inequality during transition is six times stronger than the effect of persistent communist legacies on current levels of social distrust. This has important policy implications, which are outlined in this paper.

Relations Between Individuals at Work in a Contemporary Context: Necessary Changes in Communication in Organizational Context
Companies organize themselves around objectives that seek the maximum return to its shareholders or founders. However, when forming the individuals in a group to which these goals are achieved, dreams as well as desires and ambitions emerge. Typically, subjects align with organizational interests in the expectation that their own goals are also achieved, existing three important issues in these working relationships. The first question relates to the symbolization of the "notion of work". The second issue reinforces the role of work in social relations. Despite all the discussions involving the centrality of work (OFFE, 1989; BAUMAN, 2008), it still remains one of the central points of life. The third issue concerns the lack of work, the possibility of unemployment and frustration as reality (BALDISSERA, 2010). The subjects experience these conflicts and tensions of force paradoxically (BALDISSERA, 2010; KUNSCH, 2012). Some factors explain this movement transformation in communication directed to employees: a new technological context (social networks), new relations between people and organizations, caused, for example, a new employee profile and fewer permanent links with companies, besides the existence of an internal environment of conflict and tension.

Employees need time to develop relationships and coherent narratives in their experiences within the organizations, but in a world where the future is already the day after tomorrow, in a fragmented environment, focused on project execution and flexibility, employees are not allowed to develop strong relationships (SENNITT, 2009). Communications directed to employees will be impacted. The safety at workplace, employment and career in one organization is replaced by employability. The needs of the organizations are more important than the needs of its workers. The imperative of aligning organizational strategies can find counterpoint in the desires of the individuals in the organization. As professionals working in this field, communicators must understand those changes and challenges.

Decentralization: From the Constitution's Dream to Reality
This paper aims to analyze the decentralization of public policies in the state of Ceará, Brazil, as supported in the Federal Constitution of 1988. The decentralization agenda, mobilizing social and institutional players, proposed the partaking of decisions during the elaboration and management of public policies in order to strengthen and expand citizenship bonds. The establishment of structures for the arbitration and recognition of organized sectors within civil society bolstered the public sphere for the discussion and negotiation amongst various social and institutional segments. This allowed in specific circumstances for a communal decision-making process in turn strengthening the bonds of a new civic and partnership culture across Brazilian constituencies. The hypothesis presented in this article is that investments in this joint model and the assertion of a shared public construct, in other words, are the region’s natural, but are adapted to the conditions and integrate historical, social and cultural inheritances with indigenous, colonial and migratory people. Thus, we propose to present some reflections on identity and social cohesion present in this part of the population of the Brazilian Amazon. Ribeirinho Communities are a blend of simplicity and complexity and based on social characteristics and demographic dynamics, we present the way of life of these different communities, through the relationship between territory and identity. The intention of this paper is to open a range of new interpretative possibilities on these communities, with no claim rule out pre-existing redefined categories. In the Northeast in the late eighteenth century and large integration projects in the Amazon from the twentieth century. This indicates that the interaction between ethnicity and multiculturalism is that this migratory movement qualify as social construct, in other words, individuals are not the region’s natural, but are adapted to the conditions and integrate historical, social and cultural inheritances with indigenous, colonial and migratory people. Thus, we propose to present some reflections on identity and social cohesion present in this part of the population of the Brazilian Amazon. Ribeirinho Communities: Identity and Social Cohesion in the Brazilian Amazon
This article aims to observe the general processes of identity construction and social cohesion of the *ribeirinho* communities of Combu Island, an Environmental Protection Area, located on the left bank of the Guamá River, near the city of Belém, in the Brazilian Amazon Forest. These populations are concentrated along the rivers due to the lack of means of rail and road transport, using as a prima- means of travel inland waterway vessels. In this sense, they are considered part of the so called *ribeirinho* communities, descendants of indigenous people and also the region of northeastern migrants coming from the great droughts in the Northeast in the late eighteenth century and large integration projects in the Amazon from the twentieth century. This indicates that the interaction between ethnicity and multiculturalism is that this migratory movement qualify as social construct, in other words, individuals are not the region’s natural, but are adapted to the conditions and integrate historical, social and cultural inheritances with indigenous, colonial and migratory people. Thus, we propose to present some reflections on identity and social cohesion present in this part of the population of the Brazilian Amazon. Professionalizing Armed Forces in Africa: No Easy Game. Why Not?

In this paper we focus on recent attempts of the international community to help African nations to professionalize their armed forces towards proper and effective capacities in dealing with new security threats all over the continent. One of these programs is the US-led African Partnership Station. In the framework of this program, the Netherlands Navy has launched a project called African Winds 2013, in which seven West-African countries were visited to train themselves and host-national militaries, particularly marine and navy forces, in: diving, hydrographic research, amphibious landing operations, illegal fishery policies, boarding procedures aimed at anti-piracy measures, economic development, etc. In this paper an assessment will be given of those activities, based on field work at sea and evaluations by the participants themselves. There will be a connection with previous research on training and educating young African cadet-officers in Western military academies. Both endeavours will be analyzed on the basis of mixed-methods military sociological research.

Rôyama Masamichi's East Asian Cooperative Community Theory

Rôyama Masamichi’s East Asian Cooperative Community Theory. While I was conducting the long-term project “Northeast Asia’s Transnational Space”, I became interested in the problem of when and how East Asia became identified as a unit. Soon, I became interested in the way that ‘East Asia’ is called and recognized. To approach the task, I have been interested in East Asian Cooperative Community (EACC) theorists such as the philosopher Miki Kyoshi, economist Kada Tetzii, and international politics scholar Rôyama Masamichi, and I will mainly talk about Rôyama Masamichi in the presentation.

The core of Rôyama's EACC Theory is a region or regionalism. I would like to talk about the issues related to regionalism in the relationship between East Asia and the world, which is the relationship between particularity and universality speaking in the abstract. I will divide Rôyama’s regionalism into three aspects based on universalism.

First, it is the attempt to escape from the international universal order caused by the Manila Asia issue.

Second, it is the attempt to make ‘East Asia’ into a meaningful region, emphasizing the special identity of East Asia.

Third, it is not that the regionalism of the EACC is a particularization of the world order but that the EACC itself constructs a universal world order.

Lastly I will wrap up my paper by discussing following 3 topics. 1)Japan’s leadership position 2)Horizontal regional order vs. Vertical intra-region order 3)The fact that the vertical intra-region order, which was attempted by Japan through the war, was realized by the U.S. after Japan’s defeat.

Women, Disaster and Challenges: A Case Study from Iran

During the past decades, Iran’s natural disasters such as earthquakes, droughts and floods have caused a considerable loss of human lives and livelihoods, environmental damages and the destruction of economic and social infrastructure. Although 49.6% of Iranian population are female but gender analysis has been ignored in the most national reports and surveys related to different aspects of disaster management. This study aimed to highlight the challenges of women before, during and after natural disasters and to investigate the capacity of Iranian women to reduce the consequences of natural hazards. Data collection was done by the interview with affected women of Varzaghan and Bushehr earthquake (2013, 2012), field observation, and review of related documents as well. The findings indicated that although the investigated women were affected more than men but their needs and problems were not identified sufficiently. On the other hand, women vulnerabilities were highlighted more than their capacities and capabilities in handling the disasters. In conclusion, it is important to consider women’s participation in all phases of disaster management (mitigation, preparedness, response and recovery). Gender analysis with localized/standardized analytical tools can be suggested for future studies.

A Comparative Approach on Migration in Post-Communist Societies; The Case of Albania in East-European Context

The post-communist transformations in Central and Eastern Europe represent an interesting example for comparative studies: a number of countries began this transformation from the same starting point (1989), following more or less the same common goal of moving towards democracy and liberal market economy, and EU. Based on the comparative method Brzezinski predicted twenty years ago (as it was later confirmed with surprising accuracy), the historical calendar of those countries (the article “The Great Transformation” 1993), given an example of ‘thinking comparatively’ and foreseeing the future.

While this paper is regarded with the hypothesis: Albania is an excellent laboratory for studying comparatively the new migratory process. The collapse of the socialist system was viewed with concern by many policy-makers in Western Europe who expected their affluent countries to be flooded by immigrants. Yet, this fear did not materialize and post-communist East-West migration was rather moderate. The only exception is Albania, whose emigration displayed features of an exodus. No other country has been so affected by migration, in such a short period of time like Albania has. It is confirmed that 34.2 percent of the Albanians have immigrated in more than 30 other countries, while the world migrant average is about 2.7 percent. And including the migrants that have spent 3 considerable lengths of time abroad, and have made their return back to the country, than we have a country in which more than half the population has experienced migration in the last two decades. This paper is an attempt to give a comparative answer to the question: “Why so many Albanians have migrated in such a short time, quite different from the other ex-communist countries, i.e. the countries with the same historical fortune?” In Albania, quite different from other countries, migration is shaping the society...
The (Im)Possibilities Of The Politics Of Solidarity: Human Rights Defenders Discourse, Humanitarian Aid Dynamics and Transmigrants Experiences In Mexico’s Transit Assistance-Based Places

Mexico has the most transited migratory corridor in the world. The complex migratory flows transiting the country—mainly Mexican, Central and South American—have historically been perceived as economic and male. Scholars have noted as problematic the categorisation of the ‘labour migrant’ as being exclusively voluntary. It has been demonstrated that framing agency through simplified understandings of ‘voluntary’ and ‘involuntary’ movement cannot easily capture the realities of movements along the Mexican corridor. Identification using legal categories such as ‘illegal’ migrant end up demarcating and ‘invisibilising’ individuals eligible for protection. The securitisation of borders and criminalisation of migration throughout the 20th century, led by the global north, has intensified and added further fuel to the fire. Protection has still not been clearly delineated for the undocumented and seems to be eclipsed through the criminalisation of the Mexican government through human rights and humanitarian visa appeals for migrants to transit the country. These appeals and other forms of emerging humanitarian aid dynamics are occurring outside the refugee protection regime. Also the majority of human rights defenders are non-state actors—albeit there is reliance on states for the implementation of human rights. The purpose of this paper—based on extensive qualitative research in transit-assistance based places—is to explore what kind of contribution the politics of solidarity has in reshaping the transmigrant subject; focusing on key human rights defenders discourse, humanitarian aid dynamics and transmigrants experiences.

Involvement in Physical Leisure Activities in Low Income Households

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

This paper will focus on: (1) how parents in low income households conceive, experience and handle their possibilities to participate in physical leisure activities and sports in their local communities, and further 2) what impacts these conditions may have on children’s participation in physical leisure activities.

The data material consists of qualitative interview from a strategic sample of poor individuals living in low income households. Both Norwegian and non western immigrant households are represented in the sample.

The overall findings showed that the involvement in physical leisure activities was strongly restricted by lack of economic capital both for the parents and the children. Most of the informants were single mothers and they had no resources to give priority to their own wishes for participation in fitness- and leisure activities. The children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

Women's Work and Reasons for Absence from Work

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

This paper will focus on a) women’s self-reported reasons for their sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women’s burdens in the private sphere.

The data material is responses from a postal questionnaire sent to Norwegian long term sick listed women with mental illness or musculoskeletal diagnoses, and in-depth interviews with a sample of long term sick listed women with the same diagnosis.

The overall findings showed that women’s sickness absence has to be understood as a combination of demand, control and social capital both at the work place and in their private lives. Persons with high social capital both at the work place and in their domestic lives have the best prospects to return to work. Single mothers often have low social capital in both spheres, and they are the most vulnerable group. The political consequences for reducing women’s sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women’s burdens in the private sphere.

Socioeconomic Background, Education, and Youth Work Transitions in Mexico City

Recent research in Mexico shows that the risk of suffering precarious work conditions is significantly higher among the youth. This situation has aggravated after the economic recession of 2008-2009. On the other hand, educational research indicates that the returns of education have decreased, thus rising labor market vulnerability even among those highly educated, who used to have a secured access to top-level occupations. These trends might suggest that labor market hardship has emerged as a widespread phenomenon among the Mexican youth, irrespectively of socioeconomic background and educational attainment.

Bus is this actually the case?

In the paper we explore this question by analyzing the early occupational transitions of a representative sample of 2,900 men and women between ages 18-19 who responded a retrospective survey on educational and occupational trajectories in Mexico City. We focus on the effects of socioeconomic background, educational attainment, and family events on four occupational transitions: the entry into the labor force, job shifts between jobs, exits from the labor force, and reentry into the labor force. Using event history analysis models, we devote special attention to the competing risks of entering into service class positions, intermediary occupations, and what we define as “low quality” occupations.

Results confirm, as earlier research has suggested, that a significant number of young individuals initiate their occupational lives in “low quality” occupations, and many stay there in subsequent job shifts/reentries. Also, risks of labor disqualification are significantly high among those with higher education. However, these risks remain closely associated with socioeconomic background and educational attainment. In this sense, far from replacing or blurring traditional inequalities by socioeconomic background and educational attainment, the rising labor market vulnerability of the youth in Mexico mounts onto these inequalities, reinforcing their negative effects.

Youth Parental Emancipation in an Unequal Society: The Case of Mexico

The paper analyzes the housing transitions of young Mexicans from a social inequality perspective. Mexico is the most unequal society among OECD countries. The calendars of marriage and childbearing are significantly different across socioeconomic strata, with surprisingly low ages at marriage and first child among those coming from disadvantaged families. Migration (both internal and to the United States) has become a frequent event in the lives of young Mexicans seeking job opportunities. In this context, residential emancipation may follow very different patterns among youngsters coming from different social backgrounds.

The paper will look at these differences by characterizing emancipation in association with marriage and childbearing. Although these transitions are obviously related to emancipation, the association is not universal: many newly-wed sons and daughters remain living with their parents. Others move out before entering into marriage. Thus, a proper characterization of emancipation must take into consideration the different life course pathways that emerge from taking into consideration the occurrence, timing, and sequence of this transition in combination with other family events.

Once these patterns of emancipation are identified, I will analyze their incidence and determinants among socioeconomic strata, taking into consideration the association with trajectories in other domains, and specifically with occupational events/trajectories. The aim is to explore whether early occupational uncertainty relates to different emancipation pathways.

The analysis will be based on data from the EDER 2011, a recently released retrospective biographical survey that covers the educational, occupational, residential, and migration histories of 2,900 Mexicans of three birth cohorts. The survey reports the ages of occurrence of all the events considered in the analysis. It also includes a complete module on family background, thus allowing a thorough exploration of the association between socioeconomic origins and emancipation.

Gender Bias in Higher Education- Study on Indian Universities

Owing to higher priority assigned in successive Five Year Plans, Higher education in India has witnessed phenomenal expansion, with establishment of numbers of State and Central universities, Institutes of advanced studies, and numerous private and deemed universities. Pay scales revised to bring them on par with other prestigious services in public and private sectors, rendering it highly sought after sectors of employment. It encompasses graded disciplines and positions with differential status, recognition and rewards. It is hypothesised that, distribution of academic positions and allocation of disciplines could be determined by the social forces and extraneous considerations among which gender is an important variable. The paper addresses this issue in the context of Indian universities in which the number of women faculty is on the steady rise in the last two decades. Data collected through interview of 362 women faculty members from 23 South Indian Universities reveals that, gender segregation of academic disciplines and positions are discernible with concentration of women academicians in soft disciplines as well as at lower academic positions. The hard core applied disciplines, being where the faculty could be more visible, receive more research grants, claim consultancy and patents have predominantly male faculty. Even in terms of cadre composition, the proportion of women faculty decreases with successive higher academic position. Study further reveals that, even among women academicians religion, caste and rural urban background are pertinent in determining the patterns of segregation subjecting women faculty to double discrimination.
This task. Data from the fifth round (year 2010) of European Social Survey is used.

Professions come to be arranged in a hierarchy based on their functional importance, which in turn determines their prestige, authority, rewards and sometimes even their autonomy. Traditionally, professions represented homogeneous groups of people sharing common traits in terms of knowledge, skills, values, status and rewards. But of late, owing to growing complexity of professional knowledge systems, increasing specialization, adoption of advanced technology in their practice and ever increasing diversity of services expected to be delivered by these professions, intra-professional heterogeneities and as such distinctions appear to be on rise with professionals coming to be graded within professions on professional and non-professional considerations. The paper explores these developments in medical profession in India, wherein medicine as a profession has made significant advances. A survey of 550 medical professionals in South India reveals that medical profession is a highly stratified entity with practitioners being segregated and graded on the lines of specialization, level of specialization, branch of medical practice, sector of employment, size and technical sophistication of hospital, institution from where professional credentials are obtained, length of practice and the like with rewards and recognition in commensuration, giving rise to inequities and exclusions within medical profession. Further, non-professional variables such as class, caste, religion and gender, by themselves, are not as much responsible as the professional variables stated above for professional differentiation in medical profession although they appear to be associated with opportunities for entering into high prestige sections within medical profession.

**Technology Driven Inequities at Work Place in India**

Indian work organizations, both in service and manufacturing sectors, have brought about significant restructuring and refinement of operations through adoption of new technologies that has become imperative and indispensable for survival in the highly competitive globalizing world. These developments are assumed to be having significant long term implications for the work organisations reaching in terms of skill up gradation, composition of workforce, restructuring of organisations and work process involving huge capital expenditure. This rationalization process has also implications for workforce in terms of increased wage differentials owing to emphasis on skill, absorption or replacement of workers with skills no longer required as well as adjustment with changed work culture. The findings based on a study of 41 service and 36 manufacturing establishments across three States in India indicate that higher skill requirements have rendered unskilled cadres at considerably lower wages. This phenomenon is more marked in private sector service industries compared to public sector manufacturing establishments. As a result of disappearance of moderately skilled workforce, these organisations are found with skill polarisation and heightened wage inequalities.

**Social Context As Mediator Between Values and Well-Being**

Ed Diner (2009, p. 66) claims that individuals attain subjective well-being (at least partly) while moving toward an ideal state or accomplish a valued aim. Shalom Schwartz (1994, p. 20) defines values as „desirable transissuational goals, varying in importance, that serve as guiding principles in the life of a person or other social entity”. Consequently happiness occurs after needs are met and goals are fulfilled. Therefore people are happy when their values are “right”, that is, attainable in given social, cultural and economic context. Sagiv & Schwartz (2000) have also argued that people are likely to experience a positive sense of well-being when they emphasize the same values that prevail in their environment, when they inhabit an environment that allows them to attain the goals to which their values are directed.

The purpose of this paper is to evaluate relations between basic human values and subjective well-being. Using latent class modeling framework, diverse value structures are being distinguished within European societies and in different time points. Those value systems are being compared between societies and over time. Culture-specific aspects of them are being allocated and related to wider socio-economic contexts. Finally, the temporal dynamics of those cultural specificities are explored and further related to the historical settings of their development.

**Changes in the value systems are usually studied by comparing some values, value types or value orientations and their estimates over time or between generations. With few rare exceptions, there are practically no studies concentrating on the transformation of the value structures or on the changing relations between different values. Associations between values are being seen as stable and universal both between countries/societies and over time. This is an assumption that cannot be held for an ideal world that is more and more characterized by cultural and social pluralism as well as alteration of traditional cultural templates, communication technologies, economic systems, political ideologies etc. All this necessitates the usage of methodological and theoretical approaches that are enabling to recognize the heterogeneity in the value structures within societies and between different time points. In order to compare value systems, they must be equivalent in their structural formation. If this is not the case, then diverse value structures must be distinguished and structural differences (between societies and over time) that arise, must be explained by the variations in the socio-economic or other, settings and by the developmental trajectories of those settings.

Current paper intends to fill this gap. Using value questionnaire developed by Shalom Schwartz (PVQ21) and data from European Social Survey, present study argues that the assumption of homogeneity of value structure does not hold. Using latent class modeling framework, diverse value structures are being distinguished within European societies and in different time points. Those value systems are being compared between societies and over time. Culture-specific aspects of them are being allocated and related to wider socio-economic contexts. Finally, the temporal dynamics of those cultural specificities are explored and further related to the historical settings of their development.
media can cause responses in segmented public spheres of the World Wide Web. Vice versa, content that is produced in blogs, wikis or social networks can become part of news coverage in the mass media. In addition to the public of mass media, some authors argue for the existence of a ‘personal public’ constituted by the World Wide Web. In the personal public sphere, actors use different rules of production and distribution compared to the public sphere of analog offline media. Both forms of public sphere, however, are connected with one another. It is therefore reasonable to describe today’s public discourses as transmedial discourses. The concept of transmedia requires a change of perspective from single media and their functions for social processes, to communicative networks consisting in different media in convergent, networked arrangements. It would be unreasonable to assume that discourses are only constituted through the web; this would not correspond to media practices in everyday life and would give the impression that there is a gap between online and offline media practices. I narrow my focus to online discourses as a way to investigate more thoroughly a highly important part of media practices. In my paper I place my focus on digital network media, first and foremost on the Internet, which can be characterized as a central point of reference for media convergence. I would discuss if and how public spheres are changing through the Internet.

Decline, Crisis or Change? Professional Status and Knowledge Authority Among Danish Doctors and Teachers

A common way to address the poor outcomes of public policy, for instance in areas like health care and education, is to blame policy failures on the loss of respect for professional authorities. No one today respects a primary school teacher as they used to do fifty or sixty years ago, and patients now focus on their own rights and google searches rather than the doctor’s orders. If not more, these are at least common narratives in public debates about professionals and why the decline – or even crisis - of professional authority is at the root of present problems. This paper aims to go beyond the narratives and investigate decline, change and restructurings of professional status and knowledge authority since 1950. Taking the Danish primary school teachers and medical doctors as cases, we explore how the status of the professional groups is changing (or not) over a sixty year time span. More precisely, we explore both the development of professional status in a general sense of a societal status hierarchy, and in a more narrow sense, understood as the professional authority vis-à-vis other professional groups, clients and the state.

While notoriously difficult to measure, not least going back in time, we hope to be able to assess possible changes through a combination of various data sources. Besides socioeconomic data about salaries and education, we mainly analyze status and authority through a comparison of professional selfperceptions and narratives as presented in magazines distributed within the professions.

Explaining the World of ‘Big Data’: Global IT Consultancy and Reshaping of Policy Knowledge in South Korea

This analysis of the process through which South Korean government produced policy knowledge for ‘Big Data’ policy demonstrates a certain actor’s - global IT consultancy - intervention upon it. The gap between an actor’s cognitive capacity and the complex, thus unobservable world gives birth to a number of institutions producing knowledge, especially which not only describes the world, but performs as the inter-subjectivity among actors for their reflexive adjustments, thus have ‘performativity.’ Given this, the article explores how the knowledge offered by global IT consultancy converted the Korean government’s attempt to describing the sociotechnical world of ‘Big Data,’ and examines how the intervention persisted. The precedent STS scholars’ arguments on performativity starting from the works of professional selfperceptions and narratives as presented in magazines distributed within the professions.

market model still persisted and ‘citizen’ was only taken as potential sources of lucrative data. The finding suggests our understanding of performativity of knowledge can be extended.

Social Conditions for Japanese Immigrant Attitudes Toward Institutional Elder Care

Although elder care remains within the family sphere in Japan, Japanese immigrants in the U.S. are bound to have distinctive pathways to determining whether to utilize formal care services from the native-born, Japanese immigrant women who are inter-racially married to American husbands experience complex adaptation processes throughout their lives as they encounter social conditions that differ from Japan. This research investigates of their attitudes concerning institutional elder care utilization as they relate to social conditions.

We conducted and analyzed in-depth interviews with 31 immigrant Japanese women between the ages of 40 and 84. We found that these women had the norms of independent living through cultural acculturation, ultimately leading to their preference for non-family-based care. This paper focuses on the social structural conditions that facilitated this choice. We found four factors influenced the women’s attitudes toward the utilization of institutional elder care: 1) family living arrangement discouraging family care for elderly, 2) potential family conflicts between the caretaker and the elderly relative, 3) economic class, and 4) supportive cultural attitudes towards formal elder care and institutional availability. These factors tend to influence immigrant Japanese women’s preference for institutional elder care over familial care.

“Rubber Rice Bowls”: Work and Family for Women Entrepreneurs in Post-Socialist Rural China

The three decades of China’s market-oriented reform since 1978 have brought about an increasingly deregulated and privatized rural economy, which posed new opportunities and challenges for women to balance work and family. This study focuses on a unique group—women entrepreneurs—who were neither the Maoist “iron girls” nor the cheap laborers in capitalist workshops. Drawing on interviews from two coastal villages in Jiangsu and Zhejiang provinces collected during 2004-2010, where rural industries and petty entrepreneurship had become an important economic engine, this study finds that women, although underrepresented compared with men, had played an active role as entrepreneurs. Based on the life histories of 8 women entrepreneurs, this study finds that women entrepreneurs found their “rubber rice bowls” satisfying due to its flexibility and potential rewards, but also challenging because of the increasing risks and competition. Such entrepreneurial dynamics led to various patterns of work-family balance among women entrepreneurs, which could not be summarized under the traditional gender norms or the socialist egalitarian ideology.

The Korean Webtoon As a Reflection of Society

Since 1990, the technology of digital media has been constantly developed in Korea, and the digital media became popular among the general public. With the emergence of the social network service(SNS), people increasingly expressed themselves with visual images, such as photos, icons, animated characters, etc. The new digital media expanded the scope of communication between people and visual images. Webtoon is the new genre of cartoon as the result of digitalization. Webtoon enables readers to easily access and to even participate in the process of webtoon making. The stories of webtoons show social experience in ordinary people’s daily lives. Webtoon readers become participants who share their own thoughts with webtoon artists and also create amateur works. Thus, the familiarity of webtoon increases. It is a remarkable big change in the history of Korean cartoon; thus, this research will discuss how webtoon influences people experience of seeing and interpretation. To do so, this research will study the production process of webtoons by the artist, Pull Kang who is the leading webtoon artist in Korea, and analyze how the artist communicates with readers. Also, this research will show the different responses caused by media switching

from webtoon to film. Today, webtoon makes changes on the ways of storytelling and positioning visual images and of interacting with readers. Also, the Korean webtoons are more broadly spreading overseas, such as France. With its increasing popularity and easiness to reach the public, webtoon is regarded as a driving force to boost the field of Korean cartoon industry.

The Impact of Adult Children's Out-Migration on the Elders' Psychological Well-Being in Rural China: Does Gender Matter?

This study examined the impact of adult children's out-migration on the psychological well-being of older Chinese parents left behind in their rural villages. Using data from two waves of the Longitudinal Study of Older Adults in Anhui Province, China, analyses showed that, controlling for personal characteristics and resources, the out-migration of children reduced the psychological well-being of their parents, particularly among older fathers. However, the transition to coresidence with an adult child buffered the negative impact of daughters' out-migration on the psychological well-being of older mothers. These results suggest ambivalent feelings on the part of older parents when their adult children migrate out of their home villages for work or marriage. However, there is an important gender dimension in the adaptation to the out-migration of children. Mothers benefited from entering into a traditional multi-generational living arrangement when their daughters migrated; comparable fathers suffered from worse psychological well-being following entry into such an arrangement, presumably because with living children increased their dependence. It is concluded that a complex gender interaction needs to be considered when examining the consequences of dynamic intergenerational family processes in China.

Use It or Lose It? the Impact of Grandchild-Caring on Grandparents' Cognitive Functioning in Rural China

Using the data from the waves of the survey “Well-being of Elderly in Anhui Province, China” conducted in 2001, 2003, 2006, 2009 and 2012 respectively, this study examines the impact of grandchild-caring on Chinese rural grandparents' cognitive function through constructing multi-level growth curve model. The results show that, comparing to the low intensity care for grandchildren, high intensity care has protective effect for the grandparents' cognitive aging, however, the effects of high intensity care depend on the age and gender of grandparents. The grandfathers' cognitive aging are protected by the high intensity care for grandchild, the cognitive function of grandmothers are suffered from intensive care; and this gender difference tends to be widened as aging. These results support the hypothesis of “use-it-or-lose-it”, and imply the significance of gender roles and norms in the Chinese rural families.

Multiracial Parents and the Intergenerational Transmission of 'Race' and Belonging

In both popular culture and academic discourses, being ‘mixed’ is becoming increasingly ordinary in Britain. While there has been growing research on mixed race children and young people, very little is known about how mixed race people racially identify and socialize their own children. Many adult mixed individuals have now become parents - prompting the fascinating question of how they, as parents, think about the racial identification of their own children. Parenthood engenders one’s own ancestry and the ‘right’ socialization of children; what may such socialization code for the future and significance of racial categories and boundaries in Britain? Are mixed race parents adopting post-racial attitudes and practices, or is there evidence of intergenerational transmission of racial thinking and identification in these households? How do parents think about the relationships between ‘race’ and racial difference, national and regional forms of belonging, and family lineage/ancestry? These questions are pressing, especially in light of recent research which does not necessarily privilege ‘race’, or which examines the meanings and experiences of ‘race’ in connection with other axes of identification and experience.

Based on a Leverhulme research grant, this exploratory study investigates the ways in which mixed race parents think about and communicate ideas and practices concerning racial identities and racial difference, and is suggestive of how they foster their children's (and their own) sense of belonging in the wider society. This research draws on interviews with 60 multiracial individuals (parents) in both urban and suburban regions in England. A qualitative approach is crucial in critically examining not only racial categories/terms, but also trends reported about multiracial people in large scale data sets, especially those in the US.

Educational Mobility in Three Generations: Single-Parent and Grandparent Effect

This study examines the educational reproduction of American families in multiple generations. The key question is how grandparents’ education contributes to the educational success of grandchildren, and how the grandparent’s effect differs for single- and two-parent families. The grandparent effect works through both demographic and mobility processes, because grandparents’ education first affects whether parents have any children and how many children they have, before grandparents proceed to influence the educational mobility of their grandchild. Analyses build upon the mobility and demography model used in Mare and Song (2012), and draw on empirical evidence from the Panel Study of Income Dynamics. Recent researchers and policymakers alike have expressed a growing concern that single-parent family is responsible for the growth of an “undereducated class” in America. This study investigates whether or not grandparent effect contributes to the growth of the undereducated class from single-parent families in the grandchild generation.

Through Thick and Thin: Ecological Modernization in Thailand’s Electronics Industry

Electronics manufacturing in Thailand has undergone substantial transformations over the last two decades, including with respect to technological environmental innovation. Business conditions in Thailand have been highly challenged during this period, as the country has weathered multiple changes of government, mass mobilizations, torrential floods, and uncertain institutions. Situated at the lower end of global supply chains, electronics manufacturing in Thailand has persisted through this period, even if not entirely thriving. Driven by growing international regulation of hazardous materials and waste electronics and the greening of global supply chains early in the new millennium, technological environmental innovation has proceeded. Drawing on field research conducted over two decades in Thailand, as well as on available data, this paper addresses the causes and consequences of those transformations, including such questions as: How have these changes come about? What roles have domestic and international exogenous (market, regulatory, environmental) and endogenous (industry, firm, labor) forces and dynamics played in technological environmental innovation during these two decades? What has changed and not changed in electronics manufacturing in Thailand as a result? In what ways has electronics manufacturing in Thailand become more environmentally friendly since the beginning of the new millennium? The paper concludes with a discussion of the implications of the experiences of Thailand’s electronics industry for social theories of technological and environmental change, including Ecological Modernization Theory.

Is Improvisational Theatre Really Improvised? : The Inherent Structure in Improvised Performances

The purpose of this presentation is to clarify the meaning of “improvisation” in modern society and the function of “formats” in improvised performances, and also to discuss the significance of improvisational theatre in modern society.

Improvisational theatre, often called impro, is a form of theatre that has no scripts or pre-planning. It was systematized in Britain and the United States in the 1950s and used to train actors, and also developed as a performance genre in its own right. Gradually, it spread to various countries and is now used in various other fields such as school education, business, and community development. Today, the concept of “improvisation” in itself attracts considerable attention, and there is a tendency for people to regard it as a panacea for various problems. For example, it is viewed as a way of heightening our ability to live through unpredictable times and of changing rigid social structures.

In our research, we first investigated discourses about “improvisation” in books and websites to clarify the meaning of “improvisation” in modern society. This revealed that “improvisation” is explained using highly positive concepts such as heightening our ability to live through unpredictable times and of changing rigid social structures.
as "freedom", "flexibility", and "resilience", which are contrasted with the concept of the "structure" of society.

Secondly, we did fieldwork in The Laboratory School of Improvisation, which is an impro group that carries out impro performances and workshops in Japan, and interviewed its members. We found that when improvising on stage, the performers don’t express ideas freely in their own separate ways. They embody and share “formats” which constitute the explicit/implicit manners and rules of impro.

In short, “improvisation” has paradoxical properties. Though “improvisation” is represented as a concept that frees us from social “structures” and enables us to create stories with others flexibly, performers in fact acquire freedom by means of “formats” when practicing impro.

Is Rise of China a Threat or a Chance? a Comparative Analysis of Determinant of Perception on China in Korea, Japan, and Taiwan

The rise of China has been discussed in different area of social sciences, but it is still rare for sociologists in East Asia to address this issue. International dimension of social development in East Asia is, however, necessary and indispensable part in sociological argument and the recent rise of China is one of the core parts of such international dimension.

Comparison of Korea, Japan, and Taiwan in terms of their attitudes toward China provides us with a lot of sociological insights. Comparative analysis of expatriates’ guanxi-building in China tells us that Korean expatriates are more aggressively establishing guanxi network than Japanese and Taiwanese counterparts. Outmost recent international collaborative research suggests that perception of “political risk of China” is different from Korean businessmen and Japanese/Taiwanese businessmen.

This paper tries to conduct exploratory analysis of Korean, Japanese, and Taiwanese perception of the rise of China in comparative perspectives. More concretely, two research questions will be approached in this paper; namely (1) how people in three societies evaluate influence of China, and (2) Who are most concerned about the influence of China on their society, by using AsiaBarometer 2006, which is the only one dataset that enables us to compare Korean, Japanese, and Taiwanese views on China in connection with other important socio-economic variables.

Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that “perceived” relation is important in discussing the issue of the rise of China.

The Nexus Between Collaboration, The Internet and Productivity: An Empirical Study Of South African Science

Prior research has investigated the relationships between collaboration, connectivity and the publication productivity of scientists. Most of this research has been conducted in either the developed or developing countries where internet has been either well advanced or at the other end of the continuum. Investigations in countries that fall in between these two extremes are rare. Conducted among scientists and academics in South Africa, this study is aimed at filling this gap. Interviewing academics and scientists (n=204) from the sampled institutions, the paper presents details of how the above three variables are interfaced with each other in the South African scientific system which has become a strong contributor to science. The study also, from the policy point of view, brings out the features of scientific collaboration that exists in South Africa with its variations between the two sectors—academic and research.

Cultural Capital In Movement: On The Dissolution Of Traditional Educational Codes By Educational Policy and Social Movements Among First Generation Academics In Germany

Barriers to educational advancement are often described in the literature. In this connection, authors mainly refer to Bourdieu’s concept in which a lack of suitable cultural capital is often a barrier to the educational advancement of children from non-academic families. Acquiring such capital, in accordance with this theory, is an essential prerequisite for success in an advanced educational career. Bourdieu paints a rather pessimistic picture of the chances of acquiring such capital. Codes of the milieu of origin survive, mediated through habitus, and continue to hinder educational advancement.

This paper tries to conduct exploratory analysis of Korean, Japanese and Taiwanese views on China in connection with other important socio-economic variables. Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that “perceived” relation is important in discussing the issue of the rise of China.

The last decades of development in Brazil have fostered a significant increase in women’s participation in paid work in both the formal and informal sectors. Looking into the significance of women’s growing labor force presence, this paper raises a number of questions to investigate to what extent women’s paid labor impacts inequality between gender (men and women) and among gender (among women on the basis of class). We address that main issue by looking into the connections between women’s paid labor and unpaid labor and two main factors - the sexual division of labor in the family, and the labor legislation and social policies concerning maternity leave and child care. Analyzing data from the 2012 national survey data (PNAD) from the Brazilian Census Bureau, we show that women’s transition to paid labor in Brazil has been taking place without a significant change in unpaid labor related to the persistence of the traditional sexual division of work in the family, and b) adequate policies geared to socializing responsibility for child care. We argue that a more equitable division of domestic work and children rearing in the family, as well as more inclusive social policies on parental leave and child care provisions are crucial to improve the balance between work and family (benefitting not women only, but men and children as well), and to foster equality between and among gender in the labor market and in the public sphere.

The Income Inequality in Mexico: Dynamics At The End Of XX Century

The Income Inequality in Mexico: Dynamics at the end of XX Century

The purpose of this study is to analyze the evolution of the income inequality in Mexico considering two elements: the dynamic of labor income and wage and the general productivity in the economy. I consider that is important to contrast the level of income inequality and the structural conditions which produce macroeconomic instability, the slumps of economics and the inflation. The income inequality in Mexico is part of the socioeconomic historic unequal.

After the reduction in inequality during the 1960s and 1970’s, the exhaustion of the regime of accumulation by substitution of imports, and the crisis of the bureaucratic-corporative regulation, were reflected in a greater concentration of income, accompanied by structural heterogeneity, technological inequality and...
difference in the degree of economic and social development in the diverse terri-
tories of the country. The market reforms of the 1980’s and early 1990’s worsened
inequality. Start to change the unequal in recent years but the poverty has not
decreased.

Women’s Work and Family Life. the Case of Micro- Enterprise for Rural Women in the Central Zone of Chile

Among the most significant changes that have occurred in recent decades in rural areas in Chile highlights the increasing visibility of women in the labor mar-
ket, which from our perspective is key for the effects it has on a personal level, quality family life and living arrangements of rural families. In this context, the ex-
ergise of an independent activity or the creation of a microenterprise is a pathway for personal and family subsistence for an ever wider rural woman. Therefore, from a perspective that combines quantitative and qualitative methods, the pur-
pose of this paper is to analyze specific cases of micro-enterprises rural women in Central Chile, examining three specific dimensions: empowerment process, family
 restructuring and meanings built around productive activity.

The paper is part of a broader study held in the province of Ñuble, Central Chile, concerning with female work in different social and geographic spaces and the effects of paid female work at personal and family levels and in local and na-
tional development (Proyecto DIUBB 133324 2/R).
the implementation of the Concentrated Solar Power (CSP) in the Sahara Desert is intended to support our reflection about the potentialities and contradictions of such initiative. Once these solar plant projects are destined to provide not only Middle East and North Africa (MENA) with “clean energy”, but also approximately 16% of the European energy demand by 2050, it seems urgent to consider the geopolitical transformations that the “desertec project” could unleash. We are inclined to think that such enterprise would indeed change the geopolitical meaning of the Sahara Desert and thus contribute to balance the political relationship between European and MENA countries. Although it is not likely that the marginalization of countries of the UMF are going to become “equal partners” of its European counterparts, it is probable that the export of solar energy can diminish the political asymmetries between North and South. It is also crucial to reflect whether the “political instability” of the MENA countries can impose barriers to the accomplishment of the idea, especially because “Desertec” was conceived before the so-called “Arab Spring”.

Labour Market Experts and Their Professional Practices: Technologies of Self-Control of Job Placement Professionals

In the past 20 years the trend towards New Public Management became prominent in labour market reforms all around Europe and had a deep impact on the transformation of welfare states. In Germany the Public Employment Service (PES) as the central actor was transformed from a traditional bureaucratic institution to a managerial service provider which had an enduring effect on job-oriented placement activities and the placement professionals. The introduction of controlling, management by objectives, computer-supported placement activities, service orientation, customer segmentation, and action programs are typical features of an administrative managerial organization that follows business routines to increase efficiency and formal rationalization in the era of neo-liberalism. Under the New Public Management regime the work of the placement personnel is structured differently: On the one hand the job placement professionals are labour market experts with an extended scope of action. In counselling interviews the job placement officers interact with job seekers and provide advice and monitor the individual behaviour of job seekers. On the other hand all decisions of the placement professionals are checked by a close meshed accounting system and revised if they contradict the organizational business logic. Today, these professionals emerge as „transparent job placement officers”, and their authority and expertise on placements are viewed as being because of conflicting relations between professional and managerial interests. The placement professionals are exposed to a systematic self-control which assesses the counselling and the placement of job seekers not only by technical and professional criteria, but always by the success of specific strategies along the internal organizational accounting system. The contradictory effects of extensive accounting practices on job-placement officers and the organisation we will show in our paper.

Policing and Crime Control in Contemporary Nigeria: An Agenda for Reform

Crime and insecurity are major challenges of contemporary Nigerian society, with the barrage of various forms of criminal behaviours, including: terrorism, political violence, ethnic-religious and communal violence, unbridled corruption, politically-motivated assassinations, murder, violent crimes, kidnapping for money, and robbery. Efforts by security agents to solve the problems have not yielded the desired results. The inability of the Nigeria Police to effectively tackle the
problem has made people to question the capacity/competence of the police, and also casting aspersions on the quality of governance. Recently, the military was drafted to support the fight against terrorism. In response to the problem, some ethnic militia have sprung up, with some serving as “local police” in communities. Nigeria currently operates a unitary/centralized policing system, but there have been calls for the establishment of state police – separate from the federal police. Increasingly, communities and individuals do not wholly entrust their security to the police, and there have been local community actions against crime, including street barricades and the restriction of vehicular and pedestrian access at certain times. While the informal policing outfits have been playing positive roles with security control, the relationships between them and the police have not been entirely cordial.

Drawing from recent challenges, issues and experiences with the war against crime and insecurity (including terrorism), this paper discusses the policing and security structure, as well as the relationship/partnership between the various security units. Suggestions are made for more effective policing in Nigeria, including greater collaboration/partnership between the formal policing system and the informal policing structures. The paper also advocates greater collaboration between the police and the public for a more successful campaign against crime in Nigeria.

Transnational Trajectories? Studying Nation and Citizenship in East Asia

Despite sociology's increasing engagement with global processes, the relationship between global/transnational studies and cross-national, comparative studies remains a question, both conceptually and methodologically. This paper inquires into this relationship through an empirical focus on the transnationalization of nation and citizenship in East Asia. Unlike the common practice, by transnationalization, I do not simply refer to the advance of explicit transborder regimes (e.g. the World Trade Organization and the European Convention on Human Rights), or social formations “spanning borders” (e.g., migrant networks). Rather I offer transnationalization as an analytical node to capture the diffusion of non-nation-specific, universalistic frameworks, models, and standards, and the engagement of nationally located actors’ (states, social movements, professional organizations, and individuals) with such frameworks to orient their actions and strategies. This view locates the nation-state and a variety of national actors within a broader transnational environment—in an analytical sense these two levels are inseparable. Densely organized at the national level and beyond, education policy is highly susceptible to transnationalism. The analysis of the post–World War II school curricular reforms and content (particular focus on Japan and China, in comparison with European developments) shows that national educational systems in East Asia increasingly assume a globalized society, and the role of active and able citizens and nations in making this society. In so doing, they systematically insist upon the "distinct" contributions of the nation and its citizens to the good of the wider world. Yet, as the nation (and its uniqueness) is expressed fiercely, the policy reforms that affirm transnationally difficult, common models of social order. Nations as "imagined communities" and individuals as citizen acquire commonalities across societies. The assertiveness of the nation (divergence), as well as its progressively common imaginary (convergence), is linked to its transnationalization.

SPARAGAREN, GERT* (Wageningen University, gert.sparagaren@wur.nl)

Environmental Agency and Power in the Global Network Society

Over the past two decades, practice theories as developed by Anthony Giddens, Theodore Schatzki and Elizabeth Shoe amongst others, moved center stage in the sociology of sustainable consumption and everyday life. Practice theories offer an attractive third way between individualist (value driven) and determinist (technology driven) models of environmental social change. In this paper, we move to more detailed the two modalities for analyzing the reproduction of social practices as put forward by Giddens (1984) and Shoe (2012) in particular. First, when discussing practices as performances or as strategic action, we explore how specific lifestyle groups with particular ‘green’ portfolios or competences participate in the practice in order to make the practice and their lifestyles more sustainable. We show that the environmental dimension of (consumption) practices can be crucial for attracting new practitioners to the practice since they expect gaining emotional energy (Randall Collins, 2004) from participating in the process of simultaneously greening the practice and their lifestyles. Second, when discussing practices as an entity and as part of an institutionalized set or nexus of practices, we focus on the process of strengthening or weakening the connections between different practices. We argue that the concepts of power as put forward by Manuel Castells (2009) can be used to illustrate the interrelationships between practices and thereby the key dynamics of environmental changes in the global network society.

Sorting Snorers: Straight Path to Treatment?

The medical model can perpetuate and itself be perpetuated—or be challenged undermined—by stereotypical concepts encountered on the Internet. In this rich case study of snoring and obstructive sleep apnoea (OSA), we examine internet search as a complex actor-network comprised of actors and actants such as the searchers themselves, search engines, web-pages, and the organisations behind the pages, all contributing to lay pre-diagnosis of OSA. Social preconceptions regarding typical OSA sufferers include age, gender, and weight. Overweight middle-aged men are expected to have sleep apnoea, whereas skinny young women are often not. Through situational analysis of the conceptual interactions between participants recruited on the basis of either being snorers, or being the partner of a snorer and website pages, websites, and website providers, the study closely examines the generative forces arising from engagement or ill-fit with the disease-based model as encountered during an internet search. Situational Analysis is used to model the actor-network on both individual and aggregated levels to gain insight into the complexity of the medicalisation of snoring and OSA as an emergent yet increasingly powerful and pervasive source of influence, shaping conceptions regarding who can snore, who can have OSA, and who and how therapies for snoring can be accessed. Using Situational Analysis as a starting point, we have developed a novel data visualisation technique particularly suited to representation of both human and non-human actors and actants involved in the internet search and pre-diagnostic endeavour, and to visually represent conceptual tensions (medicalisation and non-medicalisation; snoring and obstructive sleep apnoea; male and female; old and young and so forth) within the overall actor-network.

Scums Of The EARTH: A Critical Analysis Of 'Humanness' In Host Society from 10 Life Stories Of Poor Immigrants In Johannesburg, South Africa

This paper critically examines the question “at what cost do we establish national borders as the criterion for valuing others? What are the consequences to ourselves; the selves that ultimately places humans above their animal counterparts? It thematically and critically examines the 'we' that has ascribed an identity to 'migrants', labelling them as not fit for support and care. Adorno T, argued that identification themselves the scope and limits of the subject to the desired level only. However, the reverse is also the case, whereas identification limits the scope and facets of the identifier within a box, from which he cannot break free to explore his unlimited ability to create the world he desires. In this sense, by identifying migrants and in particular poor and unskilled migrants as ‘undesired’ and ‘disfunctional’ to a fully functional and successful society, we have by extension confined ourselves to a box from which we cannot break through, to dream and create a functional and successful society that includes the unwanted poor and unskilled migrants.

Using narratives from 10 life story interviews with poor African immigrants in Johannesburg, South Africa, the article examines the host society via the hard experiences of the immigrants. The article argues that there is a new form of societal enslavement and poverty; it is the poverty of our humanity. I believe that the lived experiences of unwanted immigrants will be an important platform from which to examine the inherent contradictions of contemporary humanism as exhibited by host society. Also, it is of practical relevance to apply Habermas’s critical theory of society to a location in Africa; A continent that is in the throes of awakening self-emancipation from colonial dominance in order to create its own history in a more self-directed manner.

Between Institutional Oppression and Spiritual Liberation: The Female Ordination Movement in the Catholic Church and its Utilisation of Social Media

The female ordination movement within the Catholic Church is a dynamic and forceful example of the paradoxical binary of institutional oppression and individual liberation operating within the contemporary religious sphere. Proponents of this movement are seeking justice and gender equality in the face of the system.
tic patriarchal oppression of women within the Catholic Church. This radical and pioneering international movement is struggling for recognition as a legitimate religious formation as it campaigns for a more inclusive and accountable Catholic Church. The female ordination movement thereby provides a fertile conduit for examining how religion can both oppress individual freedoms and also be used to mobilise political, social and spiritual liberation from institutional dispensation.

This paper will utilise critical discourse analysis of various social media outlets and webpages to elaborate on the institutional oppression and spiritual liberation which lies at the heart of this religious group. Drawing on feminist theology and a feminist epistemology, this paper will explore the effectiveness of social media in connecting women across the world who are facing institutional religious repression and who are seeking support from likeminded faith believers. Through critical discourse analysis, this paper will find that social media is used by groups involved in the female ordination movement such as The Catholic Network for Women’s Equality, Women’s Ordination Worldwide and The Women’s Alliance for Theology, Ethics and Ritual, to subvert the dominant attitudes towards women within the Catholic Church and to provide an alternative form of religious expression for disaffected Catholic women. These groups are thereby able to mobilise women into a solidarity international religious formation which empowers women who have experienced suppression or subjugation from the Roman Catholic Church.

UK Maternity Services ‘Risk Culture’: Is the Professional Status of Midwives ‘At Risk’?

UK maternity services, accounting for a significant proportion of National Health Service litigation claims, are increasingly regulated by ‘risk management’ standards. Such standards, aimed at improving the safety of maternity care and reducing litigation, inevitably associate childbirth with risk, and the control of professional behaviour in managing such risk. The growth of this ‘risk culture’ within maternity services poses significant threat to professional status claims.

This paper presents findings of a Doctoral ethnographic study observing the real-time impact of the ‘risk culture’ within an English National Health Service maternity department. Litigation and subsequent increasing regulation has fuelled the social construction of a ‘risk discourse’ surrounding maternity care. Aligned with the assertion that modern society has become increasingly risk averse (Beck, 1992), professional anxiety regarding risk has provoked socialisation amongst doctors and midwives that control over the childbirth process promotes risk minimisation. The stereotypical medical interpretation of risk, based upon fear of uncertainty and pathophysiology, has consequently permeated all aspects of pregnancy and childbirth. This in turn has led to the subscription of the ‘biomedical model’ as the prominent paradigm in managing maternity care, fuelling control, intervention and the ‘medicalisation’ of childbirth. Such ‘medicalisation’ has cemented doctor-led, intervention-laden management firmly within modern childbirth, with midwifery-led, naturalistic childbirth becoming an ever-decreasing occurrence. A professional identity crisis has ensued amongst midwives in that the role of the midwife in the 21st century is in a state of flux, raising concerns for the professional status of midwives within future childbirth provision.

The ‘risk culture’ in the UK has provoked significant inequalities between the professional status of doctors and midwives within modern maternity care. The role of midwives as autonomous practitioners in normal childbirth is eroding; therefore, the ‘risk culture’ in the UK placing the midwifery profession at risk of deprofessionalisation?

Doctors’ Narratives

Doctors’ Narratives

My answer to the question outlined in the title of this session would be: “Doctors’ Narratives”. As illness narration is a means to gain direct access to the subjective aspects of illness, so utilization of doctors narratives in which they portray themselves is important in order to understand who physicians really are. Making a distinction between the motivations behind their choice and the manner in which physicians perform their profession, the author tries to decipher the ‘black box’ of medical identity. He does so using 40 qualitative, in depth interviews with doctors working in Italy in various branches of different ages and professional placements. The narratives so collected appear strikingly similar to those of doctors in flesh and blood from other parts of the world or to “imaginary” doctors created by the fantasy of great writer - doctors (Bulgakov, Checov, Celine, Conan Doyle, Crichton, Maugham, etc.). Perhaps even the sociological choice of trying to understand the profession through biographical tales reveals more than a point of intersection with the “narrative” approach in medicine: to make a proper anamnesis, both clinically and sociologically, it is necessary to collect a good story, as only this can tell us not only the what, where and when, but also the how and why.

Tensions at the Frontline: Remediation-Work in the UK Travel Sector

In response to recent terror attacks, Western governments now involve private sector organizations in national security regimes in key strategic areas such as travel, communication and financial services. The UK’s eBorders programme is one such regime. Its goal is to collect and analyse passport and passenger data from all travellers entering and leaving the United Kingdom in advance of travel. Airlines and their supply chains are required to collect data from their customers and transfer it to the UK Border agency for processing. Using documentary and interview data, this article develops the concept of ‘remediation-work’ to characterise the impact of the regime on travel firms and their employees.

SPILLMAN, LYN* (University of Notre Dame, spillman.1@nd.edu)

Symbolic Violence and the Limits of Domination

Theories of power highlighting the complicity of subordinates in relations of domination typically assume their prior engagement in agonistic fields structured by that domination. Building on recent arguments for a cultural theory of interest (Spillman and Strand 2013) this paper examines the limits of the complicity assumption, and the implications of those limits for the concept of symbolic violence. I argue that cultural processes inherent in field formation as “autocatalysis” (Padgett and Powell 2012), as well as in dynamics of center/periphery relations within fields (Shils 1975), and in Hirschman’s (1990) theorization of actors’ exit options, all set limiting conditions on subordinates’ meaningful participation in agonistic fields, and thus help specify the conditions for symbolic violence.

Portraits of Juvenile Prostitutes: Reconsidering the Mainstream Trafficking Victim Narrative

The dominant narrative of prostitution in public media and even much scholarship equates sex work with trafficking – giving rise to the ubiquitous expression “sex trafficking” – and portrays sex workers as women and girls who are kidnapped, sold, and violently coerced into a life of slavery from which they need to be rescued. This narrative has been much sensationalized and set as the basis for rigorous criminal legislation against alleged traffickers (i.e., pimps) and clients, as well as reflecting the hegemonic media attention and policy influence of “new abolitionist” feminist scholars and activists who oppose pornography and prostitution as exploitative degradations of women. A bitter divide exists between those who engage in it, and the paucity of data is especially prevalent among those who engage in it, and the paucity of data is especially prevalent among juveniles, presumably the most vulnerable (and likely victimized) population. This study examines the experiences of 19 juvenile street prostitutes – twelve girls and seven boys – working in Las Vegas, Nevada, using in-depth interviews conducted between February and March 2012. We investigate the circumstances of these adolescents in sex work, including age, gender, race, abuse, ways to prostitution, involvement with pimps, and abuse. In addition to using entry narratives to explore the pathways to sex work, we go beyond simply describing why juveniles become prostitutes and examine the ways that their lives contrast with other traditional narratives about gender and sexuality, race, social arrangements, and economic consumption, all of which speak to harm reduction needs for all street prostitutes.

Leisure and the Internet: A Critical Perspective on the Social Structures of Leisure

The paper presents results from an experience of castor beans production to obtain biomasses for small farmers in southern Brazil. This research provides some reflection about the family farm crisis, which has been accentuated in recent decades, because the rural aging population, as well as the lack of successors. The social responsibility to settlement people on lands is the government’s role, in this way; the agrarian policies would propose strategies to modify the productive logic inherited from monoculture production, in the southern of Rio Grande do Sul. It is essential to rethink the viability of family farming beyond funding programs of the federal government. As a result, experiences articulated with different areas of knowledge could bring innovations in the ways of generating household income to the sustainability of rural activity.

Ethnic Differences in Premature Mortality over Three Decades – the Intersection Between Indigeneity, Social Class and Preventability

This study uses national-level mortality data to investigate the changing social class and ethnic patterns in premature mortality in New Zealand men from 1975 to 2006. During this period there was a political struggle for recognition of indigenous rights, a social policy focus on inequality, and major macro-economic reform. We used information from national death registrations and national census data from the five yearly national population censuses from 1976 to 2006 to examine changing patterns in social class differences in all cause, preventable, and non-preventable mortality for Maori and non-Maori men under the age of 65. Our results show that social class differences in male mortality have increased since 1975. Maori male mortality was significantly higher than non-Maori mortality in each social class for preventable, non-preventable and all causes of mortality. The social class mortality differences within Maori were markedly greater than those within non-Maori.

Despite focused efforts to improve Maori health, the inequality between Maori and non-Maori in premature mortality appears to be increasing, even when social class differences are taken into account. The persistently higher Maori rate of potentially preventable deaths indicates that the health sector is still not meeting the serious health needs of many Maori. It also appears that there is increasing social stratification developing within the Maori population such that the social class differences in mortality within Maori are now larger than the inter-ethnic differences between Maori and non-Maori. We present several reasons why decades of indigenous development have not overcome ethnic differences in a fundamental marker of population health such as premature mortality but have resulted in increased inequality within the indigenous population.

The Internet Is Not The Answer To The Problem Of Leisure Identities, But The Internet Is Interesting For Leisure Studies: Against Poststructuralist Theory and For Empirical Leisure Research

As people's leisure lives have become mediated through the global networks of the internet, leisure scholars such as Tony Blackshaw (2010) see a digital world of liquid leisure. Drawing on the work of Castells, Beck and Bauman, Blackshaw and others such as Rojek (2010) have advocated the ‘post-structural turn’ in leisure studies welcome the dissolution of boundaries, the reduction of inequalities of power, and the individualization of leisure choices and leisure identities that the internet supposedly brings. In this paper, I provide a strong critique of the post-structural turn in leisure studies by showing that the theoretical foundations of such claims are weak, and the evidence base for such claims demonstrates only that some people in some countries have some freedoms to play at leisure identities. I will show that the internet in the work of post-structuralist leisure scholars has become a chimera that has little resemblance to the internet that actually exists. I will end by using some of my own research to demonstrate the limits of leisure on the internet and the structures that still shape human interactions, human leisure and human culture.

References
the problem or argue for a unidirectional cause and effect relation. The conceptual
inflation in the field of stigma research also confined the strategies to counter the
stigma within the vicious circle of exclusion limiting the scope for out of the box
social engineering. This paper argues for a multidimensional understanding of the
stigmatisation process that addresses the functionality without functionalism and
without resorting to excessive individualization. It is vital to distinguish between
what we can call HIV/AIDS stigma, and what we should call HIV/AIDS related social
exclusion. How the linkages operate; uni/multi-dimensional? It is also important
to unravel the social process operating at different levels of reality and how the
old inequalities play a significant role in producing and reproducing the new
forms of social exclusion where the Right to Live is under threat. The paper calls
for an integrated paradigm for understanding the social process of stigma and
exclusion and try to explain the dynamics of stigma within and outside the matrix
of micro-macro versus subjective-objective axes of social reality. The empirical
exploration with this framework requires a re-examination of the existing meth-
odological practices in stigma research.

Inequality and Inclusion in Primary Health Care System in India: An Interstate Analysis

The trajectory of primary health care system in India is at crossroad with the
gradual withdrawal of state from health sector. However, there are efforts to re-
vamp the organisation and delivery of health care in rural areas with the intro-
duction of National Rural Health Mission (NRHM) in 2005. Within this context the
present study tries to analyse the internal differences in health care outcome in
India and its relation to the social determinants of health. Secondary data anal-
ysis showed that there are wide inequalities existing between different states in
terms of various indicators of health development. The state of Kerala stands
out in terms of its achievements on major indicators and often hailed as kero-
la model of health development whereas the state of Assam performs lowest in
most of these indicators. However the state of Assam is the only state in India,
which included health as one of the basic right to its citizen. A secondary analysis
combined with an ethnographic field work in these two states revealed that the
inequalities between these states and within the states are complex and a unitary
model of inequity determinants fails to answer the complexity. Thus the social
health determinants models needs to be re-looked from the vantage points of
these two states and within the states revealed that the problems of health
development.

A Multilevel Model of Organization and Network Change

According to one vision organizations are more likely to establish network ties
with partners having similar operational experiences (homophily). A second vi-
sion suggests that interdependent organizations connected by network ties are
more likely to assimilate each other’s knowledge and develop progressively more
similar portfolios of internal activities (assimilation). The internal structures of
organizations can be represented as networks of interdependent portfolio items.
These intra-organizational networks are nested in networks of organizations and
influence the homophily and assimilation described in these networks.

In this paper we try to establish which of these two visions best describes the
dynamics of collaboration (measured as patient transfers) and organizational change
(measured as change in specializations) in a community of hospitals. We estimate
newly developed stochastic actor-oriented models (SAOMs) for multilev-
el networks which specify how inter-organizational relations affect organizational
decisions to change the portfolio network of internal organizational activities by
adding or abandoning activities. At the same time, the model allows joint exam-
ination of how the common affiliation to internal activities affects decisions to
change network terms of patient sharing relations between part-
ner hospitals. We innovate over existing studies of network dynamics in that we
represent processes of change in internal organizational structure, and change
in the structure of inter-organizational networks as coupled sub-components of
a more general process of co-evolutionary development. The objective of this
paper is to examine this multilevel process that happens empirically using data
obtained between 2003 and 2007 among all the hospitals in a regional
community. In the discussion of the results we emphasize the connection bet-
ween recent advances in the specification and estimation of SAOMs for multilevel
networks, the current theoretical debates about the emergence of organizations
and markets and the interpretation of our findings in the light of rational choice
assumptions of the statistical framework.

Ideology of Courtroom

After 90s, when Francis Fukuyama announced the end of history and the
neo-liberal democracy was the only solution for eastern-european countries lib-
erated from the domination of the Soviet Union, it appeared that the problem
of ideology was gone forever. It soon turned out, thanks to the growing consumer-
ism, postmodern terrorism and unpredictable economy, that we can't interpret
the modern world without reference to some concept of ideology. At the same
time the theory of the law is still running away from this concept. Perhaps legal
discourse is afraid that any critical theory ultimately reduces law to the economic
base (inspired by Marx) or the flow of libido (inspired by Freud). But according to
Slavoj Zizek ideology is the specter that lurks everywhere. Even in the toilet. Even
in the courtroom.

This paper is a attempt to show the structural elements of this courtroom-spec-
ter. Using lacanian-zikzenian tools I will try to examine the Imaginary, Symbolic
and Real levels of courtroom, that escapes everyday consciousness and at the
same time are the conditions of possibility of that consciousness. This approach
raises some important questions. If trial is a theater, who is the spectator – the
Great Other? What is its object of desire – the object small a? Finally, psycho-
analysis in the courtroom is only a therapy or it immediately becomes a politc

Social Dining As a New Urban Food Community

A new form of communal meal where total strangers eat together, often in
intimate or homely settings, has become increasingly popular in urban environ-
ments. This phenomenon has been dubbed ‘social dining’ and encompasses
meal-events where the social aspect of dining is paramount. In a time where the
communal meal par excellence – the family meal – is under threat social dining
might be a new way of creating commensality. This paper seeks to develop an
understanding of social dining and examine its cultural and economic implica-
tions and discusses reasons for its apparent popularity. Examples of social dining
include weekly communal meals at regular restaurants; arrangements where un-
familiar people cook and eat together; or the now global Restaurant Day where
people set up 1-day restaurants in their own home. To understand the phenom-
eron of social dining we outline different cultural and economic characteristics
of the meal-events, such as whether it is arranged by professional or amateurs,
whether it is a private event, whether it is a shared everyday meal or a special
event. We argue that its popularity relies on four different factors: 1) The dining
events are arranged through new social media or the internet that easily facil-

The Precariat: From New Dangerous Class to Class-for-Itself

A Precariat Charter: From Denizens to Citizens

This paper discusses my new book, A Precariat Charter: From Denizens to Citizens (2014), which builds on key arguments from my 2011 book which introduced the Precariat as an emerging mass class, characterized by inequality and insecurity. A Precariat Charter discusses how rights - political, civil, social and economic - have been denied to the Precariat, and the importance of redefining our social contract around notions of associational freedom, agency and the commons. The ecological imperative is also discussed - something that was only hinted at in my 2011 book but has been widely discussed in relation to the Precariat by theorists and activists alike. By taking debates about the Precariat a step further, I further examine the kind of progressive politics that might form the vision of a Good Society in which such inequality, and the instability it produces is reduced.

Public Access to the Unorthodox Sacred Via Portuguese Urban Spaces

Drawing on numerous interviews carried out in 2010, this paper focuses on the popular cult surrounding a medical doctor famous for helping the poor, Dr. Sousa Martins, who died over a century ago in Lisbon. Because of contested rumors of Sousa Martins’ having been Freemason and having committed suicide, he is unlikely to be canonized within the Catholic Church, and the cult of devotion surrounding him exists completely outside of the church’s authority. The popu-

neoliberalism, stemming from the musings of the Mont Pelerin Society after the Second World War, meant a model of liberalization, commodification, individuation, the privatization of social policy as well as production, and – least apparent – the systematic dismantling of institutions and mechanisms of social solidarity. From the late 1970s onwards, it meant the painful construction of a global market system, in which the globalization era was the disembodied phase of the Global Transformation, analogous to a similar phase in Karl Polanyi’s Great Transformation. In both cases, the disembodied phase was dominated by financial capital, generating chronic insecurities and inequalities. But whereas Polanyi was analysing the construction of national markets, the Global Transformation is about the painful construction of a global market system.

The Precariat: From New Dangerous Class to Class-for-Itself

In particular directions. Such individuals include a charismatic female medium, a seer-turned-writer who has written numerous popular books on Dr. Sousa Martins, and the owner of a kiosk selling cult objects, who has invented rituals for communicating with the doctor which she tells to her customers. This paper will explore the importance of the public spaces through which devotees ‘communi-

The main thesis of the paper is the assumption that in the post-industrial cities of Central and Eastern Europe access to social capital is not highly associated with the socio-economic status of inhabitants. The empirical basis for the paper is a database from surveys carried out in selected post-industrial cities of Poland, Russia, Hungary and Lithuania. In each of the above countries one city was selected in order to conduct a survey of representative samples of inhabitants between the ages of eighteen and seventy. The empirical investigation was carried out in the year 2012 with the financial support of National Centre of Science in Poland.

In accordance with the Sociological literature, two components of social capital will be considered: trust and social networks. Socio-economic status will be ana-

ized by level of education, monthly income, and job situation.

The main purpose of the paper is to explain some differentiations in the levels of social capital and socio-economic status between the inhabitants of post-in-

Trust and Democracy in Different Post-Communist Societies: Poland, Russia and Georgia Comparison

The subject matter of the paper is a comparison of political trust (that consist the fundament of political stability) and democratic attitudes in three very different post-communist countries: Poland, Georgia and Russia. Poland is exceptionally different from the two others because of a very strong democratic tradition while neither Russia nor Georgia have such a tradition and experience but they differ in terms of their political culture and present political aspirations. Differences of political trust are analyzed in their relations to attitudes towards democracy. We are particularly interested in analyzing social differentiation of trust in political system and in particular political institutions in the three countries. We would like to answer the question what are the segments of their societies that might be considered fundaments of social stability and development towards legitimized democratic system. We would like to find out what are the determinants of democratic attitudes, especially their relation to political trust in the system as a whole and theirs’ institutions in countries with different traditions and different pace as well as direction of transformation. The main question is, what are the differences between those three countries in terms of the level of political trust and democratic attitudes, what are the differences in relations between the two, and what are the differences in social composition of those who trust the political system and support the democracy and those who do not. That is especially important because of the differences in existing systems. The attempt to answer these questions is made by analyzing the results of survey research conducted on nationwide random representative samples in Poland in September 2010, in Russia in March 2012, in Georgia in August 2013.

The (In)Stability of Disorder Across Time and Space? a Spatio-Temporal Analysis of Physical and Social Disorder and Fear of Crime in the Netherlands

Whereas the occurrence of physical and social disorder across the urban landscape and the explanation of the observed spatial patterns have long preoccupied criminologists and urban sociologists, relatively few studies have looked at the temporal dimension of disorder patterns. We examine if behavior from a spatio-temporal perspective. Elucidating the (in)stability of spatial patterns of disorder and fear of crime is especially important for the model of urban development known as the Broken Windows Thesis, which posits that physical and social disorder, if unabated, lead to heightened fear of crime, reduced informal social control, and eventually a rise in more serious crime.

The present contribution is a spatio-temporal cluster analysis of physical disorder, social disorder, and fear of crime in the Netherlands based on the Dutch ‘Police Population Monitor’ survey between 1993 and 2005, a large-scale biannual household victimization survey covering every municipality in the Netherlands. By aggregating the individual survey respondents of each commune, we constructed a municipality-level longitudinal dataset spanning twelve years. We perform geovisualization and spatio-temporal clustering analyses of Dutch municipalities in order to determine whether there are significant local differences in physical disorder, social disorder, and fear of crime and whether these spatial patterns persist over time. In addition, self-organizing maps serve to classify individual municipalities into clusters of similar spatio-temporal type across the Netherlands. Finally, we test to what extent this “data-driven” typology of municipalities account for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized “developmental sequence” linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Across the developed world, population ageing has coincided with rising living standards and expectations in retirement. Since the 1980s this has led to growing concern about the sustainability of public pension systems. Australia has been held up as an example of prudent fiscal management, as it looked to fund retirement income through compulsory private savings. This supplemented Australia’s flat-rate and means-tested public pension system, also supported by widespread home ownership. The shift to private pensions has made individual workers more reliant on lifetime savings and on benefits accrued through the tax system rather than direct retirement benefits. We examine the intergenerational implications of this trend towards greater financialisation of retirement incomes by analysing cross sectional data from the Australian Bureau of Statistics. Given the significance of the Australian model to international debates, we discuss the potential long run international implications for inequality in retirement of this experience.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation forscors of leisure activities, which are preferred by one sex or the other, are coordinated with the Islamic calendar, appeal to particular age group, among other differentiating principles. This paper, using a variety of library resources, examines the traditional and contemporary leisure activities in the Middle East, pointing out where equal access to them is an issue. Most Arabs and Iranians with deep family roots in this culture seem satisfied with their traditional leisure tastes. Differentiation according to the aforementioned principles is not generally problematic, not considered “unequal” in the social scientific sense of the word. What are considered unequal by some participants in the region, however, are certain “new” leisure activities, this new leisure being adopted (and often adapted) from outside the region, usually the West. These new activities range from imported European fine arts (e.g., classical music, ballet) to imported popular culture (e.g., rock-and-roll, stand-up comedy). Here, inequality is evident, for example, in differential monetary and geographic access to the fine arts. Adherence to Islamic values and traditional gender roles number among the factors generating inequality in popular culture.
Analyzing the academic literature (Bryan Wilson, 1998, Steve Bruce,2002, Rob Warner, 2010,Pippa Norris and Ronald Inglehart 2011,etc) one can note the following explanatory factors of this phenomenon: the degree of modernization and economic development, human security and the feeling of vulnerability to risks, political repression during the communist and nationalist discourse of the Orthodox Church.

The purpose of this paper is to identify –in a longitudinal and transversal discourse analysis – the proximity between Orthodox Church and national ideals. We will try to prove that in Romania, as well as in other Eastern European countries, religious nationalism was a constant, regardless of Western pressure. We regard the previous statement with a quote from Dumitru Stăniloae, one of the most respected theologians in Romania: Romanian nation is biological-spiritual synthesis Dacian elements, Latin and Orthodox Christian (...). Orthodoxy is an essential prompt of violence, terrorism, hosts inability or unwillingness to provide security and health. Coupled conceptions of diplomat representational body were employed to enclose devoted lives of diplomacies' professionals with inviolable body and protected in person if acting with host prudently and reality, between the rich North and the poor South, between the democratic West and the (ex) communist East. Attracted by the temptation of the West (liberty and welfare) and driven out of poverty and the lack of perspective inside the ex-COM- ECON states, the latest European inhabitant –more or less legally - the western side of Europe. It is indeed apparent that every new wave of EU integration has recently lead to a new wave of immigration.

These citizens bring with them not only cheap labor force, but also different principles, behaviors and attitudes towards the "adaptive" state, the institutions, etc. In fact, the readiness of migrant workers from the new EU states to accept the hardships of their new existence in the host state, leads not only to a desirable multiplication of diversity, but also to interethnic tensions. The Polish plumbers or the Romanian maids have become characters with well-known and recognizable traits all over Europe. However, along with these characters came also the Romanian beggar, the Bulgarian burglar etc. As Umberto Eco argues, by extending the characteristics of its marginalized members to a whole ethnic culture, one can provide an ideal scapegoat for a society caught up in ethnic change which is not able to recognize itself.

The purpose of our study is to identify and explain the imagine of the Este-Europeans in Western-Europe political discourse and to find out if, under the displayed tolerance one can find the premises for a stereotypical transformation of the Stranger into the Enemy.

In order to rich our epistemic goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We base our research on Serge Moscovici's social representation theory (1961).

Where There Is No Utopia? When Real Viral Social Spacing(s) Performs to Theory

Viral proxemic social spacings of the Occupation (from Occupy Wall Street to Occupy Gezipark and Occupy Brazil) and of Gangnam Style lend evidence to the next first cut proposition. It is that sensory experiences of practiced iconic irony (of Western wealthy living) in voicing cut generations able to capture attention to be listened to and joined in at distance for outperforming obstructive actors, actions and acts in human spatial behavior. Configurational comparative analysis of viral proxemic processes from transitions to or initiation of interactions at near and away, and in swaying with initiating real-time emergence of related joint actions of affiliated iconic ironists, not only in vicinity but far afield, and both in geo and vireal (digital) spaces begs explaining. It is possible by collected data to infer whether they are consequential following of reactive politics of hope or stem of proactive trust of belonging to humanity resilient to de-spair through crowd-sourcing ligatures as being change-maker of global society legitimately enacting locally its constitution and performances.

**STIEGEMANN, ANNA** (Center for Metropolitan Studies Berlin, anna.stiegemann@metropolitanstudies.de)

Shopping For Community - Local Businesses As Features Of Social Inclusion?!

Increased ethnic diversity, a high degree of differentiation in income and education levels as well as lifestyles and related the socio-spatial changes have changed not only residential and commercial neighborhood structures, but also the range and level of local interactions and leisure time activities - with wide implications for neighborhood cohesion.

As one result the social cohesion of inner-city neighborhoods and their residents is often seen as vulnerable. Whereas some of these problems are addressed by numerous neighborhood management programs, sociology still needs to pay more attention to how spatial shapes local interactions, i.e. everyday social contacts and connections between and among various groups of residents, how these affect local social capital.

So far, the great majority of research on this topic has focused on narrow and well-integrated primary relationships among neighbors in residential settings and assumes a loss of local social networks.

But these studies have mainly neglected the comparatively loose and unpretentious everyday interactions, particularly during leisure time activities as well as interactions in (semi-) public spaces and how both contribute to community building and social inclusion. As one result the social cohesion of inner-city neighborhoods and their residents is often seen as vulnerable.

Likewise, researchers have not given sufficient attention to the wide range of functions local small businesses and their employees play, including those which yield aspects of supply, sociability, local service and employment.

The purpose of our study is to identify and explain the imagine of the Este-Europeans in Western-Europe political discourse and to find out if, under the displayed tolerance one can find the premises for a stereotypical transformation of the Stranger into the Enemy.

In order to rich our epistemic goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We base our research on Serge Moscovici's social representation theory (1961).

teenage girls narrate their consumer practices. I argue that transgender videos play a double role as personal and collective identity work, affording individuals the possibility of enacting a transgender self, and also participating in the act of community-building via new media, in the context of post-feminism, the medicalization of gender, blurred public/private boundaries, and late capitalism. Turner (1996) suggests that economic transformations characteristic of postindustrial capitalism have changed the meanings of the body for individual social actors. Once the site of ascetic control and discipline, the body is now the locus of pleasure, leisure, and consumption. Not a fixed biological given, "the body can indeed be reconstructed and refashioned to bring about profound changes of identity, including changes of gender" (21). While these transgender video autobiographies do in fact exemplify the malleability of the body, I suggest that they also display the enduring importance of ascetic control and discipline.

Auguste Comte, Altruism and the Critique to Political Economy

Altruism is now a current concept among economists and sociologists. When Comte coined that word in he wished to oppose a new spring of action to the selfish one that was, according to him and many other social observers, flourishing in the industrial society. While focusing his attention on the opposition between egoism and altruism, an opposition deemed to be the "great human issue", Comte was not merely pursuing the elaboration of his own system of thought with the so-called "positive approach" and the development of the religion of humanity at the heart of his Catechisme positiviste (1852) and his Système de politique positive (1851-54). He was also pushing further the critique to political economy that he had exposed in the 4th lecture of his Cours de philosophie positive (1830-42).

Comte's theory of altruism is a central point of his religious credo but it is also a critique to the political consequences of the spreading of political economy altruism that gave birth to a large debate. The topic is thus perfectly fitted to a history of the relations between sociology and economics.

The first considers how selfish behavior or egoism came to be considered as a major threat endangering the functioning of the industrial society, by Comte and those who were worried by the diffusion of egoism. Then, the second part summarizes the methodological critiques set forth in the Cours before connecting this critique to the economic content of the Système and the concept of altruism. The last part contrasts Spencer's view of altruism to the one held by Comte and, how French political economists reacted, defending the moral value of their science.

Relational Art and Managing Emotions

One of many intentions in art is to examine and portray emotional processes across the life span of the artist and other people's emotions in different situations. The “traditional” artist carried a need to explore personal relationships or to portray emotions in social interaction at a distance. The relational aesthetics that has been of great significance since mid 1990 is oriented towards peoples’ social and emotional experiences in different contexts (Bourriaud). The relational artists’ aim is to intervene in social situations and to find ways to visualize, communicate and reflect on the social exchanges that occur in these situations. The artist wants to problematize the existing emotional rules that occurs (Hochschild) and explore and process emotions such as hidden shame in Thomas Sheffs sence and the contribute to the reshaping of social relations.

The purpose of this paper is to examine how the relational artist uses his/her artistic skills to intervene in and influence social communities and to understand what happens to the emotions expressed in these coherences. The aim is also to investigate what happens to the artists’ creativity and artistry in an outward relational artistic work. How can the artist establish a constructive relation between his/her artistic identity and the social and emotional involvement in others doing emotional work? The paper also aims to explore how theories of emotion can contribute to an understanding of creativity as a dialectical relationship between individual and collective motivations for art based on symbolic interactionism and micro sociology. The empirical material for the study is interviews with artists involved in artistic projects in workplaces in Sweden but also the study of non-institutionalized forms of relational aesthetics.

Whatever Happened to Japan's Radical Left?

In the early postwar period Japan developed two major parliamentary left political parties, the Japan Communist Party (TCP) and the Japan Socialist Party (JSP). Each was supported by labor union federations and other affiliated organizations, which mobilized for social movement activities on many issues. By the late 1950s, an extra-parliamentary New Left emerged among university students. The first group broke from the JCP-dominated national student federation to form an independent Communist League, and a second independent student group developed out of Trotsky study groups on various campuses. For over a decade, the student-based New Left played a major role in social protests alongside Old Left parties, labor unions, and other civil society organizations.

During the late 1960s and early 1970s, Japan experienced a New Left protest cycle that paralleled those in Europe and the United States. It concerned very similar issues and had a similar trajectory of escalation of violence followed by strong state repression, which ended the protest cycle and drove the most radical elements underground or into exile. However, unlike the radical left in many European countries and the United States, the radical left in Japan has been largely invisible since the 1970s and is only now becoming somewhat more visible.

Based on long-term fieldwork, this paper will trace the Japanese radical left's evolution into an "invisible civil society" that continues to engage in social movement activity, but has had little impact on mainstream Japanese political agendas and action repertoires. The analysis will examine internal conditions within the movement and its interaction with the larger Japanese social and political context, including public fear engendered by the escalation of violence, the rigid employment structure that permanently marginalized radical activists, continuing state counter-measures against the radical left, and the gradual dismantling of the support base for left political parties.

Dignity and Capabilities: An Approach to Human Development CANCELLED

To promote the full exercise of Human Rights it is necessary to have a comprehensive view of dignity with integration of respect to personal identity, local context and cultural identity, all of these contemplating the importance of allowing social actors to become, by themselves, the ones who develop a capacity to construct quality of life, sustainable development and the overcoming of their own social problems. By explaining the situation in this way, it seems that the Theory of Capabilities gives the best solution, specifically the contribution made by philosopher Martha Nussbaum in which a capabilities list proposes that individuals with a full flourishishment of capabilities would be able to become key factors in guaranteeing the fulfillment of Human Rights focusing on human development. Moreover, what has not been described above, it is not surprising that the UN (United Nations) has given such attention to the Theory of Capabilities as a promising strategy to achieve the Millennium Development Goals (eradicating extreme poverty, achieving universal primary education, promoting gender equality and empowering of women, reducing child and maternal mortality, ensuring environmental sustainability, etc.) However, and this is the main goal of this paper’s analysis, it seems like the implementation of Nussbaum's Theory of Capabilities would make the UN's action for social assistance, promoting Human Rights and

STERETT, SUSAN* (University of Denver, ssterrett@nsf.gov)

Care, Surveillance and Legal Mobilization

Legal institutions must be mobilized by people and institutions in response to disaster. There has been much attention to people in two different ways as victim and as people who have been rescuers. In studying assistance after disaster, we often treat programs as though they are distinct and experienced separately. Yet people encounter the law in disaster after having encountered other law in their lives, and interpret how to make legal claims through what they know about other programs. Similarly, state responses to disaster or efforts to mitigate or respond often work in ways that are characteristic across social programs. Although care might well be the goal of disaster assistance, for example, in the United States it is one program in a welfare state with goal of getting people off assistance and ensuring that poor people take responsibility for themselves. The people who need assistance and particularly can experience it as hard, confusing and frightening when it ends before anyone can find a job or get resettled, whatever the goal. This project draws on assistance for people who fled the Gulf Coast after Hurricane Katrina.

A Spitting Image of Reality? Analyzing Stories of Meaningful in-out Group Incidents As a Tool for Understanding Students’ in-out Group Relationships in a Divided Community

This article explores the usefulness of analyzing narratives of particular incidents that are meaningful to and involve members of different ethnic groups in a situation of conflict. Narrative analysis of the content and structure of stories told by 15 Greek and 15 Turkish Cypriot students about a particular ‘spitting incident’ and the micro- and macro context in which these students, selected from two secondary schools in the Republic of Cyprus develop their narratives, shows that the analysis of such stories can enhance our understanding of: a) the different ways in which actors represent this incident and the factors and processes that inform these representations and b) the more general representations actors make of their own in-group and perceived out-group. More specifically, TCs portrayal of the TC protagonist as a vulnerable but likable and brave hero who is the victim of deliberate and hostile actions of a powerful and untrustworthy villain (the GC protagonist and particularly the GC community), who uses his control over the situation to make it hero unfairly and excessively corresponds to their views of how GCs treat TCs in the Republic of Cyprus more generally and TCs passive, more defensive response to such treatment. Similarly, GCs portrayal of the GC protagonist as a pious hero unfairly and excessively corresponds to their views of how GCs treat TCs in the Republic of Cyprus more generally and TCs passive, more defensive response to such treatment. In addition, TCs narrate this story primarily as an isolated incident, and seek to excuse, deny and/or downplay the accusations directed to them. In turn, this story and the way in which actors define the conflict as colour coded about them. The conclusions discuss the implications of this study for future research and social policy in in-out group relationships.

Transition Cities – a SocioTechnical Approach for Transformative Innovation

The paper draws on the socio-technical transitions and system innovation framework of Geels and others to develop a new approach at city level to govern and manage the transition to a low carbon society. It reports on the European Institute of Innovation & Technology (EIT) Climate-KIC Transition Cities project. This involves a partnership of 6 cities – Birmingham, Frankfurt, Castellon/Valencia, Bologna/Modena, Wroclaw & Budapest. The aim was to develop a transition policy capability to facilitate transformative low carbon innovation in three major end use sectors – buildings, transport, and energy networks.

An inventory was made of all low carbon innovation projects underway in the partner cities. This used a broad socio technical definition of innovation and included a diversity in terms of scale, knowledge and types of innovation. 107 projects were identified with a value of €2 billion in the 3 areas identified. The distribution was similar to earlier studies on city climate innovation but was at a significantly higher scale, suggesting that the national focus of innovation policy is underestimating the extent of activity at the city level. However despite the extent of activity they tended to be treated as separate, disconnected projects and there was little evidence of strategies to link and enable wider system innovation.

An analytical and practical framework was developed in order to facilitate the clustering of projects around clearer arenas of system innovation. Social network analysis involving stakeholder participation was carried out to assess the prospects for system innovation and plausible transition pathways up to 2020 in each partner city. The results showed major differences in the prospects for transition in different arenas. It also showed the emergence of key integrating non-technological innovations in different cities with the capacity to play a key role in making transition happen.

Beyond Piracy: The Materiality of Digital Objects and the Consumption of Copyright

With the growing use of digital technologies in media consumption, companies around the world have experienced a new frontier in providing goods and services to a wider range of consumers. Despite the elevated success of digital distribution of cultural objects like music, film, video games, and books, the issue of illegal access and distribution of copyrighted materials has become a widely identified social problem. Economical, legal and criminological perspectives have largely dominated research on the topic of digital piracy, identifying and analyzing it in legal terms. Issues with these approaches arise as assumptions are carried forward in explaining and exploring these practices, resulting in their failure to identify this activity as the development of online consumption practices. In identifying this limitation in the literature, this paper sets out to create a conceptual model in approaching the study of digital piracy. Bridging the perspectives of cultural sociology with science and technology studies, my argument identifies the root of consumption practices in the properties of digital objects. Integrating the theoretical approach of cultural materiality, I explore how the conceptualization of digital objects as “dematerialized” dismisses important sociocultural dynamics of both the attributes of digital objects and the architecture of online services. In identifying the importance for a ‘digital materiality’ perspective in research on digital piracy, I explain how the form and structure of services and goods results in a development of expectations and desires leading to the consumption of copyrighted material. The resulting conceptual approach speaks to a number of possible consequences regarding how we define and understand Internet technologies. The inclusion of cultural materiality to digital content also provides a new perspective on how previous sociological definitions of materiality have been limited to a particular conceptualization of physicality.

Sociologists and the Labour Movement: Between East and West

Sociologists and the labour movement: Between east and west

While a tradition of creative engagement between worker intellectuals and academic researchers in Western Europe has been documented recently (cf. Stewart and Martinez Lucio, 2011) a similar trajectory in Central and Eastern Europe remains largely unexplored. The contrasts and continuities between both regions forms the core of this paper. We examine and compare the different historical experiences of worker intellectuals and the academy in Poland and the UK, indentifying the re-emergence of a pattern of engagement not only within traditional sectors of the working class but also among the new, precarious workforce, including migrant workers (UK) and agency workers (Poland). We argue that this engagement can be characterised on the basis of different and historically dependent patterns of institutionalisation of the sociology of labour in these countries. Moreover, this in turn can be derived from the fate of the historical relationship between labour (in its different forms) and organic intellectuals. We draw examples from the experiences of union organising and workers in the UK and Poland amongst new and emerging workplaces where the tradition of labour movement activity has been historically weak (or nonexistent).

The authors are either directly or indirectly participating in FP7 Marie Curie Initial Training Network Programme “Changing Employment”. This is providing a novel opportunity to link international funding opportunities in such a way as to foster cooperation between labour and academia.
Breaking the Ignorance Contract: White South Africans’ Recollections of Complicity and Collusion with Apartheid

It has become a commonplace joke in South Africa that one cannot find any white South African who admits to have voted for the Apartheid government. White South Africans tend to produce accounts of their past that present innocence, or at the least, ignorance of how their privilege was premised upon the disadvantaging and oppression of black South Africans. Focus groups were conducted with white South Africans who lived in South Africa during the apartheid years, and they stated their willingness to engage in conversations about their racialisation into whiteness. They were invited to reflect on a) what they in fact did, b) what they chose/preferred not to know, and c) what they now feel they legitimately can claim they did not know about the system and how it impacted the lives of black South Africans while holding their racial privilege in place. Drawing on the emergent field of epistemologies of ignorance, the paper investigates the costs and rewards of breaking faith with “the ignorance contract” that holds white collusion with racial privilege in place. I explore some of the complexities of dealing with the shame and continued self-interest that inhibits the admission of complicity.

Bringing Family Demography in: Class Variation in Family Behaviors and the Implications for Inequality Patterns

Stratification research focuses, traditionally, on the role of families as providing the life conditions for future achievements and opportunities. Studies have highlighted the importance of family structure and family behaviors (e.g., assortative mating) in producing and reproducing inequalities, class position and life chances. Recent changes in family patterns point attention to the interplay between social class and family demography, which is not yet fully incorporated in stratification research. Changes in family behaviors, including family formation and dissolution, fertility patterns and parenting practices, and the economic behavior of women are not uniform across social classes. Studies emphasize the importance of family structure (e.g., the vulnerable position of single-headed families); the economic consequences of divorce or the effect of homogamy on inequality among families. Recently, more attention is given to the contribution of family behaviors (e.g., assortative mating; differential fertility) to the general level of inequality.

In this paper I highlight the importance of class disparities in family behaviors and their consequences to the life chances of individuals. I emphasize in particular the important role of women's educational attainment plays in determining family behaviors, and the various consequences of class and family interaction to the economic disparities between families and gender inequality within families in particular the gendered division of paid and unpaid work. Recent studies, for example, document a higher risk of divorce for the lower classes. Similarly, women's education is related to their work activity and the formation of dual-earner families. These differences further deepen disparities between families and individuals that grew up in different types of families located in different class positions. Taking class variation in family behaviors into account is necessary in understanding the direction of inequalities and how different policies and institutional arrangements may alleviate them.

Cheating Among American University Students: A 30-Year Follow-up Study and a Comparative Study with Chinese University Students

Cheating is an increasing problem on college campuses, made even easier by the advancement in technology which has increased access to information. Furthermore, we are seeing a shift in attitudes toward cheating as well as a change in the definition. Faculty are reporting changes in cheating behavior. This current study reports the results of a 30-year follow-up study on cheating at an American university (Vandehey, Diekhoff, and LaBeff, 2007), as well as comparisons with a comparable sample of Chinese university students. Our findings indicate both cross-cultural differences but also similarities in cheating behavior and attitudes. Chinese students reported a higher incidence rate of cheating on exams, and a greater tendency to neutralize (i.e. justify) cheating. A factor positively correlated with American students cheating is a characteristic related to a cohort effect currently labeled the Millennial Generation or Generation Y students. Our results also point to factors that may be effective in preventing cheating.

How Media Cultivates Body Perception and Sexual Attitudes: The Effect of Television, Magazines, Video Games, and Internet

In the late 1960s, George Gerbner developed cultivation theory to understand how exposure to television shapes individuals’ perceptions, particularly violence in the real world. Research using cultivation theory consistently showed that heavy television viewers were more likely to perceive the world as more violent, even after controlling for negative experiences involving violent situations. Gerbner later extended cultivation research to sex-role stereotypes and sexuality (Morgan and Shanahan, 2010).

Using cultivation theory, the current study explores how different types of media influence individuals’ body perception and sexual attitudes. The media studied are television, magazines, video games, and internet. The sexual attitudes studies are acceptance to hook-up (casual sexual encounter) and rape myths. For the current study, we collected data from undergraduate students at an American university, using an online survey. The data indicate that body perception and sexual attitudes differ by media type consumed. More specifically, we find that (1) controlling for gender and self-esteem, exposure to television, magazines, video games, and internet is negatively associated with individuals’ evaluation of self body image, and that (2) high exposure to television, magazines, video games, and internet correlates to more mythical sexual attitudes and sex-role stereotypes. We will discuss the implications of the results and provide suggestions for improving self body perception and eliminating sexual myths.

Children’s School Achievement and Educational Aspirations: The Role of Parents’ Peer Group As Social Capital

Parental educational aspirations for their children’s educational careers have been found to be affected by the students’ school performance. Some available evidence suggests that parents with lower status background are more susceptible to constraints because of being embedded in less ambitious social contexts and are, thus, less endowed with social capital. These hypotheses are tested with data from the Mannheim Educational Panel Study (MEPS), where participants are primary-school pupils in Germany. Firstly we found strong net-effects of the level and temporal development of the children’s grade-point average on the parents’ educational aspirations, which strongly decreases with increasing parental education. Secondly, aside from the children’s academic achievement, the average aspiration level in the parents’ egocentric network is found to exert significant net-effects on the parents’ educational aspirations. Thirdly, the aspirations in the peer group moderate both the effect of the level and temporal development of the children’s grades on the parental aspirations: Parents with high aspiration contexts are less willing to adapt their aspirations in view of their children’s poor educational performance. Fourthly, the compositional difference in the peer group’s aspiration level between families with different educational status explains their different willingness to adapt their ambitions to their children’s achievement reality completely. Thus, a positive attitude toward education in the parental social network serves as a protection against detrimental effects of poor school achievement and as intergenerational social capital for their children. These results are not consistent with a simple version of a rational-choice explanation of social capital utilization.

Nationalism and Antisemitism in Postnational Europe: A Comparative Analysis of Austrian and English Print Media Debates on the Economic Crisis

Karim Stoegner (Vienna/Lancaster)
Nationalism and antisemitism in postnational Europe: a comparative analysis of Austrian and English print media debates on the economic crisis

The presentation sheds light on the intermediation of nationalism and antisemitism in a cross-country comparative perspective, including Austria and England. By applying Critical Discourse Analysis, print media debates on the current economic crisis are analysed as to how they operate with nationalist and antisemitic discourse fragments.

In mainstream print media, nationalism as well as antisemitism do not generally occur in a brutally exclusivist manner, as openly articulated racist forms of expression, but rather in latent forms, encoded in everyday linguistic practices and routines. Therefore, a broad concept of nationalism and antisemitism is deliberately chosen and the analysis gives priority to everyday modes of inclusion and exclusion. By focusing on discourses around the Self and the Other in the context of the global economic crisis, everyday social communicative practices are problematized in order to trace the role of nationalism and antisemitism within them. This approach draws on the working hypothesis that in contemporary Western societies, extreme forms of open nationalism and antisemitism are not the only force that stands in the way of a society of world citizens, but also unnoticed but well-practiced routines of exclusionary identification in everyday life. These routines subtly refer to a horizon of understanding, an archive of ideological habitus, which by tradition includes nationalism and antisemitism.

How to Avoid “Normal” Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process

This communication aims to describe how two high-risk organizations are operated, i.e. nuclear power plants and railway operation system. These technologies are so complex that ambiguous situations often arise. Organizations’ response to uncertainty usually relies on procedures. Despite a huge amount of technical documents, applying a procedure is not such an easy task to perform. The reason is that one must fit the procedure to the situation and perform it as precisely as possible. As they appear, “normally disturbed situations” (Journe, 1999) seem to be quite unique. Due to systems’ complexity, the process may be in different phases, workers teams may be available or not…Thus coping with technological complexity and uncertainty implies operators to make “difficult tradeoffs and decisions about how much risk is acceptable and even how to measure the risk” (Levenson et al, 2009, 240). Rather than focusing on major failures, the communication zooms on day-to-day activities, on how operators make technical decisions that try to encompass all the demanding issues of high-risk systems (safety, system availability, workers’ safety, environmental protection…).

Both organizations studied are characterized by a strong technical and social division of work: high-risk systems operators turn to be specialists in their field (production, safety, maintenance, etc.). Yet, these specialists are interdependent regarding the organizations’ functioning: organizational reliability thus relies on various channels such as interactions between humans and techniques (Porro, 1984). Our empirical results describe in depth the nature of arrangements and negotiations made within and between occupational groups to articulate the work. To increase decision-making rationality, professionals communicate with each other. They develop argumentation and explicitation practices to make their point visible and to contribute to the collective bargain about technical decisions that have to be made. In sum, a major way to cope with complexity relies on communications performed in situation, especially during technical points-of-view confrontations.

Future Visions in Social Milieus Among the Middle-Class of Nairobi and Mombasa – Empirical Results and Theoretization of Future Concepts

In this paper I will focus on own research on future visions in the middle classes of Nairobi and Mombasa. These results will be the basis for a theoretical interpretation of these views on future. The various future visions among the different social groups (=milieus) in the middle classes of these two Kenyan cities point at certain social developments and can thus be interpreted as paradigmatic tendencies in the present society. While the social context of the milieus and their future visions might reflect global tendencies like forms of urbanisation they are at the same time highly local as they are adaptations to specific conditions - as the term 'glocalization' (Robertson) suggests.

Different social milieus in the middle classes of Nairobi and Mombasa have certain lifestyles and related future visions which reflect different tendencies of the contemporary social world. Kenya is a very interesting case study as the country has undergone considerable change and an increased integration into global structures in the last 20 years while it is still a developing country. Especially the differences in future orientations of East Africa’s dynamic economic center Nairobi and the old multicultural town and up to make can reveal a variety of future references. Thus I will demonstrate by paradigmatic examples how future orientations of milieus in urban Kenya reflect specific social developments and how they can contribute to the theoretical interpretation of sociological future concepts. This way the paper even tries to (re)construct social theory from a specific perspective of the Global South.

Social Milieus in the Middle-Class of Nairobi - Lifestyles, Attitudes and Future Visions Beyond Homogeneity

One of the key questions in the debate on (political) orientations of middle-class is how these groups develop their attitudes. To answer this it helps to consider political positions in their heterogeneous sociocultural contexts among the different groups of the middle classes. As an example I will take a look at some social milieus, their lifestyles and their future visions in the middle-class of Nairobi – with a look at milieus in Mombasa as a contrast.

The reconstruction of milieus in the specific context of Kenya’s capital aims to demonstrate how a variety of factors influences the lifestyles of Nairobians and that there are heterogeneous groups with different lifestyles in the middle income strata.

Future visions are an excellent indicator for lifestyles and corresponding orientations of milieus to see how they integrate these visions into their daily practices. In Nairobi developed over the last decade a milieu of Young Urban Professionals between 20 and 35 years who have a consume oriented lifestyle and who are bound to the city. They are usually not driven by religious or traditional values.

So this paper will provide a sketch of exemplary milieus, their life styles, their living conditions and their future visions. Another relevant question might be how different milieus look for solutions or demand different actions concerning the threat of the terrorist terror group Al Shabaab whose last attack shook Nairobi in September 2013. All aspects mentioned will contribute to draw a complex picture of the different social milieus in the Nairobi middle class and their divergent lifestyles.

Morality in Context: A Multilevel Analysis of the Relationship Between Religion, Governance and Values in Europe

The exact relationship between religiosity and moral values is understudied, and it is so far unclear what the process of secularisation means for the morality of Europeans. Attitudes to religiosity and the visibility of religion, must be seen in light of whether religion’s presence in the public sphere strengthen moral communities and identities, or merely highlight moral differences.

From Haidt’s (2012) moral foundations theory and Norris and Inglehart’s (2004) existential insecy theory, we know that religion is associated with traditions and conservative values as well as low levels of political and economic development. One question is whether religion can act as a substitute for well-functioning secular authorities where these are absent, or if it simply has an additional effect on morality that is independent of the quality of governance. Another question is whether the relationship between religiosity and morality changes as the average citizen becomes less religious, and as religious diversity increases.

Using data from four waves of the European Values Study (EVS) 1981-2008, we analyze attitudes to personal autonomy and self interest in a multilevel model of 48 European countries. Results show that religiosity is most associated with moral values that concern personal and sexual autonomy, that individual religiosity is more associated with morality in countries with high levels of religiosity and that religious context is only negatively associated with self-interest in countries with low quality of governance.

Included But Still Not Equal? Board Interaction and Gender Segregation

Abstract

Included but still not equal? Board interaction and gender segregation

Norway was the first country in the world to pass legislation specifying gender representation on company boards of directors. The Norwegian Parliament passed a new regulation in December 2003 that required at least 40 per cent of each gender on company boards. Before the reform, law opponents claimed that the new women directors would not be able to, or allowed to, participate fully in board decision-making; instead their role would only be window dressing. Based on a questionnaire sent to all directors in public limited companies in 2009, the article studies this allegation.

Results show that women directors report less ability to influence board decisions than men directors. Moreover, women to a lesser extent feel they are part of the inner circle on boards, where such phenomena are perceived to exist. These tendencies also hold when we control for a lot of other independent variables such as board role, ownership interest, number of directorships and occupation. Hence, the quota regulated boards show tendencies of hierarchical gender re-segregation.

Wearing the Veil: Hijab, Islam and Job Qualifications As Determinants of Social Attitudes Toward Immigrant Women in Norway

Immigrant women are a particularly vulnerable part of immigrant population. In this paper we analyse negative attitudes toward immigrant women in Norway. We focus on immigrant women’s formal job qualifications, their religious background and wearing of Hijab— the headscarf that is sometimes used by Muslim women. Using survey-embedded experiments (N=1250) we are able to analyse the net-effects on attitudes of job qualifications, Islamic religious background and Hijab. The results show that natives have more negative views of Muslim women that wear a Hijab, but that the negative effects of Hijab are reduced when a woman wearing it has higher education. With a single exception, the results also show that Muslim background in itself (i.e., without Hijab) does not have any strong effects on attitudes of natives toward immigrant women. The results are discussed with a point of departure in cultural threat theories and current socio-economic situation in Norway.

Provincializing Postsecularism: Critical Reflections On New Western Civil Religion

This paper aims to denounce the provincialism of the European postsecularism, considering that an insufficient pluralism was often invoked by European Union in order to justify the cultural failure of her integration’s process. The Postsecularist orientation risks, if applied without an adequate sociological and inter-cultural reflection, to become a new civil religion. In the first part I will bring up the consequences of this critical reflection on the actually relation between State and religion in the specific context of Italian society, lacerated between a public secularism and a private Christianity. In the second part, I will try to apply to the European postsecularism, as discursive regime of the European identity, two critical hypothesis emerged from the Post-colonial Studies: the suggestion to “Provincialize Europe” and the critic to her “Cultural Hegemony”. Provincializing Postsecularism does not mean, of course, repudiate or abandon secularism, but thinking about how to renew it. In Italy the transition to post-secularism can not be seen as a simple historical transition, but also as a case of translation: translation of plural memories, religious tradition, desires of believers. In the third part, I appeal to the hermeneutic tradition of Paul Ricoeur, trying to connect a new translation of postsecularism to a new phenomenology of the Italian believer, hoping that the recognition of the religious pluralism can contribute to the constitution of a lay European political community.

Recognition and Gender Violence: Making Social Unjustice Visible

The paper tries to develop a non-conventional narration of gender violence through the description of the career that category of recognition has had both in social sciences and transnational feminist debate. In the first recognition made visible and therefore politically prosecuted asymmetries inherent models of socio-cultural representation of gender relations, in the second it redefined the relationship between equality and difference in the broad debate of human rights. The combination of these results shows that violence against women can be otherwise told provided reading misrecognition as severe form of social injustice.

STRECKER, DAVID* (University of Jena, david.strecker@uni-jena.de)

How Market Economy Did Away with Violence: A Liberal Story and The Ugly Truth of Contemporary Slavery

The history of power and violence in modernity has traditionally been conceptualized within a nation state-framework and along notions of centralization: While socially dispersed in pre-modern times, power and violence had later be-
come increasingly concentrated in the political realm. In the course of functional
differentiation, the core feature of modern societies, a state apparatus developed
which organized positions of power and ultimately monopolized the legitimate
use of violence. Violence, thereby, more or less disappeared from all other social
spheres which turned into arenas of predominantly peaceful cooperation. With
regard to this process, this book is facilitated by the alleged ironic func-
tions of market transactions: Contractual relations and trade are premised on
trust and, thus, do not allow for manifest violence in the economic realm.
Accordingly, it has been claimed that capitalism was the driving force behind the
abolition of slavery. However, violent labour relations have not ceded to exist.
In fact, contemporary slavery is a pervasive phenomenon subjecting millions of peo-
ple to privatized violence. These papers aims at making sense of this situation by
discussing the relative merits of the claim about capitalism's civilizing effects on
labour and relating it to contemporary slavery from the perspective of a world so-
ciety shaped by economic globalization and the transformation of state authority.

The Transition from School to University: Pressure and Coping in Catalonia (Spain)

In this paper I present results from a study about university transitions in Spain.
Young people face uncertainty, precariousness and discourses that individualize
structural problems currently in most Western societies. Spain suffers, moreover,
from the severe effects of economic crisis and high unemployment, accompanied by
severe cuts in the education system and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

The TEM scheme in Volos:
The case study that will be presented is located in the Greek city of Volos, facing
the austerity policies (creating a lack of disposable income in the official currency).

Uses Of Social Theory In Comparative Religious Studies: Assessing Chidester's Social Redescription Of Religion In South Africa

In analysing “sociality” (the formation of inclusive or exclusionary collective
identities), materiality (gendered bodily performances of ritual, sensory experi-
ences and the desire for material objects) and “exchange” (communist or capitalist
economic exchanges in rituals of gift-giving and expenditure) as three aspects of
religion within local and global contexts, David Chidester has used the social
theories of Durkheim, Bataille, WEB Du Bois, Weber, Marx-Adorno-Horkheimer,
and others. The purpose of this paper will be to assess what we have gained from
Chidester's use of such social categories to redescribe religion in South Africa
within a global context, by relating Wild Religion: Tracking the Sacred in South
Africa (2012) to his preceding oeuvre of twenty years, particularly Authentic
Fakes: Religion and American Popular Culture (2005), Savage Systems: Colonialism and
Comparative Religion in Southern Africa (1996) and Religions of South Africa (1992). In
line with the aim of this panel I will, in assessing Chidester's social redescription of
religion in South Africa within a global context, reflect on the legitimacy of using
etic vis-a-vis emic categories.

Competing Narratives of Modernity and Muslim Middle Class in India

The last decade has seen an increased interest the "phenomenal rise of the
Indian middle class". With economic liberalization since the 1990s, the entering
of multinationals into the Indian market and the simultaneous process of a rapidly
growing transnational media and consumption culture "new economies of desire"
have developed. Boundaries between 'traditional India' and the 'modern West'
have been broken down and a new national self-image as a modern global player
has emerged. Public Indian discourses typically make a correlation between the
growing middle class and the national pride of modern India. While increasing
consumer choices, and western connoted values are important symbolic markers of
middle class membership, the latter is linked to an expressive and confident af-

Emergence of the Interns’ Collective Actions

Students’ self-esteem in their internship and their resentment towards the factory manuality during their internship. These two factors contributed to the injury of disabled people or disability, and there were very few discussions addressing the individual problem instead of a social problem. Finally, disabled people represented from their lives in school. Regarding the first reason, those student interns from ‘the handicapped’ (cán fèi) to ‘the disabled people’ (zhàng ài zhì). Third, presentation of disability in the education system. This paper uses content analysis of Taiwanese-dialect cinema.

This paper examines the cultural warfare over national languages through investigating the rise and fall of Taiwanese-dialect cinema, which was identified as a counter-Hegemonic project against the monolingual ideology in Taiwan. How did Taiwanese-dialect cinema manage to rise in the 1950s while the émigré regime KMT officially banned the usage of Taiwanese-dialect? Even more curious, why did the dialect cinema suddenly die out ten years later? In this paper, I will argue the Taiwan filmmakers intentionally resisted KMT’s language policy through skilfully acquiring overseas capital to produce dialect films, which were highly popular among overseas Chinese in Southeast Asia. In the climate of Cold War, the KMT on one hand had to maintain legitimacy domestically, and fought against the Communist Party of China (CPC) to win over overseas Chinese on the other. The unexpected success of Taiwanese-dialect cinema was turned into KMT’s asset to secure overseas Chinese support, and hence the dialect filmmaking was tolerated. After discovering other ways to win over overseas Chinese, the KMT manipulated regulations on filmmaking and initiated a national language campaign to stigmatize the usage of Taiwanese dialect, all of which led to the demise of Taiwanese-dialect cinema.

This paper looks at the protests at both collective and individual levels taken by student interns in Chongqing in the summer of 2013. Drawing on a 5-month research, I set to secure overseas Chinese support, and hence the dialect filmmaking was tolerated. After discovering other ways to win over overseas Chinese, the KMT manipulated regulations on filmmaking and initiated a national language campaign to stigmatize the usage of Taiwanese dialect, all of which led to the demise of Taiwanese-dialect cinema.

The Representatives of Disabled People in Elementary School Textbooks in Post-War Taiwan

Existing literature has primarily investigated the representations of class, gender, ethnicity, and sexuality in textbooks. However, few studies focus on the representation of disability in the education system. This paper uses content analysis to explore the frequencies, categories, naming and portrayal of disabled people in elementary school textbooks in Taiwan, from 1952 to 2003. From a disability studies’ viewpoint, we explore the ableism ideology in the textbooks. First, disabled people are underrepresented in the textbook. The disabled people represented in the textbooks were mostly people with physical disabilities; people with mental illnesses were ignored. Second, the naming of people with disabilities change from ‘the handicapped’ (cán fèi) to ‘the disabled people’ (zhàng ài zhì). Third, people with disabilities were usually viewed as “the other,” who needed to be helped or who inspired “normal” people. Fourth, disability was defined as an individual problem instead of a social problem. Finally, disabled people represented in textbooks were mostly voiceless. There was no discussion on the world view of disabled people or disability, and there were very few discussions addressing the diversity and multiculturalism of disabled people.

Emergence of the Interns’ Collective Actions

This paper looks at the protests at both collective and individual levels taken by student interns in Chongqing in the summer of 2013. Drawing on a 5-month participant observation of the protesters’ school life and their internships in the electronics manufacturer YD, this article examines the favourable factors, features and outcomes of the interns’ collective actions. The author first argues that the emergence of collective action by these student interns could be attributed to the injured self-esteem during their placement and the culture of solidarity emerged from their lives in school. Regarding the first reason, those student interns from the occupational school had higher self-respect and expectations for the future than their counterparts of previous generations. Meanwhile, the student interns have encountered “coercive discipline” which aimed at eliminating students’ humanity during their internship. These two factors contributed to the injury of students’ self-esteem in their internship and their resentment towards the factory managers. Second, it is found that the students’ collective actions tended to take the form of violent fighting rather than strike due to their previous school experiences. The students usually resorted to violence such as fighting to resolve individual or collective disputes in their school. Third, the author suggests that school violence not only determined their action repertoire, but also help to nurture a sense of solidarity and brotherhood, which in turn provided a supporting network to students, particularly to those who lacked support from their family and teachers, favouring their workplace resistance. Fourth, the student interns’ collective actions tend to be generally scattered and transient. Last but not least, most students who participated in the collective actions were later expelled from factories and schools, negatively affecting their prospects after the internship. This paradoxically consolidated their sense of solidarity, sowing the seeds of future resistance against capitalist exploitation.

The Commodification of Education and Labor in China

This article reveals the mechanism involved in the mutually complementary commodification of education and labor, and the results of this commodification. Emphasizing institutional factors, this article argues that the state plays a dominant role in the combination of the two types of commodification. It also scrutinizes the impact of this dual commodification on student workers—deskilling, alienation, fragmented social lives, and industrial injury—as well as their response.
Mosque associations represent the social and organisational core of Muslim religious life in Germany. Their primary goal is both the practice of religion and the transfer of religious knowledge to its members, irrespective of their specific shape (e.g., organisation affiliation, ethnic composition, etc.). More recently, sociologists draw attention to the increasing multifunctionality of the mosque associations, which also offer leisure activities and courses with an orientation towards the German society, like e.g. German language courses. Previous studies and my own research suggest that this development is a result from both internal changes (demographic change, unemployment among members) and changing expectations of their environment, which are closely linked to the widespread integration debate.

A closer look on the expectations of the environment reveals a paradoxical situation. On the one hand Muslims are expected to open up for the German society by offering services which go beyond religious activities and support the socio-economic advancement of their members. On the other hand authorities and other urban actors are sceptical about additional services within the mosques as they fear that the infrastructure might increase segregation of the Muslim population and thereby endanger integration.

The present paper examines how mosque associations deal with the conflict between their own plans and the contradictory expectations of their urban environment. I have conducted case studies about mosque building conflicts in several cities of North-Rhine-Westphalia. The empirical findings are based on expert-interviews with representatives of Muslim communities and churches, neighbourhood associations, administrations and politicians. Furthermore, I have analysed newspapers and different documents (statutes, city council records, declarations) and I did participant observation in council meetings and neighbourhood assemblies. A case comparison shows, from the bottom-up-perspective, how different actor-constellations and local systems of relevance affect the development of the local Muslim organisations.

In Japan, the number of people who moving to rural areas (or the countryside) from urban areas (or metropolitan area) is currently increasing. In this presentation, I will examine this phenomenon by using the idea of "lifestyle migration", and then discuss the relationship between the decision to migrate and enhanced quality of life.

In foreign countries, "lifestyle migration" means moving to elsewhere in search for a better way of life (Benson & O'Reilly 2009). This idea is associated with a new form of international migration, unlike the case of internal migration in Japan. However, "lifestyle migration" occurs as result of self-reflection among these migrants, and consequently, this idea can be adapted to describe Japanese who move to rural areas from urban areas in Japan.

In order to test this theoretical explanation of the relationship between generalized trust and democracy at both individual and nation levels are accurate, using multilevel SEM shows that predictions of non-linear correlation between generalized trust and democracy, I analyze the 2005 SSM (Social Stratification and Social Mobility Survey in Japan) Data and 2005 World Values Survey Data. An analysis of the new female role in the society in these family changes. Increase in the number of divorces and a decrease in the only male breadwinner family. There was also an increase in the number of families with a female head, not restricted to low income groups. It is important to mention the impact of the new female role in the society in these family changes. Increase in the women's schooling, decrease in fertility rates and the female participation in the labor market influenced in a significant way the family relations.

The main objective of this study is to analyze urban families in the last 50 years, using data from the Brazilian Demographic Census. The analysis consider different dimensions: the impact of changes in gender relations with respect to familiar responsibility, effects of family income, status of marriage/union, the age and schooling of the head of the family and regional inequalities.

In spite of the changes in the family arrangements, it is worth mentioning the maintenance of the family ties in the Brazilian society. These changes in the Brazilian families are though more complex than the changes in the developed countries due to the strength of patriarchal values that might be a deep-seated characteristic of the Brazilian culture.
The Role of Family Caregivers and Their Working Lives: Convergences and Divergences Between France and Japan

This paper presents the method and results of a comparative research on family caregivers and their professional trajectories in France (Ile de France) and Japan (Osaka).

The aim of the research is to chart two kinds of trajectories in a person’s life: professional and of caregiving, and to examine their interdependence. In the current context of the prolongation of life expectancy, a person can provide care several times in different periods of life, or care for more than one person in parallel at the same time. The care provided may be for different causes of frailty. We should therefore look into the temporality and the global view of the caregiver’s life without limiting the study to a certain type of frailty.

We rely upon a sequential analysis of data on caregiver’s trajectories. We also collect care professional networks developed around the caregiver by individual participating in the care, including care for the caregiver. The typologies of professional trajectories are analyzed in relation with variables such as socio-demographic characteristics of the caregiver and care-receiver, types of care networks, etc.

We try to study the different configurations that come out for Ile de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

The Islamization of Leisure in Indonesia (A Comparative Analysis of Aceh and West Java)

In this culturally unequal world, Islam is perceived as a minority civilization which is acted upon by the dominant “western” civilization. The influence is allegedly reflected in various spheres such as leisure in which a “division of labor” between leisure and work come forth. The recent revitalization of Islam portrays a more assertive Islam in society with the development of Islamic leisure in addition to Islamic economy. The case of Indonesia indicates that there is a process of Islamization of leisure with the application of Islamic values such as the prohibition of “haram” or non-“halal” food and liquor, “khalwat” (close proximity between men and women), gambling as well as the obligation to comply with Islamic dress code. The implementation of this process can be seen as a colonization of life-world along with economy and state in which society emerges as a new arena and theater. A comparative analysis between Aceh (a Shariah province) and West Java (a non-Shariah province) will shed lights on various social movements that support or reject the Islamization of leisure.

We try to study the different configurations that come out for Ile de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

The Power of Women's Representation in Local Government in Indonesia

In this presentation, I discuss researchers’ relationships with the research object and its transformation in empirical sociology by examining “danchi” (housing estates) studies conducted by Japanese sociologists.

The Japanese housing policy system was quickly established in the early 1950s, and the reinforced concrete housing complexes stimulated journalist interest. Most influential researchers in postwar Japanese sociology began studying these housing estates during the mid-1950s and 1960s. One reason was that social surveys involving random distribution of standardized questionnaires to individual respondents were compatible with the new housing form. Housing estates became experimental fields of social policy and social research.

Urban sociologists attempted to comprehensively grasp the lifestyles and social consciousness of housing estate residents. Social psychologists introduced sociometry to describe social relations evident in these housing estates. Researchers often referred to the term “Organization Man” by William Whyte (1956), with a Japanese translation published in 1959. According to Whyte, white-collar residents in the newly developed suburban residential areas formed active neighbor relationships. Kokichi Masuda, a family sociologist, emphasized the contrast of the rarity of neighbor relationships in Japanese housing estates with what the norm was in the United States.

The image of housing estates as pictured by social researchers transformed around 1960. Studies of residents’ associations showed that housing estate communities were being formed through cooperative solutions found for residents’ common problems. Whether or not a housing estate was formed as a “community” depended on how the residents related to the space. This change was also reflected in the relationships between the researchers and the respondents in that the distance between them when using the standardized attitude and opinion survey was lost. The change in the image of housing estates in the 1960s can be said to overlap with a turning point in social research.

Between the War and Consolidation of Communist Power: The Forgotten Social Research in Poland in the Second Half of the 1940s

Opinion commonly held is that empirical social research in Communist Europe resurfaced only as late as in the second half of the 1950s, during the post-Stalinism ‘ thaw’. However, in some countries like Poland, Czechoslovakia and Hungary, social research was possible immediately following the WWII. It did not last long though. Consolidation of Communist power delivered blow to this research in the late 1940s.

In this paper I discuss how in the years 1946 – ca. 1950 sociologists in Poland took an advantage of opportunity to study the society in which they lived. Polish society has just came out from the war and was about to enter a process of political ‘reconstruction’ under the leadership of the Soviet-style Communist party. Following the war sociologists immediately started to investigate social and psychological effects of the war, post-war migrations, new communities in the former German territories, ethnical relations (especially Polish-Jewish), and social mobility as a result of the war and the political changes. Fieldwork and questionnaire were methods of these studies. However, politically sensitive issues, e.g. mechanisms of political power and public opinion were banned by the authorities as topics of sociological inquiry. Later in the 20th century the post-war social research was almost forgotten and only now is being rediscovered by social historians.

Housing's Contribution to Poor Health Among Aging Residents in Informal Peri-Urban Communities in Texas: A Mixed-Method Geospatial and Case Study Approach

The data analyzed in this paper were collected through a two-part mail and in-person survey of 630 households in two peri-urban, low-income, informal settlements in central Texas. The survey documents housing conditions and needs in these communities where a significant portion of the population is Hispanic, elderly, and low-income. Analysis of the survey data interrogates the links between chronic illness and poor dwelling conditions in an aging population. To better understand the intersections between aging, health and low-income, self-built housing we analyze detailed data on reported problems with the dwellings and incidences of illness and disability. We present descriptive findings in the following three topic areas: 1) specifics of dwelling structure; 2) perceived problems with the house design and structure; and 3) resident morbidity problems, physical disabilities, and how these intersect with the fabric and design of the dwelling unit. In addition, we use Geographic Information Systems (GIS) analysis of the location and geospatial characteristics of the communities to map how residents’ access to health and social services varies relative to those residents not living in the urban periphery. This analysis allows us to identify appropriate rehabilitation initiatives that will lead to home and health improvements in informal, peri-urban communities.
the last two decades, the academic interests about the relation of local politics and gender have been on rise and policy-makers who are aware of this fact have been paying serious efforts to bring local actors to the front to increase women’s political involvement. Since the 2000s, Turkish government has charged the various branches of politics, including the municipalities and mayors in the scope of this research, in enhancing women’s participation particularly in local politics. However, recent studies and statistics reveal that neither the number of women at local level politics have been increased either these responsibilities have been fully acknowledged by the local actors in Turkey. It is assumed that, as women representatives, female mayors would contribute to increase women’s political participation in local politics and be more assertive to fulfill the related responsibilities to support women’s involvement into local political relations. Thus, in the case of 2009 local elections in Turkey, this study aims to find out to what extent female mayors can contribute in enhancing women’s political involvement at local level. In the next step, this research will try to analyze the related discourse and activities of female mayors who were selected in 2009 local elections in Turkey by in-depth interviews.

The Controversy: Family Separation and the Immigration Law in the U.S.a

This study examines whether the Courts in the United States are recognizing the provisions of the UN Convention on the Rights of the Child as an international customary law even though it is not ratified by the U.S.A. Drawing on multiple primary sources, including the work of scholars and legal professionals the article explains the deportation of parents and discusses the family separation through immigration procedures and human rights approaches. The article then presents the results of recent court opinions, and compares court decisions. It concludes that some courts have made significant progress toward family integrity and for the best interest of the child, however some court decisions rejected to recognize the Convention and gave priority to the State interest and deported numerous parents even though their children are citizen of the U.S.A. On the other hand, this article also identifies a need for further improvement, which can be accomplished through the contributions of national and international organizations.

Care Migration in Asia: A Comparative Study

As some countries in Asia develop economically and experience major demographic challenges such as persistent below-replacement fertility, the issue of immigration and care provisions emerges. It is particularly important in the Asian context where people have to rely on the market in the absence of effective welfare state. This Asian situation is called “liberal familialism.” In this paper, we try to answer the following questions relating to care migration by drawing on data from China, Japan, South Korea, Taiwan, Singapore, Thailand, and Vietnam: Whether and how care provision is mediated by international migration or internal migration? What are the working conditions – are the migrant care workers documented or undocumented? Are they protected or covered under the local employment laws? To what extent are they allowed to immigrate to the host countries? What are their ethnicities and nationalities? What is the history of employing care workers in different countries – for childcare and/or for elderly care? What are the primary sites at which care is provided (for example, in the households via marriage migration or in institutional spaces via healthcare migration)? What are the challenges faced by sending countries and receiving countries? Finally, what are the ways in which care migration relates to various forms of social stratifications in Asia – in particular, gender, class, ethnicity, and urban-rural inequalities?

Lateral Networks of Homeowner Associations and Civil Society Building in Urban China

Civil society organizations are crucial for the development of civil society, because these organizations teach citizens democratic practices on the one hand, and constrain the power of the state on the other. Recently, lateral networks of homeowner associations are being formed in many Chinese cities. While not being recognized by the authoritarian state or even faced with potential political risks, these networks are playing an ever more important role in facilitating homeowners’ collective actions to defend their private property rights. Existing literature tends to understand homeowners’ collective action as a reactive response to counteract the powerful real estate developers and their management agencies in a very mature housing market. But based on interviews, participant observations, and online discussions of the lateral networks of homeowner associations in Beijing, Shanghai, and Guangzhou, this study argues that these networks are proactively adopted as important infrastructures for the development of civil society in urban China. Driven by the ambitions of promoting the development of civic organizations in China, the activists use homeowner associations as the most practical way to make such attempts. They not only deal with immediate material interests concerning housing and neighborhood management, but also strive for the participation of member associations on a regular basis and for the protection of member associations. This study attempts to explore homeowner activists’ motivations as well as their strategies and tactics to establish and run such lateral networks. It has profound implications for state-society interactions and civil society building in contemporary urban China.
country and facilitate return as per the willingness of migrant nurses, and finally, signing of nurse-mobility partnership agreements with the important destination countries, such as, UK, USA, Middle Eastern countries, Ireland and Australia.

Public-Private Partnerships and Micro Health Insurance Schemes in India: A Sociological Perspective

This paper is an attempt to look at the socio-economic features, and health seeking behaviours of the lower income group and their involvement in the functioning of the micro health insurance schemes. The model micro health insurance as a mechanism of social capital is examined its strength to create a good “health for all”. In other words, it focuses on the importance of public (government) intervention to create a feasible health care systems with the partnership of private both for-profit and non-for-profit sector, so that, the micro health insurance schemes profitable for the vulnerable sections of society. More precisely, practicable schemes for better health can be created by the intensive involvement of public and private, by which willingness-to-pay for health can be possible by the lower income groups.

Despite increasing acknowledgement that social capital is an important determinant of health and overall well-being, empirical evidence regarding the direction and strength of public-private linkages in the developing world is limited and inconclusive. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of experiences with different health financing methods.

Currently, the health sector is unable to meet the growing needs of the population and is severely financially constrained. The study estimates the impact of the program on trust and cooperation in rural communities. Rashtriya Swasthya Bima Yojana (National Health Insurance Programme) is the government initiative to provide quality health facility to the lower income groups. It is important to emphasize that the study does not separate the direction of causality between trust and cooperation. The analysis treats both aspects of social capital equally in the impact study public and private inter-linkages for better health facilities of the Indian society.

Ordinary Sociologists

Until the 1990s the sociology department of a public university in Indonesia strengthened their college teaching staff by recruiting college seniors with good academic achievements as part-time teaching assistants. After obtaining their bachelor’s degrees in sociology some of these sociologists would continue to teach on a part-time basis while waiting for an opportunity to be recruited as a full-time faculty member. For most of them, however, the wait was in vain, among other things because there were very few vacancies available, and also because the eligibility standards for becoming a full-time faculty members were gradually raised. After teaching part-time for a number of years – while, in some cases, working towards a masters’ degree – most of them finally sought and obtained full-time employment at other public or private higher education institutions, where they continue to teach sociology.

The practice of recruiting college students as teaching assistants was eventually discontinued, Factors such as centralization and bureaucratization within the university, the tightening of recruitment criteria for teaching staff at colleges in compliance with national standards, and the application of efficiency criteria forced the department to abandon its policy.

This paper, a case study of sociology teaching, describes the biographies of a selected sample of former teaching assistants in sociology – their social backgrounds, present social statuses, academic performances and careers. The life history data are based on depth interviews with informants who were part-time teaching assistants recruited in the 1990s, are still working as academics at institutions of higher education outside their alma mater, and are still teaching sociology.

For the study were also based on interviews with on-campus resource persons, and on the examination of relevant documents.
less couples, indicating that the meaning of parenthood and the norm of child-
birth have changed in the post-Confucian agrarian era. The burden of child care
and education has exacerbated couples’ motivations to become parents, partic-
ularly among dual-income families. However, childless Koreans may not be a ho-
genous group. Some couples remain involuntarily childless due to infertility, and
others simply delay having children. In this study, we categorized childless
married Koreans into three groups, voluntary, involuntary, and delayed, and ex-
amined the factors associated with each group.
Data came from 553 childless married Koreans who had been married at least
for three years using quota sampling in metropolitan Seoul. We conducted
multinomial logistic regression to identify the individual, attitudinal, and marital
factors associated with participants’ membership in each of the three childless
groups using involuntary childlessness as a reference group. Both the voluntary
and delayed groups were more likely to perceive advantages of childlessness, to
put less importance on religion, and to have less intention to adopt a child. How-
ever, other factors were differently related to the voluntary and the delayed groups.
Specifically, attitudinal characteristics were significant among the voluntary group
while marital characteristics were significant among the delayed group. The vol-
utary group was more likely to have negative attitudes toward parenthood and to
report a lower ideal number of children compared to the involuntary group. The delayed
group was more likely to be dual-incomers and to report a shorter length of marriage compared to the involuntary group. Our findings suggest that
childless couples may not be a homogeneous group in Korea. It is worth noting that
there are differences in attitudes towards parenthood and marital characteristics
depending upon the childless group.

US Retirement Migration to the Philippines: Reasons and
Explanations for Later-Life Migration

Studies of retirement migration in the United States often focus at the national
level, and there is comparatively little information about the retirees who cross
international borders in their search for new homes. Retirement migration flows
are unusual in that the late-life migrants select destinations in less-developed
countries, contrary to the general pattern of migration from poor to rich coun-
tries in search of jobs, higher incomes and a better standard of life. This study
has examined the reasons for retirement migration from the United States (US) to
The Philippines using data collected from different locations in The Philippines.
A non-random sample of 141 US retirees was surveyed. The findings identified
four major reasons for migrating to Mexico: financial circumstances, the natu-
ral environment, a sense of community and friendship, and finding life/sexual
partners. While these relocations contradict much taken-for-granted and popu-
lar knowledge about migration patterns around the world, they have important
implications for the ways of life, social relationships and welfare of the migrants.
More in-depth multidisciplinary studies are needed to increase understanding of
this evolving phenomenon.

Becoming Father, Doing Fathering: How Gay Men’s Practising of
Relatedness, Intimacy and Care Disrupts Normative Constructions of
Families

Fatherhood is frequently conflated with parenthood for any man who begets
children. Fathers are typically assumed to be involved parents as ‘natural’ out-
comes of biogenetic relationships with children. Drawing from the findings of a qualita-
tive research study in this paper examine the ways in which the gay men considered
distinguished between biogenetic relationships and the doing of fathering
and parenting through reflexive negotiation of expected or actual roles and involve-
ment with the lesbian mothers of their planned or current donor-conceived chil-
dren. The paper highlights three ways in which multiple parenting models based on
cooperative nonsexual reproductive relationships between men and women, and
intimate same-gender relationships, disrupt normative constructions of fam-
ily. Firstly, such disruption occurred through the men’s deliberate separation of
biogenetic fatherhood, motherhood and parenthood from the doing of parenting in
ways that suggest relationships with children can be flexible, negotiable and
centred on practices of involvement rather than biogenetic relatedness. Second-
ly, disruption occurred through the men’s separation of the doing of father and
mother from gendered assumptions about parenting roles; they performed both
fathering and mothering. Thirdly, the men disrupted the assumption connecting
fathering and mothering, and to parenting with joint residence through the de-centering
of ‘home’; neither fixed nor static, ‘home’ was attached to relationships, not plac-
tes. Troubling the taken-for-granted primacy of heterosexual two-parent family
forms, legal relationships between parents, legal and biogenetic relationships
between parents and children and co-residence as benchmarks operating to reg-
ulate families, the men’s stories open (discursive) spaces for reconceptualising
possibilities for queer fathering, mothering and parenting beyond heteronor-
mative understandings of ‘proper’ families. Within a context of escalating family
transformations in an increasingly complex society, thinking and talking about
new forms of practising relatedness, intimacy and care in ways that are expansive
and generative will open up rather than shut down possibilities for all families.

RAVazzini, LAURA (Université de Neuchâtel)
A Longitudinal Perspective on Quality of Life in Times of Crisis:
Switzerland from the 1990s to Nowadays

During the past twenty years Switzerland experienced three major recessions
and periods of economic slowdown: the prolonged and deep economic stagna-
tion of 1992-95 – the country’s most pronounced recession of the post-war pe-
riod – and the comparatively mild two recessions of 2002-03 and in the wake of
the global financial economic crisis of 2008-09. During these periods of economic
crisis, unemployment and poverty increased, particularly during the crisis of the
1990s, when unemployment soared from its previously extremely low level. The
proposed paper aims to explore the consequences of recessions and economic
downturns on various dimensions of quality of life by comparing the three histor-
ically distinct periods of economic stagnation.
In order to analyse how quality of life has evolved since the early 1990s, we
use various longitudinal databases, notably the Swiss Labour Force Survey (SLFS,
available from 1991 onwards), the Swiss Household Panel (SHP, available from
1999 onwards), and the Swiss Statistics on Income and Living Conditions (CH-SILC,
available from 2008 onwards). Various indicators of quality of life, poverty, depriva-
tion and inequality, as well as of subjective well-being will be calculated in order
to measure and compare quality of life during different recession periods. Our
empirical analysis will explore the impact of economic crises for different popula-
tion categories such as young adults and retirees as well as for various quality of life domains (objective and subjective indicators). First results suggest negative crisis impacts on quality of life and sub-
jective well-being particularly for specific vulnerable population groups.

Being Dad or Mum? about Traditional Parental Roles from the
Perspective of Polish and Swedish Fathers

Parenthood must be considered as one of areas within which reproduction of
gendered practices occurs. In my paper I will try to show how Polish and Swedish
fathers understand traditional parental roles, how they perceive biological and
cultural differences between motherhood and fatherhood, and how they think
about gender equality within the household. My paper is based on 52 in-depth
interviews conducted with Polish and Swedish fathers in 2012 and at the begin-
ing of 2013. It is a part of broader research project on fatherhood in Poland and
Sweden. Interviews concerned men’s experience of parenting and are analysed
in the institutional and social contexts of both societies. In my opinion these con-
texts are extremely important here. Stereotypical roles of fathers and mothers
are strongly connected to cultural patterns of masculinity and femininity. Beside
that Polish and Swedish societies provide, through family policies, completely
different conditions for having children and differently approach the problem of
work-home balance. Unsurprisingly, these have an impact on how men define
father’s and mother’s roles. Among Polish fathers there is a tendency to look at
it with more conservative and traditional approach. They are convinced that it is
impossible to cross biological differences between motherhood and fatherhood
and therefore father is rather regarded as mother’s helper or additional carer.
Whereas Swedish fathers are more eager to question imposed by society patterns
of behaviour. Sometimes they really struggle with stereotypical gender roles to
be more involved in family sphere and try to redefine traditional fatherhood. Ob-
viously these attitudes have an impact on everyday fathering and the way family
involvement is conducted. Fathers’ perspective is important here, since without their bigger
involvement in family life, gender equality cannot be achieved in other areas of
social life.

Prosper Or Deteriorate : Modern Millennium’s Path To Happiness

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The objective of this academic paper is to present students' perspective on methods of attaining happiness. After realizing that this age group is leaders and possesses the potential to lead, it is helpful to bring their perspective and expand it into a philosophical study to analyze and adapt to the livelihood of the general society as a whole.

The results revealed 4 methods of attaining happiness in the perspective of students. They include 1) Living under moral and ethical conduct and live with the intent of eradicating defilements 2) Setting a constructive intelligence and mindset; human beings have the ability to comprehend logic and causes of phenomena as well as resolve issues 3) Human beings should place importance on spiritual and interpersonal relation aspects over materialistic aspects 4) Body of knowledge passed on or accumulated by ancestors or knowledgeable people.

If ultimate happiness and collective social happiness are the goals of human beings, it is reasonable to follow the path that leads to a good management of life and society by understanding the principles or the valuable rules and apply them in all levels and forms of society.

SUWANRADA, WORAWET* (Chulalongkorn University, worawet@gmail.com) TSUJI, YUKI (Kyoto University) The Rise of Community in Asian Care Provision

Theories of civil society sometimes assume or praise a civil society as being independent from the state, in which citizens, by communicating their opinions freely, cultivate their power to claim oppositions and/or propose alternatives to governments. However, in Asian countries, governments themselves have intervened in cultivating civil societies in the modernization processes. For example, in Japan, the Meiji, Taisho and Showa governments tried to bring up a civil society in order to catch up with western modern nation-states (Garon 1998). The neighborhood association, chōnakai, originates in such a government's effort to organize a cooperative civil society in the community sectors.

Recently, even in many countries including advanced welfare states in the west, the governments have become more relied on the voluntary/community sector to deliver care to the elderly and/or children. Partly because of the financial constraints combined with changes of demographic structures, the role of volunteer/community is more important to sustain lives of vulnerable people. The introduction of the social model of care (as opposed to the medical model) seems to have legitimized this trend.

This paper tries to grasp the weight of voluntary/community sector in care diamonds in Asian societies. It outlines common features as well as differences among Asian societies in the structures of community care provision, and it also investigates how governments promote community care through regulations and incentives. Through these inquiries, it tries to explore whether and to what extent the community sectors contribute to de-familiarization of care in Asian societies.

SUZUKI, AKIRA* (Hosei University, insmove@hosei.ac.jp) Why Did the “Blue-Green Coalition” Develop in the Case of Minamata? an Analysis of the Struggles of the Union and Social Movements Against Chisso

From the late 1960s to the mid-1970s, there was an upsurge of social movements against industrial pollution. Victims of pollution diseases as well as local residents organized anti-pollution movements and opposed the construction of pollution-prone plants in their neighborhoods. Reactions of labor unions to these social movements were indifferent or even hostile. Some enterprise unions supported activities of residents against pollution in principle but withdrew their support when the latter's actions, such as filing lawsuits against polluters, came in direct conflict with the interests of unions and their firms. Other unions at firms that caused industrial pollution stood on the management side and took confrontational attitudes toward local resident social movements.

The paper explains the factors contributing to the formation and development of this “blue-green coalition”, by focusing on the relationship between the enterprise union of Chisso (the SNU) and social movements of pollution victims and their supporters. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively involved in supporting Minamata disease patients and formed cooperative relations with social movement groups concerned with Minamata disease. The paper explores the factors contributing to the formation and development of this “blue-green coalition” and what concrete results the coalition achieved from the perspective of “strategic capacity” of union leaders. The paper argues that the SNU developed its strategic capacity as it coped with challenges posed by hard-line management policy toward the union and management plans to drastically downsize Minamata plant. Union leaders developed the strategic capacity to frame the mutual interests of union members and Minamata disease victims by identifying the management of Chisso as their common opponent in their respective struggles and to mobilize the union's resources effectively in cooperation with social movement organizations in the struggles against the company.

SUZUKI, KAYO* (Aichi Gakuin University, ksuzuki@psis.agu.ac.jp) Do Older Women without Work Experience Participate Less? Life Course Analysis Using the Jages Data

Background Social participation, such as being a part of community groups is key to healthy, active aging. Although social participation in older age may be defined by cumulative experience throughout one's life course, many older Japanese women today have never worked outside the home. As work experience can help expand social interaction and social networks, it is possible that women who have never worked do not participate in social groups as actively as those who have.

Methods The Japan Gerontological Evaluation Study (JAGES) is a social epidemiological survey of a community-representative sample of functionally-independent individuals aged 65 and older. In 2010-11, responses were received by telephone from 123 people in 31 municipalities across Japan (66.3% response rate). Social participation was measured by monthly or more frequent participation in any one of six types of social groups (business, volunteer, senior, sport, community, and hobby). Using logistic regression, four models were tested on 41,966 to 44,272 women with a valid response for each outcome variable: whether lack of work experience in older Japanese women is associated with (1) less social participation, (2) less social interaction, (3) less frequent interaction with friends, and (4) fewer friends.

Results Controlling for age, equivalent income, family structure, years of education, and health conditions, lack of work experience throughout lifetime was associated with a 21 percent lower likelihood of participating in groups, 25 percent higher likelihood of having less social interaction, and 12 percent higher likelihood of having fewer friends. The association between lack of work experience and lack of group participation held for all income levels and age groups.

Lacking work experience appeared to lead to less social participation later in life. Work experience can develop better social skills and more extensive social networks, contributing to more active social participation in older age.

RC14-256.10

SUZUKI, KAZUKO* (Texas A&M University, kzs2303@neo.tamu.edu) Beyond Duality and Heteronormativity: Gender Display and Manipulation in Japanese Yaoi/BL Narratives

Boys Love (BL) in Japan refers to commercial fiction and fictional media by and for heterosexual women that focuses on male-male erotic/romantic relationships. These works are more prevalently known in other countries as Yaoi, a Japanese term often used as an umbrella category that can encompass various Japanese subgenres of male-male erotic/romantic fiction by and for women. The past decade has seen the emergence of studies of Yaoi/BL that have focused on gender and sex as analytical categories. Such scholarship is important in understanding fan-based cultures, production and consumption. However, a conflation of gender, sex, and sexuality at the analytical level in Yaoi/BL impedes further theoretical development. By making a clear conceptual distinction between these intertwined notions as distinctive analytical categories, this paper attempts to clarify Yaoi’s achievement in the (un)conscious feminist agenda among Japanese women. The study examines nearly 800 commercial Yaoi/BL novels written in Japanese, which were chosen based on a certain sampling method. Through descriptive statistics based on and textual analysis of the samples, as well as interviews...
with professional Japanese female writers, the paper first identifies some important features in the contemporary Yōi/BL texts such as transgression of sexual norms, subversion of gender fixity, renewed definitions of masculinity and femininity, and highly context-dependent sexual orientation of protagonists. By doing so, I argue that Yōi/BL has made it possible for Japanese heterosexual women 1) to transform normative gender dualism, sexual acts and sexuality at least at the level of discourse; 2) to use men's images not only for their empowerment but also for their own gratification as agent of desire. This is a significant step forward from early Yōi works that focused upon getting affirmation from others and fleeing from patriarchy.

To be or Not to be, That Is the Question: The Bifurcation Approach of the Japanese State and Identity Formation of Koreans in Japan

Koreans in Japan present an important case for understanding the nature of the interconnections between race, nationalism, and ethnic relations. All too often, studies of these phenomena center on Western cases or on cases where non-Western racial minorities move to Western states. In this paper, however, I examine these inter-relations within Northeast Asia. The Zainichi Koreans or old-time migrants in Japan (who are already in the fourth generation) must face a question I call a 'bifurcation approach,' which makes a strict distinction between the Japanese and the non-Japanese based on nationality in the management of ethnic/racial diversity instituted by the Japanese state and society. In Japanese, the concepts 'race,' 'ethnicity,' and 'nation' are virtually indistinguishable. The formulation 'race = ethnicity = nationality = culture' is essential to the Japanese conception of what makes one Japanese. Moreover, under the Japanese sense of nationhood defined along ethnogenetical lines and nationalistic multiculturalism, minority cultures have become fossilized owing to state sponsorship of the dominant Japanese culture. As a result, Zainichi Koreans—who have significantly become acculturated to and share a similar phenotype to the mainstream Japanese—have been racialized and constrained in their formation of hyphenated identities such as 'Korean-Japanese.' Based on interviews with Zainichi Koreans, this paper demonstrates how they negotiate the shoals of race, nationality, and ethnicity in order to survive in a deeply racialized state and examines their collective identity-formation under circumstances in which they have to live by hiding their ethnic origin with a constant pressure to 'impersonate' being Japanese.

SUZUKI, MAYA* (Tokyo University of Foreign Studies, mayasu23@yahoo.com)

Challenging Law and Justice from below: The Public Interest Litigation (PIL) Movement in the Dalit Community

In this paper, I examine protest movements of the marginalized Dalit community (formerly known as Untouchables) in contemporary India from a case study of Balmiki (a sweeper caste). In particular, I explore the political aspects of caste by focusing on the caste-based quasi system, known as “reservation,” which is a part of India’s affirmative actions.

This paper is organized around two significant issues. The first is the formation of a “new” identity among the Dalits through saint worship, which poses the following question: Why has the community embraced saint worship? The answer to the question lies in their religious choice to worship a saint, which gives them a sense of dignity and empowerment, and helps in the construction of a collective identity among members.

The second issue is the implications of caste-based identity politics. Since the late 1980s, an important factor Indian politics is the shift to a multiparty system and the rise of identity politics. With an increase in equality and social justice, marginalized castes have risen to challenge existing policies and demand an equal share in state resources.

I found that the success rate for the implementation of the reservation policy for the benefit of the lowest castes was significantly low. The distribution has been uneven among the targeted groups. Moreover, the results of my fieldwork revealed that most people tried to hide their caste. However, a number of them also affirmed that the reservation order to obtain the benefits of welfare schemes and protect their rights by challenging the judicial system through Public Interest Litigations (PIL). This paradoxical response explains why caste identity has become more positive and assertive, which has led to the politics of difference in contemporay India.

SUZUKI, MIKAKO* (Keio University, mikako0308@gmail.com)

The State of Neoliberalism Criticisms in Japan: Why the Discussion on Cosmopolitanism Does Not Gain Steam in Japan

As economic globalisation progresses, a wave of neoliberalism is sweeping across the world, demanding states and societies to render a variety of modifications. Such a phenomenon has been analysed, described, and criticised extensively worldwide. Japan is no exception; criticisms toward neoliberalism are said to be forming a major trend in Japan.

However, such critiques are slightly different from those toward neoliberalism in other parts of the world. Worldwide criticisms toward neoliberalism often lead to discussions on global transformation and cosmopolitanism, whereas such a connection is almost never made in Japan. For example, David Harvey, the author who disparages neoliberalism in his worldwide bestseller A Brief History of Neoliberalism, expresses in Cosmopolitanism and the Geographies of Freedom published in 2005 his empathy with De Sousa Santos’ (2005) idea of ‘subaltern cosmopolitanism’—Harvey finds hope in the movement to form a cosmopolitan solidarity by amplifying the voices of the victims of neoliberalistic globalisation that exists worldwide. Ulrich Beck (2008) also criticises the trend, stating that state politics are reduced when the state neoliberalistically prioritises adaptation to global market competition; he argues that becoming cosmopolitan is the realistic future for states.

As seen from the above, a global trend is seen in the inclination to progress from criticizing neoliberalism to promoting a cosmopolitan transformation. However, neoliberalism criticisms in Japan rarely lead to the discussion of cosmopolitan transformation. One of the reasons for such a difference is that neoliberalism criticisms in Japan are rarely discussed solely in a global context because they have historically evolved as arguments of inequality which often focus on changes in the socioeconomic structure in Japan. Therefore, this report will provide an overview of neoliberalism criticisms in Japan, describe their characteristics, and explain why the criticisms have strong national characteristics without having been placed in the context of cosmopolitanism.

The Formation Process for Civil Society in Northeast Thailand: From the Social Research of Two Villages

This paper focuses on village civil society (prachakhom) as the basis for the emergence of civil society and development in Thailand. The northeastern region is the result of the social research supported by Grant-in-Aid for Scientific Research by the Ministry of Education, Culture, Sports, Science and Technology (MEAC) of Japan from 2005-2007 and 2008-2010.

In the twenty-first century, the discussion of the idea of civil society (prachasangkhom) and people’s participation began to develop in Thailand. In many forums, Thai scholars proposed a range of ideas and opinions that directly linked development with civil society. Furthermore, there has been various research on the development and possibilities for shaping the civil society movement.

In our previous social research, we concluded that prachakhom was the foundation of the formation process for Civil Society. Prachakhom as a gathering of people has been an integral part of Thai society, while the civil society movement was a new idea derived from the West. In this paper, I intend to analyze the two types of prachakhom, both a grassroots type and a top-down type in response to government policies, using quantitative and qualitative data from the case study of two villages in Northeast Thailand.

The Effects on Self-Consciousness of Junior High School Students in Japan Depending on the Fact That They Have Boyfriend/Girlfriend or Not

The purpose of this study is to make clear the significance of a boyfriend or girlfriend for junior high school students in Japan. For this purpose, I firstly investigated the determining factors of having a boyfriend/girlfriend, and then clarified the fact that one has a boyfriend/girlfriend on their self-consciousness. As a result of this analysis, I got the following two findings. First, there are various factors which determine whether junior high school students have a boyfriend/girlfriend or not, and the factors differ according to each student’s gender. Furthermore, the levels of academic accomplishment of the school also make a difference. Second, when I analyze the effects of that fact on their self-consciousness, it is necessary to consider not only the very thing that one has a boyfriend/girlfriend or not, but also if she or he is likely to have a boyfriend/girlfriend. This analysis suggests that a success in love for girls in junior high has a more complex meaning compared with that for boys.

Divorce Studies in America and Japan

This paper aims to suggest ‘Good Divorce’ comparing divorce studies in America with divorce studies in Japan. The divorce rate in the United States has continued rising since World War II, and one out of three marriages come to an end. At the same time, remarriages have also increased, so ‘step family’ is now rare in America. A new sociological concept, ‘bicultural family’ advocated in “The Good Divorce” (1994) by Constance Ahrons has become generalized. On the other hand, the divorce rate in Japan has continued rising as well as the United States, so we almost catch up with the United States. In this paper, we will introduce divorce studies and works developed in America since 1980s and in Japan since 1990s. First, we will discuss the history of divorce studies in America and Japan. ‘Nuclear family’ advocated by Talcott Parsons is certainly universal, but not absolute at all. Second, introducing the discussions in “The Good Divorce” and ‘We’re Still Family’ by Constance Ahrons, we will describe divorces in America. On behalf of ‘nuclear family’, it is found how the concept called ‘bicultural family’ became to come up. Third, introducing Atsuko Okano’s various discussions on divorces, we will describe divorces in Japan. About divorce circumstances of America and Japan, some common points and differences will become clear. Finally, through both divorce studies, we will suggest what should be done to be ‘good divorce’. ‘Good divorce’ means to “keep your family together when your marriage comes apart.” We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

RC16-286.2

SUZUKI, TAKESHI* (Meijiro University, kem86871@hotmail.com)
Sociological Theory after September 11, 2001 and March 11, 2011

This paper aims to rethink theoretical foundations in sociology comparing American sociology after September 11, 2001 with Japanese sociology after March 11, 2011. Although some ‘empirical’ sociologists in America described and analyzed attacks by terrorists on September 11, 2001 and American society after 9/11, almost ‘theoretical’ sociologists kept silence. However, Jeffrey Alexander, a leading American theoretical and cultural sociologist, has interpreted sociological theory and American society and of and after ‘911’ from a post-Parssonian point of view. On the other hand, although some ‘empirical’ sociologists in Japan have described Japan Now after the Japan earthquake and Tsunami on March 11, 2011, almost ‘theoretical’ sociologists within the Parsonian and Post-Parsonian tradition in Japan have kept silence.

In this paper, I will suggest that theoretical foundations for the sociology after 9/11 and 3/11 should be established on Jeffrey Alexander’s theoretical logic, cultural sociology, and civil society. First, I will discuss that new sociological theorizing including the sociology of 9/11 and 3/11 should be multidimensionally reconstructed on the metatheorizing by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Munch. Second, I will argue that new solidarities could be founded on cultural sociology and civil society advocated by Jeffrey Alexander keeping a philosophical foundation of multidimensional sociological theorizing. Finally, it will present what should be done to reconstruct Japanese sociology multidimensionally after March 11, 2011.

Constructing Identities Across Borders: Case of the Istrion-Italian Diaspora in Trieste

In the last two decades, the accelerating speed of globalization has challenged the modern notion of state borders. Rather than the fixed line of a sovereign state, state borders are viewed as a dynamic interplay between territorial organizations and local identities evident in the border regions of Europe wherein extensive cross-border cooperation and interaction transform a border from a geopolitical “territorial line” to a socio-cultural “contact area” of neighboring societies. On this basis, people living in borderlands have new resources and opportunities to construct or safeguard their identities.

This study examines the construction of a “We” consciousness by the Istrion-Italian diaspora, who suffered from national conflicts and mass exile after World War II, and emigrated from their native homeland Istria (formally Yugoslav) to settle in Trieste, a border city in Italy close to the Slovene and Croatian borders. The aim of this paper is to analyze the identity construction of this diaspora by specifically using the case of national celebrations when cross-border interaction collides with state borders. We analyze the identity construction of this diaspora by specifically using the categories “We” and “the Other” relations, and understand the national manifestation. Our data is based on fieldwork conducted in Trieste on the case of national celebrations when cross-border interaction collides with state borders. We analyze the identity construction of this diaspora by specifically using the categories “We” and “the Other” relations, and understand the national manifestation. Our data is based on fieldwork conducted in Trieste on the case of national celebrations when cross-border interaction collides with state borders. “Intellectuals” in Gramsci’s Prison Notebooks: An Active Relationship As A Key Concept

In Prison Notebooks (written between 1929-35), Antonio Gramsci (1891-1937) – an Italian Marxist theorist – reconstructed the notion of intellectuals in the process of reconstituting the Marxist “class” concept. What are “intellectuals” in the theoretical world of Gramsci? And how did Gramsci theorize intellectuals and their roles in modern society? My presentation first introduces how Gramsci has worked and his work has been studied and contributed to sociological theoretical research in Japan and then illustrates how his writings in his Prison Notebooks located intellectuals and active relationship constructions. Content analyses of Prison Notebooks reveal that the logical foundation for his understanding intellectuals was the reconstructed concept of “man” or “human being” which was formed by active relationships. This study shows Gramsci’s belief that there was no “man” who was not intellectual; therefore, all the human beings are indeed the intellectual. Yet, nobody plays the socially organizing functional role of an intellectual. The active relationships of the ordinary people most of the time have individual characteristics; on the contrary, intellectuals create and engage in socially active relationships which are in any of the economic, social, cultural, and political field. Therefore, I argue that Gramsci advanced Marx’s social class theory by focusing on intellectuals and their hegemonic social engagements in which the socially active relationship plays a crucial role in society. This paper contributes to our sociological understanding of Gramsci, his theoretical roots, and commonalities with the Marxist and other theoretical traditions.

Visualization of SNS Communications Concerning Radiation Risk from the Fukushima Daiichi Power Plant

In this presentation, I visualize people’s communications on a Social Networking Service (SNS) concerning the risks of radioactive pollution stemming from the Fukushima Daiichi power plant accident. The data consists of the communications from a regional SNS that was launched by the residents of Iwaki City, Fukushima Prefecture, after the accident. It contains text from diaries and comments written by the SNS members and information about who made comments to whom. The co-occurrence network of words derived from the text data reveals the characteristics of radiation risk concerns about radiation risks. Comment relations are expressed as a form of social network that shows the structure of the human relationships on this SNS. The co-occurrence network of words can be integrated and analyzed concurrently to show the development and interaction of the members’ shared concerns and the social networks in the SNS. The SNS members expressed various concerns, including radiation measurement, influence on health, food safety, and so on. Based on their concerns, they created collages of the communities of interest. Through the founder of the SNS had the highest degree centrality, the mediator of the clusters was a different member who sometimes mediated members with opposing opinions. A member who had a scientific background occupied a leadership position in a particular cluster but did not play a role in mediation. This suggests that a sympathetic attitude is more important than scientific knowledge for risk communication among ordinary citizens.

Honor or Fear? Relationships Between Scientists and Experimental Animals in a Japanese Laboratory

Attachment and detachment, and honor and fear with which scientists and technicians treat their experimental animals is a paradoxical aspect of everyday practices of Animal Experimental Room in a medical Lab in Japan. The scientists kill, or tweak the genes of these animals for their research with the very same hands they used to caress and feed these animals under their custody. In Japan, some scientists even fear that the spirits of the sacrificed animals may come back to haunt them. Holding rituals to appease their spirits is a common practice.

Gesa Lindemann has argued that neurobiologists’ attitude of experimental animals could be!”consonant organisms” to “technical artifacts”, or even to “organisms being merely alive” as their experiment progresses (Linde-
männ 2009). In addition to various kinds of attitude, this paper demonstrates how scientific practice and Shinto’s affective dimensions are entangled.

Japanese way of honoring the animals killed for scientific research has been known for “offering a ceremony” for dead animals (Kuyoo). This paper pays attention to not only to the ceremony but also everyday caring practice in the laboratory.

Thus, I discuss how scientists and technicians affectively commit to experimental animals. Inspired by Science Studies scholar Casper Bruun Jensen and the sociologist Anders Blok (Jensen and Blok 2013), who developed Actor Network Theory through Japanese techno-animism, I explore new dimensions of contemporary Japanese techno-sciences.

Does Men’s Involvement in Family Planning Threaten Women’s Reproductive Rights?: A Case of Kurdish Rural-Urban Migrant Women in Turkey

This study discusses the issue of men’s involvement in birth control in Turkey. An argument is based on our research of Kurdish women’s experiences of contraceptive practices. Data were collected by in-depth interviews with forty women in a low-income rural-urban migrant neighbourhood in an Anatolian city, Van between February and July in 2008. In Turkey, fertility rates have declined and near-replacement levels in recent years yet the use of traditional method, that is, withdrawal continues to be among the highest in the world. Recent studies suggest men’s direct practice (practicing withdrawal or using condoms) and indirect (influencing women’s use and choice of contraceptive method) involvement in birth control.

Recently, we know that a strong emphasis has been placed on positive or negative impacts on women’s empowerment. In the neighbourhood we studied, contraception was generally women’s responsibility yet they experienced difficulties in accessing and effectively using contraceptives because of their gender disadvantages. Nonetheless, there are a few women who were successful in birth control. They were not very different from the other women in terms of economic, educational and familial statuses yet their husbands were actively involved in birth control directly or indirectly. One of them, however, wanted more children but were using an intrauterine device because of the husband’s request. He was the first person to accept oral contraceptives and started to use condoms sometimes.

We observe varying degrees of tension between professional autonomy, the role of client advisor/advocate and regulatory compliance. We also observe similarities in the formalization of client handling process as a structural means of making visible and actionable the balance between competing demands. The paper provides new insights on the paper literature on multiple values in organizational work (e.g. Stark 2009). It contributes to a discussion of expectation gaps in the role of professionals and highlights wider practical implications for businesses of the dual discourses on transparency and risk (Bergström et al. 2011).

The Importance of Class for Understanding Racist Discourses: A Comparative Study of People with Different Positions in the Swedish Class Structure

In research, and especially quantitative research, the working class is often singled out as more xenophobic than other classes. However, it appears that the working class has actual relationships with “immigrants” to a larger extent. Rather than determining which class is the most xenophobic, the aim of this paper is to discuss the relevance of dominant theories about class and racism in relation to empirical findings, and more specifically to interrogate why and how class may be important for understanding people’s use of racist discourses in different social contexts. This paper is based on an ongoing research project that focuses on the relationship between people’s class positions and their practices towards people that they construct as “the other”, as “immigrant” or “ethnically different”. The empirical findings consist of qualitative interviews with (1) people with working class positions living in an area with a working class area, and (2) people with higher class positions living in an area with a working class area. Both areas are located in one of Sweden’s largest cities.

In the paper, I discuss both social psychological theories that focus on people’s desire for a positive social identity and other theories, mainly Marxist, that are based on people’s position in the relations of production. The paper argues that which discourses, that are available or are seen as reasonable, are conditioned by people’s different class positions. This also means that the reasons behind people’s use of racist discourses and the meanings these are filled with need to be understood in relation to the diverse – class conditioned – social contexts in which people live.
Interconnected 21st Century and the Decline of Traditional National Security System

Traditional national security system has been definitely one of the crucial pillars for Western statecraft paradigm since Westphalia Peace agreement in 1648. Especially in last two centuries the main task of sovereign state was how to protect own citizens and territory from foreign (military) threats with strategic concepts like deterrence and retaliation are. It was very clear the national power was based on physical and natural resources, industrial production as well military capabilities. The national state was practically the only reputable actor in international relations. Notably, nearly all loneliness effects in cities are mediated by individualism, collectivism, in stark contrast to loneliness in non-urban areas. In particular, I find that individualists in Moscow are more lonely if they have children, likely because family isolates them from the types of ties they would prefer (with friends, associations, and wider networks). For collectivists, this effect is reversed. Like-wise, collectivists in a smaller city (Tambov) are more lonely if they are involved in more civic organizations, likely because this involvement is compensating for a lack of the ties they idealize (family).

Locating the Media Discourse of Climate Change Policy Network in India 2007-2010

This paper explains the framing of climate change in Indian newspapers. With its economic growth, India has become a major contributor of greenhouse gas emissions and has a major role to play in any global cooperation to reduce emissions. Yet India's rhetoric and concerns about climate change differ from other developing and developed countries. India is the world's largest democracy, but it has a weak state that lacks levers of control over its society and economy. Consequently, the distinct framing that India's newspapers give to climate change concerns, not the need for new government policies, but the need to convince and mobilize civil society.

Trust Me If You Can: Trust As Strategic Tool for Decision Making to Deal with Ignorance and Uncertainty in Contaminated Sites of Germany and India

In this paper we will investigate the role of trust in decision making process under ignorance and uncertainty. Classical approaches to risk analysis are based on statistical calculations dependent on hitherto known variables. This research suggests that knowledge for risk calculation is limited then the decision making of experts as well as lay persons are dependent on their individual and intuition-al trust. Based on newly emerging sociological theories of ignorance, this paper involves two field studies: redevelopment of contaminated sites in Germany and mitigation of groundwater arsenic contamination in India. Interestingly, in both cases knowledge on groundwater processes is limited. Processes of clean-up in Germany usually are confronted with contaminations that had not been identified in investigation activities. Unexpected surprises by the actors are often taken as normality. In the Eastern Indian region, concentration of arsenic in groundwater increases due to geological processes in succession of a decreasing groundwater level, caused by human activities. So, today's clean water may be poisonous by arsenic tomorrow. This creates a situation of ambiguity and confusion. Stakeholders (from policy makers to local inhabitants) have to take various pertinent decisions based on trust in individual, group or system. From the existing sociological literature the paper explores various dimensions of trust involved in decision making for both experts and non-experts.

Physical Activity and Quality of Life Among Chinese Cancer Survivors

Cancer is the leading cause of death among Asian American populations in the United States (CDC, 2013). Asian Americans are actually reported to have lower cancer deaths compared to non-Hispanic Whites. Consequently, more Asian Americans will survive cancer diagnosis and live a longer life after treatment. It has been shown that physical activity at modest intensity can significantly im-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
prove the side effects of cancer treatment, quality of life among cancer patients, and breast cancer mortality. Although research on exercise has grown in quantity and quality (i.e., more RCTs) during last decade, most available studies recruited primarily Caucasian samples and were based on smaller sample sizes (Pekmezzi & Demark-Wahnefried, 2011). Thus, these findings are not able to be generalized to non-Caucasian cultures, such as AAs. Furthermore, exercise patterns vary with different cultural traditions. Intervention strategies such as aerobic exercises, resistance training, and Yoga which have demonstrated positive impacts might not be applicable to AA cancer survivors because most Asians will be more inclined to use Tai Chi over Yoga for their exercise routine. Thus, more research is needed to study the unique cancer experience of various racial/ethnic groups.

This paper examines the linkage between physical activity and quality of life among Chinese American cancer patients and survivors. It is hypothesized that more physically active cancer patients and survivors are reported to have higher quality of life (QoL) compared to less active counterparts. Data was collected from self-report surveys of 55 Chinese cancer patients and survivors. In addition to basic demographic characteristics, weight status, medical history, two standardized scales are used to measure quality of life (SF-36) and physical activity (CHAMPS). Currently, we are conducting the data analysis and a manuscript based on the results of the data analysis that will be completed in the spring of 2014.

Navigational Capacities For Youth Success In Adversity: A Sociology Of Southern Youth

The global South has for too long relied on global North contexts and theories in the sociological study of youth and youth development. These Northern approaches have centred on US-driven positive youth development focused on dynamic systems, risks and protective factors, and the UK-led socio-cultural approach addressing youth agency, resistance and cultural reproduction. This paper asks two key questions towards a comparative consideration of the sociology of youth: Who are Southern Youth, and in what ways are their lives the same as, or different to their Global North counterparts? And what new tools and language are required in order to make visible these similarities and differences and so bring Southern youth out of the invisibility of current hegemonic youth studies? Substantially, it offers an alternative nascent framework, that of ‘navigational capacities’ to research and frame a sociology of Southern Youth. Navigational capacities are suggested as specific socio-emotional and material capabilities required in order to manage youth contexts of adversity which surround them. These, rather than skills, are learnable and are available to young people in the pursuit of success, where success is postulated as the capacity to (1) exert individual agency; (2) obtain, create and invest capitals in their primary proximal contexts of engagement; (3) recognize and analyse the ways in which interconnected distal contexts such as institutions, practices and policies exert influence to oppose and enable agency; (4) see the way in which power operates through identity markers to restrict participation, and perpetuate domination and poverty; and (5) practice collective agency for civic participation and life cycle transitions. In this regard, the notion of navigational capacities draws together the best emancipatory and transformational elements of both the dynamics systems and socio-cultural approaches to youth studies, and has the potential to make visible (‘deinvisibilise’) the lives of Southern Youth.

Gender Marital Roles in an Ecumenical, Covenant, and Charismatic Christian Community

Marital gender roles and religion continue to capture the landscape of much sociological research in families. A significant amount of research has emerged in investigating how the Promise Keepers movement, whose primary locus is in Evangelical-American Christianity. Much of the critique of the movement focuses on language such as “the last gap of patriarchy,” the “first backlash of patriarchy,” “soft-boiled masculinity, sphere of anti-feminist backlash,” “hegemonic masculinity,” “an essentialist retreat from progressive gender relationships,” and the Promise Keepers’ lack of recognizing the centrality of the political within the faith. Against this backdrop, this paper presents empirical evidence from a 350 member Ecumenical(1), Covenant(2), Charismatic(3) community named “Alleluia” in Augusta, Georgia, USA. Husbands are expected to lead, protect and provide for their wives and children. They are called to be leaders in their marriages and could be seen to reflect the images portrayed above in regard to the Promise Keepers. However, with data based on interviews from randomly selected cases (36) and 300 members of 350 who provided quantitative information, a very different story of leadership is presented.

The husbands model their leadership on a kenotic style of headship. This consists of leadership which is humble, empty of self-interest, sacrificial love (agape), a detachment from status privilege, gentle, meek, kind and self-efficacing. They are to love their wives as “Jesus loves the Church,” and wives are to respect their husbands.

From the interviews, both of men and women, this was the common story. Regression analysis of measures of gender roles shows significant correlations with a wide measure of measures of religion.

[1] A Community of various Christian denominations
[2] This refers to the kind of community where members make a life-time vow to live the Christian life in close and intimate relationships with one another.

Constructing Asia: An Emerging Model of Migrant Labor Exportation

This article explores how global forces are reshaping the form of labor migration in the region. China has become an important influence reshaping the Asian region through increased foreign direct investment (FDI) in public construction projects such as roads, railways, and ports. As Chinese companies expand operations overseas they often bring their own workforce, exporting hundreds of thousands of Chinese migrant workers. These workers migrate under the umbrella of Chinese multinational companies and represent a fast-growing form of labor export migration called “project contract migration.” This expansion of project contract migration represents an important form of temporary migrant worker programs which are generally governed by either labor brokers and/or bi-lateral agreements among states, and are characterized by receiving countries only accepting immigrants under “strict functional and temporal limits” (Castles, 2004: 23). In contrast, China’s emerging labor export model is an example of multinational corporation-led migration with a new twist. Historically, multinational corporation-led migration has taken the form of high-skilled professionals being relocated from developed nations into developing countries (Findlay, 1990; Stahl, 1991) while China’s multinational companies are exporting both high and low skilled workers.

According to China’s Ministry of Commerce the number of Chinese workers sent abroad has risen from about 2,000 in 1979 to around 6.5 million in 2013. Roughly 812,000 of these overseas Chinese workers are now employed by Chinese companies in the form of project contract workers, and if we include illegal or undocumented migrants, these numbers would double. This article focuses understanding why Chinese multinationals are importing their own laborers instead of using local labor. I argue that this emerging model of labor exportation creates a kind of extraterritoriality that allows Chinese multinationals to evade national and international regulations designed to protect worker and migrant rights and increasing worker control.

SWIDER, SARAH* (Wayne State University, ssvider@gmail.com)

Engaging the State: Informal Worker Protests in China

In China, the rise of precarious and informal work is closely linked to the processes of migration and urbanization. There are roughly 150-200 million migrant workers, representing between 15-17 percent of the total Chinese population (Chen 2010). By 2009, sixty percent of all urban employment in China was informal (Huang 2009); most of this is precarious work and a majority of these jobs are filled by migrants. Informal work is performed outside the purview of the state, and it is labeled precarious because these jobs do not provide employment stability, are low-waged and lack social protection.

This paper explores informal worker protests in China. I look at two different groups of informal workers; construction workers and street vendors and find that the salient issues for each group are different. The most salient issue for informal construction workers is non-payment of wages and among street vendors it is the unfair treatment by local urban para-police called chengguan. I explore these two issues and the resulting protests by analyzing the ways that their relationships with the state, the organization of their work, and different integration into urban spaces shape their organizing and protests efforts. I detail the major characteristics of these protests and argue that that these informal workers (and their protests) represent more of a threat to the government and the Communist Party than traditional models of political stability theorized by formal workers.

The Developmental Hierarchy Cultural Schema

In everyday conversation, popular media, and scholarly work, terms like the “Third World” or “developing countries” are often contrasted with the “First World” and “developed countries.” This sheds light on the fact that the development of a cultural schema of a developmental hierarchy of societies. How prevalent has this schema been throughout history? Drawing from cognitive anthropology, I argue that in general the terms people use are indicative of specific cultural schemas. This is especially the case with terms that refer to societies’ position on a developmental hierarchy (e.g., “developed” versus “developing countries,” or “advanced” versus “primitive societies,” etc.). Using the Google Books N-gram Database, I analyze the usage of over 80 such terms by year, measuring their relative frequencies in all books written in English from 1700-2008. I then combine this quantitative data with archival data and other work, constructing a historical narrative of the developmental hierarchy cultural schema over the last three hundred years. The terminology of the developmental hierarchy has been prominent throughout the time period examined, though it has experienced significant changes. During the eighteenth century, developmental hierarchy terms gained popularity as the ideas of social evolutionism expanded. Notions of sovereignty and capability eventually challenged social evolutionary ideas in the beginning of the twentieth century, leading to their demise. In their wake, modernization theory quickly became prominent, bringing a new set of developmental hierarchy terms, institutionalized by the founding of various international organizations in the mid-twentieth century, modernization theory renovated the developmental hierarchy cultural schema by shifting the object of development from societies and peoples to that of the nation-state. The developmental hierarchy cultural schema has exercised considerable power in organizing the way people classify societies.

SYKORA, LUDEK* (Charles University, sykora@natu.re.cuni.cz)
From Chicago to Los Angeles: Western Concepts and the Study of Post-Socialist Cities

Post-socialist cities have been omitted from disputes on global urbanism. However, the insights gained from the study of their dramatic transformations can provide important suggestions for the international urban studies. The paper first introduces the key features of post-socialist urban transformations placing them within the context of contemporary global urbanism. The paper specifically discusses the development of cities, which developed during periods with different political regimes and socio-economic conditions. Their urban landscapes reflect multiplicity of socioeconomic logics and are characterized with a high level of socio-spatial hybridity. The western models that assume relatively stable relations between the principles of urban development and resulting socio-spatial patterns are not capable to capture the nature of cities in radical transformations. The paper then discusses the relevance of “western” concepts for the study of post-socialist cities. It is framed within the paradigmatic evolution from Chicago to Los Angeles schools of urban studies. The paper argues for the recognition of a multitude of urban logics and urban structures intertwined within urban landscapes of transforming cities. Relating long term development paths and contemporary path-shaping practices, paper documents that concepts from both schools are relevant for the understanding of post-socialist cities. Finally, despite the present urban landscapes of post-socialist cities can be seen as different from cities in other world regions, there are striking similarities. The paper argues that despite historic and cultural specificities in local contexts, contemporary urban development is conditioned by the universalistic driving forces of urbanization embedded in a globally spreading capitalism. The hybrid coexistence of different socio-spatial landscapes can thus be only temporary as the most dynamically developing urban areas related to global capitalism gradually displace the original urban patterns. The theories and concepts developed in the social context of capitalism thus have high relevance for contemporary global urbanism.

SYLVESTER, KATE* (Victoria University, katherine.sylvester@live.vu.edu.au)
Gambatte Ikô : Negotiating Identity and Belonging at a Japanese University Women’s Kendo Club

This paper draws on an 18-month ethnography at a Japanese university women’s kendo club and examines the concept of seishin (spirit), and how it is embodied through the process of doing one’s best for the group. Gambatte ikô (Let’s do our best together) expresses the personal commitment to endure hardship in order to achieve a group goal. The strengthening of seishin can be attained through enduring physical, mental and emotional hardship alongside others, where the hardships are embedded in the club’s demanding training, work obligations, hierarchical relationships. As such, seishin takes place on all levels, in a variety of situations, encouraging the holistic development of club members. Seishin development can be goal of membership and its embodiment can be advantageous as it promises to equip members with the resilience necessary to fulfill their gendered roles as capable, exemplar models of society. Arguably, for female club members developing significant relationships takes precedence over the development of seishin. In time significant relationships with other members became my reason for being and the primary source of motivation to engage in seishin training.

SYMKOVYCH, ANTON* (National University of Kyiv-Mohyla, o.symphycv@gmail.com)
Safety in the ‘House of Certainty’: The Question of Violence in a Ukrainian Prison

Prisons are potentially volatile places. This paper draws on ethnographic research in a medium-security men’s training prison to discuss the nature of a relatively low level of physical violence in a Ukrainian prison despite the low staff-to-prisoner ratio. It attributes this phenomenon primarily to the informal structure of prisoner society, and the central role of its illicit normative code of prison life. I explore how the legitimacy deficit of the Ukrainian State and its legal system, together with often anachronistic and unreal official prison rules and limited staff presence render the unofficial prisoners’ behavioural code the guarantor of the peaceful co-habitation. I demonstrate that despite discriminat- ing against certain prisoners and instigating mutual and self-surveillance, these informal arrangements were deemed by most prisoners more just and legitimate than the official ones. Whilst this informal structure was inescapable and entailed harsh punishments for violations, it, to some degree, controlled and limited arbitrariness and established a ‘house of certainty’ (Foucault, 1975). Furthermore, I argue that despite the official antagonistic stance towards the ‘inmate code’, prison authorities heavily depended on the prisoner-controlled informal structure to both keep the prison orderly and safe and maintain uninterrupted industrial production. I then discuss the implications of the recent and current changes in Ukrainian society and prisoner profile to the maintenance of safety and order in national prisons. I posit that the intricate power-balance present in the prison has relevance beyond Ukraine because it represents a microcosm of the interaction between powerful legitimate and illegitimate interests, where the vested interest of both is profit (industry) and order (status quo).

HIV Stigma in U.S. Faith Communities

Stigma remains a significant barrier to HIV prevention/treatment in African American communities. Religious congregations, especially black churches, have been called to address HIV stigma. Social forces such as religion may create reinforcing stigmatized conditions that predispose individuals to HIV infection and limit their ability to access HIV testing and treatment. However, scientific evidence examining the concept of HIV stigma and its effects in religious communities is limited. This study examines HIV-stigma in faith communities from the perspectives of congregations, community members, and people living with HIV. We used predictive modeling of factors linked to welcoming/alienating attitudes on the part of congregations, as well as content analysis and concept mapping to qualitatively assess the concept and extent of HIV stigma present in faith communities. In congregations, stigma was often attached to the perception of individuals as unclean: those with HIV as most stigmatized, followed by injection drug use, heterosexual relations, and mother-to-child/healthcare-related situation. Some HIV-infected individuals reported feeling alienated in congregations because of stigma/discrimination. Finally, community stakeholders identified reducing stigma as the most important strategy to address HIV in their faith community; however, the feasibility of this strategy was questioned. In the analysis, we triangulate/discuss the findings to explore the concept of stigma, its consequences, and potential stigma-reduction strategies in faith-based settings.

Nativity, Religiosity, and Mental Health in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using a representative sample of U.S. adults. Dysthymia prevalence and 3-year incidence of dysthymia were assessed per DSM-IV criteria. Religious activity was a scale based on how often respondents attended religious services, how important were religious or spiritual beliefs to respondents, and how many members of their religious group they saw socially at least every two weeks. Acculturation, stress, sociodemographic and other factors were also assessed. Prevalence and 3-year incidence of dysthymia were modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments; higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood of dysthymia among the respondents). This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments; higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. The issue of medical treatment of fertility has special social relevance today for most of the European societies which are characterized by very low levels of fertility, and an increasing number of people not having children at all. Biotechnology makes parenthood available for those who used to be excluded from that earlier (medical problems, single women and same sex couples).

The aim of this research was to examine the attitudes of European society on in-vitro fertilization: Do they think that it is a stigma to become a parent without sexual intercourse or do they consider it as a possibility to help people to experience parenthood. The previous studies have already indicated that respondents' gender, age, educational level and religious background determined whether they supported fertility treatments: women, younger people, those with higher educational level and non-religious background tended to be more supportive than others (Kailasam 2001, Scheneker 2005). This research would exceed that by focusing on how traditional gender roles, family beliefs and attitudes towards homosexuality can influence the acceptance of fertility treatments. The paper also seeks to answer the practical question whether the institutionalisation level of assisted reproductive technologies can affect the social acceptance of fertility treatments in Europe.

Our data come from the last wave (2008) of the European Value Study (EVS). The EVS provides insights into the ideas, beliefs, preferences, attitudes, values and opinions of citizens all over Europe by applying standardized questionnaires. In the fourth wave of EVS an artificial reproduction-related variable was introduced, which we chose as our dependent variable, measuring the acceptance level of the artificial insemination or in-vitro fertilization. As both individual and country level factors are accounted, the most appropriate statistical technique to be used are multilevel techniques.

Far-Right Voter: The Efficiency of Social Bases As A Discriminating Factor in Voting for Far-Right Parties

The paper will address two problems: the social characteristics of voters who identify themselves as ‘far-right’, and secondly what are the additional factors which are conducive to identifying with, and voting for either radical (far-) right parties or mainstream right (or conservative) parties. Beginning with H. Kitchel’s (1997) and H. Norris (2002) seminal works we know that social bases, i.e. changes in social structure and economy are not sufficient conditions for the appearance and stability of radical right parties. Kitchel and Norris identified the party system and the electoral rules as two decisive factors for far right parties’ electoral successes. Kitchel argues that the conductive factor is „convergence of moderately left and right parties toward a median voter” and Norris emphasizes the role of institutional context (e.g. electoral rules). It will be shown, using the left-right self-placement scale as a measure of far-right identities, how far-right voters distribute their votes among political parties and what are the social and ideological factors which discriminate against mainstream right parties, apart from the type of party system and broader institutional context. The analysis will be based on recent ESS surveys and a more detailed analysis of the Polish case based on general election studies.
quantitative survey in 17 recruitment schools of Switzerland with a representative sample size of about 6000 conscripts each time.

Art Against Racism. Works By Santiago Sierra As a Voice Against Racism

In my paper I would like to present an artist who is socially engaged and whose works refers to very important social issue – exploitation of workers and cheap work force. Santiago Sierra, born in 1966 in Madrid, is the best known contemporary Spanish artist, who lives and works in Mexico City. Main topics of his works are: criticism of capitalism, underpaid labourer completing menial tasks and immigration. It is said that he get involved in social engaged art when he realised how little money get Mexican workers for performing gruelling work. His social background also has a big influence on his work, because he comes from a working-class family.

In my presentation I will discuss some of Santiago Sierra works, which can be understood as statement about (or rather against) racism. As we consider racism as invention of modernism we can also see some direct link between racism and capitalism, cheap labour force and illegal immigrants. We can also easily match those factors: being subjected by racism is often connected with being illegal immigrant who delivers low paid menial work. Furthermore, as we can learn from Loic Wacquant that racism has always been a convenient excuse to justify exploitation of some groups of people. Almost every economic system needs some resources to exploit to exist. Especially capitalism. In capitalism racism has its economic function: it lowers cost of production and stabilizes hierarchy. Similar functions also have illegal immigrants, who are necessary in the system, because capitalism still needs people to complete menial tasks for small salaries. Employing illegal immigrant for lower wages may be justified by racism – they are no us, they are foreigners, they not equal to us.

Concept of Artistic Brand As a Tool for Analysing Art World

Social construction of artistic reputation and artistic success have been an important issues in sociological research from many years now. In my paper I am going to present the idea of artistic brand as a tool for analysing art world and construction of artistic career – mainly the careers of contemporary visual artists. Artistic brand can be a person (artist, gallery owner, collector, curator, critic) or an institution (gallery, museum, art fair). The most important criterion for distinguishing the artistic brand from non-branded artist or institution is its recognition by the representatives of the various spheres of social life. I separate three spheres of social life in which artistic brands can be present: art world, media and ordinary social life. In every of those three spheres could exists different artistic brands, which are also constructed and sustained in different ways. Phenomena that have recently occurred in the art world (development of conceptual art, separating the artist from the art work, the lack of clear criteria for evaluation works of art, professionalization of the art market) made that artistic brand have gain an importance in the art world. Artistic brand simplify the complexity of the art world, improve the decision making process, add value to the art world product. Artistic brand is a guarantee of quality, a mean of communication with customers and agents. Brand is also a tool of negotiating rules in the artistic field, a tool for building hierarchy in the art world and a tool for building artistic field autonomy towards other fields.

As the exemplification of my conception of artistic brand I am going to present the outline of my research project concerning the in-depth analysis of the presence of artistic brand (contemporary visual artists and institutions dealing with contemporary art) in Poland.

The Conditions for Sustainability. Complexity, Social Learning and Integrated Climate Governance in a Warming World

This paper introduces the concept of the ‘Conditions for Sustainability’ and reviews some of the main conceptual approaches dealing with the relationships between complexity, social learning and global environmental change. The aim is to produce fresh theoretical insights and to outline an operational synthesis to better understand the types of interactions, ways of knowing, and required feedbacks that influence the production of socio-ecological complexity and affect our structural conditions and learning capacities to cope with accelerating global change. Social learning is understood as the only possible means to overcome current cultural constraints for a rapid societal transformation, and to provide the kinds of fair and quality of life development pathways that may allow humanity a dignified way out of the present unsustainability predicament.

In particular, my approach uses an ecological sociological perspective based on a further operationalisation of the SEIC conceptual model (Tabara & Pahl-Wostl, 2008) and focuses on the case of the integrated governance of climate change. From a non-dualistic standpoint, I look at the agents’ interactions and social-ecological systems dynamics in complexity production and their implications for social learning and transformation. Such analysis is carried out in a relational mode within and between the following social-ecological components and systems: 1. Structures, rules and institutions (S) 2. Energy and resources (E) 3. Information and knowledge (I) 4. Cumulated socio-ecological change (C). It is argued that such a framework can provide a more robust theoretical understanding of the required conditions for a global sustainability transformation and support Integrated Climate Governance (ICG) policies and options.

Ethnographic Biography

In this paper I present a new methodology that I call ‘ethnographic biography’. I have used this methodology to examine changes and developments in ethno-class identity among young adults from different social classes who are graduates of an integrated school and who are now finding their way in adult society in Israel. Ethnographic biography involves repeated in-depth interviews with all of the subjects over time, and from different perspectives, alongside the ongoing ethnographic study of events in their lives through various communications media, such as telephone conversations, email correspondence, and the subjects’ activities in social network sites (e.g. Facebook). It also entails attending life events in the subjects’ lives (going to a football match together, visiting a subject in mourning) and attending social events at their school, work, and leisure activities. The method of ethnographic biography has a number of important advantages. First, it offers a framework that is tightly linked to the subjects’ everyday lives while at the same time reinforcing both their interpretive and reflexive capabilities and the ethnographic dimension. Second, it enables us to follow various biographical events in the subjects’ lives in real time, and not retrospectively. Finally, ethnographic biography allows us to study the development and dynamics of ethno-class identity at varying, complex and nuanced resolutions, and thus to draw out its various pathways and instantiations.

Renegotiating the Definition of GMOs: Stakeholders’ Viewpoints on “New Breeding Techniques”

We are witnessing development of various new breeding techniques which cannot be regarded simply as genetically modified. For example, genome editing techniques, such as ZFN and TALEN, are techniques which delete some sequences of DNA without leaving any trace of the gene modification. In this case it is very difficult to identify whether this modification is made in an artificial way or just naturally occurred. As of the techniques called as reverse breeding, novel genes are inserted to induce certain genomic transformation at an initial stage, but the novel genes are removed from the final product (null segregant). Here it is open question whether the final product should be regarded as GM or non-GM.

These techniques are actually being developed by venture business companies and universities. If the products created using these techniques are regarded as non-GM by regulatory agencies, seed companies, such as in the area of vegetable and flower, would willingly adopt these techniques to develop new varieties. In contrast, once their products is categorized as transgenic, regulatory cost and prejudice in the media would be considerable, so it is open question whether the final product should be regarded as GM or non-GM.

In conclusion, we will show that the NEET category is founded upon a linear and androcentric representation of the life course (education-training-employment-retirement) (Levy, Gauthier, & Widmer, 2006) which not only subsumes very diverse social universes into chronological categories (Bourdieu, 1984, Yates & Payne, 2006), but tends to deny the importance of power relationships founded upon age.

Hijab blogs as explorative media-based spaces of social recognition

As studies have shown, women with headscarves are faced with discrimination and prejudice in their everyday lives. This becomes clear in professional settings and when job hunting in particular, as the Senate Administration for Integration and the Anti-Discrimination Office in Berlin have demonstrated. (Senatsverwal- tung für Integration, Arbeit und Soziales (Hrsg.), Mit Kopftuch außen vor? Berlin, 2008). Some explanatory approaches in the literature trace this back to a strong stereotyping in the media. Veiled women are thus perceived as less attractive, less intelligent and less educated, as suggested in the study by Yusr Mahmud and Viren Swami. (Mahmud Yusr/Swami, Viren (2010), The influence of the hijab (Islamic head-cover) on perceptions of women’s attractiveness and intelligence, in: Body Image, p. 30-93).

In Western culture in particular, the hijab is seen as a symbol of traditionalism, a lack of individuality (uniformity) and religious fundamentalism. On this basis, my study deals with “hijab-style” blogs as areas of recognition/areas of exploration. In these platforms, recognition is realised strongly via technical-media and aesthetic exploration. Using selected examples of “Islamic blogs”, which young Muslim women use as a platform to present and document “Islam stylings”, the meaning of such media platforms for aesthetic and social recognition is examined. As part of this, the presentation focuses in particular on the role of body/ dress/image for the constituting of “the self” as aesthetic configurations of social visibility.
Language As a Zombie Category of Sociological Theory

The aim of this presentation is to discuss how sociological theories have dealt with language. Many theories in sociology regard language as the most fundamental institution of social life. These theories suggest that the same language is shared intersubjectively by people, which in turn enables them to understand subjective meanings. This idea has become a marked trend since the 1960s in relation to Max Weber's sociological tradition, and is found, for instance, in Peter Berger and Thomas Luckmann's phenomenological sociology, Harold Garfinkel's ethnomethodology, and Jürgen Habermas's theory of communicative action. However, Weber himself, who lived during the formative period of the German nation-state, had consciously avoided the hypostatization of speech community linked to social organicism and collectivism. He embraced the universalism of the Western civil-society, and shaped his theory on the principle of individualism. For him, a speech community prior to individuals was only superficial. The method of understanding that he proposed was based on the rational calculability.

The idea of an intersubjectively shared language cannot be axiomatic, because intersubjectivity, as pointed out by Niklas Luhmann, is incompatible with subjectivity. Even when the same language is shared by people, the language of the majority that creates a macro-association amongst people is based on its standardization by a nation-state. A linguistic sociology that presupposes the sharing of language is possible only in the assumption of a "nation-society" by methodological nationalism. Hence, it is debatable whether a nationally constructed language can be given the status of a natural language of the life-world. Historically, the theoretical idea of sharing a language was in prevalence during the cold war period, when nation-states were relatively stable. In sociological theories, language is one of the zombie categories that carry the residue of such "nation-societies."

Complexity and Simplification. a Framework for the Analysis of the Visual Representation and Constitution of Suffering

Since the evolving global interest in them, children are constituted as a especially vulnerable group. Based on an analysis of visual representations of children in flagship reports of international organizations, I propose a framework for theorizing and analyzing the visual constitution and representation of suffering in two forms.

The first form of images of suffering is based on visual media such as photography and paintings, which represent specific individual and collective cases in aesthetic and documentary logics. A second form of representing suffering is based on numerical data and indicators and takes the form of lists (e.g., statistical tables with country-specific data in alphabetical order, rank-ordered lists (e.g., the Under-5 Mortality-Ranking), and graphical forms (e.g., world maps). Especially this second form deserves closer attention and theorisation, as it not only integrates numerical and graphical elements but moreover two distinct logics: simplification and complexity in transforming social phenomena into data and data into images representing social phenomena. I will discuss firstly the line of complexity running from simple listings to positioning to visually transforming data; and secondly, the line of simplification by which all three forms transform the complexity of social phenomena into visual clarity; a process in which diverging interpretations are hidden behind the visual representation, and ambiguity and interpretative openness is transformed into graphical decidedness.

I will conclude by linking the visual analysis back to semantic representations, as images of suffering are embedded in discursive frames through which their meaning is shaped, enacted, and specified. I will present the change of discursive frames with regard to the constitution of children from objects of humanitarian action to bearers of human rights, to human capital, and human potential; and the consequences of these shifts in meaning for the representation of suffering in visual forms.

Westernization or Hybridization? Restructuring Japanese Hegemonic Masculinity in Globalization

During the economic growth period, a form of masculinity attained a hegemonic position in Japanese society, that is, salaryman. The Japanese can easily build up a mental image of a typical salaryman as a man who works for the same company for life, being protected by career-long employment and a seniority system, and throws himself into the role of the breadwinner leaving domestic duties to his wife. Until the 1990s, majority of Japanese people approved the idea of gender division of household labor and Japan's economic conditions at the time could afford to provide a large part of people with such lifestyles. Hence, male-dominated regime in Japanese society in the second half of the 20th century has been legitimized thorough a masculine ideal characterized by preoccupation with work to provide for a family rather than violence or physical prowess.

In the age of globalization, however, any local gender orders cannot be isolated from the world and the hegemony of a locally-dominant form of masculinity is always threatened not only by local conditions but also by economic, political and cultural struggles in a global scale. Based on in-depth interviews with Japanese men in two different social contexts, the paper explores the conditions of restructing salaryman masculinity in terms of the world gender order. First, the encounters between different local hegemonic masculinities in a transnational arena is examined, showing the cases of businessmen working at subsidiaries of Japanese-affiliated companies in Australia. Then, the impact of contemporary globalization on a local gender order is considered by looking at the gender practices among middle-class men to keep up their hegemonic positions, being confronted with globally-expanding feminist agendas and neoliberal economy which undermine the basis of male-dominated Japanese society. Finally, we will discuss how ongoing reconstruction of hegemonic masculinity is associated with multiple social inequalities.
On the Function of “Symbolic Media” in the Process of Functional Differentiation

It is one of the most important contributions which Niklas Luhmann has made toward the thesis of functionally differentiated society to indicate the roles of “symbolic media” in concrete temporal events of commonground. Medium/Form-distinction is the theoretical device introduced by Luhmann for the purpose of analysis of Form-functioning in autoepoetic and information processing systems (including meaning-processing communicative ones). In short, it is necessary for meaning-processing systems in general, communication systems in particular. They constitute any appropriate distinction between Medium and Form and symbolize objects in the environment as Forms through Medium to operate and observe them.

We focus on this distinction of Medium/Form. This presentation shows how Forms in Luhmann’s terms, which mean distinctions with asymmetry between the inside and the outside, and as symbols in the self-reproduction of the communication in which they are adopted. And we deal with “health as symbolic media” for an instance so as to elucidate the significance of this theoretical device for empirical researches. In concrete terms, we will take up a case study about care work for people with physical disabilities in Japan in order to scrutinize the validity and the applicability of the thesis of functional differentiation in Luhmann’s theory. It shall be confirmed that various kinds of Forms employed as symbols are so connected with “health as symbolic media” as to allow the emergence and the self-reproduction of the functionally specific communication of care work.

The Meaning of Urban River Pollution and Sense of Place: An Ethnographic Study of the Klang River, Malaysia

This paper is based on a PhD research, which investigates values, beliefs and practices associated with two polluted rivers in urban settings – the Klang River in Kuala Lumpur, Malaysia, and the Torrens River, South Australia. However, this paper focuses on the findings from the Klang River ethnographic data. Theoretically, the concept of place is central to this paper. Findings suggest that in the urban setting where rivers have increasingly been polluted and modified, as a consequence whose water is not suitable for direct contact, the visual faculty plays a prominent role in determining the state of the river. From the perspective of everyday users, what constitutes pollution depends significantly on what can and what cannot be seen with naked eyes. In particular, objects (such as rubbish) intermingling with river water, the colour and texture of water, the decrease or abundance of aquatic species in the river are some of the common visual experiences described by the locals as indicative of pollution. What emerges is that local people have a broad conceptualization of river pollution. The values of a healthy river for the locals have also the physical environment surrounding it. Specifically, the concrete grey walls and straightening of the Klang River for flood mitigation schemes and transportation routes were viewed by the local people as a form of pollution. They expressed a deep concern regarding the physical transformation and modifications of the surrounding riverscape from ‘natural’ to ‘unnatural’, which consequently affect their visual experiences and overall sense of place. In conclusion, the concept of place is central to this paper. It is a useful means to understand and analyse the manner in which people comprehend environmental degradation and more specifically river pollution.

Betting with the Enemy: Changes in Sports’ Attitude Towards Sports Betting

Match-fixing in sport has emerged as a serious and widespread global problem. However, international sports organisations have tended to adopt an ambivalent position towards the issue. One the one hand, they deal sternly with match-fixing itself as seen in their common ‘zero-tolerance’ policy. On the other hand, the sports betting industry that brings about match-fixing has now been accepted as a reliable business partner. These conflicting approaches to match-fixing and sports betting industry frame match-fixing as a matter of individuals’ morality and ethics, instead of structural aspects that drive individual players to becoming involved in match-fixing. Interestingly, this dramatic shift in sports organisations’ attitude from vigilance to trust towards the sports betting industry appears to have been driven by monetary motivations. As FIFA President Sepp Blatter said, “bribing them [match fixing] is a way to make money in the sport”. This presentation briefly discusses various measures that international sports organisations are currently adopting to tackle sports betting along with the limitations of these measures. While in the early 19th century the football association in England struggled to protect their sport and players from dangers of the betting industry, this presentation raises a question whether today international sports organisations try to protect their business partners including licensed bookmakers from non-partners such as players in danger.

TAKAHASHI, AKINARI* (Kyoto University, ilanyca@gmail.com)  
A Shortage of Medical Doctors Due to Uneven-Distribution in Location and Specialty Needs Interprofessional Collaborative Practice in Health and Social Care in Japan

A shortage of medical doctors has been pointed out in last 20 years in Japan, but it has been more apparent after 2009, when two more years of a new compulsory clinical training added, after six years of medical education and successfully passed the medical licensure examination in Japan. A number of practising doctors per 1,000 population in 2009 was as follows: Norway 4.0, Germany 3.6, OECD 3.1, UK 2.7, USA 2.4, Japan 2.2, Turkey 1.4 and Chile 1.0. The highest number per 100,000 was 286.2 in Kyoto and the lowest 142.6 in Saitama in 2009. Causes of the shortage in Japan were as follows: advancement of medical science, specialization of health and social care professionals, increase to par participants in private practice, increase of woman doctors, longer time to talk with patients, change of patients’ consciousness to right, concentration of doctors to cities, decrease of practising doctors in pediatrics, and obstetrics.

Meanwhile, average life expectancy has extended as follows: 1921-1925: m 42.06, f 43.20; 1947: m 50.06, f 53.96; 1960: m 65.32, f 70.16 and 2012: m 79.94, f 86.41 (years).
Various needs of elderly people in health and social care could not be solved by a single profession, such as medical doctors. Many symptoms in health care occurred in the elderly, such as senile dementia, metabolic syndrome, hemiplegia, dysphagia, fragility fracture and dysuria, could be better treated by a team of multiprofessionals. Health care outcome such as average and/or healthy life expectancies may not be always correlated with a number of doctors.

In order to improve QOL of service users, a paradigm shift is needed in strengthening competencies of health and social care professionals for interprofessional collaborative practice, to develop a comprehensive health care network a community, consisting of three community-based powers on health care, welfare and education.

Method: We conducted a semi-structured qualitative study in 2013. The interviewees were 23 married men, who were volunteers, and 28-58 years old. Twelve men lived in Niigata, 5 in Hyogo and 6 in Kagoshima. The majority of them were members of the Japanese Trade Union Confederation and participated in our questionnaire survey in 2012. The rest interviewees were recruited through the personal relationships of the focal debenture.

Results: We have identified a few of new factors to promote the household work participation of married men in Japan. A married man would have positive intention to participate in the household work, if he thinks as follows: he could take the power to decide the principles of his family life (modern patriarchal hypothesis); he could manage the household economy (family economy management hypothesis); and he has clear memories of the experiences in home economics education classes (home economics education hypothesis). In the near future, we will look into these hypotheses by analyzing the data of questionnaire survey in 2012.

* This study was partly supported by Health Labour Sciences Research Grant of Japan in 2012 and 2013. Dr. Ayako Kuramoto, Kagoshima Prefectural College, is a member of this study.

Increased Involvement of the Disabled in Welfare Policymaking
There is increasing emphasis on participation by disabled people themselves in the process of formulating policies for the disabled, both in Japan and abroad. One of the most recent examples of this trend took place in Japan; in 2010 the government set up the "Committee for Disability Policy Reform," forming it in such a way that more than half of the members were directly concerned with the issue (people with disabilities and/or their family members), to discuss reformation of policies for the disabled, and to develop dialogue and cooperation with them.

Japan's Making of 'Western Society' without Democratic Social Foundations: A Historical Analysis of the Meiji Era and Beyond, 1850s-1900s
This paper provides a sociology-of-knowledge style inquiry into the process and consequence of prewar Japan's major national project: the making of 'western society' in Japan. My claim is that intellectuals and policy-makers, in order to actualize the idealized 'western society' in Japan, heightened hostility toward people's native, traditional forms and notions of society, and denied a possibility that Japan's 'westernization' was accommodated by people's traditionally democratic awareness. For this reason, prewar Japan's promotion of western society necessarily lacked social foundations of democracy. This problem, I conclude, ironically supported the prewar reactionary movement, and even led to a negation of the promoted west by the totalitarian regime.

Vulnerability of Functional Systems in Societal Transformation: On the Case of Political System
Populist political movements indicate the weakening of formal political processes. Today's advanced information society provides influential channels to get popularity and political momentum. The theory of functional differentiation predicates the autonomy and unity of each functional system. But, through mass media and the internet, populists can stimulate a societal emotion and mobilize it. We can observe, at least in Japan, a bifurcation of two political processes. On the one hand, there are formal and traditional political processes. Various interest groups support political parties as their representatives (or agents) in the political arena which adjust their interests. On the other hand, there is an arena of political communication in which various political groups are contesting to get societal resonance. Now, political system becomes increasingly vulnerable (or sensitive) to opinions in this second arena. This arena of political communication could bring a risk (e.g., of political extremism). It could also bring a chance (e.g., to achieve an ambitious consensus on social reform for sustainable society). One way or another, we can describe this situation from the point of view of social systems theory. Niklas Luhmann defined a resonance of social system as a reaction of social system to its environment in accordance with its structure. I will slightly redefine the concept of resonance to describe a societal resonance. That is, a resonance of social system is a reactive reproduction of communication in accordance with its structure (e.g., g. schema). So, we regard agendas in the second arena as societal structures which canalize societal resonances (communications). And, the problem is how societal communications affect trajectories of functional systems. The case of populism will be suggestive for this problem.

Policy makers such as European Commission, UK, and Japan are now interested in happiness as a policy tool. Happiness is normally measured by a likert scale. The comparison of happiness scale needs common understanding of happiness. However, happiness distribution can be classified into three types: normal, skewed and twin-peak. For example, the distributions in Japan and Hungary are twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply question about ideal happiness. Some may refer to 100% happiness, but the other may refer to 50% happiness and 50% unhappiness. Quantitative survey was conducted in Japan, Thailand and Philippines. It included questions about their current happiness on a 0-10 scale and ideal happiness. Adjusted by ideal happiness, the distribution was skewed distribution similar to Nordic countries. The survey's result confirmed that distribution of happiness embodied the difference of ideal happiness.

Others' Happiness: New Evidence from Four Asian Countries

If individual pursuit of happiness forced others' happiness to lower, happiness would not be a good concept to evaluate the progress of a society. We can call the society a "selfish happiness society". However, if happiness is more interpersonal, the balance between pursuit of individual happiness and other person's happiness may make society lead good direction. In particular, we now face many issues related to sustainability. Balance between economy, society, and environment and balance between current generation and future generations are keys for our survival. We can call the society a "social happiness society". Thus, the concept of "social happiness" is much more important in our society. However, effect of a person's perception about her own happiness and others' happiness on her happiness is not clear. Therefore, it is worthwhile for us to explore if a person who takes care of or pays attention to others' happiness is happier. I analyzed the relationship by using a survey in Japan and confirmed that other person's happiness makes us happy (Takahashi, 2012).

Similar to the survey in Japan, surveys conducted in Thailand and Philippines in 2013 included questions about general happiness and interpersonal happiness. Using these dataset, the author can test this interrelationship between individual happiness and other person's happiness. Even after controlling other important factors such as age, income, job and marital status, persons who reported that those around her were happy and she made those who were most important to her happy are happier than others. From the result, the author can conclude that other person's happiness makes us happy at least in Asian countries.

Identifying and Reducing The Anti-Japanese Prejudice By Koreans In Job Hiring Decisions

We investigated the level of prejudice that contemporary Koreans hold toward contemporary Japanese because of the Japanese military's victimization of Koreans during the colonial and social psychological mechanisms that might alleviate the negative feelings and attitudes held by the contemporary Koreans toward the contemporary Japanese. The Korean participants were asked to evaluate a pseudo-job candidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of do-job candidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of the candidate were manipulated to see if these manipulations would affect the participants' responses. Based on theories of intergroup conflict, social identity, and the collective guilt assignment, we hypothesized that: 1) the Korean participants would endorse the Japanese candidate more when he is portrayed as a trilingual (speak Japanese, English, and Korean) than when he is portrayed as a bilingual (speak only Japanese and English) and 2) the more collective guilt the Korean participants assigns to the Japanese candidate, the more negatively the candidate would be perceived in terms of his personality, which would result in less endorsement to hire the candidate. The results confirmed the hypothesis. Possible implications and suggestions for future studies are discussed.

Loss of a Spouse As a Poverty Risk

The death of a spouse is one of the most stressful changes in one's life. Spouse's death increases the morbidity as well as mortality of widows and widowers. The explanation is the lack of social support because the family is generally regarded as a primary source of support. One important aspect is also what happens to the income after the death of a family breadwinner. All these three factors -physical, psycho-social and financial - have a substantial impact in widows and widowers wellbeing.

In Finland after the death of a family breadwinner the income of the surviving family members consists of widow's and orphan's pension. The initial pension and the basic amount of the orphan's pension paid from the national pension scheme are paid regardless of income. The survivors' pension paid from the earnings-related pension scheme comprises the surviving spouse's pension and the orphan's pension. A child of the deceased will receive an orphan's pension until the age of 18. The survivor's pension act came into force in 1967in earnings related pension system and in national pension in 1969. Both were reformed last in 1990.

In this study we use register data of statutory pensions. Roughly 282,000 people were paid survivors' pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men's share of the pensions is 17 percent. Most of the surviving spouse's pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 per cent live under poverty line whereas of all pensioners under poverty line live 22 per cent. Right after spousal loss the income in family decreases about 20 per cent compared to pre-loss income.

The Nagano Olympics: Impacts on Local Community

This study aims at demonstrating the impacts of Sport Mega-Events (SMEs). In Japan, some studies on environmental or fiscal impacts caused by SMEs have been studied. However, few studies address the concrete impacts in a specific area and local community, nor try to investigate the long-lasting effects. In recent years, the International Olympic Committee (IOC) has attached a high value to ‘Olympic legacies.’ However, there are two main concerns regarding the IOC ‘Olympic legacies’. First, these legacies are mostly based on positive effects for the host city/nation, the National Olympic Committee (NOC), other sport-realted organizations, and for the IOC itself. Secondly, the ‘Olympic Games Global Impact’ project, launched by the IOC in order to improve the evaluation of the overall impacts is completed within 2 years of the event, and is much too soon to measure the legacy. This study argues that it is important to conduct research for a prolonged period of time in order to capture not only the positive aftereffects of events but also to address negative aspects thereby ensuring a more complete understanding.

This study evaluates different aspects of SME impacts through a case study of Hakuba village (Japan) which hosted the Nagano Olympic Games in 1998, and using three angles: the tangible/intangible; the positive/negative; and planned/unplanned impacts. Especially, the impacts on the tourism industry of Hakuba are discussed in detail. The analysis in this study is based on the questionnaires and interviews conducted with people from the community itself and on a variety of statistical data.

Association As a Tool or As a Principle?: The Reception and Usage of the Concept of the Association in Postwar Japanese Modernization Theory

How the association could be legitimized was a key question for French Sociologists, because the French Revolution prohibited not only old corporations but also new voluntary associations in order to establish a Modern Society.

For some sociologists, “Association” was theorized as an alternative to market society, for some legal scholars, the state was defined as a contract of association, in order to submit State Power to Civil Society’s control. In either case, the basic principle of association was the union of different peoples to accomplish their common purpose.

Comparing the French case, this paper focuses on the place of the association in Japanese Modernization Theory. This theory stressed the liberation of individuals from traditional ties, rather than Civil Society’s independence from the State.

As a result, first, the association was understood as one type of secondary group, which is contrasted with the local bonding community, and not as a principle for the society as a whole.

Second, the association was not considered to contribute to the Modernization Process in Japan. Modernization took the form of individualization in the free Market Society.

Today, Japanese society has been thoroughly modernized in that sense; individuals are free from tradition and customs. Paradoxically, engagement with local community activities has been revalorized and is considered to be an individual choice.

Tradition became one of the resources that create the voluntary association relationship.

These situations seem similar to Giddens’ “Reflexive Modernity” in appearance. However, today the Japanese regard the association as a tool for solving problems, not as a principle of society that unifies different peoples for the good of the commonwealth.

Retracing this history, we would like to critically examine why we have understood the association as a tool, rather than a principle, and how this understanding affects today’s policy.

Transitional Pathway from a Temporary Migrant Worker to a Permanent Resident: Narratives of Filipina Live-in Caregivers in Canada

With the rapid growth of the Tagalog (Filipino) speaking population, recent demographic trends in Canada has been directly affected by the pattern of global female migration and the subsequent arrival of these women’s family members. In particular, a specific foreign temporary worker program, known as the Live-in Caregiver Program or LCP, explains the current population growth of this visible minority. More than 80 percent of the migrant workers registered under the LCP are females from the Philippines. Furthermore, the LCP grants these female migrant workers the opportunity to apply for permanent residency and to bring their families to Canada after fulfilling a 24 months live-in working requirement. The LCP is the only temporary foreign worker program that has this legal pathway toward permanent residency in Canada.

This study aims to understand the social constraints on female migrant workers through examining everyday experience of Filipina live-in caregivers in Canada. The paper particularly focuses on the transitional legal pathway from temporary to permanent residency. The study of the transitional pathway of migrant workers uncovers the social process of inclusion and exclusion of migrant workers and their family members by states. Furthermore, this social process is highly gendered and racialized experience because vast majority of the applicants under the LCP are females from the Philippines.

Citizenship of Long-Term Migrant Filipina Women in Japan: Impacts of Positions in Japanese Families

This paper will argue how the citizenship of long-term migrant Filipina women in Japan is defined and negotiated in the dominant social structure. Regardless of the status of “sexual citizens,” or long-term legal membership based on sexual relations with Japanese citizens as Parreñas (2011) argues, sociostructural locations for these women have been stratifying, particularly between married women and mothers of Filipino-Japanese children. Based on census and qualitative data, stratification is primarily due to the process through which these women are or are not included into Japanese families, which embody the dominant racial and gender structure of Japanese society.

On the one hand, married women increasingly exercise their agency in not only the family and workplace in Japan but also in a transnational civil society. Despite their exclusion from formal political citizenship, some substantially exercise cooperation and conflict with Japanese counterparts. The three forms of hegemony are liberal internationalism around high finance, corporate liberalism (embedded liberalism) undergirded by Fordism, state intervention and Bretton Woods, and neoliberal globalization. According to the form of hegemony, the period is divided into five terms. The first is the post-First World War. Wall Street bankers formed the alliance with Japanese bankers through the investment in Japan and Versailles-Washington system. The second is the term between mid-1930’s and 1945. Great Depression destroyed liberal internationalism, and the conflict between Japan and the U.S. finally led to the war. In Japan, national industries like steel supported expansion of sphere of interest, which clashed against American ‘guy’s area’ design. In the U.S. New Deal and war mobilization formed the coalition that supported corporate liberalism. The third is the term between 1945 and 1971. American corporations and banks formed cooperation with Japanese counterparts through the investment in Japan and Japan-U.S. alliance in the cold war. Japanese leaders supported corporate liberalism, but the catch-up Breton Woods. The fourth is the term between 1970’s and early 1990’s with trade conflicts, during which American international banks rose, formed neoliberal globalization, and increased the investment in Japan. In Japan, multinational corporations rose through FDI in the U.S. after Plaza Accord. The fifth is the term between mid-1990’s and 2008. American banks and Japanese corporations shared neoliberal globalization, increasing mutual investment in Japan and the U.S. Neoliberal globalization finally, however, faced the crisis.
Making Irregular Migrants Vulnerable: A Tale of Biopolitics and Morals in Japan

This paper examines the changes in the irregular migrants’ situation in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

Giorgio Agamben (1998) theorized that biopolitics, as a function of sovereignty, operates to define the included and the excluded, the latter of which is called “bare life.” Some studies regard irregular migrants who are legally excluded as living a contemporary “bare life.” However, other studies have criticized Agamben’s argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract broad public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms. Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

Mobility, Diaspora & Contact Zones of Australians in Japan

Niseko, Hokkaido, a famous ski resort, has become a popular ski destination for Australians since 2001. It is located in the northern part of Japan serving both domestic as well as international ski tourists. Among foreign travellers to Niseko, Australians are one of predominant groups of visitors. With the large number of Australian visitors, the area has been transformed into “Little Australia” where Australian pubs, shops and English signs are becoming elements of the city landscapes. This paper will consider this flow of Australians to Niseko and its impacts in the local community through different theoretical concepts and shed light on nature as well as significance of such community under nexus of Australia and Japan.

A Moment of Recognition and Unity in Diaspora: Multi-Spatial Formations of Kurdish Music in Germany

Immigration from developing countries to Europe is often experienced not only as a social downward mobility but also as a cultural deprivation. In the context of Turkish migrant in European countries, their musical activities have drawn attention as struggles in discrimination: effort for transmitting cultures to the next generation. However, the localization of cultural creations is often prevented due to maltreatment and exclusion. Therefore, this paper will focus on the Kurdish music production which is mainly done outside of Turkey, especially in Germany.

This research focuses on the development process of the local food culture in central Tokyo. The historical development of public food culture in Japan is closely related to the socio-cultural changes in the central district. This paper will explore the urban regeneration of the land use area through the case study of ‘Central Tokyo’.

The Governance of Reproduction in Japan: How Can Reproduction be Located within the Capitalist Economic System?

As Karl Polanyi pointed out, the reproduction of human-beings and society is external to the liberal capitalist economic system. At the same time, the multi-dimensional reproductive activities (biological reproduction, economic reproduction and socio-political reproduction) are vital to the maintenance and development of the capitalist economy. The dilemma posed by the contradictory relationship between reproduction and capitalist economy had long been dealt with by mobilizing families and local communities, officially or unofficially, within each national economy. States have often played a vital role in the institutionalization of the link between reproduction and capitalist economy by locating families/communities within the national economy, in other words, governing reproductive activities, as exemplified by the setting-up of the welfare state system. Economic restructuring influenced by neoliberal principles in recent years, however, has eroded the foundation on which families and local communities can function as a reproduction unit. This paper will particularly focus on the controversial relationship between reproduction and capitalist economy. It is being recognized that the Japanese state where a high degree of the welfare state system’s dependence on the family is observable and rapid demographic changes, typically ageing and birth-rate decline, are ongoing.

This paper examines the ways in which the Japanese state has engaged in the governance of reproduction from the mid-19th century to the present time by arranging/re-calibrating the government in order to respond to changes in national/international political economy. In doing so, the paper explores a theoretical question regarding the contradictory relationship between reproduction and capitalist economy, that is, how the governance of reproduction functions in the process of developing and maintaining capitalist economies, with reference to the works of Polanyi and the ‘governmentality’ school. The analysis of the Japanese case offers some insights that illuminate important problems existing in the governance of reproduction embedded in governmental policy and economy.

How to Tackle the Vacant-House Problem in Shrinking Cities: The Cases of Japanese Local Governments

Japanese society, with the progress of depopulation and rapid aging, is faced with the vacant-house problem in both urban and rural areas. It is being recognized that vacant houses are an urgent issue to be tackled by Japanese local governments. How to reduce risks associated with vacant houses (accidents caused by building collapse and risks in fire and crime) to promote residential population and local resilience. The purpose of this research is to clarify the characteristics of local governments’ actions against the vacant-house problem in urban areas into the following two types:

1. Enforcement of “municipal regulations for controlling vacant houses”
   In 2010, Japan’s first municipal regulation against vacant houses was enforced in a city of suburban area of Metropolitan Tokyo. This action was a response to an increase in the number of destroyed houses. More than 40 cities have enforced similar regulations since then, and the number is further increasing. This trend is particularly prominent in local governments facing severe economic conditions, suggesting that how to control vacant houses has been a potential and serious problem. Main actors are local governments and the house owners. More specifically, who bears the demolition costs of aging houses is the point.

2. Management of “vacant-house banks”
   It is a challenge to local governments to introduce vacant houses, which have not been valued in private housing markets, to public information networks to promote their effective use. There are various types in the management of “vacant-house banks” by local authorities. Diverse actors including NPOs are involved in this type. Because renovation of vacant houses costs a large amount of money, those actors are seeking to form a partnership with each other and to explore new methods. Generally, not only reducing vacant house-associated risks but increasing values of local resources is aimed.

*T denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This research area called 'Tukishima' is located in the water-front area adjacent to the urban center. The Water-front mega-projects in the 1990's opened new large business/commercial district on the reclaimed island which attracts international and domestic tourists. The new subway lines were constructed through Tukishima, the number of tourists come to Tukishima increased. The traditional local shop owners in Tukishima changed their business, they opened special local food restaurants. This special local food called 'Mona'. used to be a common afternoon snack for working-class children here. About 60 Mona restaurants made the distinctive street of local food. Many tourists come to eat it at lunch time. After lunch they go sightseeing and shopping at the waterfront. Tukishima became a popular tourist spot. This is the first impact of urban regeneration on Tukishima. 

The second impact of regeneration is the boom of building super high-rise condominium towers. Tukishima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Tukishima is gentrified, and new residents enjoy to eat Mona as a traditional local taste. The third stage of regeneration is about to begin. Tokyo has been chosen to the host the 2020 Summer Olympic Games. The venue is very close to Tukishima, high-rise tower residents can see games from their windows. The price of condominiums goes up. Local food will be popular to visitors. The new era of Mona is about to start.

Challenges for Healthy Eating: A Cross-Cultural Study of Conceptions of Eating Among Young Adults in Urban Australia and Japan

In the early 21st century when bio-medical view on health and medicine dominates global discussion on “healthy eating”, most guidelines and recommendations are strongly concerned with fulfilling nutritional requirements and avoiding or limiting the intake of undesirable substances. They are motivated by the prevalence of chronic diseases such as cancer, cardiovascular diseases and obesity in modern society. Consequently, cultural ideologies around “healthy eating” are being constructed around these rationales. Beyond food intake, some studies and public health policies assert further that communal eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

I argue that the bio-medical approach mentioned above is often individualistic and overlooks the socio-cultural aspect of eating and living in a local community such as communal eating, culinary culture, history, lifestyle, and food supply chain. I explore the construction of “healthy eating” among young adults in urban cities of Australia and Japan through 71 in-depth interviews conducted during 2012-2013. I examine holistic aspects of eating by including contextual aspects of communal eating (eating alone) in the interviews. In contrast to previous literature, I find that the majority of participants see communal eating as a good cultural practice and may associate it with mental health benefits, but that this practice is not necessarily associated with the healthy intake of food (portion size, pace and food content). This is due to the fact that communal eating is rather complex and sensitive to socio-cultural circumstances.

In conclusion, this study identifies dynamics of eating contexts in different cultures as challenges for healthy eating promotion in the modern society.

How Japanese Male Narratives Are Made up?

We have recently researched Japanese university students’ sexual lives for a few years and published as a book in Nov. 2011: “talking about sex with college students: reality through sex in interviews”. I was interested in gay students’ sexual reality at the research and described how much they suffer from their lives. After the book published, I used that as a textbook in some universities. Then I happened to meet some gay students. I noticed a paradox of the narratives as a gay or that of ‘gender identity disorder’. The more I collected their narratives, what is to against ‘male narratives’ from their words and why they suffered from such unimportant miss much from their identities.

Who Makes the Stories, Medical Professionals or Patients?

I am really interested in the arguments which should save patients more ‘narrative based medicine’ or ‘narratives in Medicine’? In my point of view, carers including medical professions should more focus on patients stories about their illness and life. When patients’ narratives are controlled by medical professionals, even if it had been for ‘medical treatments’, patients are controlled by others. That might means one’s life is possibly controlled by medical stuffs which are strongly connected medical governance in their country. For instance, one’s narratives about “How to die” or “how to give birth” should easily connected to economical point of view in one’s country through the conversation with medical stuffs that defined by systematic medical standards. I may contribute to your session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illness in Hokkaido, Japan. Patient’s narratives are strongly controlled by medical stuff indeed in Japan. This should be the result of ‘Narrative Medicine’ had been done. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a se-hlp group. I will supply a small material for the argument who is to draw patient’s narratives.

TAKEUCHI, MAKI* (Ritsumeikan University, ma.kt0311@gmail.com)
Do the Small Firms Give Advantages to Female Employees?: Firm Size Effects on Taiwanese Women’s Career Choice

This study examines whether the difference of firm size influences job career of females in Taiwan using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. Well-known explanation for this is that the industrial structure composed of large number of small-and-medium sized enterprises (SMEs) and family business provide women with flexible working conditions. However, existing studies testing firm size effects on a woman’s career, have failed to reach a consistent result. To eliminate possible problems providing the inconsistencies, this study limit the objects of analysis to female employees with regular salary, excluding self-employed workers and workers of family business without payment. Also, previous studies usually treat job change and job turn over separately, but in this study those two actions are simultaneously analyzed in a discrete-time multinomial logit model. This study tests mainly two hypotheses: female workers in small sized firm are able to (1) enjoy flexible working conditions by negotiating with their employees and (2) accumulate better skills which are useful for a labor market than their counterparts in large firms are. Dependent variable is employment choice, which have 4 categories; “continue the same job”, “change job in SMEs firm”, “change job in large firm” and “leave from working”. Main independent variable is a dummy variable indicating working experience in SMEs and interaction terms SMEs dummy and event dummies standing for marriage and childbirth. The result indicates that women who have working experiences in SMEs are more likely to have uninterrupted working careers than those who have experiences in large-sized firms.

Jeunes, inégalités, Sens Du Changement Social

De quoi parle-t-on à propos de “changement social” lorsqu’on prend en compte la problématique des jeunes confrontés aux longs effets des inégalités sociales, dans la société brésilienne, mais qui sont dans un processus collectif actuel de changements surtout au plan subjectif (de leur collectif et/ou collectivité)? Changement d’attitudes quotidiennes en face de leurs propres situations précaires de vie et vis-à-vis des rapports sociaux qui rétrécissent toujours leurs possibilités de participation (économique, sociale, culturelle ou politique). Les multiples transformations à l’intérieur d’une société ont des effets différenciés sur les sujets sociaux selon la place qu’ils y occupent, raison pour laquelle le sens du changement social ne peut être défini qu’à partir des perspectives sociales. Peut-on envisager une discussion sur le changement social et le processus de subjectivation (sens foucauldien) tout en considérant certains des effets inattendus liés au développement des réseaux sociaux appuyés sur les nouvelles technologies d’informations et de communications sociales? Peut-on réfléchir sur le changement social tout en s’affranchissant des concepts « classiques » de reproduction, déviance, antagonismes de classes…afin de permettre l'émergence dans le discours sociologique, et la conceptualisation d'autres modes d'existence sociale, d'autres espaces d'expérimentations, d'autres intensités de vie, d'autres modes de penser le monde ou d'autres modes de plier les lignes de force telle qu'une multitude en son essai d'une nouvelle économie affective où la subjectivité devient une puissance de vie (sens Deleuze et Tarde) ? Des collectifs jeunes, au Brésil, en leur essai d'expérimentations culturelles, artistiques et micropolitiques qui se déploient dans les "périphéries" brésiliennes, mais aussi certains "mouvements sociaux" où les principaux protagonistes sont des jeunes, depuis 2011 (‘indig-nados’; ‘occupy wall street’; ‘printemps arabes’, ‘révolte brésilienne-2013’)… sont les fondateurs empiriques de notre réflexion sur le sens du changement social à l’intérieur de l’imposante logique des inégalités sociales.

TAKIKAWA, HIROKI* (Tohoku University, takikawa@sal.tohoku.ac.jp)
A Mathematical Model of Status Hierarchy

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years, a ground-breaking theory of status hierarchy, using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould's model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players must pay in executing their attachment strategies. Here we extend Gould’s model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould’s model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. Our main result is to show what is called "the relationality of social status". Specifically, we show that an individual’s status is entirely determined by the individual’s relative quality in the social system. This observation contrasts with that of Gould’s model in which an individual’s status is dyadically determined. Our model can be considered as a type of network formation model having broad applicability.

Remembering and Resilience after Traumatic Social Loss: A Multicultural Perspective

A challenging realm for Global Sociology is the cross-cultural thinking and processing of the experiences of collective remembering after mass social trauma and post-traumatic resilience across cultures and generations. In this presentation we will develop a theoretical and applied multi-cultural framework for working on the intersubjectivity of memory, with a focus on the unprocessed dimension of social experiences of traumatic loss, building on the latent, private, intimate individual and cultural aspects of experiences of collective memory and transmission. We will also work on the concept –building on Hallwachsian work of “undercurrents of memory,” incorporating the more recent concept of “moral injury,” a contemporary development out of the post-traumatic stress literature.

This line of grounded theoretical research, developed by collaborative efforts by the authors over the last decade, explores the underlying conflicts of the unresolved past as they are woven into the fabric of contemporary cultures, the effects of unprocessed experience lying in the undercurrents of collective memory, often excluded or absent from the public narratives of memory, but which paradoxically retain a profound intersubjective and cultural presence, until they finally push their way into the public realm. Social studies of collective memory need to include this realm of the unprocessed (latent but present) experiences and trajectories.

The authors will develop a joint conceptual approach to look at individual/community and cultural traumatic remembering, and the resilience of certain memories, over time. Applied research cases will include Southern Cone political authoritarianism, the Japanese American incarceration experience in the US as well as the Japanese memories of the 3.11. Great Tohoku Earthquake.
University competition for international excellence centers faculty research productivity (measured by indexed publications, research citations, etc.), global rankings, and international recognition. This presentation analyzes internationalization and research development in Chilean universities as a spatial reorientation of faculty work, knowledge, and subjectivity. Since Pinchot’s dictatorship, Chile’s neoliberalism has intensified everyday competition in a free market and declining welfare state. Following the regime’s political repression, universities’ knowledge alignment with popular subjects changed to creating practical, neutral knowledge through technocrats. More recently, Chilean university policy offerer enforcements to World Bank and OECD logics to increase research productivity and rankings.

I theorize globalization as a “spatial rationality” that attributes causal powers to space to create efficiency, utility, and normative ideas of “the good” that catalyze particular actions and subjectivities. rhetorics of globalization’s economic demands and techniques towards “national” national, institutional, and individual well-being. Technologies of visualization (e.g., rankings) and cosmopolitization incite faculty to compete as entrepreneurs, a spatial reorientation that secures theory, methods, and research networks of the Global North as norms for knowledge production for faculty from “peripheral nations.”

I present themes from interviews with twenty faculty across fields at two top Chilean universities: (1) Faculty describe becoming self-managers, securing grants, publishing in ISI journals, and participating in international networks, creating new privilege networks and career pathways. (2) Third sector has become prominent, increasing the decribe losses: research regulation through funding agency and journal standards, abandoning local projects of social change, and diminishing space to participate in national debates; (3) These constraints produce alternative knowledge projects, such as using grant funds to create digital platforms for public exchange or indexing long-existing Chilean journals to legitimize “expressions that expand our social imaginary.”

This is not a simple narrative of research homogenization, domination, or resistance, but of how crisis ordinaries creates new spaces, subjectivities, and knowledges.

I Miss My Mum and Dad: Children’s Well-Being and Parents’ Job Migration In Estonia

Estonia is fastly developing country, which has experienced many societal and economic changes after regaining independence in 1991. Although there has been many positive developments, the global crises has influenced the lives of many people in Estonia. One of the most recent developments is a growing job migration out from Estonia. According to Statistics Estonia since 2010 the number of people leaving Estonia has been constantly increasing. After 2012 it has been doubled compared with previous years. Negative net migration together with negative reproduction rate has been the main indicator influencing drop in population of such a small country. Another tendency that is poorly studied is the well-being of children whose parents have gone abroad. In some cases they are staying behind with their children, but in relatively same number of cases they are leaving children behind with one parent or if mother and father both leave, other relatives take care of the children. There have been also cases children are left just by themselves without any proper care, in some cases just older children taking care of their younger siblings. Aim of the current study is to analyze social and psychological well-being (life satisfaction, personal well-being and relationships in school and at home) in group of children who are left behind by one or more parents and to compare the findings with control group – children who are living together with their parents in Estonia. For the analysis most recent data is used from the Jacob’s Foundation survey Children’s World (data collected in autumn 2013). Altogether 3000 children from Estonia are studied, covering the ages 8, 10 and 12, around which is the most vulnerable age in sense of psychological and social attachment and challenges of growing up.

The Gender Gap in STEM Majors: Evidence on the Gender Belief Hypothesis from Taiwan

Why are women underrepresented in science, technology, engineering, and math (STEM) fields in college and work? Drawing on an unprecedented range of survey data were collected (Shaham, 2003) rejected many common explanations (such as gender difference in math ability and the pipeline hypothesis) for the gender difference in college majors. Survey-based research has yet to explain much of the gender gap. Drawing on experimental studies, Ridgeway and Smith-Lovin (1999) develop a concept called cultural beliefs in gender (gender beliefs). Using survey data to corroborate the experimental results, Correll (2001) argues that gender beliefs result in biased math self-assessment (MSA) and MSA explains why females are underrepresented in quantitative majors. Yet, upon close scrutiny, her results actually show that MSA is at best a minor source of the gender gap. Interestingly, Cech (2011) shows that professional role confidence, as a form of gender beliefs, can explain the gender gap in persistence through engineering majors in college. This seems to indicate the causal importance of some gendered cultural and psychological mechanisms may well be at play.

This study re-examines whether gender beliefs can explain why more men choose the science track senior high school and STEM majors in college. We draw on the core panel of the Taiwan Education Panel Survey (TEPS), a large and representative sample of first year junior high school students in 2001. In general, students’ gender beliefs early in high school explain a minor portion of the gender differences but parents’ gender beliefs when children were early in high school explain substantially more—about a half of the gender gaps. Taken together, the two beliefs explain most of the gender differences and the residual gender gaps become insignificant. For the first time, surveys-based results can provide a simple and direct confirmation of the gender belief hypothesis.

Pregnancy: Supporting Networks and Families in Disaster

The aim of this research is to analyze pregnancy in its social contexts: privatization and familialism. In post-WWII Japan, pregnancy has become privatized as a family issue. The disaster in 1995 and 2011 revealed us that there was much limitation of supporting system in these social contexts. My research is based on data as follows: (1) statistics on pregnancy, (2) relevant laws, (3) articles in professional journals, and (4) 10 interviews of women who were pregnant in disaster. My presentation is as follows: (1) To review development of laws; (2) Pregnant women in disaster as well as in peacetime for these twenty years in Japan, (2) To show what happened to pregnant women and their families in disaster, (3) To figure out a chain of caring support and women’s power to change disaster into opportunities, (4) To point out further issues left us, especially in Fukushima. In more concrete terms, I show invisibility of pregnant women in 1995, and then development of networks to support pregnant women and their families by the third sector since 2011. We can find a great deal of change in Eastern Japan Disaster in 2011, in comparison with Hanshin-Awaji Earthquake in 1995. The voices of the pregnant babies are taking care of the disaster show us that the disaster has become a turning point to support pregnancy beyond privatization and familialism. On the other hand, Fukushima remains as a harsh reality for families and mothers especially with babies. The facts tell us the way we construct families and supportive networking as well as their limitations after disaster.

When Are Interviews Good Enough? A Reflection on Threats to Retrospective Methods Posed By Automaticity and Performativity

Research on respondent performance in the research setting and on automaticity, human cognition directly challenge the validity of interviews. Interviews, however, efficiently produce what looks like rich, relevant data and they are particularly appealing when studying complex work in difficult to research environments. This paper looks for evidence of the practical relevance of performativity and automaticity in transcripts of interviews with civilian and military staff just returned from their rotations in a reconstruction mission in a (post)conflict environment. Re-analysis of these interviews suggests that the validity of retrospective methods may degrade rapidly as complexity increases.

Symbols, Communicative Citizenship Actions and the Claiming of Human Rights from a Transnational Perspective: The Case of the Social Movement of Victims of Eastern Antioquia, Colombia

In this paper I would like to present the experience of two social movements of victims of Eastern Antioquia (Colombia – South America) that have been developing different types of communicative citizenship actions and symbols in order to do political activation in regional public spheres and claim human rights from a transnational perspective in the midst of the Colombian armed conflict. Specifically, I will focus on the experience of the Association of Victims of Granada Town (ASOVIDA) and The Provincial Association of Victims to Citizens (APROVICAC), and how these two associations of victims have been implementing various sorts of symbols and forms of political action having as a reference the victims’ groups of the world such as Women in
Black (Serbia), Mothers of the Plaza de Mayo (Argentina) and May our Daughters Return Home, Civil Association (Mexico).

My two principal arguments in this paper are: first, these two Colombian experiences (ASOBIDA and APROVACI) are successful examples of how it is possible to transfer, adapt and implement different types of political actions and symbols from other parts of the world in order to improve social and political activism in particular contexts. My second principal argument is that the concept of communicative citizenship represents the instrumentalization of a new dimension of citizenship where communicative action is at the centre of the social dynamic, and one of its primary purposes is to understand the different socio-communitive manifestations, actions, strategies, practices and tactics associated with the contemporary struggle for recognition, meaning and significance for different actors in public spheres. The analysis in this paper is based on results of a narrative analysis of 48 interviews I conducted with different members of ASOBIDA and APROVACI in October and November of 2012 as part of my doctoral research fieldwork.

In Search of a New Framework: Collective Actions in Non-Metropolitan Cities of the South

Following Castells some scholars analysed urban conflicts in the framework of 'Urban Social Movements'. Both urbanists and Social movements scholars in the South except a few, however completely neglected this framework, where the discussions were focused on different sets of issues.

In the last two decades cities in the South are experiencing explosion of collective action. Actors old and new are participating in the campaigns and movements around issues of access to livelihood, food and employment. Mostly these collective actions are woven around 'identity issues' and are therefore seen as 'aberrations' from the given theoretical frameworks.

Research on non-metropolitan cities shows that there is urgent need to go beyond binary understanding of collective action in terms of material and symbolic, old and new, urban and rural to capture the complex interplay of socio-economic and cultural factors and to encompass the scalar complexity that we have understudied so far. Race, gender, caste and religion are not just general categories underlying these collective actions, but these are historically and spatially intertwined to express new combinations, alliances and contradictions. Collective action arguing for citizenship rights is also articulated in very different ways.

There is an urgent need to reformulate the theoretical tenets of urban studies to incorporate the dynamics of collective action in the urban arena and the framework in Sociology of Social movements warrant reformulation so as to address new forms of urban collective actions which redefine social movements.

TAMURA-URANO, YASUKO* (Teikyo University, yasuko8@main.teikyo-u.ac.jp)
One Health Concept and the Uninsured in Japan

Objectives. The purposes of this research are: to provide a general overview of Japan’s universal health insurance coverage system, to examine the social factors that explain the rise in the number of uninsured individuals using Geographic Information System (GIS) mapping, and to discuss the future universal health insurance agenda.

Background. Due to its universal health insurance coverage system, Japan’s health and medical services are among the world’s highest quality. Japan’s system requires that all residents belong to either the national insurance system or an employer-based insurance system. However, total population coverage is not the reality. In Japan, 18.8% of households with national insurance fail to pay their premiums, and those who fail to pay their premiums for 12 months become uninsured, including the children in these households. In fact, a Japanese government survey (2008) revealed that more than 30,000 children under the age of 16 are uninsured.

Analysis and Discussion. One key social factor that explains the rise in the number of uninsured individuals is the increase in labor mobility, which was determined so far. Race, gender, caste and religion are not just general categories underlying these collective actions, but these are historically and spatially intertwined to express new combinations, alliances and contradictions. Collective action arguing for citizenship rights is also articulated in very different ways.

There is an urgent need to reformulate the theoretical tenets of urban studies to incorporate the dynamics of collective action in the urban arena and the framework in Sociology of Social movements warrant reformulation so as to address new forms of urban collective actions which redefine social movements.

Coping With The Modern World and Re-Composing Ethnic Identity: Conversion To Christianity Among The Badeng Kenyah Of Long Geng, Sarawak, Malaysia

There has been considerable works on the anthropology of Christianity relating conversion and its impacts to colonialism and consciousness (such as the important work of J. Comaroff) or simply to the success of missionary activities. Works on conversion of indigenous minorities generally relate to the religious politics of identity in relation to the majority people, as pointed out by most contributors in the volume edited by Charles Keyes on Christianity among the indigenous peoples of Southeast Asia. We are interested in the views of women because their social roles were previously constrained under the New Order. This conservative doctrine, in which conformity was a key element, made the role of women in society. The end of the New Order was preceded and precipitated by the Asian economic crises. Indonesian GDP for 1998 shrunk by 4.3% and the value of the currency plummeted from 2,909 rupiah per USD in 1997 to 10,014 in 1998. Since then there have been a number of political developments such as a decentralization of government, democratic elections, an anti-corruption drive. Reforms also saw a rapid expansion of the media and reports on the visible Islamization of Indonesian society.

Based on qualitative interviews of 100 women in Jakarta that will be conducted in the latter half of 2013, we will examine how the changes brought about by the Reformasi movement have affected family life. We are interested in if and how social changes affect family life, or does family life remain stable in times of turmoil? We are focusing on Jakarta because it is a microcosm of Indonesia with people from the different ethnic and regional groups represented in the city. Also, the impact of the policies of the New Order and its subsequent demise would be strongest in the capital city. Also, we are interested in the views of women because their social roles were previously constrained under the New Order. Women who are at least 30 years old will be selected to ensure that they have some memory of life before and during Reformasi.

How Has Reformasi Affected Family Life? The Views Of Women In Jakarta, Indonesia

When Suharto’s New Order government fell in 1998, it ended more than 30 years of the highly intrusive Pancasila ideology that shaped the policies of the New Order. This conservative doctrine, in which conformity was a key element, had profound impact on everyday life including marriage and the family especially the participation of women in society. The end of the New Order was preceded and precipitated by the Asian economic crises. Indonesian GDP for 1998 shrank by 4.3% and the value of the currency plummeted from 2,909 rupiah per USD in 1997 to 10,014 in 1998. Since then there have been a number of political developments such as a decentralization of government, democratic elections, an anti-corruption drive. Reformasi also saw a rapid expansion of the media and reports on the visible Islamization of Indonesian society.

Based on qualitative interviews of 100 women in Jakarta that will be conducted in the latter half of 2013, we will examine how the changes brought about by the Reformasi movement have affected family life. We are interested in if and how social changes affect family life, or does family life remain stable in times of turmoil? We are focusing on Jakarta because it is a microcosm of Indonesia with people from the different ethnic and regional groups represented in the city. Also, the impact of the policies of the New Order and its subsequent demise would be strongest in the capital city. Also, we are interested in the views of women because their social roles were previously constrained under the New Order. Women who are at least 30 years old will be selected to ensure that they have some memory of life before and during Reformasi.
plinary under the nation-state building period. In order to illustrate the kaleidoscop-
ic intellectual landscape, my paper divides into three parts:

Firstly, I will depict the general history of Chinese anthropology and the logic to facilitate the sociological and anthropological knowledge as a discipline "seeing like a state" before 1949. The Chinese anthropologists and state had to face up with two problems: one was the exploration of the idea of under the first republic na-
tion-state building in China (1911-1949); the other is to construct a stable Chinese Nation (Zhonghua Minzu) community by which the modern state can identify itself and stand up to the external Others; the other is to mentally and physically develop and relate to the country. Second, I will interpret how the academic circles and intellectuals of sociology and anthropology co-relate with the nation-state building projects from 1911 to 1949. Huang Xianfan (1899-1982), Wu Wenzao (1901-1985) and Lin Chunsheng (1902-1981)'s academic lives can vividly signify how and why different intellectual trajectories jointly push forward the Chinese sociologi-
cal and anthropological knowledge. And I will close read their academic writings to show how the geopolitical facts impact their choice to produce the sociological and anthropological knowledge about understanding Chinese nation-state, and ask the questions how Huang's learning from Tokyo Imperial University combined with the understanding of Chinese social realities made him a scholar of sociology and anthropology different from the nationalists, how Wu and Lin went to differ-
dent discipline-formation track and settled their knowledge in China and Taiwan. At last, I will give opening conclusion on dealing with the relationship between the geopolitical gain/production of the knowledge and the practice of the knowledge in modern China.

TANABE, SHUNSUKE* (Waseda University, tanabe.sh@waseda.jp)

An Intertemporal Comparative Analysis of Japanese Xenophobia Between 2009 and 2013

Japan is one of the most ethnic homogeneous countries in the world; however, Japan is also in the midst of rapid globalization with increasing numbers of foreign nationals living in Japan. Therefore the grassroots right-wing movements have spread and radicalized in recent years. But the causes and mechanisms of rapid growth of xenophobia in Japan remain unclarified.

The aim of this presentation is to reveal factors of xenophobic attitudes in Ja-
pan, especially the effect of social events. I analyze two survey datasets which were collected in 2009 and 2013 all over Japan. Between 2009 and 2013, Japan has experienced terrible diplomatic problems like Senkaku/Diaoyutai Islands dispute against China and also economic recovery seems to be caused by "Abenomics".

The hypotheses on relationship between social events and xenophobia are as below. The first one is the influence of "East Asian geopolitics" (Higuchi 2012) on Japanese xenophobia especially toward Chinese and Koreans. Japan has ter-
titorial disputes against China and Korea. There are also political debates on the un-
derstanding of history in the period of Second World War. This hypothesis as-
sumes that those conflicts have negative effect on Japanese attitudes toward Chi-
na and Korea. The second hypothesis is the realistic conflict theory (Sherif 1966 etc.). From this perspective, in the time of economic depression, competition among immigrants and native citizens over limited resources are intensified, therefore ethnic antagonism toward foreign residents are also escalated. If this the-
ory is correct, the relations between respondents' socio-economic status and xe-
nophobia can be weaken from 2009 to 2013. Because in 2009 Japanese economy suffered in economic downturn precipitated by the Lehman Brothers bankruptcy, but "Abenomics" seems to show signs of economic recovery in 2013. I will confirm these hypotheses by using Multi-group Structural Equation Modeling.

Post-Colonial Immigration Memory: Social and Academic Resistance to Epistemic Violence

Since the end of the 1980s, French Immigration Memory (mémoire de l’immigra-
) has gradually become visible in France. As a result of this process, the first immigration museum in France, Cité Nationale de l’Histoire de l’Immigration(NHII), was inaugurated in late 2007. Immigration Memory, once an almost exclusive topic to the anthropologists born in a minority family for a good third of na-
then rapidly became one of the important objects of study and of public policies through the late 2000s. However, if certain dimensions of Immigration Memory have become visible, the other dimensions, that I would call post-colonial dimen-
sions, have become invisible within the same process.

This paper, therefore, argues the exclusion of Post-colonial Immigration Mem-
ory in social and academic spheres as epistemic violence and aims to explore individual and collective resistance against it. The resistance against epistemic vi-
olence is practiced by activists and artists with post-colonial backgrounds through Memory Maps. Memory Maps is a cultural and artistic practice of reconstructing certain past stories that they directly experienced or not and they find themselves inherited from. Their positionality and proximity to the past story, depending on their gender, life-course and/or ethno-racial identity, gives a different signification to each Memory Work. Through the analysis of several exemplary Memory Works about “memory of struggles” based on my fieldwork in Lyon, Toulouse and Paris since 2009, I aim to empirically study epistemic violence in order to resist it as a researcher. Post-colonial Immigration Memory, in this sense, is not only an object of study but also a sociocultural project to bring normative construction of knowledge and its violence into question.

A Biographical Analysis of Women’s Political Participation: The Importance of Politicization in Female Legislators’ Biographies

Politics as a social institution remains highly gendered in many societies both quantitatively (few politically active women such as legislators) and qualitatively (androcentric political culture). It has been a major area of concern in both the-
other economic and social science. This research aims to challenge this gendered world of politics. Despite their efforts women are still minorities among those who are in the decision-making positions. This paper applies a biographical approach to a study of women’s political participation and explores what promotes their participation in decision-making. Data used were collected in 2010 through qualitative interviews with female legislators in the local Tokyo assemblies. An analysis of the data revealed that women who used to be politically inactive, even uninterested, could be ‘politiced’ in middle adulthood or at a later phase of life. It is argued that this process of politicization can play an important role in women’s decision to run for office. As Japanese women such politicization rarely occurs in women’s lives. Women are traditionally ascribed to the private sphere of domestic work, being excluded from – or discouraging women from being engaged in – public life. Scholars of women’s political partici-
pation have stressed the androcentricity of institutional politics and identified in-
stitutions and psychological obstacles to women’s political participation, ranging from a lack of money, party support, publicity in running an election to women’s reluctance of engaging herself in institutional politics. Our study looks at opportu-
tunities rather than obstacles for women’s political engagement and focuses on how female legislators experienced the process of politicization and transcended the private-public divide.

BRISEN, LILIAN (University of Kentucky)

First Land: Creating a Farm for the Future

According to the 2007 US Census of Agriculture, less than two percent of labor force in the nation is in agriculture; the average age of principal farm operators was 57 years in 2007, and more than a quarter of all US farmers were 65 years or older. In order to support the emergence of the next generation of farmers, we, as agricultural researchers and educators, need to provide them with pathways to economic as well as environmental and social sustainability. Based on the data collected from our multi-state, multidisciplinary research project on beginning farmers, funded by the Southern Sustainable Agricultural Research and Educa-
tion (SARE), this paper examines the critical role that “land” plays in paving these pathways. We will first present multiple narratives used by beginning farmers that illustrate their understanding of the dynamics of finance capital in agriculture. Using the “economic map” as both a methodological and theoretical tool, we will then discuss the key patterns of how these beginning farmers position diverse financial/economic actors as critical resources for, or hindrances in, shaping their farming practices. We will also explore in these narratives how the concepts of “sustainable farming” and “economic viability” are articulated to guide their prac-
tices.
The Role of Tourism Companies in Forming Ethical Tourists: Case Studies of Tourists from China to Japan

The increase in Chinese tourists overseas and its socio-cultural and economic influence are of interest worldwide as well as in Japan. While many agents in the tourism industry invited Chinese tourists, the conditions of tourism between China and Japan are unstable, especially under the influence of political factors. Further, media outlets tend to create a negative image of Chinese tourists.

This article focuses on the social and cultural interaction of tourists from China to Japan, particularly, the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in the tourism industry.

Two case studies are examined. First is the case in which tourism companies teach their clients tourist ethics. In China, the government has recognized the importance of "tourist civilization," and in relation to this, I present a practice of "morality education" in tourism companies. I point out how they teach social and cultural order effectively in accordance with appropriate practices in Japan. The second case involves visits for inspection or training, which is a dimension of socio-cultural order effectively in accordance with appropriate practices in Japan.

Recovery and Social Inequalities: The Use of Capabilities Approach and Intersectionality Analysis in Exploring the Social Conditions for Recovery

‘Recovery’ has become a dominant discursive feature in the UK mental health policies. Under the neo-liberal context, the mainstream recovery services tend to promote individualistic recovery strategies. Such policies and services fail to address the structural inequalities that give rise to distress and mental ill-health or place sufficient emphasis on the diversity of inter-sectional inequalities among service users that shape recovery journeys. This paper critically engages with the concepts of ‘recovery’, based on a case study of Chinese mental health service users in the UK which explores how structural factors, such as class, gender and ethnicity, contribute to their diverse recovery journeys.

To shed light on the complex interplay of structure and agency in shaping recovery journeys, a synthesis of the Capabilities Approach (Sen, 1999, Nussbaum, 2001 and Hopper, 2007) and Intersectionality Analysis (Walter, 2007 and Anthias, 2006) was developed as an alternative framework. Repeat-in-depth life history interviews were carried out with twenty two Chinese people who had received a psychiatric diagnosis, recruited from three cities in the England. Findings showed that participants strove, sometimes cautiously, to retain and exercise agency to move from patienthood to personhood. Their journeys were shaped by social inequalities demonstrating that targeting social inequalities is essential for facilitating and nurturing meaningful recovery.

Drawn on the findings in the case study, this paper will illustrate in what ways the medicalisation process enhances or hinders the (re)development of capabilities. It will also discuss about the use of the Capabilities Approach and Intersectionality Analysis in exploring the social conditions for meaningful recovery.
Intercultural Training Program as a Mechanism of Raising the Individual Level of Competition

Seventy people representing five regions, and 32 countries were involved in the research. 25 expert interviews and 6 focus-groups were conducted by the researchers. Most contrast patterns of cultural clashes were observed in the interaction between foreign and local populations. The strategies of acculturation of the people with diverse origin are very different. The representatives of Western Europe and the USA tend to believe that their difficulties in adaptation result from low standards of local people. Japanese and Russian social environment newcomers from far eastern countries make enormous efforts to understand the motives guiding the local people's behavior, and try to adjust to the context of local culture. Africans tend to conceal their problems. The main problem of their adaptation is the lack of local people's tolerance resulting from physical and cultural differences. Weighing pros and cons of living in Petersburg they often try to focus on positive aspects and push up negative sides. As for the citizens of the CIS and former Baltic republics (Estonia, Lithuania, Latvia), the process of their adaptation is the easiest one, because they speak fluent Russian, have been visiting St. Petersburg since childhood and do not feel enormous cultural differences. However, the lack of notable differences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants from the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

TANGALYCHEVA, RUMIYA* (St. Petersburg State University, rimma98@yahoo.com)
Sociological Study of the Cultural Differences in Korean-Russian Mixed Marriages

According to Korean statistics in South Korea 90489 marriages between Koreans and foreigners were registered. The share of marriages with Russians was 835, among them 523 marriages between Russian women and Korean men. For the present study of the cultural differences in Korean-Russian mixed marriages the method of semi-structural interview was selected. This method gives a good opportunity to gather the necessary information and to interpret the object of research. The empirical research was conducted in Seoul, South Korea in 2010. Ten Russian women in the age from 19 to 31 years old, married the citizens of the Republic of Korea, participated in the study. Following the opinions of the respondents, the most difficult thing in family life in mixed Korean-Russian marriage is the difference in mentality with their husbands, but for communication with husband's relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival “Chusok”) when crowds of relatives gather in parent's home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenarios of children's socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participated in the research were in their so called “honeymoon” period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

TANIGUCHI, YOSHIMITSU* (Akita Prefectural University, tani@akita-pu.ac.jp)
Social Cleavages Caused By Radioactive Contamination of Food and the Environment: The Case of Fukushima

The nuclear disaster in Fukushima has inflicted devastating damage to agriculture and food of Japan in many respects. I will give an overview of the social cleavages caused by the disaster. First, the social estimation of organic agriculture was tremendously damaged because the regional circulation of organic matters, one of the most important characteristics of organic farming, was broadly contaminated by radioactive substances. Many consumers particularly concerned about food safety have stopped buying organic foods not only grown in Fukushima but in surrounding areas. Despite the fact that radioactive substances remaining in soil were not transferred to agricultural products, most of the consumers have not yet come back to the farmers. The fall of the reputation of organic agriculture is the more serious because it is deeply connected with the growing distrust of Japanese food in general. Radioactive contamination of food has become a serious threat to the national food security. Second, a deep cleavage occurred between the farmers who are willing to live and farm in Fukushima at the risk of exposure of radiation and many anti nuclear activists who criticize these farmers insisting that they quickly leave the contaminated hometowns. The recognition gap concerning the risk of being exposed is so wide between them that it is difficult to establish the solidarity movement between farmers and anti nuclear movement.

Third, there appeared a great gap between Fukushima and the rest of Japan, or between Tohoku District, northeast part of Japan consisting 6 prefectures including Fukushima, and the rest of Japan. The nuclear disaster has reproduced the unequal development patterns that were often observed during the modernization history of Japan: taking the goods to the center and bringing the bads to the periphery.

TANO, DAIUSKE* (Konzan University, dtano@center.konzan-u.ac.jp)
“Strength through joy” in Japan

During the second half of the 1930s and into the 1940s, the National Socialist leisure organization “Strength through Joy” (Kraft durch Freude, shortly KdF) had a great influence on the development of Japanese leisure movement (Köse movement), and played a crucial role in the establishment of relations between the two countries. Since the World Recreation Congress in Hamburg 1936, the activities of the KdF, which should regenerate the “strength” of workers through “joy” in leisure, attracted public attention in Japan, where the general interest in the subject of leisure had been slight. The KdF gave the Japanese movement many suggestions and became its model. After the foundation of the Japanese Recreation Association (JRA, Nihon kôsei kyôkai) in 1938, the Japanese leisure movement made a rapid growth into the holding of the Recreation Congress for Asian Development (Kôa kösei taikai) in Osaka 1940. At this congress, to which also representatives from Germany were invited, the slogan “Strength through joy” was adopted and the Japanese-German cooperation in the field of social policy was proclaimed. However, the actual discussions between the two countries on issues relating to leisure were not deepened by the congress, and also the mutual perceptions of Germany and Japan contained contradictions in many respects. This report therefore examines the image of the KdF in Japan and that of the Kôsei movement in Germany, and also investigates the relationship between the two countries, in order to clarify the features of the mutual perception and its significance.

HIV/ Aids Among Adolescents in Brazil and France: Similarities and Differences

In order to analyze the Aids epidemic in France and Brazil, particularly among adolescents, a critical review of literature, official documents and on-site verification of services for sexual and reproductive health for adolescents was held. The concept of vulnerability and its categories were used as theoretical basis of the research. A comparison to France and Brazil in terms of economy, education, and cultural inequalities (Bourdieu 1986) this paper highlights the way pragmatic considerations about education and economic futures intersect with the ambivalence that young people feel about their transnational upbringing and identity, as well as the way they imagine ‘home’. Given that international mobility is the norm for the young cohort I studied, their experiences offer significant insight into the complexity of transnational family lives and its impact on children.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
To make healthy lifestyle choices from among a set of given possibilities is not always easy. One needs proper background knowledge ensured by education or provided by professionals trained for lifestyle counselling. The *Health Promoter qualification within the Recreation Organisation and Health Promotion Bachelor education* offered by the University of Szeged, Juhász Gyula Faculty of Education, Institute of Health Sciences and Health Promotion (Institute) makes professionals competent in creating a “health map” for individuals – in the family, in the workplace - including physical and mental status and lifestyle elements (leisure, nutrition, time management, environment) and build personalized (individual and community level) counselling activity, health promoting actions, campaigns and projects on identified needs. With his/her knowledge in the socio-demographic determinants of unequal opportunities and the means and “language” of addressing and approaching different social groups this professional can bring the best out of life opportunities and life chances to promote healthy choices. This presentation will introduce the audience into the unique skills, knowledge and competencies the above professionals possess and the ways they can be the most effective promoters of lifestyle – with useful leisure highlighted – in an unequal world.

TARASOVA, EKATERINA* (Södertörn University, ekaterina.tarasova@sh.se)

**Anti-Nuclear Movement Discourse in the Countries of so Called “Nuclear Renaissance”**

Since the first half of 2000s the world society has been observing the expansion of national nuclear energy programs in a number of countries, also called by nuclear power industry as ‘Nuclear Renaissance’. This development has been accompanied by the contemporary trend in public opinion showing positive attitude towards nuclear energy. The striking is, however, that this situation occurs in the countries with the history of significant anti-nuclear movements, e.g. Sweden. The revival of nuclear energy programs, public opinion favouring the expansion of nuclear energy and the experience of anti-nuclear movements in the past are the points of departure for this study. The constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, these national nuclear power strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Daiichi. This paper explores what extent and how these turning points become part of the anti-nuclear movement discourse. In terms of methodology this study is based on discourse analysis.

**Multiple Discrimination: Personal and Institutional Perceptions, Impacts, and Actions**

This paper investigates the phenomenon of *Multiple Discrimination* in Hungary, with special attention paid to cases of intersectionality based on ethnic origin. The research unfolds those mechanisms that lead to multiple discrimination in the field of job seeking, hiring, and employment. The phenomenon of multiple discrimination is studied, on the one hand, from the perspective of decision-makers representing public and private employment agencies; on the other hand, from those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, in particular of multiple discrimination, among victims, and a high inertia and inaction on behalf of decision-makers lead to the reproduction of social mechanisms responsible for discrimination.

**Education for Lifestyle (Leisure) Counselling in an Unequal World**

(Szeged, Hungary)

Max Weber’s lifestyle model emphasizes the role of life opportunities, life chances and choices. Life opportunities provide the conditions for choosing one’s lifestyle. Life chances are the chances of actually realizing the given values. For realization it is the social environment that ensures the structural prerequisites. Opportunities, chances and choices in everyday life mean that people have a free choice within the wider or tighter boundaries provided by their social environment and related social pressure. At the same time, lifestyle is not only a dependent of one’s social position, but it also plays a considerable role in designating one’s position in the social structure.

**Does Local Level Policy Making Hinder Women to Participate in the Labour Market and Support the Gender Inequality?**

Eurostat projections reveal that over the next 50 years, population aging is likely to occur in all the member states of the EU. At the same time, many of the countries, the labour force will decrease. Therefore, maintaining the national social-protection systems, it is essential that the majority of the working age population stay gainfully employed. However, political frameworks ignoring the gender mainstreaming ideas may contrarily discourage women with informal care responsibilities by hindering their possibilities to participate in the labour market. The aim of this presentation is to discuss policy frameworks and local policy makers’ mindsets supporting (or restraining?) the women with informal care load to participate in the labour market. The presentation will also make insights into women’s own interpretations and examine, what restrains their (re)entrance to the labour market. Presentation is based on theoretical approach of gender mainstreaming that through the European Open Method of Coordination is affecting the national and local policy making. The methodological starting point of the presentation is multi-level governance theory focusing particularly on the local level policy-making. The presentation will base on findings from the research project FLOWS funded by the EU 7FP, by drawing data from policy documents, interviews with local level policy makers and women with informal care responsibilities.

**Emergence and Handling of New Trends in Migration**

In the 21st century, international migration is becoming more active and more complicated than before. The state and other political agencies struggle to handle migration further. But how can they be successful in handling? This paper will pose the question to explore, with taking a comparative stance of Asia with other regions such as Europe, America and Oceania. As is well known, Asia is an highly active area in migration, following some new characteristics in recent years. Firstly, South Korea and Taiwan have set up the guestworker system to introduce unskilled migrant workers officially that Western European countries abandoned around the middle of 1970s. This seemingly anachronic guestworker system is based on bi-governmental agreement, which created new flows: Now South Korea accepts migrants from Uzbekistan, and Taiwan introduces workers from Mongolia. Secondly, a points system has been introduced by Japan. Strategically, Japan planned and started the points system at the same period when it introduced the guestworker system. This system is based on the theoretical approach of gender mainstreaming that through the European Open Method of Coordination is affecting the national and local policy making. The methodological starting point of the presentation is multi-level governance theory focusing particularly on the local level policy-making. The findings indicate that informal care of older people is not seen as a gender specific problem. Therefore, ignoring the ideas of gender mainstreaming the policy frameworks may hinder women to participate in the labour market and promote social inequality. The presentation will base on findings from the research project FLOWS funded by the EU 7FP, by drawing data from policy documents, interviews with local level policy makers and women with informal care responsibilities.
El presente trabajo intenta producir una interpretación sobre las estructuras de las focalizaciones discursivas en las imágenes utilizadas en el cine mundial contemporáneo, retraendo el universo de las realidades brasileñas singularizadas en los juegos de escena entre Brasil y los brasileños, medios expuestos en las películas ibero-americanas. A partir de una serie de imágenes relacionadas con la producción cinematográfica sobre Brasil y los brasileños en el cine ibero-americano, se pretende observar los procesos de transmisión de imagen y la confección de la exofobia ‘brazuca’, articulados en los contextos operativos de los sistemas de reconocimiento y adopción de las prácticas de interpretación contrastantes de los exóados migratorios a los países europeos. Las imágenes relacionadas con Brasil y los brasileños, son vistas a la luz del debate sobre las construcciones del imaginario de los brasileños en el exterior, con el objetivo de observar las intensificaciones recientes y las dicotomías discursivas sobre los lugares de reproducción de colectivos migratorios y los extranjeros tópicos del país mediático. En este sentido, el trabajo explora el impacto de la exclusividad de imágenes de referencia que adornan y dan fuga a una serie absoluta de etnocentrismo y representaciones monolífricas donde Brasil y los brasileños son conducidos e intensificados de forma urgente dentro de la cinematografía ibero-americana reciente. Palabras-claves: cine, migración e identidades; estudios visuales y adaptabilidad;
Television As a Global Kaleidoscope: Multiple Socio-Cultural Realities within a Paramount Political Reality

In recent years, due to a number of factors like the severe global socio-economic crisis, the citizens of countries like Greece search for information through foreign media. Thus, globally broadcasting corporate or state television channels, (i.e. BBC, CNN, France 24, Al Jazeera, Russia Today, CCTV News), became very popular. This paper attempts to discuss these channels' representations as alternate sources, focusing on three levels. First, the formative one: They all (a) use English or oral and written discourse; (b) follow standardized forms of Western broadcasting; (c) utilize the media cosmogony of our epoch. Second, the substantive one: (a) Operating within a ‘global village’ framework, they function in their ‘public sphere’ without barriers; (b) They manage to create ‘medias events’, authenticating and explained by participating actors and professional experts; (c) Cultivating a sense of immediacy, they connect individual life-worlds with ‘projected’ or ‘world views’. Third, the conclusive one: (a) While documenting issues from multiple socio-economic realities (i.e. economy and business), with a prej assume- undated factuality, they express a ‘paramount (political) reality’. (b) This ‘reality’ is a ‘nemotic construction’ which reflects core values from a channel’s ethnocentric perspective with a long historical tradition. Any interpretative scheme they provide derives from this perspective. (c) Thus, foreign channels offer planned images, which hide the impact of political ideology in (un)official ‘translations’, becoming improvisations with inauthentic color schemes on the screen canvas. The critical question remains: Are those media nothing but a kaleidoscope for the ed ‘world views’. Third, the conclusive one: (a) While documenting issues from多人相互作用のシナリオを構築し、その結果を基に新たな理解を生む。

In the present work, we provide a case study of a protest against construction of a “Kaminoseki nuclear plant” at Iwaisawa located in Yamaguchi Prefecture. Attention is given to two groups. The first one is the “Iwaisawa no shizen wo mamorukai,” a group that specializes in the environmental aspects of biological diversity. The second one is “Kaminoseki genpatsu wo tatesasenai Iwaisawa tomin no shakai.” Both groups are engaged in activities that specialize in the environmental aspects against construction of Kaminoseki nuclear plant. Using the investigation data of the voice of the participant in that two groups, we analyze the motive of participation, the resource of motive, and cultural factors (e.g. collective memories, local histories, and personal stories) in order to find out the construction process of “global/local meanings” and “collective identities”.

Lastly, we attempt to clarify that the “global meanings” was related to the significance of the “local meanings”, and highlight the resource of the “global/local meanings” and construction process.

Sociological Study of E-Dating and E-Prostitution in Iran

Sociological Study of E-dating and E-prostitution in Iran

Abstract

Iran has provided the possibilities for virtual networks by facilitating internet access to the public. But the open nature and lack of “enough” control over the virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution.

As a result of strict rules imposed by the government, dating, “illegal” relationships, as well as prostitution, has been looking for new opportunities in virtual environment. In particular, online social networks such as Facebook have provided a new market for sex trade. There has been a surge in Facebook subscriptions in Iran with the purpose of advertising and seeking sexual services. This study attempts to examine this phenomenon from a sociological perspectives focusing on prostitution;

Data collected from Facebook pages of Iranian users concerned have indicated that the following key points have led to the growth and popularization of this phenomenon.

- evasion of law
- freedom from the restrictions of family,
- passing the limits of time and space,
- achieving social identity in digital social stratum of prostitution,
- anonymous identities,
- ease of socializing,
- desirably setting the conditions/price for services,
- avoiding loss of earnings to pimps,
- screening and vetting the persons of interest
- sociological (e.g. economic, cultural, religious) reasons, implications, and lowering the risk of embarrassment,
- possibility of freely expressing hidden sexual fantasies and leisure,
- combating social exclusion and finding the strength to oppose popular culture.

The trend of e-prostitution in Iran is on growth and our study attempts to discuss the consequences of this phenomenon.

Keywords: Iran, cyber-space, Facebook, prostitution, leisure

Women Go Shopping: Discussing the Behaviour of Generation Y and “Green Consumption” in Rio De Janeiro

This paper aims to discuss the buying behavior of the female segment with respect to the consumption of products with ecological appeals (“green products”), in the post-modernity, through the subject area of green consumption. The sample includes 100 surveyed women of Generation Y. For this study, we conducted a qualitative, exploratory research, with field survey using structured questionnaires. The interviews were held in January 2013, at the exit door malls in Rio de Janeiro. The theoretical basis of this study are the concepts proposed by Bau-

man, Cancini and Lipovetsky. The data discussion reveals a women of Generation Y with a consumer behavior paradoxical, showing that the influence of fashion, media and academic information makes young people oscillate between fashionable trends and practices resulting of a deeper understanding of environmental issues, according glances of environmental responsibilities and conscious citizen seized through education and through the Internet. The results also reveal the idea of consumption as a process of a hybrid culture (through the influence of popular culture produced and widespread by the socio-technical networks) and local culture, with traces of belonging, social recognition, especially from the perspective of the consumer-citizen relationship. This ambivalent condition of this generation relies both from the perspective discussed by Bauman (dialogic relationship between the spectacle and the vacuum of consumption as a moral/social duty and the critical reflection of the consumption, through spaces as schools and universities), and by the vision of Cancini which emphasizes the logic of cultural hybridity and the idea that to be a citizen is required to carry a consumer identity. Complemented by Lipovetsky, both thoughts emphasize the consumption behavior of the social actor of female sex in the Generation Y as a reflection of a society that expresses the concept of a individualistic and consumerist ethic.

Cultural Artifacts in the Mexican Social Movement Sector: The Artifactualization of Performances and the Performativity of Artifacts in a Digital Age

Where resides of a less democratic past persist, as is the case in Mexico and several other Latin American states, challenges to the state often take more subtle and insidious forms, which means that cultural institutions and mobilization processes can be especially instructive. Drawing on several mobilization sites and moments from contemporary Mexican social movement sector the paper aims at exploring whether the tools of cultural analysis—performances, ideations and especially cultural artifacts—are used in the production of oppositional meanings and whether the unfolding events and actions around them can become central to the identity and to the genesis of social movements. The social construction of these cultural artifacts, their social embeddedness, and the diverse ways that audiences respond to them, mean that artifacts themselves can play key roles in mobilization trajectories, as social actors encounter them, appropriate them, develop them, modify them, and mobilize around them. Focusing on the artifi-

cactualization of performances through digital technologies and vice versa on how artifacts can take on qualities of performances by being digitized and posted on a facebook page or blog, the paper also explores whether online social media have transformed the cultural analysis of performances and artifacts

Collective Action Between the Street and the Court: Public Hearings in India

Public hearings, in the contemporary Indian context, are public meetings organized around the implementation of a given public policy (for instance the right to education). These meetings take the form of a confrontation between the administration and the people, moderated by a panel of “experts”. This peculiar form of collective action, characterized by a deeply ambiguous relationship to the judicia-

ry, has become increasingly visible in India in the past decade. This paper will attempt, firstly, to trace the genealogy of public hearings, back to the people’s tribunals of the 1960s; it will show how the public hearing has since been reenvisioned and reinterpreted, and how it has met with a new popu-

larity. It was used by very different types of actors and struggles. Secondly, the paper will describe and analyse the dynamics of public hearings in order to highlight their hybrid nature, in between the community meeting and the lawsuit. Finally it will try to understand the sources and the limitations of the efficiency of public hearings as a mode of mobilization.

TAYLOR, EMMELINE* (Australian National University, emmeline.taylor@anu.edu.au)
Punitve Pedagogy and the Political Economy of the Surveillance School

Surveillance Schools are emerging around the globe characterised by new technologies and practices that identify, verify, categorise and track pupils in ways never before thought possible. The school gates have been opened to a variety of surveillance technologies including CCTV, metal detectors, fingerprinting, online monitoring, facial recognition and palm vein scanners, to name just a few. Of course, Surveillance Schools are not just comprised of technological apparatus, many have full time uniformed police officers, armed in some countries, patrolling the corridors and classrooms, they subscribe to random drug testing and use sniffer dogs to search students and their possessions stored in transparent lockers and bags. Taking schools as microcosms of society, they can provide us with a prophetic glimpse into an emerging penal vista characterised by surveil-

lance, containment and control. Set against this backdrop, the paper examines the new penal legacies and corporate priorities that have increasingly flowed into schools as successive waves of neoliberalism have come to shape the po-

litical landscape. Corporate schemas increasingly pervade schools, reclassifying citizens as consumers and aligning education with the needs of the post-indus-

trial market. As the Surveillance School assesses pupils according to their value
as 'human capital' (Apple, 1998) they are sorted into two ideal types; compliant ‘worker-consumers’ and ‘market rejects’; those that are disposed to poverty, or in the most extreme cases face a direct and expedited channel from the school to prison. The paper debunks the meritocratic myth to argue that the school-to-workplace pipeline has bottle-necked as neoliberalism desicrates jobs. The school production line is no longer only routed to the industrial workplace, but rather prisons have become the relief valve, filtering off the already marginalised poor into carceral warehouses.

**Mental Health and Illness and Workplace Harassment**

Even though every person is protected against harassment and discrimination in areas defined by Alberta’s Human Rights Citizenship and Multiculturalism Act, The Canadian Charter of Rights and Freedoms and the Canadian Human Rights Act, general types of harassment or bullying are not prohibited in Alberta, so this qualitative analysis examines the avenues to resolve harassment issues within the context of Alberta Public Service in Canada. The goal is to achieve a healthy workplace for every person. The ‘harrassed worker’ has been explored within a psychiatric framework, so the paper searches for an appropriate framework namely labour code, union grievance, legal remedy or medicalization of deviant behaviours in the workplace.

**Imagining Futures in Paper Homes. Ambivalence, the ‘Politics of Becoming’ and the Everyday Life of Temporary Immigrants**

This paper asks whether changes in the patterns of migrant mobility have been accompanied by, or indeed have generated, the affective register of ambivalence as a way of coping with life as temporary, nomadic and often unwanted peoples. Migration is increasingly temporary in nature, with an attendant loss of access to the channels of full incorporation to formal citizenship and belonging. As a result, immigration policies are in conflict with the basic needs of life as well as in the long-term projects of imagining a new life in host societies. This paper proceeds with a focus on the fluid contexts of immigrants’ everyday lives, negotiating the complex pathways of globalised labour markets, national migration regulations and the localised experiences that consolidate and homogenise. Ambivalence can be conceived as a rational response to the uncertainties faced by immigrants: temporary and precarious work; second-class citizenship; marginality and invisibility. At the same time, ambivalence can also be understood as a more widespread emotional response, observable under the conditions of late modernity in conformity with economic globalisation; a response heightened through the immigrant experience, though perhaps not distinct only to the immigrant experience. Drawing on the concept of a ‘politics of becoming’ as a rejection of the zero sum game approach of mere inclusion or subsumption of rights claims but also the policy-practice nexus and the potential impacts of such challenges.

The paper draws on original qualitative data from interviews with temporary migrants in the Asia Pacific region, focused on the fluidity everyday life and securing work, subsistence and on imagining futures. The interview material offers insights from temporary migrants to the possibilities of a ‘politics of becoming’.

TAZREITER, CLAUDIA* (University of New South Wales, c.tazreiter@unsw.edu.au)

‘Rooted Cosmopolitanism’ or ‘Politics of Becoming’; A Thick Convergence?

This paper proceeds from a grounded understanding of cosmopolitan values as ‘rooted’ in particular experiences and ways of life, yet assumes those same values to be generalisable – as human rights. ‘Rooted cosmopolitanism’ speaks to an aspect of human rights, namely its relationship to the nation-state form. Though human rights are conceived as universal ideals, their fulfillment in tangible entitlements and claims occur predominantly at the level of the nation-state. The possibility of human rights – and of our commitment to their primacy (as ‘natural law’) hinges on cultural understanding of rights and questions of what is it to be human. Rather than proceeding from the well understood logic of universal human rights as internationally held norms that ought to be realized and applied through the domestication of those norms in particular states, the paper proceeds with a view to the realm of affect; sympathy and love as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporary and unauthorized migrants? Through examining the perspectives of ‘rooted cosmopolitanism’ (or cosmopolitanism from below) and the ‘politics of becoming’, the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

TE KLOEZE, JAN* (Foundation WICE-DSL, jan.tekloeze@wice-dsl.nl)

**Inequalities and Similarities Between Dutch Families: Holiday Making By the End of the 20th Century**

In many studies on recreation and leisure as a social phenomenon, leisure is regarded as the opposite of work, or as compensation for work. Leisure is also seen as being complementary to an individual’s line of work. However, a number of scholars question whether this is the most fruitful way of gaining insight into recreation and leisure. Philippen (1963), Roberts (1981), Kelly (1983) and Te Kloee (1985a) believe a family or household approach to be more productive, which means that the theory should be directed at the social context of leisure on a micro- and a macro level. The social context of people refers to the primary life domains of leisure and family life – which are embedded in the wider context of society, both institutionally and socio-spatially. The question is how far the above is valid for tourist behaviour being an important part of (family) leisure life. The family tourism market is arguably more important now than it has ever been (Southall 2010).

An empirical study on family and leisure was conducted in the mid-nineteen nineties (Te Kloee 1996). Part of the data of that study haven’t been analysed before. Those data were focused on tourism behaviour, the holiday(s) chosen, if any; the activities undertaken during the holiday; the organisation of the holiday; task sharing between husband and wife. Traditional and modern-individualistic families were distinguished.

The content of the problem statement is as follows: how do (partners from) families behave in time and space with regard to holiday making, and are there inequalities related to their origin? (urban – rural; low versus high status; caring role; and gender)? We used data from diaries and from extensive interviews with husbands and wives. In this paper the main findings of that analysis will be presented.

TE RIELE, KITTY* (Victoria University, kitty.teriele@vu.edu.au)

**Conundrums for Policy and Practice Regarding Vulnerable Youth**

Many youth related policies and institutions are aimed at supporting vulnerable young people to prevent problems from arising, to catch problems early, and to assist young people who are experiencing problems. Identifying some young people as vulnerable (or ‘troubled’, or ‘at risk’ – the terminology varies) rather than providing such services for everyone enables limited resources to be targeted at those who need them most.

This poses several conundrums. First, selecting some young people for special attention creates the dual risk of stigmatising some and excluding others. However, not singling them out may lead to further disadvantage. This creates a tension between the provision of services for young people. Secondly, determining which young people warrant what kinds of support and when is a fraught issue. The criteria for such ‘triage’ are rarely clear-cut. At the policy level, this challenge focuses especially on which priorities to highlight in public announcements and through funding. At the practice level, enactment of policies may affect how and focus especially on which priorities to highlight in public announcements and through funding. At the practice level, enactment of policies may affect how and this challenge focuses on how and those who need them most.

The presentation will engage with these conundrums by not only exploring how and why certain young people are identified as vulnerable in relevant policy, but also the policy-practice nexus and the potential impacts of such challenges.

**Professional Ethics for Social Justice: Codes, Principles and Resources**
It is likely to be widely accepted that ethical reflection by professional workers, such as teachers, is of benefit for improving equity and social justice in society. More controversial, however, is whether formalized codes and principles are helpful. In this presentation I begin by analysing critiques of formal frameworks for procedural ethics: both professional codes of ethics and guidelines for research ethics, especially in the context of social science research. Specific concerns relate to the restrictiveness of codes, the impact of codes on undermining professional deliberation, and a lack of cultural relevance. I draw on Nancy Fraser's framework of social justice to relate these issues to considerations of inequality. The second part of the presentation reflects on my experience teaching a module on 'professional ethics' in a pre-service teacher education course in Australia. Rather than pre-determining codes or principles for students to adopt, I started with a Smorgåsbord approach, offering various ethical theories and materials. These were resources for students in order to construct their own 'professional ethical toolkit'. I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics frameworks internationally (respect for persons / autonomy, beneficence / non-maleficence and justice) as well as ethical resources through Fraser's lenses of procedural ethics: both professional codes of ethics and guidelines for research procedures and more informal pedagogical approaches.

When Food Aid Supports Local Farming: Towards a Sustainable Solution? Case Study in France

In Europe an increasing number of people require the assistance of food aid organizations. Access to fresh quality food gets difficult, impacting people health. This contribution is an original on-going case study assessing the impact of an innovative food aid supplying mode supporting small local farmers. Besides developing links between urban consumers and local producers, it reveals the current conditions shaping the creation of fair and sustainable markets.

This case study is based on the pluralistic intervention research ECOALES in partnership with the ANDES (national association for food aid) which has set up in 2012 an innovative short supply channel for fruit and vegetable for solidarity grocery recipients as well as financial and political partners, representing the sustainability of the system.

The intervention also includes cooking workshops and visits to farms. The network of local farmers is organised by a coordinator in charge of deliveries to food aid outlets.

We will focus on the diverse constraints: creating links between shops and farmers who are spread over a large territory; the articulation between support to farmers in a difficult situation and regular supply in quality fruit and vegetable; meeting consumers' expectations... We will also assess necessary adaptations and the sustainability of the system.

Fieldwork (including participant observation) follows the lines of global approach, including the diverse protagonists involved: farmers, solidarity food outlet staff, recipients as well as financial and political partners, representing institutions involved. The original methodology, combining interdisciplinary perspectives (anthropology, epidemiology and economy), offers finer understanding of what is at stake. The analysis should highlight the favourable conditions for the viability of such a project.

Intergenerational Coreidence, Support Transfers, and Psychological Wellbeing Among Older Persons in Myanmar, Thailand, and Vietnam

We analyze data from 2011-2012 nationally representative aging surveys from Myanmar, Thailand, and Vietnam to examine the associations between coreidence with adult child, intergenerational transfers, and psychological health among older persons in developing and rapidly aging Southeast Asia. Specifically, we ask: 1) How does coresidence with adult child and proximity of children influence the psychological wellbeing of older persons? 2) To what extent are support transfers from children associated with elderly mental health? 3) Do support transfers from children fully account for the relationships between parent-child coresidence and older persons' psychological health? 4) How do the associations between intergenerational coresidence, support transfers, and elderly mental wellbeing vary across the three societies? The mixture of commonalities and differences in political systems, cultural underpinnings, kinship systems, levels of development and degrees of population aging that characterize Myanmar, Thailand, and Vietnam render the comparative analysis particularly interesting. While the body of literature suggests that living arrangements of older adults are related to their psychological outcomes, most research focuses on the effect of living alone versus living with others, which may or may not include an adult child. Less is known about the effects of coresidence with an adult child and how factors such as coresidence and support affect psychological outcomes. We have not seen any studies that examine the extent to which parent-child coresidence affects older persons' psychological wellbeing in the developing Southeast Asian contexts. An absence of a coresidential child may adversely affect mental health of older persons. Clinical depression and depressive symptoms have been linked to greater healthcare utilization, higher spending on care, and higher mortality rates. Given the region's rapid population aging, decline in fertility rates, and unprecedented levels of young people's migration, a decline in parent-child coresidence may have significant implications for public health system, policies, and planning.

RC06-122.8
TEISSEYRE, PIOTR* (University of Warsaw, ptteisseyre@gmail.com)

This paper discusses the relationships between social representations (Moscovici 1961) of fatherhood, social policies and social practices in the period 1989-2013 in Poland. It investigates how shifts and continuities of social policies affect configurations of fatherhood. The analysis considers cultural, institutional (laws, regulations, organizations) and societal dimensions of fatherhood. The main hypothesis states that the institutional order shapes the social representations of fatherhood and simultaneously the cultural images of fatherhood define the patterns of social policy reforms and block radical changes as well as create the realities of fatherhood.

The institutional context of the welfare regime in Poland is often characterized through the strong familism and paternalism. The poor access to institutional channels of social protection, 2.4 % of children 0-3 y/o in institutional care) and the commodification of labor “strengthen” care function of families. This promotes male or dual breadwinner family model with a limited involvement of fathers in childcare and domestic work.

The 2013 leave entitlements reform in Poland can be considered as a historical transition from familism implicit to familism explicit (Leitner 2003). An entitlement to 26 weeks of parental leave was introduced as a supplement to 26 weeks of maternity leave. However, the recent reform confirmed a strong link between the cultural images of fatherhood, the political agenda and the results of reforms. The rejection of father's quota also revealed durability of the regulations that reproduce gender inequalities in care-giving and domestic work. Basing on evidence from other countries with similar constructions of leave entitlements it can be assumed that in Poland parental leaves will be used almost entirely by women. This assumption is further confirmed by a limited take-up level of 2-week parental leaves.

Legal acts, media and parliamentary debates, existing literature and qualitative data (IDI with fathers) serve as empirical material for this paper.

The Place of Art in Social Theory: A Possible Approach to Max Weber and Michel Foucault

Max Weber dedicates his work to the delimitation of the historical specificity of the West taken in terms of culture. His study on the rational and social foundations of Western society is his only formulation of that cultural specificity within the aesthetic sphere. This unique trial presents a precious articulation between the formal analysis of an aesthetic language and the definition of the specificity of Western culture through a method of historical sociology that sets the singularity of its objects by comparing them with similar expressions located in different historical contexts. In turn, Michel Foucault analyzes the literary, understood as a specific happening that emerges in the eighteenth century, as a privileged locus for defining the knowledges and practices, double dimension of his conception of experience that takes place outside of a discourse systematically ordered. Therefore, it is up to investigate it in order to define the present as historical unique.

The purpose of this communication is to examine the possible similarities between methodological arrangements proposed by both authors to undertake the analysis of aesthetic expressions in order to formulate the historical specificity of the modern world.
Persistent Invisible Inequality in Education: Sociology of Education and Gender Studies in Japan

Japanese sociology of education has a long history. Women and education and gender issues in education have become some of the main topics in the sociology of education since the 1980s. This presentation traces the transformation of feminist discourses in education in Japan, focusing especially on the hidden curriculum of socialization through gendered socialization, and gender order penetrated in Japanese society deeply, while following the main issues of sociology of education since the 1980s to the present.

Gender is an important lens through which we can interpret the role of education in society and the ways in which it contributed to social change in late modernity. In this presentation, I will focus on the following three points; first, to understand gendered schooling and education in Japan, empirical data of Japanese education such as gender tracking, faculty components, the ratio of female teachers and principals, and female researchers in academic fields examined from a comparative perspective. Secondly, based on the analysis of the trends of articles related to gender issues in the journal of JSES, the reality of persistent inequality in education will be discussed. Thirdly, I consider the issues of inequality of gender and other disparities in Japan, knowledge transmission, power relations and reproduction within the era of Neo-liberalism.
European and Latin American Higher Education Between Mirrors

Higher Education systems all over the world have gone through deep transformation and extraordinary expansion. In Europe, major transformations in higher education and in the context of the subject and serve as limits to just resulted mainly from the implementation of the so-called Bologna process. The main goal was to establish a European Higher Education Area which allowed an increase in international competitiveness, attractiveness and comparability between European higher education systems. Evaluation of results and consequences of the Bologna process has largely depended upon the evaluators’ perspective. At the political level, it is easy to conclude that the Bologna process has been successful since it allowed greater integration and harmonization between the various education systems of the 46 participating countries. However, at the institutional and local level, the response is more cautious due to the great variety of contexts involved.

In Latin America, timing was different since this was the first region where neoliberal policies were put in place, after Pinochet’s military coup in Chile in 1973. Several authors described the end of the 20th century in LA as the “lost decades” The beginning of the 21st century brought with it important changes to the scene. The election of progressive governments in some LA countries gave way to policies which favored redistribution of wealth At the same time, in some countries, with robust indigenous communities, their cultures were granted political and social recognition and intercultural policies were developed. It is not meaningless that it is precisely in LA, where the first neoliberal experiment was carried out, that the search for alternative policies and the construction of other rationalities were undertaken. This paper presents the results of a research project developed by the Network RIAPE, comprehending 31 universities from 21 countries of EU and LA, funded by the ALFA Programme through 2010-2013.

National Educational Systems and Academic Profession: Portuguese and Spanish Cases

The transformation by which the universities are facing now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale’s calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the educational policies in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professions and competences of professors as well as by the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the what is a professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

Housing Poverty in Urbanizing India: Emerging Trends and Concerns

Urbanization and housing shortage in India seem to go together. Housing Poverty, viewed as homelessness and inadequate shelter is acquiring alarming dimension in the wake of rapid urbanization, commodification of land and housing, distortion in land market and weakening of public sector housing provision in post liberalisation period. Housing shortage in urban areas is growing and situation is worsening for the poor (LIGs and EWSs). The segregated settlements emerging due to housing shortage may jeopardize the future economic and social development in urban India. The labour is shifting to urban areas with decline in employment in Primary Sector. Non-affordability of housing by economically weaker sections of society and low income families in urban areas is directly linked with the magnitude of poverty. Housing and urban development seem to be neglected in urban policy planning over successive planning eras and public sector investment in the same has declined drastically. It is also argued that JNNURM alone did not adequately integrate housing and infrastructure delivery to the extent required. In particular, housing policies have failed to resolve the problems of displacement, affordability, cost-recovery and replicability. Housing affordability is a major issue and effective repayment capacity of the slum dwellers for better housing one of the important focus areas.

Institutional and Peoples’ Response to Cope with Growing Urban Challenges: A Case of Women’s Participation and Leadership in Poverty Alleviation in Chandigarh

Chandigarh has distinctly implemented urban poverty alleviation (UPA) scheme called SJSRY unlike other towns in the region. The women as ‘change agents’ are leading various UPA activities in the city. The self help groups have been formed ‘by and for the women’ who not only catalyse the membership but other women in the poor clusters to join the skill formation training programs for setting up self employment ventures to earn the livelihood and also to strengthen urban community development networks etc. Three major women based activities i.e., ‘Learning on Wheels’, ‘Eco-friendly Handbags manufacturing businesses’ and ‘Women SHG’ have been formed. Chandigarh citizenry have been sensitized and bringing change in their Community have recently won the prestigious ‘HUDCO Best Practice Award to Improve The Living Environment’. The new pattern of community leadership is emerging among the poor women. There is a positive informal response to the UPA activities in the city which seems to empower the poor women. The Municipal Corporation has formed a dedicated Cell with adequate staff to implement SJSRY and other UPA schemes. There seems to be democratic strengthening through enhanced participation and leadership of poor women in local decision making in implementing UPA program. They are able to articulate the voice and choice of disadvantage women in a better way. The local participatory initiatives have multiplier impact on socio-economic conditions of the poor women. There is negligible poverty and better service provisions. The emerging pattern of women participation and leadership in Chandigarh is a positive step towards UPA, inclusive urban society, women empowerment and also coping with growing urban challenges. There are many success stories of emerging trend of women participation and leadership in UPA in Chandigarh which have been documented by the author for the paper.

The Transformation of Youth Attitudes to Economic Success in Japan

The purposes of this study are to reveal the transformation of youth attitudes to economic success in 2000s Japan, and to consider the youth under unqualifying in the society which has the legacy of inequality. Though the Japanese society is still seen as an elitist society, the Western societies, it has been transformed to an unstable society with liquidity and disparity since the end of the 20th century. Particularly the situation of youth employment was becoming worse and has not recover after the bubble economy from mid-and-long term perspective. In this situation, the social challenge is how to recover people’s motivation not just current economic gap.

In this study, we analyze the quantitative data which was collected in Suginami (Tokyo) and Kobe in 2002 and by the Japan Youth Study Group. Respondents aged from 16 to 29 were randomly sampled. The major findings of our first analysis are summarized as follows: First, the percentage of young people who think of “individual effort” as the most important factor of economic success is little different between 2002 and 2012. Second, in 2012 the percentage of young people who think of “individual talent” as the most important factor of economic success is about 10% less than that in 2002. In contrast, in 2012 the percentage of young people who think of “family environment”
as the most important factor of economic success is about 10% more than that in 2002. This difference can be contemplated that economic success for the youth are transformed from the individual matter to the social matter. This may mean the penetration both of the sense of inequality and the awareness that this matter should be treated publicly, not personally. In the presentation, we will discuss the impact of this transformation on the Japanese society and youth.

The Pragmatic Social Theory of Sign in Shunsuke Tsurumi

While most critics may agree in applauding Shunsuke Tsurumi (1922- ) as one of the most influential intellectuals of post-war Japan, no one has recognized him as an eminent sociologist. The aim of this presentation is to show some sociological implications of his thought and methodology. His works should be categorized as sociology of culture and cultural studies. Shun'eku Tsurumi's interest is in the life of ordinary people and in "pragmatism in Japan". He focused on a lot of cultural things, especially writing practices of elementary school children (TSUZURIKA-TA), comics and KARUTA (a Japanese alphabet card game). His notions on the so-called "disinterestedness of mass" aim not only to find the roots of the resistance to the government and bureaucrats, but also to criticize the conventional, scientific, or professional intellectuals and sociologists. Sociology can't read and find the potential hidden behind the unwritten words and thoughts of ordinary people, people who express themselves through work, games, talking, rhymes and poems, and art. He named such practices as "marginal art"(Tsurumi [1960]1991). The influence of these implications are widespread in contemporary Japan, but sociologists such as Keichi Sakuta (1922-) and Shun Inoue (1938-) are the first to share and acknowledge the methodology and importance of Tsurumi's work.

In my presentation, I'll reconstruct Tsurumi's practices and works into "the Pragmatic Social Theory of Sign" through the reconsideration of his studies regarding the development of pragmatism in the US and Japan and his analysis of Japanese popular culture.

Toward Environmental Sociology of Risk Perception, Risk Literacy, and Risk Democracy in the Aftermath of the Fukushima Nuclear Disaster in 2011

Research on Environmental risk perception has been accumulated focusing, for example, on "irrationally" or "emotionally" biased perception of lay citizens. These studies have assumed that environmental and other risks can be calculated by the formula: Risk = Hazard x Probability (or Degree of Exposure).

Recently, however, risks from environmental hormone disruptors, genetically engineered organisms, and radioactive contaminants are those that the formula is not directly applicable to estimate the gravity of impact. The level of hazard or exact probability cannot be decided by the present level of scientific analyses. In addition, we experienced the catastrophic and irreversible impact from the Fukushima nuclear disaster. Thus, the new criteria to evaluate risks, other than risk/cost/benefit analysis, environmental justice, risk information disclosure, and participatory decision-making have become more significant.

After the Fukushima disaster, the public have become more skeptical about the scientists/experts-centered risk assessment and more citizens have demanded for "risk democracy" in which wider range of stake holders can participate in environmental decision-making based on the equal "risk literacy". However, the degree to which respondents claim "risk democracy" or pay the cost for "risk literacy" varies according to their socio-economic status. Those in the upper-middle strata, in general, have more resources to access newer information on risks with scientific uncertainty and risks with catastrophic results such as GMOs and radioactive residues. Those in the lower strata, on the other hand, tend to be concerned about well-known risks such as air pollution and waste incineration. However, they are even more seriously concerned about "environmental justice" issues because they are more vulnerable to disproportionate risk burdens in general.

Thus, the effect of socio-economic variables is ambivalent. However, there is consistent interrelationship among "zero" nuclear option, serious risk perception, environmentalist consciousness, "environmental democracy", participatory and transparent decision-making orientation.

The Nation As Greek Gift? Marcel Mauss on the Ambiguities of the Nation Form

In 2013, Marcel Fournier and Jean Terrier published posthumously a book by Marcel Mauss, entitled The Nation. An article bearing the same name, collected in Mauss's Œuvres at Editions de Minuit, had long been known to scholars. That article, in fact, is only the first part of a much longer book covering three topics: 1) a historical sociology of the national phenomenon, 2) a presentation of what a sociologist might say about international relations, and 3) a reflection on the relationship between socialism and nationhood. Mauss started working on this book project during the war. To it, he devoted most of his research time in the subsequent years, until approximately 1924. The book was never brought to completion, but its huge manuscript can still be consulted in Mauss's archive.

It is this manuscript that Fournier and Terrier, after many years of archival work, have entirely transcribed and made public. This book sheds a new light on Marcel Mauss. It gives us a much better sense of his political thinking. It provides a new background against which to re-read and re-interpret his celebrated Essay on the Gift, on which it is based. The book can be seen as one of the most articulate exponents of a "civic" concept of nationhood and as the spiritual father of the sociology of international relations. In this paper, I will present and explain Mauss's position on the nation and provide an assessment of the historical significance of this work.

TEWARI, BABITA* (CSJM University, babita.tewari@yahoo.co.in)

Women, More Roles, Less Personal Leisure: A Case of Kanpur City

A need exists to understand leisure in the context of everyday life along with obligations and social structures. As women often occupy more roles than men (e.g., Housekeeper, mother, caregiver etc.) they may have less time available for their own autonomous or personal leisure. For anyone who is in a caregiver's role, leisure as free time may be irrelevant. Within the role of being a mother, for example, women have many expectations that must be addressed for leisure to happen either personally for women or within the family (Hunter & Whiston, 1991).

The underlying hypotheses of this analysis is that the more roles undertaken by the women, the more likely that the individual is to have less personal leisure. The present study takes the case of fifty household women of Kanpur City, through an interview questionnaire wherein leisure time vis-à-vis their roles were examined. A contradiction seems to exist between addressing the relationships and roles that are central to women's life and needing time for one. Establishing the findings of Wearing (1991), the present case finds leisure as a place where many traditional roles and where traditional feminine identities and roles are often associated with putting men's wishes and serving men's leisure before most women claim their own personal leisure. The value of this research is in the theory that is leading to the broader understandings of how gender and roles affect the leisure possibilities of women.

Lessons From Uttar Pradesh and Bihar:Sport Development Initiatives and The Potential For India’s Sociologies Of Sport

Despite the potential of sport development to highlight broader social complexities, sociologists in India remain disinterested in the area (as sport generally) as avenues of legitimate study. Yet, sport development programs provide sociologists opportunities to know and engage with body politics, questions of structure & agency, and social transformation. Accordingly, in this paper I draw on Bourdieu (1992; 1993) & Giddens (1990; 2009) to understand the construction and consequences thereof, sport development projects and the broader processes to which they are a part. I discuss my research with youth in two Indian states, and, consider how sport development agendas are often confined by tensions, negotiations, and resistances contours of the local context.

Among factors influencing sports participation has emerged as a point of interest among many academics (Wheeler, Sharon, 2011). In order to detect determinants of sports participation, a constructive and exploratory research methodology has been adopted. The data drawn upon in this study has a sample size of 500 interviews, spread over two States of India.

The factors influencing sports participation has emerged as a point of interest among many academics (Wheeler, Sharon, 2011). In order to detect determinants of sports participation, a constructive and exploratory research methodology has been adopted. The data drawn upon in this study has a sample size of 500 interviews, spread over two States of India.

The inclination of parents given their socio-economic background towards putting their children in sports shows a declining trend. Involvement and attainment in a ‘field’ are based on a combination of one’s habitus and cultural capital. With rise of income level, inclination towards sports does increase. In many ways sport represents a social ‘field’ (Bourdieu, 1992), a structured space of positions that allows individuals to claim their own personal leisure. The value of this research is in the theory that is leading to the broader understandings of how gender and roles affect the leisure possibilities of women.
Intersections of Race and Gender in U.S. STEM Careers

In the United States there are still discrepancies in the number of women and non-whites who achieve top positions in STEM fields. Despite vast infusions of money by the federal government to address this issue, little has changed in the last 50 years. Additionally, while it is assumed that Asians are the one non-white group to dominate these positions, they are in fact still outnumbered by whites in comparison. In this paper, I examine a sample of 22 Asian students who are pursuing careers in STEM to better understand intersections of race and gender for this sample, and larger implications regarding the assumptions around racial and gender "equality" in these fields.
rupt our humanity and sociality. While, simultaneously, we are being presented with a modality of equipmentality (Heidegger, 1962; Dreyfus, 1991, 1992; Verbeek, 2005) from within the frenzy of technological activity, which paradoxically inures us in our sociality and sociability. This contention is carried through to its articulation in Castell’s (2000, 2001) theoretical substantiation of the Network Society in the Information and Internet Age with a view to opening up and tracking into specific transformational dynamics of the new modalities of the social, economic, technological and the global. The aim behind which is to consider in which ways the Internet-based transformations offer themselves up as nodal points that gather or confine individuality and sociability in the ‘virtual’ world. And by contrast consider the ways in which the latter dimensions of social being as predicaded upon individualism are scattered throughout the labyrinthine ‘cyber world’. Taken together the paper seeks to think through how both moments of gathering and scattering are recast in the new global informational-intellectual division of labour as mirrored in the ‘Digital Divide’. We close this line of thinking by reflecting on South Africa as engaged in this Internet-based New Global Network, with its ambivalences and consider the incorporation of Developing Countries into the new global order as a function of new social inequalities and subject positions that are emergent and made manifest in one of its forms as ‘Scattering’ of the ‘Digital Divide’.

THELEN, LIONEL* (European Research Council, lionel.thelen@ec.europa.eu)

The European Research Council... An Open Door For The Sociology Of 21st Century?

The European Research Council is the most recent and most successful Funding Body created by the European Union. Why successful? Because it allows the funding of single research teams in all fields of Science (up to 2.5 million EUR for a 5 years project) and it is the sole EU funding body directed by a Council of top-notch Scientists.

The author is for now more than 5 years the Scientific Coordinator of the so-called SH2 Panel, bringing together 15 panelists – from Sociology but also from Anthropology, STS, Political Science, Religious Studies, Law and Communication Studies – in charge of evaluating between 120 to 200 proposals.

The way the ERC assesses proposals - singularly in Sociology – is quite peculiar and tends to blur boundaries between disciplines.

The evaluation procedure is done in 2 steps and, at step 1, each proposal is given to 4 reviewers. The latter are, frequently, not specialists from the main proposal’s discipline. It follows, that from, debates among them not only about the excellence of the proposal but also about its relevance in confront with its subject, hypotheses or methods.

This fruitful interdisciplinary debate 1) helps panelists understanding each other point of view while bringing them, in most cases, to a consensual decision about any given proposal; 2) gives interesting hints about the various paradigms in use in disciplines apparently close from each other; 3) raises a lot of questions about the fact that some disciplines seem more “successful” than others and 4) allows to grasp at best that having reviewers from different disciplines can have paradoxical effects for interdisciplinary proposals.

Such a debate is undoubtedly helping outlining the main features of Sociology as a discipline increasingly aware of the needed ‘porosity’ of its own boundaries and, by extension, of the other social sciences’ ones.

Göran Therborn: The Killing Fields of Inequality

This is a theoretical as well as an empirical book. Theoretically, it sorts out the differences between difference and inequality, it sets out a moral argumentation for why inequality matters, it presents a multidimensional analysis of inequality, and it lays bare the mechanisms of equalization as well as of inequalization. Empirically, the book is global in scope, historical in depth and multidimensional in range, analyzing life expectancy, health and body measures, and existential recognition, rights, and respect, as well as income.

It also tries to answer three puzzles: Why have the Northern welfare states failed on vital inequality? Why has existential egalitarianism been so (relatively) successful in the past fifty years? What is the connection between the concurrent inter-national convergence of income and rising intra-national inequality?

The book ends with a discussion of the world politics of (in)equality and the possibilities reducing inequalities.

Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany

Since the 1990s, two distinct processes of marketization in long-term care provision can be found in Sweden and Germany. First, professional long-term care services were restructured inspired by ideas oriented towards New Public Management. Second, tax deduction policies were established to create a new mix of (ir)regular domestic and professional care services. Despite the international character of the development, the existing structure of professional and (ir)regular domestic services at the beginning and the approaches selected, their effects on the infrastructure and on the situation of care (and domestic) workers differ significantly between both countries. In both countries, research findings indicate – however country-specific - patterns of a worsening of working- and employment conditions of care workers embedded in distinct processes of hierarchisation among care workers. The paper aims to compare pre-existing service structures, policy approaches, their effects on service restructurings and the situation of care workers.

Conceptually, the paper combines international comparative research on care policies and marketization and intersectional approaches developed within sociology to relate the effects of marketization to the emerging patterns of inequalities within the care work force based on gender, social class (training levels and positions) and ethnicity. Empirically, it will include documents and laws, literature review and representative statistics to analyze policy changes and existing- and changing infrastructure. Findings of a German-Swedish research project on the situation of professional carers with approx. 600 care workers in each country, will be used to reveal the country-specific restructurings and processes of hierarchisation within formal care provision, which is complemented by research on the developments within domestic service provision.

Simultaneity of Seeing and Doing in Wayfinding from an Ego-Perspective. Eye-Tracking and Video Analysis As Tools of Visual Sociology

We examine eye-tracking data that stem from an interdisciplinary user study that aims at evaluating different cartographic methods for indoor navigation maps (cartography) and at exploring social practices of orientation (sociology). In order to collect data we have been conducting social field experiments every year since 2009. Participants' task is to find their way from the ground floor of the university's main building (starting point) to the rooftop (goal) as fast as possible. To accomplish this challenge, they are asked to use specially designed maps that they should rate afterwards.

Each year, we broaden the range of our methodological instruments and test their usefulness for analyzing spatial practices. Among the instruments we are currently mixing are: different cartographic methods, surveys, ethnography (both participant and non-participant observation), photography and eye-tracking.

To use eye-tracking devices for data collection gives us the opportunities (1) to visually depict an ego-perspective of participants' experiences during the way finding process and their use of the maps, (2) to capture the focus of their gaze and (3) to record simultaneously what they said and heard during the way-finding task. To combine all of that is not possible with any other data collection technique.

To analyze the data we used the video analysis method (Tuma et al. 2013). It includes the selection of relevant scenes, transcription (visually and in written form), their interpretation and the presentation of results.

In this paper we want to present some of our results, show how we got there and discuss what worked out well and what problems we had in applying this approach.

THIJSSSEN, PETER* (University of Antwerp, peter.thijsssen@ua.ac.be)

The Potlatch of the Young: the Paradox of Excessive Intergenerational Solidarity in Aging Welfare States

In this paper a new theoretical model is applied to a research field that is some-what fragmented, namely that of intergenerational solidarity in aging societies. Inspired by utilitarian considerations many scholars tend to problematize the lack of commonality and reciprocity characterizing intergenerational exchanges. As some generations are older and more numerous they may receive excessive support of the younger generations, especially in a democratic setting. However, in reality there is limited empirical evidence of intergenerational conflict and the-oretical explanations of this paradox are dim. An integrated and dynamical ap-proach that incorporates Durkheim's solidarity theory, Honneth's intersubjective recognition theory, and the current work on reciprocal exchange is necessary in order to understand the survival of intergenerational solidarity in aging welfare states. Our integrated approach is inspired by a cyclical model of solidarity (Thijssen, 2012). According to this integrated model in a prefigurative culture the driving force of intergenerational solidarity. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing the driving force of intergenerational solidarity.

THOEMMES, JENS* (CERTOP, CNRS, thoemmes@univ-tlse2.fr)

Intra-EU Mobility: Posting As Permanent Organization Of Poor Labour

An employee is legally considered as "posted" when working temporarily in a member state of the European Union other than its usual workplace. However, the temporary, neutral and legal status of posting tends to conceal the very nature of the process: organizing permanent mobility from south and east-European countries to the richer states, exerting of pressure on local bargaining standards (social dumping), giving legal appearances to illegal practices, underestimating the massive character of the phenomena. These are at least the first results of a transnational French-Portuguese research programme in the construction sector. Further, sociological perspectives open more questions about how the legal rule of "posting is challenged. We distinguish here three different ways.

1) The first challenge is the existence of differences between legal and social rules. In fact the legal component is not opposed to the social component of the rule, it would rather be two sides of the same rule. There is not a peaceful legal side of posting and another conflicting social side.

2) The second extension of the legal rule we want to deploy in our research concerns the social regulations of conflict, agreements and collective action. They combine legal initiative, jurisdiction, the actions of the Labour Inspectors, the tribunal but also the initiatives of the workers themselves, the unions and employer organizations.

3) The third shifting from the legal rule is related to networks. The first element concerns the Portuguese community in France. Posting that is based in large part on channels mounted on the initiative or with the help of employers who are former Portuguese employees. The second element of networks relate here to interpersonal relationships. Indeed, recruitment in Portugal is often effective because a friend or a colleague did already work for the same company.
of “total motherhood” (Wolf 2013) - as individually responsible for their unborn child’s welfare and who may have their maternal identities disrupted and shifted should they not produce a “perfect child”. Nonetheless, I ultimately reveal how a diagnosis of Down’s syndrome, before being fully established or even suspected, is demarcated as an emotional tragedy and future family disruption in the early stages of antenatal care. I conclude by reflecting on what this focus on one aspect of the reproductive process can contribute to the sociology of diagnosis and, at a general level, to exploring the tensions which develop once medical technologies intersect with the complicated world of Down’s syndrome.

Naked Protest, Vulnerability and Power: Gendered Scenarios of Visibility and Protest

“Allah made me visible”. This is what some young German women shouted while they were protesting IKEA’s decision to remove all the women from the furniture catalogue for the Saudi-Arabian market. Protesting topless was meant to raise media attention and to get publicity; additionally it was unequivocally inspired by the Ukrainian feminist group ‘Femen’, which some have called one of the most successful campaigns of feminism in recent times.

In this paper I’d like to invite the participants to consider diverse examples of naked protests – e.g. fighting for peace and human rights in Liberia and Nigeria – from a transcultural perspective. In enacting nakedness as a performance of vulnerability and precariousness these examples draw our attention to particular corporeal actions, activities, practices, and events and they also clearly illustrate that the body signifies more than a site of cultural inscription. At the same time one can realize that such protest performances and their depictions in the media in particular have been criticized as self-commodification, as pornography reinforcing power structures of heteronormativity, and as the idea of the (post) colonial West and the Rest. I would hereby like to argue, that these examples make us well aware of the ambiguities and dilemmas of visibility and that they point to the challenges that those in the public sphere are confronted with by transcultural media.

THOMAS, TANJA* (University of Bremen, tthomas@uni-bremen.de)

On Cosmopolitan Solidarity for Women’s Rights

1,127 is the number of dead people mentioned in the last reports on the disaster in the garment factory in Sabah, Bangladesh, 2013. The mostly female workers, who sew clothes for Western consumers were among the lowest paid in the industry worldwide. They died as a result of an accident that, according to critical voices, could have been avoided. Our research about ‘Western’ media coverage of this catastrophe is based on a concept of critical cosmopolitanism that strongly reflects the idea of recognition and solidarity. This means that on the one hand, we will discuss the media coverage of this disaster and how the portrayal of the victims as vulnerable could have evoked empathy. On the other hand, we will discuss different ways of making use of media to emphasize interdependencies among included populations and to demand social justice. This way we want to contribute to a renewal of cosmopolitanism as a concept of competence and practice and that may help us to elaborate the media’s potentials to promote solidarity.

Laboratorios Sociales De Turismo Experiencial. Exploración Colectiva De Un Paradigma Decrecentista Para El Turismo En áreas Rurales

La presente ponencia estudia el caso de los laboratorios sociales de turismo experiencial, un espacio de exploración colectiva para el desarrollo de un paradigma de turismo decrecentista en la comunidad indígena mazatlanica de San Francisco Oaxtepec en el Estado de México. Esta propuesta vincula a las comunidades, la academia y la sociedad civil a través de una experiencia de viaje, orientada por los principios de respeto a la naturaleza, la dignidad humana, los valores locales, la cooperación social y la solidaridad voluntaria. En este sentido, cobra un especial valor el aprendizaje colectivo en el que los anfitriones desbrenzan oportunidades alternativas para complementar sus necesidades materiales; y los turistas construyen una experiencia de viaje creativa, auténtica y enriquecedora. Estos laboratorios funcionan desde la articulación que la academia realiza entre las comunidades y los visitantes, y orienta sus acciones desde la búsqueda de alternativas para incrementar la calidad de vida y el derecho a disfrutar el tiempo libre. En estos términos tiene un especial interés la capacidad de reconceptualizar el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; revaluar los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; reestructurar la actividad turística a partir una nueva escala de valores basada en la equidad, la ecoeficiencia y la simplicidad; relocalizar la actividad turística abriendo la posibilidad de redistribuir los espacios de proximidad y así ayudar a una redistribución de los recursos mediante una actitud de cooperación; reducir los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo explora las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se beneficien inmutuamente sin incentivar el crecimiento y la acumulación.

Reification: Reconstruction and Extension Of a Concept

This paper will seek to reconstruct the concept of reification and extend it along three different social-theoretic lines. I argue that reification needs to be seen not simply as a the reduction of human relations to relations between things, but that it also constitutes a deep pathology in the capacity of individuals to conceive of the pathological nature of the social relations themselves. reification constitutes, on my reading, a cognitive defect within the thinking subject and therefore as a pathology of epistemic, cognitive, and evaluative capacities of subjects. This renders them unable to perceive and understand the true nature of their social being and, as a result, they come to distort the social and material world of nature around them. The depth of reification therefore leads us to an explanatory model of why individuals are susceptible to accepting forms of social power and domination that do not serve common public ends. There is, I suggest, a social on- tology that is barred from their world-view due to the defective nature of reified thought. I take this theory to move against contemporary forms of Critical Theory such as Habermas and Honnheth to bring us back to the more radical impulse of the Critical Theory tradition through a reworking of reification.

THORPE, RACHEL* (La Trobe University, r.thorpe@latrobe.edu.au)

Women and Aging: Appearance and Age Appropriateness

Evidence suggests that Baby Boomer women may ‘do’ ageing differently to previous generations (Calasanti and Slevin, 2001). To date, there has been only minimal research considering Australian Baby Boomer women’s embodied experiences of ageing. Drawing on data from semi-structured interviews and personal journals from 28 Australian women aged between 55 and 81, this paper explores the ways in which women’s presentation of self was strongly informed by notions of appropriate dress, grooming and even behaviour for older women. Often these “rules” were taken for granted, and connected to broader ideas of ‘doing’ normative femininity and presentation of self.

This paper will consider the women’s motivations for doing this “appearance work”, and the impacts this had on their sense of self. While their endeavours were largely informed by established norms of female beauty and “appropriate” behaviour, there was also considerable resistance to these norms and acceptance of the ageing process. Competing discourses, such as ‘resisting age’ and ‘being yourself’, were also apparent, and these processes of contesting and disrupting appearance norms will also be considered.

THORSEN, LINE MARIE* (University of Copenhagen, lm.thorsen@gmail.com)

Art As Acute Action: Art and Articulations of Public Concerns in the Wake of 3.11

In the wake of the immense earthquake disaster that struck Japan on the 11th of March 2011, a myriad of art-based projects were conceived and shaped instantly as a response to the issues and concerns faced by people in the affected areas. Responding to the acuteness of the situation, artists and art professionals – alongside various other social actors – turned their practices towards aiding the disaster-zones. In doing so, artists started shaping their artistic practices according to the realities faced by North-Eastern Japan, in close cooperation with those affected and other actors involved in disaster support. I suggest that such disaster-driven art projects can be fruitfully viewed through Bruno Latour’s concept of matters of concern, and the wider theoretical context of Actor-Network Theory (ANT). With the notion of matters of concern, Latour allows for the analysis of new hybrid formations that are prompted by public concerns and cross-cussing the spheres of art, activism and disaster relief. Analyzing specific artistic projects, I argue that this approach enables one to follow the practices and movements at stake as hybrid undertakings, which serve to publicly articulate, and thus give cultural shape to, the multiple concerns triggered by the disaster.
The study of ‘youth transitions’ has consistently highlighted the persistence of class influence on life chances and opportunity. The study of youth cultures has had a more troublesome and fluctuating relationship with class. The foundational subcultural studies and more recent work continuing that tradition has been critiqued for (among other things) over-romanticising working class practice; finding ‘resistance’ everywhere; and having an unhealthy focus on the ‘spectacular’ while disregarding ‘daily life’. Work done on the loose decade of ‘post-subcultural’ studies (including ‘scenes’ and ‘neo-tribes’) has been critiqued for giving too much heed to fluid notions of identity, ignoring structural constraints; and over-romanticising ‘choice’ in consumer culture. In general, youth researchers have tended to focus on ‘people like us’ or young people for whom we have empathy. There has not been a lot of work on what I would call the ‘mundane vulgar’ end of youth cultural practice. By utilising Tyler’s ‘figurative method’, this paper proposes that tracing the use of terms such as ‘bogan’ or ‘hipster’ can enable an understanding of the ways symbolic violence is disseminated at the same time ‘class’ is shunned from public discourse. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant symbolic and moral struggles. This can help bridge the gap between ‘transitions’ and ‘cultures’ research and work towards ensuring that youth researchers do not unknowingly reproduce unhelpful stereotypes. Further, figurative methods can enhance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justice, symbolic and material inequalities and moral economies.

Global Reflexive Hipsters Vs. Local Abject Bogans: Towards Understanding Affective Inequalities in Youth Cultures

This paper looks at terms like ‘hipster’ and ‘bogan’. Using ‘figurative methods’, analysing the ways these terms are operationalised towards young people in different social spaces can enliven global comparative youth sociology. These floating signifiers enable distinction to be performed while eschewing the very notion of class. Both terms are mostly used as a pejorative towards various youth taste cultures. The hipster is a global figure used in many English speaking countries. It tends to equate with middle class endeavours and is at least seen as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant symbolic and moral struggles. This can help bridge the gap between ‘transitions’ and ‘cultures’ research and work towards ensuring that youth researchers do not unknowingly reproduce unhelpful stereotypes. Further, figurative methods can enhance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justice, symbolic and material inequalities and moral economies.

Segmented Social Capital and Ethnic Diversity in the Work Place

Work places employing many highly skilled and low skilled migrant workers and members of ethnic minorities are interesting focal points for investigations of the potential build-up of social capital along and across ethnic and national lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure, interaction and formation of social relations between different employees depending on the composition of the work force, the work tasks, working conditions etc. Therefore these social spaces represent sites in which workers may build-up social capital encompassing members of other social and ethnic groups in their networks. However, so far research has paid insufficient attention to the way in which social capital formation among immigrants, ethnic minorities and locals in the work place is influenced by issues such as race and class. Nevertheless, we may expect differences in relation to social capital formation depending on the composition of the work force (highly skilled vs. low skilled workers), working conditions (permanent vs. temporary jobs), ethnic origin (western vs. non-western background) etc. This paper addresses research questions such as; Which is the impact of increasing ethnic diversity among the employees on social capital in the work space? In which ways does social capital formation differ depending on whether the employees at the work place are highly skilled or low skilled as well as on racial and ethnic origin? The analysis will be based on interviews with 49 employees from three highly ethnically and nationally diverse Danish work places. One of these sites employees many highly skilled migrant workers while the two others primarily employees low skilled workers, including low skilled immigrants and ethnic minorities.

Men, Masculinity, Travel and Tourism: Emerging Themes and Future Directions

While the implicit masculine position of the tourist gaze has been identified and problematised, understandings of specific male tourists have often failed to engage with the gendered notions of independence, adventure, embodiment and ‘risk’ which underpin much tourism experience and practice. Drawing on the author’s own ethnographic study of British stag party tourism in a Polish city, the paper will draw out key themes emerging from in recent debates about the positioning of masculinity in the complex social interactions fostered by tourism mobility and the creation of new and developing tourist spaces. Through observing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into wider notions of how masculinities are negotiated through embodied, relational, performances within tourist spaces and through tourist practice. In particular, the notion of masculinities being increasingly fragmented and pluralised must be reconciled with the apparently straightforward and taken for granted ‘hyper-masculinity’ commonly enacted during the stag tour weekend. The paper suggests that the emergence of such male bonding rituals which are frequently based around excessive inebriation, transgressive behaviour and disinhibition illustrate the convergence of numerous emergent strands in men’s lives. As such, sociological knowledge of the stag tourism phenomenon is a pertinent catalyst to wider discussions of themes relevant to the critical study of men and masculinity. In conclusion, the paper will suggest various future directions for the study of tourism and masculinities.
What is the recent development of environmental movements (EM) in the North in response to the institutionalization and globalization of environmental issues and the speeding up of climate change? How and to what extent do activists link EM issues with those of global social justice? This article will present preliminary results from a four-year research project titled Environmental movements in a globalizing world: transformation and/or institutionalization? In a pioneering study of the EM in Sweden, Denmark and the Netherlands from 1990, Jamison et. al. showed how the development of the EM linked to national political traditions and to different strategies adopted by each state in dealing with social movements. 20 years later, we analyse and compare the current development of the EM in Sweden, Denmark and Japan. In all three countries, the EM face the challenge of global politics as parts of relatively strong national political consensus cultures. In Scandinavia, the EM is increasingly focusing on climate change, while parts of the traditional movement seem to be in decline. Local mobilization has given way to new types of networking and interaction on the global level via internet forums, websites and social media, a development that actualizes and articulates the idea of climate justice. The Japanese EM is comparatively weaker, but since Fukushima, the issue of nuclear power is giving rise to new movements and to heated debates regarding its pros and cons in fighting climate change. While the nuclear accident has pushed the climate issue to the background, it has also stimulated interest in energy and public debate regarding democracy and the fair distribution of risks in relation to energy.

Changes in Social Interactions in Reform-Era Urban China

The pattern of social interactions represents social divides and inequality. The homophily principle suggests that people are likely to interact with others of the similar social demographic, behavioral and intrapersonal characteristics (McPherson, Simih-Lovin and Cook 2001). As resources are differentially embedded within networks, social interactions represent the hierarchical structures of the society (Lin 2001).

Tonnies (1887) argued that the industrialization changes the pattern of social interaction from Gemeinschaft (community), interactions based on kinships, to Gesellschaft (society), interactions based on education and work. It was confirmed by much empirical work documenting a decline of intergenerational interactions (Cherlin 2012) and an increase of marriage patterns based on education and work (Kalmijn 1998).

We examine the changes in the general pattern of social interactions in the reform-era urban China – a nation with strong cultural traditions regarding kinship ties and one that has experienced rapid economic and industrial development over the past several decades. Using the position generator from two social networks surveys collected in 1998 and 2005, we aim to answer two questions: First, is economic reform associated with interactions less based on kinships and more on occupations? Second, does the pattern differ by gender?

RC06-125.3

TIAN, FELICIA FENG* (Fudan University, felicia.tian@outlook.com)

Changing Pathways To Adulthood In China: Urban-Rural Divides, 1982-2005

Pathways to adulthood have been increasingly diversified in the United States and Western Europe in the economic globalization (Buchmann and Kriesi 2001, Shenham 2000). The standard, tight, sequential pathway to adulthood (Stevens 1990) has been questioned, or dispersed (Buckner and Mayer 2000). These patterns are divided across the socioeconomic line: while most middle-class youths postpone the transitions, an increasingly proportion of working-class youths no longer follows the sequence of education, full-time employment, marriage and parenthood (Kalmijn 2010).

Little is known, however, about how economic change affects the life experiences of the youths in the developing world. This analysis aims to fill the gap, using reform-era China as a case study to examine how the pathways to adulthood have changed from 1982 to 2005.

It will be shown that there is an urban-rural difference. In these twenty-three years, China has experienced a noticeable increase in the urban-rural income gap (Sicular et al. 2007). The urban-rural divide arguably contributes substantially to the increasing income inequality in China (Zie and Zhou 2013). Therefore, it is both theoretical and substantial interesting to compare the pathways to adulthood between urban and rural youths, and explore the relative contributions of each institution (i.e., school, labor market, and family) to the difference.

To answer these questions, this analysis uses three censuses (1982, 1990 and 2000) and 2005 inter-censal survey. Instead of examining one transition at a time (Stevens and Bumpass 1990), the analysis incorporates educational, work and family transitions simultaneously. Methodologically, it will treat each census as a synthetic cohort, and will use the entropy index to measure the level of heterogeneity in these pathways (Russell 2005) and the bootstrap to test the statistical significance. It will also use de-composition method to examine the institutional contribution to these changes. (References available upon request).

The Power of Media Communication: How Propaganda Techniques Used in Advertising Influence Japanese Women

Media, as a communication tool, has a great impact on society. From the traditional simplex communication tools such as T.V., radio, newspapers, and magazines, to the most current bidirectional communication tool, the internet, media has a great amount of influence on society. Media is a powerful tool that can influence a country’s policies, shape public opinion, and even set the standard for societal norms. Consequently, research has shown that media outlets use propaganda within advertising. Advertising agencies skillfully manipulate female emotions, in order to create and bolster a perpetual culture of consumption. As a result, this directly contributes to gender inequality.

The primary purpose of this paper is to analyze how media propaganda influences females in Japanese society and the impact it has on their lives. Additionally, this paper will detail how media outlets use propaganda techniques, which have proven to be successful. This greatly affects how females view themselves and their roles within society.

Social problems including, excessive consumption, identity, and gender inequality, are viewed as generalized social problems. These social problems are often ignored or downplayed by the mainstream media. This paper will engage in a historical analysis, to include the studies that have been conducted, concerning media propaganda on women in Japan. Although, the news media is supposed to report objectively, studies have shown that notion to be false. The news is often skewed to serve the interest of the power elite. As a result, the news media often reinforces the dominant social ideology. In Japan, the dominant ideology is largely male-oriented. Similarly, this paper argues that the propaganda techniques used by advertising agencies, even as a byproduct, serve that same purpose: to maintain a male-dominated power structure in society.

Gender Segregation in the German Vocational Training System

Transitions from education to work are known to be particularly smooth in Germany. This is mostly attributed to the “dual system”, which combines firm-based training and vocational schooling ( Müller/Gangl, 2003). In the dual system trainees spend 2-3 years in a company as apprentices and acquire firm specific skills. Both firm and apprentice thus invest in the training which leads to a mutual commitment and a high probability that the apprentice is taken over by the company after training.

However, the German vocational training system does not only consist of the dual system but also of school-based vocational training. In these schools, the contact to potential employers is limited and the curriculum is not firm-specific. Therefore, we expect that the transition from education to work is less smooth for trainees from school based vocational training. They should face a longer transition period and/or more job mobility.

As gender specific occupations coincide with the type of vocational training, training types are highly gendered in Germany. Women are more likely to enter school based vocational training. We therefore expect that their pathways into employment are less straightforward. The lower firm-specificity of their skills and the lower commitment of employer and employee also should lead to higher job mobility.

We use the German National Educational Panel Study (NEPS). This dataset consists of detailed retrospective life course information about educational and occupational biographies of approximately 11,000 individuals. We examine transition patterns of German women and men after completion of their vocational training and assess how much of the gender differences in the duration of the job placements process and early career mobility can be attributed to the type of training.

HOLDGRUN, PHOEBE (German Institute for Japanese Studies)

Political Participation and Procedural Utility from a Gender Perspective: Activities in Neighborhood Associations in Japan
Political participation and participation in the community is often associated with higher levels of reported subjective happiness, but in the case of Japan a negative correlation between activities in neighborhood associations among female members was found by Tiefenbach and Kohlhauser (2013). The current study uses data gained from an online monitor survey (n=1600) conducted in September 2013 in Japan in order to get a better understanding of the relationship between happiness and participation in the community. A special emphasis is put on the sources of procedural utility (competence, autonomy and relatedness) as well as on voluntariness and loneliness as moderators and mediators of the effects of participation on happiness. Preliminary results suggest that participation in the community leads to higher or lower levels of happiness depending whether it is conducted voluntarily or not. In either case, participation leads to lower levels of loneliness, which in return has a positive effect on happiness. Finally, the sources of procedural utility can be linked to higher levels of happiness, but significant gender differences can be observed.

Historic Preservation of Significant Cultural Sites in Taipei: Comparing 2 Case Studies in the Aspect of Cultural Heritage Management

Cultural heritage management has traditionally been concerned with the identification, interpretation, maintenance, and preservation of significant cultural sites. The public face of CHM, and a significant source of income to support continued management of heritage, is the interpretation and presentation to the public, within an aspect of a dialogues in communicating with government and the public is therefore a key competence.

The thesis focuses on 2 sites in the city of Taipei, Taiwan. Both targeted case studies are defined as art spaces of cultural property organized by Taipei City Government. Spot-Taipei Film House, built in 1926 with a southern colonial architectural style, was originally the residency of the U.S. Ambassador. Once closed due to Pacific war and re-opened for the residency of the U.S. Ambassador under the rule of Republic of China. It had faced another closed due to U.S. changed its diplomatic recognition to PRC. Tsai Jui-Yueh Dance Research Institute, built in 1920, was a Japanese style house for the residence of the Japanese Governor. The later owner, Ms. Tsai Jui-Yueh, a dancer who was educated in Japan during the Japanese colonial period, had settled her dance studio in the dwelling, held a 24-hour-long creative activism to save it from demolition by the later ruling government of KMT. This paper will look at Taipei city government’s action toward the two historical buildings. How did the two dwellings process their way to become cultural heritage? The difference movements represent the interpretation and preservation of the space. Additionally, the thesis will review how the two culture heritage presents themselves to the public as well as the spatial reinterpretation of Taipei citizen.

‘standpoints’: Attitudes to Global Justice Among Young People and Youth Workers in Ireland

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues.

Young people’s views ranged from the very knowledgeable, critically aware and insightful to the uninformed and apathetic, with the majority in between these two positions, showing some limited knowledge of global issues or relationships but an appreciation of their relevance and a willingness to explore them further. Youth workers (particularly but not only those with direct development experience) for the most part showed a high level of knowledge and awareness of global issues and the links between the global and the local. There were however considerable divergences of opinion among them as to the interpretation of certain key concepts, including ‘global justice’ itself.

Some young people gave examples of actions they had taken themselves in response to global issues and concerns (for example decisions about where to work, study, or travel) but respondents on balance felt relatively ineffectual with regard to such issues. While the youth workers were much more likely than the young people to say that they thought they could make a personal difference to the world works, there were very different views of how this could be done; and the researchers noted that workers commonly spoke in terms of what they would or should do in response to development and global justice issues rather than describing what they had done or were currently doing. Overall the research suggests that there is a high degree of ambivalence regarding the nature of global justice, the operation of key, related concepts such as power and agency and the relevance of these to youth work practice.

Transnational Somali Families and Resilience: Experiences of Two Generations

Transnational Somali families and resilience: experiences of two generations

Following the civil war and collapse of the Somali state, sizable Somali diasporas may be found in particular in North America and Europe. In Toronto alone an estimated number of Somali descent is around 100,000; in Finland the corresponding number is about 15,000. In many places of resettlement Soma- li migrants face multiple challenges towards education, employment, housing, discrimination and racism. Also economic relocations have contributed to low-income status of many Somali families, where not only the first generation, but also the second generation often ends up in low-paid and precarious jobs. A family unit, including transnational family connections, is important for increasing the overall resilience, wellbeing and cohesion of the family.

This presentation will address the role of (transnational) family as experienced and narrated by both Somali parents and their children who have grown up in the diaspora. Which kinds of expectations do parents have towards their children as part of the family? What are parents’ strategies to support and protect their children and youth? In which ways do the children – young adults – contribute to the wellbeing and resilience of their families? How do they feel about and relate to transnational family members, including those in Somalia?

The presentation is based on ongoing research on transnational Somali families in Canada, Finland and Somalia, funded by the Academy of Finland (2012-2017). The data consists of ethnographic interviews of two generations in the families of Somali descent residing in Toronto and in Helsinki. In addition, transnational family members in Somalia and some European countries will be interviewed.

“Generation IV” Nuclear Reactor Design Project As a Controversial Innovation Process: A Qualitative Study of the French Case

This communication aims to qualify the socio-material and organizational processes that affect local and institutional decisions related to the design of future nuclear reactors in France. In the post-Fukushima context, nuclear risk is less and less tolerated by society. Yet, France, along with thirteen other countries, is currently engaged in the design of new generation nuclear reactors, known as “Generation IV”. The “GenIV” concept and the renewal of interest for these technologies are linked to the launch in 2000 by the USA of the “GenIV International Forum” to coordinate researches’ efforts on a global scale. It led to the identification of four “GenIV” objectives: highly economical, minimal waste, proliferation resistant and safer. Six concepts are currently being researched. Even if these designs are not expected to be available for construction before 2020, they arouse oppositions and remain highly controversial.

Our proposition builds on an on-going empirical study of the ‘new reactors’ design process in France, where one concept appears dominant: the sodium-cooled fast reactor, supported by the CEA. However, this choice is disputed, especially by academic scientists who try to re-orient the choice. Based on qualitative data, we analyze this innovation process as an “interactive chain” (Callon et al, 2002) that involves distinct actants (Latour, 1987), both humans and non-humans, from university labs to industrial production unit, through industrial research centers and political organizations. By observing innovation “in action”, we aim at showing how the “uncertainty/irreversibility” dilemma is collectively managed through the construction of scenarios relying on explicit and implicit hypotheses. We want to demonstrate how the positioning, the power and the level of knowledge of the different actors guide the hypotheses’ formulation and can support technological “lock-in” phenomena, finally affecting the innovation process far from being of a pure rational choice based on the four “GenIV” criteria.

Cuando La Participación Ciudadana Argentina Tomó La Palabra

La adopción en 2009 de la Ley de Servicios de Comunicación Audiovisuales constituye un paso muy importante en el proceso de democratización de los medios audiovisuales argentinos. Frente a un sector audiovisual fracasado (construído sobre el decreto-ley n° 22 285/80 -adoptado por el gobierno de facto de 1976-), esta ley se presenta como el punto de partida de la tentativa de reconstrucción del sistema audiovisual e instaura un nuevo modelo audiovisual democrático,
multicultural, pluralist, inclusive and respetuoso of the misiones de servicio publico (los pueblos originarios, ocupan un lugar privilegiado en este nuevo sistema audiovisual).

Por primera vez el debate legislativo argentino implicó una participación ciudadana digital sin precedentes. Más de 300 organizaciones sociales, sindicales y comunitarias y más de 12,000 personas (inconformes con el modelo audiovisual en vigor) participaron, desde el 2004, a esta discusión a través de foros y debates con el objetivo de lograr un consenso institucional y social. Como resultado de esta iniciativa ciudadana llamada "Coalición por una radiodifusión democrática", se elaboró en julio 2008 un texto de 21 puntos que fue tomado en consideración por los legisladores argentinos. En este contexto, el activismo de las movilizaciones sociales orientado a participar al proceso de transformación del sistema audiovisual se vehiculó a través de la utilización de las redes sociales.

Esta que ley debió afrontar una fuerte resistencia del sector privado y que pa- dece hoy en día las consecuencias de un sistema político-jurídico análogo (frenar a su eficacia como consecuencia de su judicialización) sigue siendo el centro de movilizaciones sociales generadas a través de la red. El objetivo de esta comunicación es de presentar esta experiencia argentina, de entender esta participación en la esfera pública, de analizar la fuerte expansión del uso de las TIC en diversos sectores de la sociedad (en especial: los pueblos originarios).

Identidades Políticas y Culturales. Entre La Crisis Económica, Mediatizaciones y Tecnologías

Esta ponencia tiene como objetivo presentar los avances de una investigación que estudia los procesos constitutivos de las identidades políticas y culturales en relación con las actuales formas de implicación y participación de los sujetos en la esfera pública.

Al mismo tiempo, se propone presentar reflexiones sobre las prácticas culturales con el fin de analizar las características más sobresalientes de la interacción de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Los resultados aquí presentados contribuyen al conocimiento de la constitución de identidades de relación con los procesos de mediatización actualmente sistemas derivados de las tecnologías digitales y la crisis económica y financiera de la fase actual del capitalismo.

El contexto empírico de la investigación se sitúa en dos universos institucio- nales y urbanos: la ciudad de Toulouse (Francia) y la ciudad de Rosario (Argen- tina), en el marco de sus respectivas regiones. Dos sociedades pertenecientes a dos países que también han sido diseñadas como ciudades potenciales comunes como hermanamiento entre sus respectivas autoridades en 2008.

Existen dos corrientes de investigación que encuadran de manera diferente el objeto de estudio: la que nos ocupa. Por un lado, todo lo relacionado con la llamada videopolítica y sus derivados en el desarrollo actual de las tecnologías digitales. Por otro lado, la tradición de la participación social, que se centra hoy en la emergencia de nuevos actores.

La cuestión que aquí se presenta es heredera de las dos tradiciones, priori- zando la existencia de un nuevo orden político sesgado por la mediatisación y la comunicación digital en un contexto de creciente crisis económica.

Workers Who Organize in the Public Square: A Comparison of Mexican and U.S. Informal Worker Organizing Models

The growth of informal employment in Mexico and the United States cries out for solutions. For informal workers, unprotected by existing laws, this requires developing new and distinct organizing strategies, and building alliances. Our study uses case studies of organizing of informal workers who contest over the use of public space in the two countries to understand this process in compara- tive perspective.

Our central questions are:

- What are the role of worker identity in these organizing processes?
- Our analysis undertakes two case studies grounded in interviews and partici- pant observation: day laborers in the US, and street vendors in Mexico. It is a bit unconventional to carry out such a non-parallel comparison of different sectors in the two countries, but we have chosen to examine these two informal groups because the literature suggests that they are the most advanced instances of informal worker organizing in each country. We will need to take the sectoral dif- ferences into account in explaining differences in strategic direction and degree of success, but choosing the two most advanced cases should give us leverage on our central questions.

In our case studies, we will examine national-level organizations, but our main focus will be on day labor organizations in Los Angeles California and street ven- dors in Mexico City, Mexico. These respective cities not only house the greatest concentration of these groups of workers, but are also the home base of the lead- ing national organizations representing these trades.

Re-Imagining The UK National Health Service Patient In a Neo- Liberal Policy Context

Historically, the UK National Health Service (NHS) has been taxpayer funded, and largely free to patients. Though some private sector service has always been part of the NHS, this has increased substantially in the last 15 years. Hospitals are important sites for biomedical research, with many patients participating in stud- ies, often without their knowledge.

This paper will discuss a new project that is being carried out in London with the aim of understanding patient experiences of biomedical research.

The project involves interviews and focus groups with patients and carers, and will contribute to our understanding of how patients and carers experience biomedical research.

Our analysis undertakes two case studies grounded in interviews and partici- pant observation: day laborers in the US, and street vendors in Mexico. It is a bit unconventional to carry out such a non-parallel comparison of different sectors in the two countries, but we have chosen to examine these two informal groups because the literature suggests that they are the most advanced instances of informal worker organizing in each country. We will need to take the sectoral dif- ferences into account in explaining differences in strategic direction and degree of success, but choosing the two most advanced cases should give us leverage on our central questions.

In our case studies, we will examine national-level organizations, but our main focus will be on day labor organizations in Los Angeles California and street ven- dors in Mexico City, Mexico. These respective cities not only house the greatest concentration of these groups of workers, but are also the home base of the lead- ing national organizations representing these trades.

Beyond Mannheim: Conceptualising How People ‘See’ and ‘Do’ Generations in Contemporary Society

It is sometimes argued that generation has been hollowed out as a sociological concept outside the family context, yet it continues to feature prominently in pol- icy debates, media discussion and everyday talk. The solidarity, conflict and ambivalence frameworks continue to be widely and usefully applied, but are unable to capture the complex ways in which we perceive and enact generation within and across the family and societal spheres. This paper seeks to develop a more grounded conceptual framework for both characterising and explaining the evolv- ing notion of generation. We view generations as dynamic and varied reflections of how people relate to family members, their own cohort, and groups in wider society. The paper draws on qualitative primary data collected in the course of several recent projects pertaining to intergenerational relationships and the life course; it also draws on learning from the application of this data with final-year undergraduate sociology students who were engaged as an interpretive commu- nity to examine ways of ‘seeing’ and ‘doing’ generation. Far from outdated, generation emerges as a still-relevant concept that encapsulates the meaning of family relations but also perceptions of how material resources, pe- riod effects and the welfare state context shape lives in contemporary societies.

Social Networks and Environmentalism: Structural Embeddedness and Ongoing Participation in the Canadian Environmental Movement

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
"Common sense" arguments for participation in movements like the environmental movement often refer to grievances, or beliefs, as key factors that give rise to participation. However, structural analysts have demonstrated that neither discontent nor ideology are sufficient conditions to explain social movement participation. Rather, while discontent and beliefs might help to define those who might potentially be mobilized, individuals need to be connected to other movement participants in order to become active. We explore the relationship between social network ties and participation in the Canadian environmental movement. Data are from a self-administered questionnaire, collected from nation-wide probablistic sample of environmental organization members. We find that ongoing participation is positively associated with ties to individuals in a range of environmental organizations. This effect is net of positive effects for identification with the movement, and the respondent’s NEP score, on participation. Past participation is the strongest statistical predictor of network embeddedness. Thus we argue that both "social selection" and "social influence" effects are in play. People develop ties through their participation, and are more likely to participate in new activities because of their ties. We further examine the mechanisms underlying these patterns, and discuss practical implications of these insights.

Social Media Use for Contentious Politics: Facebook-Activism Against Imposed National Education Curriculum in Hong Kong
This paper examines the use of social media for the protest against the "Moral and National Education" curriculum in Hong Kong. Employing media content analysis and archival research, it explores how social media use facilitated grassroots movement organizations and stimulated cyber-activism among atomized users in practice. On 30 August 2012, a local student organization – Scholarism – went on a hunger strike. Occupying the public area in front of the Headquarters of the Hong Kong Government, members of Scholarism protested against the controversial curriculum imposed by the Education Bureau. In the subsequent days, tens of thousands of people joined the protest. Nine days later, the government succumbed to the pressure and retracted its plans. While new information and communication technologies provide the technical infrastructures for organizing movement campaigns and protests, various uses of new media configurations offer flexible mechanisms for people to take part in contentious activities. During the occupation protest, Scholarism eagerly employed Facebook technologies to coordinate collective actions and mobilize participants. At the same time, numerous users made active use of Facebook to communicate about the movement, forge social networks, produce alternative knowledge, and create innovative protest activities. As diverse actors simultaneously undertook online activism, the patterns of their computer-mediated communication facilitated the emergence of counter-publics and the development of movement practices and culture. Borrowing insights from the growing theory on computer-mediated social movements that challenges the assumption about requirements for formal leadership and organizational hierarchies, this paper argues that new media use modified the relationship between social movement organizations and individual users, and permitted alternative forms of civic engagement for democratic participation.

Blood Sacrifice, Instant Celebrity, Organization and Mobilization
The paper deals with cases in which almost unknown persons, because of a tragedy, suddenly jump from anonymity to the civil sphere converted in celebrities with great capacity for civil intervention. These celebrities owe their instant fame to the fact that they are closely related to the victim of a bloody tragedy: the kidnap and murder of a child, a wife or a husband.

The paper will concentrate in these aspects:
1) The casual birth of a new (involuntary) celebrity, because of a blood tragedy.
2) Scandal, annoyance, desperation, and new tragic stars in the media.
3) The re-edition and impact of the old myth of sacrifice, blood spill and redemption.
4) The effectiveness of the myth that tragic death of an innocent victim is a sacrifice and sacrifice should be useful and deserve compensation.
5) The great impact of bloody sacrifice symbol. Bloody sacrifice and "conscience crisis" (Habermas).
6) The great possibilities of social action and intervention of some of these people.
7) The different strategies, goals and routes of social action.
8) The discovery of the possession of an unknown new great "magic" like power.
9) Amazement and improvisation of the action of the new celebrity.
10) Why some of the co-victim can develop social leadership and others don't?
11) Resources for the mobilization of this mythical power.

Mothers’ Use of Terms Referring to Their Child in Japanese Conversations: A Conversation Analytic Perspective

This study examines ways mothers refer to their child in conversations in Japanese from a conversation analytic perspective. Conversation analysis is a method-ology to examine real time interactions from the perspective of the participants themselves (Sacks, Schegloff, and Jefferson, 1974). Person reference has been among the major topics of conversation analysis since the seminal work by Sacks and Schegloff (1979). Studies have shown that forms of reference can do a special interactional work other than referring to (a) person(s) (Schegloff, 1997; Stivers, 2007). For instance, Oh (2010) shows that Korean speakers use a quasi-pronoun based on the distal demonstrative ce (‘that over there’) in referring to a co-present third person in order to distance themselves from the referent. In this study, I focus on the kind of interactional work mothers are doing when they use different expressions to refer to their child in conversations. My data were collected at two Kosodate Hiroba in Osaka, Japan. Kosodate Hiroba is a place where mothers of a very young child spend time watching their child and enjoy conversations with other mothers and staff members, often sharing their problems in child-raising and getting advice from them. I found that the unmarked form of a mother’s refer- ence to her child is either the child’s name or kono ko (‘this child’), neither of which does anything more than refer to the child. By contrast, the mother’s use of kono hito (this person’) to refer to her child can do a special interactional work. For instance, mothers recurrently make reference to their child with kono hito when they are explaining the child, allowing the expression to make a complaint more easily recognizable because the word hito (‘person’) conveys the referent that has independent thought and is difficult to control even for her/ his mother.

Improving the Quality of Volunteer Web Panels: Evaluating Propensity Score Adjustments Methods for the Leisure Panel

With the rise of the Internet more and more data are collected via volunteer panels. These panels are not based on probability mechanisms and hence inferences are difficult to make. Post-survey adjustments techniques such as propen-sity score weighting are often used to improve data quality. However, which methods work best and which variables need to be taken into account differ per survey. In an attempt to structure methods of post-survey weighting techniques for the volunteer Leisure Panel, different weighting methods are evaluated as well as different weighting variables, such as behavioral, attitudinal, lifestyle, and socio-demographic variables. Results are compared to outcomes of a probabili-ty-bases panel (LISS Panel) and figures from Statistics Netherlands.

Investigating Response Quality in Mobile and Desktop Surveys: A Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales

Mobile devices have smaller displays, touch screens and different methods of navigation compared to desktop computers. This may limit the amount of information that can be placed on a mobile phone screen and it can also affect how a survey is comprehended and completed. The most traditional rating scales in Web surveys are made from radio but-ton. Radio buttons require quite a lot of space, which is scarce on mobile devices like smartphones. Less space is available and a limited number of response options can be pre-sented simultaneously. Otherwise, respondents have to scroll to see all response options which may bias ratings. Visual Analogue Scales (VAS) are operated by point and click: respondents move the mouse arrow to any position on the line and after clicking the mouse button a marker (e.g., a cross) appears at the very position. In contrast, slider scales have a handle visible directly on load of the Web page. Ratings are done by drag and drop. Both scales can either be implemented as continuous rating scales, or as discrete rating scales where only a limited number of different responses can be given. A continuous implementation is especially valuable if respondents use mobile devices like smart phone where an efficient use of space is required. A comparison is needed of radio buttons, VAS, and slider bars to see how they affect data quality on mobile phones compared to regular desktop completion. Finger navigation on mobile phones is less precise than mouse navigation on desktops. This could result in selecting the wrong (not intended) answer option in radio buttons. Slider bars or VAS might be more efficient in selecting the intended response option. The usability of question formats is conjectured to be related to the number of scale points.

Alien Money: A Cultural Sociology Of The Ecuadorian Dollarization

Over the past two decades scholars have extensively addressed the influence of money on the formation and consolidation of national space. After the launch of the European Monetary Union (EMU), though, their interest has increasingly focused on the struggles over the definition of who should belong in a currency community and what cultural credentials countries should exhibit in order to gain their ticket in. What happens, though, when countries surrender their own currencies, severing the link between national identity and the currencies circulating in its jurisdiction? How do they manage to hold onto such alien currencies? The literature has not fully addressed the social struggles and the cultural mediations that take place under such circumstances. By focusing on the full dollarization Ec-uador has experienced since 2000, and therefore by addressing a case that comes close to an ethnomethodological breach of our expectations about what curren-cies should be about and how they should relate to their own societies, I hope to shed new light on the relationship between money and national space. The study of societies that take up foreign currencies as their own, even when these belong to countries they might not necessarily sympathize with, may shed some light on the factors and processes that sustain the legitimacy of currencies, especially in situations where the money becomes alien to the national identity. This case has implications for how we understand alien monies, national spaces, and legitimacy in such situations as the current Eurozone crisis.

Undrinkable Coke? Corporate Scandals, Civil Society and Cultural Difference

Over the past two decades corporate (mis)behaviour, scandals and accidents have stirred passionate debates around the world over the limits of corporate practices. By shaping public opinion over this issue, civil societies have sustained the action of those agents of civil repair, both inside and outside of corporations, who have sought to resist and correct corporate malpractices. So far, social move-ment scholars have explored the cultural resources that social actors tap into for the purpose of mobilizing public opinion over these issues. Impression man-agement scholars, on their part, have looked into the verbal accounts by which corporations seek to defend their legitimacy in public. Very seldom, though, have analysts accounted for the deep cultural metrics of legitimacy on which actors on both sides draw in public debates to win the support of their fellow-citizens and, when they have, they have mostly focused on the discursive structures that un-derscore how the rules of (social) legitimacy are interpreted. Given the global horizon of transnational corporations, however, corporate crises have been increasingly occurring in Third World contexts within which different discurs-ive structures compete to orient the functioning of civil society. In this paper I will focus on a scandal that had a far-reaching impact on international public opinion a few years ago and that hit Coca-Cola as a result of the accusation against its local bottlers in Colombia for using illegal paramilitary groups to intimidate, threat-en and eliminate some vocal trade-unionists. I will show that the participants to the public debate in Colombia over the role and responsibility of Coca-Cola drew from two alternative discursive structures that contributed to orient local public opinion: the liberal discourse of civil society and the corporatist discourse of the hacienda.

Energy Regime Change and Institutionalism: Understanding Developments in Carbon Capture and Storage

Many analyses of energy technology development disregard the importance of institutions and the interdependence of economic, technological, political and so-cietal concerns and events. I propose a dynamic institutional systems framework to integrate the various concerns into a simultaneous analysis and demonstrate the frame with case analyses on the budding developments of Carbon Capture and Storage (CCS) technologies in Europe.

The framework integrates cognitive institutionalism, Socio-Ecological Systems (SES) and socio-technical transitions theory. Institutions are the rules of the game and define the shaping human interactions; both formal rules, such as laws and reg-u-lations, but also informal institutions through traditions, practices and beliefs. Individual but shared beliefs about energy regimes shape how the systems de-velop, leading to issues of technology lock-ins, incremental change, institutional inertia and path dependency.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper focuses on self-referentiality in the mental models of stakeholders as a factor that shapes these issues. The institutions held by the actors are seen to organize in a nested mental model: the three levels of socio-technical landscape, socio-technical regimes and the innovative niche (Geels 2002) are seen nestled holons or SESs.

This paper demonstrates novel methodology to measure path dependency in policy-making. The method takes large text corpuses of policy documents, plans, scenarios, roadmaps, preparatory text and the like, and analyzes the flow of concepts, phrases and blocks of text as later documents inherit bits of earlier documents. The analysis proceeds by looking at relative frequencies of words and phrases in documents through a measure called term frequency-inverse document frequency, and translates this into two networks: the document-document network of similarities and dissimilarities describes how conceptual usage is inherited between documents and the concept-concept network describes courses or network areas of concepts that are used together and start to institutionalize in the political language.

This paper demonstrates the method through an analysis of energy policies in Finland, where various technologies, policy tools, and concepts have been pursued and fell over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.

**Belonging** in the Study of Younger Generations of Migrant Background

This study discusses the analytic purchase of the concept of “belonging” to study identity formation among younger generations of migrant background. It is argued that “identity” has more usage as an empirical concept, whereas “belonging” provides more analytic purchase to grasp the underlying mechanisms of inclusion and exclusion that inform young people’s identity formation.

The theoretical discussion will be informed by an empirical study on young Kurds’ negotiations of belonging in Finland. The qualitative study looks at how young Kurds narrate their belonging in terms of various mechanisms of inclusion and exclusion, including institutional arrangements and (racialized) discursive categorizations. The broader theoretical premises of the empirical study lie on transnational identities, identity and narrativity, and the theoretical discussion leads to question the analytical edge of “belonging” and how it addresses the questions of who gets to belong and who does not. The case study shows that young Kurds construct a sense of belonging in terms of the discursive construction of national belonging and “otherness” in the Finnish context. The racialized boundaries of “Finnishness” echo in their narrations and position them as the “other”, namely the “immigrant”, “refugee” or “foreigner” on the basis of their darker embodied signifiers.

Floya Anthias argues that belonging, in contrast to identity, assumes access and participation, and becomes activated in situations of denied membership and experiences of difference. In this sense, it is suggested that “belonging” better captures the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences on the methodological questions. This study employs the intersectional frame to analyse the intersecting attributes of gender, age and ethnicity impacting researcher positionality and the interaction situations with the interviewees. Hence, the theoretical and methodological challenges of employing “belonging” in jurect with the intersectional frame will be explored.

In France, an increasing number of local authorities have developed programs focusing on “urban mediators”, which aim to reduce insecurity within districts referred to as deprived areas. These individuals make the rounds in such districts to ensure a calming presence for inhabitants as well as to speak with them. This street intervention allows mediators to meet with various persons distant from public services, such as drug addicts, juvenile delinquents, victims of domestic violence, or immigrants facing integration problems. This demonstrates that such interventions include security and social dimensions at the same time: The mediators intervene not only with persons who “cause” insecurity but also with those who suffer as a result of it. Therefore, they differ, on one hand, from the police, whose actions consist mainly of repression (Roché, 2004) and, on the other hand, from social workers, who intervene mainly in the long term as a result of requests. These features led us to question the way the characteristics of different districts can influence the respective importance given to both dimensions (security and social action). The few analyses of archival material since the year 2010 show that this action can be classified not only according to the degree of the municipal coordination but also to the community size (larger or smaller), the networks which the municipality has with other actors, and the social status and cultural background of mediators. This communication will reveal the impact of the principal coordination on the articulation of these two dimensions, the process of construction of partner networks around the question of the insecurity, and the interaction between urban mediators and inhabitants.

This paper focuses on case studies in Finland. The case studies are focused along two projects: one cancelled retrofit of a coal power plant and one case of mineral carbonation. These two projects are deeply interwoven with each other and are part of a larger research project looking at the role of technology in development.

The claim that ethnically diverse living environments drive down social cohesion between and within ethnic groups, remains disputed, despite abundant empirical tests performed all over the globe. The Netherlands, for example, is argued to be an intriguing test site for this so-called ‘constrict proposition’, as numerous studies – using different operationalizations of ethnic diversity and social cohesion, different data, performed in different time era and defining macro-level geographical units differently – reached rather similar conclusions: in general, ethnic diversity does not erode social cohesion. And yet, such diversity of neighborhoods, trust in neighbors is indeed hampered. Yet, various questions remain. First, does ethnic diversity only drive down trust in neighbors of ethnic outgroups or also trust in coethnic neighbors? Second, is the neighborhood the crucial geographical unit of which one would expect (negative) diversity effects? And related to the second question how should we define the neighborhood and consequently operationalize neighborhood diversity? In this contribution we answer these questions through analyses of the Religion in Dutch Society 2011-2012 dataset, supplemented with unique GIS-data. Our dependent variables are so-called wallet-items in which we systematically varied the ethnicity of the target of trust (co-ethnics versus outgroup members) and the location of the target of trust (neighbors versus non-neighbors). We introduced spatial thinking into the diversity-cohesion discussion and investigated to what extent the impact of ethnic diversity depends on the definition of the neighborhood (administrative units within neighborhoods) and on the geographical scale of the neighborhood. We applied spatial regression techniques and multi-level models to test our hypotheses.

On the basis of the results of a qualitative study in a children’s self-reliance support facility, this presentation will discuss the reason why children, who leave social care facilities, become isolated. In Japan, the social exclusion of children who are, or were, placed in these facilities has been a pressing topic. However, the relationship between the purpose of social care and the lives of the children who leave these facilities has not been sufficiently discussed.

The study was conducted in a children’s self-reliance support facility (called “Z” in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: First, even children who overcome a particular issue while living in the facility may regress to their previous behaviors depending on the external environment in which they live after leaving the facility. Second, children, particularly those who serve their time and leave the facility, are often compelled to choose between returning to their families and living independently. This problem is caused by a severe shortage of institutions that provide aftercare to children who leave such a self-reliance support facility. Third, although all staff members want children to depend on them when they confront difficulties after they leave the facility, in some cases, the children are sometimes reluctant to do so.
On the basis of the above results, I will discuss the dysfunction of self-reliance as a social norm.

**TOMA, KOTA*** (Keio University, k_toma222@hotmail.com)

**The Process of Children's Socialization in a Group**

This presentation will discuss the process of children's socialization in a group. Although the socialization of children has been one of the most important research topics in sociology, the concrete aspect of it is still uncertain.

The study was conducted in a children's self-reliance support unit (called "Z") in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: (1) In Z, living with a group is optimally used to treat, care for, and socialize the children. In particular, their rank in their relationship, which is based on age or phase of treatment, plays a very significant role. (2) It is important to note that such a rank is not permanent. As the upper-class children leave the facility, when a new child enters the facility, the rank shifts. (3) Moreover, the children do not uniformly experience the reconstruction of these ranks. Rather, it is an individual experience.

As indicated above, living in a group and experiencing the construction and reconstruction of ranks in their relationship take very important roles in children's socialization. This process can be interpreted as the process of "role-taking" in group dynamics. Moreover, such "role-taking" can be regarded as a type of anticipatory socialization that occurs after children leave the facility. I will conclude by discussing the implications of these findings for the field of sociology.

**TOMALIN, EMMA*** (University of Leeds, etomalin@leeds.ac.uk)

**Gender, Development and the 'De-Privatization' of Religion**

'Poverty has a female face' in many contexts, which has been exacerbated by the recent global economic crisis. Amongst the range of actors that have responded to declining levels of welfare support by the state are faith-based organizations, and international donors and agencies increasingly recognize these as significant 'development' partners. This 'turn to religion' within mainstream development policy and practice has taken place against the backdrop of a perceived 'religious resurgence' or 'de-privatization' of religion, which casts doubts upon earlier predictions that secularization and modernization are two sides of the same coin.

From a 'gender and development' (GAD) perspective, the 'rise of religion' coupled with declining levels of state welfare provision presents a threat to gender equality and women's rights. The preference for 'secularism' amongst numerous women's rights activists and GAD practitioners is no secret, and has been promoted as the best route for securing equality, freedom and security for women globally. Therefore, it is crucial to view the recent 'turn to religion' by mainstream development actors through a gender lens. This is not only because women are more vulnerable to poverty, but also because 'religions have a male face' (see also Tadros 2010; Tomalin 2011).

This paper examines the future of the 'secular' in the light of theories about the 'de-privatization' of religion and the implications this has for gender equality and women's rights, which are central to GAD. Currently, understandings of religion that influence mainstream development policy and practice rely upon frameworks for analysis that are outdated and unhelpful for addressing the above concerns. Focusing upon examples from South Asia, I will demonstrate that distinctions between the religious and secular, the private and public, and the idea of a clearly defined term called 'religion' are unhelpful in addressing contemporary questions around 'gender, development and the de-privatization of religion'.

**Albullaryo Ritual Healing: A Construction of Ethnicity of Filipino Immigrants in South Korea**

The transnational movement of people around the globe has challenged migrants' belief systems and their quest for well-being. The movement of people in itself is a form of ritual performance, a journey towards a dream and the aspiration to acquire a new sense of self and identity. The goal of this research is to illuminate how Filipino immigrants construct their ethnicity through access to the albullaryo ritual healing of their homeland. In this paper, migrants are viewed as secular pilgrims who experience the manifold stages of liminality as they continue to seek well-being. Along the journey they suffer from pneumopsychosomatic illness, which has to maintain connection with "home." They romanticize the memories of their homeland. They access shamanic ritual healing, which brings into the real "here and now" the interplay of memory and the self's narrative that defines their identity. The research is based on the ethnographic data collected April to June 2013 in South Korea. It focuses on the story of Filipino immigrants who experienced shamanic healing in their homeland and continue wearing the amulets given to them by shamans to prevent illness and protect them from evil while in a foreign land. The migrants' definition of their "new selves" is shaped by the local institution of modernity.

Findings indicate that the root cause of disease from pre-industrial society to the age of globalization is emotion. Negative emotion breaks one's social ties with the self, significant others, and the divine. Physical illness often stems from one's spiritual sensibilities in his/her religious worldview. Also, migrants' state of identity consciousness is "in between" – that is, "neither here nor there" – and they must undergo different stages of liminality in restoring selfhood. Thus, healing is an outcome of rebuilding relationships – practicing one's spirituality and reconstructing one's ethnic identity.

**Development, Inequality, and Discrimination in Europe: A Comparison of Post-Socialist and West European Democracies**

This paper uses the European Social Survey 2002-2012 to examine trends in discrimination, taking into account two different groups: those who feel discriminated against because of their ethnicity, and those who espouse xenophobic attitudes. The country-level relationship between feelings of discrimination and xenophobic attitudes calls for explanations that consider economic development and social inequality. A complimentary research question is: To what extent does social inequality influence feelings of discrimination and intolerant attitudes, beyond economic development factors, individual socio-demographics and various personal outlooks? Our analysis covers post-socialist and West European countries (N>16) in the period 2002-2012. Multilevel regression analysis on the ESS data provides the statistical means to examine the effects of country-level and individual-level determinants and their interactions on feeling discriminated and on xenophobic attitudes. Economic variables at the country level include national income per capita and Gini index of income inequality. At the individual level, we focus on social stratification – education, occupational status, and income – subjective evaluations of standard of living, as well as a range of attitude measures. Results demonstrate how these variables are related to ethnic discrimination and xenophobic attitudes, controlling for political views and national orientations. We show that in post-socialist countries ethnic discrimination became more salient as society embraced party pluralism and freedom of speech. At the same time, in both post-socialist countries and Western democracies right-wing and nationalistic attitudes are strongly fuelling discrimination. At the end of the paper, we discuss theoretical implications of our findings for analyses of development, inequality, and democracy.

**Peruvian Immigration to Chile: Racism and the Deskilling of Female Transnational Workers**

Historically Chile has been a country of emigrants rather than a country of immigration. There are around one million Chilenos living abroad. However, in the last decades immigration to Chile has accelerated. Immigrants from Peru, Ecuador, Bolivia, Colombia, China and Korea confront a hostile and racist society. The largest of these groups is formed by Peruvian migrants. About 130000 Peruvians live today in Chile. Of these, 60% are women, many of whom end up working as domestic servants. Peruvians have become a large group among domestic laborers, in particular as live-in domestics. Although the levels of education of Peruvians are higher than those of Chilenos, they are consistently pressed into low paid work with little protection. By using a netnographic methodology I investigate how racism, that has historically casted mestizo Chilean women in the role of 'nanas,' today shapes Peruvian women into the homes of wealthier families in Santiago, regardless of the levels of education and skills they bring with them at the time of immigration.

**A Study of Policing the Protest in Japan: Effects for Social Movement Organizations and Arrested Activists**

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This study investigates the policing for social movements in Japan. Compared with other countries, a few studies empirically examined the policing in Japan in 60s/70s movements, over 5,000 activists were captured by police. Though arrested activists had dramatically decreased since 1970s, policing still have an impact on social movement organizations (SMOs) and participants in Japanese political activism. In this study, the author conducted the research focusing the effect of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: Interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing is relatively not violent, but the period of detention is extremely longer than other countries. On average, protesters have been arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person. On the other hand, seized participants face to the crisis collapsing their careers as a student, businessman, housewife, and other roles in their usual life. Particularly, arrested participants sometimes break off with external relationship from the social movements: his/her offices, the movements as they used to be. Moreover, arrested participants sometimes avoid taking part in and continuing the social movements. SMOs have to spend their money and time to release the arrested one from police, thus their resource are decreased and it is difficult to continue the movements as they used to be. Moreover, arrested participants sometimes break off with external relationship from the social movements: his/her offices, friends, and families.

Heart Transplant Recipient Identities: Between ‘a Patient’ and ‘an Individual’

This study explores how heart transplant recipients’ (HTRs) post-surgery chronic conditions affect their identities, consisting of the roles of ‘a patient’ and ‘an individual’ in everyday lives. HTRs need lifelong medical treatment to control their immune systems. After overcoming heart disease through transplant operation, HTRs tend to think of themselves as individuals, while doctors see them as patients. Therefore, the experience of heart disease presents a difficult challenge for HTRs regarding their identity.

Three key theoretical concepts can inform the subjective experience of the lifelong chronic conditions: biographical disruption, narrative-based medicine and identity reconstruction. These concepts address issues of stigmatization of chronic conditions, loss of self, and reconstruction of identity following a heart transplant.

The participants for this study were recruited through ‘snowball’ sampling. Inclusion criteria required individuals age 20 and over who had undergone a heart transplant operation more than one year before the time of the study. Nineteen Japanese HTRs were interviewed by using semi-structured face-to-face interview techniques. All interviews were recorded and transcribed into a simple text. Interview data was thematically analysed.

The results of this study show that HTRs do not simply face an issue of loss of self, but reconstruct identities between ‘a patient’ and ‘an individual’ through experiences of stigma. HTRs’ identity reconstruction process is primarily influenced by the location of the surgery, its duration, and the presence or lack of fund-raising support from the public. Depending on these conditions, recipients tend to experience stigma, which can be categorized as ‘enacted stigma’ or ‘felt stigma’. Their stigma experiences are attributed to their relationships with doctors, family, friends, and the public. HTRs tend to experience ‘felt stigma’ than ‘enacted stigma’. This indicates that HTRs’ distress may be internalised; apart from the medical support of immune control, they may not receive enough support.

Repossées Par Le Travail Ou Attirées Par La Vie Privée ? L’inactivité De Jeunes Diplômées En Italie

La montée des taux d’inactivité de jeunes femmes de tous pays occidentaux depuis l’après-guerre a surtout touché l’Italie. Nombre d’Italiennes ont ainsi choisi de ne pas sortir travailler. C’est ainsi que l’héritage culturel et économique, la composante de femmes qui travaillent ou qui sont prêtes à le faire depuis l’après-guerre. Cette croissance a été en Italie plus tardive et plus faible que dans d’autres pays après guerre. Cette croissance a été en Italie plus tardive et plus faible que dans d’autres pays. Entre le 60s/70s, plus de 5,000 activistes ont été arrêtés par la police. Bien que la police ait fortement diminué depuis les années 1970, elle a encore un impact sur les mouvements sociaux (SMOs) et les participants à la vie politique japonaise.

In this study, the author conducted the research focusing the effect of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: Interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing is relatively not violent, but the period of detention is extremely longer than other countries. The Coordination Mechanisms of Organizational Routines: A Case Study on a Free/Open Source Software Project

How might distributed, peer-production organizations that rely on the Open Innovation paradigm sustain task specialization and achieve effective coordination in the absence of formal hierarchical control? This question is increasingly relevant because a number of production processes are being shifted from the physical to the virtual domain. Traditionally, scholars identified in organizational routines the building blocks of coordinated action in organizations. In this paper, we draw on the evolutionary perspective of organizational change (Nelson and Winter, 1982) to investigate the emergence and change of organizational routines in the context of distributed, peer-production communities. We argue that change emerges endogenously from processes that order routines - which we define as ordered sequences of actions linking problem-solvers and problems within organizations. More specifically, we investigate how routines emerge dynamically from the dual association connecting individuals (or “problem-solvers”) and tasks (or “problems”) in organizations. In particular, we ask: How do organizational routines (structured sequences of actions) emerge, evolve and persist despite the demographic turnover of participants and the ever-changing character of organizational problems?

To answer this question we run newly developed class of Relational Event Models on the entire sequence of actions undertaken by software contributors on source code. Using the entire history of the Apache HTTP server, a very large Free/Open Source Software (FOSS) project. By examining directly the micro-level, socio-temporal interdependencies generated by individual actions performed by problem-solvers, we find that self-reinforcing processes underpin the endogenous coordination of a decentralized production community, by fostering task specialization and learning mechanisms. Different types of actions can exist and be coordinated over time in a decentralized decision environment. Our analytical goal is to show how sequences of interdependent problem-solving actions become embedded in temporal sequences of relational events, which then trigger...
specific self-reinforcing mechanisms that provide the social infrastructure sustaining the production of F/OSS.

Case Studies on Working and Organizing of Domestic Workers in China

The number of laborers involved in informal employment is 163 million, which contributes to 58.85% of non-farm employment in urban areas. In order to analyze the social solidarity of informal workers, the article takes the domestic workers as a case study to explore the working condition of informal employment, as well as its possibilities of organizing. We found that there are at least four workers' solidarity types, labor NGO, trade Union, self-organization or grassroots organization and the internet. These social solidarities have different organizational culture, strategy, function and activities and play different roles.

Age of Transition to Parenthood Among Married Adults: Social Determinants and Gender Difference

Using retrospective life history data from the 2008 Chinese General Social Survey (GSS) and event history analysis, this study investigated the timing of transition to parenthood for both adult males and females for marriage cohorts spanning from 1965 to 2008. Within the neoclassical economic and second demographic transition frameworks, we expect that there will be a trend toward delayed childbearing and a lengthening of the duration between marriage and first child bearing across the cohorts. However, we found that a shortening trend of marriage-first child interval across cohorts, and the more recent cohorts are more likely to transit into parenthood net of other effects. We also found that higher educated people are more likely to transit into parenthood earlier than those who have primary or no education. We speculate that the trend in China contradicts the tendency for delayed parenthood in Western countries due to the resistance to change the traditional childbearing norm of "earlier parenthood after marriage." This is because child rearing is an issue involving extended families, rather than couples' own independent decision. Under the one-child policy, extended families can pool more human and financial resources that they utilize for childbearing. We also speculate that increasing intimacy between newly married couples in the more recent cohorts contributed to this trend.

An Institutional Approach to Autonomous and Connected Cities: Ostrom's Distributed Metropolitan Governance

Global cities are the economic and cultural centres in the world. They compete with each other for a number one status on various lists. International accessibility is essential for a city's ranking and for its 'supply' of people, goods and resources, putting a city's position in the international network of airports and harbours and in the international economy high on the political agendas of national and local governments. Cities are constantly searching to improve their performance. Specialized planning models support city governments to deliver the various public goods and public services that are expected from them. More integrated models, such as the airport region and urban metabolism models, emphasize the tensions between international connectivity and local liveability. The extent to which current institutions are capable of managing these tensions is questioned by stakeholders. They search for institutional structures supporting the delivery of the public goods promised, with a prominent position for questions of scale. Technological developments have made these questions more urgent. The fast developments in the field of renewable energy technology, smart grids and electric vehicles call for redemptions of rules and roles of consumers, producers, citizens, local, provincial and national authorities and of the public goods delivered to them.

In this paper, we address the search for institutions that match today's challenges by using the theoretical framework of distributed metropolitan governance as developed by Vincent and Elinor Ostrom. With this institutional approach, we explore current urban governance challenges in the Netherlands. To sustain their competitive position in the global network, Dutch cities strive to become resilient, self-organising and self-governing. We will explore how institutional mechanisms as consociationalism and pillarization, as identified by Lijphart, which have proven to be able to bridge conflicting values, are still relevant for a renewed conception of distributed metropolitan governance.

Possibilities for New Forms of Resistance in the Neoliberal Era: Unification of All Rights Movements During Telkel Workers' Resistance in Turkey

The working class has become overwhelmingly disorganized in the neoliberal era partly due to the attacks on legal and institutional grounds of trade unions and partially due to the transformation of working class itself. Dialectically enough, the current phase of capitalism is pregnant with new crises and forms of resistance. The result of increasing precarious jobs, jobless growth, insecurity and extreme commodification. Under these conditions, unions are faced with altering their strategies. A possible formula is to organize unemployed and precarious workers as well as workers around counter-hegemonic united front of a non-negotiable defence of collective rights (right to water, rights to transportation, right to shelter, right to decent work etc.). This study provides an historical account of a working class protest which took place in 2009-2010 in Turkey. It argues that this protest foretells the possibility of unifying all rights movements under an expansive struggle for collective social rights. June 2013 mass protests in Turkey also show that the sense of injustice is becoming stronger and felt increasingly by those who are subordinated to all sorts of unequal power relations.

TOPALOV, CHRISTIAN* (École Hautes Études Sciences Sociales, topalov@ehess.fr)  
A Scientific Controversy Across the Channel: Unemployment Theories, Sociology and the Rise of Mathematical Statistics in the Early 20th Century

In the early years of the 20th century, on both sides of the Channel, social reformers were struggling to define what « unemployment » could be. Political economy, sociology and social statistics were mobilized in the process of shaping the novel category. Defining unemployment scientifically seemed to imply that the unemployed should be enumerated, otherwise transformed in solid figures. Various statistical devices were imagined in both countries for trying to solve that same puzzle, but quite different scientific languages were mobilized: William Beveridge used the language of political economy (1909), Max Lazard that of Durkheimian sociology (1909), and Arthur Bowley the new tools provided by mathematical statistics (1912).

An argument developed in professional journals between Lazard and Bowley, who doubted of the statistical techniques the other one was using: Lazard had calculated an occupational unemployment rate, Bowley an index-number of the variations in the volume of unemployment. In order to describe this controversy, one can use the notion of « national scientific styles » and observe how tools circulated between British statisticians and French ones, through the International Statistical Association and an intense exchange of literature. The limited reception of the correlation coefficient among French statisticians raises an interesting general issue of the conditions of the circulation of knowledge.

Accounting for the difference between Lazard's and Bowley's formalisations implies analyzing sociologically what they were designed for and the relations that were being established between scientists and the users of their knowledge in the respective labour administrations. In both countries, a close relationship between scientists and administrators conditioned the development of abstract statistical forms that could be applied to formalizing a new social issue and contemplated public policies: in France unemployment insurance by industries, in Britain public works providing jobs when an unemployment crisis would be looming.

TOPALOV, CHRISTIAN* (École Hautes Études Sciences Sociales, topalov@ehess.fr)  
Network Analysis and Spatial Analysis Combined: The Case of Reform and Philanthropy in 1900 Paris

Historical monographs on specific spheres of social reform are many when it comes to the late 19th and early 20th c. In the largest industrialised countries of the time – it was a « progressive era » for all of them. Every monograph points out that a good deal of the characters involved were simultaneously present in many other fields of reformist action – e.g. public health, housing reform, work relief, « protection » of women and children, prison reform, social science, etc. This invites scholars to cross the boundaries of specialisation and study reform and philanthropy as a possible unified field of action, interaction and sociability. This can be done through network analysis: voluntary associations used to pub-
lish reports and lists of leaders, members and supporters – by making the names of their followers public they increased the legitimacy of the cause.

This circumstance made it possible to collect complete lists of members of 106 reform associations, totaling 17663 people in 1900 Paris. Two directories of Paris charities have been added to the data base, i.e. 1346 charities and 2060 people. Sources provide us with an address of the charities and most of the individuals. A GIS was set up that allows it to locate every address on the street plan of Paris (as of 1888). This material is exceptional by its quantity and systematic character. Using the data base, we can separately and simultaneously consider both social and spatial links : the affiliation of people to the same institution, the residence of people in the same building or neighbourhood, the co-presence of two institutions at the same address.

The paper presents the most interesting results and discuss the methodological solutions that had been developed for combining social and spatial analysis, and facing the problems related to the bulky character of the data.

Negotiating Normalcy – Self-Narratives of Troubled Young People

Young people's risk-taking is in most contemporary societies a matter of concern. Research on troubled young people who have been placed in out-of-home care shows that these young people more often than other young people are involved in risk-taking behavior such as excessive drug use. What is rarely investigated, however, is troubled young people's own ways of understanding their risk-taking behavior in the context of their everyday lives. This paper analyses the role of excessive drug use and its influence on young people's self-narratives about their everyday lives. The young people's drug use experiences continuously inform their perceptions of what they consider a 'normal' youth life and thus how they negotiate their self-narratives accordingly. This paper is based on 15 in-depth interviews with young people at age 18 who in their childhood have been placed in out-of-home care and have experiences with extensive drug use. Drawing on theories of stigmatization and normalization the paper demonstrates that what the young people conceive as a normal youth life is influenced by their drug use experiences and troubled childhoods. Their risk-taking behavior thus challenges their wish to create meaningful and coherent self-narratives and the result is often the creation of fragile self-narratives based on subtle negotiations of what they perceive as normal.

Historic Environment as an Opposing Element to Inequalities

Taketomi Island in Okinawa Prefecture is one of the outer islands near the southwest border of Japan. Its islanders have suffered two-fold inequalities for years. The area of Okinawa Prefecture was a small independent nation until 1879. This nation was defeated by Japan and subsequently annexed by the national government. Afterward, mainland Japanese, especially uneducated ones, began to regard these islanders with contempt as defeated people. Another source of inequality occurs on the island, which was peripheral even during its era as a small nation; the people of this small nation considered Taketomi islanders as non-cultured people. This tendency continued even after Taketomi's incorporation into Japan.

However, the "historic environment" that Taketomi islanders have preserved and created through an active movement in the last 30 years has changed their dismal situation dramatically. Preserving historic sites did not affect the situation-al changes per se, but it elicited widespread discussion of common shared values and examination of the daily lives of islanders. As such, Taketomi residents have created peculiar historic environments, which attract many visitors and tourists.

Critics of Time in Modernity By Yusuke Maki

This presentation thematizes the series of works of Yusuke Maki, which is the pen name of Munesuke Mita. He is one of the most prominent sociologists in Japan. In this presentation, I would like to focus on the works of Yusuke Maki, and to define their significance and limitations.

For the abovementioned purpose, first of all, I will try to consider Yusuke Maki's series of works as a unified process and in which his project of critics about "time in modernity (characterized as irreversibility and linearity; Newton's abso-
lute time)" has been gradually deepening. Maki's critics of his initial works were based on Marxism, or strictly speaking, on theory of reification. For example, in Gendai to sono Genjou to--Sonneto-Kouzu (Existent Structures of Contemporary Society) (1977), Maki carefully examined Marx, and in Ningen-Kaihou-to-Nirono-Tameni (Toward The Theory of Human Liberation) (1971), he criticized the difficulties of an-
Social Capital in Late Life: The Case of Chilean Older People

Chile is experiencing an accelerated process of population aging. People aged 60 and older currently constitute 13% of the population. This proportion is projected to reach 28% in 2050. In this context, questions have raised about the quantity and quality of older people's social capital due to the decrease in family size and changes at the value level related to more individualized societies. The theory of individualization proposed by Beck and Beck-Gernsheim states that in today's society people are less bounded by traditional forms of representation and control. At the level of personal ties, this means that family members would relate to and help another because they 'want' and not because they 'must' do so. However, the latter does not necessarily implies negative consequences on older people's social capital, but rather it may produce a change of scenario. That personal ties can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing it or complementing family resources with other types of ties (e.g., friends, neighbors and/or state).

Gender and Education: Differences and Similarities in the Trajectories of Young Men and Women

The preliminary results of a longitudinal study, which has surveyed the same individuals at 13, 17 and 21 years old, indicate that there are convergences and divergences in the practices and attitudes of young women and men. Young women do better in school but, at the age of 13, they also report more depressive symptoms. On the other hand, at the age of 17 and 21, the trajectories of young men of both sexes are reshaped showing differentials in some respects and similarities in others. Accordingly, young women's initial educational advantages may not be promising effects, culminating, sometimes, in early interruptions or corresponding, afterwards, to precarious experiences in the labor market. Drawing on a theoretical framework which combines an intersectional gender approach with sociology of education, this presentation seeks to explain young men's trajectories and the differences and similarities found. In order to do so, we will analyze the ways in which the trajectories of young people are influenced by factors, such as social background and class, parenting styles, networks of sociability, leisure-time, subjective well-being and physical and mental health, body image and risk behaviours. These relationships will be analyzed with descriptive and multivariate analysis.

EPIteen, the study on which this presentation is based, was launched in 2003-2004 by the Institute of Public Health of the University of Oporto (ISPUP) and collects data from individuals who were born in 1990, in a total of 2 943 research images and risk behaviours. These relationships will be analyzed with descriptive analysis.

Cash for Care Schemes and Older Migrants: Perspectives from Needs Assessment Practice

The ethnic and cultural diversity of older care recipients around Europe has increased over the past decade posing new challenges to the elderly care sector. In some parts of Europe, requests for cash for care schemes have increased as a result of the fact that the elderly care services that are offered by different welfare states are believed to be ill-equipped to meet the needs that this diversity creates. In this presentation we will explore how care managers who perform needs assessments for elderly care handle increased requests for cash for care schemes from migrant families. This presentation will address how they experience these requests and the challenges that they face when handling them within the course of needs assessment regulations in Sweden. The data is comprised of 12 focus group interviews with 60 needs assessors from seven municipalities in Sweden and 202 case documents (101 concerning cases with older migrants and 101 with older Swedish-born). The material has been analyzed through thematic analysis (focus groups) and content analysis (case documents). The findings show that the needs of older migrants is challenging especially when one is dealing with late-in-life migrants' requests for cash for care arrangements. The fact that these migrants' care preferences are different from the individualist care understandings that lay at the core of needs assessment regulation in Sweden poses numerous challenges to needs assessment practice. The challenges are augmented by the fact that these migrants' younger relatives lack a foothold in the labor market and regard the formalization of their informal caregiving duties through these resources as a potential source of income. The presentation will problematize the taken for granted assumptions about care that lay at the core of Swedish need assessment practice and the understandings of filial obligation from which care managers depart.

Resistance to New Technologies: The Information and Communication Technologies Case in Spain

This paper summarises a study that analyses the surveys of different data bank containing data about social representations on science and technology in Spain, and the role of communication and specifically Information and Communication Technologies (ICTs). Based on these previous studies we conclude that, contrary to traditional theories of a uniform, positive image, there is significant ambivalence towards technoscience among citizens in advanced contemporary societies. This theory was confirmed both for social representations of technoscience in general and for ICTs in particular. On these results, our paper will show the precise mechanism that these technophobic or ambivalent social representations intervene in processes of individual appropriation of Information and Communication Technologies and its and its implications for the creation of the digital divide. Without denying the relevance of socio-demographic and psychological usual variables, the paper will highlight the importance of such social images about the technoscience and ICTs in the genesis and development of digital divide. In addition to the surveys of different...
data bank, we will also provide empirical evidence from a study about Spanish citi-
zenship which have used both qualitative methods (with in-depth interviews and focus groups) and quantitative methods (using a representative survey). Finally, we will consider the consequences of this new explanatory approach to the use of ICT and the digital divide has for the processes of social exclusion in contemporary information and knowledge societies.

Trust As Indicator of Social Consciousness in Russia
Social consciousness has always included many indicators: results of activity, needs, motives, values, interests and other indicators. Among them the signifi-
cant place takes up the trust, which always reflects one of the main forms of com-
prehending existing social relations, and at the same time, level of knowledge, awareness and evaluation of the ongoing changes in the socioeconomics.
Role and place of trust in this sphere were studied in process of All-Russian comparative research of 1989 and 2012. The main goal was the comparison be-
tween the situation in the last period of Soviet time, when the market relations were beginning, and situation in Russia after 25-year realization of these reforms.
Data of this study showed, that there are the different tendencies in the de-
velopment of trust. In connection with the division of levels of social organizations - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.
This study showed that on the level of Russian society the trust to political, social, economic institutes to a great extent decreased. On the regional level the trust has the contradictory character in depending in situation in region: the reach or poor, agricultural or industrial, political activity and ethnic specifics.
Trust in enterprises depends from the forms of property - state or private, mu-
nicipal or public company.
On the personal level the trust has increased and played the leading role among the kinds of trust existed all over the places.

Party Membership in Turkey and Members’ Participation during Local Elections in 2014
Party membership in Turkey and members’ participation during local elections in 2014
Scholars agree that since the 1980s there is a widespread disengagement from parties and party politics especially in many long-established European democra-
cies, both at the electorate and voluntary party members’ level. They also agree that decline both in terms of numbers and members’ activities depends on dif-
f erent socio-economic and political factors explained by supply-side and demand led explanations.
This study is intended to present an overview of party membership levels and of participation in party activities during the local elections which will take part in March 2014 in Turkey. In this presentation we will evaluate “Party and mem-
bership decline” thesis and observe the current situation in Turkish case since 1980s. We will compare the number of party membership by using the official data which are registered in the Supreme Court of the Republican Attorney Gen-
eralship and observe the fluctuations or decline in each 5 years period between 1983-2013.
According to the scholars, there is a decline not only in numbers of the mem-
bers, but also in members’ levels of activism in long established democracies. In order to see and understand the current levels of activism of the members, we will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. We also plan to discuss the results of the survey and see whether there is a decrease in member’s level of activism. Some issues guide our survey: Firstly socio-economic and demograph-
ic characteristics members have. Secondly why citizens enroll in parties and the third how they participate in party activities and to what extent they use new information technologies as participation methods during local elections in 2014.

Old Managerialism and New Professionalism? Social Professions Vs. Healthcare Professions
The aim of the paper is to discuss the tensions between the managerial and the professional logics, both at the theoretical and the empirical level. Original evidence comes from two qualitative studies (interviews) carried out in the Turin area: one on different occupations engaged in social work, and the other one on professionals engaged in healthcare-social team work. We move from a discus-
sion of the nature of the managerial logic, seen as a complex puzzle stemming both from classical organizational theory (Scientific Management) and from the new institutional economics (Public Choice). Our findings suggest that in social work an "old" version of managerialism has been implemented, in which the managerial logic is reduced to hierarchical control. We then analyze profession-
als’ strategies adopted to cope with managerialism, as they result from ours and other studies on social workers and healthcare professionals. One strategy (coop-
tation) stands as a non-zero sum game in which professionals act proactively to include managerial tasks within their activities and shows that the managerial and the professional logics can be reconciled, though social workers seem to be less eager and/or less capable to adopt it than healthcare professionals. The signifi-
cance of this for a new concept of professionalism is finally discussed.

Party Membership in Turkey and Members’ Participation during Local Elections in 2014
Party membership in Turkey and members’ participation during local elections in 2014
Scholars agree that since the 1980s there is a widespread disengagement from parties and party politics especially in many long-established European democra-
cies, both at the electorate and voluntary party members’ level. They also agree that decline both in terms of numbers and members’ activities depends on dif-
f erent socio-economic and political factors explained by supply-side and demand led explanations.
This study is intended to present an overview of party membership levels and of participation in party activities during the local elections which will take part in March 2014 in Turkey. In this presentation we will evaluate “Party and mem-
bership decline” thesis and observe the current situation in Turkish case since 1980s. We will compare the number of party membership by using the official data which are registered in the Supreme Court of the Republican Attorney Gen-
eralship and observe the fluctuations or decline in each 5 years period between 1983-2013.
According to the scholars, there is a decline not only in numbers of the mem-
bers, but also in members’ levels of activism in long established democracies. In order to see and understand the current levels of activism of the members, we will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. Medical tourism as national economic development in Asia: comparative case study of Singapore and Thailand, versus Japan and Taiwan

Medical tourism development has been put on the national economic development agenda by a number of Asian countries in the last fifteen years. Beginning with the forerunners of Singapore, Thailand and Malaysia, subsequently other countries, notably India, the Philippines and South Korea, joined the fray. Most recently, Japan and Taiwan also declared that they would promote medical tourism. The governments of these countries seem to share a common policy goal in developing medical tourism, i.e. to increase foreign exchange earnings, expand medical and other ancillary services, and generate employment opportunities. However, each country has developed different strategies in targeting specific niches in the international healthcare markets. In this paper we compare state strategies, scholars, practitioners in the modern period of development of society and groups, with the position of the cultural and historical context, research approaches enriches the process of social cognition personality image of the world in a globalized world, the design and interpretation of environmental social reality of Tuva ethnic.

Intergenerational Dependencies: Retirement and Old Age in the Prism of Family Geography

If the family is a determining element at every age in life, it is even more at old age. At the same time retirement and old age are more and more dissociated. What form does the family take for retired and ageing persons? How does the social constraint in family apply on its members?

The research undertaken until today has focused mainly on the one hand on the structural modifications affecting the households rather than the family and on the other hand on the residential mobility of the persons themselves rather than in the evolution of their environment. The aim of this research is to try to observe the spatial configurations and thus the places, not the individual or his household, but of his non co-resident family. When retiring, do individuals change their place of residence? Do they take advantage to move closer to their family? What about the following years when the individuals are ageing?

Based on a transversal approach we will choose three life periods (the active in individuals aged over 55, the retired aged under 65 and the retired aged over 75) to observe which spatial family forms are dominating and if it is possible to establish a link between the life steps after 55 years of age. This work obliges us to take into account social and demographic characteristics of individuals and their families as their mobility and family geography depends on it. This work builds on the survey “Famille et Logement 2011 “, which collected data from the living of both sex aged 18 and over. The survey gives information on the different places of residence of the children and parents of the individual questioned and thus allows for a mapping of the families of individuals at different age.

Revisiting the Boy Who Cried Wolf: Tornadoes and the False Alarm Effect

While the origin of the story is not clear, the 1867 publication of Aesops Fables brought the “Boy Who Cried Wolf” into the homes and hearts of many families. The story is simple and the message clear. It tells of a shepherd boy who lies to his community about a dangerous wolf to make people run to his assistance for his entertainment. The moral of the story is “if you don’t tell the truth people won’t believe you when you need them to.” Its appeal is massive and cultures around the globe use it to extol the moral virtues of truth, honesty, and honor. It is somewhat unsurprising then that building on the very same logic, academicians and practitioners have long debated the “cry wolf” or more often the false alarm effects of warnings. The question is simple: Are we somehow acting like that little boy and “crying (insert some weather phenomenon)” too often. Using a playful reference to the original fable, this analysis breaks down the key moral elements of the classic story and reinterprets their connection to current tornado prediction and patterns of risk perception as a way to help illustrate the range of complexities in need of targeted scientific research. We go on to provide scientifically based quantitative analysis of the risks associated with a false alarm, and behavioral response to a series of tornadoes that occurred between 2007 and 2010. Contrary to most existing research, we do find a statistically significant false alarm effect among other important predictors. Conclusions discuss the importance and limits of these results and suggest further research needs.
Concern Over Climate Change Among Young Australians

A large survey of young people in Queensland, Australia, indicates the majority believe that climate change is occurring, that the planet is warming because of greenhouse gas emissions and that anthropogenic global warming poses a serious risk to Australia. Parental education has an important influence upon the development of environmental attitudes among young people, with the children of tertiary educated parents much more likely than others to be concerned about planetary warming. A strong gender divide is also apparent, with young women consistently more concerned about the environment than young men are. Political party identification has an important influence upon environmental concerns even among these 15-17 year olds, with young conservative party identifiers far less likely than Greens or Labor identifiers to believe that global warming will pose a serious risk in their lifetime, after controlling for beliefs in human induced climate change. The party identification findings point to an emerging support base of young Australians for parties that adopt a progressive stance on climate change among.

The Relationship Between Social Status and Health: A Conceptual Review

Although “health disparities” have been a long standing interest of public health researchers, the complex relationship between social status and health has only recently captured the attention of sociological students of social inequality. Indeed, the first appearance of a session on health at an RC 28 meeting was in 2003 in Tokyo. However, interest in this topic is expanding rapidly and it clearly is an important direction for future research by our community. The current paper lays out the theoretical basis for expecting particular relationships with the intent of providing a sociological critique of the start point of this study is the adoption by the European Union in 2000 of numerical indicators and benchmarks to compare and stimulate the performance of the education systems of Member States. It looks closely at the processing of this statistical information during both fabrication and diffusion. These tools for government have been developed within the international institutions created after the Second World War (UNESCO, OECD) in an attempt to combine the material well being and social harmony by shaping education to meet the challenges of the industrial world. This policy of reliance on numbers has created an increasingly voluminous structure, in permanent expansion as it generates new data. Its growth has been fuelled by new technologies that facilitate the direct collection of data in schools and classrooms. Because they increase the traceability of school careers and allow for more regular evaluation of schools and students, these tools are used by both management and social science researchers to improve education and administration. Presented as teaching aids, they are designed to improve teachers’ performance by allowing them to evaluate, classify and grade both their students and their didactics. The phenomenon of quantification, by which we mean the activity of giving numerical expression to realities not previously expressed in this way, is considered here from three points of view - administrative, scientific and industrial - in order to provide an understanding of the origins and the effects of the avalanche of numbers on the vitality of our democracies and their inhabitants.

Governance and Public Security In Brazil: An Analysis Of State Departments Of Public Security -- CANCELLED

As in other areas, the public security policies have faced institutional, organizational and cultural obstacles. Sometimes are the limitations and conflicts of jurisdiction that hinder the implementation of new policies. On other occasions are the internal structures of the institutions of public security and criminal justice that hinder innovation. Moreover, the organizational culture permeated by mistrust and prejudice has hindered quite the implementation of new public security policies.

In Brazil, the State Departments of Public Security play an important role in the coordination and articulation of the actions of the various institutions that compose the criminal justice system. Its structure varies in each state, as well as the profile of the professionals who work there. Furthermore, there are significant differences with regard to their political status vis-à-vis the police. There are cases that the police are formally subordinate to the secretaries of public security. In other situations, police chiefs have the same powers of the secretaries. These differences ultimately reflect on the capacity of these departments to formulate and implement public security policies.

In this paper, we analyze the governance capacity of the Brazilian State Departments of Public Security. That is, the ability of these departments formulating and coordinating policies in the area of security.

Evaluating the Contribution of Schools to Pupils’ Progress in Educational Outcomes through a Bivariate Multilevel Model

In the last few decades, school value-added studies have largely demonstrated the effects of socio-economic and demographic characteristics of schools and pupils, as well as standardized tests and additional baseline variables. Traditionally, contextualized value-added models (CVAs) have been employed to assess variation arising from the schools and pupils in standardised tests of Mathematics, Language, Science, etc. in separate univariate models. However, recent studies show analyses of schools’ and pupils’ performance significantly benefit from additional model complexity, including the specification of unexplored levels of variation, either nested or non-hierarchical, such as between classrooms or teachers, between neighbourhoods and local authorities, as well as carry-over effects from primary schools.

Using data from the 2004 and 2006 SIMCE database (Chilean National Pupil Database), an extended 5-level bivariate cross-classified CVA model estimating simultaneously the variation in Mathematics and Spanish Language between primary schools, between classrooms (within secondary schools) and between local authorities was implemented. This is in addition to the variation between pupils and secondary schools. This extended CVA model for progress in Mathematics and Spanish Language proved effective in reducing bias present in the traditional univariate value-added models, while controlling for the correlation between the two subjects. The model also controls for the fixed effects of prior attainment, household income, gender, grade repetition, school type and average school socio-economic status, as well as the random effects of prior attainment and gender.

This research intends to contribute to school value-added modelling by analysing additional relevant structural effects and by considering the relationship between two of the most relevant educational outcomes. The analysis of these data shows that using school averages or even 2-level CVA model is incomplete for the purposes of informing school-level effects, and therefore parental choice and school accountability due to overestimation of school effects and pupils’ heterogeneity.

Historic Heritage and Petitioning in the Context of the Run-up to International Summits in Russia

Neoliberalism entangles all states, including liberal democratic ones, in capitalist market economies. This restricts citizens indirect action—voting, petitioning, influencing public opinion, participating in public hearings, and protesting (Warren, 2002). I consider the ways in which in Russia, after the mass protests against the unfair elections and, more generally, the Putin regime of 2011–2012 were sup

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
held in the West provoked fierce street protests, the summits held in Russia are widely and critically discussed online. Some intellectuals actively resist being complicit in the entrepreneurial discourse in their work and alternative discourses emerge. These discourses emerge by way of petitioning authorities. The lack of regulations regarding the predicament of evicted citizens; the absence of a program for the preservation of the cultural heritage of the city; an urgent remapping of the so-called “guarded zones” to accommodate the summits-related pressure to have enough vacant lots; and “a mess” (the metaphor of one of the interviewees) instead of systematic and logical administrative law-making—all these factors contribute to an increased “client-patron mentality” among active citizens. By “client-patron mentality” I mean the active citizens’ and political activists’ reliance on petitioning as the way for themselves to be heard and to get things done. Whether it is the only effective means to prompt the patrons to share a piece of the state budget pie or a quite efficient way to engage more public into discussions, petitioning prompts us to more closely look at the ambiguities behind genuine citizen participation.

TRUBINA, ELENA* (Ural Federal University, elena.trubina@gmail.com)
The Dialectic of Rationality and Irrationality of Urban Growth in Post-Socialist Urban Development and the “Classic” Capitalist One

It was during the 1970s that urban studies scholars began to analytically investigate the dialectic of rationality and irrationality related to urban growth. These pioneering analyses were a response to the early stage of the post-Fordist transition of Western economies and the emergence of post-industrial, knowledge-based economic development. Having admitted “the general irrationality of the present urban system” (1978: 329), Molotch described the American urban system of the second half of the twentieth century, in which cities retained relative autonomy from the central government. For his part, David Harvey called cities “the irrational rationalizers” within the capitalist mode of production (1976: 112) and demonstrated why “the capitalist laws of accumulation” remain, for the time being, the only known laws of history. While both scholars emphasize a renewal reconfiguration of urban alliances in order to cope with difficulties in financing the development of cities, Harvey, in his later work, described how neoliberal urban policies found a strong friend in the central state via neoliberalization of the state itself. Drawing on these path-breaking scholars, I argue that it is an irrational rationality which unites post-socialist urban development and the “classic” capitalist one. Today it is neoliberalism that figures as the global political rationality. It promotes market logic across all spheres of life. Part of this rationality is the expansion of state institutions. These act to broaden their administration into the practices of all societal spheres. Urban growth machines in Russia and elsewhere have embraced neoliberal policies and promoted global, market-led urban development. Since these processes have recently unfolded in the context of the global financial crisis, the growth machines often go away. Yet this does not impede authorities at any level from investing, symbolically and economically, in the new iconic projects—by continually putting forward the rhetoric of efficiency and growth.

Education and Future Well Being of Latin American Adolescents

Latin America has shown great progress in average education attainments during the past few decades. An increased participation of women in the education system occurred together with this education expansion. On average and in most countries, there are more girls attending school at all educational levels than boys. Women's participation in post secondary education is also higher than men's. In spite of this regional panorama favorable for women, there still are educational challenges to be confronted. This higher education level achieved by women is not being reflected later in their labor market insertion. Young women have a lower labor participation rate than men, higher unemployment levels, and a labor insertion in less protected sectors (with higher levels of informality, less productive, and with worse income trajectories). Although this paradox is probably associated with labor markets' historic discrimination factors, this paper seeks to identify elements from the education system that help to explain this fact. It concludes that although access barriers to the education system have been overcome by women, there is still a lot to be done in relation to the mechanisms that perpetuate the traditional socialization forms. That is, the process by which unequal and discriminatory gender stereotypes are still formed within the teaching-learning process, interfering with the prospects of equal labor opportunities. The paper also takes into account the gender differencess in the reasons for aborting school early and how that impacts the design of appropriate social policies.

Reconfiguring Outer Space Policy: Vulnerabilities and Responsibilities in Humanizing the Universe

Space exploration programs launched by emergent spacefaring countries such as China and India, together with private attempts to democratize space for the
masse (e.g., space tourism offered by Virgin Galactic) are growing quickly despite difficult economic times. These processes together with the increasing technological apparatus at the geostationary orbit are deemed as examples of the ‘humanization of the universe’ (Dickens and Ormrod, 2007). That is, the many ways humans may affect non-human cosmic bodies (e.g. potential environmental impacts of space exploration) Space and its exploration are subjects with contemporaneous resonances in popular culture, frontier capitalism, and the restructuring of superpower status in the coming century (Parker and Bell, 2009: 4). In this paper we aim at critically reflecting about some of the future consequences of space exploration by unpacking and extending the concept of planetary protection. This concept, located in space policy literature, is mainly confined to risks of biological contamination when transporting objects and people to outer space. We identify its primary limitations such as the damage caused to non-biological features and address some of its shortcomings through a multidisciplinary approach with a focus on sustainable development and cooperation. The paper suggests that there are a variety of important reasons for expanding the concept of planetary protection to include contemporary ethical approaches to the environment that will enable mitigation of possible future impacts.

**Self and Others in Transitions: How Moving from One(s)' Self to the Next Isn't Being Done Alone**

Up until the early 1990s, the Japanese post-war period was marked by the collapse of its bubble economy, putting an end to the easy growth and prosperity which had come to characterize the post-war context. As social and economic structures began to change, so did their articulation with culture - a process which participated in slowly redefining the role and the importance of said culture inside of contemporary Japan. Although questions pertaining to culture had most often concerned to the Japanese identity (in identity) in imagery (e.g. otaku) and policy makers and academicians now turned their eyes to Cool Japan, and its potentially profitable popular culture. Indeed, even though it became increasingly difficult for young adults to find regular employment and embrace to social scripts institutionalized before the 1990s, play seemed to be saving the day. To better understand the articulation of culture with both socio-economic structures and individuals’ life paths, I look at a particular set of leisure practices which characterize both contemporary forms of play in Japan (hikikomori) and its popular culture - practices identified as kosupure and which revolve around costume (e.g. ‘cosplay’). Following over two years of fieldwork in Tokyo, my research aims to better define how these cultural practices articulate participants’ identities and how they interact with other significant aspects of their daily lives. For some, play became a ‘career’ - both in the literal and subjective sense of the word. In this presentation, I aim to better define the role and the importance of leisure practices and culture in a social and economic context perceived by participants as uncertain, and in which value has become an increasing concern; be it for Japan’s economy, to better understand opportunities and constraints linked to access and participation in said practices, and for contemporary selfhood in general.

**THE DISCIPLINE OF CHOICE. How students ‘choose’ further education in French priority education zones**

Through an intensive, participative and longitudinal ethnographic fieldwork conducted during 6 years, this paper raises the issue of further education's choices of French highschool pupils in priority education zones (‘Zone d'Education Prioritaire’), in the northern outskirts from Paris. Studied pupils statistically concentrated in categories that associated to these teenagers - mainly separating the ‘good ones’ who are going to school and the ‘bad ones’ who are hanging around on street corners - does not only suffer from a very biased empirical material but also fail to explain the social, symbolic and economical significance of juvenile delinquent practices. The key separating outsiders from insiders on this particular topic is the way time is - or is not - taken into account. Outsiders do not consider delinquent activities within an historical and biographical process but as an illegal and immoral activity to be eradicated. On the opposite, listening to insiders allows us to understand that illegal activities have to be understood in relation to social trajectories and, hence, have to be considered as significant and inclusive moments rather than other aspirations to escape this system of being. Unveiling behind this issue is a wider reflection about the way the French society has structured the relationships between its ethnic and social minorities and ‘the majority’. Focusing on 3 cases allow to contemplate ‘dense’ ethnographical material which appears to be a potent sociological strategy to deconstruct engraved typifications. This paper is issued from my latest book “Des capuches et des hommes. Trajectoires de ‘jeunes de banlieue”, Paris, Buchet-Chastel, 2013.

**GLOBALIZATION AND HIGHER EDUCATION IN INDIA**

The globalization is a process which is now transforming every sphere of our social, cultural and political life both in the developing and developed countries. Transnational flow of the capital, commodities and people is an essential feature of the globalization. This creates homogenization of higher education although
in a very limited sense to enable the mobility of the potential population of the countries who opened their economy for global trade in last few decades. This requires the standardization of the education system in terms of content and quality of education throughout the world. In India, the system of higher education is highly fragmented and stratified and produces students of different qualities. A large number of students having different social background and different type of schooling up to secondary level also vary in their educational attainments as well as in their career graph. They usually fall short to the national and international standards. Only few institutions of higher learning have the capacity to produce the students who have potential to compete in the global job market. Thus, globalization poses a new challenge to make necessary structural and qualitative changes in the institutions of higher learning in order to cope with the changes taking place in the globalized economy of the country. The present paper analyses various dimensions of the intricate relationship between globalization and higher education in a developing society like India.

Exchange and Life Satisfaction: Intergenerational Reciprocations in East Asia

Exchange plays a key role in affecting level of well-being. This study aims to develop a fundamental typology of exchanges across generations. By focusing on exchange of finance and household services between adult children and their parents (and parents-in-law), four types of exchanges can be identified: balanced, crediting, debt, and self-reliance. We then investigate if different types of exchange affect life satisfaction and marital satisfaction. Empirical data are drawn from the East Asian Social Survey, which allows a comparative study of Japan, South Korea, Taiwan and China.

Land Grabbing in Taiwan: The Crisis of Food Security and Land Justice

Since the 1980s Taiwan had adopted liberalism economic policy and given up the principle of food self-sufficiency. The importance of agriculture had decreased and the land had been seen as valuable asset rather than the means of production. These changes together contribute an over-dependence on imported food in the local market and the loss of food sovereignty of the consumers and farmers. As a result, the food self-sufficiency rate has been extremely low in Taiwan (33%), far lower than China (95%), France (122%), the U.S. (128%), and even Japan (40%). In recent years, the implementation of neo-liberalism in agricultural policy has further worsened the practices of farming and the ways of land use in the rural areas. Since several local governments aim to promote rapid development in the high-tech industry, many farmers and rural residents have been forced to leave their farmland and assets. Over the past decade, Taiwan has consequently lost 4,000 hectares of farmland per year and totally lost 109,652 hectares in the last 30 years equated around 12% of farmland. In reality, the legalized land exploitation which in the name of scientific and industrial park and various developmental projects could be seen as a new form of land grabbing. In this paper, we present two case studies and explore how the recent land exploitation has changed the agricultural practices and social context in the rural areas and the long-term effect on the food security of the whole society. The two cases cover the events and outcomes which have happened in Dapu District of Miaoli County and Sanghsiliao of Changhua County, the former representing the form of anti-land-grabbing and the latter of as anti-water-grabbing one. Finally, we will attempt to discuss the impact of land grabbing on the food security and the possible citizenship aspires to food sovereignty.

Genetic Science in Identity Making: The Rediscovery of Taiwanese Origin and Ancestry

The global development of genetic science and technology has its various manifestations in different local political and cultural contexts. The government of Taiwan began to support the development of biotechnology by funding projects during the 1980s, when this country underwent dramatic transition from authoritarian rule to democracy, emergence of ethnic politics, and conflict of national identity. After the rule by martial law ended, scientific research on the origin and the genetic background of Taiwanese began to emerge in the 1990s. Taking for example the research findings and scientific discourse of the team led by Professor Marie Lin, M.D., widely known as “the mother of the research of Taiwanese blood,” my article aims to explore the particular process of co-production between genetic research and identity politics in Taiwan. Since the 1990s, she has devoted herself to unveiling the mystery of the origins of the ethnic groups in Taiwan by finding scientific evidences of blood attributes and genes. Based on the research findings of her team over the recent two decades, Lin argues that 1) 85 percent of Taiwanese have aboriginal genes; 2) the Han Taiwanese people (Hoklo and Hakka ethnic groups) are mainly the descendants of the Yue people from southern China; 3) a major part of blood attributes of the Han Taiwanese people is derived from plain aboriginal people and 4) aboriginal peoples in Taiwan have multiple origins. These arguments pose a radical challenge to the dominant Chinese nationalist ideology of the period of the authoritarian rule, which is still lingering on now. My article analyzes how the genetic research on Taiwanese origin and ancestry represented by Lin and her team’s has been shaped by social, political, and cultural factors in the context of democratization and ethnic identity. My analysis also shows clearly how science and politics are mutually constitutive.
of system developments level of individual, his life experience, emotional status, etc. The objective indicators (measures) include following main groups: natural, economic and social. Subjective ones are represented by life satisfaction, the feeling of happiness and depression, social support, personal competence, anxiety, stress, etc. This non-linear relation between the objective and subjective indicators allows to find a paradoxicalness of public consciousness and offers an original mechanisms to overcome the negative trend in QoL. All these aspects will be considered as Local-Globa! reflection.

TSAY, RUENYING* (Tunghai University, rtmsay@thu.edu.tw)

Regional Development and Social Inequality in the Age of Globalization: The Case of Taiwan

Modern societies all face a fast-developing and fast-changing global world. Recent development of tighter connection among Asian countries, especially with Chinese economy has brought significant impacts on the regional development and local life of these countries. It is expected that the emergence of the Pan Asian economy might have changed the class structure and social distributions in Taiwan. The paper proposes to study the changes of Taiwan’s social class as well as occupational structures during the last twenty years. Further analysis might show the extent of the restructuring of Taiwan’s occupational structure. In addition to occupational structure changes, this paper will also focus on the trend of economic development. To compete with other economies, Taiwan government has pursed a series of large-scale urban development and regional reorganization, during the years of fast globalization, which might have had an unbalanced development among regions and skyrocketed the housing price in urban areas and thus further exacerbates the income inequality. I will analyze both macro and micro data to test the hypotheses whether the regional development either in a national scale or within the national territory has affected the degree of social stratification in terms of social classes and the inequality of distribution.

Keywords: Class Structure, Social Inequality, Regional Development, Globalization

Inclusion Or Illusion: The Romance and Reality Of Integrating Students With Special Education Needs In Hong Kong

Integrating students with special education needs (SEN) into ordinary schools is a widespread movement towards "Education for All" in many developed countries. In principle, a shift from allowing students with disabilities to be educated in segregated special schools to providing them with opportunities to be educated in ordinary schools is justified on educational and normative grounds. Following the proclamation of the Salamanca Statement as advocated by the United Nations, the Hong Kong Government initiated a pilot project in 1997, and promoted a whole set of integrated education in full scale starting from 2004. Despite its goodwill on the part of the Government, many difficulties and problems have arisen along the moves towards greater inclusion in the Hong Kong education system. For example, the practices of integration education are under criticism as many students with SEN are not properly cared or taught, and some are even bullied by fellow students. Provision of sufficient resources and support to ordinary schools or teachers is another matter of grave concern. Teachers also face with problems in maintaining classroom discipline and ambivalence in meeting the competing demands of academic excellence on the one hand and equality and inclusion on the other. Inclusive education is one of the most controversial education policies in Hong Kong. The progress of inclusion will be examined in the dimensions of access (the extent to which students with SEN attending mainstream classes); acceptance (the extent to which all students are treated as full school members); participation (the extent to which all students contribute actively in school and achieve in terms of academic, social and emotional development). Values dilemmas and paradoxes resulted from the integrated education measures will be examined with a focus on accommodating diversity, quality, equity and fairness, as well as reducing or enhancing social inequality.

Silenced Controversies: The Professionalization of Psychiatry and the Biomedicalization of ADHD in Taiwan

ADHD (Attention Deficit/Hyperactivity Disorder), the most common mental disorder among children and adolescents in Taiwan, does not seem to be as controversial in terms of its entity, diagnosis and medical safety among local professional groups as it is in some Western countries such as the United States. This is not to say that Taiwanese psychiatrists uniformly embrace the biomedical model of ADHD. However, alternative paradigms and practices of psychiatry are excluded from the public sphere and discouraged by the National Health Insurance. Besides, the strategic alliance among psychiatrists, teachers and parents for dealing with various learning difficulties effectively justifies the medical framework of children's deviant behaviors. By analyzing the archives of the professionalization of Taiwanese psychiatry, and by conducting interviews with psychiatrists, relevant medical professionals, teachers, and the main parents organization, I unravel the interrelated processes of the development of the medical subspecialty, the publicization of health services and the medicalization of education, in order to elaborate that the biomedicalization of ADHD in Taiwan is not a necessary achievement of advancement in psychiatry, but a co-production with various social and political conditions. In particular, the "biomedical evidences" and "gearing to the international norms" constitute the driving rationality and emotion of the professionalization of Taiwanese psychiatry in a latecomer context; moreover, as a late-developing medical specialty, Taiwanese psychiatry lacks a sufficiently powerful legacy of the psycho-dynamic approach, which dominated Euro-American psychiatry before the 1980s and has thus far provided competition for the biomedical approach. Furthermore, Taiwanese child and adolescent psychiatrists are too few in number to encourage multi-paradigms. Therefore, although controversies and alternative practices concerning ADHD exist, they do not originate from the psychiatric in-group and thus find it difficult to shake the mainstream practices. Consequently, the biomedical discourses and treatment of ADHD have been stabilized and reproduced in Taiwanese psychiatry.

Digital Inclusion or Digital Exclusion? The Second Order Divide in Taiwan

The study of digital divide has shifted its focuses from unequal access to ICT's to the second digital divide that addresses the inequality resulting from the different way the ICT technologies are used. The current ICT usage is no longer a dichotomy because of its implication for social inclusion that ICTs play a critical role in all aspects of the new economy and information society. By including online activities in their measurement of digital exclusion, the studies of Oxford Internet Institute distinguished three levels of digital activities and found that individuals with specific disadvantages appear to be excluded from the digital activities that could help them most. This study, by employing secondary and longitudinal data of national Individual and Household Digital Divide Survey in Taiwan, aims at examining the barriers of second order digital divide and understanding the social implication of digital inequality in the information society. The results suggest that despite of the closing gaps of ICTs access across groups and declining usage gaps in basic internet activities (e.g. information searching, communication, entertainment), persistent or widening gaps are found across groups in intermediate and advanced internet activities, such as usages of online finance, e-government and civic engagement. These results imply that social inequality might accelerate in the information society for those well privileged groups take uneven advantages and benefits from effectively use of online activities in the social, economic, and political spheres, while lack of usage in needed digital resources will make groups that are already socially disadvantaged fall further behind. Without proper intervention, the wider array of ICT usages in information society becomes the potent tools to deepen social divisions.

Vavilicious Scandal: The Politics of Sexual Harassment in Post-Apartheid South African Trade Unions

Vavilicious Scandal: The politics of sexual harassment in post-apartheid South African trade unions

In July 2013 the General Secretary of the Congress of South African Trade Unions (CSA) (the largest trade union federation in South Africa), Zwelinzima Vavi was accused of rape and sexual harassment of a junior female colleague. While the rape allegations were later withdrawn by the accused, Vavi was subsequently suspended and investigations into the allegations of sexual harassment are being conducted by the federation. Much focus from the South African media is on Vavi's power struggles with COSATU and attempts by Vavi to capitalize on the scandal to remove him from his position. However, the significance of the incident for this paper is that it highlighted the patriarchal, unequal and hierarchical gender relations dominant in the South African trade union movement (Scott, 1986). Unions are organizations of power, which is often defined in masculine terms.

The incident also reminded us of the need to publicly acknowledge the importance of sexuality in organizations (Acker 1990:139), where women and men are perceived differently and assigned roles according to how they are perceived. The scandal has brought to the forefront the link between sexual harassment within the masculine organizational culture of the federation and its affiliated unions. The paper aims to discuss the politics of sexual harassment in the
post-apartheid South African unions, where women continue to be marginalized from leadership positions in spite of constituting almost half (48 per cent) of the union membership (COSATU 2011). The paper seeks to understand the significance of women’s composition in COSATU unions in terms of raising their voices and challenging dominant patriarchal practices. What is the significance of the increase in women’s membership in terms of their struggles to reconfigure the dominant masculine culture of trade unions?

Women Academics Under Crisis: A New Field for Reflexivity

Research data show that the present economic crisis has worsened women’s position in society. New categories of women become vulnerable to the impact of this crisis. To the traditional categories of vulnerable women (migrants, single-parent families, women victims of domestic violence, unemployed young women etc.) are now added women coming from middle and upper-middle class ladders of society (women entrepreneurs, women of high educational and employment credentials, women owners of big properties etc.). Women belonging to these new categories seem to be threatened by the risk of status degradation and the risk of impoverishment.

This paper focuses on the impact of crisis on women of high credentials. Such is the case of women academics that work in universities and research centers in Greece, a category of women of hitherto recognized social status and established high position in social hierarchy.

Our presentation is based on qualitative data coming out of the living experiences of women academics facing the impact of crisis in their professional and personal life. Initial results indicate the gravity of the present economic crisis as it expands also to include women holding highly privileged academic positions in the social hierarchy. Authority measures have not only diminished the income of academic women but also have enormously affected their living standards and worsened their working conditions. Moreover it is to be noted that the economic crisis seems to have brought into surface latent aspects of social crisis resulting from pre-existing social transformations which in turn also affect academic women’s lives.

Thus our attempt is to develop a reflexive account on the living experiences of women academics as well as to discuss the impact of the present economic crisis on processes of women’s downward social mobility.

TSIGANOU, JOANNA* (National Centre for Social Research - Greece, jtsiganou@ekke.gr)

Young People in Social Disadvantage: Opportunities and Threats in Local Environments

The arguments advanced in the proposed paper are based on the analysis of data concerning the means and ways of combating social exclusion of young people in social disadvantage at local communities by means of suitable educational and training programs.

In fact, in an era of globalization of economic and social relations, the employment structures may not be understandable on the basis either of the model of “technocratic advancement” nor of the model of “specialization”. If such is the case, there is an urgent need for the employment of other forms of “capital” in order to combat marginalization of those young people that suffer multiple social disadvantages. The question is how detached are modern societies from traditional forms of education, training and employment especially under conditions of austerity. Another issue for serious consideration is whether local environments possess new capacities for training and job opportunities for young people in social disadvantage. It is to be discussed also whether the local versus the global (i.e. in the sector of enterprises) may possess more opportunities than threats in combating unemployment and exclusion.

The Systemic Crisis of Greek Labor

Abstract

The current crisis in Greece has brought to the surface the employment security aspect of the Greek “labour system”. The employment relationship seems to be embedded upon a bifurcated system whereby labour is separated institutionally in a) a secured salaried public sector and b) a private sector defined by precarious labour conditions that are characterised by the technical separation of work from its social security (mainly pensions) relationship. The two systems have been coupled with separate health care systems developing separately (recent attempts to unify are in process). The paper explores this hidden reality by defining the organisation of the labour system in Greece, its politico-administrative controls that formulate a binary legal system (public/private) that does not allow for the emergence of the not-for-profit-law institutions.

The “social” reproduction of private labour is based upon the formally established private and “commercialised” interests that practice “trade” in basic needs (health, education). As a result, communities rely on the family, the Church, self-help and … out-migration. By focusing on this anachronistic and discriminatory system of political order for labour we may be able to unlock the reasons for the weakness of labour social economy organisations in Greece and the acute unemployment rates (the highest in the Eurozone). This approach will aid our understanding of the Greek crisis as a failure of Euro-Zone’s public policy.

Key words

Greek institutional crisis; labour fragmentation; Euro-Zone, social development

Octopus Man and Tiger Woman - Why the Chinese Are Bad for Australian Nationhood

Historically Australia has considered itself a white, Christian and British bastion in the South Pacific region. The main threat to this status was conceived of as coming from the east, particularly from the ‘hordes’ of Chinese who would sweep down and over run the nation. These discourses were prominent during the Gold Rush when Chinese men were constructed as a threat and represented as an octopus of evil. Immigration policies were instigated to stop the ‘yellow peril’. While the so-called White Australia Policy was formally rescinded in the 1970s those from Asian are still constructed as a threat.

Most recently it is Chinese students who are ‘taking over’ the most desirable graduate school positions. Because of their hard work and diligence they are excelling at entry exams and providing little incentive for mainstream Australian students to compete or be schooled in environments dominated by Asian students. Tiger mothers are represented as standing over their children, ensuring they work hard enough to achieve well. The work ethic associated with the Chinese is a form of racism. In contemporary discourses this is associated with rote learning for exams rather than independent thought.

In this paper historical depictions of Chinese men represented as an octopus ready to seduce Australian women, including through the provision of heroin, will be contrasted to depictions of Chinese women as Tiger mothers who stand behind their children ready to wield ‘tough love’ towards success. What does the promulgation of such representations in the media tell us about Australian nationhood and its reliance on gendered forms of racism for meaning?

Sakyadhita and the International Movement for Gender Equity in Buddhism

During the 1980s, the glaring discrepancies between opportunities for women and men in Buddhist institutions and societies caught the attention of a small group of women living in different countries and practicing in different Buddhist traditions. Communicating by post, they decided to gather to discuss what could be done to address these inequalities. In 1987, at the conclusion of this first gathering in Bodhgaya, India, an international association of Buddhist women called Sakyadhita was founded. Since then, Sakyadhita has received scant attention from the academic community, but the consequences for women in Buddhist societies have resounded around the world. For twenty-five years, Sakyadhita has organized a series of biennial conferences and issued numerous publications that have educated Buddhists in the new global ethic of gender justice. The path to gender equity in Buddhist communities and institutions has not always been smooth, however. Conscious or unconsciously, entrenched interest groups continue their efforts to maintain the imbalance of power that disenfranchises women.

This paper explores how a small grassroots movement to improve conditions for women and undereducated women, especially nuns, has grown into a global movement to challenge inequalities on a structural and institutional level, recounting landmarks in the history and development of Sakyadhita and the international Buddhist women’s movement from its inception until the present. In the first section, I describe the objectives of Sakyadhita and the key personalities who have helped propel the global movement for gender equity in Buddhist societies. Second, I explore the setbacks and obstacles that Buddhist women have faced over the years and continue to face in their struggle for gender justice today. Third, I trace the major achievements of the international Buddhist women’s movement precipitated and explore potential directions and strategies that Sakyadhita has mapped out for the future.
A Study on the Costs and Demand for Foreign Nurses/Care Workers in Japan – from the Angle of Hospitals and Care Facilities –

Many consider that the international migration of nurses and care workers is driven by economic factors. Wage and cost differentials should work as a ‘push factor’ in sending countries and a ‘pull’ factor in receiving countries, though rules and regulations may partly hinder it, Japan opened the gate for foreign nurses and care givers under the Economic Partnership Agreements for the first time in 2009. It was anticipated that application and entry would rise sharply because wage gaps with other Asian countries remained high and the rapid aging of Japan’s society badly needed more nurses and care workers. However, the actual entry of such personnel has been on a declining trend in recent years, despite government efforts for reducing entry barriers. This study has attempted to analyze the pull factor, i.e. the economic costs that accrued in the hospitals and care facilities based on a survey conducted. The analysis revealed no statistically significant correlation between the economic considerations and the willingness to hire nurse candidates, implying the existence of non-economic reasons for the reduced entry of such workers. For the care givers, economic considerations seem to have had some impact on the willingness of care facilities to receive additional foreign workers. It would be imperative for the government to address institutional impediments for the nurses and pay more attention to the economic incentives for the care facilities in order to increase the number of foreign nurses and care givers in Japan.

Organizing Immigrants in Rural Areas in Japan: Case Studies of the Tsunami-Devastated Areas

This study examines the process of organizing immigrant groups in rural areas in Tohoku, Japan, especially the 3.11 tsunami-devastated areas. In recent decades, Japan has witnessed the entrance of many more immigrants. Along with this influx of newcomers, their relationships with Japanese society and their social mobility have drawn attention. Although previous studies tend to focus on the cases of labor migration in urban areas or highly urbanized regions, few studies have been conducted with a focus on the immigrants in rural areas that lack a concentration of immigrant populations, such as the Tohoku region.

Many of immigrants in the Tohoku region are female immigrants as spouses of Japanese nationals, who are mostly dispersed throughout small towns and villages. They tended to be marginalized from their local society and given the limited understandings and supports from the local government.

The Great East Japan earthquake that devastated many areas of the Tohoku region seriously affected these immigrants as well as Japanese nationals. The disaster and its aftermath consequently led them to form groups to help support each other and to change their social surroundings. How did they attempt to grapple with the difficulties after the disaster? To what extent did their organizational efforts contribute to changing their relationships with the local society? With a focus on these questions, this study analyzes the process of organizing immigrants in the Tohoku region. The findings from my interviews with the actors and participatory observations suggest how they obtain resources inside and outside their community on the recovering process after the disaster, and the social issues they face to continue living in rural society. This study contributes to considering the possibilities and issues of “bottom-up” approach for immigrants to change their social surroundings in rural society in Japan.

Changes in Friendship Relations of Japanese Youth

This study aims at revealing the changes in friendship relations of Japanese youth in their everyday life, friendship relations are becoming more and more important.

According to a recent report, “In response to questioning about when they feel their life is fulfilling, the largest percentage of Japanese youth answered “When I am with friends or companions” (74.6%)”. This is also the largest percentage among the other five countries (South Korea: 58.1%, U.S.A.: 64.7%, U.K.: 45.1%, France: 68.2%), and that have basically increased from past years (1977-78: 50.1%, 1983: 59.2%, 1988: 62.0%, 1993: 70.8%, 1998: 74.0%, 2003: 72.5%, 2007: 74.6%). But in recent years, there are some interesting changes. The percentages giving “When I am by myself without being annoyed by anyone” (13.8% in 2003 to 19.8% in 2007) increased over the previous survey. (Naikaku-fu, 2009, “THE JAPANESE YOUTH :In Comparison with the Youth of the World, A Summary Report of the Eighth World Youth Survey, http://www8.cao.go.jp/youth/english/worldyouth-e/html/mokui-e.html).”

This is so complex situation that is difficult to be understood, and our recent research also shows the same situation.

In this study, there are two ways of approach. Firstly, I would like to review the hypotheses about the changes in friendship relations (e.g. the dilution hypothesis, the selective hypothesis and the homogenization hypothesis). Secondly, I would like to analyze the quantitative data, and reveal the present situation and the changes. The data was collected in Tokyo and Kobe in 2002 and 2012. Respondents were randomly sampled. Their age ranges from 16 to 29.

In conclusion, it is revealed that the number of friends are increased but the diversity of that is reduced. It suggests that the friendship relations of Japanese youth have been homogenized.

Healthy Aging and Concerns Among Japanese Elderly People

Background: Japan is facing an unprecedented aging society. In 2011, 23.3% of total population in Japan was elderly people 65 years old and older. One third of the population in Japan will be at least 65 years old in 2035. Healthy aging is a crucial key for public health and society in Japan. However, under budget limitation of social security, policies and frequent policy changes have posed a great uncertainty and concern on that elderly population. Given these circumstances, we conducted questionnaire surveys in 2010 to examine concerns in this age group. Method: In 2010, we sent questionnaires to university graduates 65 years old and older randomly selected from lists of graduates from 11 universities. The questionnaires were open-ended and asked them to write any concerns that they had about health care, health policy, health systems and their future. Results: We received 331 (Age 73.18±4.43) responses. Among those who responded, 84.9% (281 respondents) said that they had concerns. We conducted text analysis (PASW Text Analytics for Surveys 3.0.1) and extracted keywords from their Reponses. The keywords that were extracted frequently were; Doctor, Hospitals, Health care, Japanese Government Policies, Expensive, Health care cost, Medical expenditure, Social insurance, Medical care, Doctor scarcity, Prevention, Health insurance system for those 65 years and older, Quality of care, Long term care and others. Discussion: In this study, many elderly people in Japan have concerned about health care expenditure, health care systems and health policies. This may be caused by frequent policy changes and uncertainties due to frequent administration changes such as uncleness of a raise of out of pocket payment rate from 10% to 20% for elderly people under budget constraint in Japan. Correct policy-making and determination are necessary for healthy aging by removing concerns from this vulnerable population in Japan.
Examining the Chain Relationship from Initial Contact to Classical Music to Socio-Economic Status Via Music Preference

This paper examines the effect of the initial contact to classical music on the music preference, and the effect of the music preference on the socio-economic status, in Japan. Especially, as in Bourdieu's reproduction theory, whether people's "orthodox" music preference from family affects their income is examined. A questionnaire was handed to 2,000 audiences of Saito Kinen Festival in 2012. 594 audiences answered. The questionnaire included the questions of initial contact to classical music, preferences to 20 composers, and household income. By latent class analysis of the initial contact (five types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences. By latent class analysis of the composer preferences, five types were found: (a) shallow listeners, who do not know many composers, (b) orthodox maestro devotees with hardheaded devotees, who love orthodox maestros but dislike contemporary composers, (d) overarching lovers, and (e) contemporary music lovers. Crossing the types of initial contact and the types of music preference, the following was found.

1. Those with vague initial music experience tend to be shallow listeners.
2. Those who are affected by family do not have a particular preference.  
3. Those who had eye-opening experience are not shallow listeners.
4. Those who received various effects are not shallow listeners, not hardheaded, but overarching lovers.

OLS of the equivalent household income reveals the following. Those whose preferences were affected by family tend to have higher income than those with eye-opening experience. The orthodox maestro devotees have higher income than those with vague preference or hardheaded. However, as seen above, there is not an effect of family on orthodox preference. Therefore, we should conclude that there is no clear evidence for the chain relationship in Japan.

Food Aesthetics and the Unintended Construction of Civility in Peru

Peruvian food had always had important elements that connected it to national identity. However, in the last 10 years, food has acquired new meanings that pertained to a strong sense of national pride, and new understandings of what it means to be Peruvian, which are reflected particularly in media and politics. In Peru's biggest city, Lima (where 35% of its population lives), culture and cuisine reflect the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony. In this paper I argue that, in great part, the "aesthetization" of food in Peru—a focus on aesthetics rather than just on flavor—was pivotal to the transformation of its social meanings during the mid-2000s. In the early 2000s, chefs and tourism operators considered this process of "aesthetization" essential for the promotion of Peruvian food and, consequently, for the promotion of tourism and the increase of economic revenue to Peru. An unintended consequence of the success of this process was that the newly named "novo Andean" cuisine became a central element of an invigorated Peru-An.
Rebuild a Trust Relationship Between Doctors and Patients--Informal Exchange in Chinese Health Sector

Trust lies at the heart of effective patient-doctor relationship. Chinese health sector is facing a trust crisis between patients and doctors as shown in the rising numbers of conflicts and denunciations. In seeking an accountable health care, patients widely employ informal exchange by giving gifts and red-packets to doctors, seeking connections and acquaintance relationship (guanxi) to get health care. The gift exchange and guanxi network involve the cultivation of emotion (renqing, ganging, the emotional feelings of indebtedness and obligation), through which a trustworthy relationship is emergent and negotiated. However, in the changing moral context of China today, trust is very fragile amidst the inherent uncertainties of medical care. The individual efforts of gift-exchange and guanxi networking sometimes could not secure a trustworthy relationship, and patients frequently become the targets of defrauding, extortion and abuse of power. The paper, setting the context in the post-socialist China, shows how people are rising uncertainty in daily life and to secure a trustworthy doctor-patient relationship. It is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more work to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

Gendered 'living Like The Other' In Turkey

Some tourists, those who decide to stay a longer while than other tourists in a place they like, might 'fetishise the idea of 'living like the locals' (Davidson 2005: 46). One of the ways Davidson suggests they might do this is through 'integrating themselves within and among local, indigenous communities, learning from them forms of experience and knowledge rejected and repressed by the West' (2005:51). Some might even enunciate their sense of belonging by becoming tourism entrepreneurs and playing the role of host to tourist guests. Related to this, Soares (1998) talks about globalization as increasing the opportunities for copying which may be related to a desire to perform one's own fantasies about the 'other'. Soares adds that, therefore, 'mimicry can be a weapon against the political reification of identities' because the experience of circulating, shifting, and changing to the forefront of social and cultural life' (1998: 295). Such mimicry is willed with paradox and contradiction, however, because it is never possible to fully become the other. This paper considers the gendered dimensions of such tourist attempts at 'living like the other', at belonging and at becoming 'other'. Drawing on my long-term ethnographic study of tourism relationships in Göreme, Turkey, the paper discusses the different ways in which foreign (yabanci) women and men experience and negotiate their attempts at 'living like the locals'. The discussion will focus on the variable paradoxes and contradictions which foreign women and men face when attempting to live in Göreme for an extended period, as well as on how the paradox of it never being possible to fully become the other is different for each.

The Triple Role of Social Media: A Case Study

The Arab Spring's 'Facebook dimension' has already received unprecedented attention. New technology was presented as an instrument used by protesters to build extensive networks, create social capital, organize political action locally and nationally, and put in place transnational links. A debate ensued between the views of 'cyber-enthusiasts' and those of 'cyber-skeptics' (or 'digital evangelists' and 'techno-realists'). A common element, however, is that very little of this research investigates the variables into its analysis. Moreover try to counter the video a rather fragmented picture of this complex phenomenon, with many scholars focusing on relatively narrow social media-related sub-fields. The present paper tries to overcome this division. Its goal is twofold. First, it argues that the full understanding of the impact of social media on Arab Spring regime change processes is possible only through the analysis of the key role played by this media at three interrelated levels that, until now, seldom have been studied together: as a tactical tool of mobilization, communication, and coordination; as an instrument of domestic and international revolutionary contagion; and, critically, as a means of enhancing pan-Arab consciousness which, in turn, was fertile soil for that contagion. The paper's second goal is to strongly anchor the analysis of social media in the political - and, more specifically, revolutionary - dimension of the Arab Spring. Social media may have been highly influential from many points of view. Still, one should not forget that the Middle Eastern process it influenced was fundamentally a revolutionary wave. As such, the role of social media needs to be addressed within the analytical framework of revolutionary contagion, which until now rarely has been done explicitly.

TUMA, RENÉ* (Technical University Berlin, rene.tuma@tu-berlin.de)

Comparing Different Styles of (Vernacular) Video Analysis

The paper presents the outcomes of a project that focuses on activities of interpretation of video recordings. The interpretation/analysis of visual data is not only performed within sociology but in a growing number of professional fields and everyday situations ("Vernacular video analysis" [1]). My presentation draws on a focused ethnographic study of interpretation practices. I have done ethnographic fieldwork in three fields and recorded practitioners at their interpretation work. The three fields each highlight different aspects of interpretation work.

1) Police Work

The identification of actors and their ("criminal") actions is the police officials' main concern, in
2) Football Training

the aspect of instruction is most important and in
3) Market Research

the interpretation of eye tracking video is distributed and organized via means of information technology.

By itself reflexively applying Videography [2] on the practices of video analysis I am able not only to study those three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography that allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

Gender and Socialization of Knowledge

The purpose of this paper is geared towards analyzing how gender is an indicator that impacts scientific production in the administrative sciences perpetuating the differences between genders which affect the science. Particularly, significant differences that exist in the scientific visibility of men and women in Latin America are observed, as mentioned in the Latin American Quotes in Social Sciences and Humanities website (close based on its Spanish initials) and the Network of Scientific Magazines of Latina America, the Caribbean, Spain and Portugal (redalys based on its Spanish initials) for year 2012. The analysis is made as evidence that in scientific research, as in any other human activity, there is a gender related division in work, which should be considered in the science and technology agenda at all levels of government.

TURHAN, OZDEN* (Université Bordeaux Segalen, turhan.ozden@gmail.com)

Sociological Approach on the ART of Using Drugs By Patients Suffering of Oncological and Psychiatric Diseases

This study aims to analyze the strategies and tactics used by patients suffering of oncological and psychiatric diseases on the scale of social classes. This study would help to analyze and discuss the most comprehensive questions about the subject at hand.

• Which are the factors that determine the choice of the patient when he takes a medicine?
Which are the motivations that characterize the behavior of the patients when they take a medicine? How do the norms established by the public health instances influence the perception of the patients when they take a medicine? Basing my assumptions on how the patients take the medicine, I will investigate how the way of taking medicine is influenced by their belonging to a specific social class and which are the cultural factors that determine the way they take their medicine? Pretti-Wettel and Moatti[1] uphold that the patient is not only the subject of his illness but the assumption of social role with his illness also shapes it and taking it and by taking part in his healing process. In that context I will investigate the factors which determine the way the patients take their drugs taking into consideration the influence of the media on them, their belonging to a social class, their dwelling environment, their gender, their profession, their education—back ground between them and their physician. With this study I hope to be able to assert that there is a similarity in the tactics of taking medicine by patients belonging to different socio-economic and cultural classes and that the practices of public health in Turkey play a unifying role between the various social classes in question.

Post-Westphalian America: Religious Conservatism and American Exceptionalism

In the sociology of globalization there has been much talk of porous borders, the effects of the international flow of labour, legal pluralism, the fragmentation of civil society by multiculturalism, and the decline of state sovereignty. America however appears as ever to be an exception to this trend. After 9/11 and the Patriot Act, there has been considerable emphasis on the securitization of society as a whole. The focus of national security is echoed in the agenda of the Republican Party which has opposed the naturalization of illegal migrants, supported a hawkish foreign policy, warned against the dangers of creeping Sharia, and rejected cuts to the Pentagon budget. Despite its ideological opposition to big government, the Tea Party has driven the GOP further to the right over national security and defence expenditure. While the rightward drift of Republican Christians is consistent with traditional millenarianism and Christian Zionism in America, it is reinforced by fears of American decline. Confronted by economic weakness foreign policy now faces a dilemma: isolationism versus confrontation. The foreign policy of Chris-
industry and the civil society have intermingled giving rise to many theoretical interpretations that underline the professed radical change of universities and sciences. Of these theories, the current article focuses on the triple-helix of university-industry-government relations. The model claims that intensified interaction between university, industry and government has given rise to a new kind of research, which not only seeks to advance knowledge but also tries to attain commercially viable products. As a normative policy model, triple helix might be transporting into analysis certain understanding of the developmental role of scientific research. The present paper summarizes the major viewpoints of this theory and reflects on the commentary given to it. To better understand the various virtues of the model, it also analyses the model's distinct theoretical status and claims that it is ambiguous, as it combines three types of sociological theory, i.e., diagnosis of an era, general sociological theory and research theory. After assessing the status of triple helix, the paper contributes to the discussion about the model by probing different theoretical avenues that research associated with the concept might proceed. Of central importance here is systems theory by Niklas Luhmann, as major protagonists of triple helix have frequently used his ideas in discussing the model. The current paper draws concepts from Luhmann's theory to specify ways in which empirical research associated with triple helix could be made more responsive to the multi-functional and internally contradictory character of the contemporary research university.

Dress and the Embodiment of Age in Everyday Life

Clothes lie on the interface between the body and its social presentation. Getting dressed is an everyday body practice, one of the ways in which bodies are made social, given identity and meaning. When we get dressed, however, we do so within the bounds of a culture and its norms; and these include ones in relation to age – as they do gender also. The presentation which draws on an ESRC project published as Fashion and Age: Dress, the Body and Later Life, Bloomsbury, explores the role of dress in the day to day performance of aged - and gendered - identities.

New Approaches to Inequality Patterns in Education Science and Childhood Sociology

New approaches to inequality patterns in education science and childhood sociology

From a perspective that considers children as social agents we analyze how socialization- and learning environments are designed, processed and have an influence on children's self-orientation and autonomous learning. By using an interdisciplinary approach that combines sociological and pedagogical theories different dimensions of the 'self' are put into the center of attention. Thereby we aspire to gain new insights into causes of inequalities.

This article uses data provided by the (longitudinal) study "SEBI – Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environments of Primary School Children". First quantitative results of the ongoing study assessed the importance of parenting for children's self-confidence in primary school. A perceived parental interest in the own personality – associated with parental interest in the child's specific hobbies, activities and interests – can be seen as central for the academic self-concept. However, a perceived parental emphasis on efforts for the child's academic success does not have such a significant effect. Further, these findings could not be related to social class or ethnicity, which makes a difference to common findings of the majority of socialization studies. Thus, this study contributes to an extended view on inequalities in education by focusing on different socialization practices in families and institutions and how these interrelate to the child's academic self-concept and performance. The perspective gained by these findings can be supplemented by qualitative interviews concerning aspirations, parental practices and children's perspectives on school and family life with parents and children across various social backgrounds.

Based on this multi-method way of proceeding we aim to identify different patterns of inequality in socialization related to the self as a central variable. In how far this is a track worth following will be shown by presenting relevant data.

Consolidation of Russia and Characteristics of Russians' Identities

Under conditions of globalization the national identity takes on special significance. Globalization creates unprecedented opportunities for the cultural convergence, expansion of the communicative space, lifestyle enrichment. However it causes many challenges and destructive tendencies, including a trend which is the identity crisis. Problems of transformation of Russian identity assume ever greater importance. They mediate the future of the country, its ability to face the challenges of modern world as well as to carry out cultural, economic, social and political modernization. The images which will dominate in mass consciousness will affect the prospects for civil society in Russia, the functioning of political institutions, the social climate of the society. At the same time the Russians' perception of themselves, of their own place in the world and of the others affects the formation of political, social and cultural orientation, which mediates the mass sense of place and role of Russia in the modern world, people's attitude to the Western countries, institutions and values.

Internet-Facilitated Social Activism in Taiwan: Modes and Constraints

On 3th Aug 2013, a group of 39 anonymous ‘heziens’ mobilised, largely via the internet, to call for a crowd of estimated 250,000 people in front of Taiwan’s President Office to mourn for the man-made death of a military corporal, Mr Hung Chung-Chiu, and to protest against how the government responded to the case. The pressure forced the government to concede, agreeing to abolishing the distrust military judicial system during peace time. The 803 protest marked a new mode of the internet-facilitated social activism in Taiwan. Its sudden surge and the much-acclaimed ‘success’ drove many veter-
an social activists and oppositional politicians into self-questioning why they had failed to stage a rally at a comparable scale in recent years—even with the help of internet. The question calls for a comparative analysis of this incident and other internet-facilitated social movements.

Drawing from literature review, interviews and some participant observations, this paper surveyed the existing practices of internet-facilitated social movement in Taiwan—a young democracy known for its strength in computing and communication technologies. Four ideal-typical categories are identified and discussed: (1) online activism of conventional advocacy/concern groups, (2) communication platform for mobilization and public deliberation of social political empowerment, (3) issue-specific protest initiated in a decentralized, less consolidated fashion among concerned 'netizens' and (4) various 'open access' projects initiated within an IT-savvy community (e.g. the 'g0v: zero time government project).

A model will be theorized from the comparative analysis to account for the varying socialization dynamics among actors: emotional component, cognitive entry barrier and technological entry barrier. At last, a normative ethic on managing the scale of activism will be developed with the 'public attention' considered as a scarce public resource. The various modes of internet-facilitated activism will be critically evaluated with the ethics in mind.

*A Comparative Study on the Inter-Professional Collaboration Among Actors Involved in Active Ageing Programmes: Lessons from Denmark and Taiwan*

This research aims to investigate the inter-professional collaboration among actors involved in the collective actions of Active Ageing campaigns, from NPOs to the state, the media, political parties, and commercial companies. It asks how do actors interact with each other and to what extent can inequality be eliminated? Denmark and Taiwan, with their differences in welfare regime, population ageing policies, development of democracy and union movement, can be good cases to be compared. With the theoretical framework developed by Nahapiet and Ghoshal (1998), this study examines the relational dimension of inter-organizational social capital. Strikingly, three patterns of perceived relational social capital can be concluded in both the Danish and Taiwanese organizational fields, and each has its implication of obstacles to collaborate.

In Pattern 1 where actors continuously measure who needs whom and for what, an unequal power relation can be noticed. Actors at a more disadvantageous position are more vulnerable to collaboration availability and they identify with their partners in exchange of their trust. Moreover, when a collaboration project is accepted, actors' identification of being in the same community is formed. However, with numerous back-and-forth circumambulations, actors keep asking if they should trust their partners. This is the Pattern 2 in this study and its kinetics can be categorized as follows: a) toward mutual trust because of complacency; b) type of identification; c) toward distrust with problems of obligations and expectations as the crucial reason; c) toward distrust with perfection in norms as the basic problem. Last but not least, Pattern 3, which features in harmony and stabilization, differentiates itself from other two patterns by harmonized conflict of interests among actors and a shared enemy—which features in harmony and stabilization, differentiates itself from other two patterns by harmonized conflict of interests among actors and a shared enemy, which features in harmony and stabilization.

*It's Time to Change: How Does Kid-Focused Business Survive and Benefit from Population Ageing?*

Ageing is a dynamic process involving responses at both individual and societal levels. Theoretically, the existence of an organization is a consequence of temporal societal demands. This study asks why and how kids-focused business can survive and benefit from ours ageing society. Particular emphasis is on the strategy in terms of legitimacy and organizational social capital. Japan and Taiwan, as two countries that share similar cultural characteristics, can be good cases to study this issue. Various methods, such as in-depth interviews and content analysis of publications and government statistics, are applied to identify the underlying governance structures.

Social innovation across institutional boundaries can be recognized. Charities for the elderly and cram schools both recruit senior volunteers to teach children after school hours. Institutional re-design can also facilitate social innovation. Examples include kindergarten and nursing homes to be set in the same building, and public school campus turning into tourism resort. Vague vision is another strategy for actors to find legitimacy and incorporate as many projects as possible. Moreover, institutional reframing based on institutional reproduction but with actors' minor modification due to institutional leaks and personal interests, can create alternatives for those whose jurisdiction is territorially defined. A good example is public schools in the cities with students changing their household registration from the countryside but in reality commute everyday.

To sum up, actors' agency and conditioning of institutions can both pave the way for kid-focused business. The concept of New Institutionalism can explain actions within a given institutional environment while the notions of organizational theory are powerful tools to help understand why Active Ageing campaigns are widely utilized. This study ends with suggestions for re-thinking the meaning of Active Ageing campaigns and if the elderly are hence empowered or exploited.

*Women's Responsibilities, Freedoms, and Pleasures: An Analysis of Italian, Finnish and Swedish Women's Magazines’ Alcohol-Related Advertisements from the 1960s to the 2000s*

Since the 1960s, feminist movements have emphasized that men and women should be seen as equal in their roles as parents, breadwinners, and citizens. This conception is not confirmed by the images produced by advertising. The article presents an analysis of alcohol-related advertisements published in Finnish, Italian and Swedish women's magazines from the 1960s to the 2000s. The advertise-ments are approached as representations of gendered performances in which gender is made visible "here and now" by placing women in particular subject positions (identities, gender roles) that are related to private or public spheres and associated with specific kinds of gender expectations and norms reflecting women's shifting responsibilities, freedoms, and pleasures. The article asks what kind of drinking-related subject positions have been portrayed as desirable in women's magazine advertisements over the past few decades and how those positions have changed as we move closer to the present day. The analysis reveals both continuity and variability in alcohol-related subject positions in Finnish, Italian and Swedish women's magazine advertisements. It shows how women's responsibilities, freedoms, and pleasures have expanded from the traditional domain of the private home to multiple new areas as Finland, Italy and Sweden have developed from modern societies to late-modern societies. However, the expansion of women's identities has occurred differently in each geographical area. Furthermore, the analysis shows that the expansion of women's identities does not mean that the traditional gender norms have disintegrated and been replaced by equal gen-

*How to Include Material Elements in the Analysis of Life Stories? Applying Actor-Network Theory to the Analysis of Autobiographical Narratives on Alcohol Dependence*

Often the aim in the analysis of life stories is to identify cultural meaning structures that tell about the values and norms that regulate people's life choices and do their part in the reproduction of cultural meaning structures. This study approaches alcoholic dependence as an action and the alcohol action can be described in life stories from its material and bodily mediations and overemphasize the importance of psycho-social and cultural factors in action. By applying actor network-theory (ANT) to the analysis of autobiographical narratives on alcohol dependence, the paper shows how the methods that focus on the identification of cultural meaning structures have a tendency to detach action from its material and bodily mediations and overemphasize the importance of psycho-social and cultural factors in action. ANT action is understood as an effect of network where both human and material elements can act. ANT offers tools to grasp how alcohol dependence, for example, is produced and mediated by a network of material, bodily, psychological, social, conceptual and cultural entities that transforms the action in an unforeseen way.

The paper uses empirical examples from the life stories on alcohol dependence to discuss the inter-institutional entities of public policy spaces, material resources and bodily reactions, may trigger a dependency to alcohol, stabilize it, prevent it or abolish it as part of networks that connects human and non-human material elements. It proposes that as we follow the mediations of action and their conglomerations in many surprising sets of agencies, we should focus on situations/events and their concrete processes. That is, cultural meaning structures, like narrative functions or categories should be considered as mediators among other mediators, acting as part of complex actor networks that include also material elements.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
nder norms. Rather, it seems that traditional gender norms continue to be reproduced in alcohol-related advertising.

UAUNG, SHIAW-TSYR* (Minghsin Univ Science & Technology, uang@must.edu.tw)

Changing Consuming Behaviors By Designing Eco-Efficient Green Products

People continue to create and consume more innovative technology products in order to make life more convenience and comfortable than the past. However, huge industrial processes bring significant changes in the Earth. Natural resources are getting to dry up; ozonosphere has been destroyed; environment has been contaminated and so on. These environmental changes cause serious threats to the survival of the Earth's species.

Therefore, in recent years, environmental awareness began to be respected, and researchers explore green issues hoping to make living things can be survival sustainable. Many countries have implemented environmental protection laws to reduce the environmental impacts of industrialized society. For instance, WEEE (Waste Electrical and Electronic Equipment Directive), RoHS (Restriction of Hazardous Substances Directive) and EuP (Energy Using Product) organizations under the auspices of the European Union try to limit the environmental pollution caused by products. Laws and regulations seem to be a “pushing” force on changing consuming behaviors.

On the contrary, this research examines the possibility of a “pulling” force on changing consuming behaviors by designing eco-efficient green products. The present study attempts to integrate 39 engineering parameters of TRIZ (Theory of Inventive Problem Solving, developed by Genrich Altshuller) with 7 eco-efficient elements (Reduce material intensity; Energy intensity minimized; Dispersion of toxic substances is reduced; Undertake recycling; Capitalize on use of renewable resources; Extend product durability; Service intensity is increased. REDUCES, in short) proposed by WBCSD (World Business Council for Sustainable Development) to construct a green product design matrix, and use patents to verify the validity of this innovative green product design process. The green product design process of this research may allow designers to generate green products by improving eco-efficient elements as well as resolving conflict design issues. Hopefully, eco-efficient products may attract consumers’ attention and thus unconsciously change consuming behavior, and approach sustainable goals.

UDA, KAZUKO* (Senshu university, kazuko_u@mse.biglobe.ne.jp)

Industrial Food Pollution: A New Perspective on Food Safety Risks Beyond the Current Legal Definition

This study proposes a new perspective on food safety risks, with reference to the 1968 Kanemi rice bran oil poisoning in Japan. This poisoning was brought on by Polychlorinated Biphenyls and dioxins, which are hormone-disrupting chemicals. As a result, the victims had chronic illnesses and passed on the poisoning to their children. Despite the victims’ ongoing need for compensation and relief, no adequate policies as yet exist.

Similar to the Kanemi case, East Asian society has experienced many other food contamination, e.g. the 1955 Morinaga arsenic milk poisoning in Japan, the 1979 Taiwan rice bran oil disease, and the contamination of food with melamine in China and Korea in the 2000s. These cases show that salient issues regarding food in East Asia have changed from security to safety. Furthermore, they indicate that this study can be applied to other contamination cases.

In contrast to neglected those cases, environmental pollution incidents such as Minamata disease - caused by the methylmercury contamination of Minamata Bay in the 1950s - were officially recognized as ‘public nuisance’. The victims of them therefore received public compensation in accordance with the law. However, the government denies that serious food poisonings are ‘public nuisance’, leaving victims without compensation.

From the sociological perspective, the social damage structure of the Kanemi was not similar to typical cases of food poisoning. Rather, with regard to the victims’ possibility of recovery, the negative effects on daily life and community, and the cause of the contamination, it was similar to ‘public nuisance’.

In conclusion, I propose a new perspective of ‘Industrial Food Pollution’, beyond the Japanese legal definition of ‘Food poisoning’ and ‘Environmental pollution as public nuisance’. Based on this perspective, I recommend the establishment of ‘Relief Fund for Industrial Food Pollution’, which institutionalize compensation systems for victims.

UDAGAWA, YOSHIE* (Claremont Graduate University, yoshieuudagawa@yahoo.co.jp)
Rights and Responsibility - Investigation of theEmergence ofEntitled Children and the Amendment of Juvenile Law in Japanfrom the 1990s into the Next Century

In Japan during the 1990s, concepts of childhood changed, both within the domestic and international contexts. The emerging notions of self-determination, freedom, and responsibility, being debated on several fronts, were applied to children. The institutionalization of these notions extended into the functionality of juvenile law. The questions to be raised are: Is the child considered as an object in need of protection and guidance? Should the child be viewed, similar to the adult, as an independent being who has an innate ability for self-determination? How has Japanese society perceived the child? These questions form the core for investigating social, political, and legal transitions within Japanese culture in regards to its entitled children who newly emerged in the 1990s and started emphasizing their rights as they thought were rightfully theirs. In this research, entitled children are defined as those who consider themselves as an independent adult holding the rights concerning the choice of their actions. This research aims at reconsidering and reconstructing Japanese society during this time concerning the topic of entitled children and their degree of self-determination as conceptually developed by their observers, such as educators, psychologists, sociologists, legal professionals, and others. This research also enables the production of interdisciplinary discussions between areas of law, sociology, cultural studies, media studies, and qualitative fieldwork. Investigating the developed observations of multiple disciplines is beneficial for formulating a broader context in order to analyze and comprehend the topic (235 words).

UENO, CHIZUKO* (University of Tokyo, c.i.ueno@i.u-tokyo.ac.jp)
The Coming of the New Class Society: Gender Matters

Back in the 1960s, Daniel Bell predicted the coming of the new class society based on the knowledge and information capitalism. Assuming that gender would not matter in the knowledge society, women expected that this society would change in a more gender-equal direction. In reality social change has promoted neo-liberal reforms that have resulted in a widening class gap and decreased social mobility, wherein gender matters a great deal. Women are cast into the labor market in the name of the “equal opportunity,” which handicaps by virtue of their care burden. In addition, the rapidly ageing society added further burdens to the care-takers, mainly women. The result was extremely low fertility. Most OECD countries try to solve issues of care through public policy or markets, both of which depend heavily on migrant labor. In the absence of this solution, in Japan gender serves as the functional equivalent along with race and ethnicity. This explains why the women’s status in Japan as measured by the Gender Equity Index or Gender Gap Index is relatively as its ranking in the Gender Development Index and the Gender Inequality Index.

The recent disaster of the Fukushima nuclear power plant following the giant tsunami has sent out a warning that we must change our over-competitive society that places such a high value on wealth and growth. Nevertheless, the Japanese nation does not want to learn the lesson of history, despite paying an enormous price. I will argue that there is much to be learnt, both positive and negative, from the Japanese experience.

Facebook Activism By Foreign Domestic Workers in Singapore

Studies of foreign domestic workers are now numerous in the social science literature, with much attention paid to left behind families. Since new research is required to contemplate the latest change, this paper uses authentic accounts related to the current explosive growth of social networking by live-in domestic workers in Southeast Asia. Evidence was gathered through 54,000 posts on a Facebook group, most from Filipina domestic workers in Singapore. Interviews were held with Facebook group members, including a founder of the NGO responsible for starting the social network group. Findings confirm that internet technologies are integral in the lives of foreign domestic workers, enhancing their social interactions and mobilizing their self-expression. There is evidence that Facebook reduces psychological and physical costs for live-in workers, making it relatively easy for them to participate in activist social networking. Evidence suggests that, in addition to providing entertainment for foreign workers, Facebook motivates an increasing number of distantly scattered individual workers to engage in social activism.

The Coming of the New Class Society: Gender Matters

Back in the 1960s, Daniel Bell predicted the coming of the new class society based on the knowledge and information capitalism. Assuming that gender would not matter in the knowledge society, women expected that this society would change in a more gender-equal direction. In reality social change has promoted neo-liberal reforms that have resulted in a widening class gap and decreased social mobility, wherein gender matters a great deal. Women are cast into the labor market in the name of the “equal opportunity,” which handicaps by virtue of their care burden. In addition, the rapidly ageing society added further burdens to the care-takers, mainly women. The result was extremely low fertility. Most OECD countries try to solve issues of care through public policy or markets, both of which depend heavily on migrant labor. In the absence of this solution, in Japan gender serves as the functional equivalent along with race and ethnicity. This explains why the women’s status in Japan as measured by the Gender Equity Index or Gender Gap Index is relatively as its ranking in the Gender Development Index and the Gender Inequality Index.

The recent disaster of the Fukushima nuclear power plant following the giant tsunami has sent out a warning that we must change our over-competitive society that places such a high value on wealth and growth. Nevertheless, the Japanese nation does not want to learn the lesson of history, despite paying an enormous price. I will argue that there is much to be learnt, both positive and negative, from the Japanese experience.

dents in the southeastern US, we show that straight students claimed their moral worth by emphasizing their deliberate decisions to develop and sustain friendships with GLB people and by highlighting how the friendships led them to personal enlightenment and political actions. GLB students, as a stigmatized group, also claimed moral worth by emphasizing their ability to cross the community boundary and be accepted in the larger society. Organizational and life course contexts strongly shaped students’ strategies to construct moral identity as these contexts specified constraints and resources available in their friendships.

Socio-Economic Background/Women Empowerment and Maternal Health in Cross River State, Nigeria: Using Data from the NdHs 2008

Gender equality and women’s empowerment are important indicators in development strategies that focus on poverty reduction and improved maternal health. Despite the overall wellbeing of women and the nation, research in this area is neglected. Besides the condition of women in relation to women empowerment, indicators have remained poor. The study used data from the latest national Demographic and Health Survey (nDHS, 2008) to examine the socio-economic condition of women in relation to their level of empowerment and as a correlate to maternal health outcome in Cross River State. The study utilized data of a representative sample of 735 women of age 15-49. A majority of respondents reported Poor/low socio-economic status ranging from low educational status, unskilled occupation, low income per month, seasonal employment etc and this affected the level of empowerment in all the indicators. These women’s participation in household decision making, their attitude towards wife beating and their attitude towards a wife’s right to refuse sexual intercourse with her husband or partner. This condition is manifested in high maternal morbidity, mortality, inability to determine number of children, spacing and antenatal care options available to them. This is in line with the prevalent scenario in the entire country. There is therefore an urgent need for improving and enhancing women socio-economic condition as it will improve their level of empowerment and will bring about better maternal health status.

Colonialism, Land Use Planning, and Indigenous Rights: Using Institutional Ethnography to Understand the Colonial Rationalities of Planning in 21st Century Chile

This paper shares some initial findings of a theoretical and methodological exploration, in which I use institutional ethnography (IE) to examine the role played by planning in the dispossession of Indigenous peoples in Chile. Over the past fifteen years, the planning literature started to recognize the complicity of the discipline with colonial domination and imperial aspirations of territorial expansion, in particular how land use planning has been one of the main mechanisms used by European settlers to appropriate Indigenous lands. Starting from the premise that planning processes are embedded in complex and broader institutional structures, I further argue that planning has contributed to the reproduction and perpetuation of colonial injustices until this day, in part through the existence of institutional, legal, and decision-making frameworks that are colonial legacies.

Although IE has been widely used by planning scholars, I claim that to understand how colonial rationalities are reproduced through everyday planning practice it is critical to look at how written texts –especially plans, legal documents, regulations, and policies– shape planning action and help reveal colonial ruling relations. To answer this empirical question, I draw on in-depth interviews and documentary reviews, discussing how the daily actions of government planners in Chile bring to life colonial visions and understandings, although in subtler and more invisible ways than in the past. I use as an example the planning and implementation of the first Consultation on Indigenous Institutions, led by the Chilean Government in 2011, which was developed in the context of the recent endorsement of ILO Convention 169 and the UN Declaration on the Rights of Indigenous Peoples. This exploration shows how the recognition of Indigenous rights challenges Indigenous/State relations and simultaneously reinforces colonial notions of state sovereignty, Lockean ideas of land use and property rights, and liberal understandings of human rights.

Facing An Unequal World: The 1967-70 Civil War In Nigeria, Its Causes, Consequences and Implications On The Biafran Side Of The War In Contemporary Nigeria

SHORT ABSTRACT: The paper examines the causes and effects of the 1967-70 Civil War on the Biafran side of the country, even decades after the actual war.

LONG ABSTRACT: Violent conflicts of inter and intra state wars of myriad concepts have become endemic features of sub-Saharan Africa. The Nigerian-Biafra war of 1967-70 took a genocidal dimension in which the killing of people on the Biafran side of the war became a state industry. These decimation took the features of a pogrom against the “Biafrans” which resulted in millions of people of that side of the country exhumed in the war.

This paper, therefore, analyses the causative factors of the war, the consequences of the wars in terms of the massive human deaths, the refugees’ problems and the expropriating economic and social aftermath of the war on the then citizens of Biafra and Nigerians in general. The paper argues that even in the contemporary globalisation world, Nigeria suffers from the same types of structural violence that constitutes victims of the secessionist war still suffer from unequal treatment in the present Nigerian socio-political context, being a hangover of the Nigerian-Biafra civil war of post-independence Nigeria.

The Social Meaning of Racial Humour Among the Police

This paper explores a controversial side of police culture: the use of ethnicised humour among the police. The empirical material consists of twenty-two interviews made in context of an assessment on the work environment for ethnic minority officers and civilians within a major Swedish police force. The qualitative analysis illustrates how officers and civilians with an ethnic minority background talk about the widespread use of racial humour within the police. On the one hand, they support their colleagues’ use of racial jokes, as it reproduces ethnic stereotypes and tends to position minority officers as ‘outsiders’, but, on the other hand, they contribute to the reproduction of racial jokes and consider it to be an unavoidable, quite unproblematic, part of daily police jargon. Finally, the difficulties of walking the thin line between police jargon and ethnic bullying and the problems that racial humour implies for diversity work within the police are discussed.

China’s Involvement in Africa: New Approaches of Solidarity in Economic and Development Policies or Just South-South Rhetoric?

The increasing Chinese activities in African countries are often stated as different or competing against Western approaches of development aid and economic relations. Not only regarding quantity but also quality, the Chinese involvement seems to have specific patterns of a development model, for example the principle of non-interference. This paper analyses Chinese conceptions of economic and development policies towards African states. By putting these policies and their implications in the context of historical structures and social relations of forces, the asymmetrical power relations, the counter-hegemonic potentials as well as the interests and strategies of the stakeholders involved within this “third way” between (Post)Washington Consensus and South-South-Cooperation can be identified.

However, there has not been much research on African perspectives on characteristics and patterns of Chinese involvement. Therefore, in its second part, the paper focuses on the perception of Chinese activities in Ghana and the impact on local developing role models. Being the “darling” of Western donors and simultaneously experiencing a rapidly increasing Chinese involvement on different levels of its society, Ghana presents a crucial case study with conflicting constellations between modernity and tradition. According to (modern) concepts of hegemony, a sustainable impact on the local development model, manifested in reciprocally combined elements of institutions, ideas and material capabilities, must include aspects of consent (considering the specific background of the Ghanaian society by including theoretical perspectives of peripheral statehood and postcolonial approaches). Do Chinese stakeholders accomplish a broadly-based consent on their activities and therefore establish patterns of a “different” development model in Ghana? Does the Ghanaian civil society perceive them as an alternative to the dominant (Post)Washington Consensus? Following a qualitative mixed-methods design, combining expert interviews, media analysis, and secondary analysis, the findings of three core areas of the Chinese economic and social activities will be presented and compared: construction, mining and trade.
Thus, in Japan the utilization of ICT for preventing “isolated child-rearing” is direct–ICT in their child-rearing lives is to communicate with their family or neighbors and regional networks. Similarly in a real-life situation, most of the parents who seek advice or to talk with other parents on their smartphone or personal computer environments to foster advisors on child-rearing. These projects enable parents to roughly translates as “sufferers’ first-person study”) and explains the interactions with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these prec-1) patients (individual actors and groups, e.g. journalists, economists, commentators, editors, etc.); 2) non-human instruments (devices, models, rankings); 3) structures (classes, professions) and 4) networks (relationships between actors, instruments, structures). The paper pays special attention to how news about the economy is constructed and circulated, and how this news in turn draws upon, contests, and helps to produce economic knowledge. This research forms part of the ERC funded ECONPUBLIC project, which study how the ideas about the economy have been produced in the mass media in the UK, US, France, Argentina and Brazil in the post-war period. http://www.econpublic.hps.cam.ac.uk

Democratization of Local Leadership--- the Role and Function of Local Governance in the Disaster-Processes of the Great East-Japan Earthquake and the Tsunami

The gigantic earthquake of magnitude 9.0 which occurred on 11th March, 2011 caused tremendous damage to the huge coastal area around Northeast Japan. The tsunami was of historical record in terms of its height and area affected. As of the end of March, 2012, over 20 thousand people were reported as dead or missing related to this disaster.

Moreover, serious accidents at the Fukushima Nuclear Power Plants that happen sequentially had a great impact on the huge area. The catastrophic dam-aged communities had been in financial difficulties with a high percentage of aged people, revealing various types of precariousness in the social structure of the communities and the vulnerability individual resident groups have. In terms of mitigation, temporary living, restoration and reconstruction processes, the role of local political leadership that could listen to requests and meet the demand of the residents on the one hand and that could negotiate with the central and prefectural governments in order to get necessary assistance to help people in the disaster areas on the other hand, is getting more and more important. Based on the in-depth interviews to local leaders of the hard hit areas we explore the role and function of local leadership and its effectiveness, as well as the condition on which they are doing well with these jobs.

Among the democratic countries Japan has a rather centralized political and social system with a strong central government in terms of budget-control, reg-ulation of prefectoral and local government system etc. Furthermore after the earthquake we experienced the change of governing party from the Democratic Party of Japan to Liberal Democratic Party, which seemed to mean that it is neces-sary to consider deeply the way of the political leader, not only at national level but also at local level.

An Ethnomethodological Explication of the Usage of Diagnostic Categories: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (2)

Through the lens of medicalization in sociology, the relations that people have with medical categories are considered subordinate to medical professions. Therefore, how individuals with autism spectrum disorder (ASD) come to terms with the category of “ASD” is considered a manifestation of that subordination (Conrad, 2007). However, this perspective prevents us from understanding ac-tual situations in which those individuals come to terms with the diagnosis of ASD. Many studies have investigated the various relations people actually have with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these preced-ent studies, this presentation examines the sessions of tojisha-kenkyu (which roughly translates as ‘sufferers’ first-person study’) and explains the interactions of the settings in which participants refer to their own diagnostic categories. The Japanese word tojisha-kenkyu refers to a collaborative activity in which the indi-
viduals suffering from social isolation due to their impairments talk about their troubled experiences and study the structures of these experiences in their own words. Tohjisha-kenkyu began in a mental patients’ group in the town of Hokkaido, Japan and has since been utilized in many other groups of individuals with various impairments (Ayaya and Kumagaya, 2008; Ishihara, 2013). The sessions of tohjisha-kenkyu this presentation examined were for individuals with ASD and conducted by these individuals. Using ethnomethodology and analyzing audio recordings of the sessions, we focused on the following questions: (1) What is the significance and what are the roles of the participants’ self-reference to diagnostic categories? (2) What relationships do these usages of diagnostic categories manifest possible between participants? (3) What consequences do these usages give to the meanings of these diagnostic categories?

How Diagnostic Categories Influence the Self-Description of Person with a Diagnosis: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (1)

Previous studies have revealed that there is a mutual relationship between the self-description and social cognition/interaction (Spreng and Mar, 2012; Nelson and Fivush, 2004). These studies have found that to describe the intentions, feelings and beliefs of others from their behaviors requires the structured self-description which serves as a reference frame. On the other hand, self-description is structured through the social interaction.

The persons with Autism Spectrum Disorders (ASD), the medical definition of which is qualitative deficits of social cognition/interaction, are suggested to have difficulties in semantically organizing their own autobiographical memories through social interaction, which gives atypical structure of self-description (Crane et al., 2010; 2011; Bon et al., 2013; Lind et al., 2010; Williams et al., 2010; Uddin et al., 2011). However, performance of social cognition/interaction and self-description depends on ‘how’ to interact ‘with whom’, and may not be reduced to individual characteristics (Crane and Goddard, 2008; Bruck et al., 2007; Crane et al., 2012).

As a practice in which alternative self-description and social recognition/interaction are generated simultaneously, we focus on Tohjisha-kenkyu. Tojisha’ means first-person in Japanese, and ‘kenkyu’ means research. In a nutshell, Tohjisha-kenkyu is studying oneself through communication with others who share similar experiences. Tohjisha-kenkyu is a novel method of self-help and intellectual exploration born in Japan, which neither accepts without question nor rejects completely existing technical terms and diagnosis, but rather uses and customizes them to the meanings of these diagnostic categories.
For the first time in modern history and with the region's turn to multiculturalism, most Latin American censuses now ask respondents to identify by race or ethnicity. These new data allow researchers to systematically examine ethnoracial inequalities, which have long been ignored or denied. However, reliance on census ethnoracial categories could be problematic because of classification ambiguity in the region and because the categories themselves may hide racial heterogeneity. To overcome this, we modeled the relation between skin color as well as census ethnoracial categories and educational inequality, using innovative data from the 2010 America's Barometer from the Latin American Public Opinion Project (LAPOP) and 2010 surveys from the Project on Ethnicity and Race in Latin America (PERLA). We found that skin color was strongly related to educational inequality in all examined nations (Bolivia, Brazil, Colombia, Dominican Republic, Ecuador, Guatemala, Mexico and Peru), even after controlling for parental occupation and other factors. On the other hand, ethnoracial identification was a weaker and less consistent predictor.

Between Asia and Europe: Cross-National Marriages in Japan (Russian Case)

The paper focuses on modern Russian diaspora in Japan and based on research conducted in 2012 in Kyoto (Japan). Although Russians in Japan have more than 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. There were only 322 Russian (Soviet) citizens in 1985, but in 2004 the Russian community in Japan has counted more than 7 000 members. The Russian community in Japan is divided into two groups: labor migrants and members of cross-national marriages. This study (interview with Russian women married Japanese men) shows us an impact on Japan of many new ethnical communities and how Japan is becoming the society of multi-cultural coexistence. So, under influence of the small Russian community, Japan will take a new identity as a multicultural state, but not homogenous one. To prevent depopulation, Japan has to accept 17 million immigrants in 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. Probably due to Confucianism, many of Japanese religious activities are different from the Australian counterparts did. The result was different from the Australian one and the largest gap is that almost before, during and after the disclosure is made; mediation between the organization with regard to the implementation of confidential reporting systems that would pre-empt whistleblowing; developing support systems for whistleblowers after disclosure is made and after the disclosure is made; The organization and the whistleblower and advocacy to improve legal protection for whistleblowers.

Japanese Teenagers' Perception of Their Mothers' Employment and What They Do in after School

Japanese junior high school students and high school students (age 13 to 18) are rarely reported internationally regarding their behaviors after school and attitudes towards their mothers' employment. I interviewed approximately 40 these teenagers, 20 each from relatively wealthy area, Setagaya and the down town, Taito in Tokyo. The result showed that most of their mothers were working part-time with regard to their areas and this affects family supper. Some of them were suffering from neglect or somewhat of neglect by mothers particularly concerning supper. The difference was teenagers in Setagaya are more likely to complain it, while Taito counterparts were more likely to accept their severe situation in family.

In addition, comparison between this study and the result of Australian researcher, Barbara Pocock's in-depth interview of teenagers (2006) will be shown. The result was different from the Australian one and the largest gap is that almost no Japanese teenagers referred their parents' joy gained from paid work, while Australian teenagers are satisfied on their jobs in paid work. Probably due to Confucianism, many of Japanese teenagers seem to thank their parents' paid work, although some of them were not provided supper. And this tendency is more obvious in down town.

Neglect of these age groups is difficult to be recognized in the society, due to their own pretense as normal and their affections or sympathy towards their parents. However, their marks on their bodies and no yelling is heard from neighbours. Therefore, these teenagers' vulnerability remains invisible. I believe this study has significant meaning in youth studies, family studies and Japanese studies.

Whistleblowing and Intervention: A Role For The Clinical Sociologist

Whistleblowing takes place when a present or past member of an organization discerns situations about organizational wrongdoing to those they believe to be in a position to take action. Whistleblowing could occur internally when the whistleblower communicates the message inside the organization (using prescribed or non-prescribed channels) or externally when the whistleblower resorts to an external agency, which could include the media. Regardless of how the disclosure is done, organizations generally regard whistleblowing as an unacceptable breach of confidentiality. The disclosure of information about organizational wrongdoing, especially if it is placed in the public domain, is regarded as a form of betrayal and often leads to retaliation by the organization. Acting as ‘foul and caring’ employees, whistleblowers generally do not expect the severe negative responses they receive as a result of disclosing irregularities in their places of work.

This paper discusses whistleblowing in the USA and South Africa and considers the role clinical sociologists could play in designing and/or implementing interventions that would ensure better outcomes for the whistleblower as well as the organization. Clinical sociologists could use clinical interventions to help whistleblowers before, during and after the disclosure is made; Whistleblowing is becoming a root between it and homeland, between two cultures - European and Asian. This study (interview with Russian women married Japanese men) shows us an impact on Japan of many new ethnical communities and how Japan is becoming the society of multi-cultural coexistence. So, under influence of the small Russian community, Japan will take a new identity as a multicultural state, but not homogenous one. To prevent depopulation, Japan has to accept 17 million immigrants in 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. Probably due to Confucianism, many of Japanese religious activities are different from the Australian counterparts did. The result was different from the Australian one and the largest gap is that almost before, during and after the disclosure is made; mediation between the organization with regard to the implementation of confidential reporting systems that would pre-empt whistleblowing; developing support systems for whistleblowers after disclosure is made and after the disclosure is made; The organization and the whistleblower and advocacy to improve legal protection for whistleblowers.

Building “Ethnic Ghettos” or “Intercultural Bridges”? the Use of ICTs in Migrant Organizations in Spain

The use of the Information and Communication Technologies (ICTs) by migrant organizations is a relevant factor for the enhancement of social cohesion. Migrant associations develop in-group solidarity, associated or not with a particular group. There is a general consensus regarding the value of ICTs in maintaining both strong and weak ties, but there is not any consensus on whether ICTs are...
useful in forming new ties and whether those are strong or weak. This study aims at explaining the impact of ICTs use in the context of migrants' social capital. Are migrant associations using ICTs to expand new ties of capital or to reinforce homogeneous networks? In depth interviews to the representatives of 25 migrant associations in Spain, from five different origins, namely Romania, Morocco, Equator, Colombia and Bolivia, have shown that the use of ICTs is increasingly essential for their organizations. Furthermore, ICTs are used to access to information on both the origin and the host country. However, the organizations' communications, both online and offline are mainly addressing their local communities. On the other hand, there can be no doubt that the associations that use more diverse ICT tools are those who are more oriented to social cohesion. The study shows that, indeed, bonding social capital is essential for migrant associations and that the use of ICTs helps maintaining strong ties, while fostering the creation of new weak ties and political participation of their communities in the host society. In sum, ICTs come up as an opportunity for migrant associations to improve their public image, collaborate with other public, private and non-profit organizations and thus to enhance social cohesion, in general. Therefore, an effort should be done from public and private initiatives to facilitate this digitalization. This paper is part of a larger research financed by the Spanish Ministry of Economy.

UZZELL, DAVID* (University of Surrey, d.uzzelli@surrey.ac.uk)

Workplaces In Tncs: Can Green Practices Be Transported Across The Home-Workplace Border?

Just under 50% of the world's GHG emissions in 2004 were attributable to energy supplies and industrial production (IPCC, 2007). The demand for manufactured goods is expected to rise by at least 100% by 2050 (from 2006 levels), with a consequence that industrial emissions, if un arrested will lead to a 90% increase in CO2 emissions by 2050 compared to 2007. Following new EU regulations, national governments have created policy instruments designed to reduce or compensate the level of emissions of specific organizations. However, these regulations have not proved to be effective, neither in terms of production nor consumption. The research project: Low Carbon at Work, attempts to understand the drivers for and barriers to environmentally sustainable practices at work and at home, and recognizes not only the crucial contribution of industrial production to GHG emissions, but also that consumption is an inseparable driver of production. Investigating two TNCs (vehicle production and oil industry) in Sweden and the UK, we have asked under what conditions workers and managers are encouraged to transfer "green practices" from work to home and vice versa. We have also investigated whether relationships between managers, employees and trade unions might encourage or prevent the adoption of 'greener' production processes. Both case studies include informational and life-history interviews to understand changes at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw.

Welfare Dependency, Accumulation of Social Problems and Marginalization

9.2 per cent of the population in Helsinki claimed social assistance in 2011. Media often portrays these people as a homogeneous group while the evidence tells otherwise. This presentation contributes to the development of a typology of social assistance recipients and focuses on those worst-off. Is there a new group with multiple needs that should be targeted with specific policy measures? But also, are there new claimants recruited from middle classes? 40 per cent of recipients claim social assistance for less than 3 months. These short-term recipients can hardly be called the core of destitution – especially if we consider long-term deprivation as a characteristic of destitution.

An entirely different type of subgroup includes those who receive the benefit long-time or recurrently. Indeed, long-term social assistance receipt has increased and a growing share of claimants faces many problems simultaneously. Health problems, substance abuse, long-term unemployment and housing problems often accumulate and make these people more vulnerable to marginalisation.

In order to develop better policies and actions by social workers, information on the heterogeneity of clients and the depth of the various problems they face is of profound importance. Should we improve the accessibility and content of health services, to whom should the rehabilitative work be targeted and who still have the potential to re-enter the labour markets?

The presentation analyses social assistance clients in Helsinki with register data from 2006–2011. The data is complemented with information on the use of health and social services and pharmaceuticals. Using factor, latent class and descriptive analyses, the objective is to locate the core of destitution and classify clients on the basis of their background, benefit dependency and welfare problems. This categorization can facilitate the design of actions, setting of realistic objectives of policies for different subgroups, and analysing social assistance data in general.

Educational Inequality and Social Mobility: A Two-City Study in India

Patterns of intergenerational mobility provide an indication of the equality of opportunity and "openness" of a society. This paper studies the impact of educational attainment on social mobility chances in India for both women and
men. India presents a novel case to test theories of inequality and to examine social change given its diversity and the pace of recent growth that has excluded a significant proportion of the population, and due to persisting educational and gender inequalities. Specifically, large cities in India that have expanded both in terms of population and economic growth are ideal contexts for such a study of social mobility. This paper analyzes primary data collected through a survey of over 1800 respondents in two cities, Delhi and Patna. In-depth interviews with some of the surveyed respondents provide the much needed context to this study of persisting inequalities.

**VAIL, JOHN** (Newcastle University, john.vail@ncl.ac.uk)

**Bearing Witness to Social Suffering: The Emotional and Social Complexity of Social Documentary Photography**

There is a highly contested debate in the social sciences and the humanities about the artistic bearing of witness to social suffering. If we take the paradigmatic case of social documentary photography, does prolonged exposure of individuals to images of social suffering have de-politicizing effects, dulling empathy and leading to compassion fatigue or does it spark an empathetic imagination and ethical reflection, and thereby stimulate an active solidarity and sense of shared responsibility that constitutes a cultural pathway to an active citizenship. Although we sympathize with the latter judgment, we admit this is based more on wilful optimism than persuasive evidence because, in actual fact, there has been very little rigorous social science research investigating this debate. We systematically redress this oversight through an ongoing research project with the Side Gallery in Newcastle, UK. For over 35 years, the Side has hosted exhibitions of social documentary photography, many of which have been dedicated to exploring large scale social and political transformations with a special focus on social suffering and hidden injuries. For each exhibition, the gallery has kept a comments book and we have coded and analysed a sample of 25 exhibitions across three decades featuring diverse forms of social suffering and distinct subjects.

We use these contemporaneous comments to trace how the images impacted on individual emotional states (what kind of emotions were triggered, whether particular images generated specific responses). We also explore whether these exhibitions acted as a force for social learning: increasing people's understanding of social complexity and power; recovering people in the photos as proper subjects, worthy of dignity in their own right; and enhancing knowledge of possible alternatives. Finally, we are interested in whether we can observe how individuals employ distinct ethical, emotional and critical judgments when encountering these kinds of images.

**Fatherhood and Doing Gender. How Challenging Can Institutional Changes be?**

Transition to parenthood in Switzerland takes place in a particularly gendered welfare state. It is the only European country where men do not have access to any kind of statutory parental or paternity leaves. Following a conceptualization of gender as a social structure, we consider that parenthood is shaped by social mechanisms producing difference and inequality between fathers and mothers at the institutional, interactional and individual levels. This paper investigates empirically the extent to which institutional change - such as the introduction of a paternity leave - can challenge the construction of gendered fatherhoods. It is based on a case study conducted in a public sector organization which implemented in 2010 a one-month paid paternity leave. Sequence and cluster analyses are performed on register data about the patterns of employees’ leave uptake (N=95). Interpretive analysis of interviews with fathers who took paternity leave (n=22) and with men who took modified leave uptake in their team (n=8) is conducted. Results indicate a limited challenge of the gender structure. At the interactional level, although paternity leave enables fathers to spend more family time, a gendered division of childcare tasks is observed: fathers still have a secondary role with the newborn child. The majority of interviewees adopt a modified model, similar to the dominant norm in Switzerland. As regards interactions in the workplace, paternity leave contributes to make fatherhood more visible, but informal norms about the legitimate leave pattern are observed. On the individual level, paternity leave uptake contributes to men’s appropriation of their fatherhood identity and to increase their sense of competence and duty as fathers. However, their conception of fatherhood is structured according to contradictory discourses which highlight change in gender relations and persisting differences between motherhood and fatherhood.

**Highly Skilled Migration As a Structuration: What Is New?**

This paper examines the role of interaction between social structure and human agency in the process of international migration of the highly skilled professionals. The discussion draws from Giddens’s structuration theory and Bourdieu’s forms of capital. It revisits Giddens’s analysis of duality of structure and relocates this in a migration field. This presentation is devoted to explore second questions: Why do highly skilled professionals migrate even they are financially satisfied? Why others do not consider migration? What kinds of forces in migration decision process do participate? This paper is based on results from twenty in-depth open ended interviews with highly skilled professionals of Lithuania in the fields of natural and technological sciences. Migration and social status is seen as endless process constructed from set of events passed on micro, mezzo, and macro level.

In the view of structuration theory migration is seen as recursive process formed and transformed by active agents and itself shaping and structuring subsequent social behaviour of agents. Both structural determinants in the countries of emigration and immigration and acknowledgment of migration as efficient strategy for life betterment creates new cultural element in the social structure that influences migration-decision making of other peoples. International migration is a continuous interaction between migrants and economical, political, social, and cultural contexts on macro level in the sending and receiving countries.

New insights shed light on deeper than just economic considerations layers involved in forming attitudes towards international migration. The structural ant socio-cultural context where individual is acting, migration experience in parent family, seek for higher social status, personal freedom, and need for professional recognition are just several pieces of the puzzle, the outcome of which is decision to (not) migrate.

**Mexico: Democracy and Inequality in the States**

In Mexico only electoral democracy has been developed. There is no growth, neither social nor political important presence from social and civic organizations that show developments on social democracy and that allow an effective control of the government by the society. The elections alternation in every aspect has been a proof of the presence of electoral democracy.

Mexico’s ranked place 61st on the Human Development Index. Nevertheless, inequalities on the 32 national entities are quite evident. This paper analyzes the evolution of the electoral democracy on the 32 Mexico’s states and relates it with inequality according to the HDI. The unit of analysis is the alternation on municipal governments during 10 years, identifying those entities with a greater percentage of municipalities with alternation in their governments and searching the relation with the evolution of the HDI and the evolution of income poverty.

**Mexico: Electoral Geography from the States View**

Ever since year 2000, Mexico has had very competitive presidential elections. Two of these electoral processes, have been pinpointed as fraudulent, because of several irregularities that have happened.

The electoral geography has introduced the states behavior in the three elections to be studied (2000, 2006 and 2012), showing more or less territorial agglutination.

This paper introduces the electoral geography based on the electoral results from the capitals of the 31 states in the country, taking into consideration, that generally, the states capitals concentrate the higher amount of voters, and have the major political diversity from each state.

This paper also presents the political-governmental evolution from each entity, as a political and geographic context that supports the explanation.

**All Mixed up: Defining Mixed-Income in Public Housing Redevelopment**

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace trou-
bled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have entered into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of high-income (less than 1/6 of total units) to those that attempt to preserve a substantial majority of units for low-income households.

In addition, we develop a new way of identifying and categorizing mixed-income developments in terms of how income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together high-income populations of low-income and high-income residents into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly all-low income communities.

Domestic Violence As Eigenvalue in Contemporary Society: A Sociocybernetic Approach to the Construction of a Form of Gender Based Violence in Chile

Domestic violence, including several forms of gender based violence, does not exist independently from an observer, neither is this observer limited to a domestic realm. In contemporary society, domestic violence is constructed as such in a network of operations that encompasses both private and public realms. This network involves a diversity of human and non-human agents – questionnairenaires, medical instruments, etc. – and coordinates public policy, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Reinzig von Foerster), a referential correlate of this complex network of operations.

This paper, which is based on field observations made in Santiago, Chile, describes a section of this network: the section that goes from the moment a report is made to the moment it enters a courtroom transformed into a case of domestic violence. It is stated that three problems of reference (Niklas Luhmann) give meaning to the diverse operations that are involved in this network: a) the attribution of cases of violence to the environment of the system; b) their observation as forms against a medium; c) and the constitution of chains of transformations. Specific mechanisms that contribute to solve these problems are presented and analyzed.

Finally, two main consequences are explored. At the same time that the constructed reality of domestic violence becomes inscribed in the lives of victims and their relatives, shaping their experiences and descriptions of the world, it is shaped as a stream of facts that feed state mechanisms of population control.

The Circulation of Two Epistemic Objects That Carry Social Science Knowledge: Domestic Violence and Bullying

This presentation follows the circulation of two epistemic objects, namely domestic violence and bullying, in Chile, from their appearance in this country in the decades of 1990 and 2000, respectively. Social science knowledge plays a major role in the configuration of both epistemic objects. Also, both objects have important normative and emotional contents, making them relevant for the orientation of actors. In this manner, domestic violence and bullying are part of performative processes through which social science knowledge shapes reality.

The definitive positioning of domestic violence and bullying as part of everyday reality in Chile resulted largely from State-led processes of measurement, diffusion and regulation. Their arrival and diffusion was induced by several social processes. In the case of domestic violence, the feminist movement, with its claims during the 1980s, was a crucial lever. Bullying, instead, has a more diffuse arrival, being mass media, particularly television, its fundamental driver. International organizations such as the World Health Organizations and UNESCO played a key role in the circulation of both constructs. They have provided conceptual and methodological tools, as well as facilitated and disseminated research and provided funding. Moreover, international organizations have incorporated in these constructions a decisive normative framing that is associated with developments in Human Rights.

Some repercussions of these processes are analyzed regarding the globalization or universalization of these realities or cognitive objects and to the respective effect of perceptual and normative shaping. The empirical study is based on interviews to relevant agents (state functionaries, policemen, educators, psychologists, physicians, etc.), ethnographic work regarding measurement and classification practices, and revision of documents related to processes of constitution of these constructs.

The Atmospheres of Chilean Copper Morailities

From ancient times copper mining has been a key element for the materialization of the civilisation processes. From the weapons and ornaments of the Western Asian settlements 1.000 BC to the chips and wirings of contemporary hybrid cars, copper has had a privileged position advancing human capacities with its versatility. However, intensive pollution derived from copper mining has also been a prevalent issue that can be traced twenty five centuries back to the smelters of Roman Empire times, as some recent sediments analysis in Greenland have recently shown (Hong et al, 1996). Additionally, copper has been relevant in international disputes over natural resources, as can be seen in Chile in the middle of the Cold War, with a process that sought to recover national sovereignty over copper and ended up with the imposition of a dictatorship. Following an actor-network perspective, this presentation is focused on the role of copper shaping the institutional settings of Chile. The analysis is mainly based on the negotiation of air quality standards and emissions caps that lasted for more than twelve years (between the late 1990's until 2012), and explores the different copper ontologies related to health, pollution, energy, and globalization among others, mobilised during that process. Reviewing the proceedings of the expert panels and public statements made by the bodies involved in these negotiations, the agencies of copper and the visible and invisible actors are rendered as complex entities, and their organization is understood as the institutions that form the current situation in place copper production schemes. This refers not just to the local schemes, but to its intimate connections with the global copper dynamics, which are currently dominated to a great extent by China. It is argued that a way out of this entanglement should be designed, cutting across the cause-effect relations that compose current Chilean copper morailities.

Contemporary Family and Human Development

Human development is the expansion of people’s opportunities live long, healthy and creative lives; to advance other goals that are valuable for themselves and the entire society. Human development implies that people engage actively in expanding equity and respect for human rights. Family is not only an institutional cell but also is a micro-social basis of human development and its reproduction. It is a family where the key elements of human development (health, education, well-being etc.) originate from. The potential of these elements predetermine perspectives of socio-economic, scientific and cultural development of the country and ultimately of the person himself. It is a family where a person should be brought up to respect fundamental principles of equity, recognize human rights, interests and needs of other family members and people around. Family is the only social institution providing for retranslation of values and norms to the following generations; ensuring success, stability and sustainability of human development.

At present in many countries the family institution experience crisis, which is intensified by discrepant and often negative demographic processes. These tendencies affected Russia as well. Along with decrease in birth rates, there have been negative changes in marriage and family structure; in the number of income families and illegitimacy. The most common consequences of the Russian families is poverty, which is deepen with every subsequent child.

Responding to contemporary challenges in marriage and family processes the governments of developed countries realize explicit family policies. In Russia family-oriented measures were always regarded as a part of social and demographic policies. But nowadays National family policy, its statements, principles and priorities are being conceptualized. This is reflected in the work of experts’ and scientists’ communities; in broad public discussions of the draft project of the National Family Policy Concept.
A New Global Approach to Pursue Global Justice and Development

The liberalization of economy and global economy formation have fundamentally changed the mode of interaction between government, employers, and employees; have greatly affected the employment structure, labor markets and socio-labor relations. Uncontrolled world capital markets, and as a consequence, risen instability, uncertainty and inequality in society have led to a weakened sense of common purpose of social partners in labor sphere. At the same time, understanding that stability and considerable culture in socio-labor relations guarantee social and economic well-being, determined the need in a new base for consensus between tripartite partners in global scale. This role is performed by Decent Work (DW) concept, presented by Director General of The International labor organization (ILO) in 1999. In accordance with definition, DW involves contradictory: in Western countries it is implemented through the cooperation program between ILO and Russian Federation. The timeliness and urgency of DC idea is proved also by The European Union's Post Lisbon Strategy. The European network of 53 NGOs “SOLIDAR”, working to advance social justice in Europe and worldwide wrote: «We would like to see the quality jobs and decent work agenda as the cornerstone of EU social policy, the cornerstone of European Union’s social policy, and the cornerstone of broader social policies.»

The comparison of the mainstream and ethnic media narratives shows how the Mapuche hunger strike has been constructed in contradictory terms. A critical discourse analysis problematizes notions of power, legitimacy, ethnic and national identity, involved in those media narratives.

La Violencia Invisible: Acoso Sexual Callejero a Mujeres En Lima Metropolitana

El acoso sexual callejero comprende un conjunto de prácticas cotidianas como frases, gestos, silbidos, sonidos de besos, tocamientos, masturbación pública, exhibicionismo, seguidos de pata, entre otras. Se están realizando en la vía pública o en (desde) el transporte público o privado, de manera rápida e inesperada. Pese a tener impactos en la libertad sexual y el derecho al libre tránsito, estas prácticas han sido normalizadas y hasta justificadas en nuestra sociedad.

La ponencia mostrará los resultados preliminares de una investigación en curso sobre el tema, realizada gracias al financiamiento de la Pontificia Universidad Católica del Perú (PUCP). Los resultados de la Encuesta Nacional de Género 2012 realizada por la PUCP muestran una mayor incidencia en Lima y Callao que en otros ámbitos del país, lo cual revela su carácter fundamentalmente urbano. Asimismo, el segmento de mujeres jóvenes de 18-29 años es el más afectado. Lo que revela que estas relaciones de poder entre géneros tienen un componente de edad: a mayor juventud, mayor probabilidad de ser afectada. A nivel cualitativo hemos podido recoger también discursos que justifican estas prácticas.

The Resistance of Bare Life: Media Narratives on Mapuche Hunger Strikes in Chile

The current Mapuche movement emerges in the context of processes of globalization and modernization affecting Latin America. Since the 1990s conflicts have arisen between Mapuche communities and private companies, due to the development of economic mega-projects in Mapuche territory. The government role has been contradictory: while they promote politics of recognition in education and culture; politics of repression are used to suffocate Mapuche protests regarding those mega-projects.

The mainstream media narratives have constructed a particular framing of the conflict. Due to the lack of plurality of Chilean mainstream media, a critical discourse analysis of media discourses is fundamental to deconstruct how a particular narrative is imposed as the unique regime of truth. An alternative discourse has been developed by the ethnic media, which emphasizes an historical and contextualized reading of these confrontations and its consequences for Mapuche communities.

The paper compares the discursive formations underlying ethnic and media narratives regarding the Mapuche hunger strikes of 2008 and 2010. The media coverage of those hunger strikes provided a space for contestation of notions of ethnic and national identity. The analysis of these narratives brings to the forefront the concept of bare life (Agamben, 1998). The management of the bare life of the Mapuche is at the core of the modern politics. The hunger strike becomes the only mechanism of resistance of those subjects reduced to the category of bare life. The application of the anti-terrorism legislation locates the Mapuche body outside the realm of law by creating this state of exception (Agamben, 2005) where bare life can be scrutinized and managed.

The purpose of this exploratory study is to provide a qualitative empirical account of the experiences of Afro-descendants presently living in Santiago, Chile, and contribute to the debate on the migratory realities of people to Latin America from the perspective an understudied and often marginalized and excluded population. While this study can only provide a snapshot into the lives of some Afro-descendant immigrants presently living in Chile, preliminary findings suggest that this population is experiencing racism and xenophobia with which they must regularly contend. It seeks to understand the justification process by which marginalized groups contest discourses of power and how they disavow perspectives that suggest their identities have been devalued.

Contesting Stigma: Afro-Descendant Migrants in Santiago, Chile

The purpose of this exploratory study is to provide a qualitative empirical account of the experiences of Afro-descendants presently living in Santiago, Chile, and contribute to the debate on the migratory realities of people to Latin America from the perspective an understudied and often marginalized and excluded population. While this study can only provide a snapshot into the lives of some Afro-descendant immigrants presently living in Chile, preliminary findings suggest that this population is experiencing racism and xenophobia with which they must regularly contend. It seeks to understand the justification process by which marginalized groups contest discourses of power and how they disavow perspectives that suggest their identities have been devalued.

Forty-eight semi-structured interviews were conducted with adult immigrants of visible of African-descent (27 female, 22 male), from 4 continents and 15 countries, between April and May 2013. They lasted between 10 and 25 minutes and were conducted in either Spanish or English. the only mechanism of resistance of those subjects reduced to the category of bare life. Religion That Heals or Harms? an Examination of the Association Between Religion and Gender Differences in Depression

Gender differences exist in religious involvement and depression, with women reporting significantly higher levels in both. Most research finds that women benefit more from religion than men, as they are more involved than men in many facets of religion. Research has for example shown that prayer offsets the noxious effects of stress on well-being for women, but not men. Other research showed that women are more likely than men to make use of supportive religious networks through church attendance and other religious activities, and are therefore more likely to reap the instrumental and psychological benefits with those relationships. However, in contrast a small number of studies suggest that women may face unique challenges in the church that diminish or offset the benefits of religion to mental health. Compared to men, women are more often prescribed to traditional role patterns and a subordinate role in the worship service.

In addition, in secular settings, women may be confronted with the “cost of caring” by trying to maintain both extensive church-related ties while also remaining active in more secular networks. Unfortunately, the vast majority of current research is conducted in Anglo-Saxon on and non-secular settings. In the current study, we aim to examine the association between gender and depression in a different context: Religion from a cross-national comparative perspective. First results based on the European Social Survey (2006-2007) showed that religion, as measured by subjective religiosity and frequency of praying is associated with higher levels of depression, in both men and women, but more pronounced in women. These findings contradict the most frequent finding that religiosity is related to fewer depressive complaints, especially among women. We intend to further investigate our results by incorporating both individual indicators such as church attendance, as well as contextual moderators, such as religious context into our model.

Corruption weakens the trust in and the legitimacy of public offices and the government. Therefore, corruption has been identified as a major stumbling block to successful peace-building. As Afghanistan ranks among the most corrupt countries in the world, the abolition of its widespread corruption has grown into a main concern of the international community.

Dilemmas of Combating Corruption; Afghan and Dutch Perspectives

Dutch troops in Afghanistan are confronted with situations in which the local population violates values and norms, that the soldiers themselves take for granted, but which they see as undemocratic. This leads to a decision whether or not to intervene and try to stop and change undesirable behavior. This is not only a matter of operational feasibility, but also of cultural and moral desirability. In Afghanistan corruption is one such ingrained practice that brings with it difficult dilemmas for soldiers.

Corruption weakens the trust in and the legitimacy of public offices and the government. Therefore, corruption has been identified as a major stumbling block to successful peace-building. As Afghanistan ranks among the most corrupt countries in the world, the abolition of its widespread corruption has grown into a main concern of the international community.
In principle ISAF is part and parcel of these efforts, but in practice it is not always self-evident how soldiers should act. Should fighting corruption be a priority in peacekeeping and training missions as well? Or should soldiers, in order to achieve their primary mission targets, sometimes tolerate it? How do Dutch soldiers solve culturally and morally critical situations in this particular area? What's more: what about their Afghan counterparts? How do they view the cultural and moral dilemmas of the foreigners? Based on recent fieldwork in Kunduz, this presentation depicts and analyzes answers and opinions from both sides.

On Inequality and Physical Health: A Bio-Markers Based Test Of The Neo-Materialistic Argument In Low and Middle Income Countries

This paper re-examines the relationship between wealth inequality and two measures of physical health: anemia status of women and of their children and the experience of women with child mortality. We test the role of individual resources (i.e., wealth) and of the countries' resources relevant to health (i.e., the level of wealth of the country, the private financing of health and the efficiency of health services) for explaining the empirical association between inequality and physical health. We use data collected between 2000 and 2011 by the Demographic and Health Survey in as much as 52 low and middle income countries. Our binary logistic multilevel models reveal that higher wealth inequality is significantly associated with worse physical health, but this relationship is weaker and ultimately statistically not significant when individual and countries' resources relevant for health are taken into account. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly explained by compositional effects while the health institutions have a limited role for improving physical health. Based on our results we cannot endorse the idea of a true contextual effect of inequality on health, at least not in the low and middle income countries or in relation to physical health measures.

Are the Chinese Saving for Old Age? The Precautionary Motives of High Household Savings

The one-child policy in China, put in force in 1979, converged with the macro-economic developments over the last two decades. The Chinese GDP increased at an annual rate of 9% between 1995 and 2010. Poverty had declined from 65 percent of the population in 1981 to about 13 percent in 2010, lifting hundreds of millions out of poverty at an unprecedented rate. The share of household savings more than doubled to approx. 25% of disposable income, the highest saving rate in the world after India.

As the parents of one-child generations grow older, the steep demographic changes pose increasing insecurity. The old-age dependency ratio - number of people over 65 for every person of working age - is expected to double over the next two decades. What kind of policies the Chinese central government initiated to prevent old-age poverty and the overburdening of the middle generation? And, is the high household saving quota an indicator that the Chinese are aware of the financial risks of longevity? Though the Chinese government launched various pension programs, these payments are not yet adequate for older Chinese to make a decent living. Therefore, we assume the high household saving quota has been an indicator of the awareness of the risk of longevity, though many other theories are proposed. We analyse the correlation between pensions and savings whereby those entitled to pensions are expected to save significantly less and hypothesize that these two are more or less communicating vessels.

First we analyze China's transforming economy and household income from the perspective of the growing dependency rate. Because we are interested in the question if the Chinese are preparing for old age, we analyze the data from the China Health and Retirement Longitudinal Study (CHARLS).

Active Aging in East and West Germany. Life-Course Influences in a Formerly Divided Country

When it comes to life courses of older people in Germany it has to be taken into account that they had been living in different countries and political systems for decades. Next to highly different experiences of life in youth and midlife, people aged 60 plus nowadays have been socialized within very different cultures of old age. Material living conditions of retirees, employment rates in later life, social images as well as social expectations towards older people were quite different in the former GDR and FRG. Whereas older people in the Western part were pictured as retirees, enjoying leisure and earned repose, elderly in the GDR were seen as veterans, who had fought against fascism and capitalism. They were continuously addressed as productive parts of the socialist society, while the living conditions were rather precarious at the same time. However, it is not just the different settings before 1989 that make a difference in people's life stories, but also the experiences following the re-unification, namely the wide-spread unemployment in the new federal states. At the same time, the Western model of early retirement and deserved disengagement has been challenging since the early 1990s, too, giving way to a re-negotiation of old age as an productive phase of life. The presentation asks, how in far the different experiences of life before and after re-unification influence how older people think of and cope with this development. Are we witnessing changing East-West-differences or even profoundly different age cultures? The presentation is based on empirical findings from the research project “From retirement to active aging? Images and practices of old age in the transformation of the German welfare state after reunification’’ – drawing on biographical interviews with elderly from the Eastern and Western part.

**VAN DYP, SILKE** (University of Jena, silke.vandyk@uni-jena.de)

Ageism in Times of Population Aging. Rising Awareness and New Forms of Discrimination

Age and aging have become highly popular issues in industrialized countries recently – namely in a twofold manner: Next to doom scenarios on population aging and increasing costs, older people have been discovered as active, productive and successful citizens, which is particularly true for the non-frail and healthy elderly. Each of the notions, no matter if it comes to activity, productivity or success, revolves around the idea that older people are capable and relevant, and being able to contribute productively to the public good, serving for themselves and others. Though often instrumental with regard to elderly's resources in times of population aging, negative age stereotypes are challenged in new ways: We establish a rising awareness towards discriminatory effects of age stereotypes as well as various political and academic endeavors to foster positive images of aging and old age. However, this attempt turns out to be at least ambivalent when it comes to ageism: Since the rising awareness is mostly about the supposed “unjustified” negative stereotyping of capable “young retirees” and older workers, discrimination against older persons is rather deferred to dependency as older age than fundamentally challenged. Moreover, the strong focus on achievement, productivity and success in old age generates new constraints for those who do not fulfill these criteria and who are indeed frail or demented and dependent on care. Against this backdrop it is the aim of the presentation to debate on whether and in how far the new appreciation of capable so-called “young-old” finally produces new age inequalities. Since awareness of ageism as age-based discrimination is much more advanced in liberal Anglo-Saxon countries than in continental Europe, the presentation opens up comparative insights to this ambivalent configuration from Germany and the US.
Workplace innovation increases the quality of working life and the organizational performance (Oejj e.a., 2012; Kramer e.a., 2008). Moreover, the European Economic and Social Committee (2011) underlines that workplace innovation is essential for the future of Europe. The sociotechnical theory stresses that workplace innovation need to take place by an intervention in the technical system and in the social system (De Sitter e.a., 1997). In the social system, workplace characteristics (e.g. job complexity and job autonomy) influence the quality of working life and the organizational performance (Kramer e.a., 2008). Consequently, workplace innovation need to stimulate an optimal balance between workplace characteristics. Smith e.a. (2008) show that European countries differ in workplace characteristics.

This research examines, inductively, the conditions which cause different workplace characteristics in European countries. In addition, country level conditions such as welfare regime, union density, participation rate and varieties of capitalism will be used in the analyses. The European Working and Condition Survey will outline the aggregated workplace characteristics in the different European countries.

stood, secondly, in its 'singularity' (Foucault 2000). It will be argued that it is not simply the re-emergence of Lomboko and Homo Criminalis because the question that should be asked is precisely how the new biocriminological approaches problematize crime, criminality and contemporary crime control in radical new ways. This singularity of the bio-criminological program will be analyzed, thirdly, by a study of the strategic case of 'neocorporatism' (Bain 2013). This paper explores its claims, assumptions and how this involves a change in the government of self, others and the state.

*Who Benefits from Internet Usage? the Digital Divide of Mobilized Online Resources*

Several studies have shown that the higher educated possess more or better Internet and computer related skills, such as the ability to find and process information. This implies that Internet usage should therefore also be more profitable for the higher educated, which is something that has not been studied often. We study this profitability of Internet usage in terms of the resources that people mobilize through their Internet usage, and we examine whether the higher educated mobilize online resources to a greater extent than the lower educated.

In order to learn more about these mobilized online resources we look at negative life events that are experienced by respondents and the way in which they dealt with those events. We analyze newly collected data from a questionnaire that was designed to test an inventory of online coping resources. This inventory consists of seven dimension of online coping (with 3 items each), such as emotional and instrumental support, active coping, and finding distraction.

We hypothesize that the higher educated mobilize online resources to a greater extent with regard to all seven dimensions. This challenges some of the insights of social capital research, which often finds the extent of emotional support to be unrelated to social status. Moreover, unlike what is normally found with regard to offline networks, the support comes from weak ties relatively often.

*Humans, Animals, and Morality in a Nature-Inclusive Sociology*

Disruption of natural systems and depletion of natural resources have become major concerns in society, both in their global reach and in their local impacts. Natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of the social world. Sociology has to embrace these insights in its analyses, not by abandoning its hermeneutic method. Starting from these tenets, this paper sketches principles of a nature-inclusive sociology, building on studies of Moscovici and Foucault, and on earlier work of the author. In applying and elaborating these principles it explores the social implications of the commonalities of human and animal bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper then sets out to describe a social practice approach to human-nature relationships that gives due attention to natural science findings and natural system dynamics while leaving intact the role of human agency and responsibility in protecting our natural world.

**VAN KRIEKEN, ROBERT*** (University of Sydney, Robert.van.Krieken@sydney.edu.au)

*The Celebrity Logic of the Global Financial Elite*

This paper examines a particular aspect of the development of a global financial elite, its organizing around the production of particular kinds of celebrity CEOs and financial ‘stars’ which then intersect to form alliances with those at the peak of other elite fields such as sport, entertainment, journalism, and science. The analysis looks at the workings of what Robert Merton called the ‘Matthew effect’, which concerns the ongoing accumulation and leveraging of advantage, and how it works across a variety of fields including finance, to produce a global system of ‘over-clubbing elites’. In a sense the paper is an attempt to re-work C. Wright Mills’ *The Power Elite* for the present day, looking at the performative aspects of the global financial elite and the competitive demands placed on the presentation of self and representation of elite status. The overall aim is to show how the process of ‘refeudalization’ outlined by Sigfried Neckel has its core the production of global celebrity across a range of field, as the contemporary version of a global aristocracy.

*Child Benefit Reforms and Principles of Redistribution*

Child benefit systems embody objectives of horizontal redistribution (i.e. from families without to families with children) as well as vertical redistribution (from high to low incomes). These objectives are embedded in the characteristics of the child benefit system: is it universal or selective, or a combination of both? In this paper, we use these principles to position the current system of child benefits in Belgium in terms of horizontal and vertical redistributive outcomes. As an indicator of vertical redistribution, we use the impact on income inequality and poverty, as well as how these benefits are distributed over income groups. We also present a measure for horizontal redistribution, trying to capture the fiscal flows from families without children to families with children, as well as between families of different sizes. Using the microsimulation tax-benefit model MEFISTO/ EUROMOD, we calculate vertical redistributive effects of the current system (baseline scenario) in terms of inequality and child poverty reduction. Our approach is innovative in that we take into account actual costs of childrearing based on a normative budget standard, and not only rely on the modified-OECD scale. Next, we calculate the effects of a set of alternative scenarios of three extreme positions: a fully universal system, a strongly income selective system and a strong categorically selective system. What balance between horizontal and vertical redistribution is struck by these different scenarios, compared to the benchmark of the baseline? We conclude with the outcomes of a mixed system, and some generalizable recommendations for policy makers to combat child poverty.

*The Doctor-Patient Relationship: Inequality in Pain Construct*

The doctor-patient relationship refers to the quality of interaction process; also to the influence and control that role players have within the relationship. This signifies the notion of inequality of experience as well as the perceived and actual outcomes thereof. The objective of the research was to explore the assumption that there is a correlation between patient consultation and anticipated and actual levels of pain reported by males and females who were operated for knee and hip replacement in Libya. The research questioned the impact the doctor-patient relationship has on the ‘pain construct’ that allowed exploration of the ‘divide’ between the role players, amongst other variables the influence of gender and culture. Face-to-face in-depth interviews were conducted with medical doctors who undertook the surgery and with patients, while observations were carried out during doctor-patient consultation sessions. With reference to gender, more male than female patients experienced a higher level of organic pain than anticipated prior to surgery, and both male and female patients experienced higher organic pain levels who had not received ‘informing consultation’ prior to surgery. These findings indicate that ‘inequality’ of doctor-patient is still prevalent in some societies highlighting cultural factors at play, while it also poses the question to what extent congruence of ‘pain construct’ can be attained through a doctor-patient relationship that is characterised by actual and perceived narrowing of the divide ‘traditionally defined’ by control and influence.
The Multidimensional Spatiality of Citizenship: Understanding Tensions in a Mobile World

While theoretical discussions generally assume citizenship to be anchored in a particular geographic community, little attention has been devoted to how the geography of citizenship should be conceptualized. This paper argues that scholarly disagreement about the public nature of citizenship has over the years displaced the question of how to think citizenship spatially. The result of this is that political sociology still silently draws on the outdated idea of citizenship as anchored in a national and homogeneous territory with clearly delineated borders. In an age of increasing cross-border mobility however, territory is no longer the only, nor necessarily the most important, spatial form citizenship can take. In this paper I will therefore firstly propose a typology for understanding the multidimensional spatiality of citizenship. The typology stems from an engagement with social geography, and distinguishes four spatial forms of citizenship: territory, scale, place and network. Secondly, I argue that the different dimensions of citizenship are not disconnected, but linked up with the spatial typology ‘ zone ’ received in statist terms as a legal status and rights entitlements, citizenship is structured in a ter- ritorial or scalar fashion. Understood as a practice of participation and belonging, citizenship is anchored in a place or a network. Thirdly, the paper ends by dis- cussing the possible tensions derived from this multiple spatiality of citizenship. It does so by elaborating on the example of cross-border workers in the enlarged European Union. As a single space for free movement and labor, each European citizen can work wherever she wants on the territory. From the perspective of rights entitlements however, connections to the national level remain strong, leading to tensions between territorial mobility and scalar fluxity. Simultaneously however, belonging and identification often remain grounded in a local place of origin, or become dispersed across space in networks of (ethnic) affiliation.

The governmental management of mobility is a crucial way in which contempo- rary Europe is being made. Images are part and parcel of the increasingly elabo- rate network of organizations, expertise, legal codes and material infrastructures set up to manage the ‘desirable’ and ‘undesirable’ mobility across EU-borders. Visualizations of registered data, routes, maps, risks, opportunities and uncer- tainties are implicated in governmental attempts to gain overview, anticipate the future and authorize control. However, these images of governmental surveil- lance and security exist and become visible in a wider field of image production and dissemination. State institutions are far from alone in their attempts to see and disclose ‘what’s going on at the border’. This paper will analyze the relations between images implicated in border management and alternate visualizations of cross-border mobility. The latter concern the work being done by NGOs, ad- vocacy groups, political actors and activists. More specifically, illegalized migrants themselves work to make themselves visible in circumscribed ways, often to claim rights and gain political agency in highly precarious circum- stances. How are images and the craft of making them copied, translated, dis- figured and redeployed within this field of images? How can we conceptualize affinities and contradictions between different visualizations in order to assess multiple ways in which ‘Europe’ and ‘not-Europe’ can become visually enacted? Images and their interrelations may both confirm, contest and confuse existing imaginaries of ‘Europe’ and its ‘outside’.

hybridize non-Latin and Latin musical genres to argue for pro-indigenous equality and student rights. Finally, they obtain information from global sources to argue for policy changes on issues pertaining to the environment, same-sex rights, and Latin American sovereignty.

Amidst this turn to what can be seen as globalized ethics, we draw from Latin American youth studies literatures to argue that the outcome of this transformation requires scholars to pose young people’s relationship to politics as a question in need of investigation rather than assuming a pre-defined relationship. As youth from Latin American imagine the future from global vocabularies, they seek to transform the nation: the local, the local, and the personal. Rather than localities serving as a barrier to cosmopolitan outlooks, Latin American literatures on youth political activism indicate that an awareness of an unequal world is embedded in transforming the immediate spaces in which they live.

Life Course Pathways to Later Life Wellbeing: A Comparative Study of the Role of Socio-Economic Position in England and the U.S.

A main paradox in comparative social epidemiology is that subjective wellbeing in the U.S. tends to be higher than in England in later life, although physical health is similar. To all these studies (Banks, Marmot, Oldfield, & Smith, 2010; Zevin et al., 2010). One proposed mechanism, the differential distribution of education and wealth in both countries, is at the core of this paper and will be extensively tested. Multiple measures of wellbeing, such as depressive symptoms (Radloff, 1977), satisfaction with life (Diener, 1984), and more eudemonic approaches to wellbeing such as CASP (Hyde, Wiggins, Higgins, & Blane, 2003) and psychological wellbeing (Ryff & Keyes, 1995), will be considered. Using a growth curve approach that investigates not only differences between people, but also within people over time, we will investigate to what extent life course approaches to socio-economic position, such as accumulation, social mobility or latent period, explain baseline differences and rates of change in wellbeing in later life. This analysis will be conducted using multiple waves (2002-2012) of two sister studies of ageing, the U.S. Health and Retirement Study (HRS) and the English Longitudinal Study of Ageing (ELSA). Both panel studies have a large, representative sample (N~20000 for HRS and N~10000 for ELSA) of the community residing population aged 50 or more and contain comparable information on a wide array of life circumstances, among which gender, marital status, health, and both current and childhood socio-economic circumstances will be the most important for this analysis.

TAGGART, JONATHAN (University of British Columbia)

In Love with Place: Off-Grid Living and Place-Making

Why do residents of Western world live off the grid? This presentation provides answers to this question. The expression “off-the-grid,” refers to the living condition of a household or a community lying outside the electricity and natural gas infrastructure, but often also denotes disconnection from other infrastructures such as municipal water conduits, natural gas pipelines, road networks, garbage and waste collection, food supply chains, and telecommunications. Drawing from and contributing to the literatures on sense of place, rural studies, and voluntary simplicity we argue that while off-gridders embrace values typical of the voluntary simplicity philosophy, their biographical and geographical trajectories reveal that living off-grid is not a clear and free choice. The performance of the mundane complexities typical of the lifestyle renders off-grid living a uniquely radical, but also contradictory and even paradoxical, constellation of practices through which new marginal spatialities are constituted. Drawing from ethnographic fragments culled from a multi-sited ethnographic project unfolding across Canada we present a thickly descriptive look into the motives and lifestyles of off-gridders.

Controlling the Social Cost of Local School Markets?

Education policy is evidently in a state of change across industrialised countries. The fragmentation of modernity has manifested in a local government reforms, privatisation and agencification, whilst the core executive’s capacity to steer has eroded. In toto, a wide variety of endeavours to move away from the firm idea of state-funded, state-controlled and state-provided compulsory education have emerged. Along that trajectory the Finnish compulsory education system shifted during the 1990s from one of the most centralised to one of the most decentralised. Consequently, segregation between municipalities, residential ar

eas and families has emerged also in Finland, and the variation between schools, measured by PISA scores, has recently increased.

Our aim is to elaborate the Finnish local spaces for school choice, and the ways in which the negative outcomes of school choice and overall diversification are governed by contrasting three distinctive local contexts. By analysing administrative statistical and documentary data, we aim to model how local authorities respond to novel, local, inequalities, and the demands of freedom to choose and equality of opportunity, simultaneously.

Our analysis models three different sets of policies in the municipalities in Metropolitan Helsinki (Helsinki), (first (the municipality of Espoo), the local institutional space for school choice is constructed in favour for choice, without any current policies for positive discrimination. Second (Vantaa), school choice is more restricted, the policy is to prevent segregation by emphasising the uniformity of schools. Third model is ‘very pro-choice’ (Helsinki), where the policies to prevent segregation have included actions in regional policy and direct positive discrimination to schools located in sub-standard socioeconomic status neighbourhoods. By revealing the diversified policies concerning positive discrimination and other forms of control of negative externalities, we discuss about the formations and estimations of social cost for school choice.

Assessment of Managerial Skills in a PSO: The Eufor Case and Its Capacity Building Role

The European Union (EU) launched a military operation in Bosnia and Herzegovina (BiH) in 2004 named “EUFOR - Operation Atleea” to assist Bosnia by ensuring safe and secure environment and conducting capacity building and training tasks in support of the Armed Forces Bosnia and Herzegovina to facilitate their progress towards EU and Euro-Atlantic integration.

In the meantime, militaries directly and indirectly are suffering from spending cuts and efficiency and effectiveness have been core issues of defense forces. Eventually this emphasizes a better assessment of training of military personnel in peace operations. The current attention is focused on how to train prospective military personnel for asymmetric warfare. Developing management skills may have better PSO outcomes. The aim of this paper is to assess the managerial skills of EUFOR peacekeepers from participant perspective and to emphasize the individual capacity building role of PSO experiences in removing the training deficiencies of peacekeepers. The research will also try to discuss wide-ranging impacts of asymmetric warfare on the officer profession, military training and education. Ten different managerial skills (leading, decision making, stress management, team working, problem solving, team working, motivation, and conflict management etc.) un...
Independent film production, characterized mainly by its low budgets and by the absence of a hierarchical division of labor, acquires increasing recognition by consecration instances of traditional Brazilian cinema. It is also notable a proliferation of specific instances – such as independent film festivals or distribution companies focused on independent production –, which may indicate the beginning of an autonomization process.

Here we bring empirical data to situate the contemporary independent production in the large Brazilian cinema field and especially to show how reputation and consecration here are constructed in opposition to the values/practices of industrial cinema. And it means not only the adoption of certain aesthetic positions, but also the adoption of some practices in terms of social organization of production.

We also call attention to the fact that, among the independents, consecration sometimes brings the “reverse effect” of threatening the representation of independence – which is a subject of dispute.

How to understand independent agents, for which categories as dominant or dominated, established or newcomers, are all unsuitable in some extent? How to analyse the construction of consecration in a context where the many forms of institutionalization (including some kinds of recognition) may threaten the very condition of “independent”?

VASEY, HUW* (University of Manchester, huw.vasey@manchester.ac.uk)

Diversity and Inter-Ethnic Marriage – An Agent-Based Approach

Inter-ethnic marriage, both a cause and a consequence of immigrant integration, is generally used to imply that the social distance between groups is low and, by extension, that community cohesion is high. The decision to marry outside (or even within) one’s group is often regarded as stemming from individual preferences and opportunities for contact. However, many anthropologists and sociologists have noted that culture-specific norms of kinship and reciprocity have a profound effect on who may be seen as eligible partners (Ballard 2008; Gardner 2006), echoing segmented assimilation theory’s focus on the importance of community and family influences in shaping assimilation processes.

Using a descriptive agent-based modelling approach, we seek to investigate the patterns of partner selection in diverse communities, focussing on individual preferences, opportunities for contact, and group norms to uncover how these may lead to differential rates of inter-ethnic marriage. Agent-based approaches provide an ability to study ‘global’ phenomena simultaneously with their causal ‘local’ processes (and vice-versa) in a dynamic setting. They allow us to investigate the development of population-level phenomena from a simulated ‘local’ social space of norms and values populated by acculturated agents familiar to sociologists, potentially providing insights into community cohesion and inter-ethnic marriage which would not be available from other sources. Whilst agent-based models of inter-ethnic marriage have been developed previously, they have overestimated rates of inter-ethnic marriage and largely ignored the group-level processes necessary for a global understanding of inter-ethnic marriage. Utilising research and evidence from quantitative and qualitative sources from across the social sciences, we thus seek to develop a complex model of emergent processes of differentiation and change in the marriage patterns and social cohesion of migrant communities.

VASILIEVA, LESSYA* (docent, lessya-vasilieva@ya.ru)

The Quality of Political Elite and the World Crisis

The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. The representatives of elite have such mental qualities as sophisticated cognitive intellect, diverse range of behavior and social attitudes and aims allowing them to bring maximum benefit to the society. The ersatz-elite have some common qualities with elite. But its representatives haven’t diverse range of behavior and their ideas of values are mainly targeted at satisfaction of personal interests not regarding public. The representatives of elite and ersatz-elite are presented on all levels of social hierachical pyramid. The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. Ersatz-elite introduce or develop social mechanisms depriving people of any control over political machinery. It turns out that in political and economic spheres of society deficient motivation and deficient satisfaction of basic needs are indifferent through political difference, social and economic frustration.

The present crisis does not have only economical but mainly social roots and cultural effects. It needs to specify the term Social Rent with new scientific definition. An equivalent formulation may be given in terms of the social parasitizing when given such a status by government. Social rent is a form of unecomonical compulsion. It is necessary that such status must be admitted by productive, market and state forces. The power and economical monopolies are the social factors which are converted into settled rent factors. Institutionalization of social rental relationships destroys economic and social competition.
The main subject of social rentiers is the ersatz-elite. As they develop and become the ruling class, the economic and political systems either arise with seizure of new resources or destroy themselves.

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

The paper problematizes the literary text that becomes a subject of the sociological analysis when representing social processes and phenomena as well as social practices of certain groups. The narrative analysis reveals a deep structure of the text reflecting values, norms and social attitudes used for describing social groups and social processes. The analysis correlates with structural hermeneutics of G. Alexander implying sociocultural research of semantic structures of the modern mass literature where social myths and archetype's are updated, serving as interpretive models to explain and organize (construct) the social world.

The paper aims to show the results of the empirical research while proposing an original method of the narrative analysis of 18 American female novels, top rated in the largest specialized websites. The method synthesizes various courses in narrative analysis (event-structure analysis by D. Heise and L. Griffin), structural approach (R. Barthes, V. Propp, T. van Dijk) and K.Yung's theory. It consists in constructing a causal sequence of narrative events interpreting it in the context of the social myth. The method's steps include:

- studying the life course of the heroness;
- selecting significant events (based on structural indicators);
- narrativization of the chosen events using the grammatical approach (verbs as action highlighters);
- forming causal sequence of the events;
- detecting the general narrative structure interpreted in the context of the social myth.

The resulting narrative schemes form 3 basic archetypical female role-models within the cosmonogst myth and can be considered as interpretative patterns for describing gender role transformation in modern American society. The results of this empirical research can be verified in the context of feminist and post-feminist theories.

Integracism At Work. The Case Of Germany

This paper further explores the notion of integracism, which has been introduced by the author briefly in a previous paper. The notion of integracism refers to a specific interpretation of the notion of integration with implicitly racist assumptions. This racially biased and ethnocentric notion of integration frames the meanings of managing ethnic diversity in Germany. Integration policies and management measures are deployed to 'aid the better integration' of ethnic minorities, who are widely seen as deficient and difficult to integrate, rather than adopting diversity management measures to foster equality, fairness and inclusion at work. In that frame, ethnic diversity is depicted as a source of potential problems. There is a surge in the use of the concept of integration in management of immigration, not only in Germany, but also in France and in the UK in recent years. The notion of integration is the dominant concept in the management of ethnic diversity in Germany. The aim of this paper is to examine the corrosion of the notion of integration with racial bias, which undermines the overuse of opportunities at work. Arrangements of integration for immigrants include requirements of extensive documentation, training, point based calculations based on qualifications, economic wealth and experience, citizenship rituals. Most of these requirements are highly variable, based often on racial profiling. It could be argued that these politics and practices of managing ethnic minorities and immigrants are not as innocuous as they may seem at first sight. This paper shows how ethnocentrism and racial bias influence employment practices, leading to the exclusion of highly skilled ethnic minority workers.

The paper operationalises Bourdieu's key concepts, field, habitus and symbolic violence and draws on a large qualitative study based on more than 40 interviews, a case-study, focus group as well as visual material and a research diary.

Bringing History In: The Management Of Ethnic Diversity In The Shadow Of German Nazi-Past

Diversity and equality concerns and patterns of disadvantage in the labour market are historically constructed, and they draw the framework of diversity agenda at the national and organizational levels. Therefore, attempting to understand the notion of managing ethnic diversity in Germany requires the acknowledgment of the importance of history in diversity management research. Drawing on data from a company case study and thirty stakeholder interviews, this article revealed the generative influence of history on the diversity management agenda. We demonstrated that the Nazi-past, and particularly the treatment of this past, casts a shadow on contemporary diversity management efforts in Germany, generating several points of resistance and blind spots in dealing with ethnic diversity of the workforce in a creative, resourceful and fair way. It is the ongoing and current treatment of history, rather than the history itself as an essential reality, which shapes how we generate meaning and frame life. We illustrated that the post-holocaust collective guilt, which must be seen as the treatment of the Ger-

v-vasilkova@list.ru
position or category within society, everyday world into the object of study, and generalize forms of consciousness into generalizations about people. We discuss the ways we have responded to reviewers and how this process has taught us more about the distinctive features of institutional ethnography as an alternative sociology.

La Adopción De Un Modelo Organizacional Como Estrategia De Comunicación Para La Transferencia Del Conocimiento y Tecnología En Centros Públicos De Investigación

El presente trabajo se plantea la necesidad de contar con un modelo organizacional como estrategia de comunicación institucional para la transferencia del conocimiento y de la tecnología en centros públicos de investigación de la región del Bajío, a fin de identificar la forma de comunicación más efectiva en materia de difusión de los procesos de transferencia de conocimiento y tecnología de cada Centro. Se parte de la premisa de que el conocimiento se presenta como el activo principal para la renovación y el progreso de toda sociedad, particularmente en organizaciones que se han creado con la intención de contribuir al progreso de la sociedad a la que se debe, fortaleciendo la economía del conocimiento, a través de la transferencia del conocimiento, y de la tecnología. Se concibe a los Centros Públicos de Investigación como sistemas vivos, en permanente movimiento, cambio, adaptación y evolución. La estrategia metodológica con la que se ha realizado la investigación, es desde enfoque cualitativo, siendo el estudio de caso uno de los instrumentos metodológicos. En este artículo se pretende mostrar formas para una adecuada comunicación institucional de los procesos de transferencia y tecnología en Centros Públicos de Investigación.

Alienation of Scientists in Post-Communist Europe

This paper focuses on the alienation’s problems of scientists: researchers in scientific institutes, centres and universities in Post-Communist Europe. This topic has not yet received enough attention, especially in sociological researches of these countries. After the clash of the USSR it was seen decreasing of scientific study especially in future it was found of science but also in humanitarian knowledge. This process was accompanied by cuts of wages of researchers, their social exclusion from decision-making process and growing alienation. From the other side many researchers went abroad from the countries of their residence and some of them began to participate in different projects and programs of foreign countries. They didn’t identify results of their researches with former homeland but linked their achievements with the place of present residence. This situation provoked appearance of the new forms of alienation. The paper analyzes manifestations and consequences of such alienation in scientific practices. I’ll try to give certain contribution to the discussion about alienation in Post-Communist Europe. How did dramatic social changes that had taken place in these countries stimulate growing alienation of scientific researchers in different Post-Communist countries? From the other side scientific cooperation contains reserved possibilities to help scientific researchers overcoming self-estrangement. Haw the changes of political life in their Homeland could influence their isolation? Thus the paper focuses attention on this background of people’s alienation. My analysis builds on media accounts, interviews with scientific researchers and data’s of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional alienation.

Identities through Big Sportive Events

This paper focuses on the identities’ problems of participants of big sportive events: Olympic Games, international championships and competitions. This topic hasn’t yet received enough attention, especially in sociological researches. In real practices of last years it was seen increasing of athletes who participate in different competitions as representatives of foreign countries. From the other side many fans go to the games identifying their self with sportive clubs and fan-movements and with their states. Thus the new forms of identities appeared. The paper analyzes the sources and manifestations of such new forms of identities in real sportive practices. I’ll try to give certain contribution that looks into the role of national factors and local cross-national relations in the region of the residence of big sportive events in formation of different identities. Many local places of international championships are characterized by multinational population with very long and complex history (London, Sochi, Rio de Janeiro, Tokyo and so on). Haw big sportive events impact on local, regional and national identities in different countries? From the other side sport contains reserved possibilities of cooperation and solidarity not only on the local and regional but also on the global levels, Haw the Olympic spirit and changes of political life in the Region of the residence of big sportive events could influence the choice of identities? Thus the paper focuses attention on this background of people’s identification. My analysis builds on media accounts, interviews in different organizations of people from the Organizing Committees of big sportive events and data’s of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

Why Sociological Theory of Happiness Falls Short

Happiness in the sense of life satisfaction is a psychological phenomenon in the first place. Consequently most sociological explanations draw on psychological theory, often implicitly and with little view on its limitations. A dominant perspective in sociology is that happiness results from comparison between perceptions of life-as-it-is and standard of how-life-should-be, which view fits with the notion that happiness is a social construct and as such culturally variable. Explanations in terms of universal affective appraisals and needs are marginal in sociology, as is wide biological sociology.

Though not suited for explaining happiness as such, sociological theory is apt for explaining conditions for happiness, societal conditions in particular. Empirical research shows that conditions for happiness are quite good in modern society, where its inhabitants live now longer and happier than ever in human history. Yet most sociological theorizing is about the miseries of modern society.

Some sociological explanations for this sociological short-sightedness are discussed.

Violence in Scholars Students in Latin America

Violence in Latin America has become into an issue that is growing and emerging new violence expression (Jiménez, 2009). Young people and teenagers are one of the social groups most affected by this problematic (See Youth Violence Prevention in Latin America and the Caribbean, 2013).

Mexican youth has been affected for this violence in the Latinamerican region violent dead between young people are growing more. In recent research the young people in the region (Alvarado, 2010-2012) one of the most violent places in Mexico is the secondary schools. This paper proposal shows the results about one exploratory research among students of this scholar level to know causes and effects on its social interaction find out prevention.

Violencia, Armas De Fuego Y Mortalidad Juvenil EN Mexico

La violencia en México ha ocasionado un alto número de víctimas -sobre todo entre los jóvenes- , muchas ellas provocadas por el uso de armas de fuego. Objetivos: Analizar el comportamiento de la mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México en los últimos 20 años e identificar factores socioeconómicos asociados a sus variaciones interesetales en el trienio 2009-2011. Material y Móodos: Con la información oficial sobre defunciones y 2010 por género, edad y estado; mediante un análisis de regresión múltiple se identificaron las variables asociadas a las variaciones interesetales de la tasa en el trienio 2009-2011. Resultados: En 2011 se produjeron más de 5,000 defunciones por armas de fuego, por lo que sería la primera causa de muerte más importante del país entre los 15 y 24 años. La tasa de mortalidad por armas de fuego se incrementó en 62% entre 2000 y 2010. Las tasas más elevadas se encuentran en hombres entre 20 y 24 años. Variables relativas al narcotráfico y el consumo de alcohol están asociadas a las variaciones de la mortalidad por armas de fuego en estos estados. Conclusiones: El aumento de la mortalidad por armas de fuego, especialmente entre los jóvenes, es un obstáculo para el incremento de la esperanza de vida en México. Este es un problema social y de salud pública que debe ser abordado de forma interdisciplinaria.

**Social Norms of Morbidity As Specific Factors in the Demand for Health Services**

Seeking professional medical help is caused not only by medical criteria health pathology. There is a complex system of social factors of the transition from the physical sensations of discomfort or psychological distress to get help from a professional medicine, i.e. make it socially relevant fact. This is the most important cause why the accounting treatment for medical help and he true morbidity can not match. The different access to health care for different social groups is the most actively discussed. The transition from Islam to modern secular factors and in countries and cities where the network of medical institutions sufficiently developed they are more important. This result was obtained in representative survey in St. Petersburg (2007-2011). The most part of them are the social attitudes, norms which give rise to refuse treatment in medical institutions and relate to the culture of health behaviors. This culture is very contradictory. Improving education increases the tendency of self-medication. Massive short duration diseases (e.g. ARDS) are treated within the family without recourse to occupational medicine in 75% of cases. Social attitudes of non-professional care are supported by the widespread corporate informal norms to continue work in diseases with partial loss of ability to work. Such practice is supported by other informal social contract employees with employers: rejection of the fixing of cases of the disease in the social insurance company. This and other identified dependencies suggest that the indices of morbidity are subject to change without unambiguous connection with the actual number of patients and the duration of their illness. Methodological conclusion: for the considered social and medical conditions the survey are necessary for the correction usual morbidity data. Conclusions on the basis of registration of patients who seek health care may reflect the actual changes of many factors

**The Indicator of External Validity As Aggregate Criterion Quality of Survey**

The external validity criteria in sociological survey methodology and practice are used rarely. The exceptions are electoral polls. The well known Gallup and others polls obtained the trust of public and professionals due to external (predictive) validity, although the term had not yet been coined. The predictive validity is the simple and most convincing proof of the high quality of all elements and stages of such survey. The basis of application of the internal validity criteria is limited. Methods for assessing the external validity developed in psychology, medicine and experimental economics where in many research single target parameter and one external parameter analogue of an unbiased independent source are used. Therefore, in the most sociological survey various criteria of internal validity criteria are used for evaluation of survey quality. These methods allow to evaluate the common error for all variables of a survey under the condition that the sample is random. However the last few decades a number of difficulties with probability sampling have been cropping up in the expanding range of survey topics. The basis of application of the internal validity methodology has been shrinking too. The paper offers a few steps expand the application of criteria of external validity: - install for surveys on specific topics limit application of the criteria of internal validity - "unanswerable nonresponse rate" (nonresponse is the main factor that makes a non-random sample); - develop and apply external validity indicators for assessing the quality of a survey on selected topics - "item external validity"; - install ancillary questions in the questionnaire, which will compare the survey data with data from independent external sources. In our surveys of social settings in Saint-Petersburg (2007-11) we used as a measure of external validity and simple distribution, and complex calculated indicator of latent social phenomena.

**The Occupational Challenges of Female Architects in Iran**

The Occupational Challenges of Female Architects in Iran

In the recent decades, Iranian women's access to educational opportunities in architecture and professional fora has witnessed several radical changes. Women's urban planning and engineering education has been broadened. However, despite the considerable number of professional women with qualified success and technical expertise, patterns of gender inequalities have been sustained through traditional social and cultural systems. Some of the patterns of gender inequality are related to monopolisation of managerial roles by men at senior level and job polarisation in the field. Women are also often subjected to gendered cultural transformations. They participate in their interests, rights and gender equality both in the family and wider society in multifaceted and sometimes contradictory ways.

**Hierarchies of Middling Transnationals: Indian It Workers in Singapore -- CANCELLED**

This paper builds on emerging literature around ‘middling transnationals’ (cf Ho 2011). Drawing on empirical research among Indian IT workers in Singapore, the paper advances two propositions. It argues that there has been insufficient consideration of skilled migration in terms of national and racial hierarchies of opportunity, rights and conditions; and that so far, literature on skilled transnationals has been too receiving country driven. It is an interesting example of a highly transnational skilled occupation that has become associated with workers from India. It is argued that IT has become associated with India in ways that naturalise precarious forms of employment and attracts less favourable conditions than occupational categories more associated with White professionals. Using the example of Singapore, the paper argue that conditioning occurs via four intersecting factors. First, Singapore has a long-standing tradition of visa hierarchies which situate White, European transnational elites at the apex of the occupational hierarchy, and dark skinned workers from the Indian sub-continent at the bottom. Although ‘other’ transnational workers are often located near the bottom of these hierarchies, the perceptions of the recent flow of middling transnational skilled Indians builds upon this history of racial sorting. Second, we suggest consideration needs to be given to deeper social, cultural and historical analysis of how labour has been conditioned historically and in the present era in sending countries like India and how this in turn translates into conditions in receiving countries with regard to the treatment of workers accepted as ‘their due’ and what they consider to be normal. Third, we suggest a more global circulation of colonial era ideas of racial hierarchy continue to cast a long shadow even to the most modern of occupations like IT. Finally, IT as an industry has emerged as a quintessential post-industrial service industry characterised by highly precarious sub-contracting forms of transnational labour supply.

The Politics of Social Policy Expansion in Latin America

Welfare systems in Latin American countries have been significantly expanded during the post-liberal/corporativist social policy hegemony in the region today. After decades of a social policy based on social insurance programmes which tended to cover formal sector workers and their families, new social programmes have been introduced and coverage of existing ones has been extended to reach population groups previously excluded throughout the region. This expansion processes have been explained as an outcome of the consolidation of multi-party electoral systems, since parties in government now compete for the sympathy of the electorate by introducing policies that favour the majority, notably social policies. However, even if this perspective clearly demonstrates the impacts of democracy on welfare policy, it falls short of explaining the variations in the expansion models adopted in different countries. This paper aims to contribute to the existing literature on Latin American social policy by attempting to explain such differences, combining institutionalist and interpretivist approaches. The chosen case studies are Argentina, Brazil and Mexico, the three largest countries in the region, where different expansion models have been adopted. The paper examines and compares the socio-political arrangements that enabled and triggered the changes in each country. Findings show that the variations can be explained in terms of the effects of democratic transitions and the party systems that emerged from them, the degree of social mobilisation around social policy issues and the capacity of social movements to break with the neoliberal hegemony established in the region during the last two decades of the last century. Social welfare expansion, as a consequence, contributed to temper gross inequalities as well as to displace and redefine the fault lines governing social conflict. The article concludes with an outline of the main features dominating welfare policy in the region today.

Construcción De Una Secuencia Didáctica Universitaria En Modalidad Presencial Integrando Aplicaciones Para Ipad y Smartphones

La necesidad de innovar la práctica docente en el aula se hace cada vez más evidente ante la falta de interés de los jóvenes universitarios por el modelo tradicional de clase en donde predomina la presentación unidireccional de información. Con base a la reflexión de Díaz-Barriga (2013) sobre la importancia de construir secuencias didácticas diferentes que despierten en los alumnos el interés y la motivación de su aprendizaje, se presenta el resultado de analizar y construir secuencias didácticas innovadoras mediante el uso de aplicaciones y software para Ipad, Tabletas digitales y Smartphones de los alumnos. Esta investigación se inserta en el paradigma de la investigación-acción, para lo cual se ha conformado un grupo de profesores no especialistas en tecnologías de información y proveedores de diversas disciplinas que se enfocan en analizar y probar diversas alternativas tecnológicas para adaptarlas a las necesidades de educación y formación en el contexto de la Educación Superior en México. El resultado ha sido la selección y elaboración de una guía de uso de 3 herramientas de software diseñadas para el tipo de dispositivo señalado, que han permitido construir secuencias didácticas innovadoras presenciales enfatizando la interacción profesor-alumno y del alumno-alumno, permitiendo instrumentar una primera fase del Modelo Educativo de la Universidad de Guanajuato enfocado en el aprendizaje significativo y el desarrollo de las competencias deseadas del alumno.

Professional Interests, Organizational Goals and the Mobility of Football Players in Europe

The mobility of professionals has important repercussions for organizational performance and to a more subjective career success of the professionals involved. Within professional football, team quality is directly affected by the movements of players to and from the club. Transfers have a big impact on player careers as well, as footballers changing clubs increase their income or revitalize their career with a renewed chance on first team football. Whereas previous research examines these movements from the perspective of individual players, this study analyzes to what extent player transfers are shaped by the interaction between institutionally embedded organizational goals and the interests of footballers. Using event history analysis to estimate the probability that a player moves to a different team, I argue that player transfers are a function of the location of an organization in the field and the position of a footballer in his team. In general, fringe players are more likely to move. This is especially so for high status teams, where such players move to pursue their interest of first team football. Moreover, players of underachieving high status teams are bound to be transferred, as the club lets go of the players it blames for its relatively low performance. This contrasts with the transfer probabilities of players in low status teams. The key players of these teams have a higher probability to move, as they are looking to increase their career rewards by moving to a higher placed team. Moreover, key players in overachieving low status teams are particularly likely to be transferred, as such teams sell their best players to cash in on their hard earned success.

In sum, this study highlights how professional labor mobility is shaped by the interaction between the institutionally defined interests of professionals and the goals of the organizations they work for.

Gender Asymmetry As the Barrier of Political Modernization in Russia

Considering activity of the women organization in the context of Russian political life we establish the fact of gender asymmetry in Russian politics. Representatives of women in Parliament (State Duma) vary from 10% to 14%.

The main features of social context determining gender asymmetry are the following: feminization of poverty, latent labor discrimination; Social and cultural inertia accompanied with gender stereotypes; Ignoring gender interests in political sphere. As the result one can see marginalization of women in the political and economic spheres. We consider Globalization as the factor inspiring political activity of women in Russia and analyze role of more than 1500 thousands women organization and pay attention to the positive dynamic of their activity. Most of them act in social sphere (Maternity and childhood protection (39%), The help to socially deprived groups (29%), Providing of public services and amenities to city environment (29%), Healthcare (21%) and Education (22%), Protection of social interests (13%), Human rights (10%).

Main reasons of low representative of women in Politics can be described in different terms: Peculiarities of political socialization; structural factors (unequal distribution of resources owned by men and women; situational and biographical factors. For many years even the very consideration of the Law “On guarantees of equal rights and equal opportunities for men and women” was blocking. The Law about quotas for women in the party lists also was not adopted, despite the extensive discussion in the information and the public sphere. The trend of gradual increase in the proportion of women MPs in the federal and regional legislatures is very slow.

Hidden discrimination in the political sphere restricting activity of women leads to the different problems of social sphere.

Parliamentary Debates on Ritual Slaughter. a Contextual Discourse Analysis

Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis

During the last three decades the visibility of religion has increased in the public sphere of many European societies. This has not only to do with the arrival and settlement of large numbers of Muslims and other non-western immigrants in these countries, government policies for managing religious and ethnic diversity, but also with political agenda setting of powerful secular forces. Illustrative for this is the political debate on ritual slaughter in the Second Chamber and the Senate of Dutch parliament in 2011, initiated by the Party for the Animals. In this presentation, the argumentation used in this debate will be analysed from the perspective of contextual discourse analysis. The arguments will be related to features of the main participants in this debate as well as to the wider context of Dutch politics in the wake of “9/11” and “the Fortuyn revolt” in 2001. These events have contributed to a reframing of Dutch identity in cultural and secular terms. Within the new created frame religious issues such as Jewish and Islamic ritual slaughter are defined in opposition to secular Dutch identity.

Criminalizing Inequality: The Narratives of Women Formerly on Death Row in the Philippines

This paper delves into the pathways to prison of women who once received the death penalty in the Philippines. Drawing upon extensive participant observation at the only two existing women's prisons in the country and in-depth interviews with 27 former death row inmates, I examine how the women framed the circumstances that brought them to death row, based on their understanding of their identities, relationships, and social worlds. I analyze the link between the women's histories of victimization, social and economic marginalization, and substance abuse problems and their crimes. I also consider how the experience of deception and betrayal in close relationships, compounded by corruption in the criminal justice system, constituted a pathway to death row for the majority of the respondents. I discuss the implications of their narratives for the discourse on women and crime.

The women in my study were largely in marginalized positions in their families and relationships, at work, and in society in general. Their crimes resulted from their efforts to survive on a day-to-day basis and cope with their circumstances. Their narratives reflect many facets and social realities of low-income and working-class culture in Philippine society. Their accounts of victimization, violence against specific men and even women and children, drug abuse and/or drug dealing in response to social and economic marginalization, cooperation with illegal activity as a result of relational responsibilities, corruption on the part of government and law enforcement agencies, and family problems are heterogeneous, and often connected, illuminate the contours and dynamics of their conflict-ridden world. My paper exposes the challenges to the dominant discourse on women's crime, as illustrated by their narratives—as predominantly low-income women in a postcolonial, low-income nation enmeshed in poverty and institutional corruption.

Microblogging and Macro Weather: Climate Change Risk Discourse on Twitter

The social web represents a new arena for local, national and global conversations and will play an increasing role in the public understanding of science and the creation of risk discourses. This paper presents an analysis of climate change social representations on Twitter, analysing over 60,000 tweets collected using a random web method. The analysis includes a combination of web metrics, latent semantic analysis and semantic network analysis. Results indicate that most active users on climate change are distributed according to a power law distribution and that web metric indicators suggest a moderate conversation on the topic. In terms of content, there is a remarkable complex network of topics that hints to a rather multi-dimensional and complex risk discourse accounting for complex causal links between climate change and natural, social and economic consequences. Most of the tweets cluster around the domains of the effects of climate change, the measures that are proposed to adapt to it, the policy debate between policymakers and energy industry and call for actions for offline events. Moreover, the media economy of the tweets, the web links shared in them, are from a wide set of sources with a major role played by traditional media but with a substantial presence also of scientific journals and NGOs websites.

Psychology and Learning Difficulties

In the context of a sociological thesis conducted in France in primary schools, the focus has been on the issue of the diagnostics and devices used to help children with learning difficulties. The purpose of this paper is to analyse the role of psychological approach in the management of academic difficulties. In the attempt to understand how the family, the mother figure in particular, are blamed for the learning difficulties of their children. It will be seen that the lifestyle and educational habits of families are analysed by teams of professionals, and that when considered as deviant, they suggest help to the family. Indeed, from the professionals perspective, these learning difficulties are due to family dysfunctions, and educational deficiencies of the parents. This would damage the mental functioning of the child and lead to difficulties in their learning. In schools where children are mainly or exclusively of modest background, it seems that these psychological approaches are nearly exclusively the methods being used. Thus, children going to these schools are more likely to be diagnosed with mental illness than in a school with students from the upper-class. This psychological tendency to put the responsibility on the family or the child for his failure, while ignoring the issue of the gap between the culture of the school and the one of children from modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that the psychological approach used by teachers allow them to suggest reasons for the difficulties faced by children and to put in place solutions. Indeed from a psychological perspective, the parents are seen as ‘actors’ of the success or failure of their children. The challenge for schools is then to accompany parents to transform their habits and their way of parenting.

Changing Trends In Migration Flows From Mexico To The United States

Although some observers tend to view Mexican migrations to the United States as a common socio demographic phenomenon due to the vicinity of the two countries in the context of unequal economies, late drastic reduction in migration flows from Mexico to the United States pose several questions. In the views of some analysts this is mostly associated to the security measures practiced by the U.S. government on its southern border after September 11, however there are other indications that point out in a different direction suggesting that these changes might be associated with a set of several factors in which demographic variables along with economic, labor market and political ones are closely interconnected, or if not is the case they coexist and interact in the same political arena.

One further aspect of this phenomenon has to do with the repatriation to Mexico of huge numbers of irregular or undocumented migrants most of whom were previously residing with their families in the U.S. On another dimension there has also been the changing characteristics in the flows of Central American migrants crossing Mexican territory on their way to the United States. This new trend has been offering a challenge to Mexican authorities with new implications to the legal Mexican political framework.

One objective of this paper is to offer data and information related to the kinds of changes that have taken place lately not only in terms of Mexican migrations to the U.S., but with respect to the different political actions in the U.S. as well as in Mexico with reference to Central American migrants crossing the country and staying in the country.

A second objective is to interpret these new modifications at the light of other general changes especially those concerning the “management” of migration flows by other governments.

The World Bank and the Global Governance of Social Policy: A Strategic-Relational Approach to the Education Case

The World Bank’s original mandate did not include education, but its involvement in the education policy and reform has grown substantially since the 1960s. Today it is widely recognized as the most powerful and hegemonic of the international organizations operating in the education for development field. The Bank is the largest single international funder of education for development in low-income countries, and its technical and knowledge-based resources (human and capital) countries over those of other international institutions. This paper develops a global governance approach for understanding how the World Bank’s agenda and policy outcomes in the education field have been constructed and have evolved with the passage of time. According to such an approach, research on agenda-setting in international organizations (IOs) needs to focus on three main dynamic: the political opportunities created by geo-political and ideological shifts among the most powerful member governments; the IO’s relationships with borrowing (or “client”) countries; and finally the internal dynamics and organizational culture of the IO’s own bureaucracy as it aims to reproduce itself and manage shifts in the previous two dynamics.

The paper explores how these three dynamics interact in the constitution of the Bank’s educational agenda and policies in four key periods: from the 1960s to the beginning of the 1980s, when the debt crisis exploded in many developing nations; from 1981 to mid nineties, a period marked by structural adjustment lending; from the mid nineties to 2008, when the Post-Washington consensus emerged; and from 2008 to present, characterized by significant shifts in power in the world system and an accompanying rise of strategic uncertainty at different levels within the Bank.

Learning from Informality? A Case Study to Rethink the Misfit Between Formal Policy Strategies and Informal Tackles of Citizenship

Dutch disadvantaged city neighbourhoods face a wide variety of policy strategies to regenerate housing and public spaces, integrate migrants, support families, and make these urban areas safer and more attractive to the middle class. Residents of these areas, however, use these different strategies of informal tactics to deal with threats and develop community activities from the bottom-up. Informal practices – like everyday routines, tacit use of public spaces, and interventions at a square – tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the public sphere as governments hold on to formal repertoires. Recent needs for welfare care for violent eldercared make local governments eager to rethink citizen’s involvement. How could sociologist but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in the unhandy mismatch between well-intended strategies and everyday tactics. Could local governments use tacit knowledge without ‘taking over’ or ‘disrupting’ the tacit fabric of the neighbourhood?

Relative Deprivation, Affirmative Status Generalization and Social Identities

The paper is based on caste-based graded inequalities and social identities emerging from the perceived relative deprivation by the socio-economically and educationally backward castes and affirmative actions based on identification of backwardness by the state agencies in India. The emerging social identities are discussed under a new concept ‘Affirmed Status’, besides, Activated and Ascribed, as explained by Ralph Lynton. The affirmed status characteristics generalization are empirically verified to reconstuct the social structure, in modern Indian context. The process of such generalization and thereby emerging identities are explained with the help of a theoretical assumption, ‘Social Devolution’. Affirmed status is explained as the social identity of an individual or group(s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative status. The state agencies in India are at whatever level, could not have been possible without such support from the state. Thus, the social identities of the affirmed status group(s) are resultant of aspirations and achievements of individuals belonging to a group(s) but due to support of the state. The status and mobility among affirmed status group(s) required to be higher could only increase with the incorporation of the policy of positive discrimination, as more and more opportunities and benefits would become available and could be redirected to them. “Social Devolution” is construed as a process of elevating social power, prestige and dignity to relatively deprived, socio-economically and educationally low status groups by way of positively discriminating them to provide opportunities by a central agency (state in the case of India) without redistributing supremely more equipped for their lives. They perform tacit and informal practices to deal with experiences of threat and develop community activities from the bottom-up. Informal practices – like everyday routines, tacit use of public spaces, and interventions at a square – tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the public sphere as governments hold on to formal repertoires. Recent needs for welfare care for violent eldercared make local governments eager to rethink citizen’s involvement. CHILD Abuse in India : Navigating the ZONES of Silence

A growing body of text have begun to furnish information and data on the widespread pervasiveness of child abuse in India. The paradox is that the perpetrator or the offender is often someone known to the child and more often someone from the extended family. Though in some situations it is beyond their control, but many times the family fails to protect the child from sexual abuse given to the cultural tradition of ‘family being a private space’ where no interjection of public into it is not acceptable. The ‘innocent’ is implicit. Moreover social stigma makes it difficult to talk about child incest in public. However, there is still a absence of in depth understanding and empirical evidence to support general observations because of the lack of the sensitivity to the issue and the failure to acknowledge it in the first place. This paper assess the perception of child abuse among young college students in the age group of 17-20. The focus of the paper is in-depth case studies of 10 victims of child sexual abuse and incest. The purpose is not only to get quantitative data on the issue as understood by young girls but also get an insight into the manifold dimensions and meaning of abuse to the victims through case studies which is mostly anecdotal. It reflects on the excessive influence of normative standards of families also looks into the long term consequences of this in the lives of the victims.

YOUTH, Social MEDIA and Emerging Alternative Spaces for Socio-Political Movements : Analysis of ‘nirbhaya’ IMPACT

With the swelling proportion of youth population, India today is becoming one of the biggest Social Media market. The emergence of youth as new actors empowered with the technology - mobiles, facebook twitters and the like have resulted in organized demonstrations/protests developing an intercultural platform to build solidarity. This new ‘youth brigade’ by engaging in political conversations for collective action has not only ignited mass social movements but also challenged the academia to reposition itself on the role of youth and social media as active partners of social change. This paper analyzes the role of social media as perceived by the youth in the age group of 18-30 years in the city of lucknow. The case in study is the December 2012 New Delhi Gang rape case ‘NIRBHAYA’ Movement. This paper attempts to gain in depth understanding of youth activism at the intersection of multidimensional identities and their unified perception towards transformative socio-political change through social media campaigns . It also focuses on why and how the youth organize in to online social movements tirelessly and bring in a faceless movement for collective political action by actively engaging in dialogue and building public opinion thereby creating strong youth pressure. The paper examines how far such campaigns have been successful not only on focussing on punishment but challenge the cultural assumptions which creates spaces for violence against women.

Hospital Management and the Contribution of Non-Sector Expertise

A belief in the value and superiority of private sector management expertise has been central to NPM reforms (Ferlie et al., 1996; Hood, 1991; Pollitt & Bouckaert, 2000), leading to concerted efforts to re-structure public organisations and recruit senior managers from the commercial sector, including accountants (Clatworthy et al., 2000; Ferlie et al., 1995). It is assumed that such expertise will have a transformative impact on public organisations, moving them away from models of professionally dominated ‘custodial’ or ‘consensus administration’. Commercial managers will emphasise the importance of resources, the need to meet performance targets, and have the ability to implement change.

However, while these assumptions and expectations have been met at the heart of policy making worldwide, there is little research that has tested them directly. Some work has been done on the impact of senior leaders in local government (Boyne, 2005; Boyne et al., 2011) and school districts (Meier & O’Toole Jr, 2002; Mosynhin & Pandey, 2005). As yet however, there continues to be a dearth of evidence supporting the assumption that diversifying the skill mix of senior managers in public organisations will lead to enhanced performance.

To address this deficiency, we focus on the impact of this non-sector specific commercial expertise on the boards of acute hospital trusts in the English NHS. Drawing on the governance literature focusing on the human (and social) capital of board members (Haynes & Hillman, 2010; For & Sundemorehuti, 2009), we first investigate whether a more diverse skill mix of senior managers in hospital trusts makes a difference and if so, under what conditions. Given the dominance of clinical logics in the fields of health care (Bey & Hnings, 2005), we, then, look at the nature of performance outcomes and whether other factors, such as tenure and autonomy, mediate the impact of commercial and accounting expertise

Discours De Crise, Périodisation économique Et Quotidien Tit

L’objet de l’intervention est de croiser la périodisation des discours économiques, (- hauts salaires, crise bancaire, crise de la dette publique, compression salariale) avec les discours de quotidianité en France, recueilli dans le discours sociologiques ( selon les groupes sociaux et les générations )

Deux thèmes importants de la mythologie politique apparaissent dans ce corpus de crise (2007/ 2012)-Le sentiment d’impunité économique face aux registres ‘ salaires, impôt); -Le sentiment d’impunité économique face aux...
contraintes économiques globales (finances, capitaliste, restructuration économique.
Nous nous interrogerons sur le rôle des interactions médiatiques pour véhiculer ou masquer ces deux mythologies de base. Il s'agit de conjuger les effets de trois types de médias (local, national, global).

Multilevel Approach of Professional Fields: Differentiation of Professional Status inside Governance

Multilevel approach of professional groups set up a large differentiation of issues, practices and status inside the same professional groups. This approach will be developed for planners and secondary teachers in France. Local surveys frame the observation on a rich diversity of practices and capabilities. National surveys focus on the normative requirements of professional integration (certification, regulation). European survey focus on the governance models inside the convergence of professional standards (Swensson). The notion of profession can be framed inside three repertoires of issues. We recognize a differentiation of perceptions and of professional claims within the relations between qualification and autonomy for teacher, between status and recognition for knowledge workers (Larsons, Abott).

The sociological question comes to specify the place of professional groups inside the networks of globalization. The convergence of expert knowledge standards at the global level do not mask the intense differentiation inside each professional groups (Freidson), between the level of practices and the definition of professional responsibility, between meritocracy and salaried. The professional fields frame a intense reorganization between these different levels and different status.

Human Rights As a Social Institution

Human rights as a social institution

Contrary to legal-positivist approaches to human rights, sociologists often argue that human rights need not be restricted to legal norms. Rights have to be seen as more than legal norms discerned by judges trained in legal reasoning. For human rights to have social meaning, they must become institutionalised socially and become embedded in people’s minds as well as in the day-to-day workings of societal institutions such as the judiciary, the schooling system, healthcare and the family. The aim of this paper is to develop such a sociological-institutional approach to human rights, which provides an important contrast to standard legal-positivist approach of human rights. Based on the work of a.o. Meyer and Luhmann I will argue that fundamental rights can be seen as a social institution playing a crucial role in the protection of individual agency in a modern, horizontal and heterogeneous society.

Real Fantasy

Real fantasy

As new format of the cultural industry, reality shows are usually approached from two opposite and irreconcilable views. Sometimes they are taken as a sham, pretending to reproduce the Real (in the Lacanian sense of the term) – in this case, these programs would be a kind of window that opens to the reality itself, understood as the fantasy that ties our daily life. This social model of knowledge production is fed and which returns as mirroring: the flexible accumulation capitalism.

The focus of this study is the capacity of women to assert themselves within the household and how it may affect the sufficiency of their utilisation of antenatal care and which practitioner to visit. This behaviour regarding choice may vary widely among Filipino women, albeit affected with relations with their partners and be the demonstration of their household autonomy. Autonomy here is inclusive of education and employment status but also considers other facets as attitude towards intimate partner violence and mobility and economic dependency within the household.

Using regression models, it is found that the usual education and employment for cash indeed affect health-related behaviour but as in Philippine context, number of children ever born affect it as well, but at differing degrees. All these mentioned have particular thresholds that may be positive or negative in effects. What is central is socioeconomic status of the household which is positive in effect.

Abstracts are organized by first presenting author’s last name.

* denotes a presenting author.
Results support the oft considered health gradient that access is based on the perception of finances. This becomes the main barrier for women to seek sufficient antenatal care and medically-trained personnel as well. Also, seemingly counter-intuitive findings had lead to having initial interviews with mothers in selected provinces in the country. What is supported by this approach is that traditional views on healthcare shape their views but perceptions of gradients that some types of care are only suitable for those who can afford them.

Food Security, Rural Livelihoods and Agricultural Change: Evidence from a Case Study of Potato Contract Farming in Maharashtra, India

Despite decades of sustained economic growth, food insecurity remains a seemingly intractable problem for many households in rural India. In recent years, food security has been elevated to pre-eminence in the political discourse of India with the passage of the much-debated National Food Security Bill (2013). At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al., 2013).

Concurrently, the majority of rural Indian households continue to rely on smallholder agriculture as their primary livelihood activity. The nature of agriculture, however, is changing, in India, as liberalisation policies open up the sector to domestic and foreign capital. One such change has been the spread of contract-farming schemes. Where they operate, contract-farming schemes are changing the dynamics of smallholder agricultural production, as land-owning households are increasingly exposed to modern inputs, technology and markets. These schemes present new opportunities for some households, yet it is unclear how these changes will influence patterns of social differentiation at various scales.

This paper discusses the nexus between household livelihoods, food security and modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra. The paper argues that understanding agricultural change through a rural livelihoods lens, we can reveal the nuances of how rural households negotiate change specific to time and place, and who is in a position to benefit from such change. If we understand food security as primordially a livelihoods issue, then understanding how modernising agriculture is influencing patterns of social differentiation will be critical to the long-term food and livelihood security of India’s most vulnerable rural households.

Subjective Functions of Participation in Sports or Games: A Comparison of Findings in Israel, Japan, South Korea, Taiwan and the Philippines

Using the 2007 International Social Survey Programme (ISSP) Surveys on Leisure Time and Sports, this research paper looks at sports, games and physical activities most frequently participated in in selected Asian countries. More importantly for this study, it examines the subjective functions that taking part in sports or games serve, i.e., as a means of social interaction, competition with others, or for the betterment of one’s personal well-being. On the topic of subjective functions of participation in sports or games, the study specifically compares the importance of 1) physical and mental health, 2) meeting other people, 3) competing against others and 4) looking good as reasons for taking part in sports. Cross-country comparison of the findings focus on Israel, Japan, South Korea, Taiwan and the Philippines, in particular.

Is Poverty a Key Aspect of Ageing?

The poverty in old age is one of the most persistent stereotypical images of ageing. Due to the significant differences between income before retirement and pension benefit, there is an objective drop in the income with the retirement. However, with the individualisation of pension provision and weakening the link between national age and labour market exit, the concept is not so straightforward anymore and the image gets even more colourful when social class and different forms of capital are taken into consideration.

Using the secondary analysis of different surveys carried out in last decade among the Czech population aged 40 years and above, I will show the attitudinal data on the role of poverty and financial exclusion in old age definition. I will address issues such as expected (sources) of income after the retirement, marginalisation in consumption, indebtedness, age discrimination in financial services provision and subjective poverty. I will use the paradigm of a heterogeneity of older population to show how these differ in different age, gender-, income-, and social capital- groups.

Transferability of Successful Cooperativist Actions: The Case of Albacete’s Cooperatives

The Integrated Project INCLUD-ED (FP6 of the European Commission) identified Successful Actions (SAs) in diverse social domains. In the field of employment, the successful case of the cooperatives of Mondragon in the Basque Country was analyzed. The Mondragon Corporation (MC) has proven to be a non-capitalist alternative to the traditional organizational and governance models of capitalist firms, combining democratic principles, values of solidarity and strong competitiveness that allow it to achieve both efficiency and equity. In this organization, five successful cooperativist actions (SCAs) were identified and considered crucial in explaining these accomplishments. In order to analyze the transferability of the SCAs, some of them have been recreated in the poorest and most marginalized neighborhoods of Spain: La Estrella and La Milagrosa in Albacete. In 2011, a cooperative was created on the basis of developing the SCAs to provide decent, stable and sustainable employment to people from these neighborhoods. This paper aims to explain the success of the transferability of the latter to the cooperative in La Estrella and La Milagrosa and the ways in which this successful actions approach is contributing to overcome inequalities while contributing to generate alternatives to the capitalism. This work is developed in the framework of the international network of research on cooperativism coordinated by Erik Olin Wright and Ramon Flecha.

Sustainable Consumption Practices in Brazil’s “New Middle Class”

In recent years, Brazil and other emerging economies are showing a significant change in their socio-economic composition, which highlights the increasing income of the poorest sectors of the population. Some Brazilian authors claim that such economic improvement fosters the emergence of a “new middle class”, prompting a debate on such socioeconomic changes, and on the very concept of social class, as this concept is not consensual within the Brazilian social scientists.

Regardless of the classification which assigns to this stratum of the population, this represents a profound change in Brazilian society, with implications for the consumption patterns. This phenomenon occurs in a scenario where environmental issues gain public notoriety and the discourses that advocate the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. So, it sets up a paradox between the possibility of increased levels of consumption and access to material goods by this economically emerging stratum (labeled as the “new middle class”), and the diffusion of the discourse and the proposals that advocate sustainable consumption and the need to reduce the consumption patterns as a way of coping with environmental problems.

Given this paradox, the paper will present results of an ethnographic study that aims to map the debate about the economic rise of the phenomenon of the less affluent in Brazil and the trajectory of environmental thinking until the moment this research was carried out. These discourses and consumption patterns. This phenomenon occurs in a scenario where environmental issues gain public notoriety and the discourses that advocate the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. Mortalidad Juvenil En América Latina: Factores Associated y Desafíos Pendientes

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
En las últimas dos décadas América Latina presentó importantes resultados en la reducción de la pobreza, aumento de la esperanza de vida y reducción de la mortalidad infantil. Sin embargo, el incremento de la incidencia de muertes violentas, sobredotado, entre los jóvenes en este mismo período sigue siendo un desafío pendiente. Así como ocurre con la mortalidad infantil o el embarazo adolecente, las tasas de homicidio inciden diferentemente sobre los individuos de acuerdo con su posición en la estructura social. Los estudios sociodemográficos evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/ etnia y clase social. Irónicamente, las vidas ahorradas en los primeros años de vida en las áreas más densamente pobladas por media comunidades de la niñez y cuidado en la niñez continúan siendo interrumpidas prematuramente en la adolescencia o juventud por causa de la violencia. En los países latino americanos, la sobremortalidad masculina alcanza considerable magnitud. En muchos de nuestros países los chicos mueren de 4 hasta 6 veces más que las chicas de misma edad. Esos niños, que pueden ser considerados dentro del marco de una cultura que aún sostiene fuertes rasgos machistas y una visión muy arraigada de valorización de la virilidad. Este trabajo discute las relaciones existentes entre las elevadas tasas de mortalidad violenta entre los jóvenes, especialmente los homicidios, e indicadores de condición de vida. Nuestra línea investigativa enfatiza el rol de la educación. Los avances cuantitativos alcanzados en la educación no son acompañados por elevación de los niveles de calidad. La baja calidad de la educación de la educación. Los avances cuantitativos alcanzados en la educación no son acompañados por elevación de los niveles de calidad. La baja calidad de la educación en América Latina que se observa por medio de los bajos rendimientos en las evaluaciones internacionales, a ejemplo del PISA, está muy correlacionada con una estructura de oportunidades restrictas que en su versión más perversa se refleje en altas tasas de mortalidad juvenil.

Trajectories of Risk and Uncertainty? Medical School Students and Their Vocational Choices

In Portugal, the imposition of a numerus clausus system at the HE entrance has contributed to the strengthening of a hierarchy of excellence in the school system. At the same time, it has introduced an increased uncertainty regarding the possibility to accomplish future projects and ambitions.

The case of medical courses has been paradigmatic in this regard. Its high demand has fixed permanently, academic excellence as an entry requirement. The access to a medical school implies some effort and sacrifices that not every young student is willing to take. Namely, because it implies a tension between the need to invest in studying on a highly competitive basis (thus focusing on future projects) and the desire to invest in youth sociability practices, under a high peer pressure (which are rooted on the present).

Obtaining and maintaining high grades along the secondary education is a long-term process (built during the three years of secondary education), but highly uncertain and risky: a single moment (an exam, an assessment) can ruin everything.

This presentation aims to analyze the processes involving Medical School entrance in Portugal. In particular, we intend to confront students’ investment on a highly competitive vocational pathway (Medicine) with their awareness of risks that may emerge along with their option.

The analysis is drawn upon data collected within the project “Failure and drop-out at the University of Lisbon: scenarios and trajectories”. A recently completed research project sponsored by the Portuguese Science and Technology Foundation (Project Ref. PEst-C/QUI/UI0495/2006). In particular, it will explore data from in-depth interviews conducted in the academic year 2009/2010 to the students that in the previous academic year had entered the 1st year of medical school at the University of Lisbon.

Did Someone Say Cosmopolitanism? A Critical Feminist View on Cosopolitan Citizenship, Post-Nationalism and Trans-Nationalism in Europe

By Dr Ulrike M. Vieten (University of Sheffield, UK)

Since the early 1990s cosmopolitan visions evolved as an endeavour to transform national states by creating a common political identity that defined its citizens. Today, the post2001 intellectual climate of some kind of hegemonic ‘security and surveillance totalitarianism’ demands a serious ‘reality check’. Speaking from Europe, and witnessing a rise in nationalismist socio-economic interests and neo-fascist political orientations in various EU Member States it is difficult to uphold any ideal of post-national political communities, even not talking of cosmopolitanism. Nonetheless, I will argue from a feminist perspective that transnational belonging and cultural hybridity are equally on the rise providing some futuristic space to envision social justice and equality encompassing a subaltern cosmopolitanism. It seems we also live in a very rebellious civic world society; also very much connected to structural changes of the social fabric as far as ethnicities, race and religion is concerned in metropolitan cities all over the world.

While critically analysing Habermas’ and Soysal’s take of the ‘post-national’ and turning to Young’s concept of the ‘social connection mod’ the first part of the paper proposes an alternative reading of transnational and diasporic urban political spaces. It is argued that complex diversity and social contradictions nurture intensification and widening of trans-cultural cosmopolitan habits alongside a backlash of parochial opinions.

In a second part of the paper these emerging trans-national identity containers of multi-layered belonging will be tested while introducing some research results of a comparative study on new European citizenship and vernacular cosmopolitanism with respect to different ethno-national minorities in Britain, Germany and the Netherlands.

VIGOUR, CÉCILE* (CNRS, c.vigour@sciencespbordeaux.fr)

Autonomy and Heterogeneity of Managerial Changes in European Judicial Systems

For a long time reluctant towards managerialism, Dutch, Belgian, French and to a lesser extent Italian judicial systems have undergone deep changes, since the Ministry of Justice implemented new management policies and tools. In terms of professionalism, accountability procedures, new norms (a more customer- and efficiency-driven approach), the valuation of other competences than legal ones, budget restrictions modified professional practices and identities of clerks and the magistracy. New models of what constitutes “a good magistrate / clerk” emerged.

The paper will focus on the part of autonomy and heterogeneity of professional groups and political actors who either decided, implemented or had to cope with those managerial changes. Ambivalence prevails regarding their promoters and initiators.

Managerialism was partly promoted by other national or international institutions (the Ministry of Finance, the Parliament...). But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain efficiency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession’s definition of relevant managerial criteria and procedures.

But this autonomy varies according to the professions and hierarchical positions. How was it measured? Not only in increased capabilities (in priorities definition, budget allocation...). Yet, professional identities of ordinary magistrates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...).

Finally, we observe a hybridism between legal and managerial values reinforced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bureaucrats, lawyers and clerks.

VIGOUR, CÉCILE* (CNRS, c.vigour@sciencespbordeaux.fr)

Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the “modernization of the State” (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level on lean system? How was it re-appropriated by the Ministry of Justice, where other tools (such as ISO standards) had just been experimented, so much so that lean management is about to be generalized in the civil judiciary system?

My hypothesis is that lean system was a means for transversal ministries such as the Ministry of Finance (to which the DGME reported) to reaffirm their power on specialized ministries and impulse reforms otherwise than by budget cuts.

Moreover lean production was implemented in the judiciary by emphasizing its “soft side” (considering a court ruling as a collective work) and by presenting the efficiency goal in a positive way (reducing the wastes of time to focus on the core business of clerks and lawyers). This selective transfer was facilitated by the fact that the DGME supported its cost and that there were no staff cutbacks in the Ministry of Justice.

The paper will show how the success of lean production relies on its adaptability to the selection of some characteristics, its capacity to be compatible with values of diverse professions (even though it may generate jurisdictional conflicts with consultants or between professions when the division of labor is modified), and on strategic uses made by professional groups and political actors.

Studying lean system in public services requires therefore to associate sociology of work and a political sociology perspective. This empirical study at national
and local levels is based on observations and interviews with bureaucrats, lawyers and clerks.

Intimate Unions: Sex Workers’ Labor Activism in Karnataka, India

Recent scholarship has de-exceptionalized sex work and positioned it within the theoretical framework of intimate labor (Boris and Parreñas 2010). However, academic studies of sex workers’ activism as laborers remain scarce (Jennex 1990; Kempadoo and Doezea 1998; Hardy 2010). What tensions emerge when a labor framework for sex work serves not only as an analytic, but also as a basis for collective action?

This presentation, a scholar-activist collaboration, examines the trajectory of the Karnataka Sex Workers’ Union (KSWU) in India, drawing on 8 focus group discussions, 50 in-depth interviews, and our experiences. KSWU organizes sex workers using a trade union model. Rejecting state practices that either criminalize or pathologize sex workers, especially after large-scale HIV prevention programs directed at sex workers in India, KSWU has attempted to articulate an alternative claim on the state, positioning sex workers as citizens and workers.

We argue that KSWU has provided a meaningful alternative to existing relations between sex workers and the state. It has built alliances with other informal laborers and feminist and Dalit rights groups, and developed an independent trade-union-like funding approach. However, traditional trade union models have not always been adequate in the face of stigma; dispersed spatial patterns of work; no fixed ‘employers’; fluid identities of those who move between sex work and other informal work; systematic violence; and differences among women, men and transgender sex workers in their relationships to sex work. Many sex workers in Karnataka prefer the safety of invisibility, but KSWU’s politics pull toward greater public visibility. KSWU’s experiences highlight the inseparability of claims for recognition and redistribution, and suggest the need for strategies of organizing that respond specifically to intimate labor spheres—strategies that draw on the insights of Southern labor and feminist movements and develop creative, safe spaces for solidarity.

VIKKELSO, SIGNE* (Copenhagen Business School, ssv.iao@cbis.dk)

On the Work Itself: Task and Organizational Reality

In classic organization theory, ‘purpose’ and ‘task’ were key concepts. In order to understand the situation of a particular organization and to assess the form and necessity of managerial action it was considered crucial to address the organization’s basic purpose or core task. Without this, an organization could not realistically assess the strengths and weakness of its inner arrangements and the threats and opportunities posed by its ‘environment’. In contemporary organization theory there is no longer a natural point of departure and figures only as one among many ‘aspects’ of organizational life. A widespread argument for this decreased significance holds that it is no longer relevant to speak in terms of overarching purposes as organizations manoeuvre in rapidly changing environments where tasks and purposes are multiple, ambiguous and in flux. Another is that the definition of ‘tasks’ by management is ultimately a ‘political’ or ‘instrumental’ reduction of the creativity and multiplicity of an organization. Thus it has been suggested that organizations are no longer relevant to understand as total entities, but only as ‘partial organizations’ (Ahme and Brunsson, 2011). In the paper, I revisit Barnard’s concept of ‘organizational purpose’, and Miller and Rice’s concept of ‘the primary task’, which share a number of family resemblances. I argue that the authors were aware of the challenges in sorting out the core tasks and purposes and that they also explain and illustrate the problems of being carried away by fragmentation arising from neglecting the issue. A bewildering and fragmentation that also characterizes contemporary organization theory as a discipline, I argue. Employing the notion of ‘reality device’ I conclude that understanding the core tasks of an organization is an indispensable means to register and evaluate the empirical reality of organizations and the work to be done in order to accomplish those tasks.

The Discussion about the Body Between University Teachers: A Case Study

The debate about the concepts of the body is justified by the fact that the noviciate is a key element for the formation of the body conception of undergraduate students, this is the first step to consolidate how to think and act in different fields. We aim to discuss the conception of body from teachers of a philantropic University of Goiás. The research is a cross-sectional study of the body nature.

Made sure a case study with a questionnaire developed and validated specifically for this study. Was distributed approximately 20 questionnaires and one teacher refused to answer. The study was approved by the Ethics Committee of the PUC Goiás under No. 1256/09. identifies the fact that 26.7% of teachers working with this particular activity, 40% with the humanities, and 33.3% with the area of biology.

About the body conceptions that prevail among teachers, nine replied the question, 66.67% consider the body as a machine, or as an organism, comprising separately from other components. Was also questioned whether teachers read authors who discuss the issue, 88.9% said yes. The completion marks the fact that teachers’ conceptions of body can be considered traditional, since there was no overcoming the dualism of body and soul, or the condition of a body “thing” (machine or organism). This conception among university teachers can affect the thinking about the subject among academics, fact that is shown by other researches.

Mental Health in Public Universities: A Comparison Between Brazilian and Canadian Professors

Mental health, an important object of research in Psychology as well as Social Psychology, can be determined by the relationship between psychological well-being and psychological distress. In this context, we search to understand: How do compare mental health of professors working in public universities in an emerging country like Brazil with the one of professors working in a developed country like Canada? What are the main differences in the indicators of mental health in work domain? How Mental Health affects Work-Life Balance? To answer these questions, this paper assesses Mental Health and Work-Life Balance for professors working in these two countries and test for their differences. The sample consists of 354 Brazilian professors and 317 Canadian professors. Data were collected through an on-line questionnaire assessing the following Mental Health indicators: anxiety, depression, loss of control, general positive effectiveness and emotion ties. We compared the components of Psychological Distress and Psychological Well-Being with the indicator of Work-Life Balance to analyze their relations. Reliability analyses demonstrated that all tested components are consistent to evaluate Mental Health and Work-Life Balance. Correlation analyses showed the components of Psychological Distress are negatively related to Work-Life Balance, whereas the components of Psychological Well-Being are positively related to Work-Life Balance. There are some small mean differences between Brazilians and Canadians professors in all five components of Mental Health, but these differences are not statistically significant. Mean differences for Work-Life Balance, gender, age, and Bias of Conformity are statistically different, although the size effects are small. Linear regression analysis, step by step, controlled for Life Events, showed that General Positive Effectiveness, Anxiety and Emotion Ties predict 31.5% of the scores of Work-Life Balance. Additionally, we observed that Brazilian professors find more balance between professional and private life than do their Canadian colleagues.

Higher Education: Inequalities and Globalization in Some Emergent Countries Using the Mexican Examples

Higher education: inequalities and globalization in some emergent countries using the Mexican examples

This paper refers to the last question suggested in the proposal of the symposium: Since data and methods to investigate inequalities mostly refer to national unities, how to produce quantitative evidences of global inequalities?

I will try to explain the implications of the process of globalization of the national higher education system in Mexico, having as a background the Bologna process as one of the best examples of the intense globalization of national education systems.

The paper has three parts:

1. The first one focuses in a comparison of the imbalance regarding economic and material resources among students, in order to gain access

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
to higher education in some selected countries, based on international statistics.

2. The second one is based on an empirical research undertaken in six universities in Mexico City, that are classified by academic characteristics, and by the implications that these have in the process of globalization of knowledge, and will examine the material and symbolic inequalities of the students that obtain their professional degrees.

3. The third one, will consist on a reflection that, based on empirical national data versus international data, allows the design of some elements of comparison regarding the inequities experienced by the young students that succeed in finishing their degrees, in some selected emergent countries.

Argentina's Dirty War: Counter-Hegemonic Collective Memories & Frame Analysis

In this paper, I analyze the contentious and long-lasting collective process to document, understand and reach justice for victims of Argentina's Dirty War, based on fundamental texts produced after the end of the last military dictatorship. By looking into the works of Patricia Mas (Never Again) report prepared by the National Commission on the Disappearance of People (CONADEP), which included hundreds of testimonies by survivors of torture and acquaintances, reading scholarly analyses on this matter, and finding testimonies published in other venues, I discuss how this report became a master narrative from which subsequent interpretations of the Dirty War emerged. I apply Goffman's (1986) frame analysis theory to understand the complexities and nuances of processes of collective memory-making, and identify how hegemonic and counter-hegemonic frames were used to create meanings and organize experiences of the Dirty War. Then, I propose alternative frames (an "intersectional frame" and an "emotions-conscious frame") with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

VILLALON, ROBERTA* (St. John's University, villalor@stjohns.edu)

Economic Crisis, Politics and The Menace To Battered Immigrants’ Rights

The anti-immigration measures and xenophobic sentiments that have spread since the eruption of the financial crisis in 2008 have been significantly detrimental for immigrant survivors of intimate partner violence in the United States. In common times, this group is particularly vulnerable to abuse because of the intersection of their members’ gender, sexuality, nationality, race, ethnicity, language, religion, immigration status, isolation, cross-national frames of cultural and legal reference, and socioeconomic standing. All of these factors influence the way in which aggression is inflicted and endured, and affect the availability of resources for immigrants to escape and overcome abusive relationships. The economic recession, anti-immigration policies and a rising xenophobic environment have all created additional hurdles for battered immigrants given that employment opportunities have declined, exploitative work conditions have worsened, and immigration controls have increased. In this pressing context, immigrant survivors of intimate partner violence have been faced with empowered abusers whose threats of deportation became real; ambivalent law enforcement officers who instead of protecting battered immigrants may be forced to collaborate with immigration officers; and a widespread sense of fear with its paralyzing and isolating effects. At the same time, most nonprofit organizations providing services for battered immigrants have met serious budget cuts that curtailed their ability to serve the increasing number of survivors approaching them. Based on interviews with service providers across the nation, participant observation of networks of battered immigrants’ advocates, and a close reading of debates around the re-authorization of the Violence Against Women Act (VAWA), I analyze how these dire circumstances have been critical for not only immigrant survivors of gender violence, but also the battered immigrants’ and battered women’s movements.

La Cooperación Científica Entre Universidades De México y Francia: Qué Prácticas, Estrategias y Alcances Podemos Identificar

Los Programas Marco de la Unión Europea y particularmente el 7º abrieron nuevos horizontes para la cooperación científica y el flujo de conocimiento entre investigadores de Europa con los otros continentes. En este contexto, cabe preguntarse en qué medida las universidades y centros de investigación han lo-
D"austérité De L'hôpital Public Rencontrent « L'accélération Sociale Du Temps »

Dans nos sociétés prises dans ce que le philosophe allemand Hermut Rosa appelle l‘ « accélération sociale du temps », et face à la dégradation des conditions de travail et le contexte d’austérité, maîtriser son temps de travail est un en-jeu. Et ce d’autant plus dans le milieu hospitalier où temps de travail est souvent synonyme de don de sa personne.

Depuis une dizaine d’années une forme de travail atypique se développe, à la limite de la légalité, dans les équipes soignantes des hôpitaux français : le travail en 12 heures d’affilée. Présenté par les directions des hôpitaux comme une solu-
tion pour pouvoir les postes vacants, le travail en 12h permet aussi à court terme d’économiser des postes en supprimant les temps de chevauchement entre les équipes.

Mais pour les soignants eux-mêmes, ne travaillant qu’en 12h, la situation est plus difficile. En effet, à la différence des plannings traditionnels en 8h, travailler en 12h permet d’obtenir un roulement fixe et de dégager mécaniquement du temps pour cumuler une deuxième activité à l’heure du salaire.

Notre exposé s’appuiera sur les premières conclusions d’une enquête ethnographique de plusieurs mois menée dans divers services d’hôpitaux parisiens, ainsi que d’entretiens avec les soignants, dans le cadre d’une thèse engagée depuis octobre 2012. Nous montrerons que ce qui apparaît comme un consen-
sus inébranlable dans les équipes soignantes d’un hôpital est un déséquilibre entre travail et familles, et est fait en un moyen pour les soignants de fuir un travail qui s’est intensifié depuis que les politiques de restriction des dépenses et de maximisation de la productivité se sont imposées ces dernières années à l’hôpital : « au moins on ne revient pas travailler tous les jours ! ».

Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict

The principle of food security is in recent agricultural policy documents in Nor-
way being used to re-legitimize increasingly neoproductivist farming policies and systems. Thus conservation of agricultural land is once again prominently posi-
tioned on the political agenda. With only very limited availability of farmland, only 3% of Norway’s land area is in productive agricultural use, the issues of agricul-
tural land conservation and food security have become more or less inseparable in Norway. Further, Norway, as a non-EU member, has insisted internationally on maintaining a very protectionist agricultural policy to meet the objective of being 50% self-sufficient in calories produced from agriculture.

A large proportion of the best quality farmland is within the vicinity of the coun-
try’s major urban areas. While Norway was urbanised relatively late by Europe-
an standards, there is now a very strong centralisation tendency with in migra-
tion from rural areas. This, combined with increasing in-migration from abroad, is placing considerable pressure on the remaining farmland – particularly fertile land on the outskirts of major cities. Conflict between agricultural policy objec-
tives for food security and the national interest following the demand for housing, roads and infrastructure is thus becoming a major issue in the public and political arenas. Based on a Norwegian case study, this paper will show how food provisioning and food security as collective goals is framed

Multiple Imputation Of Squared Terms

We propose a new multiple imputation technique for imputing squares. Cur-
rent methods yield either unbiased regression estimates, or preserve data re-
lations. No method, however, seems to deliver both, which limits researchers in the implementation of regression analysis due to the presence of missing data. Besides, current methods only work under a MCAR mechanism. Our method for imput-
ing squares uses a polynomial combination. The proposed method yields both unbiased regression estimates, whilst at the same time preserving the quadratic relations in the data for both MAR and MCAR mechanisms.

Russian Housing Care for Orphans: Equal Rights in Unequal Opportunities

A great number of decrees, regulating various aspects of social security for orphans (including housing), have been adopted by the Russian government in 2013, which put Russian Orphan Care among the paramount issues of social pol-
icy.

This paper analyzes the housing care laws in relation to orphans in Russia, including federal laws, regional statutory documents and case law protecting the housing rights of orphans.

At present, the Russian government has a duty to provide orphans with hous-
ing regardless of their age, which is made at the expense of both the federal budget and the resources of local authorities. At the same time, orphans are un-
equally allocated in regions with various levels of economy, which collides with the Russian government’s efforts to provide housing needs of all orphans.

For example, during the period of professional studies orphans are provided with a room in the university’s dormitory, thus their housing need is partly met by the funds of their educational establishment. However, after graduation orphans are required to have a permanent registration, i.e. living space of their own, in order to have a job and for other purposes.

In general, the paper combines the case study methodology with legal analysis of effective housing rights for orphans and young care leavers who are in need of housing. The study leads to the following key point: equally guaranteed rights to housing care are hampered by the lack of (i) a unified mechanism for different re-

VIRCHOW, FABIAN* (Univ Applied Sciences Düsseldorf, fabian.virchow@fh-duesseldorf.de)

From Right-Wing Violence to Racist Terror – Exploring Factors of Radicalisation

In November 2011 a racist terror group in Germany that claimed responsibil-
ity for the murder of nine migrants and one police-woman was discovered by chance. For more than thirteen years security forces had no real idea of the ac-
tivities of the group, assuming that the killings were caused by criminal motives.

After the existence and activities of the racist group has become known several high-ranking security and secret service officers resigned and the security appa-
ratus is still under reconstruction.

The paper addresses the attempts by researchers to locate the factors why a terrorist group developed from a much broader racist violence-prone movement and tries to weigh up the role and actions (as well as non-actions) taken by state actors towards the extreme right in Germany in general and against the regional right-wing movement in Thuringia from which the terror cell emerged in partic-
ular. In doing so, the investigation tries to find out if in the first phase restraint by the state might have encouraged right-wing violence while in a later phase adamant decisions by public prosecutors may have contributed to a radicalisation processes resulting in racist homicide.

The Identitarian’ Movement

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In autumn 2012, the Génération Identitaire, a French group, launched a video message on Youtube declaring war on multi-culturalism. In order to gain a maximum of public attention and as an example of how the movement’s performance would look like the group occupied a mosque in Poitiers, chosen for the final victory of Karl Martell against the invading Moors in 732 AD.

While, in France, the group’s roots date back into the early 2000s, the occupation of the mosque quickly inspired imitators in neighboring countries like Austria and Germany. Although presenting themselves as being non-racist its ethno-pluralist approach and public statements on several issues clearly indicate that the movement belongs to the spectrum of right-wing racist populism.

The paper will outline the emergence and the development of the ‘identitarian’ Movement taking the variations in several countries into account. A focus will be given on the analysis of the movement’s claim of not being racist on the one hand and the de facto involvement of known right-wing protagonists on the other hand. First, the public performance of the movement that is web-based to a large extent is investigated. In sum, the paper offers an analysis of a new political phenomenon and situates this into a broader understanding of more recent developments of right-wing populism as a whole.

**Gendering Responsibility: Work Practices and Institutional Responses to Intimate Partner Violence in Finland and in Russia**

This paper examines how the highly gendered phenomenon of intimate partner violence (IPV) is encountered in various institutional settings of social and health care services in Finland and in Russia. The empirical data comprise (1) 16 focus group interviews with staff members (n=73) in various social and health care units in Finland and (2) 74 interviews with staff members (n=56) and services users (n=14) in three public crisis departments and one NGO crisis center in Russia. Based on the analysis of this data corpus, it seems that one of the dominant institutional discourses is that of making the female victims responsible for dealing with the problem of IPV. According to the interviewed professionals, it is difficult or even impossible to address the topic of the responsibility of male perpetrators due to various reasons, e.g. in inadequacy of existing work practices or insufficient legislation. This paper takes a closer look at the ways in which the above-mentioned discourse operates to organize work practices that result on “gendering responsibility” at the level of local activities. Following the ideas of institutional ethnography (Smith 2005), the basic assumption of this paper is that institutional discourses organize the ways of “seeing” and “knowing” the solution to the problem of IPV in institutional actional ways. Of special interest here are the interconnections between the institutional processes carried out locally and those organized at state, national and even international level. In addition, this paper addresses some cultural differences between Russia and Finland in the ways in which the female victims are made responsible for dealing with the problem of IPV in the everyday work of the institutional settings under investigation.

**Testing the Effectiveness of HRM Practices Among Expatriate Humanitarian Aid Workers**

**Abstract:** Staff turnover has become a major concern for humanitarian organizations. On the one hand this can be seen as something humanitarian organizations have to live with, but on the other hand it has also been blamed for reducing effectiveness and efficiency due to discontinuity in staffing and loss of institutional memory. To generat public pressure for greater efficiency and accountability, Professionalization, and especially adopting for-profit management practices, for example regarding human resource management (HRM) was deemed to be key to achieve enhanced efficiency and accountability. In short, no sector is dependent on the employees and their loyalty and at the same time is experiencing a very high turnover. Therefore, this is the perfect setting to study the effectiveness of HRM practices. Yet, while much discussed, in-depth research on the consequences of human resources practices on attitudinal outcomes of employees, like trust in management, job satisfaction and leaving intentions in this sector has not been conducted. So far, most studies have been conducted in the for-profit sector and to a lesser extent in the public sector. While it is assumed that HRM practices should also be effective in humanitarian organizations, empirical data was lacking in order to actually test this. To the knowledge of these authors, this is the first empirical attempt to study these issues among a sample of humanitarian aid workers (n=140) working for one of the largest agencies in the field: MSF. Preliminary results show that HRM practices are positively influencing individual attitudinal outcomes (job satisfaction and turnover intentions) and that trust in management is an important factor mediating this relation. HRM practices are conducive to building trust in management, which in turn is positively related to job satisfaction and intention to remain with the organization.

FRANDJI, DANIEL* (ENS-Institut Français d’Education, danIEL.frandji@ens-lyon.fr)

**Les Droits Pédagogiques Chez Bernstein : La Normativité Sociologique En Questions**

Cette communication visera à questionner ce qui apparaît comme le modèle normatif explicité dans la théorie de Basil Bernstein : le modèle des « droits pédagogiques » par lequel il introduit son dernier ouvrage et qui semble fonctionner communément (Bernstein, 2007). Il s’agit d’admettre implicitement que, au sens il affirme ce que sont les droits pédagogiques notamment au regard des institutions et des individus, et normatif au sens où il décrit ce que devrait être le dispositif pédagogique, et singulièrement le dispositif scolaire en rapport à son ambition démocratique. Ces deux dimensions associées permettent de poser l’eu élu d’une normativité objective. En relation avec quelques hypothèses simples permettant de penser les conditions de possibilité d’une démocratie minimale, l’auteur en vient ainsi à poser la nécessité pour les dispositifs pédagogiques d’instituer trois droits reliés entre eux : le Droit à l’Amélioration (DA), le Droit à l’Intégration (DI) et le Droit à la Participation (DP). Il est cependant possible que ce modèle ne joue pas encore totalement le rôle qu’il est appelé à jouer, et que Bernstein entend lui faire jouer dès l’introduction de son ouvrage : « un modèle auquel je pourrai comparer tout ce qui se passe dans les divers systèmes éduca tifs ». Y compris dans les analyses de Bernstein lui-même, en témoigne d’ailleurs le fait que les trois droits n’ont jamais été mentionnés tout au long de l’ouvrage. Ils semblent peu repris explicitement aussi par la communauté actuelle des bernsteiniens.

**How Courts Must Act To Provide Democratic Access To Justice On Civil Disputes? The Experience Of Brazilian Federal Court In Slams Of Rio De Janeiro**

The aim of this communication is to discuss how could brazilian federal court act in marginal urban communities with peacekeeping police forces units (UPPs) to promote democratic access to justice in civil disputes. A federal court in Brazil has the competence to judge the conflicts involving the brazilian federal state, as well as their federal organs, as the mail office, the social security institute, federal banks, the national regulatory agencies and others. The field of research is the implementation of programs and projects of the federal justice in underserved communities, implemented by the federal court of Rio de Janeiro. These programs began in 2010 and last until 2013. The implementation of such policies was extremely heterogeneous and plural. Initiative began with a realization of hearings, production of expert evidence and offering agreements by the social security institute approved at the same time by the Federal Judges (judgment), and then began in 2010 to provide legal advice and assistance, and legal education for citizenship, without rendering jurisdiction in strict sense. Presented through the analysis of a report on the competence of the federal court in underserved communities, implemented by the federal court of Rio de Janeiro. I conclude that pedagogical access to justice, which means, legal education for citizenship can offer a third way to rethink the relation between courts and communities for dispute resolution in civil conflicts.

**Art Works and the Production of Knowledge on Cities**

Artists work on the built environment mainly through the production of art works in the public realm. This implication has recently taken a new orientation where artists work in some cities, on issues related to urban projects along with the project team. They contribute to the early stages of urban projects and take part in field studies. Besides the use of urban planners’ and architects’ know-how, they collect data in various forms -sound, images, objects, words, impressions- and transform these into art works which are qualified as territorial. They produce through this work and their actions, knowledge on the city, the project site and the local community.
This paper presents the results of a research project based on five case studies where artists are invited by urban professionals to work and produce knowledge on cities and project sites in France. They are digital artists, sound artists, choreographers, visual artists, actors. They work mainly through intensive field work. Site immersion and (informal) interviews are singled out as the key elements that are used. We will first discuss in which way and to what extent artists produce knowledge that is different from that produced and used by city professionals. What kind of knowledge do artists produce? In which aspects is this knowledge different? Are these differences due to artists' specific skills? To their methods? To their unique gaze? To their capacity to represent the reality? Then we will discuss how can urban professionals use and work with this new kind of knowledge. How do they analyse it? What are the epistemological, methodological and analytical problems encountered in their understanding and their transposition in urban studies?

VIVANT, ELSA* (Université Paris Est Latts, elsa.vivant@uni-paris-est.fr)

Young Graduates Self Entrepreneur: Searching for Job or Creating a Company?

Precariousness is a rising condition of high skilled and knowledge work. The implementation of new kind of work contracts is supporting this movement. In France, a new fiscal regime for self-entrepreneur had been created in 2009. This consists of lower tax rate and simplified administrative procedure for small companies (turnover under 33 000 euros). This communication presents the results of a research on graduates (master or PhD in social sciences) who enter the labour market by creating this kind of self-entrepreneur. It appears that they didn't choose this scheme of work: it had been required by employers to lower their labor cost, flexibly the working relationship and externalise administrative procedures. While graduates are administratively independent, their conditions of work are mainly those of salaried: in the firm, with fixed schedule, prescription from the superior, etc.

In these situation that fuzzed and hybridised working regime and working conditions of independents and salaried, how are these graduates (as specific population of knowledge workers) adapted? Their working conditions, activities, projects and discourses reveal different feelings about that situation. This paper will explore these three idea-types of young self entrepreneur: subordinated, independent, or in inclusion. To what extend does this situation trained them to become entrepreneurial worker?

VIVEROS-VIGOYA, MARA* (Universidad Nacional de Colombia, mara.viveros@gmail.com)

Masculinities, Violence and Multiculturalism in Latin America

Male violence has occupied a foundational place in Latin American history. Latin America's past has been marked by men's violent acts, such as the Spanish Conquest and Colonization in which not only colonized "women" were powerless within their communities, but also colonized "men" were subordinately placed within a hierarchy of masculinities. This societal structure was based on mechanisms of racial inferiority and gender subordination, which established relations of opposition and of complicity between the people and their colonizers. The postcolonial period manifested the consequences of such brutality and its difficult to speak about Latin-American social history where violence hasn't been present, not as a Latin-American cultural trait but as a social fact. While I'll reference the Latin-American context generally, I'll particularly focus on the situation in Colombia, an area on which I have extensively worked. Due to the old and painful reality of the Colombian armed conflict, exceeded only by the Israeli-Palestinian and Indian-Pakistani conflicts, the need has become apparent to promote initiatives, which introduce discussion and action into the public and academic agendas. In the two following issues: first, the conflict continues to differentially affect the lives of Colombian women and men because of their social place in the gender order; and second, the difficulty of dissociating the violence of masculinity, as it has been designed and constructed socially in the Colombian context.

This paper will first reflect on the relevance of social intervention programs developed with men oriented towards violence prevention. It will then address male resistance to change and the attempt to trivialize violence against women and reaffirm masculinity based on domination, in which some geopolitical and internal social hierarchical considerations are present. Finally, this paper will discuss the forceful effects that multiculturalism in the region may or may not have on gender violence and its eradication.

Fisheries Cooperatives: The Solution to Fisheries Mismanagement?

As fisheries have a vital role in maintaining the social and economic cohesion in insular areas, where the majority of the population is employed within the fishing sector, regulation and control of the activity affect directly the fishing communities. Self-regulation has a significant impact on managing effectively Fisheries Protection Areas by gaining access to local expertise, resources and developing working relationships between the fisheries professionals and the local control and regulation authorities. In Greece, 18.8% of the territory consists of insular areas, enhancing thus the significance of fisheries communities for social cohesion. However, the notion of participation in regulation and control is still not widely spread in the fishing communities as it is only practiced sporadically. Insufficient statutory control of illegal fishing heightens the need for promotion of self-regulation as a means to protect the marine resources, as well as promote local development, local employment and economic growth. Thus, creating incentives for fisheries professionals' participation in regulation and control of the fishing activity is pivotal for the realisation of self-regulation. However, providing the fishermen with incentives has its drawbacks, as they do not always guarantee the expected outcome, namely productivity coupled with sustainability. One of the most common issues with incentives is the enforcement of the legislation and the decisions. This research focuses on the potential of fisheries cooperatives as solution to the problem of legislation and decision enforcement and, thus, as promoters of self-regulation in the fish stock management sector. Through the examination of international case studies, the study gives suggestions for the promotion of fisheries cooperatives in the Greek national waters that greatly lack such organisation and the after effects that the adoption of such a policy would have in the area under examination.

Living with the Sea: The Satoumi Concept

The importance of sustainable marine resource management through the Ecosystem and the Participatory approaches is widely accepted and supported by contemporary science. Fisheries management based on the internal knowledge of the local artisanal communities, which operate with traditional techniques and tools, is considered the key for the realisation of self-regulation. In the case of the marine and coastal ecosystems, in Japan, the participation of fishermen in the decision-making process as well as the enforcement and realisation of conservation plans is being researched and promoted widely. The most promising conservation framework, the satoumi, is based upon the interaction between traditional human activity in fishing communities and ecosystem management. These ecosystems

WGO5-927.7

VIZCARRA-BORDI, IVONNE* (Universidad Nacional Autónoma de México, jvbordi@hotmail.com)
still maintain high productivity and biodiversity, coupled with human activity. The satoumi is based upon traditional resource management techniques which aim at the protection of the targeted ecosystem. As the depletion of fish stocks and the degradation of marine habitats expand around the globe, the provisioning, regulating and cultural services that the marine ecosystems provide for the fishing communities are disappearing. Through extensive literature review, this paper explores the capacity of the satoumi concept for the sustainable use of the marine resources. The most important aspect of the research is the exploration of the significance of the implementation of the satoumi for the survival of the communities that have adopted it. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

VLADIMIROVA, ALINA* (National Research University, avvladimirova@hse.ru)

Perceptions of Rising Powers: Are Russia and China Still Brothers Forever?

“Russia and China are brothers forever” was a popular slogan in the Soviet Union time, that perfectly shows how important it is for political science to understand differences in perceptions. While in Russian culture a brotherhood can be relationships of the equal, in mind of Chinese people an hierarchy is always formed and one of the brothers has to be elder, has to be a leader. Even though China has designed a new political and cultural system and a new type of superpower, that relays more on soft power than on hard, it is struggling with the China Threat theory and problems of misinterpretations of the Harmony World concept. In order to predict the role of China in the future many specialists turn to its imperial past, the tribute system and roots of the strategic culture, so processes of a politicization of hierarchy is observed. The major China is influencing this country image and relationships with other actors in the international arena are a crucial part of political discourse now, to which scientists and policymakers pay close attention.

Unequal Social Participation in Later Life

The concept of active ageing comprises the maintenance of societal participation throughout the life span into old age. ’Good’ ageing in line with this activity paradigm develops into a starting point of social inequality rather than being its result. Based on the German Ageing Survey (DEAS) and on the German Survey on Volunteering (FWS) we investigate the access to volunteering and to educational activities depending on social and spatial aspects of inequality. The DEAS is a nationwide representative cross-sectional and longitudinal survey of the German population aged 40 and above, so far data was collected in four waves in the years 1996, 2002, 2008 and 2011. The FWS is a representative cross-sectional survey on voluntary work, honorary office and civic engagement of the population living in Germany aged 14 and older. Data is currently available for the years 1999, 2004 and 2009.

Societal participation is socially and spatially structured: Individuals from a lower social class are less often involved in educational activities or in volunteering. The results of our multi-level-analyses clearly support these inequalities in societal participation known from the literature among individuals in both, middle and later life. The findings indicate that individuals living in economically disadvantaged regions are less likely to participate than in economically strong regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate participation should be taken on the local level to enhance opportunities for volunteering and educational activities throughout the life course and especially in later life. This should help to increase the participation of individuals from lower social classes sustainably.

Environmental Attitudes before and after Fukushima

The Fukushima Daiichi nuclear disaster revealed the dangers of nuclear power and might have changed people’s attitudes towards this energy source. Therefore this paper examines whether a nuclear accident like the Fukushima accident has a long-term effect on attitudes towards nuclear energy. After we describe the overall impact and trend before and after the accident for different countries we test hypotheses about the structure of the effect. On the one hand, whether the effect is temporary or persistent; on the other, whether the average treatment effect depends on individual characteristics, like age, gender, education or nationality. According to availability heuristics (Tversky and Kahneman, 1974) we would assume a temporary effect (declining media coverage, memories fading away). Classical rational choice theory (Coleman, 1990) might expect a long-term effect, which is caused by an updated risk evaluation due to new information we got from the Fukushima accident (e.g. how tedious it is to stop nuclear chain-reaction or a lack of trust in authorities because of bad disaster management).

Researching Youth Ethnicities in East London and in Paris Banlieues: Methodological Challenges and Explorations

This contribution explores the methodological challenges I faced while carrying a qualitative study on ethnicity among young people (aged 15 to 25 and chosen to adolescence the transition between systemic diversity across gender, age, ethnicity, social class, education and type of housing) in the London Borough of Newham in East London and in the city of Bondy in Paris northeast Banlieues. The research aimed at investigating the impact of French republicanism and British multiculturalism on everyday life and identities of these young inhabitants. But how to study ethnicity, a deeply relational phenomenon, socially and symbolically violent, and often – especially in France – considered taboo?

The paper starts with positionality and how I dealt methodologically, ethnically and personally with the power relationships involved in the research. As a mid-20th-century French female researcher who was perceived in opposed ways during fieldwork: a white rich middle class Parisian in Bondy; a strange, lost, and possibly East European young woman in Newham. It then shows how both the willingness to reduce symbolic violence and the choice for a constructionist approach defined my research design and the structure of my interviews. Two methods especially helped me investigate intersectionality while decreasing symbolic violence: self-portrait and mental maps. This fed a reflexion over the use of categories.

At last, I discuss how each method involved specific power relationships and revealed different - different, different aspects of ethnicity. Individual semi-structured interviews fostered the presentation of particular yet universal selves who rejected categorization and stressed a distinctiveness based on intimate experiences; focus groups (carried out every other week in secondary schools with the same participants for one or two semesters) politicized discourses and built collective actors defending group identities based on Us/Them dichotomies. At last, observations disclosed autonomous, playful, situational and instrumental aspects of ethnicity and discrepancies between attitudes and practices.

Creativity & Creative Class in the Transformation of Russian Society

Russia is a country of creative minds, rich in talents. Creativity - is a fundamentally new state of Russian society, associated with the formation of the creative class, the integrated group, which unites representatives of various professions on the basis of a demand of self-realization and service to the public good. Investigation of the conditions, the vector of development and activity of the creative class shows that, despite the spontaneity of social initiatives steady trend of actualization of potential creative class occurs, which gives us hope for a successful modernization of Russia, the qualitative renewal of all aspects of public life.

Today Russian society gets its second wind, gets rid of “post-reform fatigue syndromes and skepticism”. It requires the formation of the creative person, creative education, creative management of all aspects of Russian society. It is with the growth of creative trends and shaping the creative society, a society of social creativity the future of Russia is linked. What responsibility has society and what a social dialogue should be to implement a real historical breakthrough depends on the creative class.

Discourse of the Integration of Society in Latvian Sociology

If sociological theory considers social integration as a universal process which involves the whole society and all types of its diversity, the public consciousness in Latvia, as well as the scientific discourse, persistently relate this term to just one dimension – ethnic. The findings presented in the article demonstrate that the scientific research on the integration processes in Latvia has become more critical towards the methodological assumptions which appeared in the 1990s, but in the theory there is a reconsideration of the values of those ideological approaches to the understanding of society integration which first were formulated in T. Parsons’ conception. At the same time, the ideas of J. Habermas who considered it necessary to recognize a collective identity of ethnic minorities in the multicultural society, have become a significant ideological resource for the research on society integration in Latvia. The article presents some data from the sociological research carried out in the largest city of Eastern Latvia – Daugavpils, the city with an ethnically diverse population. The data obtained in the run of the research demonstrate the possibility to reconcile the liberal conception of society integration in Latvia with the recognition of the value of a collective identity of ethnic minorities.

The Formation Of Political Subjects

The Formation of Political Subjects. Tenant Protest in Berlin and New York

A crucial point in the development of urban social movements is their ability to form coalitions to overcome the deep entrenched structural and discursive fragmentation and particularization of neoliberal societies. The urban seems to be the context in which this can be achieved. In current tenant protest in Berlin and New York, though highly specific in their issues and demands, we can see such an abstraction from personal interests making affiliations of broader political positions possible. In the process of legitimizing their right to stay put some of the protest groups go as far as to make universal claims to (represent) the common good.

But social movement research lacks concepts to fully grasp this process. To counter these shortcomings of social movement research I propose a re-thinking of social protest through the lenses of the formation of political subjects. Such an approach would offer the opportunity to overcome social movement research’s one-sided focus on the actors of protest as merely strategically acting, identity-based and self-interested activists by shifting the focus to the impact of the interplay between structure and discourse on peoples subjectivity, the subject positions they shape in the process of protest and the possible links they thereby offer to others.

The Poor As Drivers of Development – How Global Discourses Legitimised Social Cash Transfers

Since 2005, social cash transfers (SCT) have become a legitimate and widely used instrument of global development policy. This is surprising, because development organisations have long rejected direct cash transfers, citing concerns of dependency and lacking capacity for implementation in the Global South. In this paper I attempt to explain how and why development organisations changed their position on social cash transfers. Previous research indicates that a shift in global discourses may have caused development organisations to reconsider SCT as a policy option. Therefore, using an approach of sociological discourse analysis, I check in how far changes in global discourses prior to the 1990s have had an impact on the legitimisation of SCT as development policy. Indeed, I find that three global discourses have played a role in the rise of social cash transfers: One on poverty, one on development and one on human rights. Since the late 1980s, each of these discourses has shifted in specific ways which have facilitated the legitimisation of SCT in development policy. Even though the shifts in the three discourses do not seem to be causally connected, they had a joint effect: I argue that the shifts in global discourses fundamentally changed the perception of the poor in development policy. While the poor were long regarded as passive beneficiaries of development, discursive shifts during the 1990s led to their perception as potential drivers of development due to untapped economic potential. This shift in the perceptions of global actors legitimised social cash transfers, because they were successfully portrayed as a direct investment into the poor which can help to fulfil their untapped potential.

Area Characteristics and Admission Rates of People with Schizophrenia and Affective Disorders in a German Rural Catchment Area

Background Research on environmental risk factors for mental illness in rural areas is sparse, although the same risk factors as identified in urban areas may be present. Especially municipality characteristics reflecting economic uncertainties may have an impact on mental health.

Methods From 174 rural municipalities in the catchment area of the state psychiatric hospital in Gönzburg (Bavaria – Germany), hospital admission rates from the years 2006 through 2009 were computed and combined with structural and socio-economic data. Relationships of admission rates with municipality characteristics were analysed by means of negative binomial regression models.

Results Admission rates of patients with a diagnosis of schizophrenia and affective disorder combined decrease with increasing population growth, poverty, average income, and percentage of green areas, while admission rates are positively correlated with commuter balance, income inequality, unemployment rates and percentage of traffic areas. Admission rates for schizophrenia are negatively related to population growth, average income and percentage of agricultural area, but positively related to mobility index, income inequality and unemployment rate. Admission rates for affective disorders are negatively related to population growth, population density, average income and (percentage of green areas, while higher admission rates are correlated with commuter balance, high income inequality, unemployment rate and percentage of traffic-related areas.

Conclusions Previously reported effects of wealth and economic inequality on psychiatric admission rates form urban areas also seem to apply to rural areas. This study once more shows that lack of financial security is a major risk factor for the occurrence of mental disorders. In contrast to findings in urban areas, the present study suggests that population density may have an ameliorating effect on mental health.

Multiple Migrations: Who Moves On and Why? – Answers From A Biographical Informed Perspective

Even though multiple migrations have and continue to gain in importance due to contemporary internationalization processes, to date they have hardly been subject of systematical examinations in migration research. Not only are the dimensions and significance of their repeated migratory movements in the society as a whole underestimated, but also bring they out a methodological challenge for social research, especially quantitative methods. The multiple transnational paths of those onward migrants usually don’t appear respectively go missing in survey statistics. Nevertheless, according to certain targeted quantitative studies a notable part of international migration can be characterized as repeat migration. Based on them limited data are available on their demographic characteristics.

such as age, income, employment, educational background and country of origin. However, even less is known about their individual motivations, decision-making and experiences. In order to contribute to an understanding of who is moving on and why, results of a qualitative, biographical oriented study on serial migrants from different national and social backgrounds are presented. Therein the underlying structures of new governance patterns of order given their multiple migration movements are reconstructed and analyzed as constitutive elements of their transnational trajectories and social contexts.

Prostitution and The “Law-In-Action” – A Study Of Public Administration In Germany, Poland and Czech Republic

The paper presents the results of a qualitative-empirical research project on public administration of prostitution in Germany, Poland and Czech Republic. Therein administrative practices of both governmental institutions and civil society organizations (e.g. police force; public order, public health and tax authorities as well as social work) will be described and analyzed. Using semi-structured expert interviews with organizational frontline-actors governance of prostitution is approached and investigated from a bottom-up perspective. Germany with the Regulation model on the one hand and Poland and Czech Republic with the Abolitionism type on the other hand follow different laws and policies regarding prostitution. However, concerning their “law-in-action” the role of social actors’ professional habitus formations revealed to be highly significant. Moreover, it can be shown how executives’ patterns of perception, thoughts and behavior are crucial in the political decision-making. The study took place after an explicit legal and political paradigm shift of governing prostitution in Germany. Based on case reconstructions and contrastive comparisons a theoretical model on prostitution governance has been developed. It enfolds the conceptualization of administrative actors’ professional habitus consisting of three general dimensions: their definition of subject, definition of self and definition of environment. Furthermore, empirically emerged challenges and ambiguities of governing prostitution in terms of an everyday practice attempt to explain the relevance of professional habitus formations affecting “law-in-action”.

Challenging New Governance: Evaluating New Approaches To Employment Standards Enforcement In Common Law Contexts

A mounting crisis in employment standards enforcement is prompting experimentation in common law contexts with new instruments aiming to improve workplace regulation. This experimentation across all stages of the enforcement process indicates the increasing influence of ‘new governance’. Focusing on reforms in five jurisdictions, this paper raises serious cautions around ‘new governance’ styled place regulation. This experimentation across all stages of the enforcement process is approached and investigated from a bottom-up perspective. Germany with the Regulation model on the one hand and Poland and Czech Republic with the Abolitionism type on the other hand follow different laws and policies regarding prostitution. However, concerning their “law-in-action” the role of social actors’ professional habitus formations revealed to be highly significant. Moreover, it can be shown how executives’ patterns of perception, thoughts and behavior are crucial in the political decision-making. The study took place after an explicit legal and political paradigm shift of governing prostitution in Germany. Based on case reconstructions and contrastive comparisons a theoretical model on prostitution governance has been developed. It enfolds the conceptualization of administrative actors’ professional habitus consisting of three general dimensions: their definition of subject, definition of self and definition of environment. Furthermore, empirically emerged challenges and ambiguities of governing prostitution in terms of an everyday practice attempt to explain the relevance of professional habitus formations affecting “law-in-action”.

Social Media Collaborative Storytelling: The Occupy Movement and the Narratives Constructing It

Social Media developed in the 21st century have become tools for people to transmit and express their opinions for the global political scene. At the same time, the worldwide recession and financial crisis has lead the people to make use of these technologies in means that were never intended to when they were launched. Looking specifically at the Occupy movement and the role of social media, this paper will argue that Twitter cultivated the ideal conditions for this social movement to bring together online and offline activist communities that shared common values. Considering the use of Twitter during a number of protests that adapted the ‘Occupy’ name, slogans or rationales, incubated in New York, London, Madrid and Athens, this paper will be premised upon the following advances. First, that this platform is increasingly evolving into means for collaborative storytelling by the social movement by the social movement through them with a collective identity and a sense of belonging. Twitter’s discursive identity anchors an interactive role to the activists who use the medium as a tool to synergetically construct the movement’s story. Second, that this Occupy collective identity is now traceable in an one-time system where the realization of the Occupy movement is portrayed simultaneously in the world and inside its networks of production, online and offline. Presenting the story of Occupy, Twitter becomes the score and the machine by the same token: the digital container of the story. A story that begins with solid social conventions, evolves through stages of dispute and crisis, and ends with a rather permanent openness or lack of resolution.

The Effects of School-to-Work Transition Pathways on Economic Outcomes through the Great Recession

Whereas the term “school-to-work transition” (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional and typically includes involvements in both school and work. Destandardization in the STW transition makes it difficult to assess the extent to which young people today “flounder” during this period. Using longitudinal data from the US Youth Development Study and hierarchical latent class analysis, this paper examines the interplay of educational and career attainment and its longer-term economic consequences. Four STW pathways were observed from age 18 to age 30: two groups that attain careers through postsecondary education (via Bachelor’s or Associates/Vocational degrees) and two floundering groups that do not (those with some college and those with no postsecondary experience).

Regression models demonstrate the negative effects of floundering pathways on economic outcomes and the heightened difficulties of those pursuing these pathways during a recession. While the High School Flounders were consistently the worst off, the Some College Flounders (SCF) also experienced relatively poor economic outcomes. Both pre-recession (2005) and in 2009, respondents in the SCF pathway were less likely to have a savings account and own a home, and had more financial problems and lower job satisfaction than those who moved into the labor force with Bachelors’ degrees. Even starker were their circumstances in turbulent economic times, with the SCF pathway now more likely to be unemployed, receive financial help from parents, and to have recently lost a job. We find that most differences between the two career groups and the Bachelors into Career group were non-significant, despite their unequal educational attainments, suggests that the pathway from an Associates or Vocational degree to a career is a viable alternative. We discuss implications of these findings both for the U.S. context, as well as for transition dynamics in other countries.

Rural Upliftment and World's Largest Welfare Scheme Mgnarega : A Sociological Learning of Southern Rajasthan in India

Despite the preeminent efforts during the different Indian plan periods, the state of affairs of rural masses do not change significantly and the primary goals such as an increase in productivity, employment, eradication of poverty and social-cultural transformation of society remained an illusion for several years. Therefore, in order to achieve the twin goals of rural development and employment, the government of India was promulgated the world’s biggest welfare program entitled as Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) on December 7, 2005. It aims at enhancing livelihood and security of homes in rural areas of the country by providing 100 days’ guaranteed wages in each financial year. The NREGA became operational on 2nd February 2006 and initially covered 200 most backward districts. In the second stage this scheme was further expanded in 330 backward districts and finally it made available for all the districts of the country. As far as the impact of MGNREGA in Rajasthan is concerned it has helped the poor and needy in the villages of Rajasthan in several ways. Aside from offering jobs to the rural needy, it has been assisted in the creation of durable rural assets like plantations over degraded forest land, pasture land development, cleansing of ponds, improving the water harvesting system creation of gravel roads etc. It has helped in deepening the grass roots participatory democracy by making the system more transparent and accountable at every step. The scheme has also assisted in controlling the migration of poor villagers towards cities and towns in search of employment.

In this context, the present paper is an attempt to assess the effectiveness of implementations of MGNREGA in southern Rajasthan comprising of Bhilwara, Chittaurgarh, Partarpagar, Udaipur, Dungarpur and Banswara districts. These districts of Rajasthan are most backward and extensively populated by scheduled tribes.
While violent action is almost always countered by state violence, the opposite is not true. It is unclear, according to Christian Davenport, whether state violence triggers or contains civil violence. In fact, one of the most difficult issues in the study of contentious politics is to predict civil society actors’ reactions to state violence. Will those who have witnessed state repression pick up a weapon in anger or quiet down in fear and despair?

This paper tackles this repression-dissent problem. The literature on collective violence emphasizes the importance of institutional and structural contexts—e.g., political regime characteristics, state capacity, ethnic, religious, and class cleavages, levels of socioeconomic development, etc.—to understand the repression-dissent dynamics. A major stumbling block in the effort to carry out such a research agenda is methodological. On one hand, small-N case studies, while good at revealing exact processes of state and civil society interactions, cannot measure adequately the effect of multiple contextual factors. On the other, typical quantitative analyses of annual event counts, while good at estimating the contextual effects, fail to detect dynamic interactions.

By conducting a cross-national comparison of contentious event sequences, this study attempts to examine both the contextual effects and the interactive dynamics at the same time. We use a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. This unique data set records event information at a daily—instead of yearly—basis and, thus, helps us detect interactive dynamics. Moreover, we distinguish the actors who are more likely to resort to violence after state repression from the actors who are more likely to give up any further attempts to make claims by using multilevel analysis of actor-target interactions. This paper presents an original analysis of national contexts, actor characteristics, and actor-target interactive dynamics.

Participatory Action Patterns Based on the Cultural Hypothesis about Repertoires of Contention

Contentious events—such as the collapses of socialist regimes around 1990, the Seattle anti-globalization protests in 1999, and the Arab Spring since 2010—often catch many by surprise. It appears that future contentious actions are highly predictable because actors’ selection of action forms is dependent upon their familiarity with these forms. In a word, people cannot perform if they do not know how. This paper explores such a cultural hypothesis about repertoires and asks to what degree we can predict future action patterns (violence, nonviolent protests, and conventional institutional actions). Specifically, we ask, what is the most important predictor of action patterns? (1) institutional regime characteristics such as degree of democracy and state capacity, as political process theorists have argued, or (2) actors’ familiarity with contentious forms, as the cultural hypothesis claims? To find an answer to the question, we conduct a cross-national comparison of action patterns using a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. Using multilevel analysis, we estimate and compare the national-level political regime characteristics, state capacity, ethnic, religious, and class cleavages, levels of socioeconomic development, etc.—to understand the repression-dissent dynamics. A major stumbling block in the effort to carry out such a research agenda is methodological. On one hand, small-N case studies, while good at revealing exact processes of state and civil society interactions, cannot measure adequately the effect of multiple contextual factors. On the other, typical quantitative analyses of annual event counts, while good at estimating the contextual effects, fail to detect dynamic interactions.

By conducting a cross-national comparison of contentious event sequences, this study attempts to examine both the contextual effects and the interactive dynamics at the same time. We use a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. This unique data set records event information at a daily—instead of yearly—basis and, thus, helps us detect interactive dynamics. Moreover, we distinguish the actors who are more likely to resort to violence after state repression from the actors who are more likely to give up any further attempts to make claims by using multilevel analysis of actor-target interactions. WADDELL, PHIL,* (University of Southampton, phil.waddell@soton.ac.uk)

#StopG8 - Activist Perceptions Of Social Media Use In Contemporary Global Justice Protest

In June 2013, a group of global justice activists occupied an abandoned police training academy in central London. The building became a “convergence space” from which a series of events were organised in protest against the G8 summit that was simultaneously taking place in London. The group were known as “Stop G8” and had an online presence with a blog, facebook group and a unique hashtag (#StopG8) on Twitter, which pointed to awareness by organising members of the group regarding the value of a presence on the Web.

This paper presents an ethnographic account of a week spent with these activists in the convergence space which was carried out in order to explore the position of the Web and of social media in the real-time process of protest participation. Through participant observation and interviews with activists, a picture emerged that runs in some ways counter to the mainstream understanding of the benefits of social media towards political activism.

It became clear during this study that these situated activists had a broadly apathetic, in some cases hostile view of using the Web. Two clear concerns noted during the ethnography were; the shift in recent years from public forums and well-connected networks of committed activists to a more fragmented network of individual social media profiles, a filter bubble effect which appears to have reduced the ability of activists to create coordinated alternative media for protest events and the clear adaption of social media by not only the public at large, but corporations and governments existing within clear power structures that present little opportunity for decisive political change. It may be that the opinions of these activists are a signal of a shift away from activist networks away from corporate-controlled, mainstream social media towards more ideologically suitable Web services and virtual communities.

The Interplay of Youth Culture, Social Media and Political Participation: New Reflections after the Arab Spring

The recent Arab youth’s rebellion offers a valuable insight into new forms of online participation, alongside the role of youth culture, for political participation. For communicating their unease, for organising protest and for mobilising themselves young people utilise social media such as Facebook, Twitter, and YouTube. Furthermore, youth culture, also communicated through social media, played in initiating the 2010 uprisings: “Facebook revolution” and “Twitter revolution” became essential in getting news out of the country, as well as in providing a rather independent news source of the current events. Before using Facebook to bring people on to the streets, the activists also used it to articulate their political critique and to build a constituency and growing community around those ideas. Our analysis further reflects on the Middle East and Northern Africa events in demonstrating that Hip Hop cannot only be used for self-expression, but also for mobilising the (young) masses. We show how youth culture seems to be a perfect tool for reaching the young population, especially when distributed through new social media such as Facebook or YouTube.

WAGNER, ELKE,* (IGU Mainz, wagnere@uni-mainz.de)

Communities, Networks, Swarms. Internet-Collectivities As Supplements for the Notion of Society?

Sociological observations of social formations emerging with the internet have seldom pictured their object as a society; instead, there are many references to community, network, or swarm. These different notions are in many ways loose and diverse. They change all the time and combine different forms of networks. Thus, concepts switched to theoretical tools found in network analysis. Conten-
porary sociological writings go back to the concept of swarms to describe internet
coletivities. The notion of society does hardly appear within the sociology of the
internet. Instead of simply taking that as a sociological blind spot, this paper ar-

gues for an empirical perspective. Discussing different supplements (Derrida) of
the notion of society within internet culture it thus addresses internet practices as
societal. The practices are social practices – and within modern society there has always been a typical figuration of proximity and distance, fl-

uidity and diversity. But at the same time the different supplements for the notion of
society could indicate that societal forms are changing (through the influence of
new media practices), e.g. the figuration of proximity and distance or the fig-

uration of privacy and publicity. For the special case of the internet, this might
be an instance of "writing (society) into being" (boyd). The paper discusses the
sociological discourse on internet collectivities from an empirical point of view.
It emphasizes that internet practices take place within society. And it works out how
the new supplements to/of the notion of society could be indicators for social trans-
formations.

WAGNER, ELKE* (JGU Mainz, wagnere@uni-mainz.de)
Internet Communities As Intimate Publics

The culture of the internet has long been described as community culture (Rheingold, Wellman, Thiedeke). But what does community here actually mean?
On the one hand there is a sort of community feeling and support in online social groups (Booth, Bechtel). On the other hand internet communities are often com-

munities between strangers who have never met or will never meet. Even in Social
Network Sites like Facebook the Friend-Practices don’t often mean true friend-

ship but simply contacts between different addresses. Therefore Danah Boyd
(2006) has suggested to describe community-building on the Internet as “writing
community into existence”: communities don’t exist per se, they have to be fabricated
by writing practices. This paper wants to illustrate these community writing prac-
tices. It shows on the basis of screen-shots from Facebook and interviews with
Facebook users how the special feeling of community does emerge here: On the
one hand community means here an intimate sphere where contents between true
friends are published. On the other hand contents remain indeterminate
enough to include different friends from the contact list. Thus, community ap-

pears in Social Network Sites like Facebook as intimate publics. They are intimate
because they assemble a list of close persons, but they are publics because there
are different circles (Simmel) of close persons who have to be integrated in the
writing practices. That is why indeterminate writing practices emerge.

True Finns and Non-True Finns: The Minority Rights Discourse of
Populist Politics in Finland

This paper analyses the minority rights discourse found in political statements of
the populist party called the True Finns. The party won a historic electoral result in
the Finnish Parliamentary Election in 2011, increasing its share of the votes from
4 to 19 per cent. A theoretical framework for this paper is provided by re-
search about populist discourses, which has shown that populist discourses in west-
ern democracies. Will Kymlicka (1995) distinguishes between the minority rights
of two different types of minorities in modern nation states: on the one hand, old
national minorities, and on the other hand, new minorities that have emerged as
a consequence of immigration. Kymlicka (1995) argues that the international so-
called backlash and retreat from multiculturalism has mainly occurred in relation
to the acceptance of ethnic-cultural diversity among immigrant groups. In this
paper, the support for a backlash against multicultural policies is found in the
minority rights statements of the political party called the True Finns. The paper
argues that Kymlicka’s assessment is not completely accurate in this particular
case. The statements of the party are not only about policies relating to immi-
igrants, but in the political rhetoric of the party the basic principles of group-specific
rights for minorities are disputed. Thus, any real or imagined minority who is not
considered truly Finnish, or not considered sufficiently representing ‘Finnishness’,
can become a target of the rhetoric.

Variations and Continuities of Motives for Climate Protest: A
Comparison of Cop-15 Protesters in Copenhagen 2009 with Cop-
19 Protesters in Warsaw 2013

In connection with the Fifteenth Conference of the Parties to the United Na-
tions Framework Convention on Climate Change (COP-15) in Copenhagen 2009, many activists had (at least reasonably) high hopes about successfully pushing for

a new international climate agreement. After the complete stalemate between
different country positions in Copenhagen, many climate activists lost their faith
in the possibilities of achieving substantially changed international climate pol-
cies through the COP meetings. Four years later, facing the COP-19 meeting in
Warsaw 2013, the climate movement mobilizes protest in a political situation with
ostensibly more limited political opportunities. How do participants’ motives for
protest and sense of efficacy vary between two equivalent climate protests when
political opportunities change over time? The paper also explores shifts between
the two points in time regarding what political strategies the participants in trans-
national demonstrations claim to prioritize. This is analysed based on two
surveys of protest participants, one collected at the largest demonstration during
the COP-15 meeting in Copenhagen 2009, and the other one at the main climate
demonstration during the COP-19 meeting in Warsaw 2013. The data collection
is based on a strict standardized methodology established in the international
research programme CCC (Caught in the act of protest, Contextualizing Contes-
tation) which ensures reliability as well as comparability across protest events.
Inevitably, the research design not only involves comparison of cross-sections of
climate protest participants over time, it is simultaneously a comparison of two
national mobilizing contexts. However, these two aspects can be sufficient-
ly disentangled by controlling for demonstrators’ country of origin in the highly
transnational demonstrations. The study aims to contribute to current scientific
discussions about protest mobilization, as well as to tap into the contemporary
developments of the (European) climate movement, from the perspective of
individual climate protesters.

Variations of Stressful Work and Effects on Health after Labour
Market Exit. Results from Share and Elsa

Recent research has highlighted the importance of former life stages in ex-
plaining social inequalities in health at older age. In this paper, we describe working conditions during adulthood and analyse their influence on health after
labour market exit. Analyses are based on two longitudinal studies with compara-
bale information across 14 European countries: the English Longitudinal Study on
Aging (ELSA), and the Survey of Health Ageing and Retirement in Europe
(SHARE). We measure working conditions in terms of psychosocial stress at work (as de-
defined by the demand-control and the effort-reward imbalance models), as well
as working careers are regrouped using sequences analyses. Moreover - given
cross-national dataset – we explore the relationship between specific indicators of
social and labour market policies (e.g. expenditure on active labour market policy)
and working conditions. Results show important variations of working conditions
according to gender, socioeconomic position and countries. In addition, results
illustrate the importance of work and employment for health among older adults,
where effects of stressful work and unstable careers on later health were more
consistent for men.

Disaster Preparedness Among Older People with Long-Term Care
Needs and Family Caregivers: Who Is Vulnerable and What Do
They Need for Preparedness in Communities?
Background: Hurricane Katrina in the U.S. highlighted the potentially fatal effects of a natural disaster on older individuals. This experience was reinforced by the Great East Japan Earthquake, where community-dwelling elderly were again at the greatest risk of mortality. Understanding the needs for and concerns of older persons with long-term care needs and their caregivers is vital to the development of public health programs for community level disaster planning.

Purpose: The preparedness of community-dwelling older people with long-term care needs were examined to identify characteristics of care-recipients and caregivers that are associated with worse preparedness and greater concern.

Methods: A self-administered survey among family caregivers of older Japanese with long-term care needs (n=952) were conducted in 2011. Logistic regression analysis was used to identify the predictors of disaster preparedness, including evacuation plans and caregiver’s concern about preparation. Data were analyzed in 2013.

Results: Most older people had no concrete evacuation plans, and those with dementia were 40% less likely to be prepared. Caregivers who were responsible for older persons with worse mobility, as well as those in worse health or poor financial situations, reported higher levels of anxiety about their disaster preparation. However, more experienced, wealthier, and better socially integrated caregivers in the community were more prepared.

Conclusions: Older people with long-term care needs are at heightened risk in disasters, and rely upon caregivers who may be ill-prepared to respond in emergencies. Education of caregivers and development of community support programs could provide important sources of assistance to this vulnerable group.

What is Justice? Gendering Visions of Equality and Justice

Equality is key to justice. Debates on gender relations have challenged simple concepts of equality. Going beyond the static notions of equality as either equal opportunities or as equal valuation of different contributions, emergent concepts of equality depend upon visions of transformed gender relations. The paper critically engages with the limitations of Fraser’s account of the cunning of history, to produce an analysis of the varieties of gender regimes, not only domestic but also public, not only neoliberal but also social democratic, not only in the economy, but also in violence, politics, and civil society. The paper goes beyond the limited Sociological engagement with violence, drawing on Gramsci to offer a stronger basis for conceptualising the social and political dimension of daily life. The paper engages with the debates on democracy, in the tensions between statist and horizontal conceptions, offering resolutions drawn from feminist politics. The paper offers a gender lens to develop debates on justice from Harvey and Wallerstein to Esping-Andersen and Sen.

Behavioral Versus Questionnaire Measures of Influence

In this project we examine the relationship between attitudinal measures of expectations and influence and a behavioral measure in an experimental setting. The attitudinal measures are typical questionnaire items regarding a study participant’s views of themselves, a partner, and their task after interaction. The behavioral measure, $P(s)$, is the standard dependent variable for the kinds of experiments from which the data comes. $P(s)$ reflects the participant’s resistance to influence from his/her partner and is thought to reflect underlying expectations for competence. In this study we regress $P(s)$ on the series of attitudinal questionnaires regarding expectations, influence, and affect. Results indicate that there is a strong relationship between attitude and behavior. Further, attitudes about ability, particularly the partner’s ability, are more closely associated with behavioral influence than affective sentiment is.

Changing Meanings of Family in Personal Relationships: A Comparative Perspective

Personal relationships are today less dependent on marriage and blood ties, with commitments going far beyond the nuclear co-resident family to include kin, non-kin and ex-kin. The aim of this presentation is to examine the meanings of family ties by exploring the changing boundaries within kinship and a wider array of affinities, in three European countries with different historical and social pathways and characterized by distinct welfare regimes: Portugal, Lithuania and Switzerland. We intend to grasp whether family configurations reveal different levels of kinship integration, as well as the degree of fluidity in the social construction of family ties, in particular through the inclusion of friendship ties in the family setting. Do the different social and economic backgrounds that have been affecting family life in late modernity in these countries shape the patterns of family configurations? To what extent do other factors, such as the life-stage, structural conditions (gender, education), family circumstances (partnership, parenthood) or relational characteristics of the ties (duration) moderate these cohort effects? Findings reveal the salience of kinship ties, as well as the gendered nature of the family ties. We find important through friendship. However the degree of salience of kinship ties varies across the three countries. Structural, life stage and family variables are shaping factors, but relational effects (quality of the tie), are of particular importance.
Forgotten Estates: The Precarity of Neighbourhood Restructuring in Salford, UK

Since the 1980s, the Northern English city of Salford has undergone intense deindustrialisation and been subject to systematic waves of urban regeneration. A key aspect of these regeneration efforts has been to rebrand and reconstitute the city and its districts from ‘grimy’ and ‘old Salford’, to dynamic and cosmopolitan. Under the aegis of the ‘New Deal for Communities’ policy, one specific district in the mid-2000s was earmarked for a distinct process of redevelopment entailing the demolition of public housing stock and the construction of private housing developments within newly enclosed estates and along the profitable local riverside.

Ten years on and amid a challenging fiscal climate, this redevelopment vision has largely stalled resulting in an amalgam of complex neighbourhood impacts and processes encompassing partially demolished public housing estates, threats of further eviction for housing tenants, the arrival of new private owners and a severely disinvested community infrastructure. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established resident experiences of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established resident experiences of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic.
The regional infrastructure is a crucial training determinant. Age and vocational degree do not directly affect training decisions. Yet, persons in specific occupational settings do exhibit a lower training tendency. Also, training behavior of these persons appears to be more rigid and less likely to react to changes in their cognitive training attitudes.

Encountering the ‘Other’: Interpreting Student Experiences of a Multi-Sensory Museum Exhibition

The Immigration Museum in Melbourne, Australia launched the Identity: Yours, Mine, Ours (IYO) exhibition in 2011. Aimed primarily at young adults and secondary school students, this major long-term installation seeks to foster reflection on identity and belonging as well as dialogue about racism through a reflexive, empathetic and interactive museum experience. Drawing on findings from three secondary schools, this paper reflects on a multi-method approach that included narrative interviews, video diaries and focus groups with Year 11-12 students as well as key informant interviews with principals and teachers.

While focus groups were a catalyst for dialogue about everyday experiences with cultural diversity and racism, the identity lens privileged in these groups could not account for the complexity of embodied experiences of belonging that were, to at least some extent, captured in narrative interviews and video diaries. For example, the narrative interviews allowed students to talk about themselves in relation to aspects of the exhibition rather than directing and framing their experience a priori, thus capturing a complex understanding of the student IYO experience through an entanglement of their life worlds, at home and school.

Overall, the combination of qualitative methods revealed the ways in which an interactive and immersive museum space can support students to encounter and engage with individual stories and faces, move beyond the abstract tolerance of cultural diversity, unsettle the Self and destabilise stereotyped and prejudiced interpretations of ‘the Other’. We conclude by discussing the potential of multi-method qualitative approaches to draw upon students’ meaning-making, including the narrative barriers experienced in multilingual contexts, in order to provide a rich emic perspective on multi-sensory exhibitions.

Internet Public Sphere Under Construction: A Grounded Theory Analysis to Sina Netizens’ Comments on “Toilets Standard”

The dilemma for China to construct its internet public sphere does not result from the lacking of the same physical foundation as the western world has. On the contrary, the structural constrains such as no clear boundaries between public and private, the inner-circle communication oriented caused by “Chau Guo”, as well as the non-stand against as the ‘weapons of the weak’ do matter, that finally prevent from the opinions transforming from personal to public. To break through the deduction circulation that whether the virtual or physical public spheres should make the first move, this paper try to get the answer from the induction from the Comments on “Toilets Standard” by Sina Netizens using the construction grounded theory as a research method. It is easily to find out after a series of coding that, the public all agree that this standard has very bad operational performance and military power); on the other hand, it is also contended

1. How Indigenous People Are Excluded from Caring Their Children?

The “residential school” symbolizes the ultimate form of cultural violence by the state toward indigenous peoples in the Western history of child welfare, with the victims of residential school named as ‘the stolen generation’ by indigenous scholars. Although residential school has never been adopted in Taiwan, I argue that similar effects of residential school policy are replicated through the social organization of child care. The case of the aboriginal community-based child care program in 2008 will be analyzed to illustrate how indigenous peoples are excluded from caring their own children and how indigenous ways of care disqualified in the bureaucratic discourses of ‘safety’ and ‘quality’ in child welfare. Choosing the experiences of community workers for indigenous communities as the standpoint of my study, the analysis shows how the definitions of safety and quality reflect the worlds of urban Taiwanese people and indigenous perspectives are exclusion of ‘unsafe’ and ‘inferior’. IE is adopted to give voices to front-line child care workers and validate indigenous perspectives in the coalition-building process among indigenous communities. Alternative discourses on safety and quality will be presented as a way to interrupt the circle of colonial relations in the context of the child welfare system.

The Quest to “Overcome Modernity”: War, State-Building and Nationalism in Japan and China

Drawing on Japan and China as two illustrative cases, this paper intends to shed new light on our theoretical understanding of modernity by articulating the relations between state, national building and nationalism discourse in the non-Western context. From its very burgeoning, the historical formation of modernity in East Asia has been intertwined with the experience of the defeat of war (or war threat) that, in turn, gives rise to nationalism. Moreover, understood as originating from the West, modernity to the East has been regarded as something to be achieved and overcome at once. On the one hand, it is considered that the East has to catch up with the West in terms of material achievements (particularly economic performance and military power); on the other hand, it is also contended
that Western modernity has intrinsic contradictions that will eventually lead to self-destruction, of which the only redemption is through the alternative path provided by the East. Such a dichotomous view of modernity has been dominating nationalist discourses in many instances in East Asia. Thus, nationalist projects in East Asia often have a double task: to pursue modernization through state-building, on the one hand, and to “overcome (Western) modernity”, on the other. However, due to the legacies of war, which leads to a lack of reflection on state ideology and violence, such nationalist projects often fall into the trap of modernity itself without being able to become the genuine critique of the latter. This paper will use the attempt to “overcome modernity” in wartime Japan and the search for “anti-modern modernity” in contemporary China as two examples to examine such a paradoxical situation. It is concluded that, to better theorize (and critique) modernity, the intertwined relationships between war, state-building, nationalism and global inequality have to be taken into account.

Feeling Good about the Iron Rice Bowl: Economic Sectors and Happiness in Post-Reform Urban China

Situated in China’s market transition, this study examines the relationship between economic sectors and individuals’ happiness in post-reform urban China. Based on pooled data analysis of restricted urban samples from the China General Social Survey (CGSS) 2003, 2006 and 2008, the subjective premium enjoyed by workers in the state sector is noteworthy: individuals working in the state sector have significantly higher levels of happiness than their counterparts in the private sector, other things being equal. After controlling for selectivity in mobility into the private sector, differences between those remaining in the state sector and those moving from the state to the private sector are highlighted: those remaining in the state sector are significantly happier than former state sector workers who moved into the private sector, whether the move was voluntary or involuntary. Possible underlying causes of these psychological costs are further explored: institutional segmentation in the allocation of social welfare benefits rather than psychological factors serves as the primary nexus linking state-to-private mobility and happiness. On the one hand, those who moved voluntarily experienced a trade-off in enjoying higher paid-offs while losing a sense of security. On the other hand, involuntary, downward mobility leaves long-term psychological scars to those who experienced layoff or unemployment after controlling for social welfare benefits. People who experienced sectoral mobility, whether voluntary or involuntary, suffer from loss of the iron rice bowl. Results from robustness checks indicate that neither observed nor unobserved confounding factors, if any, would bias our conclusions. This study emphasizes the role of social security as an important dimension in determining individuals’ happiness that should be explored in future research.

Re-Territorialization and Social Resistance in the Remaking of Dafen Village, Shenzhen, China

After exhibited in Shanghai EXPO2010, Dafen Oil Painting Village has been advocated as an innovative “best practice” of governing that has transformed urban villages with low-skilled labors and chaotic landscape into a cultural cluster. Many scholars have noted that, in China, couples of famous cultural clusters have emerged and prospered in places with a near vacuum of governance, such as villages or remote suburbs, only to drastically change due to the expansion of state governance. Nevertheless, there seems to be a marginalization of scholarly attention to the trade-painting community of Dafen Village, perhaps due to the common critiques on authenticity of trade-painting industry and thus, negligence of everyday life of trade-painting workers and their struggles. It is changing landscape of social relations when a particular area is demarcated as a special cluster subject to the state’s regulation in name of objectifying the imagined economy. Instead of debating the nature of trade-painting industry, we argue that the remaking of Dafen Village into a cultural cluster is a project of re-territorialization, driven by the state with a market mindset. The fabrication of the cultural cluster thesis into the settlement of the trade-painting community entitles the state to try new logic and new forms of inclusion and exclusion. More specifically, we are concerned about the differentially treated treatment given to different social groups through calculated policies and the corresponding social struggles of various social groups for their rights. Particular attention is given to two major calculation rules: spatial planning for land use regulation and differentiated welfare access rights. Through the study, we attempt to offer a critical yet nuanced perspective toward the heterogeneous society and changeable alignments or blurred boundaries between the state and society in the dialectic process of re-territorialization and counter-territorialization.

Gender Differences in Social Quality in Taiwan

This paper will try to explore the social quality through gender lens. Taiwan is undergoing a transition in terms of economic and social progress. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in perception of social quality.

The data is derived from 2nd wave SQS survey done by National Taiwan University. This questionnaire has been originally designed by the Seoul National University and modified by ACSQ network and Taiwanese SQ team member. Here are about 1200 sample are collected and CATI system has been utilized during data collection. Stratified random sampling has been used for sample representation purpose.

The data will address that here is gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

Effects of Social Capital on the Psychosocial Development of Children in Middle Childhood in China

In this analysis, the effects of social capital (including family, school, and community social capital) on the psychosocial development of children from traditional families in China have been investigated. Five dimensions of psychosocial development are analyzed, including social competence, emotional competence, self-esteem, resilience, and pro-social behavior. In total, 140 children studying in grades 4 to 6 from two primary schools in Tianjin have involved. And all of the participants are selected randomly. The outcomes suggest different effects of social capital on the five dimensions of psychosocial development. The interaction effect between family and community social capital significantly affects children’s social competence, emotional competence and resilience at the same time. School social capital and peer social capital are interacted, and influence emotional competence. Meanwhile, community social capital and school and community social capital has significant effect on resilience. However, except for the direct effect of family social capital on social competence, no other direct significant effects of social capital have been found surprisingly. It is also surprising to find no significant effects of social capital on self-esteem or pro-social behavior, which is conflict with the current literature from Western culture. The outcomes from empirical analysis suggest that, simple social capital can not promote the psychosocial development of children in middle childhood in Chinese context. To strengthen the interaction between family and school, school and community, family and community, will be very important to improve children’s psychosocial development level. Furthermore, more potential predictors are supposed to be found to function self-esteem and pro-social behavior in Chinese context, such as cultural capital.

The Guanxi Hierarchy - Family Ties and Finance in China’s SMEs

In his seminal work, From the Soil, Xiaotong Fei found that solidarity in social ties fades with distance from primary group relations. Thus the power of guanxi (i.e., connections or relationships) would differ according to its source. Most powerful would be guanxi based on kinship, with the power of such connections fading as one moved down the scale from kinship, to regional location, thirdly to school ties, and finally to business ties.

Fei’s early work has returned to prominence in analyses of group ties in private enterprise, following market reforms over the past four decades. For instance, Yu-sheng Peng (2004) highlighted the economic benefit of kinship networks in China’s rural industrialization programs. He found that kin solidarity played an important role in protecting the property rights of private entrepreneurs. In the absence of credible market institutions or a legal order protecting property rights, kinship ties reduce transaction costs during the early stages of market reform. Yan-jie Bian (2009) broadened the thesis, arguing that the emergence of private firms can be traced back to guanxi networks. However, He and Jia (2005) discovered a reverse hierarchy in the strength of guanxi ties. They found business-based guanxi gaining prominence more recently in the management and operation of domestic private firms.

I look then to the pattern of guanxi ties, and relevant hierarchy in the strength and significance of such ties among owners of private enterprise. Data were drawn from about a thousand SMEs between October 2008 and March 2009. I found that strong kinship network ties were correlated with positive effects on
The Influence of Early Trauma on the Quality of Life in Taiwan: The Moderating Impacts of Religiousness?

A growing body of life course research based on the Western societies has displayed the long-term negative effects of childhood and teenage trauma on life conditions in later life stages and has pointed out that religion plays an essential role in moderating or buffering the critical impact of early trauma. However, whether similar patterns appear in Asian societies remains largely unexamined. It is especially ambiguous whether the effectiveness of religion's coping impacts applies to Asian societies where religious compositions are more diversified with non-Christian religions. As a result, this research regards Taiwan as an ideal setting to elaborate the associations among early trauma, religiosity and two indicators of adulthood life quality: happiness and self-reported health.

With the utilization of the data drawn from two nationwide representative samples: the 2009 Religion Module of the Taiwan Social Change Survey (TSCS) and the Survey of Religious Experience in Taiwan (REST), three sets of questions are investigated. The first sets of analyses enable this research to ascertain the impacts of diverse dimensions of early trauma on the life quality, including quantity views and quality views of family (as measured into number of early traumatic events); category views (as classified as parental-related, sibling-related, self-related, and economic early trauma), and juncture views (as sorted into childhood traumas and teenage traumas). Furthermore, this research discusses whether the Taiwanese with higher level of childhood and teenage traumas tend to display higher level of various types of religiosity during adulthood, including belonging aspect (as grouped into no-religion, diffused-religion, and institutional-religion), belief aspect (as measured by attitudes toward supreme god and spirituality), and behaviors aspect (as determined by public religious attendance, private observance, and religious techniques). Last but not least, this research gauges whether the negative influence of early trauma on adulthood life quality is moderated and buffered by religiosity during adulthood.

Immigrant Wives As Volunteers in Taiwan: Their Characteristics and Experiences

The prevalence of transnational marriage can be witnessed in Taiwan in the late twentieth century where Chinese and Southeast Asian women, mainly from Vietnam, dominate numerically. Most of the women got married to Taiwanese men through means of predetermination marriage age or proxy marriage, and were labeled as “foreign brides”, a derogatory term that implies exclusion and discrimination. It has been recognized that immigrants can improve their economic, social and emotional well-being, civic participation and integration in the host society by undertaking volunteering activities. Nevertheless a variety of factors can prevent them from voluntary work. In other words, it is significant to disclose immigrant wives’ experiences of being volunteers in Taiwan. However, the studies to date undertook the opposite patterns that on immigrant women's participation in volunteering. Thus this paper aims to learn about the characteristics and experiences of immigrant wives who participating in volunteering in Taiwan by conducting qualitative research. The major questions raised for this paper are: 1) What are their motivations for volunteering? 2) What are the factors preventing them from volunteering? 3) What types of volunteering work do they do and why? 4) What do volunteering work mean for them? The research results can put forward recommendation to policy-makers and mainstream organizations with a hope of promoting volunteering participation of immigrant wives in order to improve their well-being in Taiwan.

Cooperative Marriage: Queer Politics of Chinese Lolas and Gay Men

Being a new and under-researched phenomenon since 2005, cooperative marriage attracts attention and generates debate in and out of the mainland Chinese LGBT community. Cooperative marriage is a heterosexual marriage performed and negotiated by two non-heterosexual parties, a lola (lesbian, bisexual and transgender woman) and a gay man.

Various strategies are developed in finding and sustaining the (superficial) harmony of such families: different family practices, new family arrangement, the performance of masculinity and femininity in their conjugal houses and relevant public spaces. Friendship and even family bonds are thus developed and strengthened, forming new sexual alliances in the society. Like all heterosexual marriages, cooperative marriage is also a gendered experience; therefore the study is especially interested in lolas’ experiences and narratives, their definition of love, family and intimacy. This research studies cooperative marriage from multiple aspects of family practices including domestic consumption, kinship, marriage, emotion and parental practices, in order to understand their lived experiences and how they do gender and families. Feminist, interpretivist qualitative approach is adopted in the research. Semi-structured interviews were conducted and participant observation as well to gain insights of such marriages, 13 lolas and 7 gay men were interviewed, as well as activists from the LGBT community.

The Embeddedness of Corruption in Contemporary China: The Bo Xilai and Lai Changxing Cases

Economic corruption cases are a window into networks linking state office holding with wealth accumulation. This paper draws on the concept of embeddedness (Granovetter 1985) to examine two prominent cases in contemporary China. The cases are, I claim, ideal typical of agents and their networks coming together in the pursuit of wealth accumulation. One is “corruption from above”, its agent is an entrepreneur from a humble background, Lai Changxing, who forged networks with hundreds of officials in an immensely profitable smuggling operation that was exposed in Fujian Province in 1999. The other is “corruption from below”. Its agent was a high-level official born into the political elite, Bo Xilai, who accumulated great wealth through networks in his social circles that were revealed in 2013. This paper’s analysis centers on how the agents select, monitor, and sanction others in their networks. There are two key findings. One is that the networks are organized in a purest form of hierarchical structures. The other is that the networks’ institutional basis is constituted not only by trust, but also by coercion. The paper’s subsequence discussion considers from some mirrored differences reflected in the humble and elite positions of the agents, and how their two kinds of networks can interact. In conclusion, I use the paper’s argument to stress the need to develop an economic sociology of corruption.

Cool Towns for the Elderly - Protecting the Health of Elderly Urban Residents Against Heat Stress

Background: The 2003 heat wave in Europe resulted in 70,000 deaths. Particularly at risk were socially disadvantaged persons over the age of 65 years. The STOPHOT project explores how the elderly Viennese population perceives adjusts their behavior during a heat wave. Of specific interest are the behavior patterns of older persons with lower SES living in socially deprived urban areas.

Methods: Using a standardised questionnaire, a telephone survey was conducted in number: 2011. 400 subjects (65y) living in four different residential area in Vienna were interviewed. In addition, face-to-face interviews with residents of retirement homes (n=200) and 15 in-depth interviews with stakeholders were carried out.

Results: Heat primarily affects the elderly's energy balance. Most frequently mentioned conditions are fatigue (58%) and sleeping problems (48%). Older people adjust their behavior during a heat wave mainly by wearing lighter clothes, increasing liquid intake and staying indoors during daytime. High-risk groups are persons with a lower socio-economic status and activity level as well as poor health condition. This group is also more likely to withdraw from the public for the duration of the hot periods. Those who don't withdraw suffer from fewer heat-induced ailments. Factors that increase the likelihood to stay at home are a disadvantaged neighborhood, dissatisfaction with and lack of neighborhood networks...
and age discrimination in the residential area. Whether older socially deprived individuals go out during a heat wave period is not so much a result of available green spaces, but rather of existing socio-spatial conditions.

Conclusion: The elderly are particularly vulnerable towards heat stress. With urban populations ageing, and urban temperatures rising, design of urban areas must increasingly consider the interaction of social and climatic factors to increase age-friendliness. Vulnerability towards heat is not natural, but produced by socio-spatial conditions and can be counteracted by community-building initiatives.

Since resources are limited, it is a common dilemma for religious organisations how much of their resources should be allocated for these different purposes. This dilemma can be approached analytically by distinguishing between Gemeinschaft-oriented and Gesellschaft-oriented activities, drawing upon Ferdinand Tonnies’ classical ideal types of social relations. Both kinds of activities are important for achieving a sustainable religious organisation with a potential for long-term growth. The author’s study of the Bahá’ís and of fund-raising in Danish churches abroad provide empirical material for developing this proposition into a generally applicable model of the internal dynamics of proselytising organisations in terms of Gemeinschaft and Gesellschaft. It will be argued that Gemeinschaft and Gesellschaft are complementary to each other and not opposing ideal types of social relations. On the one hand, the organisation must fulfil the members’ expectations of Gemeinschaft—otherwise, in the long run they will become passive or even resign. On the other hand, the functioning of the organisation must not be jeopardised by neglecting the need for administrative efficiency and proper management of resources, which by definition are Gesellschaft-oriented activities. If proselytising is a more permanent activity, it requires formal organisation, rational planning and money to be efficient. When resources are limited, investing in proselytising usually occurs, at least partly, at the expense of activities that strengthen Gemeinschaft. Eager proselytising can therefore easily lead to an organisational and human strain which is not sustainable.

Older People in Public Space(s) – Engagement or Disengagement?

Background: Public spaces are in transition, and it doesn’t head towards age-friendly cities. Instead, spaces are turned into functions of mobility – lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

Methods: The main research question is how older people cope with the depriorisation of public places and what role the specific localities play in their strategies. A comparative case study of contrasting residential areas in Vienna, Austria, will be presented. A mixed-methods design combining both quantitative and qualitative methods is deployed.

Preliminary Results: The quality of the residential area significantly correlates to older people’s outdoor behavior. Factors that reduce the likeliness of spatial engagement are a disadvantaged neighborhood and age discrimination in the residential area. Who owns little resources is even more affected. However, older people also own specific resources that can contribute to the revitalization of public spaces, increasing not only their own quality of life but the quality of city life in general.

Conclusion: The intersectionality of old and new dimensions of inequality - like age intersecting with education and gender - poses new challenges for environmental justice discourse. Hence, environmental justice can be discussed under the keywords of age-friendliness. Without counteraction, environmental depriorisation and the corresponding withdrawal of older people from public space will increase inequality – both in regards to health and significance. Who withdraws from public space becomes invisible in society. However, older people are also a highly competent group that is yet hardly targeted by urban revitalization initiatives. Here lies potential for inclusive ‘gentrification’ of urban areas.

Gender Equality Policy Revisited, the Case of Poland and Norway

Gender equality is one of the most complex and contested concepts in recent decades in Europe and worldwide which has been developed by academics, practitioners as well as politicians. It is seen as a tool for economic growth and centuries in Europe and worldwide which has been developed by academics, practitioners as well as politicians. It is seen as a tool for economic growth and age-friendly cities. Instead, spaces are turned into functions of mobility – lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

Gender Equality Policy Revisited, the Case of Poland and Norway

Gender equality is one of the most complex and contested concepts in recent decades in Europe and worldwide which has been developed by academics, practitioners as well as politicians. It is seen as a tool for economic growth and sustainable development. While some European countries have made significant progress as far as the gender equality is concerned, there are still evident examples of inequalities in the economic, social and political sphere. The aim of this presentation is to discuss the possibility to use the new framework of gender equality created by the MAGEEQ project to analyse the equality policy in Poland and Norway. Comparing both models will allow to identify specific social contexts for development of GE policy in Europe and allow to answer the question if it is possible to integrate various approaches and measures to GE policy on the European level. In other words, the policy analysis in both countries will help to suggest the areas of potential improvement for gender equality policy and a new methodological framework for gender equality.

This paper will present the result of research project: Gender equality and quality of life - how gender equality can contribute to development in Europe. A study of Poland and Norway funded by Polish-Norwegian Research Programme.

The Reproduction of Informality Among Low Income Self-Help Settlements in Texas

Insights from a major cross-national study of low income consolidated irregular settlements in Latin America (www.ohn.utexas.org) reveals a reversion to informality as previously regularized (legal) property titles become clouded by houselessness. Mexican American communities in South and Central Texas and drawn upon three major datasets compiled by the author. The realms of informality discussed are: forms of land acquisition; types of title and proof of ownership; financing of home building and improvements; compliance with codes; lot subdivision among kin or petty landlord-tenant arrangements; practices of servicing and solid waste disposal; health practices to deal with chronic morbidity and mobility problems and aging; inheritance and disposition of property to heirs.

The Contingent Legitimacy of Professional-Managerial Hybrids: Towards a Relational Sociology of Hybridisation

Despite increased interest in professional-managerial hybrids, the unit of analysis for most research remains on the hybrids themselves, i.e. practices, interests and identities, or the processes of hybridisation, i.e. moving into the role. There is limited consideration to the experiences or influences of other professional or managerial actors with whom these hybrids must relate and achieve a sense of legitimacy. This highlights a relatively neglected aspect of professional-managerial hybrids and requires a shift in analysis from the hybrid to the wider constellation of relationships and stakeholders. Drawing on theories within relational sociology, especially the work of Bourdieu and Crossley, the paper examines the relational ties of 36 medical-managerial hybrids working in different areas of service organisation, including executive management, clinical leadership and clinical governance. Each of these hybrids exhibits different relational networks and points of ‘professional-organisational intersection’, which are drawn up, developed or dissolved when the hybrid seeks to legitimise their new hybrid roles. It examines the relationships of co-workers, from both medical and management networks to these new hybrid roles, where co-workers are often found to question hybrids in terms of their expertise, inter-occupational relations, strategic alignment, and reputation with colleagues. The study shows how hybrid managerial roles are contingent upon the relationships and sanctioning powers of both other doctors and managers, and in fulfilling their hybrids roles and this involves drawing upon different forms of social, symbolic, cultural and, increasingly, economic capital. The paper concludes by calling for greater attention to the relational dimensions of professional work in organisational contexts and the relevance of Bourdiesuan social theory within the sociology of professions.

New Approaches to Sociospatial Network Analysis: Understanding and Responding to Neighbourhood-Level Poverty and Disadvantage

While socio-economic-spatial divisions within cities and towns have long been evident, in post-Fordist cities they are generally considered to be growing sharper and differentiating at the scale of suburbs and neighbourhoods. This produces effects in which the poor and non-poor increasingly live apart from each other and is referred to as ‘sociospatial polarisation’. These socio-economic-spatial processes have significant implications for the ways in which poverty and socio-economic disadvantage is being reproduced through converging socio-economic and spatialised processes. Drawing on a series of studies conducted in Victoria, Australia, and exploring social network structures and experiences of community in disadvantaged and non-disadvantaged neighbourhoods, this paper explores the implications of converging socio-economic and spatialised processes with particular focus on settings of place-based neighbourhood disadvantage. Issues addressed are: 1) discussion of findings from network analyses that show contrasting patterning of social networks between residents of poor and non-poor neighbourhoods; 2) consideration of the implications of divergent network patterning experiences and potential of community in place-based settings for poverty reduction strategies. Network analyses use a range of methods to collect network data on residents’ networks including contact diaries, CATI surveys and ethnography and, more recently, mobile phone and Global Positioning System (GPS) technology. Evidence from these and other studies suggests that residents of socioeconomically disadvantaged neighbourhoods are likely to have more local networks and fewer extra-local networks, than residents living in other kinds of neighbourhoods. These findings have significant implications for poverty reduction strategies that assume neighbourhood ‘community’ to be potentially transformative mechanisms for driving socioeconomic change at local levels. Rather, efforts should focus on understanding macro processes that are contributing to socio-spatial disconnections among vulnerable populations and developing poverty alleviation strategies that include efforts to connect residents into extra-local and socioeconomically diverse networks.

Unpaid Domestic Work and the Economic Crisis: Reinforcing or Diluting Gender Inequalities in Britain?

The recession of 2008-9 and the prolonged economic downturn have brought to the forefront fundamental questions about the ramifications of the crisis for the working lives of diverse social groups. In Britain, a marked absence in the plethora of research exploring the work and employment outcomes of the crisis is explicit attention to ‘housework’. Whilst campaigning women’s organizations have made multiple predictions about the impact of crisis on the gendering of work; inside and not just outside the home, there has been little substantial empirical evidence to date to identify the implications of this phenomenon. The purpose of this paper is to offer a different picture of the crisis for unpaid care work and the gendering of unpaid domestic work in Britain. Using data from National and European surveys (UK Time Use Survey, Workplace Employment Survey) and analysis of media and policy responses to the economic crisis, this paper will evaluate the extent to which unpaid domestic work is being drawn upon to absorb the fallout of crisis in multiple ways. The domestic sphere might be the links between education and society. In particular, examinations have visible and invisible functions in education and society. In this respect, examinations function as a form of system maintenance, even when alien to education. Entrance examinations have spatial ramifications since they are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

Increasing attention is paid to work-family conflict among faculty fathers. Gender differences in network homophily by parental status among faculty at a research intensive university

Increasing attention is paid to work-family conflict among faculty fathers. Gender differences in network homophily by parental status among faculty at a research intensive university

Promoting Elderly Volunteers and Long-Term Care Policy Reform: Through an International Comparative Analysis Between Nederland and Japan

The aim of the presentation is to examine how the elderly join volunteers in home and residential care setting.

In Nederland and Japan, expenditure on LTC for the elderly is a matter of immediate concern due to rapid demographic aging. Nederland is the first country which introduced a national health insurance scheme (AWBZ) for covering LTC services from 1968. Japan also implemented public LTC Insurance since 2000. Nowadays, in both countries, LTC policies need serious improvements in order to react to increasing expenditure for LTC services and keep quality of these services. The promoting and utilizing elderly volunteers in care setting is focused as one solution of the LTC reforming.

Based on semi-structured interviews to staffs of volunteer organizations, elderly volunteers and public officials in Leiden, Nederland and Yokohama, Japan, I would like to show (1) features of long-term care (LTC) policy reforms on promoting elderly volunteers and (2) elderly volunteers’ minds’ under the reform. Both Leiden and Yokahama adopt new innovative LTC policies to work in closer cooperation with LTC service providers.

Diluting Gender Inequalities in Britain?

The purpose of this study is to better understand the academic work culture by exploring informal (non-work related) social networks of faculty focusing on parental status and gender. Social identity theory predicts that we tend to form homophilous social worlds after retirement. Thirdly, only Japanese volunteers emphasize that volunteering create new social bond in local community. On the other hand, Dutch volunteers tend to think volunteer work is important but personal work, and put little emphasis on pragmatic purposes. The differences is based on the difference of LTC regimes between two countries.

The evidence that does exist is patchy, however, multiple predictions about the impact of crisis on the gendering of working lives of diverse social groups. In Britain, a marked absence in the plethora of research exploring the work and employment outcomes of the crisis is explicit attention to ‘housework’. Whilst campaigning women’s organizations have made multiple predictions about the impact of crisis on the gendering of work; inside and not just outside the home, there has been little substantial empirical evidence to date to identify the implications of this phenomenon. The purpose of this paper is to offer a different picture of the crisis for unpaid care work and the gendering of unpaid domestic work in Britain. Using data from National and European surveys (UK Time Use Survey, Workplace Employment Survey) and analysis of media and policy responses to the economic crisis, this paper will evaluate the extent to which unpaid domestic work is being drawn upon to absorb the fallout of crisis in multiple ways. The domestic sphere might be the links between education and society. In particular, examinations have visible and invisible functions in education and society. In this respect, examinations function as a form of system maintenance, even when alien to education. Entrance examinations have spatial ramifications since they are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

This paper examines the various functions of examinations by comparing three countries: United States, Japan, and Nederland. Special attention is paid to the socialization patterns in each country. The Japanese National Center Test for University Admissions was modeled after the American SAT (Scholastic Aptitude Test), but what each test examines is quite different in terms of modes of knowledge and students’ faculties. Unlike the SAT and the National Center Test, the French Baccalauréat employs examination for admission. Since the modes of these examinations are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

the tendency to have informal social interactions (e.g., discuss personal matters, share free time) with departmental colleagues who share parental status (parents or non-parents). We use social network data on about 380 faculty within the natural and social sciences at a large research-intensive Midwestern university.

For the preliminary analyses, we ran OLS with permutation tests and did not find a significant gender difference in parenthood, which was measured using the point bi-serial correlation (PBSc). The next step is to run Exponential Random Graph Models (ERGMs) and test the gender difference controlling for dyadic dependence.

*Why Do Organizations Form Groups?: Complex Structure and Behavior of Japanese Groups from 1977 to 1998*

Although it has been a well-known fact that Japanese business groups have consisted of two types of network, the structural difference between them has not been paid enough attention to by researchers. Applying the techniques of network analysis and regression analysis to data on a total of 2,972 large Japanese firms over a 22-year period, this paper demonstrates the correspondence between network structures and the three different goal-pursuing behaviors of firms.

Corporate Complexes (i.e., the largest six cross-industrial corporate networks with a circle pattern of bilateral equity ties) had a significantly positive effect on member firms’ status-oriented behavior as well as on firms’ technology-oriented behavior. However, the effect on firms’ efficiency-oriented behavior was not confirmed with the same dataset. Meanwhile, Corporate Groups (i.e., the seven corporate networks in the automobile industry with a tree or star pattern of unilateral equity ties) had a positive effect on member firms’ economic behavior as well as a negative effect on member firm’s technological behavior. In the case of the economic effect, however, only superordinate firms benefited from corporate groups. The effect of corporate groups on member firms’ social behavior was not confirmed. The patterns of group structures and member firms’ behaviors did not change throughout the observation period despite the fluctuation of the macro economic environment.

From the analyses, these findings suggest that Corporate Complexes were a system of resource-acquiring by means of firms’ high social status, while Corporate Groups were a system of making profits to sustain the costly system for superordinate firms. (For subordinate firms, corporate groups were the system for bare survival.) Both structures were thus complementary to each other. Shielding the member firms against environmental fluctuation and technological uncertainty, Japanese business groups, by virtue of their complex structure, simultaneously pursued multiple goals as a united body.
How can the Impairment and Disability be accomplished in the sports games? Answering this question, I apply interaction analysis and game analysis to the Wheelchair Basketball games.

The social model of disability is very important in the way that “disability” is “the Social”. But this model is rarely used for the studies of the sports sociology. The Social Model is simply used as a factor to block personal sports participation. However, from a viewpoint of the Ethnomethodology, we can regard the severity of the impairments and the disability as the cooperative accomplishment in / by the interactions of people. The purpose of this study is to illustrate “the sociality of disabilities” from experiences in the sports practice. In this study, I classify games of wheelchair basketball, the top-level, middle-level, low-level and examined the play in each game.

The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game “achieved” something.

In the wheelchair basketball, it is empirically-known that a competition power of the team is closely concerned with the skill of the low-point player (a player with severe impairments). In the team having high competition power, the implication of a player with severe impairments may be different from a low team. In the logic of the wheelchair basketball rules, “impairments” is indispensable. The game performance shows it. While, “impairments” is experienced as difficulty in the game when the low-point player does not function effectively by the team. The negative “impairments” is achieved and maintained as a result of play interactions. “impairments and disability” are accomplished as a play interaction in a game.

**Reducing Uncertainty and Improving Recovery through the Provision of Flexible Services**

For many individuals living with mental health and substance abuse problems, it is difficult to obtain the safety and security that are necessary components of recovery. This is because they do not have access to recursos such as food, housing, transportation, and employment that are needed to begin the process of stabilizing their lives. When these resources are available, they are often are attached to a variety of caveats that make it difficult to exercise personal agency, another important component of recovery. Recognizing this, new approaches to mental and behavioral health care have begun to emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them. This presentation will focus on this emerging paradigm and the effect it is having on the mental and behavioral health fields. Housing First (HF) and Access to Recovery (ATR) are two services approaches that will be highlighted as examples.

HF is an intervention developed in the United States—and spreading internationally—that provides immediate housing with low service demands to chronically homeless individuals with co-occurring mental health and substance use disorders. ATR is a program funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) that engages individuals with substance use disorders to develop their own recovery goals. ATR also provides individuals with stipends that can be used to access a number of services that are not provided by traditional programs. Discussion of both service approaches will emphasize findings from our own research, which shows how these models assist individuals in their recovery processes by reducing uncertainties related to the lack of resources and by increasing personal agency.

**Gender, Homelessness and Social Capital: Young Women’s Management of Disrupted Housing Transitions**

Mainstream understandings of young people’s housing transitions inadequately reflect the diversity of experiences and social processes that shape the course to independent living. By only recognising normative pathways for young people leaving the family home significant experiences are either being misrepresented or lost. In Australia, a largely hidden aspect of youth housing transitions is the presence of homelessness. Many young people in need of accommodation are faced with a difficult housing market where there is a short supply of safe and affordable properties. For young people, to be without a home is not only to be homeless but also to be removed from all the subjective meanings a home carries. In addition, increasingly globalised economies and deindustrialisation have had serious implications for young people’s transitions to secure accommodation due to employment insecurity and financial instability. I argue that the complex relationships between disrupted housing transitions and youth homelessness needs to take into account structural factors relating to gender, race/ethnicity, class, location, sexuality and disability. Accordingly, the variety of young people experiencing homelessness in Australia demands new ways of conceptualising the phenomenon. The application of a gendered lens to homelessness research is one possible way to challenge dominant discourses of youth housing transitions. In this paper I explore young women’s experiences of homelessness and the utilisation of intimate relationships as a form of context-specific capital for accessing material support, particularly access to stable accommodation. To this end, I draw on theoretical perspectives of social capital developed by Pierre Bourdieu. These concepts are examined from a feminist standpoint to explain how Bourdieu’s work may be appropriated to advance knowledge of how gender impacts on both the management of homelessness as well as transitions to stable accommodation.

**Housing Market Restructuring and Inequalities in London and the UK**

This paper aims to do two main things. Firstly it provides an overview of UK housing market restructuring which has occurred as a result of longer-term shifts in tenurial patterns, and shorter-term impacts of the 2008 credit crunch aftermath and the Coalition Government’s welfare and housing policies. The impact of this restructuring is that the tenure boundary between social and private renting, in terms of rents and security, is becoming increasingly blurred, while homeownership is being transformed via shifts in mortgage finance availability. The result of these trends is the ‘end’ of both social renting and home ownership as we know it. Secondly, the paper focuses on London and it demonstrates how the national trends are exaggerated in the capital, partly as a result of the central London housing market providing a ‘safe haven’ in relation to global capital flows, and partly as a consequence of urban regeneration schemes which have had the net effect of reducing the proportion of social housing throughout much of London. The paper uses Census and other data to examine the dramatic rise private renting in London since 2001, a rise which is predicated on the buoyancy of the buy-to-let mortgage markets, foreign capital inflows which generate build-to-let developments, and also the increasing outflows of ex-public housing into the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London since then is an increased insecurity that parallels and arguably reinforces the labour-market based ‘precariat’ identified by Guy Standing (2011) and Loic Wacquant (2008).

**Public Housing and State-Led Gentrification in London**

This paper sets out a framework for understanding how state-led gentrification has occurred in London with reference to public council housing and urban renewal policies. It argues that urban renewal policies, in particular the Right to Buy policy, have fundamentally transformed the tenure boundary between social and private renting by encouraging landlords to convert council housing to private renting. In doing so, the paper draws upon a range of data sources, including official statistics, but also interviews with young people living in public housing and a case-study of a community for whom council housing represents an elusive ‘gold standard’ of housing that they aspire to, but a standard that is increasingly out of reach.

**Are There Only Detours and Dead Ends? Durkheimian Routes to the Suburb of Europe**

The paper aims at extrapolating several qualitative hypotheses concerning detours and dead ends in social science from a case study of three generations of Polish scholars influenced by a Durkheimian school in sociology. By this, it attempts to contribute to a larger and seemingly paradoxical question: whether a foreign reception of a school of thought might lead it into a dead end? In the narrative of history of sociology, the origins of a Durkheimian approach in Poland are associated with Stefan Czarnowski (1879-1937), a student of Henri Hubert and Marcel Mauss, the author of Le culte des héros (1919) and the founder of the first chair in sociology in Warsaw in the 1930s. On the basis of the analysis of his unpublished letters to Mauss and Hubert (rediscovered by the author) *denotes a presenting author. Abstracts are organized by first presenting author’s last name.*
of the paper), the paper shows the initial organizational and cultural obstacles to the institutionalization of the discipline and to the transnational exchange of ideas. Then, it moves to the case of Czarnowski's student Nina Assorodobraj-Kula (1908-1999), showing how she combined the Durkheimian thought with Marxism. Although the results of this unusual merge were interesting, the question arises whether they could be considered Durkheimian anymore. Finally, the works of a third generation (represented by Assorodobraj's students) show that what was still left from the Durkheimian core was more and more undermined by a reception of American sociology. Several tentative conclusions are drawn from this overview. 1. Although relatively influential in Poland, the Polish Durkheimians were internationally unknown, which already forms one of the dead ends of the school; 2. The way Durkheimian thought was interpreted, provokes the question whether it was still Durkheimian; 3. There has not been a conceptual innovation starting with the third generation. These observations can be extrapolated for the sake of future comparisons.

Interrogating Female Household Headship from Women Heads of Household Perspective: Findings from a Qualitative Study in Ouagadougou

Background and Objective

Despite its extensive use, the notion of female headship is a matter of constant controversial debate among scholars. This study analyzes how women household heads in Ouagadougou perceive themselves, versus the ways in which female household headship is conceptualized by researchers. Studies on female headed households are scarce in Burkina Faso, and it is our expectation that this study will contribute to fill the gap.

Methods

Semi-structural in-depth interviews were conducted to explore women's view of and experience on household headship, in relation with domestic power and decision-making. A sample of 20 female household heads was derived from a previous quantitative survey by using a purposive sampling method, in order to have women of different marital status and educational levels. Data were analyzed using a manual grid.

Findings

Findings show that all respondents acknowledged themselves as the current head of their respective households, even though all women mentioned the absence of a male partner as the reason why they defined themselves as the head. In terms of authority on family matters, the respondents made no spontaneous association between their being head and having domestic power nor making decisions in the household. It emerges from the responses that for female heads mothers of young children, the consistency of authority on household matters was mediated through women's relationship with in-laws, mostly men. Conclusio

The study reveals that women's experience of household headship differs significantly with the conceptualization of female household headship by researchers, in terms of control over family matters. While the husband/wife transition in the occupancy of household headship seems quite natural, the authority tied to this position seems to be when held by a woman. The study challenges key conceptual understanding of female headship and current debate around the dynamics of domestic power in their household.

WEAKLIEM, DAVID* (University of Connecticut, weakliem@uconn.edu)

Explaining the Rise in Top Incomes

Since the 1970s, the concentration of income at the top has grown most rapidly in the most advanced capitalist nations. The standard economic explanation is that the development of information technology has increased the productivity of managers and professionals and reduced the demand for blue-collar and white-collar workers. However, the extent of growth in top incomes varies widely among countries, suggesting that it is necessary to go beyond the standard technological factor. This paper suggests three factors that seem to have the potential to explain the national differences. The first is changes in the power of labor and capital. A decline in the strength of labor may have led to a decline in the wages of ordinary workers and an increase in profits and the wages of top management. The second is a combination of deregulation, especially in financial markets, and the degree to which the political system facilitates “rent-seeking.” Where the “rent-seeking” possibilities for financiers and top managers may have been able to shape the regulations in ways that worked to their advantage. The third is changes in social norms. There has been a good deal of discussion of the influence of social norms on pay, but most of it has focused on lower-level workers. However, it seems possible that the same factors also influence top earnings. On the one hand, a concern for reputation might put some restraint on top earnings. On the other hand, social comparison might lead to a “race” for relative position among top earners. It is possible that the increase in top earnings reflects the degree to which the forces that produced stability were weakened or disrupted.

The paper will discuss the implications of these three hypotheses and offer a preliminary test using data for OECD nations.

WEBER, ARNĐ* (KIT, arnnd.weber@kit.edu)

Policy Actions for Securing Computers

Societies rely on information technology, be it for business operations, private life, or for national infrastructures. However, IT systems are not reliably protect-ed against attacks on data integrity or confidentiality, as the debates around the Stuxnet worm and the NSA have shown. It is expected that powerful organizations, such as foreign competitors or secret services, will launch significant attacks on businesses or infrastructures in the future. Industry cannot invest large sums to create highly secure systems, as users who did not yet suffer large damages will not be willing to pay for their development costs. Therefore, only a slow migration takes place towards, e.g., the use of virtualization to isolate sensitive or risky applications. Moreover, the paths to highly secure systems are not clear. One path would be to have careful specification, implementation and evaluation. This path is known to be expensive but would provide a level of protection so far unknown. However, even such implementations might be hacked. Therefore, a path towards provably secure systems might be preferable. Though significant progress has been made, the development of provably secure computing systems faces three challenges: first, a large open source software base needs to be created. Second, matching hardware needs to be designed and ultimately an entire secure system. Third, means need to be explored to make sure that actual implementations match the system design, without insiders planting Trojan horses, and without having any implementation errors.

In either case, a policy push is needed which must take place in at least some economically significant countries. It is needed (1) to make the problems and solutions better known, (2) to explore the costs and benefits of the paths, and (3) to make some path mandatory. The latter could be done in a gradual way, starting with some devices and applications.

Lessons Learned about Different Experimented Researcher Positions within Military Organization

This paper will focus on ethnographic methods used to analyze military organizations and groups and, more precisely about immersion which has been – and still is – a privileged tool use during my research within military universe during the last twenty years. Three positions will be questioned. A first one, as member of the Army when I was drafted and when I realised my very first research in order to complete my master's degree (study about incorporation and instruction of a draftee). A second one, one year later when I was a researcher completely outside the institution. A third one, as PhD student financially supported by the French MOD but also in a technical way to realise my immersions in the Army, in the Navy, in the Air Force and in the French Gendarmerie. At least, my current position as a researcher and a teacher on secondment from the French University within the French Military Academy of Saint-Cyr where I conducted a research on the socialisation processes of the French Army officers through a class of cadets 1. Each one of those positions presents its own advantages or disadvantages, inevitably associate to the intelligible dimension of each study produced. The presentation will consequently stick to consider aspects which appear to me as most important: those relating to the posture of the researcher and his statute; those of the delicate question of distance and the differences between the « participating observation » and the « observing participation »; those corresponded with the challenge of restitution and the significant stage of the writing with a possible self-censorship; those still of the tricky question of the researcher's identity in a male dominant universe; etc.

Elderly Suicide - A Question Of Social Standing?

The growing social inequality in Germany features a strong spatial component, which is why attention to the concentration of poverty in specific urban areas triggers so much attention, beyond just the social sciences. Subsequent we argue
that the reported suicide statistics in the Berlin Health Report require a closer in-
pection because the zones used in reporting are not sensitive enough to provide a
robust picture of the articulation of social status and suicide. For example, in
2009 the Berlin health report suggested that there was no relationship between
elderly suicide (individuals over 60) and social status.

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who
are on the periphery, those who are socially and economically disadvantaged,
experience less of this good health and extended life. Often these people are
custed together geographically.

The identification of these zones or socially weak areas is based on the re-
search of the working group “Monitoring Soziale Stadtentwicklung” in Berlin. They
aim to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. The very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. Then, by ranking the districts with the highest
suicide statistics and comparing them to the Berlin health report, we detected a
strong correlation between social status and elderly suicide. This suggests that
incorporating the legal and medical records from the coroner and altering the
definition of a municipal district to capture this fine level of detail establishes a
real and concerning trend.

A New Global Labour Studies?

The rapid growth of a new labour studies presents us with a paradox: in a
context where the traditional labour movement is in decline, labour studies is
thriving. What this new labour studies is identifying are the initiatives, organisa-
tions and sources of power that are emerging at the periphery of tradi-
tional labour. There is a “growing interest in a new political subject of labour…
women, immigrants, people of colour, low-paid service workers, precarious work-
ers… Groups that have been historically excluded from the moral and material
boundaries of union membership… Rather than traditional scholarship on indus-
trial relations, new labour scholars are exploring transformations occurring at
the periphery of mainstream labour movements” (Jennifer Chun, ‘The Power of
the Powerless’, 2012: 40).

In this paper we analyze the content, methodology and authors who contribute to
this new global labour studies through an examination of the Global Labour
Journal (GLJ). The GLJ was launched in 2010 as a scholarly response to the new
forms of labour action, organization and ideas emerging in the age of globaliza-
tion. It grew out of the activities of the International Sociological Association Re-
search Committee on Labour Movements (RC 44) which has been transformed over
the past fifteen years into a truly global forum for the study of labour. Over the
past four years the GLJ has begun to record and analyze the forms of action and
organization that fall outside the traditional focus of labour studies to include
labour linked organisations such as NGOs and community organizations. What
emerges from our analysis is the growing focus of submissions on labour in India
and China. An emerging theme is the emerging formalisation of labour and its
implications for traditional trade unionism.

Home Away at Home: Tourism Narratives of the German Village in South Korea

‘Where do you come from?’ is a question that haunts tourists. Here, places are
considered as fixed spaces in the same way destinations are considered an end in
tourism. In the context of multi-strata mobilities, places are increasingly being re-
produced through embodied relationships in a world that is never quite finished.
They are performed on unstable stages as they are being reimagined. It becomes
apparent then that spaces are emergent and need to be considered alongside the
sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of
memories and narratives through the experiences of people engaged in embod-
ied social practices. They are not only packaged for tourist consumption, but are
also constantly redefined especially in terms of spatial identities located through
everyday tourist practice. This paper focuses on the German Village on the island
of Namhae in South Korea, which was built over a decade ago as a tribute to the
Korean workers who lived in Germany as Gastarbeiter. It explores the question
of identities of the ‘locals’ as portrayed in the film, ‘Endstation der Sehnsüchte’ by
Cho Sungyung and juxtaposes this alongside the huge influx of tourists’ indulg-

WEI, WEI* (East China Normal University, weiw1974@hotmail.com)

Literally meaning “to engage in homosexual conduct” and originally from Cantonese gau-gey, gao-ji (doing gay stuff) is a derogatory term to refer to homosexual people in mainland China. Thanks to the rapid development of Internet and cyberculture in recent decades, the use the gao-ji as well as other derived terms such as ji-qing (gay romance) and ji-you (gay buddies) have been going mainstream, particularly among Chinese urban youth. Other than referring to homosocial behaviors and relationships, the use of the gao-ji discourse becomes increasingly popular to describe the homosocial bonds among heterosexual-identified young men. Focusing on this newly emerging sociolinguistic phenomenon, this research provides an alternative reading of homosexually-themed language that has been traditionally associated with homophobia at both institutional and interpersonal levels. Drawing on findings from mainstream media sources and ethnographic interviews with young people living in Shanghai, combined with a nuanced analysis informed by social constructionist theories on gender/sexuality and other empirical studies done by western counterparts, the paper reveals the construction and transformation of gao-ji discourse in today’s urban Chinese society. Although acknowledging the decline of homophobia, as shared by other countries, has largely contributed to the rise of gao-ji discourses in popular culture, I contextualize my discussion of this sociolinguistic practice in relation to 1) the continuing Chinese tradition of male homosociality; 2) the transformation of Chinese masculinity that gives more prominence to intimacy and expressiveness; and 3) the urban youth communities that are stratified along the lines of class, gender, and sexuality in contemporary Chinese society. I conclude my paper by discussing how the gao-ji discourse, as one manifestation of queering the mainstream, could affect the public views towards homosexuality as well as its implication to the LGBT politics in mainland China.
The stories found in a nation's history textbooks are profound statements about the way the nation sees itself. Textbooks that exclude certain groups alienate these children and may lead to disengagement from education and lower levels of educational attainment. The Netherlands is known internationally for its tolerance and multiculturalism, particularly towards immigrants, and sees these elements as crucial to their national identity. However, historical anti-immigrant policies and social attitudes towards immigrants reveals levels of racism not unlike their European peers who, like The Netherlands, have experienced increased immigration and xenophobia in the last decades. In the educational domain, multicultural policies of the 1990s have shifted to those emphasizing assimilation, with immigrants often blamed for low educational attainment. This paper examines how immigrants, multiculturalism, and tolerance are represented in all Dutch primary school history textbooks published since 1980 to identify trends to determine whether or not they reflect larger political discourses and speculate as to the potential effects of these depictions on the children who read them. Preliminary analysis suggests that immigrant groups are depicted as culturally different outsiders from underdeveloped, poor, and violence nations who cause problems for the Dutch society that benevolently allows them entry. Textbooks fail to meaningfully address discrimination in The Netherlands suggesting that immigrant failure to integrate is due to cultural differences, which likely enhances social alienation among the many immigrant students encountering these texts. Findings are of relevance to multiple nations with large immigrant populations.

The Role of Preferences and Attitudes in Film Consumption

The sociological analysis of cultural consumption is usually situated in the field of social stratification research, identifying the way how cultural consumption is related to social status and the weighing of aesthetic preferences and situational opportunities. In contrast, the second perspective points to the importance of culturally and aesthetically shaped attitudes and positions guiding cultural consumption in a rather automatic way, given relevant situational cues. Since either of these perspectives brings about both theoretical and empirical problems, it seems reasonable to conceptualize cultural consumption as a joint process of conscious preference weighing and automatic attitude following. This in turn asks for a “dual-process”-model of action which is assumed here to offer a more accurate picture of the individual foundations of cultural consumption. Drawing on recent survey data from Switzerland (conducted in February 2013), this assumption will be tested in the domain of film consumption. This dataset includes measures of the frequency of attendance to various types of films, and measures of the respondent's preferences for as well as attitudes towards these types of films. This allows for (1) comparisons between the effects of film preferences and film attitudes on the respondents' movie-going behavior, (2) the identification of the relationship between film preferences and film attitudes, and (3) the examination of the interplay of film preferences and film attitudes in the process of film consumption.

From School to Work and Back – Inequality in Late Postsecondary Education As Part of the School to Work Transition in the US, Germany and Sweden

Varieties in the school-to-work-transition are often discussed against the background of social stratification and education system. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openness and institutional flexibility for non-traditional students of the postsecondary education system. Non-traditional patterns, such as late re-enrollment after an initial phase of work, vocational training or motherhood differ by country in their relevance for the typical school-to-work transition. In several industrialized countries, in particular those with a strong social origin effects on the patterns and labor market careers are indeed greater than in flexible systems such as Germany. However, this is more than compensated by their overall smaller educational inequality.

You Snooze, You Lose? Returns to Interrupted and Delayed College Education in the US

Postsecondary is frequently not acquired straightforward, but through detours and along with initial phases of labor force experience. This circumstance raises the question of the role of timing of higher education for the returns on the labor market. It is further a fortunate situation for separating the role of work experience and education for labor market returns. Since educational detours are more often taken by minorities and young adults from lower social origins, this question also has implications for social inequality in postsecondary education.

The research question is whether delayed entries into and interruptions of educational careers of varying type and duration affect employment outcomes upon labor market entry. The situation of graduates and college-goers never completing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance, the self-assessed wage and occupational outcomes measured as Hauser and Warren’s 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational pattern. For incomplete college, the timing matters more. While there are small penalties for interruptions in general, small bonuses can be gained if the time out of the education system was spent with full-time work. The dataset analyzed is the US National Longitudinal Study of Youth 79 (NLSY79).

Third Culture Kids and Intergenerational Challenges in Migrant Communities: Korean Christians and Tamil Hindus in Germany

After several decades of coexistence, the research fields migration studies and the sociology of religion have built a strong theoretical and empirical exchange. The impetuous was a sociological conceptualization of migration as a decisive factor of religious dynamics in modern societies. This idea, in turn, triggered in-depth investigations of religious dynamics within migrant communities as they transmit religious knowledge to second generations and their way of adapting religion (doing religious culture). We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations.

The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany and Tamil Hindus. The research question is whether delayed entries into and interruptions of educational careers of varying type and duration affect employment outcomes upon labor market entry. The situation of graduates and college-goers never completing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance, the self-assessed wage and occupational outcomes measured as Hauser and Warren’s 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational pattern. For incomplete college, the timing matters more. While there are small penalties for interruptions in general, small bonuses can be gained if the time out of the education system was spent with full-time work. Social Layers in a World of Territorial Containers, Political Closure, and Socially Differentiated Functionings

The sociology of social stratification is caught in a dead-lock: Data and concepts remain bounded by the nation-state while recent theorizing as well as popular debate focus on the global level. Based on a theoretical book project, but illustrated by results from two international comparative research projects on skilled migration, the paper suggests a novel approach to the challenge of building individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities. It takes a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons acting in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural, and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who are mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

Social Professionals and Knowledge Practice

Current debates about migration and high skilled labor markets are characterized by an ambiguity: On the one hand, knowledge, especially in the natural and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is put to use. In times of globalization we have to assume the mobility of people and the spatial extension of bodies of knowledge co-constitute each other.

The ambivalence of the “Hauptschüler” as a stranger appears in all three perspectives. How are “Hauptschüler” made into strangers? How could one describe the ambivalent positions and positioning of the students? And how do the students themselves deal with their situation?

I will turn the view on the question how the students themselves deal with negative actual intermingling of class, ethnicity and gender in school. In the third part, I will show how structural problems of the school system are confronted with this ambivalence is used to resist negative ascriptions and processes of self-victimization. What unifies these various reactions is the active approach of dealing with and reacting to the social contempt with which the students are confronted.

Contempt. Dealing with Disrespect and Misrecognition Among Berlin Hauptschüler

The issue of disrespect and misrecognition will be discussed both on a conceptual and an empirical level and shown to be part of a neoliberal logic.

1) According to Honneth, people experience misrecognition as a deprivation or disadvantages for a positive development of the self. In Germany, Honneth refers to these deprivations as Missachtung (misrecognition), while I prefer the slightly different term Verachtung, which better captures the emotional dynamics of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actively harmed. The most appropriate English translation of ‘Verachtung’ is ‘contempt’. The social production of contempt defines forms of exclusion via processes of social ascription in which low socio-economic status is linked with disregard, in turn ‘producing’ a disrespectful or contemptuous treatment of others.

2) In an ethnographic study of “Hauptschüler” in Berlin, Germany, I have shown that the problem of misrecognition is characterized by an ambiguity: On the one hand knowledge, especially in the natural and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is inhibited by many factors, and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is inhibited by many factors.
Illness has a major influence on people's lives. Studying healthcare-seeking is therefore of vital importance. Patients' decisions about healthcare fundamentally influence the performance of the overall healthcare system in terms of a population's health, the quality of healthcare services, and the level of expenditures. Even though illness behaviour has been an intensively studied research topic over the past five decades, previous work has largely overlooked the embeddedness of these decisions in social and institutional contexts. We will present first insights from a project that aims at theoretically, methodologically, and empirically enhancing previous research. It contributes to the development of an integrative theoretical framework of illness behaviour and provides an important test case for institutional theories and the theory of frame selection.

For analyzing healthcare decision-making a new survey is constructed to collect data on the basis of 2,000 face-to-face interviews in Germany that will provide a unique data source covering the healthcare needs and the way these needs are managed. At the conference, we will provide first results from the survey. We will analyze people's decision making when having a medical condition with a particular emphasis on the interpretation of symptoms and the utilization of healthcare, and generate information about the extent and variety of self-care strategies. Our paper covers how social networks and institutional features of the healthcare system influence the decision making of healthcare seeking.

Capital-Labour Relations in China's Car Industry - What is “Chinese” about Them?

Facing shrinking profit margins, and driven by a quest for cost-efficiency and market access, manufacturing enterprises intensified their expansion into the global South since the 1970s. It was especially the automotive industry that was eager to venture into promising markets, first and foremost China. Though global car manufacturers have been present in China since the 1980s, research on their operations is still limited - especially when dealing with sensitive issues such as labour relations and unrest.

The presentation thus sets out to shed light on workers' reactive and pro-active agency in relation to enterprise strategies, trade union culture and developmental policy in a global car manufacturer operating in China. Based on intensive fieldwork in Mexico and China multiple factors determining the specific patterns of workers' agency in China's car industry shall be mapped out and questioned for whether they are rightly attributed to local "Chinese" specificities – or aspects that are better explained by reference to the qualities of the industrial sector and a capitalist global economy, respectively its current stage. On the one hand this will concern the enterprise orchestrating its established strategy with local conditions – of which labour issues are merely one factor amongst others – thus producing boundaries, potentials and vehicles for workers' political-economic agency on the shop floor. On the other, it will focus on workers' subjective concerns, rooting their agency in their more complex social conditions of existence. Relating these findings to a functional examination of certain political and institutional patterns in China, the uniqueness of Chinese capital-labour relations will be raised to question.

Comparison and Topicality of Three Classical European Concepts of Community

Without any doubt, community is one of the most central sociological terms and concepts – particularly in the German/European sociological tradition, where Ferdinand Tönnies might be seen as the forefather of this concept. Taking relevant sociological literature regarding this issue into consideration, one may come to the conclusion that there are two traditional main ideal types of community: in one tradition, community is theorized as a collective with specific relationships, in the other tradition, community is conceptualized as a collective with a shared consciousness of kind, a collective identity (this questions the section of the social reality, which is emphasized). Furthermore, there are two main types of the intended use of the concept: theoretical ideal types on the one hand and terms for the apical social research (this questions the interest, which is tight to the conceptualization of community).

Taking these basic categories, three classical concepts of community will be analyzed and compared: the ones of Ferdinand Tönnies, Émile Durkheim, and Max Weber. Afterwards the question of the topicality of their concepts of community will be dealt with. Especially the possible application of the classical terms of community to new forms of communitarisation, presented by the example of so called brand communities, will be discussed.
amines international tourism at the Cu Chi Tunnels in South Vietnam by focussing on the narration of the war by Vietnamese tour guides and its interpretation by young American, Australian, British and European tourists. While the oversight of tourism in Vietnam by the state sees tourists at Cu Chi presented with some strong anti-American rhetoric, this is offset by a strong dialogical narrative of the war presented by local guides. It is argued that guides are important entrepreneurial entrepreneurs who in order to account for post-Fordist tourists privilege the local while also drawing together different national traditions. For Western tourists this typically results in a greater recognition of Vietnamese suffering and a questioning of the anti-authoritarian and post-heroic narratives that have dominated Western projections of the war. However, the dialogical dimensions of the tour and their experience of everyday life in Vietnam also commonly provides tourists with greater agency to mourn the death of Western soldiers. It is argued that through media portrayals and word of mouth such 'dark' tourist experiences have a broader influence on understanding of history and in shaping debate within the cultural public sphere.

Social Networks and Subjective Wellbeing in Australia

Previous research into social networks and social wellbeing has tended to examine objective aspects of well-being such as employment and socioeconomic attainment, physical security, and political participation. Fewer studies have examined subjective social networks and subjective wellbeing, and those that have tended to emphasise limited aspects of social connectedness, such as social support. This paper develops a comprehensive theory of the relationship between social networks and subjective well-being, with the latter concept defined in terms of cognitive (life satisfaction) and affective (happiness) evaluations of one's own life. The theoretical framework defines social networks precisely, specifies different mechanisms for positive and negative network effects and also attempts to account for mechanisms and selection processes whose omission some critics argue undermines much previous social networks research. We examine this theoretical model empirically using data from a new national Australian survey currently being undertaken that is specifically designed to investigate social networks and subjective well-being. In the paper we describe our theoretical framework and the cross-national comparative project we are undertaking on the relationship between social networks and subjective well-being in Australia, China and the United Kingdom. We then present early results from the Australian survey, including measurement models of key scales and constructs, and substantive models examining some of the central relationships posited by the theory.

Alternative Lifestyles in Growth-Critical Societies – Conceptual Reflections on Social Movements

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-) growth (e.g. Alternative Lifestyles), concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the rejection of growth as the dominant social imaginary (Castoriadis 1990, Latoche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented:

(1) Social-theoretical focus: From the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies.

(2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandel 1995, Nussbaum 2010).

Higher Response Rates - at What Price? Effects of Different Strategies to Increase Participation By Motivating (Un)Motivated Participants

Different approaches – e.g. normative explanations, rational choice models or social exchange frameworks – have been used to explain motives on survey participation. This paper deals with one of them, the rational choice theory. However, both commitment (e.g. triggered by appeals to attend to social norms (Misra et al, 2011)) and consideration of benefit/cost ratio (e.g. positively influenced by incentives) are regarded as decisive for survey participation – at least for the initial items. These strategies may result in higher response rates but also in “satisficing” (Instead of generating the most accurate answer, respondents settle for merely satisfactory ones) (Krosnick, 1999). Consequently, the longer a survey takes to finish “Non-Opinion-Responses” (ibid) but also “Non-Responses” are expected to be more likely and both may affect data quality.

The central issue of this paper is to examine the effect of different motivating strategies on refusals to answer. For this reason experimental arrangements were included in a survey dealing with student participation at university. The survey population was randomly divided into several groups. The information provided to each group differed concerning the presence and combination of the following “triggers”:

i) the possibility to make possible profits (incentives),
ii) appeals to social conscience (commitment) and
iii) information on duration and progress (related to effort/burden).

Additionally the answer categories of several questions varied with regard to including a “No-Opinion-Option” to control for satisficing. Finally, pros and cons of the presented “manipulations” in order to gain higher response rates will be discussed.

"I Haven't Got a Clue!" Do Clueless Respondents Affect Data Quality through Response Behaviour?

Several papers are dealing with the effect of different numbers of response categories (e.g. Preston & Colman: 2000; Lai et al: 2010). However, irrespective

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

1059
of the number of categories it can be assumed that respondents are facing difficulties in answering questions if they do not already have an opinion for the topic. If a “don’t-know-option” is offered the participant might tend to choose it even if it were possible for him or her to form an opinion. This is “making survey researchers reluctant to offer this option unless absolutely necessary” (Delouvreur & Couper: 2002). However, if the “DK-option” is missing, respondents may skip the question and increase items missing. Offering a middle category in rating scales may even enlarge biases if perceived as “neither-nor-option”. In this connection personal characteristics and the type of question (e.g. opinion, attitude or behaviour) are expected to influence corresponding ad hoc decisions.

According to these considerations, the paper

i) focuses on the effect of different numbers of categories in combination with “don’t-know-options” on missing values;

ii) takes several question types into account and

iii) considers effects of personal characteristics on scale quality.

The results are based on methodological experiments included in three online surveys in Austria and Germany.

WHITE, THERESA* (California State University, Northridge, theresa.white@csun.edu)
The Racial Divide? African American College Students: Mitigating Digital Visual Culture
The most important development in terms of Internet users between 2000 and 2005 was the radical increase in the number of women, ethnic and racial minorities online. In the early years of the Internet's massification, cyberculture scholars discussed online with only marginal references to online media produced by African Americans, Asians and Latinos, instead focusing on representations of racial and ethnic minorities produced for consumption by white users and audiences (Nakamura, 2002).

Notably, social media, such as Facebook and Twitter, are platforms of web and mobile-based technology that enable consumers to turn communication into interactive conversation, much of which is widely consumed by college students today. Demographic studies on Internet use emphasize African American's position as consumers. But surveys of access, race and the “digital divide” that fail to measure digital production in favor of measuring access or consumption, cannot tell the whole story. This suggests that minorities are more or less successful consumers or producers, rather than producers or active audiences. But how might African American college students use the Internet and mobile technology as sites of resistance?

This study will visually document the level of internet/social media usage, the propensities and style of Internet user-created content, as well as its effect on cultural and social capital for African American college students. The project will gather visual data (videotaped interviews, focus groups and cyberspace photo mapping) on students who are engaging in content creation (e.g., developing Web sites, posting music, images and videos, managing and contributing to Listserves, or adding content to other textual sites). The study will demonstrate how these students are not only active consumers of the Internet, but also Internet content producers and creators.

Australian Fathers’ Use of Leave for Parenting: Changing Patterns and Policy Implications
In the absence of policy measures widely-recognized as conducive to fathers’ parental leave-taking, such as well-remunerated and non-transferable leave arrangements, a relatively low proportion of Australian fathers (around 30%) use paid paternity or parental leave, although around half take some paid annual leave in association with the birth of a child. These figures suggest persistent barriers to more gender egalitarian divisions of parenting and raise questions over the pace of change in Australia. Using survey and interview data collected over the past three years we examine fathers’ leave usage in detail, analyzing the factors that influence leave uptake and duration and seeking evidence of changes in patterns of use. Change might be expected in part as a reflection of evolving expectations and behaviors associated with increases in the labour force engagement of mothers and/or as a result of a greater awareness and legitimacy of parental leave stimulated by recent policy initiatives. Our surveys suggest a complex picture in which the overall duration of leave taken by fathers increased somewhat in recent years, although the duration of leave specifically designated as ‘paid paternity leave’ decreased. We test these results for consistency when controlling for sample differences. The data also illustrate different patterns of leave usage among fathers, with a significant group taking leave for parenting purposes after their child was six months old. We use interview data with mothers and fathers to provide further evidence of influences on fathers’ use of leave around the birth of a child. Overall our analysis provides an assessment of changing patterns of leave usage by Australian fathers over a period of policy innovation, as well as a more nuanced picture of fathers’ leave usage to inform future policy development in the interests of more gender egalitarian family outcomes.

Parenthood and Career Mobility: Implications of Transitions to Part-Time Work Among Australian Mothers
One of the main strategies adopted by Australian mothers to minimise work-life interference is to work part-time hours. The prevalence of this working pattern in Australia underlines contradictions between gender equality and care and raises questions about the contrasting possibilities for career retention and advancement associated with the transition to part-time work, particularly in the context of austerity pressures. In this study we examine the employment patterns of Australian mothers and assess the career implications of transitions made on return to work. Our analysis draws on data from the first two waves of a longitudinal survey of Australian mothers who had given birth to a child in 2010 (Wave 1, n=4,201; Wave 2, n=3,487).

The basis for our analysis we map employment trajectories among these women, illustrating the prevalence of transitions from full-time to part-time work: 77% of those who had returned to work in Wave 2 of the survey were working part-time, and among those who had been working full-time prior to the birth of their child 75% returned part-time. We use multivariate models to examine the impact of these and other transitions on indicators of career mobility, utilising changes in hourly earnings and occupational mobility as objective measures and responses to a question on perceptions of career prospects as a subjective measure. Our analysis identifies some risks associated with the transition to part-time: for example, around 40% of mothers making this transition attempted that their career opportunities had declined compared with only around 20% of those who maintained their pre-birth working-time status. Our models explore the complex relationships between these and other potential influences on career mobility, including the type and duration of parental leave taken. The analysis establishes a baseline from which longer-term effects may be examined and the contradictions of the Australian context explored.

WHITTAKER, ANDREA* (Monash University, andrea.whittaker@monash.edu)
From intimate industry to rotten trade: reproductive travel in Southeast Asia
Intimate processes of conception and reproduction have become increasingly global in expectation and practice. They have become the focus of new forms of global commercialized reproductive trade, often termed ‘reproductive tourism’ whereby people travel to seek reproductive health services in other countries. This can involve the movement of patients, but also of service providers, ova donors and surrogates, as well as ova or embryos across the region. In this paper I concentrate upon the intimate industry of cross border IVF involving the movement and in some cases trafficking of women for reproductive services. The social and medical benefits in many parts of the region compromised attempts at ‘regulation’ of the trade. Examples of the internet advertising for Thai surrogates and testimonials of commissioning parents illustrate the ways in which Thai surrogates are marketed and constructed as willing and available to service the needs of foreigners. Implicit presumptions of race privilege are woven through exchanges between farang and Thai often glossed within the discourse of ‘Asian service values’. In parallel to the legal circulation of these bodily commodifies has arisen an unregulated market, a ‘rotten trade’, in which ‘bioavailable’ women and their body parts are trafficked to feed the demand for their reproductive capacities.

How should intergenerational inequality be explained? A common idea is that parents transfer their children and that parental investments influence their children’s attainments. Most studies have emphasized the effects of parental investments in education. It is easier for parents to directly influence their children’s attainment of education than their success in the labor market. Therefore early parental investments are considered to have the largest impact on their children’s life chances. This is not the case for wealth transfers between generations. Wealth may be easily transferred during the whole life course, and in many cases transferred quite late in life.

In this paper, we measure intergenerational inequality through the life course using sibling correlations. A sibling correlation provides an omnibus measure of family background and neighborhood influences, a measure that includes both observable and unobservable characteristics. There are no prior studies to our knowledge that assess life course changes in sibling correlations using wealth as measurement.

Following recent theoretical developments, we explore the consequences of different parental investment strategies. Put simply, one strategy is that parents make equal investments in their children, something that leads to the expectation that sibling correlations in wealth should decrease over the life course. If, however, the parents seek to compensate for initial differences in talents and attainments among siblings, by transferring most to the least successful sibling, we expect an opposite trend. We discuss how these patterns may be influenced by children’s labor market success and savings, and by variations in parental strategies in different socioeconomic layers.

We use register data from Norway for brothers and sisters born 1955–1960, tracked annually 1993–2010. Our measures include earnings and capital income, as well as two measures of wealth (net and gross wealth). We also take into account sibling differences in education.

Increasing immigration poses a serious challenge for many countries. Empirical studies from around the world indicate that immigration and increasing diversity increase social cohesion and increases in social withdrawal, particularly in disadvantaged areas. Less understood, however, are the mechanisms that explain these relationships. We contend that these associations are at least in part due to two key factors: how residents perceive the neighborhood composition and how these perceptions influence residents’ own social identity. Further, we suggest that these relationships will differ in cities with different immigration histories. In this paper we integrate census data and the Australian Community Capacity Study survey data from approximately 10,000 residents living across 298 neighborhoods in Melbourne and Brisbane, Australia. Using a multiple level random-effects model, we first consider the cues that lead individuals to distort the presence of non-whites in neighborhoods. Here we focus on recent immigration increases, ancestry, language and religion as important cues of difference. We then employ multi-level models to test if these distortions influence residents’ superordinate or subordinate identities. Finally, we consider the independent effects of these distortions and social identity orientations on residents’ reports of social cohesion and interactions with fellow neighbors.

Children and young people’s civic engagement has occupied the attention of researchers and policy makers globally during recent decades, but there is a growing acknowledgement that young people’s political engagement can only be understood in the context of wider social cultures and practices. This paper explores the social dynamics of civic engagement, in the context of one community’s democratic practices and targeted activism, involving the ‘nannas’ as central players as well as mothers, children and young people.

In the Dandenong Mountains near Melbourne, Australia, a small community has taken up a prolonged battle with a multi-national fast food giant. The battle line, the on-line world, the legal system and mass media are the different fronts of the battle, providing multiple sites for experiences of political engagement, confronting ideas about political issues, power inequalities, social justice and the role of the state.

In facing an unequal word, one of the challenges for global sociology is about creating the conditions where the systemic drivers of injustice can be recognised. Analysing material from the campaign’s social media pages, this paper identifies critical moments where activist sensibilities are awakened and identified, within, despite and across generations. It shows how the progression through fear, anger, humour and hope can be heightened when elements of difference in power, class, gender and generation are named and mobilised as resources.

Voluntary Association Involvement Among First- and Second-Generation Immigrants in the Netherlands: Addressing the Role of Different Layers of Social Context

Voluntary association involvement is both a cause and consequence of immigrants’ integration into their host societies. Yet, while previous work has demonstrated that immigrants generally lag behind in civic participation as compared with their first-generation counterparts, whilst Turkish immigrants exhibit the exact opposite trend, this puzzling finding invites the question of what is behind these differentials.

This paper deals with job-search strategies and related labor market outcomes of cross-border commuters residing in the regions of the Czech Republic, Slovakia and Hungary bordering on Austria. This European core region has a long history of cross-border mobility and social exchange, from Habsburg Monarchy to post-war period and after 1989. Several years after the fall of the Iron Curtain a process of European re-integration began which led to the accession of post-socialist countries into the EU. However, substantial social inequalities between Central European countries still exist in terms of wages and unemployment. Cross-border mobility on an emerging transnational labor market therefore can be seen as an “individual response” to massive transformations in this region.

So far the given circumstances for participants in this transnational labor market have not been investigated in depth. Our paper aims to close the research gap by pursuing the following research questions: What job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria? What are the labor market outcomes of these job search methods in terms of wages? Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a longitudinal survey on employment careers of cross-border commuters conduct-
ed in 2012 (N=2,550). Our results show that human and social capital resources serve as key factors for job finding strategies and successful labor market integration. There are also substantial gender differences and differences related to previous occupational status and migration experience within the group under study. Overall, our results reflect cross-border commuting as a renewed form of social practice in this European core region, which may reduce structural inequalities between Central European countries in the mid-run.

The Limits Of Multiculturalism

1. Multiculturalism and transnationalism are concepts that belong to the present historical era. They have been produced in western countries, and are used often, with a deep unconscious ethnocentrism. Aren't they part of the intellectual hegemony of the west, and in the same time, maybe, of its decline?

2. There is in some parts of the world at least a feeling that multiculturalism, if not a failure, is at least in a difficult situation, and there are important criticisms of the idea of transnationalism.

3. The political concrete limits of multiculturalism are connected with the rising importance of globalization, including transnational phenomena. But globalization does not necessarily mean the decline or the crisis of the Nation and/or the State, which is the natural framework for multiculturalist policies and institutions. And the limits of transnationalism are given by States that still control borders, deliver passports, authorisations for transit, visas, etc. If societies are not entering in an era where multiculturalism and transnationalism are stronger and stronger, how will they deal with cultural differences, on the one hand, and with identities and practises that are not led to one national state?

From Web Surveys to Online, Multi-Device Surveys

Unintended mobile survey completion rates have risen largely in the past couple of years, with around 7% of the online respondents attempting to access surveys using tablets and 2% using smart phones (USS panel, June 2013). While these rates are expected to continue to grow, the question arises whether one can speak of traditional web panels as we know them anymore. Especially the tablet user group has become too large to ignore anymore. While regular web surveys can be accessed via mobile browsers, this can be burdensome if the layout has not been adapted. To avoid coverage, nonresponse and measurement error, new strategies are needed for offering web surveys which can be properly accessed by the most common online devices.

We present the strategy for the Dutch LISS panel to develop from a web panel towards a true, multi-platform compatible to the different online respondents groups. We start with presenting the latest rates of unintended mobile response in online panels and provide a profile of the mobile respondent. We discuss the advantages and disadvantages of different multi-platform approaches and report the latest experimental findings from the field.

The presentation concludes with a discussion of policy and practical implications. Youths in Canada

Youth in Canada

The Limits Of Multiculturalism

The presentation concludes with a discussion of policy and practical implications. We explore the benefits and challenges of using visual methods to engage remote-dwelling Aboriginal elders living on a remote island in the Northern Territory, using DIPEx methodologies (Alexander & Zeibland, 2006). This involved narrative interviews recorded via video clips on the internet, thematic analysis, and findings presented in a documentary style format on film, thematic analysis, and findings presented in a documentary style format on film.

Implications: Video and the internet are more engaging for a lay audience than academic writing and provide a more reciprocal way of involving traditionally marginalised people in qualitative research.

WILKESMANN, UWE® (TU Dortmund University, uwe.wilkesmann@tu-dortmund.de)
Which Form of Organizational Governance Supports Freedom of Teaching and Increases Their Perception of Relevance? Empirical Evidence from Two Types of Higher Education Institutions

New Public Management caused an ‘economic turn’ in universities to managerial governance. The leadership literature distinguishes two modes of governance, which can also be applied to the governance of universities: transactional and transformational modes of governance. Transformational governance encompasses all forms of managerial governance, which includes the provision of incentives and monitoring capacity. The theoretical underpinning of this mode can be found in Principal-Agent Theory which is the theoretical underpinning of New Public Management. Whereas transformational governance covers, on the one hand, the means of structuring the roles of principals and agents, the interaction situation in the organization, on the other hand, it also addresses all the means of re-structurings the relationship between perceived environment and motivation, as can be seen in Self-Determination Theory. Other elements of transformational governance are social norms such as those that inform the quality of research or approaches to teaching. As such, the main research question is: What has more impact on professors’ perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance were tested. The research was conducted with the help of two quantitative surveys, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

WILKINSON, LORI® (University of Manitoba, lori.wilkinson@ad.umanitoba.ca)
A Longitudinal Examination of the Intersections of Ethnicity and Sex and Their Influence on Perceived Racism Among Newcomer Youth in Canada

Perceptions of racism and discrimination are powerful forces influencing social cohesion of members of any society. Real or not, those holding a perception that they are victimized by discrimination feel marginalized and ostracized socially and may express the instrumental forms of discrimination in various aspects of their lives: career, access to education and health care and others. The consequences of the belief that racism affects one’s life chances mean that many people are unable to achieve their potential in employment, school, and health. This has a significant impact on their feeling of belonging. This paper uses data from a longitudinal national study of newcomer youth in Canada to examine the extent and factors influencing perceptions of discrimination. We follow nearly 4200 11 to 17 year old newcomer youth over 8 years on a variety of different topics. The data analysis technique involves a multivariate analysis of the changes in perceptions of discrimination over time. The factors involved in perceived discrimination and changes in this perception over the eight year study period. The main control variables are sex and place of birth. Findings indicate that female newcomer youth are significantly more likely to feel marginalized than their male counterparts regardless of their place of birth. Other factors influencing perceived discrimination include economic factors, parents’ pre-arrival education and post-arrival employment. These findings have significant influence over the sense of belonging in Canadian society among immigrant and refugee born youth and are interpreted through a lens of intersectionality and identity theories. The presentation concludes with a discussion of policy and practical implications.

Economic Democracy in South Africa: Women at the Grassroots

In this paper we explore the ways in which women are creating spaces for economic and political participation in South Africa. The post-apartheid South African Constitution has been hailed as one of the most progressive constitutions in the world with its entrenchment of socio-economic rights and recognition of equality among various cleavages such as gender, race, and sexual orientation. There are myriad policies and legislation entrenching women’s rights. Despite the constitutional and policy environment, the state has not created spaces for women’s political participation at local levels. Nevertheless, women are creating their own spaces of political and economic participation, linking up with the state when and where it is possible, and forging ahead when it is not possible to link with the state. In this paper, we look at a township north of Johannesburg and a rural area in the Eastern Cape to see the ways in which are creating and engaging economic production within their communities. Are these simply survivalist strategies or do they represent an emergent alternative that is rooted in economic equality and social justice? Are they practicing economic democracy? What role has the state played in this process?

Practicing Women’s Agency: Women’s Participation in Local Spaces in South Africa and Kerala

In this paper we look at the conditions for and effects of increased participation of women in political spaces in Kerala, India and South Africa. In both places, women enjoy supportive policy environments, yet patriarchal gender norms continue to limit women’s agency. Drawing on interviews of two communities in Kerala and two communities in South Africa, we show that despite the conducive policy context, women face various challenges in practicing their agency and citizenship. Based on empirical research in four localities inhabited by economically and politically marginal populations (a Johannesburg township and rural Eastern Cape in South Africa and a Trivandrum slum and a fishing village in Kerala), we show that women’s political participation is influenced by electoral dynamics and party politics; the relations and networks that women are part of both collectively and individually; the intersectionality of gender with other social structures based on caste, class, and race; and relations in the wider political economy including changing market relations as a consequence of globalisation. Kerala (as well as India at large) has targeted women directly in policies aimed at increasing women’s participation among migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship – as a set of substantive rights relating to citizenship in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The paper draws on qualitative research in two multi-ethnic neighbourhoods in Sydney, Australia to explore localized belonging amongst migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship as a form of post-nationalism can complement and augment the potency of everyday cosmopolitanism – which is easily appropriated by the state and commercial interests. Also, arguments about emergent urban citizenship should draw on ethnographic understanding of ordinary cosmopolitanism to better understand the multiple ways migrants negotiate identity and socio-spatial belonging in urban settings.

Rescaled Citizenships and Vernacular Cosmopolitanism in Sydney, Australia

In the Australian context, notions of cosmopolitanism have had less airtime than the nationally sponsored program of multiculturalism. Cosmopolitanism has emerged in academic theories of living together with difference as an academic theory, and are usually synonymous with notions of ‘everyday multiculturalism’ (Velayutham and Wise, 2009). However, these theories have been less explicit about how such everyday, intercultural exchange might be part of a rescaling of belonging for migrant residents, and how this might impact on the nation-state (Kay, 2000). In this regard, I suggest drawing on notions of urban citizenship (Holston and Appadurai, 1996) as a form of post-national or sub-national belonging to scale up the potential implicit in quotidian modes of cosmopolitanism. Urban citizenship – as a set of substantive rights relating to citizenship in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The presented data, including interviews with stakeholders and observation of parliamentary meetings, also investigates the manner through which a recognised ethnicity-based health inequity can be strategically deployed for specifically professional, political or civic interests; that is, how socially charged notions of race and ethnicity can be mobilised toward potentially beneficent ends (St. Louis 2010; Benjamin 2013). Finally, the paper also brings into relief the tenuous position of the “expert” within a widening forum of stakeholders.
of Australians to shed light on various ‘spaces’ of cosmopolitanism that provide the opportunity for cosmopolitan encounters. Rather than revealing a linear pathway to a final, utopian cosmopolitan destiny, we highlight various gradations of the relationality between space, place and performance into what constitutes cosmopolitan encounters. We then propose particular research strategies for uncovering cosmopolitan encounters, and highlight unlikely contexts worthy of investigation in future research.

Fitness As Leisure - Exploring Physical Activity through Consumption and Lifestyle

Drawing on the discussion on the commercialization of the fitness culture, this study examines fitness as a leisure activity. Fitness is prominent both in media and consumer culture, and it plays an important role in individuals’ everyday life as everyone is surrounded by the social world of the fitness culture, its meanings and signals. Fitness activities are practiced in numerous ways and due to various reasons. Also the fundamental aims of the activities have changed; they have become commodities of the leisure industry.

The core of leisure is in the production of value, and it can thus be associated either with freedom from work and responsibility, or as freedom for self-production. Fitness is understood in relation to both health and appearance, which have become central not only to the social order, but also to individuals’ occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body’s physical capital.

This study takes a qualitative approach to examining how consumption and lifestyle are related to the motives for physical activity. The data is derived from The National Student Health Survey (n=4403) conducted in Finland in 2012. The results revealed three consumption styles/lifestyles: hedonistic, healthy and sustainable. Moreover, four main motives for physical activity were found: sociability, health, self-image and appearance. It is clear that all correlate with the appreciation of well-being, emphasizing different aspects. Hedonistic lifestyle correlated with all fitness motives, the strongest relation being with the motive of appearance. Also healthy lifestyle was related to all fitness motives, emphasizing the motives of sociability and health the most. Sustainable lifestyle, on the contrary, had no correlation with any other fitness motive than health, even having a slightly negative correlation with the motive of appearance.

Glorious Mission: Social Media, Video Games, and Propaganda

Governments and social movements have long used information technology to promote their causes. In the past books, songs, radio, and television where used to persuade people that political and social actions were necessary. With the growth of information communications technologies there are now new media that can be used for propaganda and persuasion. Technology such as Twitter, Facebook, and Video Games have emerged in the past decade as growing forces in protest movements and government propaganda.

This paper will discuss how new technologies have been used for purposes of propaganda around a number of political issues in Asia. Analysis is based on content review of Twitter archives, online newspapers, blogs, and Video Games associated with political issues in East Asia. The issues to be addressed will include territorial disputes such as the Dokdo/Takeshima islands, North and South Korea, and the radiation from the Fukushima Daiichi nuclear power plant. Results suggest that governments in East Asia have been quick to recognize the propaganda power of new media and have quickly organized to provide a government perspective on ongoing disputes. Protest movements may have had an initial advantage in recognizing the power of new technologies and new media, but government quickly responded to remove or reduce the political advantage they had. Even though new information technologies have become common the issues of public discourse and propaganda remain fundamentally the same. Propaganda through Twitter and Video Games has the same motivation as in the past, but presented using current and emerging technology.

Managing Risk in a Complex Food System: The Importance of Inter-Personal, Professional and Organisational Trust

A challenge of managing food safety risk is the multi-sectoral nature of the complex system set out to do so, with responsibilities lying with expert actors from both food industry and food regulation. Amidst this complexity, a unified message must be conveyed to consumers so that food risks are managed. This paper presents research conducted to navigate this complex system. We investigated the role of expert actors from the food regulatory and food industry set-tings in developing/breaking/repairing/maintaining trust with consumers about food. Qualitative interviews were undertaken in Australia (n=30), the United Kingdom (n=15) and New Zealand (n=5). Respondents identified that risk management, including increased consumer trust, could only be established if trust existed within and across the expert actors. As with the nature of the trust between actors became central to the research. Inter-personal, professional and organisational trust between these actors was observed. Interpersonal trust and relationships were developed between actors through transparency, good communication and regular phone and face to face informal meetings. Organisational trust was maintained through documents such as memorandums of understanding and regular, formal meetings. Professional trust was particularly apparent between actors within the regulatory and industry systems who both had responsibilities for managing food risk. Some actors indicated that they did not understand the perspective of the other system, because of the different processes and systems in which they worked. Despite this, each system had a common goal (to avoid foodborne illness). When this common goal was recognised by industry and regulatory actors, stronger trust was formed which enabled a unified message to be communicated to consumers. Therefore one way to manage the complexity of the food regulatory system, and ultimately better manage food risks, is to develop inter-personal, professional and organisational trust between expert actors in the food system.

A Walk through Memory: Urban Interventions and the Sensual Battle Against Oblivion

In the years following the Latin American military dictatorships of the 1970s and 80s, historians and activists noticed a disappearance of documentary evidence that paralleled the disappearances of human beings. Decades of activism by the Mothers and Grandmothers of the Plaza de Mayo, human rights groups, and political institutions that value human rights, has fueled an archive of memory: an ongoing city-wide network of projects and museums dedicated to remembering the Dirty War years throughout Buenos Aires.

This paper explores the roles of mural art and street flagstones in the production and reception of two post-conflict memory projects in Buenos Aires. The Olimpo project foretasted a tense time in Buenos Aires and the Barrios x Memoria y Justicia collective flagstones project traversing upper and lower-class neighborhoods, to form a city-wide visual map of disappearance both represent attempts to inscribe memory onto public spaces.

The Olimpo project began in 1995 in the City Council of Buenos Aires. The building housed the automobile registration office of the Federal Police before being converted into a torture facility. Many Argentines wanted the facility razed to the ground once democracy returned. The museum owes its existence to an ongoing local community struggle to manifest the identities and experiences of individuals made absent by the military dictatorship. The Flagstones project, created by the Barrios x Memoria y Justicia collective began as an ongoing endeavor to replace parts of sidewalks with small, colorful plaques, in front of places where victims of state terrorism were born, lived or were kidnapped.

We consider two-decades of historical data reflecting the struggles to establish memory projects that bring into conflict state authorities, human rights organizations, neighborhood groups and university students. These concrete visual reminders of state-sponsored violence are both memorials and fuel for the battle against forgetting and/or rewriting history.

The Origin of the World: Analysis, Representation and Performance

This paper focuses on an artistic experiment or performance, ‘The Origin of the World’, in which over a two year period, 50 male artists were provided with charcoal, paper and instructions quickly to draw a vagina (only) with no human or other model. 20 of the drawings were later re-presented in a video in which the drawings slowly morph together and apart consecutively to music. Later, the drawings and video were exhibited in a university space. This paper explores this process and these data from a methodological perspective, discussing their potential as both representation and performance. First, the drawings were analyzed interpretatively in relation to Lacanian psychoanalytic theory and feminist critiques of the same. This analysis highlighted the notable lack of consensus in the shapes produced, the extent to which the artists stuck to or deviated from the instructions given, and the clues they provided as to the artists’ responses to the exercise (anxiety? disgust? humour?). This work raised further questions as to the nature of the data analysed and the potential contribution to such analysis of interviews exploring the artists’ perspectives on the exercise, its distance from their habitual artistic practice and perhaps their own gender/sexual identities.

However these data are also performative (Law 2009) in that they enact multiplications, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertainties, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertainties, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertainties, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertainties, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertainties, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertainties.

WINTER, BRONWYN* (The University of Sydney, bronwyn.winter@sydney.edu.au)

Trends in Wealth Inequality

This paper will present new estimates of inequality in household wealth in the Netherlands 1993-2011. Changes in this recent period will be connected with long-term trends in Dutch wealth inequality (from around 1900), which will be compared to trends in other Western countries. Preliminary findings are: there has been an overall tendency of partial collectivization (a shift from personal to collective wealth) and diminishing wealth inequality in the Netherlands and other Western countries during the greater part of the twentieth century, followed by a tendency of decollectivization and growing inequality since the 1980s. The latter trend will be explained by connecting it with processes of deindustrialization, globalization and politico-institutional change. The paper will give special attention to recent changes under the impact of the financial crisis, and discuss the question to what extent national government policy can be used to modify wealth inequality.

WINTER, BRONWYN* (The University of Sydney, bronwyn.winter@sydney.edu.au)

(W)visible and (im)Mobile: Lesbians, Exile and Global LGBT and Women’s Rights Movements

In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firmly part of the UN and many national agendas, lesbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of political asylum.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
On one hand, social movements campaigning nationally, transnationally and internationally for both women’s and LGBT human rights have facilitated access to asylum, mostly in Western countries, for lesbians from the many countries where homosexuality remains illegal (76 countries), or where the state fails to protect homosexuals from abuse, despite decriminalisation (another 60-70 countries). The European Union, for example, now explicitly includes references to the specificities of LGBT experience and needs in its new standardised asylum procedure.

On the other hand, continued cultural taboos and in some cases political backlash have, in many countries, maintained or even exacerbated the isolation of lesbians, depriving them of easy access to global LGBT rights networks (including the very important online networks that have proliferated over the last decade, but which frequently continue to privilege gay men). Moreover, the significantly lower levels of financial and cultural autonomy for women in many countries have meant that access to escape routes is much more limited than for men—a problem that lesbians share with heterosexual women but can be even worse in their case. Yet, access of lesbians to asylum presents as one of the world's most urgent human rights issues, as almost without exception, lesbians seeking asylum have suffered multiple forms of physical and psychological torture.

The paper will discuss the above issues with reference to the importance of transnational social movement activism and support that specifically addresses the situation of lesbians, as well as to case studies from France in particular.

Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case

“Data without Boundaries” – a project funded under the 7th European Framework Programme – aims at improving access to microdata from official statistics in Europe. This overarching goal is reached through several tasks, among them: compiling information on available data and access conditions, proposals for harmonization of access conditions, building a remote access network and offering web-based, structured and searchable codebooks for Eurostat data. Among the data sources that Eurostat produces and disseminates and that “Data without Boundaries” is creating a service for is the European Union Labour Force Survey, the largest household survey of the continent. EU-LFS is a continuous household survey. Currently carried out in 33 countries. In many of these countries EU-LFS is mandatory leading to very high response rates. Because of its size and the high quality of its sampling this survey is often used as benchmark to measure nonresponse bias in social surveys.

After introducing “Data without Boundaries” the presentation will demonstrate how EU-LFS can be exploited to assess nonresponse bias in surveys conducted in Europe. The empirical analysis focuses on the European Social Survey, the European Values Study and the European part of the International Social Survey Programme. Nonresponse bias will be assessed relative to the variables sex, age, education, employment status, household size and where available region or size of place.

The analysis demonstrates how not only those directly interested in micro data from official statistics but also survey researches benefit from the efforts of “Data without Boundaries” and the improved access to Eurostat’s data.

WOLF, CHRISTOF* (Leibniz Institute for Social Sciences, christof.wolf@gesis.org)

Problems of Survey Measures of Social Networks

Since Fischers (1982) and Burts (1984) seminal contributions to collecting ego-centric network data in social surveys the method has been employed in numerous studies and can be regarded as standard in this field. Recovery this approach has been severely criticized. Some authors have pointed out the standard approach to measuring egocentric network data suffers from strong interviewer effects which may lead to misleading conclusions (Paik/Sanchagrin 2013; Bruderl et al. 2013).

The presentation will discuss the methodological problems with the standard approach to collecting egocentric network data. Several adjustments to the standard approach will be discussed and alternative methods to capture aspects of “social capital” will be presented. The presentation ends with a plea to use a combination of several independent measures of social embeddedness thereby over-come biased estimations of the main consequences of local autonomy and participatory democracy. However, within transnational networks these dual aspects of the cy-ber age, democracy and localism, are often in tension with one another.

In this paper, I use the indymedia movement as an exemplar of a transnation-al media network where the dynamics of global democracy and local autonomy come into tension, offering a more nuanced look at the intersection of the global and the local in global networked social movements. Founded during the WTO protests in 1999, indymedia is a global-spanning media network, with over 200 active nodes on six continents, where news and journalism is produced in multi-ple forms in over 30 languages. In specific, in this chapter I look at the decision of the global indymedia network to reject a large grant from the Ford Foundation because of Ford’s history in the Argentine dirty wars. The heated episode almost forced the young dynamic network to shut its doors, and brings to the forefront the complex tensions of local autonomy and global sovereignty, highlighting the con-servative and oft-times reactive nature of transnational communication networks. Moreover, this episode and indymedia in general, brings to light the inability of decentralized networks to build proactive power, highlighting the disorganizing and at times debilitating organizational logic of contemporary social movements.
peline to teach the ideas of communism and social action, thus banned teaching sociology at universities in Korea. K. D. Har was not able to teach sociology, and eventually kicked out from the university. After liberation from Japan, he pursued the career in journalism, but his newspaper was not allowed to publish due to its critical report on post-Colonial South Korean government. Using K.D. Har as a case study, this paper discusses the potentials and limits of public sociology in (post) colonial context, and explores the challenges of global sociology in (post) colonial context.

WONG, DAY* (Hong Kong Baptist University, daywong@hkbu.edu.hk)
Passing and Crossig: A Study of Transgender Embodiment in Hong Kong
Issues of transgender and transsexuality provide a new impetus and a practical need to problematize assumptions about bodies and identities and to rethink the categories of women and men. While transgender studies have exposed the artificiality and mutability of sex/gender/sexuality categories, a tension exists between the transgender/transsexual discourses which are oriented toward a search for a gendered home and the queer emphasis on creating trouble for the gender order through non-normative, unintelligible embodiments. This paper seeks to address the debates through an examination of the embroiled understandings of passing and crossing in the transgender community in Hong Kong.

For many gays and lesbians, passing or acting straight is a strategy for coping with stigmatization in a hetero-normative society. For many transgender people, passing, that is, to blend into society both socially and visually in accordance with their preferred gender, is a goal rather than a means. They want the society to see them in their desired gender. The emphasis on passing is reinforced by the ‘Real Life Test’, which requires trans to dress and live in their gender identity successfully for a period of time in order to be eligible for hormonal treatment or surgery. Questions will be raised as to whether a hierarchy based on the ability to pass has been created in Hong Kong's transgender community, to what extent the practices of passing entail compliance with dominant standards of dress and behavior which are grounded in the class privilege and compulsory heterosexuality. Similarly, questions will also be raised with regard to incoherent embodiment. Who can afford incoherent or unintelligible embodiment? Whose incoherence is strategic, and whose incoherence is necessary or unlivable? This paper argues for the importance to subvert dominant codes, yet without losing sight of the materiality, complexity and ambiguity of the lived experiences of transgender people.

Biographical Experience, Desires, and Interests: A Case Study of Individual Hong Kong Fans of Japanese Boy Love Comics
This paper is an ethnographic attempt to understand the relationship between individual Hong Kong fans of Japanese Boy Love (BL) comics through the general image of male characters in BL comics through the fans' derivative creation of BL. The key concept here is the desire. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, each of them tends to maintain a unique interest in it. We further argue that the unique interest in the general image of male characters in BL comics is closely related to the biographical experience of each individual Hong Kong fan. The biographical experience itself is a product of many social factors, among which family is the most important one. Following Sangren (2000), we argue that in order to understand how biographical experience shapes unique interest of each individual fan, one should understand how family as a social institution underlies the desire of individual fans toward BL comics in general and the general image of male character in BL comics in particular. The desires instituted by family in turn will be shown to motivate the unique behavior of individual fans toward BL comics in general. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, the desires instituted by family and the firm bargin over the wage rates. Since most female workers receive wages during maternity leave and generate no production value, a matched pair with a female worker may generate lower expected profit to the firm. Rent-sharing ensures a male worker to be paid more than a female worker even with the absence of overt discrimination, thus resulting in statistical discrimination against female workers. Using the 5% random subsamples of census and by-census data in Hong Kong in 1996, 2001, and 2006, the study provides unequivocal evidence that age-specific fertility rates exert negative impact on female wages, after controlling for other observable characteristics. More importantly, the negative effects of fertility on women's earnings are notably greater in female dominated occupations whereas similarly situated men are unaffected. Since fertility rates tend to be increasing with age during the early stage of women's work career, our theory partially explains why the gender gap tends to rise with age. One important implication from our model is that employers would similarly expect less productive female workers to have lower fertility than their heterosexual counterparts and thereby resolves the puzzle of the existence of the lesbian earnings premium found in the economic literature.

WONG, RAYMOND SIN-KOWK* (Hong Kong University , sorwong@ust.hk)
Gender-Oriented Statistical Discrimination Theory: Empirical Evidence from the Hong Kong Labor Market
This paper proposes a simple search model to shed light on the role of aggregate fertility as a form of statistical discrimination against young working women in the labor market. Our proposed theory assumes that workers generate identical production value that does not differ by gender. When matched with a firm, the worker and the firm bargain over the wage rates. Since most female workers receive wages during maternity leave and generate no production value, a matched pair with a female worker may generate lower expected profit to the firm. Rent-sharing ensures a male worker to be paid more than a female worker even with the absence of overt discrimination, thus resulting in statistical discrimination against female workers. Using the 5% random subsamples of census and by-census data in Hong Kong in 1996, 2001, and 2006, the study provides unequivocal evidence that age-specific fertility rates exert negative impact on female wages, after controlling for other observable characteristics. More importantly, the negative effects of fertility on women's earnings are notably greater in female dominated occupations whereas similarly situated men are unaffected. Since fertility rates tend to be increasing with age during the early stage of women's work career, our theory partially explains why the gender gap tends to rise with age. One important implication from our model is that employers would similarly expect less productive female workers to have lower fertility than their heterosexual counterparts and thereby resolves the puzzle of the existence of the lesbian earnings premium found in the economic literature.
Can the Industrial Relations in Japan be Reconstructed in the Long-Term Perspective?

More than ten years have already passed since it was first proposed that Japan’s corporate management and labor relations should be reformed to keep pace with globalization. After the financial crisis of 1997, especially, corporate governance changed, and management began to shift emphasis to short term rather than long term profits and shareholders’ rather than employees’ concerns. In addition to the general reduction in labor costs, replacement of regular employees with non-permanent employees rapidly proceeded. The wage system became more performance-based as well in accordance with emerging HR policies that sought the immediate competence of employees. However, some scholars argue that, in the long term, such changes in business strategy and HR policy have negatively affected Japanese industries’ productivity and quality. Moreover, Japan’s institutional mechanisms have been affected as well. Laborers have failed to cope with problems such as wage reductions, growing numbers of non-regular workers, and the decrease of collective bargaining power. These problems exist against a backdrop of increasing wealth disparity. This paper aims to elucidate the possibility whether Japan’s industrial relations could be reconstructed or not in the long-term perspective, focusing on the mechanisms by which globalization and changes in corporate governance are influencing industrial relations at the micro level.

Welfare Support Attitudes in Korea, Taiwan, Germany, and Italy: Focusing on the Influence of Institutional and Political Factors

Previous studies have shown that welfare attitudes are determined by various demographic, economic, and social factors in Western countries. Class is found to be one of the most influential factors in explaining individual welfare attitudes in Western countries. On the contrary, no clear factors have been found to be significant in differentiating individual welfare attitudes in Asian countries, particularly in South Korea so far. To understand welfare attitudes in comparative perspective, we will analyze the <Life and Society> survey data collected from Korea, Taiwan, Germany, and Italy in 2012. Two Asian countries are small emerging welfare states, whereas Germany and Italy are already mature welfare states. However, these countries have some commonalities in that their welfare systems were constructed by the principle of Bismarckian insurance system. It would be very interesting to check changes in welfare attitudes in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The first purpose of this article is to explore whether there are different social cleavages in welfare attitudes in Western and Asian countries. The second purpose is the main part of this study. The study focuses on the issue addressed by institutionalists in the analysis of welfare attitudes. That is the importance of institutional and political factors. We expand the concept of ‘political trust’ to measure the political and social evaluations of the political as well. We are important in explaining welfare attitudes such as individual support for welfare states. At the same time, we will show that there are variations among four countries, and particularly differences between Western and Asian countries in the direction and significance of institutional and political factors.

Precarious Labour In The UK: The Impact Of Neoliberalism and The Possibilities For Resistance and Organisation

This paper seeks to examine resistance to precarious employment in the UK. It has been the focus of recent debate in the UK, both in academia and in the labour movement. In academia there have been debates between Guy Standing (2011) and Kevin Doogan (2009) amongst others about the extent and implications of precarious employment. The use of statistical evidence is a particular point of contention; ranging from some arguments relying on very little of it to others claiming it negates the concept. However statistics alone provide only a partial picture, as the category of precarious employment is heterogeneous: it is not simply about being on a specific kind of temporary contract. The experience of precarity is an important component of work today, and an understanding that draws on Bourdieu's (1998) notion of 'précarité' as a 'mode of domination' is useful for developing this further. The paper will attempt to historicise precarity in the UK as part of the British response to the crisis of 1970s and the rise of Neoliberalism. These processes were enforced with a series of defeats for the trade union movement, which have left low levels of membership concentrated mainly in the public sector and large sections of the private sector without traditional forms of working class organisation. There has been resistance to precarious employment. The examples of university teaching staff, call centre workers, and the campaigns against zero-hour contracts will be examined to understand how new forms of struggle can lay the basis for the renewal of workers’ organisation. The paper will argue how the historical examples of new unionisation in the 1880s and 1930s can inform contemporary debates on overcoming precarity.

Towards a Method For Activist-Scholar Research Collaborations: Taking Inspiration From The Tradition Of The Workers’ Inquiry

This paper will argue for a method for collaborative research projects involving academics and workers that takes inspiration from the tradition of workers’ inquiries. It draws on my own experience of conducting an inquiry in a UK call centre. In Marx’s (1938: p379) attempt at an inquiry he stated that workers ‘alone can describe with full knowledge the misfortunes from which they suffer,’ and crucially that ‘only they, and not saviors sent by Providence, can energetically apply the healing remedies for the social ills to which they are prey.’ The innovations of the Johnson-Forest Tendency in the USA, in examples like The American Worker, highlight how collaborations between workers and intellectuals can be used to develop an understanding of society. The Italian Operaismo in the 1960s developed the methodological component of inquiries as a form of ‘co-research.’ The aim was to simultaneously develop a form of knowledge production and new organisations. The debates in their journals discussed the difficulties in this approach, seeking to move from inquiries ‘from above’ to those that involved workers self-organisation – an inquiry ‘from below.’ Romano Alquati argued that in many ways this was not only ‘political militancy has always done concrete (co-research). We would go in front of the factory and speak with workers: there cannot be organization otherwise’ (quoted in Roggero, 2010: p3). This paper will argue that inspiration can be taken from previous attempts to develop workers’ inquiries. They represent particular and important moments when academics sought to engage with the changing conditions in the world alongside groups of workers. Although the location of the factory gates has changed in many ways, the current context of austerity necessitates the engagement of researchers with workers’ struggle, both inside of universities and in different workplaces in society.
used a range of terms to capture the ‘grey zone’ that falls between worklessness on the one hand, and relatively secure full-time employment on the other. This ‘grey zone’ varies significantly in size across first world countries and is likely to expand under the current turbulent economic conditions. Although sociologists have both introduced and critiqued various terms used to represent insecure and fragmented work, there have been few attempts at a theoretically driven conceptualisation that ties the new conditions to broader processes of change in advanced capitalist societies and links structural change to new forms of consciousness. While the idea of framing the experiences of fragmented and casualised work in the new economy as a new class, for example the precariat, has some attraction, there are also difficulties with the conceptualisation. One of the core problems relate to the fact that not all young people who are structurally located in the precariat by virtue of their employment in casual or insecure forms of employment represent a disadvantaged or marginalised group. For some the experience of precari卡尔 employment is alleviated by access to other resources, such as family support, and they escape some or all of these precarious work conditions as they get older. Drawing on evidence from a number of countries, and primary data from an ongoing mixed-methods study of youth in Australia, in this paper we describe some of the ways in which changes in the labour market are affecting young people, consider the adequacy of representations of precarious and fragmented positions as the basis of a new ‘class’ and propose an alternative way of conceptualising ‘individualised’ structured inequalities in the new economy.

Balanced Advice? Appointments to Advisory Boards and Gender Quota’s in the European Union

Advisory councils and boards play an important role in countries with corporatist democratic traditions. Appointments to these boards are often controlled by political actors but regulated in a bureaucratic framework. Feminist movements identified these decision-making bodies as both crucial gatekeepers and easily malleable venues for a quick fix of gender balance. Given that many of the bodies are appointed by the state, boards and public committees seemed to offer the opportunity to quickly change the gender balance in decision-making, even as electoral sectors were changing slowly. Countries such as Belgium and Norway adapted legal gender composition rules for appointed bodies by 2005. Later quotas in electoral politics became more widespread. Today many European countries have also started proceedings to implement gender quotas in advisory bodies and corporate business boards with state participation. To what extent has the increasing integration of Europe led to adaption of gender regulations of appointed boards in EU member states? How does this interact with political appointment processes? What are the results and how does the bureaucratic capacity of the state interact with implementation of gender-balance rules? This paper will report on comparative data and measures in the 27 European Union countries. Who has adopted quota for these bodies, and what are the arguments? How do gender equality considerations relate to debates about de-politicization of appointments? Further the paper will review available results on the composition of advisory boards. The paper will review available results on the composition of advisory boards and present the findings from this study.

Between Ambition and Reality: The Role of Gender Representation Rules in European Scientific Advisory Councils

Research Councils are crucial gatekeepers to academic power. Substantial research indicates that gender skewed scientific advisory and review boards play a role in the underrepresentation of women receiving scientific grants. Since the mid-nineties, many European scientific advisory bodies have adapted guidelines about the gender composition of their panels, either compelled by national legislation and European directives or voluntarily. European Union scientific review boards are supposed to be composed at the 40%/60% level, for example. However the adaption of guidelines and the implementation and monitoring of guidelines are not always linked. Quotas generate controversy, even among female scholars. Further, the re-arrangement of the European Research Area may mean that ambitions of representation become lost thanks to neo-liberal arguments. This paper will review available results on the composition of panels and management. The implications for research councils and gender equity in decision-making will be discussed. Contextual and structural factors of legislation, leadership, peer pressure, Europeanization, monitoring and bureaucratic capacity are identified as contributing to differing outcomes. Concretely, the paper treats the major European players in transnational funding and management: European Science Foundation, the nascent Science Europe, the European Research Council and the Commission of the European Union.

Rematerialising the Commodity in Social Theory: Performativity, Iconicity and Object Transitioning

The frontiers of social theory and cultural inquiry have been advanced by the affordances of object-oriented analyses and, more critically, a material ontology. Objects, things and materials are the stuff of new ecologies of meaning and practice, whereby social structures, global networks, cultural ideals, social values and the like are to be understood as both material and constituted. Studies of object ecologies, material culture and things have challenged how we think about the nature of mundane experiences, modes of social communication and performance, and networks of social affiliation. In all of these fields, the material basis of social life has been uncovered and emphasised. As it has matured, material analysis has tended to bifurcate into interpretivist and materialist approaches, leaving approaches to materiality at something of a crossroads. On the one hand, strongly materialist approaches tend to fetishise material dimensions and relational, systemic patterns of exchange, while interpretivist approaches focus on the constitution of signification as a social process. Using the central sociological category of the commodity, this paper explores opportunities for integrating these approaches with special focus on the relatively new cultural sociological resources of performance theory and theories of iconicity.

Neoliberalism on the Defensive: Austerity As a New Form of Common-Sense

Since the global financial crisis, the extensity of resistance to global forms of neoliberalism has been marked, with economists being at the forefront in demonstrating how austerity is unsustainable as a means of production. Both radicals and Keynesian economists, alongside a wide variety of political and social movements, which were already prevalence during the preceding decades since the end of the cold war became more prominent in their attacks and criticisms of neoliberalism. These have included social movements such as the Occupy campaign, regional political movements such as those in Latin America, reactionary nationalist groups and religious-based organisations, which have all been explicit in their attacks on the hegemony of neoliberalism.

In response, the notion of austerity has flourished as a concept in order to keep such criticisms at bay. This paper will argue that the notion of austerity has developed into a defensive ideology, geared around the rejection of comprehensive alternatives to the crisis. Instead, it is geared upon the idea of presenting austerity as a compulsory painful measure, required in order to re-stimulate growth and confidence in the economy. It will also suggest that this narrative has been strengthened by the failure of its criticisms to adequately construct a viable hegemonic alternative that might replace the status-quo. As a result, austerity has assumed a character that can be understood as a form of ‘common-sense’ in the wider Gramscian tradition. It serves as providing a set of norms and conditions which are understood as being both natural and universal in their operation and context. This paper will conclude that it is through this articulation of common-sense that neoliberalism (as least to date) managed to survive and to go on the offensive. Such a position that was not seen possible merely five years ago.

Gender Equality in Progressive Muslim Movements: Social Implications in the United States

The varied forms of progressive Islam all endeavour to realise social justice and equality through a critical engagement with Islamic sources and an inquiry into progressive Islamic practices. An important feature of most progressive Islamic movements in North America is the focus on social equality and ultimately on gender parity. This paper seeks to investigate the ways in which social justice is achieved and enacted in target progressive Muslim communities and organisations. Subsequently the possibility of the instigation of social processes for ensuring human rights stemming from progressive ideologies will be examined. The research will be focused on two organisations: Muslims for Progressive Values and the New York Community of Progressives. Fieldwork will be carried out through online focus groups, observation and in-depth interviews in the United States. Such work will contribute to the development of a theoretical framework on the role of progressive Muslims in North America and within other alternative Islamic practices/communities. The findings from this study will be used to evaluate the broader
Neoliberal metropolitanism and the remaking of welfare systems: The rise of professional projects in the government of the biopolitics of the metropolis

European research on the linkages between professionalization and political systems has focused either on the role of the state in professional projects or, more recently, on the relevance of transnational developments for a globalisation of professions. This paper extends the analysis of political systems to a new scale, that of the metropolis. It identifies the recent discourse of metropolises as ‘landscapes of power’ in global economy as a meta-level turn to ‘neoliberal metropolitanism’ in public policy. The paper further argues that the new discourse has helped to construct metropolises also as important landscapes for professional projects.

The analysis examines urban planning focusing on the Greater Helsinki region as a ‘world-class centre for business and innovation’, focusing on the professional projects that arise in the intersection of government and scientific expertise. I employ Patrick Carroll’s ideas about how the role of scientific expertise for ‘material design’ as conducted by political systems. Carroll highlights how the key boundary objects of land, people and built environment are transformed into ‘techno-territoriality’, ‘bio-population’, and ‘infrastructural jurisdiction’. Employing Carroll’s framework to my analysis of role of expertise for the biopolitics of the metropolis, I argue that expert professionals are key agents of this transformation work, forging expert knowledge into institutional practice.

The findings show that the kind of knowledge that gave rise to new landscapes such as public health the market-conscious metropolises also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four key professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

A Sociology of Real Utopias

On Marx’s tomb in Highgate cemetery is one of his most quoted passages: “Philosophers have only interpreted the world in various ways; the point is to change it.” Usually this is taken as a call to action. But it is also a call to produce a certain kind of knowledge, knowledge that is relevant to the task of social transformation.

Such knowledge needs to grapple with four broad problems: specifying the values that drive our search for a better world; developing a rigorous diagnosis and critical vision of what is needed; developing a certain kind of knowledge, knowledge that is relevant to the task of social transformation. This knowledge needs to be understood as ‘a world-class centre for business and innovation’, focusing on the professional projects that arise in the intersection of government and scientific expertise.

The findings show that the kind of knowledge that gave rise to new landscapes such as public health the market-conscious metropolises also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four key professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

Digital Contention: Anonymous and the Freedom of Information Movement

The main task of this paper is to analyze the online collective known as “Anonymous” as a case study using the theoretical framework of traditional social movement studies. I outline this framework in the literature review section of this paper as nine distinct characteristics, each pertaining to a different aspect of social movement research. My purpose in doing so is to argue that Anonymous is part of a larger, loosely-connected new social movement, which I call the Free- dom Movement, as well as to show how its unique characteristics which have developed out of new digital technologies are making it necessary for sociologists to update and expand upon our existing theories and concepts of social movements. Some of this work has already begun. There have been several, though not many, studies of cyber-activism, hacktivism, digital repertoires of contention, cyber diffusion, online activist networks, and decentralized organizational forms of online movements. Through a combination of historical and qualitative content analyses of news articles, websites, operational fliers, and other written materials associated with Anonymous, I am attempting to build upon and expand this new and growing paradigm concerning online social movements and digital forms of contention.

Child Abuse and Public Inquiries: Historicizing the Imperative for Openness and Disclosure

By the late twentieth century, an imperative for openness and transparency - what might fruitfully be called a ‘culture of disclosure’ - was increasingly evident across all spheres of social, political and personal life in the West. While this can be identified in disparate domains, it has been particularly striking in relation to disclosures of child abuse. This paper explores the imperative for openness and disclosure about the abuse and neglect of children against the backdrop of emergent constructions of childhood vulnerability since the 1970s. It takes as its focal point a key instantiation of societal openness over the last several decades: public inquiries into childhood maltreatment. While official inquiries have a number of functions, a key purpose is acknowledged as ‘learning lessons’ from the past in order to prevent future recurrence. Given it is now widely accepted that people who have suffered abuse and neglect as children often face lifelong challenges, including poverty, social isolation and poor mental health, there is a strong warrant for investigations that throw light on cases of past abuse.

This paper first considers the rise of public inquiries in a number of countries, including the United Kingdom, Ireland and Australia, as exemplars of increasing societal concern about childhood vulnerability and abuse. Second, it examines inquiries against the backdrop of emerging theories of human development and psychological research that shaped how childhood experience, and the effects of ill-treatment, came to be understood. Finally, it explores the public pedagogical function of inquiries, and makes a case for the use of official inquiries in understanding broader processes of social change; in this case, changing concepts of childhood vulnerability and the emergence of social and educational policies aimed at safeguarding children and promoting their wellbeing.

The Role of Official Inquiries in Understanding and Preventing Childhood Maltreatment

By the late twentieth century, an imperative for openness and transparency - what might fruitfully be called a ‘culture of disclosure’ - was increasingly evident across all spheres of social, political and personal life in the West. While this can be identified in disparate domains, it has been particularly striking in relation to disclosures of child abuse. This paper explores the imperative for openness and disclosure about the abuse and neglect of children against the backdrop of emergent constructions of childhood vulnerability since the 1970s. It takes as its focal point a key instantiation of societal openness over the last several decades: public inquiries into childhood maltreatment. While official inquiries have a number of functions, a key purpose is acknowledged as ‘learning lessons’ from the past in order to prevent future recurrence. Given it is now widely accepted that people who have suffered abuse and neglect as children often face lifelong challenges, including poverty, social isolation and poor mental health, there is a strong warrant for investigations that throw light on cases of past abuse.

This paper first considers the rise of public inquiries in a number of countries, including the United Kingdom, Ireland and Australia, as exemplars of increasing societal concern about childhood vulnerability and abuse. Second, it examines inquiries against the backdrop of emerging theories of human development and psychological research that shaped how childhood experience, and the effects of ill-treatment, came to be understood. Finally, it explores the public pedagogical function of inquiries, and makes a case for the use of official inquiries in understanding broader processes of social change; in this case, changing concepts of childhood vulnerability and the emergence of social and educational policies aimed at safeguarding children and promoting their wellbeing.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The 1970s saw both the emergence of child abuse as a recognised social problem and the rise of public inquiries to investigate issues of major social concern, including childhood maltreatment, in a number of Western countries. In the United Kingdom there have been more than 80 inquiries into various aspects of childhood abuse and neglect over the last four decades. In Ireland, 14 reports published since the 1990s have examined abuse in schools and institutions. Similarly, in Australia, growing concern about the welfare of children in out-of-home care has prompted a number of official investigations, the most recent being the current Royal Commission into Institutional Responses to Child Sexual Abuse. It is one of the largest public inquiries in Australia’s history and like the Irish Ryan Commission before it, is likely to be one of the most significant inquiries into historical instances of child abuse internationally. Through examination of a number of prominent inquiries, this paper first explores the role of official inquiries in social and educational policy reform, and in shaping public understandings of the problem of child abuse more broadly. It then considers the cathartic function of inquiries for victims and for societies more broadly, through exploration of the notion that inquiries reflect an open and transparent society in which ‘the voices of the powerless are heard’ and the powerful are held accountable. Finally, the paper analyses the fraught social justice issues at play in the investigation of past instances of abuse, and the promise of social and institutional change aimed at better protecting young people today.

Choreographing Risk: Multiple Sociotechnical Networks of Multiple Pregnancy

This paper creates the concept of “choreographing risk” to explore the socio-technological networks of multiple pregnancy, mostly caused by assisted reproductive technology. I argue that during the processes of assisted conception and multiple pregnancy, elements of technical, legal, financial, emotional, political and gender, are coordinated around risk. Data includes in-depth interviews of women and medical professionals, and archival data. I find that in the stage of getting pregnant with assisted reproductive technology, doctors tend to use multiple embryo transfer and ovarian stimulation medication to increase the pregnancy rate. Both doctors and women perceive failure of conception as the major risk, and tend to disregard the risk of multiple pregnancy. In the case of multifetal conception, fetal reduction becomes a technical model to reduce the risk of multiple pregnancy. However, some women and doctors refuse this technique for reasons other than health risk; network of fetal reduction often collapses. High prevalence of multiple pregnancy in Taiwan exists. Pregnant women of twins and triplets take embodied responsibility to avoid risk of premature birth, including diverse bodily work, and negotiation between productive and reproductive labor. This paper shows that as women vis-à-vis medical professionals become more and more the central choreographer in the multiple networks of multiple pregnancy. For policy implication, I suggest adjusting assistance conception methods, such as reducing the number of multiple embryo transfer during in-vitro fertilization, to relieve women from the hard labor of multiple risk choreography.

How Scenes Drive Housing Prices in Beijing

Wu (2011) proves that Scenes heavily influence the urban residential choices in China. In that paper, an analytical framework is constructed to study 375 counties of 25 largest cities in China. The objective of this paper is to improve on the previous analytical framework and delve into an examination of neighborhood level housing markets. Specifically, we focus on the city of Beijing in this paper and collect a database which includes three-year housing prices data and 85 types of amenities from 220 neighborhood areas in Beijing. In addition, we develop a novel technique to overcome the drawbacks of the spatial econometric modeling and the traditional theoretical framework due to strong spatial autocorrelations among housing prices. We also employ geographically weighted regression and Kriging mapping to support our analyses. Our conclusions are the following: (1) the distribution of local culture and amenities is polarized in Beijing; (2) housing prices in Beijing are significantly influenced by neighborhood level culture and amenities; (3) the distribution of housing prices in Beijing has the shape of a comet, corresponding to the distribution of local culture and amenities, and with tails spreading towards the northwest.

The Research of Cost Performance of Urban Housing in China: Base on the Theory of Scenes

In the last decade, the rising real estate price in Mainland China has become a worldwide issue. All walks of life paid close attention to the urbanization process stood by flourishing Real Estate Market in China. Moreover, some scholars have more emphasis on crisis and bubble hidden by the fast-rising real estate price. Recent research and analysis on commercial housing vacancy ratio, relationship with housing price land value and Housing Price-to-Income Ratio have occupied the mainstream. These researches either stressed the influence on housing price by the cost of residential land from the perspective of supply or underlined the mismatch of housing price and per capita income from the perspective of demand. However, this paper argues whether there exist bubbles in commodity residential market is a dynamic equilibrium process, it is difficult to judge only by one-side factors. Hence according the Theory of Equilibrium Price posed by New Classical Economics, this paper re-examine the residential market bubble issue in China from a totally new perspective- cost performance of commodity housing based on Principle of Supply-demand equilibrium. Using ideological system of the latest achievements of Scenes Theory from Chicago School, this paper selected Panel data from 2001 to 2012 in 147 main cities in china, built urban residential Scenario index to measure cost performance of commodity housing in different regions in China and empirically proved the rationality and validity of the index. Finally this paper points out that urban cost performance of commodity housing ruled low in general, Second-tier cities had a low commodity residential market bubble level rather than first- and third-tier cities had a high level and offers targeted policy recommendations for macro-control of real estate market of the government of China.

Micro and Macro Conditions for Happiness in Urban China

Despite the large literature on happiness research, sociological studies on the social determinants of happiness in China remain rare. This study examines not only micro conditions for happiness but also the potential interplay of micro and macro conditions in urban China. Specifically, we focus on some wide-studied and much overlooked micro conditions, socioeconomic achievements (what you get) and non-cognitive skills (who you are), respectively. However, the happiness effects of micro conditions may well differ across macro contexts. We thus investigate how the happiness effects socioeconomic achievements and non-cognitive skills depend on the level of economic development in urban China. Our data are drawn from the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey. Socioeconomic achievements refer to years of education and annual total income. Non-cognitive skills refer to conscientiousness, operationalized by indicators of consistency, dependability, and deferral of gratification in performing the student role. Macro condition refers to urban areas in the most developed provinces, as indicated by provincial-level GDP per capita. We obtain three main findings: (1) Both adolescent conscientiousness and personal income, but not education, enhance personal happiness. (2) The happiness effects of education and income are highly contingent on the level of development, with education having a positive effect in less developed areas but a negative effect in more developed areas. (3) The happiness benefit of conscientiousness is robust across urban areas of high and low economic development. The evidence thus suggests that the micro conditions for happiness do depend on certain macro conditions in China. There is a penalty on happiness for high achievers of education and income in the most developed urban areas, but the happiness effect of adolescent conscientiousness is uniform across development contexts.

Personality Traits, Socioeconomic Inequality and Subjective Well-Being in Urban China

This paper brings together two literatures: a large literature of health inequality that has long documented the robust health benefits of socioeconomic status (SES) and a new human capital theory that emphasizes the health benefits of certain SES characteristics. We examine the potential dynamics between psychological functioning (personality traits and competitive pressure) and socioeconomic inequality in the context of subjective well-being (SWB). Specifically, (1) does adolescent conscientiousness (one of the “Big Five” personality traits) affect socioeconomic status (measured by education and income) in the transitional economy of
urban China? (2) Does adolescent conscientiousness also modify (interact with) the SWB effect of SES? (3) Are the SWB effects of conscientiousness and SES contingent on the degree socioeconomic competition of an urban area?

Drawing on the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey, we measure SWB with multiple indicators of positive and negative affect and conscientiousness with consistency, dependability, and deferral of gratification in performing the student role. We obtain three main findings: (1) Adolescent conscientiousness enhances education and income. (2) There is no interaction between adolescent conscientiousness and SES in predicting SWB. Each has independent effect on SWB. (3) However, psychological functioning and structural inequality interplay in a more complex way. We use level of economic development as an indicator of the degree of socioeconomic competition. While the SWB benefit of conscientiousness on SWB is robust across urban areas of high and low economic development, the SWB effects of education and income are highly contingent on the level of development. The evidence suggests that there is a penalty on SWB for high achievers of education and income in the most developed urban areas. Thus psychological functioning does not only affect socioeconomic achievement, it also critically determines the SWB benefits of socioeconomic achievement.

Perceptions on Hurricane Information and Protective Action Decisions

Tropical storms and hurricanes have caused extensive casualties and damage in past decades. Population and economic growth in the vulnerable coastal areas have made hurricanes a serious problem and created the potential for a catastrophic loss of life. The existing research literature lacks a sufficient scientific understanding dynamic protective action decision making during events in which additional information becomes available over time. Emergency managers and residents in the risk areas are most likely to make decisions on their protective actions based on National Hurricane Center's hurricane forecast advisories. This study uses the DynaSearch program to conduct a computer-based experiment that the understanding of hurricane strike probabilities and their choices of protective action recommendations during four different hurricane scenarios by having students playing the roles of county emergency managers. This study simulates the approach of a hurricane by providing experiment participants a sequence of hurricane forecast advisories and examining their threat perceptions and implement protective actions over time. The results show that (1) people's hurricane strike probability judgments and protective action recommendations escalated as hurricanes approached to their counties; (2) people realized that hurricane could make turns and might not always follow the forecast track; (3) risk assessment variables are correlated with people's disaster responses; (4) hurricane experience has a significant effect on protective action recommendations; (5) participants failed to evacuate appropriate risk areas in timely manner; and (6) participants had difficulty interpreting strike probabilities. The results suggest that participants were able to utilize the available hurricane information to make reasonable judgments about each city's relative strike probability. However, their failure to be left-behind in both at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in the family. Implications of these research findings were further discussed.

Ethnic Autonomous Policy and Ethnic Inequality in China: An Evaluation

China's 55 ethnic minorities constitute about 9 percent of the national population, and more are concentrated in remote areas and disadvantaged in social and economic development compared to the Han majority. To promote ethnic inequality, Chinese government has instituted the ethnic autonomous jurisdictions at different levels: 5 autonomous regions, 30 autonomous prefectures and 120 autonomous counties/banners, covering 71 percent of ethnic minorities and 64 percent of the territory as of 2005. This paper aims to employ China's census (from 1982 to 2010) and the mini-census data in 2005 to evaluate the effectiveness of such a policy on ethnic disparities in educational, occupational attainment and income. Specifically, we will employ the causal inference methods to investigate the experience of ethnic minority (relative to Han) living under their own autonomous jurisdiction and their counterparts otherwise. The findings will have important implications for China's policy towards ethnic minorities.

Trends in Intergenerational Social Mobility in China

This paper studies the intergenerational social mobility pattern in the People's Republic of China over half six decades, based on an analysis of 5 cohorts (born between 1932 and 1988) from a series of national representative surveys conducted in 1996, 2005, 2006, 2008, 2010, 2012, respectively. In the context of rapid economic industrialization since 1949, the absolute mobility rates in China increased over time, but the level is much lower than other countries. The relative mobility patterns were largely stable for both men and women except for the youngest cohort. Education played an important role in intergenerational social reproduction: the effect of origin on educational attainment does not change over time, but the effect of education on destination does. The household registration (hukou) system that the Chinese government installed in to curb the rural-urban migration in the course of socialist industrialization created a unique pattern of social mobility in China that deviates from core models of social mobility found in other countries. The market reforms has altered the pattern of social mobility: the effect of origin on education increased and the market-oriented reform seems to enhance the inter-generational transmission.

Between the Individualism and the Collectivism: Dilemma in the Socialization of Today's Chinese Adolescents

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
About one hundred years ago, William Bagley put forward several controversial issues on different trends of education concepts. One of them concerns the debate between two opposite values in pedagogy: the individualism and the collectivism. If these two values represent and distinguish two different notions in diverse civilizations, especially during this transitional stage, and the context of globalization, China's Chinese youth is the first generation whom simultaneously contact with various cultures from the Western world and from their own tradition, thus directly confronting this dilemma during their socialization.

On one hand, Chinese social convention attaches importance to the strategies needed in maintaining a collective life, in which individuals should adhere to the Doctrine of the Mean in hopes of becoming invisible within the community; On the other hand, the competition advocated by market economy require individuals to show their uniqueness in order to stand out above others. Moreover, the Confucian family tradition is used to emphasize that an individual submits to the collective interests but disfavors his or her public responsibilities. However, civil society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today's Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships? How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still having an impact on those Chinese, the individuals who hold traditional Chinese notion of "collective" commonly used in surveys such as the World Values Surveys, might be different from western concept of "trust". Second, questions about political values are sensitive, especially in China, and therefore the distrust in interviewers and political fear may lead Chinese citizens to overstate their trust in the authoritarian government. Third, the political system and culture of imperial China could play a role on those Chinese who are influenced by the tradition of this young generation facing the obligation of the familial collectivist tradition with that of the impacts of the individualistic civic innovation.

Re-Thinking Political Trust in China

Political trust matters as it reflects a regime's perceived legitimacy. Cross-national survey research shows that political trust in China is very high. This is puzzling because China is not only governed by an authoritarian regime but it also has serious corruption and large wealth inequality. The high trust exhibited within the Chinese context is therefore questionable.

In this study, we argue that there are at least four key points that need to be considered when using survey data to examine political trust in China. First, the Chinese notion of "xinha" commonly used in surveys such as the World Values Surveys, might be different from western concept of "trust". Second, questions about political values are sensitive, especially in China, and therefore the distrust in interviewers and political fear may lead Chinese citizens to overstate their trust in the authoritarian government. Third, the political system and culture of imperial China could play a role on those Chinese who are influenced by the tradition of this young generation facing the obligation of the familial collectivist tradition with that of the impacts of the individualistic civic innovation.

Multilingual Education of European Union – Backstage of Ideology

The image of state education, together with visions of its main functions, priorities and expected results are constantly being reshaped under the impact of various social, economic, political and cultural changes. Being a powerful tool of influence, education is often becoming the battlefield of different interests, the most powerful of which have their reflection in educational policies and practice. This paper concentrates on the case of Poland, which faced several important transformational processes during last decade, among most important of which is joining the European Union (2004). What impact on educational system and its actors did it have? This paper investigates how EU’s directives and recommendations influenced Polish educational system, using the example of foreign language proficiency. In 1995 the European Commission published a White Paper on Education and Training, which states that each citizen of European Union must speak at least two foreign languages, which would enable mobility and competitiveness on the labor market. This is the starting point of the analysis of the paper, which will present the insight to EU recommendations concerning foreign languages and relate this data with the actual educational reforms in Poland in 2004-2013. Further on, the paper will concentrate on the analysis of the foreign language skills characteristics of Polish citizens in 2013, using the data gathered in Polish Panel Survey POLPAN and European Survey on Language Competences (2011). Interpreting the results, the paper confronts the dominating idea that Poland should “catch up” in learning foreign languages (Poland National Summery ESLC, 2011) and opens the questions of whether foreign language proficiency is an unavoidable condition of modern world and to which extend the multilingual pressure creates the new marginalization, unequal relationships and uneven chances.

Contested Control: Irregular Transit Migrants in Europe

This presentation is about young migrants’ journeys with low chances of receiving asylum or any other type of residence in Europe. These migrants exhibit a highly complex migration pattern. First, these migrants are frequently in durable “transit” across Europe, moving back and forth between different states. Second, transit migrants must exhibit a high degree of flexibility, as they have to respond to suddenly changing conditions, such as work opportunities, rejection of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty of asylum claims, detention or deportation.

The dynamics of the economy goes through three strands: the State, the market and civil society. The State, in principle, is characterized by the logic of intervention, by the regulation and entrepreneurship; the market prefers the competitive logic; and the third sector step by associative pathways. Currently, the economy of many countries goes through times of turbulence. The State no longer meets the diverse needs of its population; private companies are increasingly profitable. Social “companies”, in principle, have many weaknesses in their management and, in this regard, we realize that there is a disruption of economic and social order in society, like: increasing poverty, violence, environmental degradation and so on. We need an alternative to the productive process. In this way, the social entrepreneurship enables new forms of economic activity management with a logic contrary to market economies. In this paper, we describe an entity of third sector with the solidarity economy approach, through social entrepreneurship postulates. Our research is descriptive, qualitative, being a case study on a social entity. We use observation and documentary work for data collection and the analysis of the content reflected the catalogued information. The results suggest that there is a new economic order and that other alternatives practices of economic production are viable. Cooperating companies can be managed by the competitive logic, but with emphasis on the collective human needs. The entities have vision of solidarity and aim financial and social profit as well. The local market is valued and the cooperative process is visible. On the other hand, it is not easy to maintain an organization of this type in the market, with associative goals. Predatory and unfair competition of traditional companies undermines the survival of social entities. Finally, the success achieved by the Organization studied shows that another economic production is possible.
University, analyzing two key factors of variable quantity, marketing and word of mouth, we research China’s audience of animated film and try to discover facts of objectivity of research and teaching for the needs of major national projects, China has created the interactive mode of “society-engineering-research-teaching”. In a word, this unique phenomenon comes up under the condition that education highly mixed with political field, scientific field and economic field.

Chinese Animated Film and its Audience; An Empirical Research on Chinese Cultural Wave

In this presentation I will take up the case of Chinese animated film and its audience as one of those examples of new cultural waves from Asia. Institute for Cultural Industries at Peking University has been conducting a survey research on the issue as a part of the survey program called Cultural Consumption Program. The program (survey project) has been one of the rare attempts of such kind in China and we are now analyzing the data gathered by the project. In the presentation of this session, I will show the results and the facts of the survey and I will try to connect the outcomes to the other cultural ‘waves’ from Asia in locating it in the broader picture in Asian settings in the whole. In doing so I shall commit the dialogues with other presenters who deal with the findings from other areas of Asia.

Who Becomes Registered Urban Resident during China’s Massive Urbanization: Assessing the Roles of Human, Political and Social Capital

Background

Over the last half-century, registered urban residents persistently occupy an advantageous position over rural residents or rural-urban migrants in obtaining good jobs, health care, housing and even education for their children. Therefore, transforming one’s household registration (hukou) status from rural to urban is a very effective path to upward social mobility. Prior research shows that education, Party membership and military service are the three most significant predictors of hukou conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion.

Empirical Findings

(1) Education is a far more powerful credential than expected, facilitating the transformation of hukou status in both directions, and the mechanism of hukou conversion channels, such as military, employment in state sector or cadre; (2) the role of familial ties in hukou conversion needs to be examined further.

Question

We re-examine the roles of three types of predictors in hukou conversion: human, political and social capital.

Data and Analysis

We draw on the 2008 Chinese General Social Survey that provides crucial timing data for life events, including the timing of hukou conversion for both the respondents and their spouses, first marriage and joining in the Communist Party.

Empirical Findings

(1) Education is a far more powerful credential than expected, facilitating the use of not only educational channels, but also a wide range of state sponsored conversion channels, such as military, employment in state sector or cadre; (2) when reverse causation is thoroughly eliminated, we show that Party membership and military service are the three most significant predictors of hukou conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion.

Hermeneutics and Cultural Sociology

Hermeneutics and Cultural Sociology: A Discussion between Alexander’s “Strong Program” and the “Cultural self-awareness” of Chinese Sociology

Bing Xu, Shanghai University, China

Jeffery Alexander’s concept of cultural sociology is closely related to hermeneutics, and hermeneutics has been built continuously as well as cultural sociology. He and Philip Smith’s “strong program” takes Dilthey’s hermeneutics as its philosophical resource and late Durkheim as its classic sociological resource (Alexander and Smith, 2003). What is the relationship between the two resources? My viewpoint is that both of them are inspired by Wilhelm von Humboldt’s metaphor of “the web of language” in German Romantic Philosophy, which plants the seed of modern hermeneutics (cf. Taylor, 1985: 23). “The web of language” is expanded from text to text-like actions by Dilthey, and from text-like action to social structure by Durkheim. Durkheim articulates his approach to reach beneath the symbol to grasp the social reality around 1920, which has hermeneutical implications (cf. Durkheim, 1995: 2). This approach has been transformed into structuralism in the French tradition in early 20 century, and has been extended by Alexander between French structuralism and American pragmatics as “cultural pragmatics” in the turn of 21 century.

Chinese sociologist Xiaotong Fei (2003) argues that hermeneutics is a powerful approach for the “cultural self-awareness” of Chinese sociology, because the profound thoughts on mind in Neo-Confucianism of Song and Ming Dynasties has hermeneutical implications. I would argue that hermeneutics can be developed in this exploration, and in return, the exploration can be pushed forward by the expanded hermeneutics. The hermeneutics in this context is different from that of Alexander but can be inspired by the latter.

Aspirations, Motivations and Immigrant Children’s Unexpected Success in Education

Evidences have shown that despite their undesirable family background, immigrant children are doing unexpectedly well in education when compared to their native counterparts. Previous studies have failed to prove that strong motivation towards better life and high aspiration for upward mobility may contribute to their academic success. To fill this gap, I use Hong Kong PISA data to identify four types of incentives that theoretically would cause immigrants’ outstanding performance, and use mediation analysis to measure how much of the effect of immigrant status on academic achievement is mediated through these factors. The results confirm that aspirations and motivations do mediate a part of the immigrant effect on mathematics achievement, and educational aspiration seems to be the relatively more important one. For immigrant students from families with low socioeconomic status, although their academic advantage is especially large, but that does not mean they have stronger motivations and higher aspirations.

Factors Associated with Subjective Well-Being in Chinese Elderly People

This paper used the data from China General Social Survey to examine factors related to Subjective Well-Being (SWB) in Chinese elderly people. I constructed a conceptual model adapted from Anderson’s health behavioral model and probed the associations between SWB and predisposing, enabling, need and health behavior factors. I discovered that higher SWB is more likely to be found in elderly people who have spouses accompanied, maintain good quality of relationship with family relatives and friends, have stronger need for recreational activities, have better health status, exercise more, perceive an increase in their current socio-economic status compared to previous situation, and remain optimistic about their future socio-economic status. Results also suggested that enabling factors (socio-economic status and quality of social connections) can impose more influence on elderly people’s SWB. Thus, policies that maintain or boost the perception of upward socio-economic mobility and that enhance harmony between older people and their relatives and friends should be given special consideration in future.

Socio-Political Crisis and the Language of the Media: The Case Study of Russian “Snow Revolution”

This paper is devoted to the analysis of the Russian Media during the “Snow Revolution”: the period of a political crisis in Russia between December 2011 and March 2012. The falsification during the parliamentary elections caused numerous demonstrations and street actions, which continued till the presidential elections.

The social networks played undoubtedly important role at that time: as a source of information, as a mean of mobilization and as an environment for the discussion and reflection. As a consequence, several recent studies of the “Snow Revolution” have been focused on social networks, such as Twitter or Facebook. Unlike the previous studies, this paper focuses on more traditional sources, such as newspapers, information agencies and news feeds on the Web. We address two interrelated research questions: first, how the socio-political crisis affects the content and language of the Media, and, second, to what extent their view of the events represents the public opinion.

To answer these questions we use various types of evidence. First, we collect a large corpus (52 millions tokens) of Russian news, published both during the “Snow Revolution” and before this period; we automatically extract the statistically significant keywords that characterize the investigated period. Second, we conduct the experiment among 104 informants who were asked to recall words and phrases that they associate with the “Snow Revolution”.

We compare the results of these experiments and discover the correspondence between the news and the survey responses; this demonstrates that the traditional news still have an impact in mind-shaping of certain strata of people. We also compare our results with the dictionary of neologisms collected by FaceBook users and post-edited by professional linguists, and come to an idea that a self-reflection of the social networks users not necessary represents the real processes in language and society.

An Emerging Energy-Focused Community in France: A Local and Social Innovation

Can we talk about “communities” in the field of energy in France? Local and citizen-led initiatives relating to energy are developing strongly in Anglo-Saxon countries and a growing body of research is examining the innovative potential of these grassroots initiatives, known as “community energy”. In France, similar initiatives – albeit with certain specificities – only began to emerge recently (in parallel of and related to the Degrowth Movement and the Transition Towns), and so far, very few studies have dealt with them. The purpose of this complementary study is therefore to explore an exploratory and in-depth analysis of one advanced French case, that of Le Mené, a pioneer in local energy autonomy.

We examine the conditions under which the initiative emerged, and the processes through which a grassroots innovation is formed and developed. In studying this case (interviews with key actors and inhabitants, analysis of documents), comparing it with other sources of data (interviews with experts, comparative observation of other on-going initiatives) and taking stock of various social sciences studies, we show that a social innovation was produced in Le Mené through the hybridisation of actors, sociotechniques and discourses. This local initiative was innovative not only in terms of the scope of the implemented equipment, but also in terms of the social organisation behind the development of the projects and the capacity to use energy production as a social resource. Finally, the case study highlights the emergence of a new form of collective action and reflects on its possible diffusion in France.

Why so Weak? : The Social Conditions of Labor Insurgency in Malaysia

Many Asian countries have experienced rapid industrialization and developed manufacturing for the past several decades. Given that manufacturing was traditionally one of bases of labor activism in many countries, the growth of manufacturing can activate the labor movements. In fact, as a result, some newly industrialized countries including South Korea and China have also experienced labor upsurge in a large scale. However, in Malaysia, which has also been remarkably industrialized since the 1970s, there does not necessarily exist a strong labor movement. This paper seeks to explore the reason why the labor movement in Malaysia is so weak even though manufacturing has clustered. Firstly, the brief history of Malaysian labor movement is reviewed and the labor movement in Malaysia used to be very active in the past. Secondly, taking into account various social factors such as class relations, organizations, institutions, networks, and the state, the cause of weak labor movement in Malaysia is clarified. Thirdly, examining the recent process of the enactment of minimum wage law in Malaysia, this paper clarifies that the labor movement did not necessarily affect the enforcement of minimum wage law but the government primarily took the initiative to decide its enactment. Lastly, this paper tries to examine the possibilities to support the labor movement through various means for resource mobilization, and to analyze how the recent deterioration of economic inequality can affect workers and their movement in order to define the social conditions of labor insurgency in Malaysia.

Japanese Challenges Towards the Sustainable Society – the Recovering Process from the Earthquake and Tsunami, and Establishing New Industrial Relations –

After the serious earthquakes and tsunami in 2011, Japanese society, mostly in Tohoku area, had been damaged horribly and the accidents of Fukushima nuclear power plant are still ongoing. Japanese central government had established “Reconstruction Agency (http://www.reconstruction.go.jp/english/)” for reacting to them. The task is “leading and managing the reconstruction process”, and the role is to “accelerate structural reconstruction and revitalization in the affected areas, by surveying implementation of government policies and managing coordination of reconstruction strategy and initiatives between various branches of government at a national level and with local municipalities”. However, the reconstruction process is not sufficient for the local communities.

Following this situation, at a municipality and a community level, we could consider two distinctive changes as hints for new Japanese working features. This presentation tries to examine whether these changes will shed their skin and become new industrial relations or conditions.

The first case would be an excellent collaboration between fishermen and NPOs in Iwate prefecture. Traditionally, the cleavage between fishermen and leisure divers was deep, because of their miscommunication. Currently, a NPO is proposing a cooperation aiming at recovering the sea both for fishery and divers. Through the collaborative works, fishermen have gradually presented their positive attitudes to divers and both of them have been able to understand each philosophy of work.

The second case would be a citizens’ participation toward local administrations. For the aim at reconstructing a community, most of all municipalities are requesting citizens’ participation to set their future plan. In this case, the working style of municipality’s staff had changed to deliberative and negotiating process. Under this pressure, the staffs of municipality office have been forced to think how they can work with citizens and how they can realize the policies through deliberations.

A n Attempt to Analyze the Narrative World of the Life-Stories of Doctors and Patients Involved in the HIV Tainted Blood Product Incident in Japan

A n attempt to analyze the narrative world of the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan.

We have conducted research projects started in 2001 ended 2010, which aimed at collecting and analyzing the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan. This endeavor culminated in the final reports consisting of 3 volumes which amount to 1358 pages. Against the simplified bipolar model of the perpetrator and the victim of this incident, we found more complicated and individualized world of life-stories which would reflect the differences of social and historical context where each interviewee was situated at that time. First, the doctors had been thrown into the uncertainty and indecisiveness toward the then unknown disease of HIV infection, which would result in refraining from taking a clear-cut attitude concerning the use of non-heat- treated concentrated blood product. For most doctors, the change from cryoprecipitate to concentrated product meant undoubtedly a quantum progress of medical care treatment for hemophiliacs; to return to the old method of treatment looked retrogression and might run the risk of engendering the lives of hemophiliacs by the higher rate of intracranial bleeding.

Second, the older generation of hemophili in Japan unanimously experienced the unbearable painfulness of bleeding and was told by parents that they would die young. For them, the anti-hemophilia factor concentrate was regarded as the miracle medicine to ease the pain and to endow a long life. However, facing up the occurrence of HIV infection, they felt being kept separated from every trustworthy information sources. Although, the frank communication between doctors and patients should be acutely demanded at the time of confusion and uncertainty, we found little evidence of any interchange between them.

The “Vocabulary of Motives” of Worker’s Suicide in Japan

Recently, Worker’s Suicide has emerged as a serious social problem in Japan. According to the governmental statistics, the number of application for insurance and the total amount of payout about “karō-jisatsu” in the worker’s compensation insurance system in Japan have gone up significantly last ten years. The purpose of this presentation is to examine in how worker’s suicide is understood among Japanese people now through the interview researches with bereaved families.

Japanese government reported the number of the people who committed suicide per year in Japan has been more than 30,000 from 1998 to 2011. This presentation especially focuses on worker’s suicide, what is called “karō-jisatsu” in Japan. Karō-jisatsu is a Japanese word that means working person himself after too much working or moral harassment in workplace. This word has been popular in our country since 1990’s, while “karō-shi” which means death from overwork has been known since 1970’s. Some lawyers and doctors who are engaged in labor problem or industrial hygiene have claimed that too much working and stress make worker exhausted, so he/she injures his/her mental health, in the worst case he/she kills him/herself. That is called “karō-jisatsu”.

But I point out there is a logical leap between overworking and committing suicide. I clarify how they have been connected in the discourse of “karō-jisatsu”. For example, “worker” was defined by “bureaucratically” and “kareigaku” has been traditionally regarded as heroic suicide in Japan. Medical terms constitute a major “vocabulary of motives”(Gerth& Mills,1953) of worker’s suicide. So when bereaved families decide on the significance of their member’s suicide, they tend to use these types of vocabularies.

Decomposition of Inequality By an Extension of the Dinardo-Fortin-Lemieux Method: An Application to an Analysis of Gender Inequality in the Proportion of Managers in Japan

As a method for analyzing how inequality in one dimension is explained by inequalities in other dimensions, this paper introduces a method for the decomposition of a group difference in the outcome into several components, explained by differences in the covariate values among groups and a component unexplained by them. The method is an extension of the decomposition method introduced by Dinardo, Fortin and Lemieux (DFL) based on propensity-score weighting. An application of this method focuses on the amount by which gender inequality in the proportion of managers is explained by sex differences in human capital variables. The regression-based Blinder-Oaxaca method cannot be employed for a decomposition of the difference in proportion because the linear probability model cannot be specified as a regression model. Unlike the BO method, the DFL method can be applied to decompose a difference in proportion, but the latter does not permit a simple further decomposition of the explained component into elements explained by each covariate. The method introduced in this paper enables alternative sequential decompositions to assess the contribution of each variable to the explained component.

Suppose we denote by C, birth cohorts, by E, the educational attainment, and by D, the employment duration, and the causal order, C→E→D. The decomposition in gender inequality in the proportion of managers by the forward order of equating the conditional distributions of C, E, and D between sexes leads to a sequential application of the DFL method and identifies the effects of C, E, and D including each variable’s indirect effects through causally posterior variables. The decomposition of the backward order of C→E→D assesses the unique contribution of each covariate’s effect on gender inequality requires an extension of the DFL method, however. This paper demonstrates the usefulness of this extension.

The Determinants of Gender Inequality in the Proportion of Managers in Japan

This paper analyzes linked data of employer and employee surveys from the Internationally Comparative Surveys on Work-Life Balance conducted by the Research Institute of Economy, Trade, and Industry to find the determinants of gender inequality in the proportion of managers among white-collar workers in Japan. The high job quit rate among women is a common reason given in employer surveys conducted by the Ministry of Health, Labor and Welfare for “having few and/or no voice.” This cannot be the true cause underlying gender disparity. The proportion of managers among female college graduates is far below that among male high school graduates even when the female employees have worked the same number of years as the male employees at their current companies. The fundamental problem is the institutionalized managerial practices of Japanese firms through which sex is given greater weight than educational attainment in evaluation for managerial potential.

Using the decomposition method of DiNardo, Fortin and Lemieux, this article shows that the difference in human capital between men and women only explains 21% of the gender disparity in the proportion of managers. It also shows that in order to become a manager, long hours of work are required even more for women than for men and that the proportion of managers increases for men and decreases for women depending on the age of their last child in a way suggestive of the reinforcement of traditional gender roles by employers. The analysis also shows that firms with 1000 or more regular employees and firms with centers dedicated to the promotion of work-life balance have smaller gender inequality, and that gender inequality in those firms decreases more rapidly than other firms as the quit rate of female employees decreases. Policy measures to eliminate gender inequality in attaining managerial positions are also discussed.

The Impact of the East Japan Great Earthquake on Community in a Small Village

This article explores the impact of the East Japan Great Earthquake on the sociocultural aspects of community based on 40 in-depth life history interviews and a survey administered to more than 1200 villagers in a small seaside village. Noda Village, which is located in northern Japan and has a population of 4500, is characterized by close interpersonal ties, a traditional patriarchal system, and an ethic of mutual assistance. During times of economic prosperity, many male villagers moved to the Tokyo metropolitan area to work as carpenters due to the lack of jobs in the village. When a 37-m-high tsunami hit this village, 37 people were killed and almost 30% of the houses were damaged. The tsunami caused not only material damage and life-threatening situations, but also changed the sociocultural character of the community. For instance, people were initially reluctant to accept support from outsiders, such as volunteers, and talking about the tsunami experience has become almost taboo among villagers. We explore the processes by which sociocultural changes occurred and discuss the goals of post-earthquake community reconstruction in the context of data from small village.

Lay Responses to Radiation Contamination of Food

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster of 3/11, the Japanese public has experienced an increasing diminishment of trust in the government’s ability to ensure the safety of the food supply. Consumers are not convinced that “the experts” (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find “individualistic approaches” to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared bonds of sympathy and empathy. This paper is going to argue that these phenomena – in which individuals seek and create “societal approaches” to deal with the contradictions created by the emergence of this new set of risks and the perceived failure of experts to fulfill their roles and ensure safety – is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.

Effects of the Natural Disaster Recovery Process on Multicultural Community Development

This presentation discusses the impact of natural disasters on foreign nationals in Japan and the process of recovery that they undergo. The data were collected through interviews. The Great Hanshin-Awaji earthquake of 1995 had a major impact on both newcomers as well as early immigrants in our society. Most of the affected people were family units who shared the same heritage, and aids were accordingly designed to support these families. In the area affected by the Great East Japan Earthquake, foreign brides of Asian origin in Japanese families posed a major problem. Although they belonged to a different culture, they expected to be treated like their Japanese counterparts as they believed they played an important role in passing down traditional Japanese family culture just as a Japanese family member would. However, circumstances have changed their lives after the disaster; they have started using their mother tongue, and find many ways of giving expression to their culture. The experience of the disaster and the recovery process has created a bond among these foreign brides – many of them have taken vocational training, enrolled in Japanese language programs, and become caregivers, and some of them have been employed as professionals in various organizations. Such empowerment programs have enhanced their self-esteem, which has changed their family lives and the local community. Participating in various social activities is crucial to being equal members in a society.

International Comparison of Protest Norms Between Japan, South Korea and Germany

In recent years, many protests draw many people’s attention all over the world. However, protests in Japan are not yet as active as in other countries. Why don’t Japanese people participate in protest? They have complaints about society and politics, and they also have opportunities to participate. In the previous survey in Japan, we found people who shy away from politics consider that social movements and arbitrary claims which bring about disruption in social order, although majority of people consider that social movements are legitimate political rights. In addition, the fear of social order disruption has a bad influence on permission to participate in protests.

Based on these findings, the important factors that affect Japanese non-participation are norms to participate in protests. Although people think a protest is legitimate, they also think a disruptive activity should not be done. Then, protest participation is affected by which norms people consider important.

However, are these arguments applicable to other countries? Do people in other countries have similar views toward social movement? Therefore, in this study, we try to grasp the norms to participate in protest by the international comparison survey: Japan, South Korea, and Germany.

Using this survey data, we examine similarities and dissimilarities of protest norms between three countries. Furthermore, we explore questions as follows. First, which factors affect such norm emerging in each country? Political regime, civil society structure, political culture, and so on. Second, do protest norms effect on real protest participations?

It is indicated that these countries have different characteristics about civil society: active advocacy in South Korea and calm advocacy in Japan. By comparing these two countries, we can expect to grasp norm emerging clearly. Furthermore, we can grasp a feature of the Asian protest norms by comparing norms in these Asian countries to norms in Germany.

Impact of Social Change and Restructuring of Urban Underclass Areas on Homeless People: The Case of Yokohama, Japan

This study aims to explain the impact of social change and restructuring of urban underclass areas on homeless people by examining a case in Yokohama, Japan.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The labor demand for day-laborers decreased since the early 1990s. As a result, the number of homeless in major Japanese cities increased. After the establishment of a new law to help homeless people become financially independent in 2002, many people who were homeless or considered unable to work because of age or disability received welfare and took up residence in urban underclass areas.

Kotobuki, Yokohama's urban underclass area, currently houses the highest rate of welfare recipients—approximately 80%—of underclass areas in Japan. The number of welfare recipients in the area has especially increased this decade. As a result, the area has become the center of the socially vulnerable.

In light of this social change, the local government, the social welfare council, and nursing care business offices developed a community welfare system in 2011. This system mostly focuses on officially recognized residents, not on those who are homeless. In 2006, Yokohama City reduced its special temporary welfare support for homeless and then cut it entirely in 2012. This created greater difficulties for the homeless in the neighborhood, creating a highly concentrated district of welfare recipients.

So far, urban underclass areas are important for the homeless with regard to providing access to social resources—for example through forging relations with supportive groups and getting free meals. As urban underclass areas have gradually changed into places of concentrated welfare recipients, those who do not receive welfare support and are homeless now face even greater pressure.

Displacement and Politics of 'Transitory Space' for Resilience: A Case of the Great East Japan Earthquake

Forced displacement induced by disaster makes various types of "transitory spaces" in the process of reconstruction. The aim of this presentation is to discuss about functions and politics of "transitory spaces" for disaster assistance in the age of population-shrinking/aging society based on a case study of the Great East Japan Earthquake and Tsunami in Iwate Sanriku coast. The first point is to rethink about "temporary housing" system established in the 20th century. In the history of disaster in Japan conventional relief act defines "sufferers" by the standard whether they lost their own "houses" or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and community still remains and more and more households are living alone, "house" do not necessarily mean residents do not have "social vulnerability". Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi- scales resources and make mobilizable and continuous response on condition of sufferers according to the case. This second point. This presentation will focus on a temporary "base point" of assistance which was constructed by individual affiliate labor union in Tono area, one of the inland cities in Iwate prefecture. On the background of urban precarity and de-centralization of the "provincial city" this "base point" emerged as a nodal space for re-organizing collective infrastructure of life. Considering such politics of "transitory spaces" will offer a valuable hint to invent future system of social resilience.

Party Membership during Partisan Realignment and Realignment Phases in Post-War Japan

This paper investigates whether an abrupt and drastic realignment trend (i.e., a revitalisation of political support) in Japan since 2000 has changed patterns of political membership, even though Japan had a quite similar political realignment compared with other advanced industrial democracies in the West until 2000.

Political scientists have pointed out that party membership has constantly declined in contemporary Western democracies. This substantial downward trend has been caused by the widespread political detachment from conventional party politics throughout the post-war period. In Japan, scholars have rarely examined the association between realignment and political membership, although a long-term realignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the realignment trend inverted into realignment since 2000.

The data analyses using Japanese data in the World Values Survey indicated that party membership witnessed an increase of inactive members from 1981 to 1995 and the percentage of these had remained through 1995 to 2005, while the ratio of active members remained stable from 1981 to 2005. In addition, logistic regression models suggested that political interest was a significant predictor throughout 1981 to 2005, however, its explanatory power had been weakening throughout the periods. Even though Japan entered into a realignment phase since 2000, the growth of partisanship has not led to an increase of party membership. It has a great theoretical potential for contributing both the Western and Asian political membership studies. This is because it has not only a Confucian-style political culture, which is based on strong social ties in a local community, but also political norms highly valued in advanced industrial democracies, such as citizenship, independent individuals, and basic human rights.

A Half-Open Door to Africa: Chinese and Japanese Migrants in the Twentieth Century South Africa

Over recent years, the increased presence of China and residents of Chinese descent in African countries, growing attention has been paid to experiences of Asian migrants in interdisciplinary studies of South Africa. What has been revealed by exploring their histories is that, despite their small numbers, the existence of Chinese and Japanese migrants had a considerable impact on 'white' South Africa racial policies. By focusing on those who migrated from East Asia at the beginning of the twentieth century, this paper seeks to examine how they confronted the technologies of exclusion that South Africa introduced in order to maintain the colour bar of the country.

While several countries and colonies had restricted Asian migration associated with the Yellow Peril panic and a threat to the 'white' labour at that time, the British government encouraged Chinese labours just after the Second South Africa War to compensate for the absence of labour in gold mines. Lake and Raynolds (2008) emphasizes that introduction of the Chinese strengthened 'white' labour unions and encouraged legislations which restricted skilled work to white men. As for the Japanese, they were listed as prohibited migrants under the 1913 Immigrant Regulation Act, and were later removed from the list because the Union government needed to allow Japanese business persons into the country in order to expand the wool exportation. This can be considered as a precedent for the 'eminent visitors' status under apartheid, or the privileged status granted to non-white inhabitants staying in the country for business or diplomatic purposes.

The paper aims to contribute to wider discussions on South Africa's history of non-white inhabitants staying in the country for business or diplomatic purposes. In light of this social change, the local government, the social welfare council, which is based on strong social ties in a local community, tried to think about "temporary housing" system established in the 20th century. In the history of disaster in Japan, conventional relief act defines "sufferers" by the standard whether they lost their own "houses" or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and community still remains and more and more households are living alone, "house" do not necessarily mean residents do not have "social vulnerability". Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi-scales resources and make mobilizable and continuous response on condition of sufferers according to the case. Medicalizing the Male Obesity through Metabolic Syndrome - Some Social Aspects of the Japanese National Chronic Disease Prevention Program

The Japanese mandatory National Chronic Disease Prevention Program started in 2008. Although some experts in public health and medicine have questioned the efficacy and feasibility of the program, it cannot be denied that it spread the term “metabolic syndrome” among the public and contributed much to the medicalization of obesity in Japan.

We interviewed scientists, experts, doctors and public health nurses about the intention of the program and the difficulties in its implementation. Currently we found the following points. 1) In spite of the fact that the program designates the whole population aged 40 to 74 as its target, the real target of the program is middle-aged men, especially working for small companies or self-employed. In that sense the medicalization of obesity is gender-biased. 2) The program used the newly developed diagnostic concept, “metabolic syndrome,” as its key concept to prevent cardiovascular diseases and type 2 diabetes. The concept played the central role in medicalizing obesity in Japan, where men’s obesity has always been the focus of health professionals. 3) The program faced with serious difficulties and resistance in its implementation. Some of the difficulties are viewed as originating from reasons that concern the meanings of one’s health and its care. 4) There is also a marked contrast in the understanding of the program between public health nurses and general practitioners. Whether the reason for this lies in the professional interests of the two or in the gender biased concept of health for the two is not yet clear.

We like to place all of these issues in the context of medicalization of men’s health in the post-industrial society where several traditional masculinity-related behaviors are viewed as problems and medicalized.

The Uneven Structure of Home Care Service Provision Between For-Profit and Non-Profit Organizations in a Quasi-Market System

The Japanese Long Term Care Insurance (LTCi) was implemented in 2000, aiming the promotion of user’s choice and the competition among different kinds of providers (i.e. such as for-profit, non-profit). It was expected that a quasi-market system would facilitate the effective competition among providers and improve the quality of care, though the price of each service was regulated as “legal price” by the government. However, it is not clear that such competitions can be realized, because different providers have different motivations in providing care services. Especially, non-profit organizations (NPOs) have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers’ motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs.

The findings are as follows: First, among the services of the LTCi, NPOs tend to undertake lower-priced domestic work, while for-profit providers take higher-priced domestic work. Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCi rubric, even though the income from the additional services is smaller than the services under the LTCi. Third, the altruistic motivation makes NPOs’ workers content with long working hours of additional services.

NPOs have tendency to deliver their services in spite of small profit, as long as users need them. This allows for-profit providers to choose the services with larger profit, that is, cream-skimming. The different motivations of providers create the uneven and uncompetitive structure of the elderly care system in Japan.

Cross-National Survey on Well-Being and Social Relations

Well-being is an important issue in recent social survey research and many surveys focus on subjective well-being, happiness, and quality of life with some measures or scales on certain items in questionnaires. The measurement, however, is not free from differences on gender, culture, and other social conditions. As for social values and general response tendencies to questionnaire surveys, we have repeatedly reported regional variations in our longitudinal and cross-national surveys over half a century by the Institute of Statistical Mathematics (Yoshino, Nikaido & Fujita, 2009) (http://www.ism.ac.jp/~yoshino/index.htm and http://www.ism.ac.jp/ism_info_j/kokumineni.html), under the paradigm of Cultural Linkage Analysis (Yoshino & Hayashi, 2002) and Cultural Manifest Analysis (Yoshino, Nikaido, Fujita, 2009).

The present study examined the relationships between well-being and social factors using our cross-national surveys, “a study of statistical science on health and culture: cross-cultural study on dynamics of social disparity and life”, carried out during 2002-2010 in four western countries (USA, Germany, France, UK) and three East Asia countries/region (Japan, South Korea, Taiwan). The survey was carried out on the target population of adult residents in each country/region, with the sample size of some 1000. Random Digit Dialing (RDD) telephone survey using CATI system was conducted in in the four western countries and Japan whereas a face-to-face interviewing was conducted in the South Korea and Taiwan. By multivariate analyses, we show how social and cultural factors are related with several indices on well-being as well as the similarity and dissimilarity of these Western and East Asian countries. We discuss the characteristics and limitations by considering methodological issues.

3.11 Crisis and Okinawa’s Demilitarization Movements

Okinawa has a long history of resistance against the U.S. imperialism and Japan’s power over its islands and have been engaging in various forms of resistance to protect their ancestral lands, dignity and human rights. This paper looks at the demilitarization movement in Okinawa and examines the impact of Japan’s post 3.11 crisis have brought to the movements and how Okinawans have responded to it. One of the common frameworks used to describe a connection between Okinawa and 3.11 survivors is that they both are “sacrificed” for the larger “national agenda.” Some of the anti-nuclear protestors and Japanese settlers in Okinawa suggest that it is a coalition opportunity between people of Okinawa and the survivors. However, some Okinawan activists criticize such framework because it overlooks complicated power struggles between Okinawa and the national government. Another common misconception is that Okinawa is a safer place to be. Various types of Japanese organizations have planned getaway programs for the survivors of 3.11 in Okinawa. Okinawa is marketed to be a “safer place” since it is the farthest location from the “affected region” in Japan. These programs upset some activists for its false and disrespectful claims. Due to the largely concentrated and long lasting U.S. military presence, Okinawa’s land and water has been contaminated by many toxic chemicals such as PCB, dioxin, depleted uranium and so on that on the military had stored. Lastly, some of the post 3.11 Japanese settlers in Okinawa declare themselves “refugees” and participate in the demilitarization activism threaten the ownership of the movement and attempt to shift the focus of the movement to fulfill their agenda.

Social Perceptions and Environmental Communication on the ‘Benefits’ and ‘Risks’ of Tidal Flat Restorations

This paper looks at how the ‘risks’ and ‘benefits’ of tidal flat restoration projects are communicated, perceived and negotiated by different stakeholders in case studies from Japan, the UK, Netherlands and Malaysia.

Various tidal flat restoration projects have been conducted in Japan and elsewhere in recent years in an attempt to revitalise fish stocks or preparing sea level rise. Coastal wetland restoration projects, such as coastal realignments or re-flooding farmland, still represent a new concept. Due to the need for long-term social support and investment in such schemes, it will become increasingly important to take into account the various perceptions that exist in the community from now on. Yet, at the moment it is often not clear 1) what kinds of environmental benefits can be expected from coastal wetland restoration projects, 2) whether the benefits can be shared fairly by project contractors and other stakeholders in the community, 2) in what way various stakeholders perceive the ‘benefits’ and ‘risks’ of their local restoration projects; 3) what the commonalities and differences among these discourses are, within and across different case studies, and 4) how the findings could make a contribution to future decision making and support for coastal wetland restorations in Japan and beyond.

This paper explores the above four points to examine the improvement conditions of participatory sustainability initiatives. This paper is based on data collected during a three-year government-funded research project (2011-2013) from stakeholder interviews and through document analysis of the environmental information provided to citizens and decision makers via various media.
Double Responsibilities of Care: Emerging New Social Risks of Women Providing Both Elderly Care and Childcare in Japan

This paper is based on a both international and comparative research project exploring how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relatioships in East Asia. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their frail elderly relatives and young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions as facing with acute demographic and social changes. Through the comparative analysis of data from questionnaire surveys and semi-structured interviews, this paper investigate the new structure of social risk involved in the double responsibilities of care, work and generational relations with a specific focus on Japan. We will discuss both theoretical and practical implications of our research on double responsibilities of care, to wider social theory, care policy and practice.

Women Providing Both Elderly Care and Childcare in Japan

Women's work-family experience differs across countries. This study analyzes how different employment systems (including firms' employment customs and public policies) lead to different work-family experiences for Japanese and Taiwanese women. The post-war employment system in Japan segreates workers according to gender and marital status assuming that women quit employment at marriage, and this system is more prevalent in large-scale firms for clerical workers. Under this system, women employed in large firms or clerical occupations are more likely than others to retire at the time of marriage or childbirth in Japan. In Taiwan, the segregation is more on the basis of human capital of gender and marital status, and therefore women with lower human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competitions and low birth rates in a backdrop, Japanese employment system has qualitatively changed: non-standard employment has expanded while measures for balancing work and family for standard employees have developed. Taiwanese women may be intensifyed under economic competitions but not qualitatively transformed.

Performing Cool Japan and Uncool Hybridity: Analysing 'luogo' (Lou Language)

‘Metrolingualism’ refers to young people’s use of new hybrid language or foreign languages/dialects, in popular culture or everyday interactions (Otsuji and Pennycook 2010). They are creative moves which challenge and loosen cultural, historical, and political boundaries, in-sync with the late-modern and globalised social reality that we apparently live in today.

As of Japan, Maher (2002) provocatively stated: ‘Cultural essentialism and ethno-orthodoxy are out. In Japan, metroness is in. Cool rules’. True, young people in Japan today are far more ‘open’ towards foreign cultures and languages: dimsum and Thai curry follow for dinner, followed by drinks at a British pub with the NBA games on TV screen. But are they really feeling ever so border-free in terms of language? And do many discursively engage in such border-loosening behaviours? If not, why not?

Luogo (‘Lou language’) is a performative and comic idiolect of a TV personality, Lou Oshiba. Luogo is a deliberate mixture of English words into Japanese phonology and syntax. In his communication styles and stunts, he also reenacts the stereotypical culture shock between ‘Western’ and traditional Japanese non-verbal communication styles.

Using discourse analysis, I discuss how the intricate mixing of the two linguistic/cultural codes is interpreted as uncool, illegitimate, unpatriotic, undesirable, idiotic, corny, foolish, and fantastic, rather than cool, creative, liberating, desirable, ubiquitous, skillful, and down-to-earth.

Despite the popularity of such cunning comedy, the boundaries between languages and ethnicity do not look as if they are loosening and liberating. Rather, the comic act securely positioned the hybridity in the marginal discursive space. In turn, even the seemingly liberal, multi-layered and sometimes fun nature of hybridity is supporting the hegemony and the distinction between the socioeconomically powerful and the rest.

Gender Difference in Older Parents’ Coresidence with Their Adult Children: A Comparison Between Japan and Taiwan

Women’s work-family experience differs across countries. In East Asian societies, being influenced by Confucian values, the inter-generational coresidence (i.e. older parents live with, are provided, and cared for by their adult children) has been thought to be desirable. Recently, however, the coresidence rates are decreasing even in East Asia. Moreover, there are differences in the manners of the coresidence between societies there. The coresidence rates are relatively low in Japan but high in Taiwan. Gender distributions of living arrangements also differ between the two societies: older mothers are more likely than older fathers to live alone in Japan while there is no large gender difference in Taiwan. In contrast in Taiwan, the situation that women with higher human capital are more likely to continue employment has not changed in this period.

Women providing both elderly care and childcare according to gender and marital status assuming that women quit employment at marriage, this system is more prevalent in large-scale firms for clerical workers. Under this system, women employed in large firms or clerical occupations are more likely than others to retire at the time of marriage or childbirth in Japan. In Taiwan, the segregation is more on the basis of human capital of gender and marital status, and therefore women with lower human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competitions and low birth rates in a backdrop, Japanese employment system has qualitatively changed: non-standard employment has expanded while measures for balancing work and family for standard employees have developed. Taiwanese women may be intensifyed under economic competitions but not qualitatively transformed.

Under this system, women employed in large firms or clerical occupations are more likely than others to retire at the time of marriage or childbirth in Japan. In Taiwan, the segregation is more on the basis of human capital of gender and marital status, and therefore women with lower human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competitions and low birth rates in a backdrop, Japanese employment system has qualitatively changed: non-standard employment has expanded while measures for balancing work and family for standard employees have developed. Taiwanese women may be intensifyed under economic competitions but not qualitatively transformed.

Performing Cool Japan and Uncool Hybridity: Analysing ‘luogo’ (Lou Language)

‘Metrolingualism’ refers to young people’s use of new hybrid language or foreign languages/dialects, in popular culture or everyday interactions (Otsuji and Pennycook 2010). They are creative moves which challenge and loosen cultural, historical, and political boundaries, in-sync with the late-modern and globalised social reality that we apparently live in today.

As of Japan, Maher (2002) provocatively stated: ‘Cultural essentialism and ethno-orthodoxy are out. In Japan, metroness is in. Cool rules’. True, young people in Japan today are far more ‘open’ towards foreign cultures and languages: dimsum and Thai curry follow for dinner, followed by drinks at a British pub with the NBA games on TV screen. But are they really feeling ever so border-free in terms of language? And do many discursively engage in such border-loosening behaviours? If not, why not?

Luogo (‘Lou language’) is a performative and comic idiolect of a TV personality, Lou Oshiba. Luogo is a deliberate mixture of English words into Japanese phonology and syntax. In his communication styles and stunts, he also reenacts the stereotypical culture shock between ‘Western’ and traditional Japanese non-verbal communication styles.

Using discourse analysis, I discuss how the intricate mixing of the two linguistic/cultural codes is interpreted as uncool, illegitimate, unpatriotic, undesirable, idiotic, corny, foolish, and fantastic, rather than cool, creative, liberating, desirable, ubiquitous, skillful, and down-to-earth.

Despite the popularity of such cunning comedy, the boundaries between languages and ethnicity do not look as if they are loosening and liberating. Rather, the comic act securely positioned the hybridity in the marginal discursive space. In turn, even the seemingly liberal, multi-layered and sometimes fun nature of hybridity is supporting the hegemony and the distinction between the socioeconomically powerful and the rest.
Japanese Jewelry Market

Though jewelry market size in Japan in 1991 was three trillion yen (around thirty billion USD at current rate), its size is less than one trillion yen (around less than ten billion USD at current rate) in 2013. Jewelry market size in Japan grew up with bubble economy in Japan. After collapse of bubble economy in 1991, the market size continues to shrink up to the present day. Japan had not had western style of jewelry market because Japanese wore “kimono” and western style of jewelry does not fit with kimono, Japanese does not wear western style of jewelry. After restoration of Imperial power in 1868, western style of clothes was getting popular in Japan and western style of jewelries started to be manufactured and sold in Japan. Along with western style of clothes population, western style of jewelry market continued growth. It means western style of jewelry market in Japan has only one hundred and fifty years’ history. In addition to that, generally, the value of jewelry is difficult to judge for consumers. This is true not only for Japanese but also western people. In the process of new market of western style of jewelry growing, I will investigate how the knowledge of western style of jewelry was implemented and diffused or Not implemented and diffused to Japanese. I also will analyze how western style of jewelry market was formed in Japan during these one hundred and several decades and how the relationship among seller, purchaser and institution was transformed and affected each other from view of institution of jewelry and its contribution. As researches on jewelry from sociology points of view is very rare in Japan, I would like to make contribution by stating historical background of Japanese jewelry market and relationship of players and institutions.

Reconstructing Biopower: From an Analysis of Television Programs about Conducting Surrogacy

How does performance affect the human body in terms of biopower? This research analyzes a process where discourse about reproductive technology leads to its implementation to change actual bodies. From an examination of television programs in Japan, I show how culture impacts the materialistic sphere, which is mediated by performance regarding “America,” an icon of modernization for the Japanese.

The Japanese national public broad casting organization, NHK (Nippon Hoso Kyokai), has aired programs about reproductive technology since the emergence of In Vitro Fertilization. At the beginning of introducing the technology as a realization of scientific progressivism, but regarded the ethical aspects as unrealistic. In the discourse, the image of Europe was that of an agent of intelligence; on the other hand, the image of the U.S. is that of savagery.

However, after a Japanese celebrity couple conducted surrogacy in the U.S., “America” became a normative model for the Japanese; there was a contrast between the undeveloped Japanese and the developed American in terms of modernization. The television programs implied surrogacy stands for emancipation from the traditional Japanese convention to oppress women to construct a modern family. Moreover, they constructed a solemn image of the children taken from the U.S. by utilizing imaginary which evolves memories of the imperial coronations.

These images raised a positive public opinion toward surrogacy; which led the government to rush to legalize it. However, after foreign mass media revealed that a Japanese male had conducted surrogacy in India with a purchased egg (known as Manji’s case), NHK stopped discussing surrogacy and the Japanese government postponed the legalization of surrogacy. The Manji’s case showed the Japanese had already gone beyond the savage and modernized “America.” Therefore the Japanese lost their frame of reference.

The above examination indicates the decision to apply reproductive technology depends on culture.

Cultural Consumption, Class Mismatch, and Gender As a Determinant Factor

Studies of cultural consumption have a distinctive academic tradition after Bourdieu’s book “Distinction”(1984) where each class has their own cultural tastes and high class people are considered as high culture, even women with low education or class background, implying the distinctive meaning of women favoring high culture compared to men. A discussion of several reasons for these results will be followed focusing on the particular meaning to women’s identity and status. We will conclude with the suggestions for future research to address more issues related to the interactions between social factors such as race, gender, and class, along with analyzing the latent meaning of preferring certain culture for each social group.

The Metaphor of home/Family in Introduction of the Nordic Model in Taiwan

Welfare studies find specific characteristics in East Asian countries, such as development of welfare system is considered as introduced from top and the focus of the family in East Asian societies is linked with Confucianism. Different from former studies, this paper focuses on the reform of child care policies in Taiwan, which was initiated by women’s organizations and several feminist scholars. Moreover, feminist discourses in introducing the Nordic model in Taiwan highlight the family, which is not as conservative as it was considered in ‘Confucian Welfare States’.

Departure from feminist welfare studies, this paper aims to examine the active role women play in transformation of social welfare policies. The research methods consist of discourse analysis of “State-Market-Civil Society” triangle model in Taiwan and interviews from key figures in child care policies reform.

I find feminist discourse stresses on de-familialization while using the metaphor of home/family that regards the state as ‘the People’s Home’ and the local community as ‘the big communal family’. I will argue that Confucianism can be strategically used by state feminists who employ a legitimated cultural tradition in order to make the ‘importation/emulation of the Nordic model in an East Asian country possible. Secondly, I will examine how such a discourse highlighting the provision of child care by a strong collaboration between civil society and the state is in a social context with high communication of child care in Taiwan. This will make the triangle model of ‘state-market-civil society’ complicated and help us to rethink the relation between civil society/family and the state. I will relate my analysis to further debates on Confucianism in welfare studies specifically and discussions of civil society and family in social theories generally.

Taiwan’s Higher Educational Reform in a Global Context: The Paradigmatic Shift from Modern to Postmodern

Through theoretical approach, this paper attempts analyzing Taiwan’s higher education reform since 1990 under the influence of globalization. Firstly, this paper lays bare the definitions and critiques of globalization while dealing with the related issues. Then, it describes the transformation of the conceptual development from the modern humanistic idea of higher education to the postmodern non-centre idea of higher education in a global context. Next, it mentioned issues and problems of Taiwan’s higher educational reform since 1990 presented a fundamental paradigmatic shift from modern to postmodern in a global context. Finally, it provides some suggestions about higher educational reform for Taiwan in a global context.

A Study on Female Industrial Structure and Gender Segregation of China

[ABSTRACT] In the first decade of the 21st century, China achieved stable and rapid economic development, and made new progress in industrial restructuring: the modern service industry and emerging strategic industries have provided more employment opportunities for laborers including women. To analyze the female industrial structure and gender segregation in industrial structure, data retrieved from the Third Wave Survey on The Social Status of Women in China in 2010. It was found that if viewed from the perspective of gender structures in different industries, females are mostly concentrated in sectors with lower levels

of income and social security, where gender segregation and gender parity coex- ist. Compared with 10 years ago, the proportion of employed women in farming, forestry, animal husbandry, fishery and water conservation shows a substantial decline, while the increased ratio in wholesales and retail, and in public administration and social organizations are the two highest. The proportion of women in industries with higher degrees of monopoly is low, and the declining tendency reflects the intensified gender discrimination and gender differentiation in monopoly industries; the proportion of females in the modern service industry as well as the degree of gender parity in the industry have been increasing, making it possible for more and more women to obtain higher incomes.

From Green Energy Governance to Green Economy: A Case Study of a County in Southern Taiwan, 2009-2013

After a lot of negotiations, conducted by Ping-Tung Government in Southern Taiwan, among solar PV companies, Tai-power Company, Central Government and local farmers, 25MW solar farms were installed on the damaged lands of orchards and fish farms in Lin-Bian and Jia-Dong, two towns in central Ping-Tung, in which the government carried on post-disaster reconstruction in the wake of Typhoon Morakot on 8th August 2009. Meanwhile, under these highly ground-mounted solar panels, there were organic vegetable farming and ecological fish farming set up. Inspired by the example of agricultural/solar farms in Lin-Bian and Jia-Dong, companies of various green energies came to Ping-Tung in search of different technical experiments. Since April 2013, a hydrogen fuel cell company has allied itself with local B&Bs, gas stations and convenience stores, offering hydrogen-powered scooters to promote a "low-carbon tour." Now, this company is preparing to get fuel cell scooters into mass production. Meanwhile, small-scale wind turbines are planned to be installed in central Ping-Tung, together with the existent solar farms and hydrogen fuel cell systems, to conduct a 'smart grid' experiment, which has been listed in the 'Smarter Cities Challenge, 2013' by IBM Company. Also, in northern Ping-Tung, there is another ‘smart grid’ plan to connect solar farms, wind farms, bio-gas plants from pig farms, and micro hydropower systems.

The author of this paper has investigated and analyzed the performance of green energy in Ping-Tung by means of participative-observations and in-depth interviews. More specifically, adopting the concepts of green energy governance, social innovation, green economy and STS, the author describes and explains the socio-technical mechanisms and meanings of green energy in Ping-Tung, with a focus on a variety of human and non-human actors such as the green-energy team in Ping-Tung Government, green-energy companies, local entrepreneurs, NGOs, and local communities.

Gambling Behavior As a Masculinity and Violence Using Japanese General Social Survey 2000 and 2001

As gambling population is expanding, many studies have started to clarify the relationship between gambling behavior and masculinity. It is claimed that gambling behavior is closely related to violence, since gambling is thought to be a type of masculine behavior. However, few empirical studies have examined the relationships among gambling behavior, masculine attitudes and violence. In Japan, gambling industry such as casino is now planned to introduce by government. People might be anxious about the possibility of violent incidents. Examining whether gambling causes violence through masculine orientation is a very important research topic.

The JGSS-2000/2001 integrated data are very suitable for us to explore such a research question, since the data include the following variables:

Firstly, gender, age, marital status, occupation and educational background are used as demographical variables. Secondly, a degree of reaction (Spots-kind) to physical punishment by parent and teachers is used as a variable for masculinity. This variable particularly explains that as part of masculine culture, physical punishment influences children's and students' gambling ability and justifies their misdeeds. Lastly a series of frequencies (4points-scale) on different gambles (pachinko, horse-racing, lottery, soccer-toto, numbers or mini-lotto) are chosen as variables to the quantitative analysis.

Consequently, this empirical analysis could examine whether the relationship between gambling and masculine behavior as a form of force exist or not. If not, Japanese gambling would not generate friction in Japanese social life.
because this is the only way they can get authorized eligibility as first or second class national sportsmanship. Others argue that since its functions of attacking and defending have been in degradation as modern weapons developed, Chinese traditional martial arts still can attract many people of different countries, ages, and backgrounds, not because of its athletic features, but because it contribute immensely to one's physical fitness and self-moral cultivation, and the cultivation of both physical and moral health is the power source of its sustainable development in the context of sport globalization.

The author think that as to the development of Chinese traditional martial arts, a regular authorized eligibility certification system as the athletic sport has will standardize its technical requirements, and focus on the physical and moral health promotion will keep its diversified national features in its globalization in the world.

Asian Migration to the United States and within Asia in Comparative Perspective

More than one million Asians had migrated to America before 1965. Since 1965, Asia has been a major source of migration to the USA and more than 10 million Asians have arrived on U.S. soil. Most recently, Asia has surpassed Latin America as the largest source of immigration to the USA. Up to the mid-19th century, Asians mainly migrated to other Asian countries, and in contemporary time Asians have begun to migrate within Asian countries. Within the trends in Asian migration to the USA and within Asia? How do sending countries of Asian migration to the USA and within Asia resemble and differ? Do the same or different types of Asians migrate to the USA and within Asia? What are the similarities and differences in causes of migration to the USA and within Asia? Are there similarities and differences in Asian immigrant transnationalism between the USA and Asian countries? How are Asian migrants to the USA and within Asia similar and different in patterns of adaptation to host societies? How do the impacts on host societies of Asian migration to the USA and within Asia resemble and differ? What is likely to happen to Asian migration to the USA and within Asia in the near future? Using a variety of data from the USA and international organizations and focusing on the post-1965 period, this paper seeks to answer these questions through comparison and to address the implications of the findings.

Mechanisms of Trust Formation Under Different Conditions of Political Identity

Individual political behavior is a manifestation of social behavior, and individual voting behavior indicated his/her political choices and political identity. After democratization in Taiwan, presidential elections show bipartisan polarization and reinforce general distrust of social phenomena. Therefore, this study intends to explore how people format their trust behavior when they interact with others of the same or different political identity groups. In stage 1, the computer randomly assigns trustees and trustees and does not show political identity of 2012 presidential candidates (Ma Ying-jeou and Tsai Ing-wen). In stage 2, the computer displays political identity logo by random arrangement. In stage 3, the subjects can choose their preferred objects of the same or different political identity logo by themselves. There are three mechanisms of trust behavior formation under different identity condition. (1) Win-win mechanism: Win-win strategy is that both trustee and trustees attempt to maximize their provendence and return through exchanging with the targets of the same or different political identity groups from the beginning round. (2) Identity mechanism: Under the condition of political identity choice by subjects, identity effect becomes strongly significant at the beginning of the first round on the third stage of the experiment, especially for that of Ma-Ma identity group. (3) Mutuality mechanism: Mutuality effect is very significant in all three stages of trust experiment, especially in the second and third round of stages. When people exchange with the same political identity groups, it will produce the phenomenon of polarization. When the trustee return high proportion profits to the trustor in the first round, the trustee will feedback more in the second round. However, if the trustee return low proportion profits to the trustor, the trustor will feedback less and less, even lower than exchanging with different political identity groups.

Soemma Undong and Beyond: Upgrading the Opportunities and Capabilities of Women in 1970s South Korea and Kenya Today

Capabilities and empowerment are no longer new concepts: they are well understand and widely seen as necessities for individual as well as community development. Practices in today's developing world, however, are not always successful. Nor have the successful practices of the past been much elaborated so as to provide practical lessons for today. This study attempts to fill this gap with the case of Soemma Undong, a New Village Movement in South Korea in the 1970s, in combination with discussions of its applicability to Kenya, one of today's developing countries. Soemma Undong has recently become an inspiring development model for many developing countries. It is known for its strong and committed leadership both at central and local levels, as well as the high rate of local participation. The rise of women as equally capable agents of change as men has been noted as one of its distinctive features. Indeed, Soemma Undong is understood as a remarkable turning point for women in rural areas, which made them visible and active in formal activities beyond their own family and household. This newly explored social form is known to have effectively served rural and national development during the high growth periods of Korea.

The objectives and the structure of this paper are as follows. First, it explains the mechanism and processes of Soemma Undong, which made women's involvement, or empowerment, possible within a society that had a strong Confucian character at that time. Second, it elaborates the strengths and weaknesses of the Movement in terms of women's capabilities and empowerment. Finally, the paper discusses the applicability of the findings to today's developing world. Our selected case country is Kenya, but discussing the applicability of the case is expected to provide practical lessons the developing world in general.

A Tale of Two Suburbs: Earthquake Recovery and Civil Society in Christchurch, New Zealand

This study followed two similarly affected, but socio-economically disparate suburbs as residents recovered from the devastating 6.3 magnitude earthquake that struck Christchurch, New Zealand, on February 22, 2011. More specifically, it focuses on the role of local churches, community-based organisations (CBOs) and non-governmental organizations (NGOs), here referred to broadly as civil society, in meeting the immediate needs of local residents and assisting with the longer-term recovery of each neighbourhood. Analysis of sixteen qualitative interviews with residents as well as key informants from local civil society in each suburb found that despite considerable socioeconomic differences, civil society in both suburbs has been vital in addressing the needs of locals in the short and long term following the earthquake. Institutions were able to utilise local knowledge of residents and damage in the area to a) provide a swifter local response than government or civil defence and then help direct the relief these agencies provided locally; b) set up central points for distribution of supplies and information where locals would naturally gather; c) take action on what were perceived to be unmet needs; and d) act as a way of bridging locals to a variety of valuable resources. However, the findings also support literature which indicates that other factors are also important in understanding neighbourhood recovery and the role of civil society, including: local leadership, a shared, place-based identity, the type and focus of civil society, social capital, and neighbourhood- and household-level indicators of relative vulnerability and inequality. The intertwining of these various factors has influenced how these neighbourhoods have coped with and taken steps in recovering from this disaster. It is suggested that a model that takes a multi-factorial approach in understanding community vulnerability and capacity within the Christchurch context be designed to more effectively explore further research in this area.

Culture As “Agon”: Agonological Features of Weberian Sociology

Culture as Agon: Agonal Features of Weberian Sociology

Max Weber treated the Greek concept of “agon” with great interest, in the final parts of his treatise of the “City”. However, if we focus on his interest on “agones” in general, the social fields of competition and social selection, we should rather say that this interest can be considered as his premier Leitmotiv, which permeates his comparative study of cultures.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper explores the advantages and the limits of this methodology on the cultural comparison of ognes (that will be coined “agonology”). Starting from Weber’s concrete historical depiction of Asian competitions (especially, in his “Hinduism and Buddhism”), this paper moves in to the theoretical concerns. It argues that, it is much fruitful to point out the agonological features of Weberian methodology than just to stick the “cultural determinism”, “idealism”, “methodological individualism”, or “conflict theory”. Finally, briefly contrasting this Weberian agonological features with modern sociological theories of competition, such as Bourdieu's theory of symbolic violence, etc., we will like to outline the future possibilities of this comparative agonological perspective.

International Political Support For Endangered Languages (The Uralic Languages of Russia as an example)

International political support for endangered languages (the Uralic languages of Russia as an example)[1]

According to the UNESCO Atlas of the World’s Languages in danger there are 131 such languages in Russia; 20 vulnerable ones, 49 definitely endangered, 29 severely endangered, 22 critically endangered and 15 extinct languages. Uralic languages are among them. Along with traditional measures the World Congress of Finno-Ugrian peoples (the institutional form of the Finno-Ugrian language community) are forms to attract attention to the situation of these languages.

The beginnings of construction of the Finno-Ugrian community were laid in the eighteenth century by a white Russian, Gabriel Porthan, professor of rhetoric who popularized the idea of Finno-Ugrian brotherhood in Finland and urged Finnish scholars to investigate the kindred Finno-Ugrian languages. Spheres of cooperation expanded in the 19th century. This trend culminated in the Finno-Ugrian cultural congresses organized by Finnish, Estonian, and Hungarian scholars, teachers, and students. The first was held in Helsinki in 1921. The ideas of rebuilding began in the early 1990s. The Finno-Ugrian world was conceived as a broad cultural identity based on linguistic affinity, and attempt to integrate various Finno-Ugrian peoples in the social and cultural integrity. In 1992 the first World Congress of Finno-Ugrian Peoples was held in Syktyvkar where it was tasked to “achieve the status of non-governmental organization United Nations”, further in 1996 (Budapest), in 2000 (Helsinki), in 2004 (Tallinn) in 2008 (Khanty-Mansiysk) and in 2012 (Sofok).

Over the past two decades, World Congresses did not grow into a non-governmental organization or analogue of the International Organization of la Franco-phonie. However, they have become forums where the problem of endangered languages is actualized. World Congresses are the guidelines for the implementation of language policies at the regional level.

Ethnic Food As Tourism Resources

This paper aims to examine ethnic food as one of the tourism resources, based on field research conducted in ethnic town in Yokohama city. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multietnic. I conducted participant observations to some ethnic groups (Okinawan Association, Brazilian NPO etc.). Also I conducted in-depth interviews with some families who have multietnic backgrounds and experiences in order to understand their identities and their changes in the migration process. Based on these field work data, this paper considers the social value of migrants from the methodological individualism.

In particular, this paper focuses on entrepreneurs of ethnic food business. For example, ethnic restaurant owners in this area are second generation migrant. They think their business not merely as a job but also as a cultural practice for keeping their ethnic culture. However, some ethnic owners have conflict because they must change flavor to suit Japanese guests' taste although most of guests think their ethnic food authentic. Besides some first generation do not admit their ethnic food authentic. This is why the ethnic restaurant owners in this area are second generation migrant.

Taking a tour through these multietnic migrants and their business, this paper charts an exploratory excursion through arguments that address 'ethnicity', 'memory', 'authenticity', 'Invention of tradition' and cross-cultural encounters within the 'mixed' spaces and contradictory imperatives of postcolonial migrant in Japan urban area.

An Analysis of Recent Internationalization of Education in Japan: A Case Study of Nepalese Students

In this paper, we discuss the experiences of Japanese language school students from Nepal, as a case study, to understand the emerging new trends and issues surrounding the internationalization of education system in Japan. In 2008, the Japanese government proposed the goal to recruit 300,000 international students by 2020. Due to the effect of the Japanese government and school systems, the number of international students has been increasing; however, the patterns of international students have been changing simultaneously. For example, Chinese and Korean students, who used to be the most popular group of international students, are now less likely to choose Japan as their destination country to pursue their education. Instead, the number of students from Nepal, Vietnam and Myanmar has been increasing in the last five years.

To explain the new trends, we discuss the push-pull factors for the changes. Also, the international students need to acquire Japanese language skills to be enrolled in the Japanese university system, the Japanese language school often serves as the first school for many international students. For this reason, we focus on the role of Japanese language schools to discuss students' perspectives on life in Japan. Based on the case study of Nepalese students, we found that the most of them are 'self-funding' students. Although they hope to pursue higher education and better career prospects, providing financial support to their families in Nepal has become the top priority. Nepalese students have to work double or even triple jobs to manage the heavy debt from study abroad, high living cost in Japan and support families in Nepal; consequently, many students face challenges to pursue their dreams. In addition, some of them expressed cultural differences and isolation from the society. Based on the analysis, we propose social implications of the emerging trend of international students.

T09-969.6

A Systemic Approach to the Construction of Urban Places

This paper reports on research undertaken across three markets in the centre if London, England. The research adopts an ethnographic approach that focuses on the ongoing process construction. By using in-depth/iterative interviews the work hinges on both the changing narrative that people constructs 'in the moment' while also highlighting the role of researcher in place construction. This projects works on the premise that it is beneficial to understand places as complex adaptive systems that are constituted by an array of heterogeneous parts. Places have physical locations and material forms but they are also in part, made up of the very people who experience the place. Understanding such complexity leads the researcher to focus on the 'how' of place, rather than the 'what', 'where', or 'who'. Rather than attempting to understand place as unique, stable, concepts, this work builds on systems-theoretical approaches towards an understanding of places that facilitates both change and permanency so important to architecture and community building theories.
The study aims to explore ethnic differences in gender specific study choice patterns. The central research question is: to what extent do ethnic minorities present different gender-specific choice patterns in mathematics, science and technology (MST) and what are the reasons for such differences? The study is based on the premise that pupils with non-western ethnic backgrounds differ in their evaluation of MST-studies from pupils with native ethnic backgrounds as a result of the difference in cultural values. To explore this premise, we first examined the effects of gender, ethnicity and grade averages on school profile choices of 265 pupils in higher secondary education in two schools in the Netherlands. This was followed by semi-structured interviews with 45 individual pupils about their choices.

In our sample 59% of male and 42% of female pupils have chosen a MST-profile, of which 39% of both male and female pupils have chosen this profile in combination with a Health-profile. Moreover, the combined grade average for mathematics, physics and chemistry is shown to have the strongest effect on a positive choice for a MST-profile. Gender also has a significant effect, even after controlling for the combined grade average. Ethnicity however does not.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils and in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.

This study aims to explore ethnic differences in gender specific study choice patterns. This paper focuses on women's working lives in Leeds, England, where some of the UK's most affluent and most deprived localities are found. The authors compare the work-care reconciliation practices and attitudes of lower and higher educated women, and consider how differences and similarities in these are shaped by local welfare state arrangements and conditions in the local labour market. The analysis, conducted within the EU-funded FLOWS project, is based on data from a survey of local women and focus group interviews with women who combine paid work with raising young children or looking after old, disabled or sick family members.

While working-class women in the UK have 'always worked', the second part of the 20th century brought middle-class women's mass entry into the labour force. In some other countries, this process was actively encouraged by state provision of publicly funded care services and other policies to support women's attachment to the labour force while raising young children and/or looking after older family members. In the UK's liberal welfare state, childcare and caring for older, sick or disabled adults have primarily been conceptualised as individual/familial responsibilities and care services are currently provided primarily by market actors, rather than by the state. The authors explore the relative importance of the national/local state, cultural preferences and market conditions on women's working lives, and consider how these shape social inequalities between women in different socio-economic circumstances.

Carers in England and across the UK have been a focus of policy debate on work and care for several decades. In the 2000s, modest new employment rights (including the right to flexible work) were introduced to support them reconcile work and care, and municipalities received new funding from central government to help develop local services to address carers' needs. In national population censuses in 2001 and 2011, the Office for National Statistics collected data about caring responsibilities and these permit examination of the relationship between the (unpaid) care individuals give to their older, sick or disabled family members, friends or neighbours and paid work, age, gender and health.

Based on analysis of these data, and supported by insights from two surveys of carers (the 2009/10 Survey of Carers in Households and the Carers, Employment and Services survey undertaken in 2006-7 at the University of Leeds), this contribution examines data on the intensity of caring responsibilities (hours of weekly care provided as a measure of intensity) and participation in the labour market for men and women aged 45-64. The paper highlights gender differences in patterns of care and paid work, with a particular focus on the extent to which men and women in this age group appear to use part-time work and early retirement as ways of combining work and caring responsibilities. In interpreting these data, the authors also draw on qualitative and policy evaluation studies undertaken by the CIRCLE research group at the University of Leeds. These provide insights into older workers' motivations, preferences and behaviour in relation to work and care, and indicate the complex cultural, moral and institutional contexts which shape patterns of caring in later life.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils and in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.
L'économie solidaire au Brésil regroupe des travailleurs (informels, chômeurs, pauvres des périphéries urbaines, travailleurs ruraux) ainsi que des organismes communautaires, des mouvements de foi et des syndicats de la CUT (la Centrale unique des travailleurs, principale confédération syndicale au Brésil). Elle a impulsé des formes de développement local reposant sur la notion de circuits courts de production et de souveraineté alimentaire. Ces formes prennent appui sur l'organisation en coopératives auto-gérées d'agriculteurs familiaux et sur la mobilisation des Communautés traditionnelles (Quilombos, etc.) qui réinvestissent la valorisation des Communautés traditionnelles (organisation en coopératives autogérées d'agriculteurs familiaux et sur la modélisation des Communautés traditionnelles (Quilombos, etc.) qui réinvestissent

Struggling to Climb the Organizational Ladder in Turkey

Depending on twenty in-depth interviews with men and women who graduated from top universities of Turkey and who have been working in corporate jobs for more than ten years, this paper reflects on the impact of gender on prestigious white-collar jobs. It aims to answer the questions of to what extent gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues related to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper suggests that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women’s responsibility. Women who have struggled to reach senior management positions give up on their jobs, as they get exhausted because of the double shift of paid work and child care. Although these women have above average family incomes and can afford to hire domestic help, because of the traditional ideology that emphasizes the crucial role of mothers for socialization of kids, they give up their careers and shift to jobs that have regular work hours but no future prospects. Educated in the same way with their male colleagues to be successful and to have achievements, these women end up being unsatisfied with not only their jobs but also their lives.

Research on Public Attitude Towards Social Impact Assessment of Chang È Lunar Probe Program

For a long time, China evaluates engineering’s or project’s impacts mainly by assessing its economic contribution, always lack of social impacts. This study chooses Chinese Chang È Lunar Probe Program and conducts a survey by using questionnaire about public’s attitude towards Chang È’s social impacts. The results suggest that public’s attitude towards high-tech and non-direct-interest engineering’s social impact consists of military impact factor, political and economic impact factor, psycho-social impact factor and educational impact factor. Furthermore, public’s attitude towards Chang È’s social impact is related to age, and differences cannot be found between the two groups of respondents with high and low education. Women with PhD degree look down upon it, it is not influenced by income at the same time.

The Business of Housing God: A Case of Singapore Megachurches

Religion and business are often seen as inhabiting separate social spheres but in this paper I explore how they are combined and reconciled in the activities of megachurches. Through two case studies of Singapore’s largest megachurches, I examine how they combine religion and business, focusing on how these churches strategically use their religious and faith-reliant characteristics to manage growth and multiply financial rewards through church building projects. This explicit engagement in business practices not only raise the question of profits in ‘non-profit’ organisations but importantly, foreground the reconciliation of religion and business practices in the same discursive space. I demonstrate this reconciliation through the churches’ built environment-building projects which exemplify the dedifferentiation of space that characterises not only the religious, investment and consumption practices of these megachurches, but also of the language and practice of business. This not only extends understanding of neo-liberal effects but demonstrates the form and dynamics of marketing managerialism in a specific ‘non-business’ context. In doing so, they reflect the values of economic neo-liberalism which has been a driving force in global economies such as Singapore. Therefore this research is interested in questioning how neo-liberalism privileges business and the market to become the prime factor in shaping religious practices in contemporary churches such as the megachurch in the ‘intelligent island’ state of Singapore. Singapore is “famous for being run like a giant corporation”[1] and is an affluent country characterised as “neoliberal-developmental”[2]. This is reflected in the religious organisations operating within it, especially megachurches that have pressing space demands in containing its burgeoning congregation in a highly urbanised and compact city.

Urban Transformation in a Transitional Economy: Is “Gentrification” an Analytically Useful Concept for Vietnam?

Despite the rapid transformation in the urban landscape of Vietnam, a simple and uncritical application of the “gentrification” concept out of the specific spatial and temporal context of the country is problematic. Not only does the phenomenon progress in a highly compressed temporal scale compared to similar processes in cities in the “global north”, it is also embedded within a paradigmatic shift of the entire socio-economic system. This paper attempts to explore the process of urban redevelopment in Vietnam and to critically examine whether this concept, with its origin from the “global north”, is capable of offering a conceptually robust lens through which the phenomena can be consistently analysed. This paper attempts to contribute to such discussion and explore the process of urban redevelopment in Vietnam and offer a critical examination on the applicability of the concept in cities of the global south, particularly within the context of a city in a transitional economy. To enhance coherence of the empirical data being compared, the city of Hanoi is used as the case study city. As the capital and a “political” city of Vietnam, Hanoi is undoubtedly commendable to the typical socio-political forces that are at work in the country. With case examples of redevelopment projects in Hanoi against the context of the specificity of the socio-economic and political transformation of the country, this paper will offer a conceptually robust lens through which the phenomena of gentrification can be critically analysed in the specific context of Vietnam.

Civil Society Organizations and Cultural Repertoires of Evaluation in the Media Debate on Climate Change: Comparing France and the United States

National political cultures have an effect on how global political problems are constructed in media debates in different countries. Our starting point is that the repertoires of moral evaluation used to justify arguments related to the problem of climate change are likely to vary between countries, and that these differences may, in turn, affect policy responses. Civil society organizations, we argue, have a particularly important role in bringing moral evaluations into the debate. In this paper, we compare the argumentation of civil society organizations and their allies and opponents in coverage of UN climate change conferences in Le Monde and the New York Times between 1997 and 2011. We find that arguments are more often justified by appealing to civic values like equality, democracy and scalar and legal regulation in France, while monetary value plays a more important role as a justification for climate policy arguments in the United States. These differences are not due to differences in the selection of sources by journalists, but seem to reflect deep-seated cultural differences. In France, even business organizations often resort to the civic mode of argumentation while in the US, civil society organizations often justify their arguments in economic terms. Over time, we see convergence in both countries towards arguments based on the idea of ecological modernization: economic growth, technological progress and ecological values are increasingly seen as supporting each other. Radical ecologist and radical pro-market arguments are both becoming more marginalized.

Crowding in: Why and How Indian Civil Society Organizations Began Mobilizing on Climate Change

In this paper, we argue that a process of crowding in of civil society organizations (CSOs) into the field of climate change advocacy has occurred in India since around 2007. Both the number and the diversity of CSOs involved in this field of advocacy has greatly increased. Drawing on the Dynamics of Contention approach, We identify five mechanisms that explain why and how this process has unfolded: (1) The expansion of discursive opportunities in the global public sphere, (2) the event effect of Copenhagen COP 15 in 2009, (3) the network effects of expanding global civil society networks of climate change advocacy and the resulting flows of discourses and funding, (4) adoption and innovation of new action repertoires, and (5) the global political pressure effect leading to development of national climate policies and corresponding opportunities for CSOs to influence their formulation and implementation.
Nuclear Energy and Safety: International and National Isomorphic Pressures

Nuclear safety has often been an accident driven topic as the Three Mile Island, Chernobyl and Fukushima disasters show. In addition to accidents, severe economic and environmental challenges related to the construction of new nuclear power units and management of ageing plants and new technology, not to mention decommissioning of existing older units keep nuclear energy and safety among the relevant topics. Furthermore, the recent upgrading of safety requirements at the national, international level and harmonization attempts of nuclear safety regulation by the Western European Nuclear Regulators’ Association, raise questions about the cultural features of nuclear safety regulation.

The aim of the paper is to explore how nuclear safety (that is an important component of human and environmental health) has been dealt with in the international and national level in Finland and the UK after Fukushima and what kinds of factors constrain learning. The data consists of the International Atomic Energy Agency's Safety Standards, Western European Nuclear Regulators’ Association’s reports and the OECD Nuclear Energy Agency’s reports, the national final reports of the Stress tests of Finland and the UK, national nuclear energy act and safety guides. The method of analysis is content analysis.

The conceptual frame draws on the isomorphic pressures, which refer to the phenomenon by which organisations become structurally or strategically homogeneous. Isomorphic pressures, stemming from national institutional patterns or professionalisation, may play a role in the nuclear sector, since they affect the what, how and who of safety-related action. Isomorphism is important to the extent that it may strengthen and spread effective understandings of, and approaches to, safety, but it may also engender inability to detect specific needs and requirements or it may lead to contrasting understandings and approaches among bodies involved in nuclear safety that are exposed to different isomorphic pressures.

Youth, Political Socialisation and Everyday Life

This paper aims to explore the social processes that shape political socialisation of European youth. The theoretical point of departure is the literature of political socialisation that sees family and close friends as principal actors in young people's political socialisation process (e.g. Hyman 1959, Jennings et al. 2009). A key question is to what extent parents pass on political values and habits to their offspring, and how upcoming generations differ politically from their predecessors. However, there seems to be a lack of knowledge concerning social dynamics and interaction in the everyday experience of young people's political life. Especially, whether the development of modern family patterns and increased gender equality might change the classic roles of the parents in the political socialization process.

While we recognize the importance of parental socialisation, we challenge the typical assumption of a “one-directional” intergenerational transmission of political values from parent to child. Therefore, we believe it is essential to scrutinize how young people engage in daily conversations and discussions about politics and society, because young people who engage in political discussions with family and friends tend to be more engaged in political participation than other youth, such as voting at elections, petitions and participation in demonstrations (Gundelach and Levinsen 2011).

Besides outlining relative contributions by different agents of political socialisation, we aim to explore the contexts of political socialisation by asking how political issues are raised and what kind of political issues are discussed? Thereby, it is possible to make a coherent analysis at different levels, which both maps the networks of political socialisation and explores how young people gain and develop information and knowledge.

Methodologically, the paper adopts a mixed methods research model. The paper triangulates survey data (n=936) and in-depth interviews (n=60) of young Danes. Data has been gathered for the MPPLACE project.
**The Rise of ‘Reflexive University Governance’ in the Risk Societies: Japan, the United Kingdom and the United States**

Socio-economic upheavals after the Lehman Shock, and in European countries, the introduction of austerity measures have financially overshadowed the university sectors cross-nationally. The purpose of the paper is to identify how uncertainty and insecurity in the post-2008 period have reshaped university governance relating to risk management. The study examines university governance at the system and institutional levels in Japan, the United Kingdom and the United States.

The paper is both theoretical and empirical driven. The study takes the theoretical approach by utilising two conceptions of ‘peer reflexivity’ and ‘risk’ in the context of university governance. The former refers to the ‘cycle of peer feedback, self-monitoring, self-analysis and action. Higher education institutions are treated as learning organisations’ (Clark 1998; Dill 1999). The latter explores Becks (1992) and Giddens’ (1990, 1999) risk society. The study then proposes, a new concept, ‘peer reflexive governance’, which is compared with Foucault’s neo-liberal ‘governmentality’ (1988, 1991) to capture the characteristics of ‘peer reflexive governance’.

Regarding empirical analysis, the study takes documentation for data collection in order to identify the extent to which the institutions in three country settings are autonomous (not in direct state control modes), making the peer reflexive mechanisms feasible. The collected document includes acts, government White Papers, circulars and other official documents.

The paper argues that ‘peer reflexive governance’ has become significant in insecure and uncertain environments due to the universities becoming more self-aware, reflective, and reflexive than ever before. The universities have strengthened their self-monitoring mechanisms in order to respond to uncertainty and risks, shaping them into learning organisations. The practices of peer reflexive governance, however, differ between Japan, the United Kingdom and the United States.

The study is significant because few literatures so far connect the concept of ‘risks’ to university governance.

**Change in Juvenile Delinquency in Japan**

In Japan we witness four peaks of juvenile delinquency after the World War II. Immediately after the war the Japanese police system was demilitarised. However, the police did not have resources enough to carry out the activities for prevention of juvenile delinquency. With the recovery of economic conditions the police established the system to prevent juvenile delinquency. Since then the police have carried out the net-widening of their activities for the prevention of juvenile delinquency. I will explain how the net-widening has been carried out.

**Japanese Language Education for Japan-Philippines Economic Partnership Agreement**

This paper asks how Japanese language education for Filipino nurse candidates under JPEPA can be located in the Philippine socio-cultural settings, in order to provide academic grounding toward more meaningful policy making for both governments.

Foreign nurses’ entry to Japan presents a unique pattern of migration from the point of view of language learning. It pertains to adults who learn a foreign language from the beginning; yet are required to reach a high level of proficiency. Historically speaking, adult migrants often meant either unskilled workers who are not required high level of language skills; or skilled workers who already know the language of the host country. In any cases, the movement often took place from a former colony to a former sovereignty. As for Japan and the Philippines, although Japan occupied the Philippines for a few years during World War II, linguistically speaking, there is no significant amount of cross-linguistic immunity among the young generation of Filipinos today. Also, due to the eligibility constraints, it is unlikely possible to find an EPA candidate who has received higher education in Japan.

The paper illustrates the socio-cultural situation in language practice in the Philippines at large and points to the both governments’ weakness in systematic understanding and addressing it — a multi-lingual-ness with ambivalent relation with English as both colonial and global language; b) prominence of orality over literacy; c) weaker establishment of Japanese language education than other Southeast Asian countries in quantity and quality; and d) class issue in gaps in motivation and needs of Japanese language learning.

**University Governance and the Academic Profession in “Rising” East Asia**

The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salmi (2008) suggests that “world-class” universities and higher education systems require favorable governance with autonomy and academic freedom. Terms such as “entrepreneurial universities” (Clark, 1998) and “academic capitalism” (Slaughter and Leslie, 1999), however, imply that traditional “collegium” governance is at risk. Most East Asian higher education systems have been established and developed through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these “Post-Confucian States” (Marginson, 2011) are now achieving “world-class” status without experiencing the strong “collegium” governance pattern of the past. Japan could be an exception, having developed a strong academic freedom and autonomy led by the faculties since World War II. However, now, top Japanese universities are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?

The New ICTs and Gender Inequality in Korea

This presentation aims to explore the implications for gender inequality of the increased access to and usage of mobile ICTs, based on the data collected in Korea. Korea used to be no exception to the conventional digital divide in which women, compared to men, are disadvantaged in the use of ICTs. In recent years, however, there has been a remarkable increase in Korean women’s access to internet and, specifically, mobile internet technology. Women have surpassed men in the number and proportion of ‘smart’ mobile phone users. Among young generations, in particular, girls, compared to boys, tend to have access to the mobile phone earlier and use it more frequently and longer in duration of time. In 2011, Korean children are reported to own their first mobile phone at the average age of 10.4 years (fifth grade at elementary school), and 80% of the third graders at elementary school owned it.

What would be consequences in terms of gender inequality of this earlier and increased exposure to mobile internet technology represented by the ‘smart’ phone? On the one hand, the user friendliness of the new technology has the potential of narrowing or eliminating the gender gap in its professional and financially lucrative utilization, and its mobility in time and space potentially brings the liberating effect for women both in employment and domestic labor. On the other hand, however, there are concerns that the easy availability and access to the mobile technology would lead to continued gender inequality, in which women remained mere consumers, and increased vulnerability to the new problems brought by the new technology, such as digital/mobile addiction. This presentation investigates the consequences of the new ICTs in gender inequality and their implications to cope with the gender inequality at present and in the future.

Cultivating Ethnic Solidarity in the Transnational Enclave: Co-Ethnic Relations Between South Korean “Newcomers” and Korean-Japanese/ Korean-Chinese “Oldcomers” in the Korean Enclaves in Osaka and Beijing

Recently, scholars have noted that migrants exhibit distinct patterns of adaptation characterized by frequent movement to their countries of origin. This influx of transnational migration has in turn, altered the structure of historically established minority communities. My research investigates how changes in the ethnic community were brought on by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and survey data conducted in the Korean enclaves in Beijing and Osaka.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean Chinese “Oldcomers.” As a result of the growing number of South Korean newcomers since the 1990s, the Koreatowns in Beijing and Osaka today have become increasingly conjoined—both on the institutional and grassroots levels—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has led to the growth of formidable barriers in constructing a collective ethnic consciousness within the Korean community. Damaged co-ethnic relations between the two waves of Korean migrants have significantly hindered their ability to mobilize the rich transnational resources in the enclave for upward mobility. This paper brings to light the structural barriers Korean migrants encounter in cultivating ethnic solidarity in the transnational enclave. In doing so, I offer suggestions for social welfare policies that may aid transnational migrants in more effectively cooperating together to mobilize the resources of the enclave to better their life chances.

Effects of Child Involvement in Housework on Future Gender Role Expectations

Housework allocation has been studied extensively, particularly in its relation to women’s employment. Despite the richness and abundance of literature on this subject, most research has focused on housework allocation between couples, and children’s participation in housework has been understudied. These few studies, however, indicate that children participate in household tasks to varying degrees. The present study utilizes writing assignments submitted by approximately 120 undergraduate students enrolled in family sociology courses at a Midwestern U.S. university, and qualitatively analyzes patterns of housework participation in students’ familial and care of origin, with special emphasis on the meanings of terms used to describe this participation. Preliminary data analysis shows that most college students expect to marry, and for both spouses to earn an income, even when students grew up in households with stay-at-home mothers. While this convention continues, more gender-neutral expectations in provision of childcare experiences, expectations regarding domestic tasks varied more, and childhood experiences appear to have important impacts on perceptions and expectations with regard to housework. Students who “helped” their employed mothers with the second shift were more likely to perceive indoor housework as important to career success and to expect their future husbands to be “helpers.” Other students stated that all family members “contributed” to domestic tasks in their childhood households. These students tended to view housework as the responsibility of the entire family, and to hold less gendered expectations. The types of housework done by children were often gendered (e.g., sons doing yard work and daughters helping with cooking), and this also shaped students’ perceptions and expectations. By analyzing childhood experiences, this study aims to fill a hole in the literature, shedding light on how parents include their children in negotiating housework allocation, and how childhood experiences shape gender role perceptions and future expectations.

Lessons Learned from Great East Japan Earthquake - Birth Outcomes in the Catastrophe of Highly Aged Country

The Great East Japan Earthquake and Tsunami occurred in 2011/3/11 and this disaster revealed health care issues that Japan already had. One is the lack of attention for maternal health care in the highly aged society and the other is decreasing OB/GYN providers in the Tohoku area. It was hard to see preganant people and babies in the highly aged country like Japan, however, there were a few expecting mothers left in the cold, hungry and anxious sheltering in another place. They were not prioritized as a vulnerable population. Continuing research of 11 hospitals and 37 clinics in one prefecture in the devastated area showed that most of pregnant mothers stayed more than 3 evacuation shelters to find a safer place to live and half of the pregnant patients could not find a way to go out from the Tsunami area to have birth. With more than 200 patients who could succeed to transport to another prefecture, their average delivery time (weeks of gestation), weight of baby, preterm birth rate, low birth weight rate, amount of blood loss and another birth outcomes of this catastrophe area tells us the importance of the pre-hospital OB/GYN care team in disaster response and safety confirmation system for mothers and babies. We should strengthen the perinatal care in highly aged society where mothers are “minority”. There is a generation inequality in health care of highly aging society like Japan - perinatal health care is less concern than elder care. 10 obstetricians set up a project specialized for pre- and postnatal care, and carried out medical activities in these disaster-stricken areas by taking care of pregnant and postpartum patients from April 1st until September 3rd, 2011. With dispatched specialist after natural disaster and built the visiting system and correct birth outcomes and neonatal health outcomes.

Who Takes Part in Anti-Nuclear Actions? a Case Study of the Organizations of Evacuated People from Fukushima Plant Area and Their Attitudes Concerning Nuclear Energy

It is often assumed that the people of Fukushima, especially those who lived near the nuclear plants, are increasingly aware of the impracticality of Japan’s nuclear energy policy as they have been replaced with fear of radiation or from evacuation zones.

In this paper, the author asks whether the assumption is valid in any case, and if it isn’t, what are the reasons for the cases that goes against the assumptions. The author will examine some of the responses of the recently displaced organizations based on the areas bordering the Fukushima prefecture and other prefectures in the more distant.

First it is shown that, as long as each organization represents the people who lived in the same municipality before the devastating event of March 2011, the extremes of both now passionate “anti” or “pro” opinions concerning the nuclear energy policy have been embraced by some of these organizations.

Second, it is demonstrated why these people have taken either “pro”- or “anti”- stances in the process of the disaster followed by the nuclear accident, and the author points out that these attitudes are affected not only by their experiences...
after the beginning of the disaster, but also by their life-styles before the disaster and their memories of these life-styles.

Third, the question of whether these organizations have simply endorsed or excluded some of these "anti-" attitudes or the "pro-" attitudes is discussed; rather, here we see the unexpected effect of the "anti-nuclear" discourse on the formation of these very people's doubts about the discourse; but even this adverse effect has not resulted in showing anti-"anti-nuclear" discourse. Hence scholars may expect that time would ease the unfortunate misunderstanding about the anti-nuclear opinions; however, this could take a generation, which may be too long a time for some witnesses.

Aging Problems in Suburban Neighborhoods: A Case of Hiroshima Region

The Japanese suburban neighborhoods that were developed in the 1960s to 1970s are standing at a crossroads; one path leads to sustainable communities to which young people move, while the other leads to "ghost towns" in which both young generations move out when they grew up and old people leave their houses because of residing in a nursing home. Regarding the demographic characteristics and housing conditions of Japanese suburbs, a large number of housing estates are at risk of heading towards the second road. Aging and the increase in vacant houses is one of the most serious and urgent topics to be surveyed by scholars in a variety of academic backgrounds. This paper examine (1) aging problems in Japanese suburban neighborhoods with GIS methods, and (2) relationship between aging and increasing vacant houses in Hiroshima region; and (3) finally, we discuss generative process of vacant houses in local cities.

A Sense of Absence: A Reflection on Ethnography of Walking in Yokohama and Vancouver

This paper reflects on our ethnography of walking, part of our larger cross-Pacific project on the formation and regulation of communities of sex-workers, which we have been conducting since the summer of 2012 in former-brothel-districts of Yokohama, Japan and Vancouver, Canada, places that are commonly marked by absences of material and discursive traces and documentation of communities of sex workers. We discuss how we came to make sense of and engage with the places through our sense of the material absences but "ghostly" presence (Gordon 2008) of sex workers' bodies and brothels. We also discuss how our affective responses such as frustration, numbness, boredom and anger, which we experienced when encountered the production of those absences, enabled us, emplaced ethnographers, to make the absences visible and envision an ethical way to engage with the spaces whose communities were uprooted and memories have been marginalized, erased or forgotten.

Women's Hair Loss from the Perspectives of Body and Gender

This research aims to pursue the social cognition on women's hair loss (women's baldness) due to alopecia, and to clarify the structure of oppression on which they were placed from the perspectives of body and gender. Through this study, I want to point out that women's hair loss should be argued as a sociological object than just a medical disease.

Until recently, hair loss was mainly identified as alopecia in a medical or psychological research. By the previous studies, mental difficulties of women with alopecia are clarified(Eckert: F1976, Van der Donc et al.: F1994), and the usefulness of wearing wigs as the ways of coping is shown (Nakajima, Nakayama:2002). However, in these researches, it isn't clarified about the problem experience after wearing wigs. So, this research uses Goffman's passing theory (Goffman: 1968) and analyzes the navigation of 14 bald women with alopecia area who wear wigs.

This study draws the following discussions. Firstly, the point of view of the concerned individual, wearing a wig is itself a disability for bald woman and it's based on the cultural norm which considers hair as the symbol of femininity. Secondly, one reason behind the production of the disability as being the existence of "close others" (family), who force or encourage the individual concerned to wear wigs. As the encouragement by society and the intimate sphere to wear the disability fits with the gendered body's accepted norm, it is one reason why the individual continues to wear the wig.

After the accident, consumers were restricted to sell contaminated products, and even if not contaminated, the fear restrained consumers from purchase. The heavier organic customers one is, the more sensitive was her/his reaction to products from affected area, and the economic damage of organic farmers was severe. It was ironical that the food industry and local people supported affected farmers at the critical stage.

Consumers and farmers of teikei groups held study meetings jointly to understand the situation, and such meetings were opened to general consumers, too. Among un-affected consumer groups, the number of members increased, which shows the reliability of Teikei was reevaluated.

Many consumer groups did some kinds of special supports, but continuing the relationship was also the support. Consumers went to farmers' fields to help farm work, and one group sued nearby nuclear plant to stop the operation. Feelings of mutual help and solidarity encourage the affected farmers, and also give deep consuming to consumers.

Teikei is shrinking in Japan while “Community Supported Agriculture” is growing worldwide. Conventionally, teikei relied on voluntary work of women (especially for consumer side). Such style become difficult to maintain, and Teikei is now shifting to individual based one using parcel delivery service. Serious divergence between farmers (rural) and consumers (urban) in the consuming society is the cause and the result of the accident. Social consensus and broad struggle to get out of such divergence, learning from the experiences of teikei, need to be sought seriously and not to reopen the nuclear plant.

Organic Farming, Consumers and "Teikei" in Japan: Focusing on the Influence By the Nuclear Plant Accident

The nuclear power plant explosion in March, 2011 caused severe damage to the people in Fukushima and surrounding areas. Present paper examines its influence on organic farming, focusing on the behavior of consumers - general consumers and teikei (direct co-partnership between farmers and consumers) consumers.

After the accident, farmers were restricted to sell contaminated products, and even if not contaminated, the fear restrained consumers from purchase. The heavier organic customers one is, the more sensitive was her/his reaction to products from affected area, and the economic damage of organic farmers was severe. It was ironical that the food industry and local people supported affected farmers at the critical stage.

Consumers and farmers of teikei groups held study meetings jointly to understand the situation, and such meetings were opened to general consumers, too. Among un-affected consumer groups, the number of members increased, which shows the reliability of Teikei was reevaluated.

Many consumer groups did some kinds of special supports, but continuing the relationship was also the support. Consumers went to farmers' fields to help farm work, and one group sued nearby nuclear plant to stop the operation. Feelings of mutual help and solidarity encourage the affected farmers, and also give deep consuming to consumers.

Teikei is shrinking in Japan while “Community Supported Agriculture” is growing worldwide. Conventionally, teikei relied on voluntary work of women (especially for consumer side). Such style become difficult to maintain, and Teikei is now shifting to individual based one using parcel delivery service. Serious divergence between farmers (rural) and consumers (urban) in the consuming society is the cause and the result of the accident. Cultural Manifold Analysis (CULMAN) for Cross-National Comparative Survey

The objective of this presentation is to show our paradigm called Cultural Manifold Analysis (CULMAN) for the comparability of cross-national surveys. This paradigm has been developed in the longitudinal and cross-national surveys on national character by the Institute of Statistical Mathematics (ISM) over the past six decades since 1953. First, I summarize our paradigm of cross-national and longitudinal surveys. Second, I summarize some Japanese social values and, among others, aspects of people's sense of interpersonal trust shown in our longitudinal survey of Japanese national character. (See http://www.ism.ac.jp/ism_info_e/ko-kkkenkou_e.html)

Thirdly, I present cross-national comparisons of interpersonal and institutional trust as well as some basic social values based on our past surveys, including the Seven Country Survey (surveys of seven-countries (Japan, USA and five European countries)), the East Asia Values Survey (EAVS) (2002-2005), the Pacific-Rim Values Survey (PRVS) (2004-2008) and the Asia-Pacific Values Survey (APVS) (2010-2014). (See http://www.jsp.sps.go.jp/j-grantsinaida12_kiban/ichiran_22_e-data/e33_yoshino.pdf) The results show that East Asian countries have already departed from traditional Confucianism and that people share more common social values beyond the distinction of East and West. Fourthly, I present an overview of data on Japanese immigrants in Brazil, Hawaii and the U.S. West Coast in order to study the interaction between the environment and ethnicity. Finally, some comments are provided for our future research.

The Representation of Wedding News in Taiwan: Critical Thinking about Romantic Love, Capitalist Ideology and Gender Politics

This research explores the representation of weddings news in mass media in Taiwan. Focusing on the gender/sexual politics, the researcher examines how wedding events are reported on mass media. In terms of textual analysis, the researcher discusses the gap between the wedding news representation and the
social reality. Additionally, the implied ideology is examined. Hopefully, the result could be transformed into teaching materials for the graduate course of sociology of gender.

Wedding as an event affects and is affected by a combination of external and internal constraints and expectations. In modern Taiwanese society, weddings are big events people want to get it right on the act. Thus it may be said that, wedding consumption is related to emotion as well as interpersonal relations. The researcher is interested with how wedding is reported on mass media and how these representations will affect people's cognition and attitude.

Heterosexual relations and gender stereotype roles in the wedding events have been depicted in certain ways. These images also convey illusion of romantic love ideology. Popular culture plays a key role in naturalizing the capitalist as well as the gendered pattern. The present research attempts to analyzed the wedding news to explore the implied gender ideology.

We are living in an age often portrayed as being dominated by consumer capital and the products of capitalist popular culture. It is important to acknowledge the influence of the mass media in shaping people's identities and daily lives. Combining gender analysis with sociological inquiry, the researcher believes that the study on the representation of wedding news could provide some insights for the teaching practice of critical media literacy, gender equity education and relationship education in universities.

The Power of Religious Objects in Transnational Migration

Since the economic crisis in Spain hit most migrant households as the most vulnerable, religious institutions such as the Catholic Church, are becoming increasingly important. Their houses act as reference points by which the community is kept together. Tangible assistance is offered and transnational communication structures and family bonds are sustained. Being assisted by local Saints, the Catholic Church serves as a place of remembrance to produce and reproduce senses of belonging that date back to the early colonial era. Social relations of migrants are manifested in a symbiotic representation which symbolizes the power and glory of the former Colonial regime.

Giving the example of the congregation of San Lorenzo in an immigration neighborhood in Madrid, it is shown, which role and agency religious artifacts play in re-producing collective identities and allocating social and financial resources. By focusing on the object itself (not necessarily its symbolic representation) the functions and cultural meanings of the figure in different historic contexts become apparent. The religious staging around the object of the Saint show spatially and chronologically comprehensive chains of interaction which reflect deep seated power relations between the immigrant and the host communities.

Economic Crisis: Toward the Erosion or Stability in Individual Welfare State Preferences?

Understanding voter preferences for the welfare state and how they are formed has become an important basis for making claims about either the erosion or continued stability of the welfare state.

In the past decade evidence has mounted to point towards a relationship between individual measures of economic hardship/risk and support for the welfare state. However, most of the research has been constrained to limited time-series data that evaluates this relationship under relatively stable business cycles which seldom affects individuals belonging to more secure economic groups (high skill, high income). In light of the increasing global economic instability that places these individuals at greater risk, it becomes important to determine if they will respond differently and change the direction of aggregate support for the welfare state.

This paper will examine in detail how different class groups respond to increasing risk, in particular more economically secure groups, and identify if recent findings of increased aggregate support as well as class convergence in Sweden hold or if they resemble a recent study that demonstrated a decline in welfare state support in the United States following the 2008 economic crisis.

The leverage of this study is based on the use of (1) exogenous properties of the 2008 economic crisis, (2) a Swedish survey that reflects respondents' welfare state preferences and socio-economic attributes that spans seven consecutive years sampling approximately 3000 respondents per round, and (3) a design which employs a difference-in-differences method to compare individuals across municipalities. Municipalities are sorted according to those that experienced an immediate substantive spike in unemployment and those that experienced little change, which resembles a treatment and control group respectively. This design reduces endogeneity to make stronger claims for causality, improves estimation of increased economic risk on more economically secure groups, and consequently overall changes in public preferences.

Communal Entrepreneurship in Shanghai Commercial Streets: The Cases of Tianzifang and Minxinglu

This paper presents the cases of Tianzifang and Minxinglu commercial streets. In both sites, commercial development implicates two broader social processes - the global rise of gentrified neighborhoods, and rapid urban sprawl sustained by state policies of new town construction and old district revitalization. In this paper, we discuss one central motivation behind the commercial boom, communal entrepreneurship (CE hereafter), which is reflective of a historically rooted spirit of street commerce in Shanghai. Our discussion of CE is anchored in two key concepts, Jugaifei and immigrant entrepreneurialism.

The first key concept is Jugaifei, which underlies the emergence of both cases. The local government tacitly consented to and provided support for community shops, whose legal status was murky as owners used residential space for commercial purposes (known as Jugaifei in Chinese) without explicit approval from authorities. Despite the illegality of shops and the relaxation of state authorities, this peculiarly anarchist arrangement nonetheless facilitated the commercial success of local streets. Such practices of Jugaifei also received popular support, thanks to the increasing availability of consumable goods.

Our second key concept is immigrant entrepreneurialism, which can also be found in both cases. In the case of global migration, as represented by Tianzifang, transnational migrants with solid knowledge of global art and business development were instrumental in the development of a creative industry. In the case of urban sprawl, as represented by Minxinglu, internal Chinese migrants from rural regions operated businesses to meet the daily needs of local residents. While the former type of commercial streets is tailored to middle-class consumption, the latter satisfies the otherwise unmet needs for consumable goods in the neighborhood.

We conclude with a discussion of CE, which is the core spirit of commercial streets in Shanghai; it enabled the intersection of residents, community, and entrepreneurs, leading to the commercialization of street commerce.

Weibo and Inequality in Disaster Coverage

The disasters today have the characteristics of uncertainty and inequality. This article focuses on the two big earthquakes happened in the last five years in Sichuan province, China. It explores the way to reduce the inequality in disaster coverage by researching the changes of the form of news report.

In the disaster coverage, especially in the early stage, the traditional media tend to draw close attentions on basic information in key areas, ignoring the remote areas inevitably. The new media, especially SNS, with its group advantage, becomes another important force in the disaster news report. In Sichuan Lushan earthquake in May, 2013, the traditional media started to use its weibo account which formed a new mode of news report. This is different with their works in the Wenchuan earthquake five years ago. By interviewing 15 journalists who partici-
ipated in reporting the Wenchuan and Lushan earthquake, this article finds out the discrepancy in using the traditional media and new media. It also elaborates the new form of inequality emerged due to the digital divide, while web is eliminating traditional inequality. (Webo is a SNS like Twitter)

Is Religion an Alternative Source of Help for Immigrants to Maintain Their Mental Well-Being?

A number of studies have shown that religious participation is positively related to immigrants’ mental well-being in the West, thus making religious venues “places of refuge” for immigrants and religion their “balm for the soul.” A study in Canada in 2007 found that immigrant status is associated with lower rates of use of mental health services, which is likely caused by cultural and linguistic barriers to care. In this paper, I attempt to find if religion is an alternative source of help for immigrants when they suffer from psychological distress and whether religious participation is associated with lower rates of use of mental health facilities among immigrants. The goal of my research is to help policy makers better understand how immigrants adapt in their host countries when facing barriers to access to certain important resources, in this case, culturally and linguistically appropriate mental health services.

I will conduct my analysis within the Canadian context, where there is universal health insurance. My analysis will be based on data provided by the Canadian Community Health Survey: Mental Health and Well-being. The variable mental well-being is defined by the “psychological well-being manifestation scale” in the survey. Consisting of 25 questions ranging from “self-confidence” to “pace of living” on five scales, these measurements are combined into one continuous variable. Religious participation can be defined by the two questions on how religious respondents respond to stresses and their frequency of attending religious activities. The survey also contains a section on health care utilization, thus making it possible for me to analyze the relationship between religious participation and the use of mental health services.

Declining Marriage Rates Under Globalization: Homogeneity Or Heterogeneity?

Around the world, marriage is undergoing massive changes. The United States has called on “saving marriage” (Popone, 1993; Furstenberg, 2005), the Middle East is experiencing a marriage crisis ( rashad, Osman, and Rouidi-Fahimi, 2005), Latin America is seeing the rising substitution of cohabitation and single motherhood in place of marriage (Estev, Garcia-Roman, and Lesthaeghe, 2012), and China is seeing more “sheng nu” meaning “leftover women,” a group of single women who are struggling for a higher qualification and high income. A series of questions arise from these changing trends of marriage: Does globalization affect marriage the same way in the developing countries as it does in the developed countries? What causes declining marriage rates under globalization? Do these changing trends mean marriage as an institution is weakening or even disappearing? What does a marriage mean in different regions under globalization? Previous research focuses on either the declining marriage rates in the developed countries (Cherlin, 2004 and 2013; Tost, 2010) or the “flight from marriage” in the developing countries (Jones, 2005). What is missing in the current literature is a comparative perspective on this phenomenon, which can help us better understand marriage as an institution characterized by a heterogeneity (its complexities) not a homogeneity (an individually driven phenomenon). This paper explores the declining marriage trends occurring in different regions (i.e. the United States, Latin America, the Middle East, and the Southeast Asia), compare and contrast their similarities and differences, and analyze the implications for the significance of marriage as an institution. I argue that delayed marriages and declining marriage rates in the developing countries do not indicate marriage as a traditional institution is eroding, replaced by other modern alternative living arrangements. Instead, marriage is still viewed as a significant institution and its traditional characteristics are reinforced by family and economic contexts under globalization.

Effects of Social Capital on the Developmental Outcomes of College Adolescents: Evidence from Shanghai, China

It has been suggested that individuals are faced with more transitions and life-decisions in adolescence and young adulthood than at any other stage of life. Overseas studies have also suggested that during these time periods social ties might change. However, domestic research has spared disparate efforts in the investigation into college students’ psychosocial development undergirded by the deficit-based model. Drawing upon a sample of 1153 university students in Shanghai, China, this study investigated how family social capital, friendship qualities, associational social capital, linking social capital, and adolescents’ agentic personality influenced multiple developmental outcomes of college students in mainland China. The results of a structural equation modeling analysis provided a good fit for the sample as a whole. The overall findings support the hypothesis that higher levels of agentic personality were associated with better developmental outcomes of college students, including higher levels of resilience, self-efficacy, and self-esteem. Agentic personality also mediated the effects of family social capital, friendship qualities, associational social capital, and linking social capital on developmental outcomes.

The study advances the theory of social capital by incorporating its various dimensions into one conceptual framework, thus unraveling the mechanism of how family social capital, friendship qualities, associational social capital, and linking social capital influence the college students. It also advances the theory by testing it in a non-western socio-cultural context, thus potentially fortifying its universal applicability. Moreover, it is desirable that more programs for enhancement of agency building could be devised to foster emerging adults’ agentic personality. Family education, positive peers groups, associational participation, and linking mentoring are also anticipated to promote their optimal development.

Disregards to Principles on the Distribution of Risk and Bads

Geological disposal is the primary option for most countries where have high-level radioactive waste. All countries except for Finland, however, have not (fully) accepted the geological disposal facilities due to objections from the population. Japanese government is facing same problem. We must dispose nuclear wastes regardless of continuation/stop of nuclear electricity. How can or should we tackle this problem?

The essential sociological perspective is the distribution of risks/bads. This perspective was suggested by Ulrich Beck in his Risk Society (1986). He has insisted that the concept of class is not effective for understanding the logic of this distribution anymore. To his argument, lots of works have asked whether it is true or not. The logic of the distribution of risk/bads has been a focus of sociological studies.

In this presentation, we will show two disregarded principles on the distribution of high-level radioactive waste. These principles are deduced from an analysis of conflicts on general wastes in Japan. Based on these principles, we will analyze a site finding scheme and its result of geological disposal facilities in Japan. Japanese government is looking for communities where spontaneously accept the facility now. For getting a spontaneous candidacy, the government established a governmental body called NUMO (Nuclear Waste Management Organization of
Japanese Wave of Sub Cultures

The aim of the paper is to use methodological viewpoint of the visual turn of sociology to understand the influence of Japanese Animation and Manga and the phase of their ‘globality.’ The data that will be dealt with is the one from the extended survey research on Manga and Anime conducted by Association of Japan Sub-Culture Studies at Kobe University (headed by the author).

Comparing the research results that have already been conducted by European and American scholars, and the survey research has been conducted in the areas such as in Hangzhou (China), Hong Kong, Taipei and the survey research has been done using questionnaires as well as interviews with the participants/fans in the events of Manga/Anime festival in those cities/areas.

Observing those processes of acceptance/rejection, and the ways of permeating into people’s daily life paper suggests the transformed nature of our contemporary way of life in terms of the visual and the social are constructed simultaneously in localized ‘cosmopolitan’ consciousness from below.

This paper addresses the fusion, rupture and transformations in the notions of race, nation, and culture by attending to the contradictory but reciprocal relationship between racial nationalism and the ‘cultural’ deployment of multicultural rhetorics. Focusing on the South Korean context, the contemporary racialization of Chosŏnjok (Korean Chinese Migrants amid South Korea’s Multicultural Turn)

The aim of the paper is to use methodological viewpoint of the visual turn of sociology to understand the influence of Japanese Animation and Manga and the phase of their ‘globality.’ The data that will be dealt with is the one from the extended survey research on Manga and Anime conducted by Association of Japan Sub-Culture Studies at Kobe University (headed by the author).

Comparing the research results that have already been conducted by European and American scholars, and the survey research has been conducted in the areas such as in Hangzhou (China), Hong Kong, Taipei and the survey research has been done using questionnaires as well as interviews with the participants/fans in the events of Manga/Anime festival in those cities/areas.

Observing those processes of acceptance/rejection, and the ways of permeating into people’s daily life paper suggests the transformed nature of our contemporary way of life in terms of the visual and the social are constructed simultaneously in localized ‘cosmopolitan’ consciousness from below.

effect than abortion in reducing births in South Australia. The abortion rate is still lower than in the rest of Australia as calculated from Medicare data, even though this is an underestimate because it includes only fee-paying patients. There remains a need for continuing emphasis on better contraceptive use, including better emergency contraception.

An international comparison of the recent abortions data for South Australia, UK and USA revealed that the prevalence of abortion in South Australia was marginally lower than that in the UK and USA.

The Chechen and Japanese Values in a Globalization Context: The Comparative Analysis

In the modern world the globalization process strengthens an interference of cultures and values, actualizes contradictions of secular and religious, traditions and the modernity, requirement of defining a vector of a society development.

Object of research - the Chechen and Japanese values in conditions of globalization.

Methods: cultural and action approaches, methods of the sociological, comparative analysis.

Results. In Caucasus, as well as in Asia, Japan in the hierarchy of values the key place take the values of family, collectivism, respect for seniors, mutual aid, solidarity, group unity. The Chechen values, despite religious and language distinctions in Caucasus, are considered as a part of a segment of the Caucasian and Russian values. During the post conflict period in the Chechen Republic, as well as during the post-war time in Japan, high interest to social and cultural values and norms is observed, responsibility for preservation and revival of traditions and customs is shown. In the Chechen and Japanese society there is a similarity and distinction in the ratio of collectivism and individualism, display of paternalism, reflections on globalization calls. Transformative changes in Russia cause social activity, among young and persons of middle age enterprise, initiative, requirement for a competition is more often observed. The Internet, mobile communication, other information means make changes to functioning of traditional norms. In this context interesting is the aspiration in Japan to adapt traditions for new conditions.

Conclusion. Caucasus is on crossing of the European and Asian cultures. Japanese social practice of combination of traditions and the modernity serves as a model for others in carrying out transformations in social and cultural spheres of life. However in each region and country it is necessary to develop a strategy of modernization taking into account social and cultural specificity.

Work Values in a Modern Linguistic Space

In the modern world, in the conditions of globalization many languages and cultures undergo changes. Social factors make the mediated impact on languages that is shown in contexts of their use, new word meanings.

The purpose of our research is the study of work values in the English, German, Russian and Chechen idioms taking into account social and language contexts, the language situation in the Chechen republic.

Methods. The comparative, semantic, corpus, sociolinguistic analysis of idioms, poll of the Chechen language speakers is carried out.

Results. In the basis of work values there are the material values focused on income, profit; spiritual and psychological values - self-realization in work, pleasure from work, understanding and feeling of the meaning of life, spiritual growth through work, creativity, social and career values - education, status in society. In an internal form of idioms the cultural values describing work traditions, customs, and the historical events forming work cultures of different countries were also reflected. So, in the English and German languages the value of official regulated work was accentuated, in German the value of an official duty was also specified. In the Russian contexts very similar social experience is fixed. According to the poll of Chechen language speakers at the present stage important are the values of income and success that can be connected with a post-war situation of revival, construction of work culture. In the frame of a language situation in Chechnya the idioms with the opaque internal form which fixed the facts and subjects of culture not taking place in the modern reality are less familiar and seldom used.

Conclusion. Thus, the study of contexts is necessary for revealing the influence of social factors on idioms and evaluation of the language situation in society.

La Presencia De Las Mujeres En El Trabajo y Los Cargos De Dirección En México

Las mujeres en cargos de dirección del sector privado en México.

Gina Zablodysov Kuper

La ponencia mostrará cómo, a pesar del drástico aumento de la participación de las mujeres en el ámbito laboral y en las universidades, su presencia en los cargos de dirección y de liderazgo en las compañías privadas es todavía muy escasa y variará de acuerdo a una diversidad de circunstancias y como son el tamaño, gênero de la compañía, procedencia del capital, existencia de políticas de diversidad, y otras características del ámbito laboral.

Las fuentes de la investigación la constituyen los trabajos académicos sobre la temática, la interpretación de los datos estadísticos del país, la cuantificación y generación de la propia información a partir de los distintos directorios empresariales, el trabajo de campo realizado con base en entrevistas con los directores(as) de recursos humanos y las mujeres ejecutivas de varias corporaciones. Con base a estos datos, el trabajo adoptará una estrategia comparativa que permitirá analizar la situación en México con las tendencias de otros países tanto en América Latina como en el resto del mundo.

Los puntos a tratar, son los siguientes:
1) Las presencia de las mujeres en la fuerza de trabajo, en los cargos de liderazgo y en la educación superior. Persistencia del “techo de cristal” segregación horizontal y vertical en los oficios y carreras en las organizaciones.
2) Los efectos sobre las oportunidades que tienen las mujeres de las políticas de flexibilidad, diversidad y de apoyo a la conciliación familiar trabajo. Diferencias entre las empresas de capital extranjero y las nacionales.
3) Características familiares y diferencias generacionales de las mujeres directivas.
4) Feminización y masculinización de las ocupaciones.
5) Diferentes trayectorias laborales.
6) Principales retos y obstáculos de las mujeres en cargos gerenciales y ejecutivos.

¿Hacia dónde vamos? Proyección hacia el futuro.

Renegotiating Communal Identity in a Globalized World: The Case of Greek “Communal Associations”

As a follow-up research on “communal associations” in Greece, this case study of 16 internal immigrants’ hometown associations from the island of Lefkas, aims to examine their struggle to survive the intergenerational gap amidst the present conditions at the turn of the millennium. Established primarily during the postwar period, the country’s urban and rural thousands of “communal associations”, acting as “mediating structures”, undertook initiatives for the implementation of public projects in the villages; played an active role in maintaining “local cultures”; and reinforced collective identity and belonging to an “imagined community” away from home. Although their noble mission was initially very successful, during the last two decades these associations were confronted with a number of problems, the most important being the declining membership and participation of the second and third generation. This paper intends to understand the contemporary challenges and institutionalization dilemmas, which impede their operation and threaten their continuity, in the light of these major changes that impact communal life: (a) The dissolution vent connectivity with multiple identity trajectories that characterize postmodern societies; (b) the eroded sense of “topo-logical” conception and “self-placement” due to globalization and (c) the
weakening of communal cohesion due to the recent economic crisis. In addressing these problems, Lefkadian “communal associations” employ different strategies to overcome their current predicament and counterbalance the “homogenizing” effects of globalization: Some, stressing the eternal qualities of traditional values, try to perform an almost religious “sanabatism” to old and unaffected identities through the ritualistic re-enactment of village customs and practices that promote group spirit. While others, introducing a “globac” approach, adopt novel means and try to institutionalize new communal practices in order to appeal to youth. Thus, seeking to (re)establish communal bonds through “invented traditions”, they renegotiate local identity and culture.

RC15-264.5 ZADOROZNYJ, MARIA* (University of Queensland, m.zadoroznyj@uq.edu.au) BRODRIBB, WENDY (University of Queensland) MILLER, YVETTE (Queensland University of Technology) Private Provision, Public Care? Community Based Postnatal Care in Neoliberal Times

As with many other high-income welfare states, maternity care in Australia is available through a system of universal health coverage available to all citizens. However, Australia is distinctive in its parallel private health insurance sector which operates alongside and in competition with the public sector. The private health insurance sector has been heavily subsidised through a range of government policies. The costs which have been criticised as costly and inequitable insofar as they favour the most affluent segments of the Australian population and those in metropolitan regions. In addition, concerns about the impact of this stratified system of care on maternal outcomes have been increasing. For example, women birthing in the private sector are at substantially higher risk of instrumental delivery, caesarean birth, induction of labour, episiotomy and epidural anaesthesia; their stay in hospital following birth is, on average, twice as long as women birthing in public facilities (Australian Institute for Health and Welfare, 2011). What do these differences mean for how women experience post-birth care following discharge from hospital? In this paper, we report on analyses from two Queensland studies of women’s experiences of care in the community following childbirth, with a particular focus on the impact of public and private care provision. We report findings from a Queensland survey of new mothers (N= 6,433) in terms of their experiences of care in the community, and their confidence and satisfaction with their healthcare. In addition, we report the findings of qualitative interviews with 70 new mothers and 49 health care professionals providing post-birth care in public and private health care sectors in Queensland. Together, these analyses demonstrate inequities in health care provision resulting from the current stratification between public and private systems of maternity care.

RC21-362.1 ZADRAZILova, DAGMAR* (University of Cambridge, d251@cam.ac.uk) Tempelhof: A Battle for the Green Heart of Berlin

Tempelhof Airport, an iconic building with rich history in the middle of Berlin, was closed for traffic in 2008 and the airfield turned into a huge park, much loved by inhabitants from the adjacent neighbourhoods as well as by Berliners from further afield. However, after the Berlin Senat, as a governing body of the metropolis, announced its much-trumpeted “Masterplan” to re-develop the airfield, a wave of activism emerged. What was in stake was not only a loss of a unique place, a green lungs of Berlin and one of the largest open green spaces within an urban landscape in the whole of Europe. However, after the Berlin Senat, as a governing body of the metropolis, announced its much-trumpeted “Masterplan” to re-develop the airfield, a wave of activism emerged. What was in stake was not only a loss of a unique place, a green lungs of Berlin and one of the largest open green spaces within an urban landscape in the whole of Europe. Therefore, various kinds of creative activism appeared in order to save the park, consisting mostly of engaged volunteers and enthusiasts, yet of different educational and income backgrounds and age: from garden colony (established in the 1920s), fighting against the loss of social learning to public initiatives campaigning through education and rocketing rents. Thus, it is obvious that the perception of “urban renaissance” is dissimilar amongst different strata of society: it is not only the conflict of the power elites and citizens, but also of people who believe they belong to Tempelhof (and keep its memory) vs. those who do not.

Kozminski University Index of Balanced Economic and Social Development (“IBESD”) for Poland

The paper presents a new Index of Balanced Economic and Social Development (“IBESD”), designed to evaluate Polish economy and society, with an emphasis on human conditions. “IBESD” is constructed in “beyond GDP” paradigm, on widely accepted assumption that traditional measures, such as GDP, are insufficient to evaluate socio-economic development. “IBESD” covers four domains: internal (national) economic, external (international) economic, internal (“micro” or subjective) social, and external (“macro” or objective) social. Each of them is measured as an aggregation of several simple indicators. All four medium level indexes of four domains show almost parallel changes, so they can be aggregated into a general “IBESD” index. All of them, “IBESD” included, describe very well changes in Polish economy and society during 2000-2011. Their trends may be explained by general knowledge of economic cycles in Poland and they are surprisingly highly correlated with the ultimate measure of human conditions, operationalized as an aggregation of psychological well-being (state of mind and emotions) and suicide indicators. Economic and social components of “IBESD” show the same pattern of changes, with a slight delay and greater amplitude of social changes. That indicates “leading” role of economic aspects in relation to social ones and great sensitivity of social indicators to economic ones. As far as social aspects are concerned, the trend of subjective evaluations of current conditions repeats, with small delay, the “leading” trend of expectations for future social conditions. This delay does not appear, however, during the present economic crisis, when predictions and evaluations similarly react to dramatized economic news. “IBESD” was designed in a theoretical context of balanced development. Its application confirms the theory that rapid development is associated with diminishing balance between its different domains.

Discourse on Youth’ Sexual and Reproductive Health-Stigmatized in Lahore Pakistan

INTRODUCTION: Pakistan is facing various challenges to deal with issue of youth’ Sexual and Reproductive Health (SRH). Although youth represent large number of population, yet are deprived to seek proper education and treatment to cope with their SRH needs. Subject of human sexuality is associated with strong ideology, moral views and traditions. Being Muslim country where, to discuss the topic of SRH is a societally taboo, less research is done. Moreover, poor infrastructure coupled with non-co- creation of behaviour of family/community and healthcare providers discourages youth’ practices to access particular services. Thus need for this study has arisen to understand youth development, enabling to provide appropriate information about sexuality and reproductive health to youth of Pakistan.

METHODS/APPRAOCH: Research on “Assessment of awareness of youth living in Lahore regarding Reproductive health” was conducted in 2009, funded by Small Scale Research Grant under Bill and Melinda Gates Foundation at John Hopkins University and organized by Population Council. Potential participants for study were youth (males and female of 15-24 years), parents, teachers, representatives of youth organizations, service-providers and Govt. officials/policy-makers. Qualitative research technique was adopted through 40 In-depth interviews and 12 Focus-Group Discussions along with combining two techniques (Dynamic Contextual-Analysis and Formative-Research).

RESULTS: Research provided a deep insight into lives and thinking of youth. Results show that youth are quite aware about subject although there are still some concerns about access and understanding of correct/authentic knowledge. It highlighted gaps in access to information from reliable sources and non-cooperative behaviour of family and community.

CONCLUSION: Research concluded that there is major difference of perceptions and awareness-level amongst females and males. Lack of reliable knowledge about sexuality/reproduction, unpreparedness for physical/emotional changes, over-exposure of information via internet, scarcity of youth-based interventions and ambiguity of key-stakeholders’ roles are major constraints.

HIV/AIDS Prevention Among Female Sex Workers, Lahore, Pakistan

Background: Although commercial sex is illegal in Pakistan, yet the number of FSWs is increasing. Pakistan is almost in the grip of an Asian epidemic, where HIV/AIDS is spreading like a silent killer. One of its main reasons is the high rate of transmission among sex workers and their clients, due to lack of awareness, limited access to healthcare and preventing services, socio-cultural barriers and taboos.

Description: FSW Service delivery project to respond spread of HIV/AIDS was launched in collaboration with Punjab AIDS Control Program and Contech International in Lahore during 2012-13. Comprehensive package of HIV services and provision of other health support services were the key project interventions. DISH[C] Centers (including FSWs friendly-DICs) established in high concentration areas of FSWs, focusing their typology including home, street, kot-khana and hotel-based FSWs. Extensive trainings were imparted to peer educators and counsellors of results of multisectoral and cross sector joint ventures. For the communities (VCN) was formulated by bring together more than 100 volunteer peer-educators. Innovative strategies including provision of Primary Health Care (PHC), STIs management, Inter-Personal Counseling sessions with 9,500 FSWs and Behavior Change Communication (BCC) interventions was applied for awareness and promotion of safe-sex practices. Moreover, law enforcement agencies, local GPs/CBOs, sex-workers network operators were also sensitized to create enabling environment.

Challenges: Major challenges e.g. community and service-providers stigma regarding sex-workers, substantial use and limited access to healthcare services, availability of prevention commodities, HIV-testing, illegality of sex-workers and non-cooperative attitude of law agencies were addressed.

Conclusion: A mix of multiple interventions involving key stakeholders is beneficial to bring change in knowledge and behavior of community and vulnerable populations. Offering both outreach and drop-in services proved the best way of involving sex-workers and the services would be more effective with this coordinated approach.

Dual Job Market for Universities’ Graduates – Comparing Educational Paths and Careers of Science and Humanities Graduates

During last twenty years huge expansion of tertiary education could be observed in Poland. Number of students has risen from less than half a million in the begging of the nineties to almost two millions in recent years (GUS, 2011). For most of the time in this period the number of students of humanities, especially social sciences, was rising at fastest pace. At the same time a shortage of technically skilled employees has occurred in the Polish economy. This led to number of policies aimed at increasing popularity of technical and scientific studies among secondary schools graduates and reversal of the aforementioned trend (MINISW, 2013). These changes have yet to satisfy the demand for skilled labour force.

We will present the results based on conducted surveys five years among students and graduates of University of Warsaw – the biggest university in Poland. We combine results of statistical analyses of surveys and administrative registers with results of qualitative research (Jasinski et al., 2012). One of main conclusions is that there is a dual labour market for university graduates: one for highly demanded graduates in sciences and the other for the graduates of humanities. Representatives of these two clusters proved to have different approaches towards their studies and tend to develop different strategies for entering the labour market: students of sciences concentrate on gaining knowledge and specific skills and tend to seek job experience during their studies to enhance their employability in the future. Careers possibilities of these groups differ substantially. Graduates of sciences seem to be more successful on the labour market.

ZAKHAROV, NIKOLAY* (Södertörn University, nikoly.zakharov@sh.se)

Racialization of Labour Migrants in Russia - Taking Social Movements into Consideration

The anti-immigration movement is one of the most important actors in the Russian social movement network. The goal of this paper is to isolate the key elements of the movement’s frame, the ways in which it is applied in building the discourse around “illegal immigration”. It is shown that the social movement against immigration may be treated both as epiphenomena accompanying global processes of racialization but also as the producer and transformer of societal patterns, discourses and political constellations which has its own morphogenetic, structure-transforming potential. By revealing the relatively autonomous character of many of the key themes of racial discourse in Russia, I argue that although the processes of forming class, nations and ethnicity are intimately intertwined with the biologization of cultural differences, the latter cannot simply be reduced to the former. Racial discourse concerning labor migrants in Russia has been shaped by economic changes and the realization of a nationhood project. Construction of the “migration issue” as a social problem in Russia is in many ways embedded in the tensions obtaining between the demands of the state for social cohesion and the demands of enterprises for socially disunited labor. My study has demonstrated that the operation of these factors results in the racializing of visually recognizable groups of labor migrants, the social relations in which they are involved, and, more recently, the category of “migrant” itself. Since groups and individuals develop strategies for negotiating their place in the racial order, they are also involved in the process of negotiating access to material and discursive resources. We thus need to identify and examine trends in the shifting logic underlying the construction of the racial other through the migration regime and also take a closer look at individual and group responses and negotiations in respect to this process.
childfree/childless than the more educated (studies on men and childlessness keep being less abundant, though). Moreover, research findings from European countries suggest low fertility may be correlated to unemployment risk and job insecurity. How are births being affected in Spain? Secondly, an inquiry on how older never-married women and men, regardless of their sexual behaviour or identity, are facing difficulties due to the crisis. Within a familial welfare regime, never-married older individuals (and some childfree ones) build support networks in a slightly different fashion than do parents/married older adults. Such networks tend to be more diverse, but also more vulnerable to health/independency negative events. Thirdly, a question on whether salient social justice issues are being dealt with or not when looking at the two previous points: is becoming a parent a choice increasingly being reserved for the more educated and privileged individuals? Are childfree/childless and never-married individuals suffering cumulative inequalities just for the still prevailing stigma of such conditions?

ZAMORA, GERARDO* (Universidad Pública de Navarra, g.zamora.monge@gmail.com)

DE LA ROSA, ROSANNA (Universidad Publica de Navarra)

Childfree/Childless Individuals, Population Ageing and Sexual Identities

In many societies, either as a single person or as a couple, individuals who choose not to have children are increasing in number and as a share of the population. Also, many individuals and couples do not have children not because it is their choice, but because of other social and individual factors. Both situations confront normative sexualities, and question the normative links between sexuality and reproduction. In parallel, a large group of individuals have been denied social (and thus legal) recognition concerning the access to parenthood; therefore, a great part of these individuals have remained childless/childfree, whether voluntarily or not. This is the case, for instance, of many lesbian, gay, bisexual, transgender, intersex or queer (LGBTIQ) individuals aged 60 and older, or even younger. Both LGBTIQ parents and non-parents confront and question, too, normative sexualities and the links with normative reproduction.

How are these social processes affecting demographic changes, such as population ageing? Have they been affecting such changes? Does the study of childless/childfree individuals in their fifties and sixties shed some light on how to address the challenges facing the societies in the future decades, when family structures will have changed so much and childlessness will become more visible? Will the increasing choice of a childless/childfree life blur the boundaries between certain features of the so called sexual identities? Can there be an identity based on childlessness/childfree choices? How does this affect sociological research perspectives on demographic changes? Is this relevant for policies addressing population ageing?

This paper analyses waves 1, 2 and 3 from the Survey of Health, Ageing and Retirement in Europe (SHARE). It compares parents and childless/childfree individuals in terms of health, social expectations, and other variables. The paper analyses, too, results from 10 in-depth interviews with LGB individuals aged 50 and older, most of them non-parents.

ZAMORA VARGAS, DANIEL* (Free University of Brussels, daniel.zamora.vargas@ulb.ac.be)

When Exclusion Replaces Exploitation: Structural Unemployment and the Retreat of Class Politics

The rise of mass unemployment in Europe in the late 70s and early 80s changed the conditions of the political struggle and debate in the west industrialized societies, producing a strong economic and political inequality within the working class. While the conflict between capital and labour had structured the analysis of the post-War years (with strong unions and labour parties), the 70s and 80s witnessed a shift of attention to the unemployment crisis and in particular its unequal effects (as evidenced by the centrality of debates around exclusion, urban marginality, and unorganized struggles). This simultaneously political, sociological, semantic and ideological turn is deeply rooted in the changes that have taken place within the scenarios of the last forty years. The increase in unemployment, which is itself increasingly concentrated on parts of the population (both socially and geographically) resulting in the emergence of a vast stratum of what Marx called “surplus population”, is a key elements in understanding this evolution. This evolution also created the conditions of possibility for both the conservative political strategies aimed at limiting access to the Welfare State as well as the deeply entrenched of “the working class question” among authors and critics on the left like André Gorz or Herbert Marcuse. In this new ideological framework, the “exploited” is defined by its exclusion and its increasingly precarious relationship with work. Making use of new statistical data on unemployment in Europe, our paper will explore how the political struggle and debate was progressively framed around the question of the “excluded” and the underclass in a way that made less relevant the question of exploitation and changed the political agenda. This evolution is of fundamental importance – theoretically and practically – for the advancement of critical theory and for understanding inequality under neoliberalism.

Sociological Dilema of Iranian Sociology: Critic of Critics

The purpose of this paper is to study the situation of sociology in Iran focusing especially on examining the lack of sociological theorizing. For thirty years the development of positivism and experimentalism has dominated, emphasizing quantitative methodology. The impact of this is that theorizing about Iranian society has been forgotten. To understand the reason for this we have performed a meta-analysis of discourses of social actors in social sciences. Findings indicate that this can be explained by social choices and not social chances, individualism, or a lack of cooperation or creativity. Findings also suggest that what is important is the manner in which they spoke, perhaps even more that what they actually said.

The Early Employment Inequalities of Disabled Postsecondary Graduates in Canada

Disabled youth have become an increasingly important at risk group for educators and policymakers in Canada. Youth with disabilities are more likely to drop out of high school and are significantly less likely to pursue higher education. Yet, many universities are now reporting that nearly 10 percent of their graduating students self-identify as having a disability, and educational achievement-based programs designed to accommodate students’ needs are growing across campuses. While accessibility within postsecondary education may be improving, existing studies suggest that youth with disabilities still face inaccessible workplaces and hiring discrimination. In fact, perceptions of disability by employers and colleagues have been shown to have stronger effects on workforce outcomes than lack of accommodations in the workplace. Drawing on Statistics Canada’s 2005 National Graduates Survey, we explore three major research questions. First, do disabled graduates experience similar inequalities across economic and non-economic transition outcomes (earnings, education-job match, job satisfaction, employment, full-time employment)?

The Communist Legacy As a Self-Transforming Social and Semiotic Structure

This paper will focus on the problem of the contested meanings of the legacy of communism in Central and Eastern Europe and the relationship between moral and political assessment of the communist past and the modes of its interpretation in academic debates. Post-communist societies are commonly perceived in terms of the legacy of the communist period, which is seen as a crucial factor defining both their general path of development and shaping their internal social hierarchies. At the same time, elements of the communist legacy are imbued with strong moral and emotional judgments. In the majority of cases, this legacy’s connotation is clearly negative and is used to color most of the past and current outcomes of the socio-economic development in countries of the region. Moreover, contemporary social actors, for a variety of reasons, are often viewed as being

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
tainted by the communist legacy: as products of the communist institutions and path-dependent effects. Analogically, diverse discourses that may be perceived as harmful are seen as direct outcomes and/or new forms of communist “new-speak”. This highly moral and political nature of the communist legacy, which is an important component of the reservoir of moral metaphors of public discourses in the countries of the region, makes debates on the nature and scope of the “real” or structural impacts of the communist past extremely difficult. The paper will demonstrate how constantly re-negotiated meanings of communism, and the boundary between “negative” and “positive” (if any) aspects of the communist leg- acy, impact the way in which the role of the past is interpreted in academic de- bates. Examples will be taken from discussions of regional inequalities and from sources that examine the roots of economic and social backwardness of Poland and other countries in the region.

Gender's Crooked Path: Feminism Confronts Russian Patriarchy

This contribution discusses the uneasy development of gender studies in Russia as one example of public sociology, on the basis mainly of our own experience in the Gender Studies Program at the European University in St. Petersburg. It observes how the political and academic context of the 1990s created opportuni- ties for academic innovations that ideologically challenged Soviet patriarchy and invoked gendered criticisms of post-Soviet changes. I discuss the effects of the rapid but insufficient institutionalization of gender studies in the Russian academic context and how gender became the umbrella term for both feminist and anti-feminist standpoints. Since international support for the gender studies diminished in the 2000s, the fashion and economic benefit of doing gender studies has declined, with only a small group of researchers maintaining their commitment to the feminist approach to gender. I focus on the politicization of gender in the last decade of Putin’s Russia and the role of feminist researchers in the analysis of the new conservatism, expressed in gender ideology. The problems of combining public expertise and academic work in the particular realm of gender politics are examined.

Successful Aging: Cross-National Analysis of Subjective Well-Being in the Late Life Period

This paper aims to identify and analyze the life course and contextual factors that influence the level of subjective well-being (SWB) of 60+ aged people. Our research is based on the results of 5-th waves of World Value Survey. We have investigated the level of SWB of older people on individual and country level. The results of research demonstrate that the strongest predictors of SWB in late life period are satisfaction of financial state, health state and sense of control, i.e. the important factors of SWB of older people is an ability of older people to establish and maintain friendly relations with other people (members of family, friends and etc), i.e. to invest their own resources to positive emotions and important relationships for themselves. Older people from ex-communist countries as USA, Canada, New Zealand and United Kingdom have, by contrast, the highest level of SWB. Older people from English-speaking countries such as (USA, Canada, New Zealand and United Kingdom) have, by contrast, the highest level of SWB. These results allow suggesting that the degree of modernization influences the level of SWB very strongly. For older people the country in which they live, the level of democracy, GDP per capita, freedom and tolerance are very important. In contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as “successful aging”.

Apport De La Socio-Analyse à L'étude Du Processus De Construction Identitaire

The object of my communication consists in exploring the lien between the experience of the immigration and the construction of the identity ethno-que, à partir d’un cas concret (une famille d'origine nigérienne émigrée/immigrée au Canada). Les théories de l’identité, qui ont connu un boom depuis les années 1970, ont certes rompu avec l’essentialisme des premières approches, mais perpétuent souvent (à leur insu) une perspective substantielle des identités ethniques (Brubaker, 2000; Jenkins, 2010). On reconnaît volontiers ces dernières comme étant mouvantes et dy- namiques, mais on s’attarde très rarement sur leurs incohérences, leurs ruptures, leurs contradictions (Bajot, 2009; Collovardi, 2007). Par ailleurs, l’ethnicité (comme l’identité) se trouve souvent étrangement traitée sous l’angle soit de l’intégration (le fameux concept du vivre-ensemble), soit du déracinement (crise d’identité), soit encore du rapport intergénérationnel (crispation ou dissolution de l’ethnicité; ethnicité sym- bolique). La socioanalyse (Sayad, 1991; Bajot, 2009), en remettant l’individu au centre de la recherche et en privilégiant la méthode de la biographie reconstituée, permet de contester l’essentielisation (intention discours dichotomiques) dans ses contradictions les plus profondes, ses ambivalences, ses évolutions (au cours d’une vie), ses mécanismes de dissimulation, etc.

Pour ce faire, il faut nécessairement saisir l’expérience de l’immigration dans toute sa complexité; autrement dit, dans les rapports qu’elle implique avec le pays d’origine : souvenirs, fantasmes, nostalgie, désillusion (du retour); avec la famille élargie : entre culpabilité et sentiment de devoir s’acquitter d’une dette; avec la so- cieté d’accueil : promesses (réelles ou d’escue) d’une nouvelle vie ou de nouvelles possibilités, discriminations (raciales, sociales, économiques, etc.), sentiment de have the lowest level of SWB. Older people from English-speaking countries have the lowest level of SWB. Older people from English-speaking countries such as such as USA, Canada, New Zealand and United Kingdom have, by contrast, the highest level of SWB. Older people from English-speaking countries such as USA, Canada, New Zealand and United Kingdom have, by contrast, the highest level of SWB. These results allow suggesting that the degree of modernization influences the level of SWB very strongly. For older people the country in which they live, the level of democracy, GDP per capita, freedom and tolerance are very important. In contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as “successful aging”.
The Reverse Panopticon Metaphor: The Autocratic State's Fear of Being Recorded

In the aftermath of the catastrophic earthquake that occurred in the Chinese province of Sichuan in 2008, the artist and activist Ai Weiwei launched an independent ‘citizen investigation’ movement that challenged the government’s failure to gather accurate data on the number of deaths, especially the deaths of schoolchildren who had fallen victim to shoddy school building construction. Through a case study of this movement and its suppression by the Chinese State, this paper aims to analyze how new media facilitate the power dynamics between the autocratic state and social movement actors.

To analyze this campaign, the paper uses David Whitman’s ‘coalition model’, developed to evaluate the impact documentary film affect social movement actors, and redefines this model. First, activist documentary film that is disseminated via the internet and makes use of the internet at various stages of the creative process does not merely influence the dominant public sphere, but, rather, it creates new public spheres, including a local ‘grievance community’, as well as an activist community. It creates new internet spaces to discuss issues addressed by the documentary. Second, the documentary film production and distribution become key processes of movement mobilization in this context. Third, various state agencies’ responses to social movement actors illustrate a pattern of the autocratic state’s fear of being recorded. The prison Panopticon metaphor is therefore reversed in the process: the governor who is monitoring all members of the autocratic society, becomes the subject of all-pervasive observation by its prisoners in the new public spaces created by new media technologies.

This study signifies discursive social movements in the digital century in a party-state with multiple strict controls and heavy censorship on expression and association.

Asian Values Revisited after 20 Years: Value Shift in China, Japan, South Korea, and Taiwan

1 Introduction

This paper focuses on the value shift occurring in four East Asian societies resulting from socioeconomic modernization and political democratization. Proposed in the first half of the 1990s, the notion of “Asian values” describes the socio-cultural characteristics of East Asia (i.e., conformity, hierarchy, harmony, and the priority of collective interests). In reexamining Asian values in China, Japan, South Korea, and Taiwan against the background of overwhelming social transformation in this region, this paper addresses two issues: (1) the differences of Asian values in the public and private spheres in four East Asian societies and (2) whether citizens in these four societies detach from the Asian traditional culture and thus Asian values.

2 Methods

The theoretical discussion includes an examination of the empirical evidence provided by the Asian Barometer Survey. Three waves of surveys administered over the past 10 years in four East Asian societies have offered an abundance of information to test the value shift in this region.

3 Results

Revisiting Asian values 20 years after its initial proposal has revealed two major findings. First, no remarkable gap exists between the Chinese and other East Asian societies’ citizens in terms of Asian values in the private sphere. Second, although citizens in Japan, South Korea, and Taiwan have abandoned authoritarian political values, this value shift has not been observed in China.

4 Conclusion

The value shift is more significant in the public/political sector in East Asia. Even though Asian values in the private sphere are popular in all four East Asian societies, modernization and political democratization have facilitated declining Asian values in the public sphere in Japan, South Korea, and Taiwan. Not only do the Chinese cherish traditional family and social values, as do the citizens in other East Asian societies, but they also uphold authoritarian political values.
the possibilities of resolving civil disputes from bottom up. Using a national survey dataset (CGSS2005) from China’s 410 villages, this study aims to examine the impact of social capital on rural residents’ preference and actual choice of resolution in virtual and actual civil disputes, respectively. The social capital in the village refers to the features of social organization, such as trust, norms and networks that can improve the social capacity by facilitating the coordination. The author argues that increase in social capital can significantly increase the probability of mediation. First, the abundant associations provide more platform and agency for the residents to resolve their civil disputes. Second, the networks on the community level could give rural residents more choices when they face disputes. Considering the high cost of administrative and legal ways of resolution, the macro networks are cheaper and more available for ordinary villagers. Third, the social trust increases the interaction and dependence with each other so that villagers may be more willing to resolve their disputes by resorting to the informal parts. This research is of great importance for discovering the informal institutions indispuses resolution and provides insightful evidence for rethinking the state-society relationship in authoritarian China.

ZHANG, JUNDAN (JASMINE)* (University of Otago, jasmine.zhang@otago.ac.nz)

“No Gods, No Shangri-La”: Rethinking Tourism In An Environmental Discourse

Currently, environmentalism and the conservation movement still largely are situated within a positivist epistemological paradigm that is built on a tradition of Western Enlightenment epistemology. Consequently, the value of the current concepts of ‘the green economy’ and ‘sustainable development’ often are not challenged from non-Western political and ethical perspectives. Drawn from a study in a remote Tibetan village called Nizu, in Shangri-la County of northwest Yunnan province, China, I pose the question: “what role does tourism play in the formulation and development of power and reshaping knowledge in terms of how humans relate to ‘nature’?” From a political ecology perspective, I will identify an environmental discourse within which tourism is embedded. By describing how tourism acts as a medium for mediating the material needs and cosmological beliefs in the village, I will challenge the idea that tourism is an imported product with the power to bring people and their living environment to modernity, in a more “ecological” way than would otherwise be the case. I argue that the descriptors “premodern”, “modern” and “postmodern” are performed by the villagers in one way or another, through tourism. Such performances can be contextualized in the environmental discourse that constantly is shaping and reshaping ecological knowledge that has been taken for granted. Finally, I suggest we look further into the subjectivities that determine such performances of tourism, and the power relations involved, to better understand the complex and fluid nature of concepts such as “nature”, “culture” and “tourism” in this setting.

ZHANG, JUNDAN (JASMINE)* (University of Otago, jasmine.zhang@otago.ac.nz)

Tourism, Politics and Beliefs in Nizu Village in Shangri-La, Southwest China

While most of the literature in tourism studies focuses on the problems relating to tourism development at World Heritage Sites, little attention is paid to places that somehow failed to be included in the list of World Heritage Sites. This paper will talk about tourism, politics and beliefs in a Tibetan village called Nizu, with a reputation as the ‘backyard of Shangri-La’ in relation to the famous tourism destination Shangri-La County, Southwest China. Geographically located within the Three Parallel Rivers Region, which is a natural World Heritage Site, the 2003 application of Nizu village to be included in the Three Parallel Rivers WHS failed due to the governmental plan for a copper mine north of the village. Pudacuo National Park’s establishment in 2007 brought hope to the villagers of Nizu for protecting the village and region around its ecotourism products. Such hope hasn’t realized. Currently, the village attracts approximately 1500 visitors each year. One significant issue in the village, brought about by the ‘underdeveloped tourism dream’, is the diversity of ideas held about environment/nature. Traditionally, the villagers believed in the ancient Bon Religion, a belief that treats mountains and rivers as gods and then bonds people’s everyday life to these gods. In such a belief, the tangible (mountains and rivers) and the intangible (spirits and gods) are intertwined and inseparable. With the existing ambivalent attitudes to developing (ecotourism in the village, various ideas of dealing natural resources become tangled with other socio-political issues among villagers. By contextualizing and theorizing from a political ecology perspective, I question what role does the notion of world heritage site play in a complicated situation such as in Nizu village? Also, I ask how far can the idea of ‘protecting heritage’ progress without close scrutiny on the power issues involving the different players?
further help to think more closely about the possible path of urbanization and guide more effectively the practice and exploration. This paper takes Mei county—a county located in the core zone of Zou-Qin culture, which is of thousands of years of history—as research object, by historically presenting its development to observe the developing stages, distinguishing characteristics and historical evolution of China's urbanization.

A Study on the Method of Public Participation Based on Discourse-Power Model Among Different Stakeholders: A Case for Avoiding NIMBY Risks of Waste Transfer Stations in Nanjing, China

Promoting sustainable development and public participation are inextricably linked, to promote sustainable development, it should to enhance the public participation. The “NIMBY” phenomenon which means that not in my back yard is an increasing prominent urban problem in China to threat sustainable development. NIMBY risks are the kinds of negative external effects of urban facilities. However, in China, with its rapid urbanisation rate, city services still need to be optimised, and many public facilities must be established. Thus, the remission of avoiding NIMBY risks is an urgent matter which can help to improve social equality and justice. NIMBY conflicts are a type of social conflicts among different stakeholders including governments, experts, planners, developers, media, residents from different locations, etc. To solve it, we need to coordinate the interests among different stakeholders even to addition.

This study constructs a method of public participation based on discourse-power model among different stakeholders for avoiding NIMBY risks and also the related approaches to realize them in Nanjing. Firstly, it classifies the different interests groups basing on the spatial zoning of different negative impact areas and the services area of waste transfer stations by using GIS-based spatial quantitative analysis approach. Secondly, it introduces the concept of discourse power, establishes a discourse-power model based on different interests groups, and analyses the game relationship among them. Thirdly, it builds a mechanism of distribution and implementation of discourse power to clarify different discourse power among stakeholders. This study attempts to improve an ordered public participation on avoiding NIMBY risks to guarantee a scientific, participatory, and operational urban governance.

Data Envelopment Analysis on Assessing the Efficiency of Japanese Film Release Market from 1955 to 2011

The film industry, as one crucial component of the leisure and entertainment industry, has received much attention in decades due to its great contribution to the economy and culture. Undoubtedly, with the presence of a big domestic market and excellent works, the Japanese film industry is playing a crucial role both to Japan and the world.

This study examines economic performance of Japanese film release market quantitatively from the perspective of input-output by applying the method of DEA based on the data from 1955 to 2011, and tries to interpret the change in light of historical development. The results demonstrate a wide range of efficiency among the individual units, and suggest a new perspective to recognize the performance of Japanese film industry for years.

Specifically, the models adopted in this study are Charnes, Cooper, and Rhodes model (CCR, 1978) and Banker, Charnes, and Cooper model (BCC, 1984), which are frequently used models of DEA. Technical efficiency (CCR efficiency) measures a DMU’s ability to convert inputs to outputs given the size of the DMU. On the other hand, by decomposition of CCR efficiency scores, BCC scores (Pure Technology Efficiency) and Scale Efficiency (SE) is calculated to examine whether the scale of the industry has any impact on its efficiency. The input includes number of screens, number of Japanese films released, number of imported films released, and average admission fee. On the other hand, the number of admission and box office receipts is output. The results also present the change of inefficiency shack on basis of the model, which is one advantage of the potential improvement room for input. Based on the above calculation, possible reasons for the changes of efficiencies and also some managerial implications and helpful insights are provided to competitors, investors and researchers.

Social Integration of New-Generation Migrants in Urban China: A Case Study of Suzhou

Associated with the rapid urbanisation, there is a gigantic issue of social change in China. Part of that change is caused by the millions of rural-urban migrants. As a consequence, their integration into China’s urban society has drawn extensive attention in recent years. The new generation of young people that are the new-generati- on migrants who are increasingly moving into towns and cities. Many young people, who have no roots and are the key potential to enhance the social integration of the new generation of young people who are the new generation of young people. The new generation of young people is the key potential to enhance the social integration of the new generation of young people. The new generation of young people is the key potential to enhance the social integration of the new generation of young people.

This study shows that new-generation migrants are more willing and have more potential to integrate into the urban society and can make permanent urban citizens. Although new-generation migrants have weak neighbourly interactions, they have relatively high attachment and sense of belonging of the neighbour. The findings also show that the quality of public open space is important for a more flourishing neighbourhood life which could support better social integration of migrants.

China’s Aging Population and Challenges It Is Facing

According to Chinese population projections, the paper analyzes future aging process of different historical periods. Findings indicate that unless the family planning policy reforms in future decades, the bottom of population pyramid will shrink dramatically, and growing life expectancy will progressively expand its top. By the year 2050, the aging population over 65 will account for 25% of the society. Considering the reduction of children population, the population in the labor force between 15-64 years old will also decrease.

This population transition will bring some very serious problems in the near future: Firstly, China will face the shortage of labor force if automatic standards of production process can’t be improved, especially in the low-end industries. It means migrant workers’ income will keep increasing and the labor cost in the production process will be getting higher. It will produce some negative effect on China’s international competitiveness.

Whereas aging process will accelerate, the adult population will save money for their future aging, restricting the consumption rate. It will affect the domestic spending policy. On the one hand, the decreasing of children population will lower family’s expenditure rate, on the other hand, the lower level social security will prevent the people in the labor force from contributing more to savings in their productive years.

With the population transition and the changing Chinese family structure, the aging people will face the shortage of social support network, especially due to lack of family members’ support. The linkage between mother and children’s family will weaken because of population migration. Thus Chinese aging population will have to depend on their spouses for their care. If they lose their spouse, the aging people will have to be send to bedhouse to be cared for. But up to now, China has not prepared enough bedhouses for their aging population.

China’s Class Structure and Future Trend

According to a series of nationwide sample data, the paper analyzes the changed trend of Chinese class structure, finds that the population of middle class is becoming more and more, the population of working class is surpassing the counterpart of farmer class. With the expansion of higher education, the population of middle class will be the biggest class in the near future, but the new middle class is still smaller. However, farmer class will be shrunk dramatically when urbanization is speed up. This kind of social transformation will affect the distribution of most Chinese society’s social policy.

**Awards and Conservation of Intangible Heritage**

In 1804, Napoleon Bonaparte rewarded for the French “Honneur et Patrie”, which became the first modern nationawards institution in the form of selection and pride. Then such awards systems spread throughout the modernizing world and fostered the formation of world's fairs, such as modern Olympics and UNESCO, which almost accepts all countries as its membership.

Specific to the awards systems of intangible heritage which promoted by UNESCO, on one hand, it reflects the people's consensus to protect ICH, but on the other hand, for different countries and areas to implement the same awards way, could if really accomplish the protection aim? It is noteworthy that each country and area form the culture logic and mode in their-own history river, when the local culture rule meets the global culture awards, actually it's difficult to reach the expected aim. Today UNESCO carries out a series of awards ways all of the world, including “Masterpiece”, “Nominations”, “Medals”, “Living National Treasures” and “Heritage Funds”, in fact, when China operated these awards ways specifically, which led to the “culture crash” will usually make the counter result that awards really wants.

As the Guizhou Miao ethnic group's Yalu King Epic for a example, The paper will research the culture awards in the conservation of intangible heritage, emphasize the importance of the local culture logic and rule in intangible heritage awards, make sure the awards could really protect the intangible heritage.
the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain

The development of heritage tourism in historical cities of China is regarded as a vital ingredient of urban regeneration by state and local governments. In Xian, the Imperial capital of thirteen dynasties of Chinese history, the construction of a modern landscape catapulted the city from an isolated entity to the globalized world system. Guided by a fifty-year governmental city plan, the densely populated inner city of X'ian is currently being transformed into a functioning replica of the Tang-era Imperial City to reconstruct the glorious past of Chinese civilization. Guided by a fifty-year governmental city plan, the densely populated inner city of X'ian is currently being transformed into a functioning replica of the Tang-era Imperial City to reconstruct the glorious past of Chinese civilization.

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in a Social Welfare Institution, the “functioning” of the elderly has been neglected. I reflect their identity pursuit of self-identity, namely, the elderly’s agency, constituting the impetus of their involvement in institutional service. In the service field, care-givers and care-receivers, as the actors in contact, gather to build the “life world” during care service with the subjective recognition and interaction practice, which becomes the foundation of the Participation and Cooperation between the aged and the organizational workers. Accordingly by way of self-care and participating in service the elderly construct the Participation and Cooperation in Context with the care-givers together, which contributes to both the old persons themselves and the resident, and to reaching the elderly’s “productivity” of identity. Through theelder’s participation and their cooperation with care-givers are meant to be an approach to Productive Aging in Institutional Care service.

How Home Ownership Becomes a Measurement of Inequalities: Analysis of Home Ownership of the Young Generation

Since the beginning of the 21st century in contemporary China, house prices have been increasing rapidly especially in metropolitan cities like Beijing and Shanghai. The problems of ‘unaffordable houses’ are most significant among people who are not able to buy their first houses in this period, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues to be four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as marriage and work by owning a home or not and living in a metropolitan city or not. The main arguments are people without home ownership are in a relatively disadvantageous position in life quality and even the marriage and labor market, so in the metropolitan cities in China, home ownership has become an important index of socio-economic status or to measure social inequalities.

The Rise of Income Inequality in Urban China, 1996-2010: Increasing Returns to Education, State Sector Shrinkage, and Composition Effects

Income inequality in urban China has experienced a rapid growth over the past two decades. To account for the rise in income inequality, previous studies have provided three major explanations: widening regional gaps, increasing returns to education, and growing residual inequality. Since the mid-1990s, however, the composition of the urban labor force has been considerably reshaped by three large-scale structural changes: (1) the expansion of higher education, (2) the shrinkage of state sector employment, and (3) a surge in rural-to-urban migration. In this article, I discuss how the recent rise of income inequality can be driven by these institutional and demographic shifts. Based on data from two nationally representative surveys, I use variance function regressions to decompose the growth in income inequality from 1996 to 2010 into four components: changes in between-group income gaps, changes in within-group income variation, and two types of composition effects (distribution effect and transfer effect). The decomposition results indicate that changes in between-group income gaps explain around 40% of the rise in inequality, while more than half of the total growth can be attributed to composition effects. Using counterfactual analysis, I find that changes in between-group income gaps are almost entirely driven by increases in returns to education, while composition effects stem chiefly from changes in human capital distribution and the shrinkage of state sector employment.

Participation and Cooperation: An Approach to Productive Aging in Institutional Care Service in F Resident

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in a Social Welfare Institution, the “functioning” of the elderly has been neglected. I reflect their identity pursuit of self-identity, namely, the elderly’s agency, constituting the impetus of their involvement in institutional service. In the service field, care-givers and care-receivers, as the actors in contact, gather to build the “life world” during care service with the subjective recognition and interaction practice, which becomes the foundation of the Participation and Cooperation between the aged and the organizational workers. Accordingly by way of self-care and participating in service the elderly construct the Participation and Cooperation in Context with the care-givers together, which contributes to both the old persons themselves and the resident, and to reaching the elderly’s “productivity” of identity. Through theelder’s participation and their cooperation with care-givers are meant to be an approach to Productive Aging in Institutional Care service.

How the Internet Is Transforming Health Experiences: Reflections from a Decade of Qualitative Research on Experiences of Cancer, Chronic Illness, Infertility and Bereavement

This study explores how people talk about the internet and how attitudes and caution about different types of websites have changed over the last decade, drawing on comparative qualitative analysis of narrative interview studies, conducted during the years 2002-2012. In the early 2000s patients’ narratives suggested that only particularly engaged, expert and activated patients sought health information online. By 2010 the web had become an almost unremarked, routine part of people’s experience (eg ‘of course we all looked it up straight away’). The internet has transformed how people make sense of and respond to symptoms, decide whether to consult, make treatment choices, cope with the emotional and practical aspects of care and connect to others. The complex associations of these actors co-construct new urban spaces through contestation and meaning-making. Moving beyond the macro-perspectives of political economy and economic geography, the research will engage with X’ian as an important ground for testing urban transition of social and spatial landscape, and examining social inequality in the rapid development of modern China.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
of what can be labelled the „conservative“ block of the Western elite. „Conservative“ means that its primary interest is the conservation of the status quo: the rule of a small elite through a democratic capitalist system. Attempting to achieve this goal in a dynamic environment with major challenges (the spreading of the communist ideology, the breaking up of the colonial system etc.), it needs to adapt innovative methods, like the creation of supranational institutions.

In the descriptive part I focus on nationality, age, gender and occupation of the participants. In the second, analytic part, I present the connections between different sectors of the industry as well as positions of political power that the participants hold. In a further step I attempt to describe the shift in this network between the 1950s and today. The official lists of current participants of the Bilderberg meetings allow researchers to draw an adequate picture of this network in its current form. From previous research on the topic of the change in the elite it can be expected that the major changes have occurred regarding the dominant industries, little changes are to be expected regarding the nationality, the gender and the age of the participants.

Between Voicelessness and Empowerment – A Biographical Approach to Life Stories of Complex Traumatised Mothers

Regarding currency and scope of sexualised violence against children my research takes a look at the long-term consequences for victim-survivors of these human rights abuses. With this perspective the social positioning of highly mentally burdened survivors comes into consideration. This paper is based on a biographical-sociological approach of the life stories of women, who are all patients of a traumatopsychiatric hospital and who were abused in their childhood. I would like to contribute first empirical results of my PhD project. Due to the fact that all the women I interviewed have children my results point to the major difficulties of being diagnosed, treated and seeing oneself as mentally ill and at the same time being a mother who is not supposed to be mentally tainted in any way. In my presentation I would like to illustrate that there is a strong self devaluation regarding the women’s motherhood that leads to a form of voicelessness of the interviewees towards actors, e.g. in medicine or social work. Based on further empirical results I will also take a closer look at ways of empowerment due to traumatopsychic approaches the women have appropriated to themselves. I would like to discuss on the one hand to what extent a traumatopsychic approach might overcome women’s voicelessness concerning issues of motherhood and on the other hand to what extent these women are somehow limited to pathologyising labels of mental illness that detach their present mental symptoms from their biographical background.

Yokohama, 1860-1923: Confinement and Clashes, Exchange and Hybridization

Yokohama, meaning “broad beach”, was Japan’s biggest free trade port opened in 1859, under so-called “unequal treaties” with Western powers. It became Japan’s most important venue of economic exchange with the world, technological imports, hybridization and innovation – such as Japan’s first railway link to Tokyo, first daily newspaper, first brewery, first gas-powered street lamps and first waterfront urban park. Yokohama provided space for international communities - American, European as well as Filipino, Korean and Chinese. The paper analyses some of the processes - confinement and clashes, exchange and hybridization - that ultimately led to the “rise of Asia” out of (semi-)colonial dependency.

Reducing or Re-Producing Inequalities? Grand Narrative of Diversity and Its Influence on the Minority Learner

European societies increasingly implement diversity education as part of a civic education curriculum in order to provide young people with competences in dealing with different forms of diversity. The presentation analyzes policies and praxis approaches pertaining to education for diversity at both the supranational level of European Union and Council of Europe as well as at the level of member states (Germany, Estonia, Russia, and Sweden). The presentation shows that in Europe school education for diversity similarly pursues two separate goals: while generating a grand narrative of celebrating European diversity those same materials and policies stipulate that issues of inequality are to be dealt with separately. Based on the conceptualization of diversity with reference to heterogeneities and inequalities, the presentation shows how inequalities tend to be covered in positively connoted conceptions of diversity. Comparing educational pol-

icies, school curricula, and teaching materials, the presentation reveals the ways in which diversity and inequalities are decoupled in curriculum and educational practice, and poses following questions: What happens if diversity is only treated as a matter of celebration? Turning to the minority learners, experiencing exclusion, the presentation demonstrates, how diversity celebration narrative disempowers those minority learners, contributes to more uncertainty, social closure and (self-)exclusion of those learners, who do not find themselves within diversity celebration.

Capabilities, Critique and Sociology

This paper discusses the implications of the double dimension of capability, a normative and descriptive concept, for sociology and its relationship to critique. Using a capability approach means endorsing a critical stance. But the resulting critical standpoint is as much a matter of concept, as of theoretical and methodological implementation. Therefore different ways of bringing together capabilities, critique and social sciences are at hand.

The conceptualization of capabilities along freedom and power of achievement offers a common normative background. Beyond equal distribution of resources, it makes out of equal freedom to choose and achieve, i.e. to convert resources into valuable realizations, a yardstick for assessing social inequalities.

Once settled this common background, conversion factors bring into play the second dimension of capabilities, namely the descriptive one, which is diversely taken up. Economists have worked a lot on measures and descriptions of capabilities. Sociologists should contribute to this debate with their own means. The paper argues that the sociological design of inquiry may offer an as important source for critical social sciences. Along the lines opened by J. Dewey’s logic of inquiry, it shows how the capability concept may fuel a critical, normative based on the confrontation of different levels of analytic: institutional semantics (the public policy level), which designs how things should be, its implementation (organizational level) and the outcomes it actually produces in people’s lives (the biographical level).

Finally, the paper gives an insight into the analytical and critical perspectives opened up by a capability approach focusing on the interactions between institutions, organizations, and individuals on issues such as freedom, responsibility, empowerment and employability, core-concepts in the reforms of European Welfare states.

Comparative Analysis of Changing Family Formation – Different Life Course Regimes and Developmental Paths Identified in European Countries

The paper contributes to the comparative analysis of life course dynamics and cohort changes in Europe. Varying forms of data collection and preparation often hinder quantitative comparative analyses; therefore, international survey programs like the Generations and Gender Survey (GGS) have been initiated. I added data from the National Educational Panel Survey (NEPS, research methodology very similar) for West Germany to compare developmental paths with regards to family related life courses between four European countries (Germany (NEPS), Italy, France and Norway (GGS)). I use sequence analysis to examine life course patterns of nearly 40,000 respondents and identify life course regimes and changes between them. The empirical patterns are finally related to classifications of cohort changes and developmental paths as provided by concepts of welfare regimes (e.g. Esping-Andersen).

Findings show, that Northern and Western European countries follow a similar sequence of regimes, starting from a traditional life course regime, marked by a second dimension of cohabitation and marriage and subsequent fertility among the majority of respondents. Afterwards, they pass through a ‘semi-traditional’ regime with unmarried cohabitation preceding traditional family formation. Finally, they reach a ‘post-modern’ life course regime, in which life courses with first birth(s) to unmarried, cohabiting couples are more frequent than other life courses. The process of change in Norway and France, while in West Germany the transformation from the second to the third regime is retarded. Italy follows a different developmental path: The change towards a ‘semi-traditional’ regime is much slower and the regime is characterized by a postponement of the traditional process of family formation.

Finally, the concept of family related life course regimes is helpful to understand, compare and classify life course dynamics. The sequence of the regimes can be interpreted as developmental paths; developments are not determined, differing speeds and changes in directions are possible.
The Aesthetics of Banality

Be it Breton’s fascination for an adorned wooden spoon or Valéry’s ambiguous affection for a sea shell and not to mention the rapturing experience of cracking the crust of Crème Brûlée described by the movie character Amélie Poulain, all these seemingly ordinary objects are said to be surrounded by a sacred aura offering the possibility to sense the (assumed actual) mysterious depth hidden behind the surface of banality. Whilst the avantgards at the beginnings of the 20th Century conjured the magic of the overlooked in terms of a countercultural model, we are positing that the epiphany of the unimposing has to be regarded as a prevalent model of popular culture symbolizing a nostalgic search for the utmost real.

According to sociological approaches referring to material culture and with respect to cultural theorists we will first reconstruct the emergence and the changing cultural valuation of the discourse about the cultural significance of the insignificant, claiming that the contemporary search for the meaningfulness of banal artifacts serves as a prime example for the reenchanted conquest of the quotidian. In particular the new aesthetics continuously stress the fact that the aesthetics of the marginal are laying at the core of the condition postmoderne: on the one side with regard to the construction of the banal as a category of sensuality and on the other side with respect to diverse strategies of aestheticism creating the auras of things usual or things new. Hereon we will secondly shed light on the consequences of this discourse on the study of material culture suggesting that we won’t be able to expose the cultural significance of mundane objects properly, if we don’t account for the factor that these “actual significatory structures” are themselves part of a prevalent model of the aesthetics of banality.

A Multiple Imputation Approach To Address The Problem Of Nonignorable Nonresponse and Misreporting Patterns In Income Data

When people are asked to report their monthly income they are likely to refuse to answer. If they answer, they tend to round their income to the nearest fifty, hundred or thousand, or they even completely misreport the value of income. It is well known that the propensity to misreport or to refuse to answer income questions depends on individual characteristics. For example, people with migration background are normally more likely to refuse to answer. Thus, commonly income data collected by personal interviews show nonignorable nonresponse and abnormal concentrations of reported values at certain “heaping points”. Using such data to compute, e.g., distribution characteristics like sample quantiles or proportions usually causes severe bias. In order to allow to adequately modeling such kind of incomplete and heaped data, we introduce a general method that allows addressing both, the issue of incomplete data and the problem of rounding.

To impute missing values, we suggest using the proven method of multiple imputation by chained equations. The method requires determining a univariate imputation model for each variable with missing values. We suggest specifying the imputation model for the income variable such that it describes the true distribution of the income variable simultaneously with the heaping pattern present in a data set. Monte Carlo simulations are used to validate the novel approach. To illustrate the capacity of the approach we conduct a case study using income data from the adult cohort of the German National Educational Panel Study.

Relationships Between Gender Role Attitudes, Role Division, and Perception of Equity Among Heterosexual, Gay and Lesbian Couples in Israel

Abstract

The purpose of the present study was to investigate the relationships between gender role attitudes, household tasks, and the perception of equity among heterosexual, gay and lesbian couples. One hundred and twenty-four participants (54 heterosexuals, 30 gay men and 40 lesbians) were tested. It found that same-sex couples had more liberal attitudes toward gender roles than did heterosexual couples. In addition, significant differences were found between the spouses in their responses regarding role division in housekeeping in each group. The responses of heterosexual spouses correlate more closely with each other regarding the role of each of the spouses than was the case for same-sex couples. However, the role division among lesbian couples was more egalitarian than that of heterosexual couples. In addition, heterosexual women consider their married life less equitable than heterosexual men do. Similarly, one of the gay spouses considers the relationship less equitable than the other spouse does. The results are discussed in terms of their relevance to theories of social perception and cultural backgrounds.

The planning and political negotiation processes of sustainable energy production in Australian coal regions are characterized by contradictory processes. A number of different players from Commonwealth, State Government and regional level got involved to transform the Latrobe Valley region that has the dirtiest coal fired power stations in Australia.

We examined the interwoven processes of strategic planning and governance, the set-up of the Latrobe Valley Transition Committee and the development of a Roadmap to transform the region as well as the funding of concrete projects to provide new jobs within the region. What has been seen by many as a smooth and successful process came to a halt when the political conditions changed.

At the same time it became clear that allegedly smooth process had some weaknesses. The collected process had been driven by funding promises of Commonwealth and State Government the region did not develop an independent vision of the transformation of the region. With the loss of funding it became obvious that there is a need to develop such a vision to further drive the process. However, good networks have been developed that might be strong enough to push forward where major funding resources are no longer available.

This paper will discuss the conditions of climate change adaptation and the advantages and challenges multi-level governance structures provide for regional planning and governance.

The purpose of the present study was to investigate the relationships between gender role attitudes, household tasks, and the perception of equity among heterosexual, gay and lesbian couples. One hundred and twenty-four participants (54 heterosexuals, 30 gay men and 40 lesbians) were tested. It found that same-sex couples had more liberal attitudes toward gender roles than did heterosexual couples. In addition, significant differences were found between the spouses in their responses regarding role division in housekeeping in each group. The responses of heterosexual spouses correlate more closely with each other regarding the role of each of the spouses than was the case for same-sex couples. However, the role division among lesbian couples was more egalitarian than that of heterosexual couples. In addition, heterosexual women consider their married life less equitable than heterosexual men do. Similarly, one of the gay spouses considers the relationship less equitable than the other spouse does. The results are discussed in terms of their relevance to theories of social perception and cultural backgrounds.
and the social and economic consequences have been encountered. The 2010 Haitian earthquake occurred within a country with a history of poor child health indicators and outcomes. The indicators include child nutritional status, immunization status, and diarrheal disease treatment. Despite the low performance on many child health indicators, data from Demographic and Health Surveys (DHS) have shown national-level improvements in key child health indicators in the three surveys conducted prior to the earthquake. These improvements continued in the 2012 DHS despite the 2010 earthquake and cholera outbreak. The purpose of this study is to determine national and regional differences in child health indicators in light of the influence of the disaster on child health indicators. Simple extrapolation method was employed to calculate the estimates. The results show a difference between expected and observed values, with observed values indicating poor health outcomes for children compared to what was predicted based on the previous three time points. Further, regional variations were apparent and linked to proximity to the earthquake epicenter and family composition. The results provide evidence of the effects of the disaster on child health in Haiti.

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)
Is Georg Lukacs’ Critique Of Neo-Kantianism Justified?

A recurrent theme in the work of Georg Lukacs is a critique of the prevailing currents of sociological theory and method of his time. For Lukacs, Marxism provided a theory that surpassed social theory modeled on the neo-Kantian distinction between facts and value. Several scholars have argued that Lukacs’ commitment to Marxism blinded him to the contributions made by other social scientific approaches. In effect, Lukacs is charged with dismissing all other social scientific approaches on the basis of his alleged dogmatic Marxism. Moreover, Lukacs is accused of identifying any non-Marxist approach to social science as reactionary. This paper revisits Lukacs’ critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs’ critique has been misinterpreted and warrants renewed consideration.

Reexamining Lukacs’ critique of neo-Kantianism reopens debates over claims that Lukacs’ notion that prevailing currents of social theory overlook the problems of alienation and reification.

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)
Reification and Racism

Both historians of social theory and practicing social theorists have drawn attention to the prevalence of racialist thinking in nineteenth and early twentieth century social theory. They have been increasingly aware of the ways such thought is embodied in social theory and development and questioned the extent to which the vestiges of such thought still informs contemporary social theory. This paper examines an overlooked chapter in the critique of racialist social theory. In particular, it focuses on the seldom-studied work of Georg Lukacs, The Destruction of Reason. In that work, Lukacs develops a critique of racialist social theory. Lukacs’s commitment to Marxism blinded him to the contributions made by other social scientific approaches. This paper revisits Lukacs’ critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs’ critique has been misinterpreted and warrants renewed consideration.

In and Beyond the Visual Gaze of the Tourists: Humanizing Antarctic Wilderness

The objective of this study was to unwrap the Antarctic tourism imaginary and go beyond the oral-visual narratives of tourists in order to understand which other senses and how are activated when touring in Antarctica. What is the grand master plot at the core of the Antarctic tourism imaginary? To summarize, most of the visualization of Antarctica and Antarctic experience rotates around the theme of “humanized nature”: the penguins are seen as human-like creatures, the icebergs are spoken about as the perfect examples of abstract art and whalebones are static reminders of once prolific whale-hunting industry. Antarctica is the only land that has no myths of origin but compensates this with the heroic stories of its first explorers. In contrast to the “gaze” centered approach to tourism, Antarctic tourism presents an example of multisensuous, non-ocularcentric geography. Deepest affectual encounters of tourists come from engaging various senses: interviewees talked about the powerful sounds of calving glaciers and meditating brush ice, the awful smells of penguin and seal colonies, the caresses of Antarctic wind, of refreshing PolarePlunge and thick morning mist, which concealed the land and upon seeing which people would start to cry.

ZUEV, DENNIS* (Independent Scholar, tungus66@gmail.com)
Self-Transformation Of Russian Youth Through Work and Travel Program In The USA

In this study I wish to examine the mechanisms of personal transformation among Russian youth through the contact with America as an imaginary and real-life entity in the course of the program “Work and Travel”. I delineate several families of transformation: relational transformations, physical transformations, and attitudinal transformations. I argue that the transformations that occur with individuals during the contact with another culture or as a consequence of the trip are part of the (de)civilizing process of the individual. One of the practical questions behind the study is whether after being a guest in the other culture young people become positive towards others being guests in their home culture.

Some of the effects of the trip have civilizing effect in the sense that they touch the structures of habitus and modes of knowledge. Through lived-in experience young people transit to the state or reevaluation of their distance with parents and intimate partners. One of the important configurational changes is the reevaluation of the relationship with parents who initially serve the primary instance in regulating the trip (through financial and emotional support).

The physical changes in perception of one’s body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gains refu ted American civilization, however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. One of the leading emotional changes concern the feeling of embarrassment for the behavior practiced or observed before the trip: accepting money from parents became embarrassing for some respondents and seeing people behaving rude towards them was also considered embarrassing.

ZUKIN, SHARON* (Brooklyn College, zukin@brooklyn.cuny.edu)
Globalizing the Local: Restaurants, Racial Identity, Gentrification, and Immigration

The globalization of cuisines takes place in sites ranging from the family dinner table to fast food franchises, with the integration of new products, new production techniques, and new taste criteria into traditional formulas. Located between the private, domestic space of the family and the public, mass-market space of McDonalds, neighborhood restaurants and modest takeout food shops provide a middle ground of individual action and collective provisioning where globalization reshapes local identities. Much of the globalization is carried out by demographic changes, with the entry of immigrant and “creative” entrepreneurs who both replace old restaurant owners but open new kinds of restaurants and food stores. But globalization is also encouraged by the entry of menus that define traditional cuisines in new ways, repositioning them, on the one hand, in a new global culinary order and, on the other hand, in changing local markets. Recent changes in restaurants in a majority-black neighborhood of Brooklyn, New York, suggest that the global migrations of cuisines help to create more complex social, racial, and local identities.

Memory, Nostalgia and the Creation of “Home”: An Okinawan Woman’s Journey

This study looks at how elderly Okinawan women return migrants created and re-created perceptions of “home” upon their return to Okinawa through the life stories of an Okinawan woman presently living in Naha, Okinawa. Married to Filipino base workers during the American Occupation of Okinawa, these so-called “war brides” spent a considerable number of years in their husbands’ country, assimilating into Filipino culture as well as negotiating their identities as Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. The purpose of this study is to examine the mechanisms of personal transformation among Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. The purpose of this study is to examine the mechanisms of personal transformation among Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. The purpose of this study is to examine the mechanisms of personal transformation among Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. ZULUETA, JOHANNA* (Japan Society for the Promotion of Science/Hitotsubashi University, zujuluta@soka.ac.jp)

Okinawan and Beyond: Okinawan Women and The Re/Creation Of Diasporic Identities

Studies on Okinawan women migrating to the Philippines during the postwar years are scant and not accorded much attention by scholars looking at Japanese/Okinawan migration. Furthermore, the role of women in the maintenance and re/creation of diasporic identities have been significantly overlooked. These Okinawan women married Filipino men who worked on U.S. bases in Okinawa during the early years of the Occupation Period (1945-1972). Many of these women went with their husbands to the Philippines and settled there, raising families and living new lives. Upon migration, many of these women consciously assimilated into Philippine society. Despite this, they still acknowledge their Okinawan selves by passing on aspects of Okinawan culture to their offspring, creating in the process, a diasporic Okinawan identity that contains both Philippine and Okinawan characteristics.

I argue that these migrant women are active agents in the transmission of Okinawan culture, at the same time promoting the culture of their husbands and their adopted land, thus creating a distinct “Philippine Uchinanchu” identity. This particular identity is continuously being maintained and re/created not only within familial and contiguous boundaries, but also across space and time, through various activities these women engage in. I also argue that these women engage in this process of re/creating as they fashion out their sense of a “home” away from home. The creation and re/creation of an Okinawan diasporic identity also relates to a re-definition of Japanese identity, which tends to conflate nationality, ethnicity, and race, and continues to leave Okinawans in an ambivalent position vis-à-vis a Japanese identity.

This study analyzes data gathered from interviews with these women, as well as from participation in meetings/gatherings of the Philippine-Okinawan Society in Manila. Interview data from their children are also pertinent sources of information about their mothers and thus will be utilized in the analyses.

Anti Doping Code and Controls: Social Sorting For Fair Play?

Viewing doping controls in the lights of social sorting, puts a new perspective on the subject. Besides touching on issues such as data protection, citizens’ rights of informational self-determination, privacy and the right to be let alone, those controls foster forms of social sorting, albeit ones that claims to sort out particular subjects in the name of fairness. As much as doping practices are a problem to a culture of fairness and good sportsmanship, so are the controls.

From existing research, it is apparent that the athletes’ perspective is missing in the discussion. The athletes are the object of the public debate, rather than the subject. Athletes that are convicted (or even only suspected) of doping practices are blamed and condemned - often by the same people that were generating the pressure under which the decision to take illegal performance enhancing substances was made. Doping and its controls therefore operate in a twofold field of social sorting: one that sorts out the guilty - and one that sorts out the losers, which may turn to illegal measures to improve their situation.

From interviews with athletes, officials and doping controllers on doping control practices, I will highlight what forms of social sorting are generated through doping controls, how they are perceived and what discourses are being formed.

I want to draw the attention to other issues within the debate on doping, such as those without received wide attention and are not likely to, as athletes more and more are put under a general suspicion within the system that is generating a massive pressure and puts athletes at risk. Social sorting is by no means an intended consequence, but a „collateral” effect that does play a major role on how these controls are perceived and hence legitimised.

Italian Young People and the Choice of Emigration: Economic Crisis’ Weird Effects

In Italy, as well as in other European countries, the economic crisis and the austerity policies have exacerbated the structural national problems, worsening the already difficult situations of the whole population and, in particular, of the youngest generations. In a country where the unemployment rate touches the 35% among the 18-24yo young people and where the demographic, socio-economic and political disparities between young and adult generations lead to a worrying decrease of the social visibility of the first ones, emigration become again an option for many Italian young people. Although still quantitatively limited, it’s emerging among them a new migration trend which involve extra-European countries such as Australia, where the emigration phenomenon acquires new peculiar characteristics in terms of adaptation plans and future projects. The proposed contribute aims at exploring the new features of the old phenomenon of young people emigrations through the analysis of 25 in-depth interviews - collected between January and June 2013 in Sydney and Melbourne - to a group of Italian young people aged between 18 and 26yo, emigrated in Australia in the last two years. Trying to situate the emigration project within the framework of the interviewees’ transition to adulthood, the analysis will focus on the reasons pushing them to emigrate, on their adaptation strategies and on their future plans. The first results highlight the weight of personal, familiar and socio-demographic characteristics on the choice and especially on the results of immigration, which does not mitigate the starting social inequalities; within the transitions to adulthood, emigration becomes an opportunity of realisation for the strongest and a ‘trap’ for the weakest. Finally, as immigration has a mirror effect on the society, the interviewees’ stories stress the difficulties of a country that seems no more able to invest on its present and future.
