with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in Latin America to reduce abortion. These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change, bolster policy reform, and better outcomes in this deeply controversial policy arena.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from research on democratic consolidation measurements that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patronalistic or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy the middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as for women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry. In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments. The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu, that class (status) level of professions, in order to achieve transformative potential, must be connected and backed-up by (macro-level) health and social policy interventions.

State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly contraceptive use, which suggest that accounts for more than 50% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injectable methods are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing public political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second
most common method. We use survey data, documentary evidence, and key in-
formant interviews to examine these developments further. With certain caveats,
the Indonesian experience offers lessons for instituting more solidly founded con-
traceptive and population policies and for accelerating the path toward replace-
ment-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing
injectable use can help meet demands on the fragile state health system, make
use of Egypt’s underdeveloped community-based channels, and may serve as a
 catalyst for other Arab states to help them reach more sustainable population
and development trajectories.

Depression, Suicidal Ideation and High-Risk Behaviors Among
Underserved Youths in Central Mexico

Background: The staggering cost of depressive disorders and suicide on the
quality of life of patients and families, the increased mortality risk, and the high
economic burden demand our attention. There is evidence suggesting that en-
gagement in risky behaviors, development of negative habits such as using alco-
hol, tobacco, and drugs, and depressive disorders all begin during adolescence.
Further, substance use, in particular smoking and drinking, has been linked to
depression and suicide risk. The study aim was to evaluate the prevalence of de-
pression and suicidal ideation and identify predictors that could inform a preven-
tion program.

Method: Using a cross-sectional study design with a probability sample, 702
adolescent students (ages 14-24) from low-income, rural high school students in the cen-
tral Mexican state of Guanajuato were surveyed.

Results: Almost half (49.2%) of participants showed some level of depression
(CES-D >16), with 23.6% identified as suffering severe depression (CES-D >25).
Logistic regression analyses indicated that controlling for financial status, symptoms
of depression were predicted by female sex, low self-esteem, risky behaviors, con-
flictive parent-teen relationships, and binge alcohol drinking. The same variables
with the exception of binge drinking predicted severe depression. In turn, suicidal
ideation was associated with depression, low self-esteem, high-risk behaviors,
and conflictive relationships with parents. A similar pattern of clustered behaviors
among teenagers has been reported.

Conclusions: Predicting and ultimately preventing depression is of enormous
public health significance. The findings can inform the design of interventions
to prevent this early pattern of depressive disorders and associated risk factors
among low-income, rural youth in Mexico and possibly in other contexts.

Urban American Indian Youth Religion, Native Spirituality, and
Well-Being: A Latent Class Analysis

Most American Indians (AI) in the United States now live in urban rather than
tribal areas yet little is known about their interconnected spiritual, religious and
cultural worlds. This presentation documents ways that urban AI middle school
students were involved with religious institutions and Native spiritual and cultural
practices, and assessed how these differences related to cultural identities and risk
and protective factors. Data come from AI youth (n=205, mean age 12) in five
urban middle schools in a southwestern USA metroplex. Latent class analy-
sis identified distinctive groups of youth according to religious affiliations, atten-
dance at religious services, adherence to Christian and traditional spiritual beliefs,
sense of Native spirituality, and involvement with spiritually significant Native
cultural practices. Five classes emerged. There were two Christian groups, one
attending Christian churches and following Christian beliefs, but uninvolved with
Native beliefs, spirituality, or cultural practices, and a nominal Christian group af-
filiated with but not attending church, and relatively unattached to belief systems.
Two groups followed Native beliefs and spiritual practices, one affiliated with the
Native American Church (NAC) and another unaffiliated with any church. The fifth,
non-religious group, was unaffiliated, followed neither Christian nor traditional
beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA
indicated that the two Christian groups were higher in SES, had lived longer in the
urban area, had more healthy behaviors and better decision-making but also the most
substance using friends. The two groups embracing AI spiritu-
ality (NAC, and non-NAC) had better school grades, more enculturation in tribal
language and strong AI ethnic ID, and the strongest bicultural orientations. The
non-religious group had the lowest scores on parental monitoring, closeness, and
supportiveness. Findings indicate different pathways to different behaviors.

Marginalized or Empowered? Conflict Induced Internally Displaced
Kurdish Women's Experiences in Turkey

This study is focusing on the conflict-induced internally displaced Kurdish
women's experiences. There has been an ongoing internal armed conflict in Tur-
key since 1984 and one of the consequences of this conflict is the internal dis-
placement that occurred in 1990s. In the displacement process, women and other
family members were victimized. They did not only loose their homelands, but
they also had to struggle in the city centers with poverty and discrimination.

After they started to live in the city centers, women may become both mar-
ginalized and empowered. The aim of the study is to understand the situations
that lead Kurdish women to be marginalized and/or empowered in the cities to
which they have been forced to migrate. After the displacement process, which
is one of the major victimization processes for these women, some of them may
be trapped in ethnic and gender-based discrimination and may become more
marginalized in the city centers. But marginalization and empowerment are not
fixed categories and there is always a possibility for these women to transform
their marginalized position into empowerment. By political engagement, working
outside home and/or being head of the household these women may break the
cycle of their marginalization and becomes empowered in the city centers.

Nations and Expectations of Democracy Among the Participants of the Occupye Gezi Movement in Turkey

The aim of this paper is to explore the notions of democracy and the expectations around the Occupy Gezi movement expressed by the protestors of Occupye Gezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul’s rare central parks, developed to nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protestors and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in Istanbul was used as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protestors, along with their demographic characteristics.

This paper is based on the analysis of the participants’ notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government’s policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and to analyze health care among aging using qualitative methods from secondary level of population structure. The trends of population and fertility indicators which seem to result in Asian family traditions of population and fertility indicators which seem to result in Asian family structures unique to their own. Therefore, now is the time for us to examine changing trends of population and fertility indicators which seem to result in Asian family alternatives such as lifetime singlehood, elderly couple households, and elderly alone households.

Historical, archival, current, and prospectus statistical data for four Asian societies - Japan, Hong Kong, Korea, and Singapore-and the United States are examined. Following the footsteps of western nations Japan, among Asian nations, took the initiative to launch into the area of population aging and fertility decline. The rate for progress in Japan, however, has been much faster and unprecedented than other western countries. Nevertheless, today and the prospects on these dimensions in other Asian nations are more striking than their Japanese counterparts. Fertility decline and population aging started relatively late in these three Asian societies. The prospects reveal, however, that they will be in the critical situation, i.e., the zero/minus population growth in the foreseeable future, in which Japan has currently been undergoing.

Asian elders must learn to adapt and depend living lifestyles quite different from those of the traditional ones. Making the best use of the modern ICT devices, various programs developed for the care of senior citizens would have significant implications for Asian societies that will soon follow the Japanese footsteps. Japan, especially for the care and health management of the elderly, may hopefully give a good guideline for other Asian families in the years to come.

KUMAGAI, FUMIE* (Kyorin University, fkumagai@com.home.ne.jp)

History of Courtship and Dating in Japan

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsunadai-ko (the groom commuted to the bride residence), to the muko-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men’s families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yorai pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (mioi), and the romantic marriage (ren-ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization mioi was the predominant pattern, however the complete reversal has emerged today, and ren-ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singlehood of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various “kon-katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-ko (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singlehood, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

Car Festivals (Religious Yatras) in India: A Dimension of Leisure Tourism (A Case Of ‘Nanda Devi Raj- Jat Yatra’ In Uttarakhand, India)

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, jagannath puri rath yatra (orissa, India), mysore rath mahotsav yatra, mysore (karnataka, India), and nanda devi raj-yatra yatra (uttarakhand, India) etc. are some of the famous religious car festivities in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. Nanda Devi Raj-yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttarakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources.

This study is also used to explain the experiences of the participants of the car festivities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping: Some Illustrations from Western Himalayas

Around 10,000 years ago human being had started domestication of plants and animals, even before this period, people had been altering plants and animal for their own benefit by using other means such as fire-stick farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and at least selecting three respondents from each village, 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, semi-culture and horticulture and earning very good income and experienced change in the amenities available in the household as well as they provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sdi131012@g.hit-u.ac.jp)
The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures.

KUMSA, ALEMAYEHU* (Charles University, alemayehu.kumsa@ff.cuni.cz)
Conflict In Ethiopia

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word colonus, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where they are viewed as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teaches us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing its neighboring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

KUMSA, ALEMAYEHU* (Charles University, alemayehu.kumsa@ff.cuni.cz)
The Roots of Horn of African Conflicts

The Roots of Horn of African Conflicts

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of African states is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waqefana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper.
Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new trends make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan’s limited living space. Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All these above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

KUNPHOOMMARL, MONTR (Naresuan University, montrinu@hotmail.com)
The Movement of People's Politics in Democratization Process in Thailand

This paper aims to explore the concept of people’s politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 60 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people’s active involvement. People’s participation has also been launched throughout the country. Both the top down strategy and people’s politics in the political movement towards democracy will be examined in the paper. The grassroots’ movement for human security, equity and opportunity will be studied as an example of the strengthening of people’s politics in terms of deliberative democracy, civic education and democracy. The role of the people’s politics movement through the works of Center for People’s Political Development Center supported by King Prajadhipok’s Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people’s politics development in the future.

RC39-661.3
KUO, SHIH-YUN (Science Technology Disaster Reduction, sykuo@ncdrnat.gov.tw)
LEE, HSIANG-CHIEH (National Science and Technology Center for Disaster Reduction)
Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society’s acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system’s ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.
Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result ‘civil journalism’ has emerged. The urgent problem of trust in networking has become more actual. Media-trust defines relations in mass media communication with the using of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience, or to a concrete reader (a viewer, a listener, a user). The users’ status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context (“the ideology of the time”), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the information, of connection information to one or another area of subject’s life and etc. Users’ trust in e-zines is one of particular cases of media-trust, which is a result of three basic components integrated: trust to information, trust to journalist, and trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent’s characteristics has identified.

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and descriptive analysis of data to the results of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees’ loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees’ loyalty, i.e. each component of organizational culture will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. It also demands of the efforts to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal “chi” cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has inevitably led to the neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of “chi” and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxinghong, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.

The Relations Between National and Global in Ukrainian University Rankings

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. Being initially national educational institutions (with a certain specific internationalization of “national” during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of “double pressure” from the ideology of nationalism and influences of globalisation. How intersection between “national” and “international” is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

Emotional Infrastructure of Reconciliation

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian - is aimed at excavating the basic emotional components underlying the success and dynamics of reconciliation. This involves the discussion of emotional love, guilt, hatred, forgiveness, penitence and love. The tolerance is usually assumed as minimal precondition for reconciliation but the ideal reconciliation is linked with the proactive approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the role of love in the dynamics of the loved and hated complex. This is then linked to the reconciliation process with the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal “chi” cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has inevitably led to the neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of “chi” and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxingxian, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.
rate and rate of deaths in medical institutions broken down by gender and age, and (c) life expectancy at birth, 20 years of age, and 65 years of age broken down by gender, in post-war Japan will be examined, and by comparing between the patterns of chronological change of (a) and (b), and between those of (b) and (c), it will be analyzed how the change in (a) has influenced (b), and how the change in (b) has influenced (c).

Globalization in East Asia and Contemporary Situation in Northeast Asian Societies

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 — higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tensions between both between China and Japan, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China’s relationship is often described as comprising “Cold politics and hot economics.” It can be said the same for Japan and Korea’s relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of “Cold politics and hot economics”, as is recently observed in hate speech against foreigners from Korea.

Financial Support for Families with Children and Its Trade-Offs: Balancing Redistribution and Parental Work Incentives to Increase Well-Being of Families

Financial support for families with children implies inherent trade-offs some of which are less obvious than others. In the end these trade-offs determine the effectiveness of policy with respect to the material situation of families and employment of parents - two crucial elements for the well-being of families. We analyse several kinds of trade-offs involved using a careful selection of potential changes to the system of financial support for families with children. We focus on: 1) the trade-off between redistribution of income to poorer households and improving work incentives, 2) the trade-off between improving work incentives for better off and poorer households, 3) the trade-off between improving work incentives for first and for second earners in couples. The exercise is conducted on data from Poland, a country characterized by high levels of child poverty, low female employment and one of the lowest fertility rates in Europe. We demonstrate the complexity of potential consequences of family support policy and stress the need for well-defined policy goals and careful analysis ahead of any reform.

Supporting or Hindering Maternal Employment? Comparing Financial Incentives within Family Policies in CEE Countries

The Central and Eastern European (CEE) countries have often been treated as a monolith in comparative social policy analyses. While there are moderate differences in gender employment gaps of childless men and women in these countries, the picture of employment among parents of young children is completely different. The employment rates of fathers of preschool children are very high in all these countries with the exception of Poland, ranging between 94% and 95%, but the employment of mothers diverges from 36% in Czech Republic to 81% in Slovenia. Previous research has showed that there are different cultural, structural and economic factors influencing
Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country on their own. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tap and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

Vulnerabilities to Cyclonic Disasters in Bangladesh

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the respondents' evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2007 and 2009 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation and enormous destructions.

KUSAYANAGI, CHIHAYA* (Waseda University, kusayanagi@waseda.jp)

“Individuality” As a Moral Expression in Japan

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kituse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “individualization” and “individualism” in Japan are vocabularies often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku (individual or solitary on their own),” and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kituse 1993).

This paper examines how those vocabularies are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

KUSEIN, ISAEV* (Kyrgyz-Turkish University Manas, kuseinsaev@yahoo.com)
Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is “a more sober political identity” that separates itself from the background of the past centred around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the choice of communal. Dominant traits of Kyrgyz identity are being national-religious identities is a feature of traditional societies in which ideology, ethnicity, and religious traditions are main social values. In post-traditional world the values of civil nations are asserted that integrate multi-ethnic communities and ascertain cultural pluralism as a main vector of collective identifications. A “national city” is not developed by chance, but emerges as a result of the efforts to strengthen civil society and its institutes and their interaction with the state.

The overall problem of the Kyrgyzstan’s identity is a mismatch between its basic elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements’ composition. While the Soviet identity was mobile home lifestyle “in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less stable, affordable, and personally fulfilling for older people than originally anticipated.

Between Lifestyle and Necessity: Senior Mobile Home Living in Florida

This paper focuses on a community-type that has long been attractive to older people in the Gulf states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the "mobile home lifestyle" in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less stable, affordable, and personally fulfilling for older people than originally anticipated.

KUSENBACH, MARGARETHE* (University of South Florida, mkusenba@usf.edu)

"Look at My House!" – Home-Making and Identity in an Urban Mobile Home Park

This paper focuses on meanings and practices of home among residents of a predominantly Latino mobile home park in Florida. It is based on an analysis of 30 qualitative interviews conducted with sixteen Latino/a, twelve White, and two African American community residents, follow up walks with fifteen interview participants, and ethnographic field notes written by a Latino student researcher and community resident during 2008-2009. This research was part of a larger study investigating the communities and disaster vulnerabilities of working class families who lived in mobile home communities in Florida, during the unfolding of the last U.S. economic crisis.

The paper specifically discusses the meanings and emotions of home for the Latino/as, who were predominantly immigrants, and emphasizes differences with how white residents thought and felt about their places. Latino/as generally displayed great pride in their neatly decorated and customized mobile homes. They emphasized their (various) achievement of homeownership, the neighborhood, community, and the park’s safety and tranquility (especially when compared with surrounding areas) in their descriptions, which functioned as markers of decency, upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of “trailer” residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.

The Business Case For Labour Broking In South Africa

Globalisation has brought about changes in the world of work, in particular the restructuring of the workplace in order to promote labour market flexibility. Labour brokers, also known as labour brokers, who apparently facilitate this labour market flexibility. Labour broking has stirred up a lot of controversy in South Africa through the media, unions and many movements to the point where labour broking has been labelled as a new form of slavery that further fuels worker exploitation. Certain abuses have been associated with the practice of labour broking in relation to ensuring decent jobs in South Africa’s globalizing capitalism. This research has been conducted regarding the business case for labour broking and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhumane, insensitive, detached system and strategy.

From ‘L’intervention Sociologique’ to ‘Pendampingan Sosialisasi’: A Reconstruction Of Social Movements Theory & Methodology Based On Indonesian Experience

The idea of ‘intervention sociologique’ (sociological intervention), introduced by respectful French sociologist, Alain Touraine, has been considered as one of the most innovative approaches to social movements. However, in the different social context out of European society, sociological intervention faced various challenges. My experience in doing sociological intervention to a group of young actors of ‘multicultural movement’ in Indonesia has allowed me to identify the limitation of sociological intervention and furthermore, to build alternative adaptation and innovation in a more suitable with Indonesian society. As a consequence of theoretical and methodological reconstruction that I have made, I therefore introduce a concept of ‘Pendampingan Sosialisasi’ or could be translated in France as ‘l’accompagnement sociologique’ and in English as ‘Sociological Accompaniment’. Although pendampingan sosialisasi found its origin and inspired principally from larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global
multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

KUZMINA, ELENA* (MGIMO University, helen.i.kuzmina@gmail.com)
Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulence the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

KÜNEMUND, HARALD* (University of Vechta, harald.kuenemund@uni-vechta.de)
Life Expectancy and Retirement Age: Policy Options and Practise

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforce. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforce and redistribution of inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of aging societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., Improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)
The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rather based on tribal and regional affiliation than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1'000 people were killed and over 300'000 displaced. It was thus remarkable when the newly aligned major political parties composed programmatic manifestos for the 2013 elections. They included some claims in the field of health, without converging into a coherent vision on health policy. The political feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalitions' interest and capacity in implementing them.

However, barely three months after the election, President Kenyatta declared free public matenrty services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power theories have limitations and explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGS). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)
Faces of Uncertain Transitions to Adulthood – in Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its manifold fields of education are ideal cases for studying the phenomena in question.

Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will:
(a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances); (b) differentiate between different patterns of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone); (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In context of our research project, we link theories of interactionism (e.g., Meads processual concept of “self”; Strauss’ concept of “status passage”) with Bourdieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

RC04-80.9
KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)
orientations and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions), and it is (c) embedded in an interactive process with generalized and specific others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific “artistic”, incorporated capital. Mass participation to education at an academy does not exist. c) The relevance of significant others: The quantitative interviews show that students from lower classes more often feel parental misgivings concerning their personal ability. The qualitative interviews allow to deepen the analysis about the role of significant others.

*Victims and Villains: Exploring the Media's Representations of Gender in the British Press and the Impact of These Depictions on British Muslim Experiences of Belonging*

A recent spate of “multicultiphobia” in Europe has seen German Chancellor Angela Merkel recently pronounce the failure of multiculturalism, a sentiment further echoed by British Prime Minister, David Cameron and the then President of France, Nicolas Sarkozy. It has been suggested the continued existence of radical differences practices by Muslims highlights an "illiberalism" about multiculturalism, since the latter is alleged to license these practices. This paper presents findings of content and critical discourse analyses based on the researcher's doctoral thesis examining the media's representations of Muslims around the period of the London bombings. It presents a comparison of how gender is represented in the British press, exploring in particular how these debates play out with respect to structure and agency. 503 articles were analysed in the six-month period preceding and following the attacks on London from five major national newspapers. It will be shown how belonging for Muslims can become a problematic negotiation as a result of these representations. While Muslim “differences” are recognised, their negative representation signifies that there exist limits to what can be tolerated in multicultural states. It is argued that alleged failure of multiculturalism is a reflection of multiculturalism's inherent liberalty rather than illiberalty. The fact that radical alterity beyond the spaces allotted by liberalism cannot be tolerated represents the failure of multiculturalism.

*Gender, Work and Family: The Situation in the Philippines*

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as "homemakers". Then the paper will examine the possible impacts of gendered domestic division of labor on the work place, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers of migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their life-world with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in this sense, migrants needs to be constantly reassessed. It is a surge of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villageness”.

Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organisations in France. The analysis of the Journal official, a registry of all associations created in France, shows a long decline of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organisations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO’s engaged into development and humanitarian activities.

What are the relationships between this reorientation of Moroccan volunteerism and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10 000 people, and focusing on both immigrant integration and transnational practice shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

Nationalism and Attitudes Towards Immigrants: Canada and Taiwan Compared

Canada and Taiwan are both developed societies with a full range of class cleavages and “haves” that grew out of waves of settlement from elsewhere. Both have a complex internal ethnic structure, with two large majorities, aboriginal minorities, and waves of more recent immigrants. In recent decades, both societies have experienced important re-definitions of the relationship between the aboriginal segments and the larger society. In Taiwan, the cleavage between the long-established Taiwanese and Mainlanders is an overarching one. Both societies are also immigrant societies with ongoing debates on various aspects of immigrant integration. National identities are complex and evolving in both societies, and relations with a larger neighbor (USA, PRC) play an important role in each setting. This paper will summarize and juxtapose some findings from Canada and Taiwan from the International Social Survey Programme (ISSP) data set on national identities in 34 countries. In both societies, civic and ethnic definitions of nationhood co-exist in tension, and attitudes towards immigration are mixed and contradictory.

Changing Care and Migrations Regimes: New Contrasting Regulations and Their Impacts on Employment and Working Conditions of Care Workers. An Intersectional Perspective

Since the beginning of the 2000, the French care/domestic service sector, like other countries in Europe, has been undergoing considerable reorganisation. These changes in terms of commodification have had consequences on the migration status of caregivers. The process of commodification has led to the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

L’Action Et Les Politiques Syndicales à L’Épreuve De L’Aide Et Des Services à Domicile En France. Le Cas De La France

En France, comme pour d’autres pays européens, l’aide et les services à domicile sont le lieu, depuis plusieurs décennies d’expérimentation de nouvelles formes d’emploi et de précarisation du travail. Dans le même temps, les avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les pouvoirs publics impactent fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de gestion du personnel. L’enseignement de l’action syndicale dans l’aide et les services à domicile est tout aussi pertinente que jamais.

Cette communication propose de s’interroger sur les formes des politiques et de l’action syndicales dans l’aide et les services à domicile en France, en articulant les différentes échelles de l’action syndicale et en revenant sur les contradictions à l’oeuvre. L’analyse documentaire, d’entretiens réalisés auprès d’acteurs syndicaux et institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l’oeuvre et de la façon dont elles peuvent peser pour changer le travail, qu’il s’agisse d’actions au quotidien ou de formes d’intervention dans des instances internationales. Les données sont extraites d’une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par le BRP (Bureau de Recherche et d’Information sur les Syndicats) et menée au moment de l’application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

The Egypt-Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufism in forming the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

How Well Do Municipalities Cope with Immigration - System Capacity Versus Cultural Reclusiveness

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufte 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed and to what extent the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times ‘an ongoing crisis of attentiveness.’ Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be “an ethical listening subject.” He argues this subject will make “the choice to listen selectively.” This does not mean Beard explains to only those points at which we feel “safe” but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Holfield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Holfield argue this listening then in turn creates the ‘self’. The listening approach to applied in the context of environmental issues. The recent work of Holfield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Holfield argue this listening then in turn creates the ‘self’. The listening approach to -

Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. counties from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

Back to the Future? How 3D Printing Technology Reassembles Museums' Materiality with Scenarios Analysis

3D printing or ‘personal fabrication’, as a newly emergent technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the widespread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum's aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field. Based on 3D printing's current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of forms of museum capital: Firstly, it analyzes current museums' acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection's restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing engaged in museums' interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-making in the age of (im)mobility. Some scenarios analysis of the 3D printing's general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.
The formation of social networks is a not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are offered in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions.

The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Second, how may parallel structural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions.

First, what is the network impact of transition to higher education? Two research issues are addressed: 1) what kind of local (Tunisian) dialogue took place; and 2) what kind of global dialogue (esp. together with non-Tunisian participants) took place - inside and outside workshops and sessions. These questions intertwine with the questions of why the WSF came to Tunisia and what affect it had to the local civil-society from the young informant's perspective. The paper also studies the roles and effects of the local youth in the WSF as well as the success and shortcomings of the WSF Tunis from the perspectives of the young volunteers and young Tunisian civil society actors.

The Tunisian author of the paper (Jabberi) was the volunteer coordinator in the WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in Tunis (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the global South and North takes also place in the setting of co-authors, carefully reflected in the paper.
socio-sexual landscapes, belief systems, behaviors and interactions, employing the case of universities and their students as sites of institutional sociological convergences. We will report on a grounded theoretical qualitative study incorporating Feminist ethnographic, narrative, phenomenological and phenomenographic methods with a diverse cohort of university students interviewed throughout their first year. Intractating transitions and complexities in their developmental lives and social environments. The participants provided courageously candid, detailed and complicated accounts of their experiences. Findings elucidate and delate previously conflated and/or obscured details of the phenomena, pointing to hopeful opportunities for fostering social and sexual agential capacities.

Identification of Training Needs in Informal Sector for Street Vendors and Their Facilitators in Mumbai

Informal sectors are thought as a source of development. But these sources of development can be misleading by poor working conditions and poor management in these sectors. Where poor working conditions can include different problems in their day to day functioning which is also affected by poor management of the human capital engaged in the process. Therefore with increasing importance of development through these informal sectors needs to be more focused and organised, for which identification of training needs of its human capital is one major approach that needs to be addressed by different Corporate Social Responsibility (CSR) activities of organised sectors and other government and non-government organisations. Exploring the importance of Training Needs Assessment (TNA) this paper is an attempt to highlight the difficulties they face in their work life and the way they deal with. This paper also tries to identify their skill development techniques and strategies that links to their growth and descent survival of their family in the society. This paper is based on primary data sources where, structured questionnaires were administered among the Mumbai street vendors, Government and Non-Governmental Organisations and CSR activities of organised sectors including a few case studies. The data was analysed through chi-square test and cross case analysis. The findings supported that the group undergone any kind of training were able to speak about their future learning skills they required for better development of their families than those who were deprived of any kind of training for their business growth were keen to learn the skills required.

Issues of Atrocity and Discrimination Against the Dalits: A Study of Students Protest at the Premier Indian Educational Institutions

Even today Dalits are the victims of violation, isolation, atrocities, discrimination untouchability, discrimination, ill-treatment, deprivation, social stigma, and the trap of the poverty in the society. Recent years that makes the state answerable before each and every Indian Dalit and Dalit women in particular. Needless to mention the two unfortunate incidents: Recently 30 Dalit houses were torched by the upper caste people in Lathore, Odisha. Earlier the most unfortunate incidence of Pipil gang rape to a Dalit girl in Odisha, Khairlanji massacre in Maharashtra and many more. Conceptualise the problems this paper tries to explore the combined protest efforts of students' organisations and civil society in India. The second objective of this paper is to find out, how the students' organisations take up the issues and strategies in the process of revolution or protest against the state for the justice. It also aims at to explore the defensiveness of the students' revolution and its impact on the democracy and Dalit women in particular. It paper is also theorising the atrocities, discrimination and it's consequences towards the Dalits in India. This study is based on both exploratory and content analysis research; data triangulation is the method for the data collection. Thematic analysis and descriptive statistics are the data analysis procedures for this study. The student sensitisation, organisation and the way of the protest are the footprints of students' movement in the sand of justice and struggle. The politicisation of the issues in the campus and the outside campus pulling the leg of success of this movement. Personal vested interest played prominent role to de-sheat and de-lined the student protest from their founding motto. This study reflects how it impact the civil society, upper caste lobby and to the state silence in the atrocity and discrimination issues.

Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic. The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys' school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers. It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the "form" and "severity" of CP administered on students. Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release. High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/inhuman beating” in schools. These views expressed by teachers raise important policy implications.

The Conflict over Mining in the Heart of the Universe

Mining is progressing over indigenous people’s land in Mexico. One of the holiest sites of Wixarika people, Wirikuta, has been conceded to mining companies seeking to revive mining in the region. This has caused a conflict. Wixarikas are divided into different groups of actants by construction, ownership and control of that territory. This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective, I also seek to highlight the importance of nonhuman actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex and multifaceted local and global dynamics. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people's capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national programs in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people's livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household's surveys, and on programmes assessments and internally available data. Through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.
and transnationalism. Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration. This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

Deferential Surrogates and Professional Others: Recruitment and Training Of Migrant Care Workers In Taiwan and Japan

When outsourcing care to foreign workers, a society must engage in discursive reconstruction and institutional reorganization of intimate labor. Should care be seen as a family duty or professional work? Should care be characterized as a culturally embedded practice or a market form of labor that can be easily outsourced to foreigners? This paper examines the operation of transnational care regimes in Asia by comparing the recruitment and training of migrant care workers in Taiwan and Japan. Although both countries seek migrant workers as a solution to the similar problems in aging population and care deficit, Japan and Taiwan have adopted distinct models which demonstrate varied ways of intersecting migration regime and care regime: Migrant care workers in Taiwan are positioned as “deferential surrogates” while their counterparts in Japan are seen as “professional others.” It is often assumed that East Asian societies share substantial cultural affinity due to their intersecting histories and common tradition of Confucianism. This comparative study not only shows varied institutional parameters of care that organize the family, market and state in distinct patterns, but it also demonstrates that cultural values and social practices such as familialism and gendered division of care are subject to transformation under the influence of state intervention and global market.

LAND, KENNETH C.* (Duke University, kland@soc.duke.edu)
Fifty Years after the Social Indicators Movement: Has the Promise Been Fulfilled? an Assessment and an Agenda for the Future

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constituent distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical situation and a particular mode of production, and specific ways or relating to so-called “modern”

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and technology. For the majority of the planet’s population and in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern, as essential a component of the modern experience as the experience of the North. Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the global modern experience. Eurocentric social sciences have over-erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the “normal”, “modern” universal template that the rest of the world has to replicate.

LANDER, EDGARDO* (Universidad Central de Venezuela, elanderl@yahoo.com)
The Tensions between the Struggles against Inequality and the Defense of the Rights of Mother Earth in South America

In the last decade and a half the struggles of South American popular movements and organizations against the military governments, free trade agreements and neoliberal economic adjustment policies crystallized in the election of many left or “progressive” governments. In these struggles and the constitutional processes that occurred in some countries, there are two central threads of struggles and interventions: first, the popular demand for the “return of the state” and social policies aimed toward social inclusion, access to education, health, food, social security ... and a reduction of the profound inequalities that have historically characterized the continent. The other axis refers to the relationship of humans with their natural surroundings, the struggles of indigenous peoples and peasants for their territories and rights of Mother Earth. This implies a profound critique of the very idea of development and the search for options to a civilization in crisis that has to confront the fact it we have reached the physical limits of the planet. This also relates to a critique of the monocultural character of liberal-colonial South American states in profoundly pluricultural societies. The attempt to achieve these two sets of goals simultaneously has generated deep contradictions. In response to widespread social demands of the most excluded sectors of society and looking to reassert their political and electoral legitimacy, all these governments have prioritized economic growth based on extractive neo-developmentalist (economic model based on an increased dependency on the export of non-processed primary goods) in a context of a significant hike in the demand and price of commodities in the world market. The purpose of this presentation is the analysis of some of the socio-environmental impacts of these governmental options and the main social and political conflicts that these have generated.

Work-Life Conflict In The Economic Recession

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to change work and accept reduced working hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the global economic downturn has affected well-being of all employees, the ramifications for individual employees' remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright's class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifurfrud, Bison and Jensure. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters' resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego's social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego's network resources differs if the accessibility of resources is not taken into account; how well we approximate ego's resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego's network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting larger-scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the 'new middle classes'. They are assumed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumer behavior.

Negotiating a Space to Rest: Denver's Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into "loft-living" condos, rundown streetscapes were intensely policed then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver's revitalization while exacerbating the city's problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public's field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of "protection against the elements".

Sampling designs that did not eliminate homelessness and interested in how Denver's homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

"Because You're a Migrant, They Treat You Really Tough." Findings of a Qualitative Study on Young Migrant's Perception of the Armed Forces in Germany

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of ‘others’. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewees allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in producing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewees was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemen as positive role models for their respective communities.

Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as a constitutive part of one’s biography. In general, peer research that is aimed at exploring life worlds as an “insider” is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58

Mobilizing for Dignity: Recognition and Social Movements

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy? How have such movements faded? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in Marxist critique of alienation, Lukacs critique of refication, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilizations.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban financing, and urban rebuilding projects. Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the « Japanese miracle » which occurred from the 1960s to the 1980s during a time of prosperity, the 2000s also knew another sharp decline during the 2000s. While demographic and economic indicators of Tokyo could the urban profile of Tokyo change as fast and as dramatically as it did? How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy? How have such movements faded? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in Marxist critique of alienation, Lukacs critique of refication, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilizations.

Teamwork Diversity

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production, which first appeared in Japan's industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. On the one hand, semi-autonomous team management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today's workplaces? Does teamwork represent a breakthrough from taylorism or a strengthening of taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec mining sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption relies on a logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.

Résister à La Précarisation Du Travail Dans Une Sidérurgie Brésilienne : Malgré Le Syndicat ?

En fonction du principe de l'unicité syndicale, le Syndicat des métallurgistes de Ouro Branco et base (SINDOB) est le seul syndicat à représenter les travailleurs de la métallurgie et de la sidérurgie dans la région de la Vallée du Paraopeba située dans l'État de Minas Gerais au Brésil. Le SINDOB est notamment le syndicat qui représente la moitié des 6.000 travailleurs directs (et un dixième des 4.000 travailleurs sous-traitants) de l'ancienne sidérurgie Açosminas, une entreprise étatique privatisée en 1990 et aujourd'hui détenue par le groupe brésilien Gerdau, 14e producteur d'acier dans le monde. Une enquête par entretiens a été menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette sidérurgie dans le cadre d'une thèse de doctorat sur les formes de résistance non institutionnalisées des travailleurs. Les dirigeants syndicaux interviewés – trois directeurs et le président – affichent leur politique auprès de la Gerdau : « négocier ». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd'hui « tranquille » grâce à ce « partenariat » établi depuis de longues années avec le groupe sidérurgique. Les bouleversements de l'organisation du travail dans cette entreprise – commencées par « l'affaissement » financier et administratif d'avant la privatisation – et utilisées principalement sur le plan syndical du groupe Gerdau – ont changé le scénario du travail et de l'emploi dans toute la région. Dans un contexte de précarisation sociale du travail, nous souhaitons discuter les relations entre la politique syndicale de la « négociation » et la fragmentation des résistances des travailleurs face aux restructurations du travail.
LARROSA, LEONARDO (Social Weather Stations, leonardo.larossa@sws.org.ph)

Undeserved Unhappiness: A Comparison of Philippines and Japan

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness. Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger; and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness. SWS participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan. This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

LARSEN, HÅKON* (University of Oslo, hakon.larsen@sosgeo.uio.no)

Legitimation Work: A Social Theory

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimating their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide legitimacy to the organizations, and the general public provides legitimacy to the producers. In satisfying the three publics the organizations are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization's communication with the various publics and what role they play in the legitimation work.

LAURENT, ARTHUR* (Oxford - ECI, arthur.laurent@yahoo.fr)

A Peruvian Reducing Emissions on My Behalf: Representation of the Stove User for a

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization’s communication with the various publics and what role they play in the legitimation work.
Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new wave of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of education: only Russia displays high shares of tertiary education (more than 50%) among the adult population[1], as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

For this reason, however, these three countries differ profoundly in the way they have developed different patterns in terms of institutions and norms with regard to social protection schemes, labor regulations, and gender policies.

This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be developed in order to determine the factors that most contribute to explain gender asymmetries in each country.

Financial Inclusion As a Basic Human Right? Reframing Inequalities in > the > South

A new wave of commodification “all the way down” (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-sharing to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of de-commodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) even state that “we need to redefine the character of ‘universal human rights’ (…) in more basic terms” (2012:150) to connect all people to finance.

This presentation will compare the extent to which incomplete social protection schemes are being replaced by the provision of minimum income transfers and some basic services for the needy through the social protection floor (ILO 2012) along with a process of “bankcarization” of the poor and the vulnerable. We argue that preventing market failures instead of promoting equality of opportunities and further public redistributive mechanisms to make market societies more homogeneously distributed will need to be complemented by: i) a general increase of the welfare state, and ii) strengthening of social security systems.

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent of overseas ownership and control – and nature – of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of financialisation. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculation in land along with opportunities for more secure food production for oil-rich but land-and-water-poor countries, are but two of the motivations for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control.

Pour aborder ces questions on pourra tirer des éléments de la mise en place des techniques de transplantations du visage au cours des années 2000 et de leurs modes de légitimation.

Is There a Medicalization of the Facial Appearance?

A partir d’une recherche au sein d’espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu’où observe-t-on une médicalisation de l’apparence et quels dispositifs de soins s’y substituent ?

On peut avancer qu’il existe des normes d’apparence que les institutions médicales et judiciaires encadrent. La problématique du normal et du pathologique imprégnée les jugements des chirurgiens du visage qui nous rappellent le caractère d’une norme d’humanité. Une posture qui peut aller à l’encontre des associations d’aide aux personnes défigurées, qui ne souhaitent pas rendre la beauté mais à rapprocher d’une norme d’humanité. Une posture qui imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère d’une norme d’humanité.

Socio - Economic and Health Status Of Elder Population: Some Empirical Reflections From Tamilnadu, India

The rapid spread of modernization, growing urbanization and crumbling of the joint family system has conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental disorders and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come form the family members are denied resulting in their deprivation and desertion. Consequently, the welfare intervention form GO’s and NGO’s are looked forward to fulfill their basic needs. The health care and support systems promoted through GO’s and NGO’s provide some solace to their requirements. The condition of the elderly population in rural areas of the country is not properly addressed. The elderly in provision of care and support and status in rural community. This paper is and outcome of the field investigations conducted on socio-economic and health status of elderly population in selected block in state of Tamilnadu, India. This paper analyses the status of the elderly population in terms of socio-economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elderly people in the family towards the provision of care and support.

Is There a Medicalization of the Facial Appearance?

Pour aborder ces questions on pourra tirer des éléments de la mise en place des techniques de transplantations du visage au cours des années 2000 et de leurs modes de légitimation.

LE MAITRE, FRANCIS* (University of Konstanz, francis.le-maitre@uni-konstanz.de)

Sociology and the Myth of the Crisis

Ever since Comte, sociological scholarship is predicated on the legitimizing image of being the science of crises and conflict. The dealing with crises has attended to the question of how they arise, how they may be prevented through sociological insight, and what role they play for the functioning of our socio-cultural reality. According to A. Weber sociology itself is a „daughter of crises” entering the academic world in the so called saint-simonian time of modernity; a period of change, tremors, uncertainty and unsettledness be it with regard to the political, the economic or the societal order. Even nowadays, we can witness the topoi of conflict and crisis as being the ever renewed funding myth of our discipline by e.g. having a brief look at the major themes discussed at various national and international congresses of sociology.

Within our contribution we will show that whilst early sociologist have both attempted to understand the crisis as a part of a social drama and all the uncertainties accompanied as constitutive for the structuring and the stabilization of the routine of social reality. Herein crises are no more labeled as punctual outbursts but seem to offer an omnipresent model of contemporary social reality. Positing that the routinization of crises is at the stake of present sociological narrations, we will finally question how this ever-present dystopian corrective of tremors can function as a „challenge of reality” (Baudrillard).

LE ROUX, RONAN* (CNRS UMR 8085 PREINTEMPS, ronan.le.roux@gmail.com)

In Instrumental and Political Asymmetries in Coastal Risks Perception Between the French State, Local Actors and the European Union

Background

• Recent concerns have stressed a probable increase of the frequency of extreme events and new risks linked to climate change.

• Between generic models and emerging big data strategies, best predictive configurations are not firmly established.

• Political tension with legal framework under progress. Tensions occur between the State and local actors concerning the responsibility of risk prediction and preparedness, as illustrated by the case of storm Xynthia (Feb. 2010, 59 causalities mainly in France); while the State has not properly applied its own directives, it is suing local mayors for not respecting them; in turn, following the trend of participative science, local towns are recruiting technicians to have their own measures. Local territories also show growing demand of satellite observation solutions offered by the European Union.

Hypotheses and questions

How cognitive facilities and political margins of maneuver influence each other: whether, to what extent and in what cases an instrumental asymmetry occurs between the State and local actors (i.e., the State using rather generic prediction instruments, local actors using rather territory-specific information)? If so, are there asymmetries a condition or an effect of political tensions? Do scientists play a neutral role in the way they produce and disseminate data, models and scenarios?

Terrains and approach

Comparative approach with case studies: geographical comparisons (France-USA-Japan); risk comparisons (oil spills, algal blooms); scientific and socio-technical configurations (instrumental strategies and division of labor).
Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

LEAL HALBRITTER, LUCIANA* (Universidade Federal do Rio de Janeiro, luciangalelhalbriter@gmail.com)

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a will focused on the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tolls of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO’s. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

The idea of justice is connected with the distribution of natural and social resources among people and the criteria and mechanisms of correction of injustices. Putting together the theories of justice by John Rawls(2003), Amartya Sen(2011), Nancy Fraser(2009) and Martha Nussbaum(2011) that represent the political, economic and cultural aspects of justice, that are related to the justice found in the ways of life and not only in the legal recognition, we can extract elements characterizing the social justice in the plan sense. Then we can also allow investigating its presence in the free participation of individuals in the social networks.

Consequences of Alternative Feminist Approaches to Land and Housing Security

In September 2013, the Huairou Commission, an international non-governmental organization that works with grassroots women, and Espacio Feminista, who work with landless women in Recife, Brazil, held an expert group meeting. Patricia Chavez, founder of Espacio Feminista, said:

We need to go deep into what development is; we are just accepting a process of urbanization; people are not obliged to live in riverbanks, hills. We are being forced out of fields, to open up space. [There is a] model of development that is being imposed… let us not be transformed into something that is not compatible with our needs.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market that pays low wages and offers no protections. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the “diverse” economy as developed by J.K. Gibson-Graham, authors of The End of Capitalism (As We Know It): A Feminist Critique of Political Economy (1996, 2006). The diverse economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist). On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

TARANOVA, OLGA* (Saint Petersburg State University, o.a.taranova@gmail.com)

Global Cyberspace: The Involvement Problem

In the present-day information world the involvement of an individual in Cyber-space is an important social marker determining belonging to one or another social group. Your circle of contacts, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren’t an Internet user. On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development that prevents the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

Les Droits Du Patient Et La Dépénalisation De L’euthanasie Comme Lieux De Questionnement De La Médicine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépénalisant l’euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des institutions et la dépendance que l’homme doit faire de son médecin. La Loi a introduit dans la législation une nouvelle clause qui permet au médecin d’abréger ses souffrances. L’application de cette loi fait problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l’incidence de la rédaction de la loi elle-même et de la représentation qu’elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l’unanimité. La Loi de dépénalisation de l’euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d’abréger ses souffrances. L’application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l’incidence de la rédaction de la loi elle-même et de la représentation qu’elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l’unanimité. The Spaces and Times of Youth Culture in the New Century

It is starkly evident that in the new century young people’s biographical constructions have come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingent identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of ‘natural attitude’. Rather, young people’s creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people’s cultural expressions can be understood as organised not so much as answers to ‘problems’, but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from “arthritis”, we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels: - corporate level, characterized by an increasing heterogeneity in terms of organization and performance - institutional level, characterized by a decay of previous forms of coordination and a revival - social compromise level, characterized by a surge of multidimensional inequalities.

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follows its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the oversimplified typology of Esping-Andersen, which can be qualified of “welfare orientalism” (Takegawa, 2000). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affect such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new “regulation mode” able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adaption mode” able to overcome the current contradictions at work. As emphasized by Boyer et al. Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses cross-sectional data at the unit of analysis with an assumption that stratification takes place globally. The second is a between-country perspective that has usually been taken by development scholars. It focuses on stratification among countries. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as individual processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, I situate income earnings of South Koreans within a broader pattern of global income hierarchy, and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) with achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skills in migration processes and attitudes toward out-group populations, the importance of relational skills has not received as much attention. In this paper, we highlight the role of relational skill assets of skilled immigrant workers and provide a new explanation for why skilled immigrants are less likely to experience anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings. The results strongly support the research on immigration and family formation. Incorporating these two streams of research, this paper provides a relational perspective on the intergenerational transmission of socio-economic mobility: How is childhood poverty experienced by parents passed on to their offspring’s poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper examines how childhood adversities experienced during childhood affect parents’ childhood poverty, which in turn affects children’s childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of childbearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

LEE, CHOONIB* (Stony Brook University, choonib.lee@stonybrook.edu)

This paper will explore how the Black Panther Party (BPP) transformed its chief strategies for the Civil Rights Movement from violent to nonviolent throughout the late 1960s and early 1970s in the United States. The BPP has been infamous for Black Nationalism and armed struggles against racist violence, as opposed to the nonviolent methods for the Movement popularized by Martin Luther King Jr. In contrast to the well-known armed demonstrations of the BPP, there were in fact serious debates within the group on the effectiveness of violent tactics, and the leaders of the group promoted more nonviolent actions. After the FBI's count-er-intelligence activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group's relatively nonviolent strategies, such as their free breakfast programs. Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP's violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state's effort to destroy the BPP, as well as the two men's personal power struggle.

I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against violent strategies for the BPP, will be the key to understanding the inter-relationship between the social movement's militancy and the state's oppression.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong inter- generational link in economic disadvantage, documenting the ways in which so- cioeconomic status is transmitted from one generation to the next. Childhood economic deprivation plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. Ample evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper provides an intergenerational analysis that turns around the question of socio-economic mobility: How is childhood poverty experienced by parents passed on to their offspring’s poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper examines how childhood adversities experienced during childhood affect parents’ childhood poverty, which in turn affects children’s childhood poverty. The Alienated Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the de- mands of a globalized advanced industrial labor market, which legitimacy accel- erate universities as corporations. The neo-liberalist conception, to be called ‘the corporatizing culture’, by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by the commodification and commercialized. The subjectivity of professors seems to be weakened by the management of teaching quality assessments. The author hence pertain to argue in this paper that the alienated images of professors such as subjective, non-ethical, and disposable, distorted by neo-liberal discourses, need to be addressed seriously, if the last Professors as social conscience and the voice of justice could last and fight back in the neo-liberal corporatizing world.

Gendering the Migration System in East Asia

This paper attempts to do gendering the migration system in East Asia by focusing on urbanization. Inter-Alia, migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998)'s work, I attempt to gendering the regional migration system by examining feminized migration streams: labor migration for care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIH and the Gini coefficient, affordable housing and affordability of household are more important subjects in Korea than the level of housing wealth, in view of inequality. The third thing is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, in descending order, and unlike HWI, HAI is affected relatively by unsold housing of region, the number of house, per capita GROP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and in HAP is TM (top-middle) section.

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean family law including the family head system was enacted in 1958, the status ‘a head of family’ had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on ‘why the abolition of the family head system was possible in 2005’ and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has orient toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is ‘what social conditions created a new family discourse and brought about the abolition of family head system?’ The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between ‘gender equality vs. tradition.’ However, after the 2000s, the change of the family structure with the economic crisis has involved the risk on the class patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one's family.

LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and migration labor policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorial and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Industrial Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme was so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans’ historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’ (minjunguipjip in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2006. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’.

This paper has aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘Worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

They were working-poor, net-café refugees, and others who felt into “new poverty,” no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty,” no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty,” no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty,” no longer explained by labor as it was – appeared in Japanese society.

The emergence of “new poor” who were unidentifiable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Freeter’s Free(2007-2008) and Lost Gene(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-) publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

Japanese Military ‘comfort Women’: Reconstructing Identities, Shifting Boundaries

This paper explores how Japanese military ‘comfort women’ (Japanese military sexual slaves) have de/reconstructed their own identities as negotiating boundaries of nation, state, gender, and political ideology. Based upon ethnographic field research, various documents, and women’s testimonies, I analyze how women, who suffered both from the Japanese military sexual slave system during Japanese colonization in Korea and from Korean patriarchy system that has continued even after national liberation, have transformed their own identities from victims to transnational activists and from hidden ghost to historical subjects, while have been actively engaged in transnational women’s movements against imperialism, colonialism, militarism, and patriarchy. Particularly, focusing on the Wednesday Demonstration and the Butterfly Fund led by former Japanese ‘comfort’ women, I will examine what made ‘grandma’(Halmomi in Korean) not a helpless victim but a symbol of peace and women’s rights across time and space.

Can We Hear Subaltern Woman’s Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea

The purpose of this paper is to illuminate the implications of feminist oral history as critically reexamining the relationship between hearer and speaker, representative and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camps in South Korea (yonggongi), we tried to reveal the experiences of historically excluded and marginalized ‘other’, and their strategies of negotiation and resistance in confronting ‘Other’ not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijichon ( formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/ coincidence, the enforced/voluntary, prostitution/intimate relationship, and being a prostitute/military bride while continually negotiating as well as conflicting with various myths and ideologies of ‘normative woman,’ ‘official nation,’ and ‘normal family.’ In addition, women’s narratives to cause the rupture of our own stereotypical images of military prostitute not only prove the possibility to reconstruct identities of subaltern woman, but also redirect the research focus from the object to the subject (hidden) desire to represent others. Therefore, we argue that feminist researchers to represent other’s experiences should inquiry ‘what/how we can hear,’ ‘why we want to know others,’ and ‘who we are,’ instead of asking whether ‘subaltern can speak or not, which shed light on what feminist oral history would be like.

Relative Social Standing and Support for Nativism

This paper explores the relationship between relative social standing and one’s attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one’s nativist attitudes by exploring the individual-level effects of education and
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, the foreign born, and college graduates) and outcomes (self-identification as a member of a particular group of people). I find significant relationships between income and ancestry as a core component of national identity.

*Coming Together and Across through Celebration: How Individuals Change their Societies*

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-capitalist societies. Using these instruments, more anonymous individuals are becoming ‘playing selves’ who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re)consider how people foster and utilise their ties as social capital to shape and advance their objectives. Following this trend, this study scrutinises the emergence of ‘foose’ collective actions based on weak ties and their roles in advanced capitalist societies. It introduces two Japanese grassroots organisations, the Old Tokaido Road Shingawara House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew themselves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

*Contemporary Religious Landscapes in South Korea: From Diversity to Commonality in a Habermasian Post-Secular Society*

The contemporary religious landscape of South Korea is summarized with three major religions – Buddhism, Protestantism, Catholicism – that monopolize 95% of religious ‘market’ consistently. This paper explains these socio-religious phenomena with historical approach and tries to diagnose its implications through Habermas’s post secular theory. First, Korean religious field had been subordinated and passively mobilised by exogenous socio-political factors such as Japanese colonization, Korean war, and military-dictatorial regimes, and democratization process. The current monopoly of religious market is the result of inter-play between internal dynamics of religion and external social forces. Although a highly competitive ecology of religions often causes social conflicts, it also makes positive conditions to reflect on Habermasian post-secular perspectives in the public sphere. So, in particular, Korean churches, more than other religious traditions unlike Christianity, put little effort into these issues. However, every religion, to different degrees, appears to secure its interest in the expansion of religious influence on society. What is significant in the public roles of religion should be engaged in the civil ethos of a “good society” (Bellah).
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalistic reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

Precairous Work and New Class in Post-Industrial South Korea

This paper attempts to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, workplace conditions, and economic insecurity but however, we suggest that not only employment insecurity but also insecurity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition we include how individual workers perceive ‘precariousness’ and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will be also considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study.(1st wave – 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

Mobility of Chinese and Korean Migration Migrants in Japan Rural Areas

In this research report, we are going to look at mobility of South Korean and Chinese female marriage migrants in Japan from the following perspectives:
1. suspension raised among people in the community by marriage migrants’ temporarily returning to their hometown.
2. proportional growth of monolingual in their offspring generation.
3. In rural areas, marriage migrants are still seen as “escaping brides”, and are under significant influence of this old paternalistic belief that “Once married into a family, she belongs to it”. This idea has taken root in migration’s mobility negatively, and has worked as a mechanism which restricts it. This report will present our perceptions toward female marriage migrants’ mobility through cases in Tohoku and Tokai districts.

Canadian Women’s Perspectives On Disability, Underemployment and Health

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

The Impacts of Parent-Child Generational Gaps in Family Values among Korean Adolescents

Due to South Korea's (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering, in this study, we specifically examined how parent-child relationships influence adolescents’ happiness, it is important to understand how parent-child relationships influence adolescents’ happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influence subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents’ subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children’s happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents’ happiness.
Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained significant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrivals of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities’ religious requests and the post 9/11 context contributed to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific “reasonable accommodations” implemented to respond to religious requests of pupils and teachers – in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice – with the aim of disclosing the effects that the so-called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question of what it means to “be sporty.” From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet “training and competing” but to go further so as to include softer and more ephemeral physical activity forms. In fine, a scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etic dual approach.

Sociologists aim to discover the sociological, cultural, demographical characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The data-free points software proposes some modern approaches for dealing with two-way tables (Yule’s Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher’s goals (Wheaton, 2003) enable to detect and visualize (Ely, 1999) the sociological, cultural, demographical and geographical effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting social inequality in educational achievement. However, evidence on the short and long term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic backgrounds.

Educational Expansion, Earnings Compression and Changes in Intergenerational Economic Mobility: Evidence from French Cohorts, 1931-1976

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are more strongly affected by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1950s and those born in the mid 1950s, but substantially rises for cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than for cohorts born in the 1930s but the difference is not significant. Changes in mobility mostly reflect the evolution of cross-section earnings inequality, rather than variations in positional mobility.

LEFRANC, SANDRINE* (CNRS, sandrine.lefranc@cnam.fr)

Ce pari se fonde sur des descriptions erronées de ce qui se passe sur la scène des commissions de vérité, et sur des éclats intellectuelles. Une de ces erreurs consiste à croire, en premier lieu, que les acteurs arrivent à l’audition avec des émotions nées de l’expérience de la violence policiée, et stockées depuis lors —des « traumatismes ». On suppose, en deuxième lieu, que ces émotions, traumatiques, sont suscitées par la souffrance : peine infligée par la violence, ou souffrance de la perte d’un proche. On imagine, en troisième lieu, que l’expression émue de cette souffrance permet le remplacement d’émotions de déliaison, par des émotions d’adhésion : la victime s’identifie à un collectif qui la reconnaît enfin ; réciprocement, la nation se refonde dans la communion émotionnelle, dans l’effusion cathartique. On verra comment ce “tribunal des larmes” que fut la TRC met à l’épreuve ces convictions.

Leadership Research in Healthcare: A Realist Review

According to Gilmartin and D’Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren’t stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collect longitudinal qualitative and quantitative data.

The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role? 2) How can leadership impact the healthcare sector and what challenges are addressed? 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those? 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; how new leaders learn, what kind of expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues.

Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research – to what extent, in what roles, for what purposes and to what effect.

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutional professional type of civil society organisation over grass roots activists.

Beyond Rational Dialogue: Alternative Modes of Participation

The stumbling blocks of the “dialogical” procedures spread in the public and “private” spaces, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The “post-dialogical” way suggests that the “dialogical” devices in the service of the democratic participation are neither a necessary condition, nor a sufficient condition of the mobilization of the actors or the exercise of the citizenship. The passage of the models and the devices of participation of “dialogical” type in the models and devices of cooperation of “post-dialogical” type allows to envisage sustainable democratic methods of social exchange and governance beyond the public place and beyond the political space, by considering their development and their functioning in the “private” spaces, in particular those of the world of work and of everyday life. The way of the cooperation groups a big variety of approaches and experiences and suggest, beyond the devices of interaction, to question the transformations of the company and the State, as well as their possible evolution towards the public and “private” spaces, in particular those of the world of work and of everyday life.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master's, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of certification for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under review this year. The main rationale for this plan was to: (1) to protect green space from further land encroachment by Toronto's massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. In tandem with this legislation, a second provincial legislations came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the possibilities - Markham as the "inside" of the greenbelt and Barrie on the "outside" of the belt - and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of reports, and newspapers. It is hoped that these general lessons will in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

Inclusion and Structural Processes of Young Recipients of "Unemployment II Benefits"

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to "include" – due to their precocious status as recipients of "unemployment II benefits". I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative "metamorphosis" (Schütze 2001). In terms of biographical analysis a special focus is put on "structural processes" (Schütze 1981) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to types, and newspapers. It is hoped to draw general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

Inclusion and Exclusion Intertwined – a Sociological Self-examination of a German-Dutch-Jewish Family Biography in the Context of Racism and War

For over 30 years I have worked as a scholar in the areas of racism-research and education. While, during this time I have studied processes, consequences and causes of negative stereotyping, othering and exclusion I now dare, for the first time to do a "sociological self-examination", excited and encouraged by the reading of a text by Pierre Bourdieu (published in 2001 under that title). The focus is my German-Dutch biography, which is also about my Jewish grandfather from Rotterdam (Netherlands), whose daughter (my mother) during the occupation by troops from Nazi-dominated Germany fell in love with a German soldier (my father). My analysis shows a form of inclusion in a bi-national family, asserting after war and Holocaust a 'normality', that almost compulsively is 'forward looking', but excludes all the issues that have to do with racism and injuries from the past. That 'leaden silence' makes family possible, suggests harmony, and closeness and affection can occur, while key life events of family members remain untouchable.

Why Economic Inequality Matters for Criminology and Criminal Justice

The presenter, a co-author of The Rich Get Richer and the Poor Get Prison, will focus on economic inequality, which receives less attention than race or gender. This paper will start by providing an overview of economic inequality in several developed nations before discussing several ways to conceptualize the inequality between natural and corporate persons. Next, the presentation will summarize the links between inequality and crimes of the poor as well as crimes of the rich, following Braithwaite's formulation that inequality worsens crimes of need and crimes of greed. The impact of inequality on each stage of the criminal justice system will then be reviewed. Law making is influenced by lobbying. Policing means war on crimes done by the poor and zero tolerance, but deregulation for corporations. Judicial processing and outcomes are heavily influenced by quality of legal assistance and resources. By sentencing, the wealthy and corporations who have harmed workers, consumers and communities have been largely woelet; it is those who get sent to prison, reinforcing the belief that they are the most dangerous. The conclusion highlights the importance of ideology in minimizing concern about inequality and its effect on justice.

Governing the Commons in Transforming Economies: The Case of Ukraine

The situation generally defined as the “tragedy of the commons” acquires its specific features depending on the political and economic settings. Due to the domination of the public domain and the state ownership in the basis of the socialist economic systems, the definition of the “commons” in the so-called post-communist countries (the former Soviet Union and its satellites) can be employed to a much more extensive body of the resources. This creates additional challenges to the process of governing the commons in those countries, and it becomes increasingly complicated in their ongoing socio-economic transformation toward capitalism.

The situation in Ukraine, which is surviving through one of the worst scenarios of the falling transformation to capitalism, the disastrous deterioration of the economic infrastructure, and deregulation of the property rights, I investigate the epidemiological value of the scholarly work on the governing the commons and the disaster capitalism, particularly writings by Naomi Klein and Eleanor Ostrom, as applied to the countries in transition. I locate the situation in the post-socialist countries against the background of the global economic and legal (related to the property rights) affairs. I investigate the possibilities and the character of the reciprocal influences of the resource mismanagement in those countries and the vulnerabilities peculiar to the Western economies.

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotypical and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

LEMAIRE, XAVIER* (University College London, x.lemaire@ucl.ac.uk)

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative characteristics for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the environment, while other technologies like the mobile phone have spread in Africa quickly.

This paper will determine how a more dynamic approach could help to analyse the way actors interact and build relations around new technological products, so to understand how their dissemination could be accelerated. Technologies have their own life and need to produce a specific context to thrive (Latour, 1996). Markets are created by policies and institutions; a series of stable rules embedded in organizations or networks have to emerge to make them sustainable. Clean decentralised energy technologies are “new” in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

LEMAIRE, XAVIER* (University College London, x.lemaire@ucl.ac.uk)

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming- leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

**National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland**

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1990. Of the leaders (an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders' identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

**Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration**

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in culture and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm.

Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think in this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analyses in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

**Contested Multiculturalism in Germany? - the Debate on Circumcision**

In the words of Angela Merkel multiculturalism has “utterly failed” in Germany (16/10/2010). Although the former German President Christian Wulff had stated “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this seeming to be settled. In contrast to other European countries adopting official “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate (16/10/2010). Although the former German President Christian Wulff had stated helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

**The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.**

In this case, right-wing politicians as well as a coalition of secularist actors, and children’s rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was made in the German Civil Code to the effect that parents have the right to circumcise their sons for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the ‘boundaries of the social world’ (Luckmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This included a re-consolidation of the religious community, and a ‘civilizing back’ children’s rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their clients, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices that are differentiating the involveng. The first thing into these practices and of a special configuration these practices carried out: masculine software developer.

The argumentation will begin with introducing theories of practices as an instructive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The so produced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, “guarantees” the social order in the observed field.

Involved Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking the overall numbers help us understand the complex dynamics of changing gender relations in the private sphere.

Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father’s uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstinence from career ambitions is a permanent source of conflict.

Another essential source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father’s engagement, but, on the other side, tend to defend the household as their domain. Often the father gets into a position of his wife’s “junior partner”. If men refuse to be the junior partner a new kind of gender conflict arises. Closing the gap between “culture and conduct of fatherhood” (LaRossa) proves to be complicated in different respects. It even can evoke new conflicts.

Changing Gender Orders and the Variety of Gender Welfare Regimes

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The the difference based gender order developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women’s votes, legal reforms for women’s own rights of property and decision in the family. The worldwide spread of Fordist/Postfordist production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women’s educational advancements, by women’s movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Presently a flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market, and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.
nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and eco-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature has been loosely grouped under the banner of soft power research. Perhaps spurred on by China’s adoption of Nye’s notion of soft power in recent times, these focus on the management of how one’s own nations is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy.

Both this body of work is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of identification and belonging. The main goal is to highlight paths, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on every day practices, on the methods of planning for the future, on the interpersonal relationships. Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research is designed as a work on Diaspora connections and soft power, understanding relationships between nations and diaspora-to-home-nation as dyadic and reciprocal. Hence, though the two bodies of work develop in parallel they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this trial. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

The Dimensionality Of Immigrant Adaptation In Britain: An Analysis Across Generational, Ethnic, and Gender Lines

Many theories have been put forward to explain the long-term experiences of migrants and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the ‘neo-assimilation’ theories of the ‘new’ straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the immigrant experiences, as well as the paths of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, cultural, language, etc), as well as on the examination of one dimension at a time. Young Women Facing The Economic Crisis

The paper presents the intermediate outcomes of a research on the impact of the socio-economic crisis in Italy on young people. More specifically this paper deals with gender differences and inequalities which characterize the condition of young people in Italy. Which are the expectations, the abilities and the competences to cope with difficult economic conditions that characterize young female and male? The relevance of cultural capital will be discussed in order to understand the opportunities or the difficulties faced by young women or men. Besides some data will be presented on young male and female living in Italy but with foreign origins. We argue that gender, ethnic origin and cultural capital are the three most important variables to explain inequalities of opportunities among young people facing the economic crisis.
signs in these organizational platforms. Habermas’ model of a discursive space that is free from the domination of power remains an ideal to be realized. The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study set out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas’ theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world interact to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Determinants of Effective Cross-Border Cooperation

The world over local communities broach international boundaries. The borders of the Western liberal system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities’ capacity to reduce the transaction costs that differ policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narval/Vangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study’s outcomes, the paper uses collective-efficacy theory to measure each community’s response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

Implications of Generational Change for the Armed Forces

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

LEVENSON, ZACHARY* (University of California, Berkeley, Zachary.Levenson@gmail.com)
Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs), state-provisioned formal housing, rental stock for the working poor, TRAs, and other – to a broader process of dispossession and confinement. Drawing on a year of ethnographic fieldwork in relocation sites across the Cape Flats, I argue that post-apartheid urban relocations can be characterized as dispossession through delivery. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely through formal housing allocation that segments of the population are relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future

Despite the growing urgency of scientists’ warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries or millennia, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible. A recent increase in manifest and unpredicted climate disasters, which have arguably struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute 'substantial but affordable sums on a regular basis' for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks 'in the next two years', 'during your lifetime' and 'in centuries to come', suggesting no progressive discounting of the future.

*The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World*

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by a recent wave of foreign aid that undermined the disaster preparedness of the US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channeling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channeling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences.

Monalisa Chatterjee’s study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

**LEVIN, JACK** (Northeastern University, jlevin@neu.edu)

*Blurring the Boundaries: The Declining Significance of Age*

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the cult of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of ‘emerging adulthood’.

Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to ‘boomer changes’. The book thus takes a comprehensive life course approach to aging.

*Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.a Da Fontinha (PORTUGAL – PORTO)*

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequal urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporaneous religion, also arouse renewal urban struggles dynamics, renewal space strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributions to the existing processes analysis in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movement these processes engage and what are fragilities and lines of flight can they offer?

On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a Brazilian urban slum habitation type – placed on Vila Olimpia neighbourhood, and Es.Col.A. da Fontinha, a squat-eviction process of an urban cooperation in Porto; municipalities transformed in an auto-managed collective space. Immerged on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to opposite that path, almost heroically. Attempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

*Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators*

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge those social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from ‘bottom up’ has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the polarization. In education, this implied breaking with the “old” divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

Conceptualizing the Bereavement Hierarchy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determines the level of collective actors’ tolerance for economic factors (such as the extent to which the war is portrayed as successfully attaining its original goals) to challenge the dominant discourse and influence the war’s policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children’s lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subversive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group’s social status and its reliance on the military as a mobility track; (2) the group’s ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies-market-regulated vs. state-sanctioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subversive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operational environments of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achieving challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collective learning in complex operational environments? Numerous analyses concerning the performance designs have ended up emphasizing the importance of such flexibility that allows steering the regulation based on regulated actors’ experiences. Such an opportunity may be called as a feedback between institutional and operational environments and it seems to be very important element also according to collective learning. Few studies, however, have analyzed the capability of policy designs to strengthen such institutional feedback in practice. Based on a case study of industrial region located in the northern Finland, I argue that institutional feedback is very important in industrial waste management. My preliminary findings point out that optimally institutional feedback allows the continuous learning and the development of industrial systems towards better material efficiency.

LEW, ILAN* (École Hautes Études Sciences Sociales, ilanlew@gmail.com)

Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor

In this presentation, we will expose a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristic dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of “moral-concerns” of massmurderers. Consequently, we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead these “veterans” beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the thematics of indignation in both contexts and more specifically on the relationships to money and the management of resources that emerge for the perpetrators in the course of their duties.

LEWANDOWSKI, ROMAN* (Voivodeship Rehabilitation Hospital for Children, rlewando@wp.pl)

Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment

Poland, like other European post-communist countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organization access to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communist system, costs control were made through a lack of access to expensive medical technologies, which absorbed both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

LEWIN-EPSTEIN, NOAH* (Tel Aviv University, noah1@post.tau.ac.il)

Changing Circumstances in Late Life and the Relationship to Household Debt

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one’s health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two concepts central to social stratification: consumption and risk. With regard the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt.

Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-
lately to health status and labor market activity), the association between house-
hold debt and the subjective experience of economic hardship; and cross-country
variations in the relationship between household dynamics and indebtedness.
The analysis is carried out using the first and the fourth waves of the Survey of
Health Aging and Retirement in Europe (SHARE). The panel structure makes it
possible to study changes in late life (marital status, labor market, and health)
and their relationship to household debt in 13 European countries and in Israel.
Preliminary findings reveal that household debt is widespread even in advanced
ages; it is not limited to households that are asset poor; but it is systematically
related to changes in health and marital status. Large country differences exist in the magnitude of household debt. We also find com-
plex effects of country context on household level relationships.

School)
Trade Unions and Whistleblowing: Can They Do More Than Protect
Their Members?
The role of trade unions in relation to whistleblowing is frequently seen as
reactive and defensive. They often have limited resources and regard their prime
function as being to advise potential whistleblowers and to represent both those
who feel they have been victimised for reporting concerns and members who are
alleged to have engaged in wrongdoing. Research conducted by Public Concern
at Work and the University of Greenwich in the UK suggests that trade unions are
good at performing these tasks but are not particularly effective in ensuring that
allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate
whistleblowing policies and procedures at the workplace where employers were
willing to do so. Research conducted in several countries consistently shows that
whistleblowers normally report their concerns internally first and that line man-
gerers are often the first port of call. However, if this manager is not appropriate
for any reason (for example, is the subject of an allegation or is regarded by the
whistleblower as unsympathetic/antagonistic), the question arises as to whether,
for trade union members, a lay or full-time official should be regarded as a suit-
able alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in
relation to the whistleblowing process and will consider the ways in which they
could use their collective strength to play a more positive role in dealing with
alleged workplace wrongdoing.

Natural Surveillance: Google Trekker and the End of Wilderness
Natural Surveillance: Google Trekker and the End of Wilderness
For individuals seeking refuge from the increasingly monitored spaces of ur-
banized “control societies,” the idea of untamed wilderness has long held a special
appeal. Figuring prominently in various strains of ecological writing and literary
romanticism, wilderness has also been central to various indigenous belief sys-
tems in the Americas, Australia, and New Zealand. In these contexts, wilderness
has often been valorized as an aesthetic, moral, and national resource of the high-
est order, a sacred place for the regenerative experience of living “off the grid” of
contemporary techno-culture.

However, new surveillance technologies are rapidly taming the wild, bringing it
under the watchful eye of the governments, corporations, and private individuals
who want to minimize risk and uncertainty in any environment—even where an
element of risk has long been considered a virtue. Indeed, the rapid proliferation
of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms
of remote sensing is challenging long-held conceptions of nature as refuge. As the
surveillance assemblage expands into the wild, finding an unobserved, or unob-
servable, spot will become increasingly difficult.

While Facebook’s Mark Zuckerberg dreams of an “Open Planet” of total trans-
parency, Google is bringing its “Streetview” concept to nature with “Google Trek-
ker,” a backpack mounted data collection apparatus that is designed to illuminate
the hidden recesses of the natural landscape. With satellite cameras, drones,
and now Google Trekker looking over our shoulder even on the highest moun-
tain peak, will we continue to imagine the regenerative power of wilderness in
opposition to the enervating qualities of post-industrial life? Is desert solitude a
bygone fantasy? By putting Google’s Trekker into dialogue with concepts of rug-
ged individualism, wilderness, and frontier autonomy, this paper will explore the
implications of “rural surveillance” phenomenon for national imaginations and
eco-consciousness generally.
influential factor affecting educational inequality, and educational gap between urban and rural population is much larger than of class, race, gender and nationalities. This paper, based on national survey data of 2006, 2008 and 2010, examines the change of the educational inequality between urban and rural residents over time. It concludes that educational gap between urban and rural children has been continuing to enlarge in spite of rapid educational expansion.

**A New Cycle: Understanding the Current Life Course of Rural Families in Western China**

Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economical meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a pattern emerges in which a peasant plays different roles at different ages: he is raised by grandparents in the country home where education is inexpensive, works in the city if possible supporting his children and parents, and returns home where livelihood is inexpensive, raising his grandchildren, hopefully with the support of his children who work in the city. We call this pattern the ‘new cycle’ as opposed to the peasants’ traditional life course which dissolved in the tension between rural-urban duality and globalization.

**Gender and Power in the Primary Teaching Workplace: Women’s Fight Against Male Power in Taiwan**

This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power.

In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six teachers for a day and in-depth interviews, which were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power.

The aim of this paper is to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men’s abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men’s advantaged position, women’s domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men’s dissociation may imply that men can also enjoy working with children and the solid teaching profession.

**Income Inequality, the Welfare State, and Economic Growth Across Time and Space**

Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primarily studied the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state.

Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-recursive structural equation modeling by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

**Parents’ Commute to Work and Children’s Social and Emotional Wellbeing in Germany**

Based on a nationally representative sample from the German Socioeconomic Panel Data (SOEP), we examined the relationship between parents’ commute to work and five domains of child emotional and behavioral problems, using SDQ and controlling for family socioeconomic and demographic characteristics and child gender. The findings show that commute to work by both fathers and mothers when their children aged 3 to 4 years was associated with a higher level of emotional and behavioral problems in their children two years later. In both-parent families, father’s daily commute to work two years prior was associated with higher scores for peer problems and, to a lesser extent, higher scores for emotional symptoms and hyperactivity when the children aged 5 to 6 years. Daily long distance commutes (40 or more km each way) in fathers was associated with the highest level of emotional and behavioral problems in children. Mother’s commute to work either daily or weekly was associated with a lower level of prosocial (positive) behavior in children. Analysis including single mothers showed that mother’s commuting 20 km or longer each way was associated with a lower level of conduct problems but a lower level of prosocial behavior in children. This is one of two studies on this topic in the literature and much further research is needed to address causality in a more rigorous way, with more waves of longitudinal data and to examine mechanisms linking parents’ commute to work and child outcomes.

JOHNSON, SARAH (Telethon Institute for Child Health Research)
This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules and an adverse child development outcome. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

Impact of Conjugal Living Arrangement on Marital Satisfaction in China's Rural Labor Flows

In the context of rural people floating out for jobs, one of the challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey “Population Mobility and Reproductive Health / Family planning Service”, which was carried out in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction. The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men interviewed in this paper, working at hometown, only a few of their wives float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

Law and Rebuilding Community In Post-Disaster Recovery In China

Law and Community in the Post-Disaster Recovery in China Abstract: The existing the emergency response act of PRC(2007) prescribes many issues with regards to the post-disaster recovery, especially the rights and obligations of governments of different levels, civilians, and NGOs, etc. The efficiency and effectiveness of these articles related to the recovery was not reviewed until the S.12 Wenchuan Great Earthquake took place in 2008. Especially in the period of recovery of the catastrophe, the rebuilding of local community is one of most important problems confronted by the disaster zone, but which cannot resolved practically according to the above mentioned law and demonstrated there existed at least four shortcomings in the law. So the central and Sichuan provincial government took several active measures to make up the shortcomings of the law for rebuilding the community. Firstly, the State of Council made specially and comprehensively the post-disaster recovery regulation. Secondly, different governments were facilitated to build up mutual help relationship so as to restore and revitalize the economy and social development as soon as possible. Thirdly, government adopted many mitigation disaster policies synchronizing with the planning and rebuilding disaster zone. Finally, in the process of rebuilding, the ability of self aid and help of individual and family was emphasized by the government and community which began to promote drastically to train and educate the civil society’s disaster response ever than before. In sum, the benefits generated from recovery practices of the Sichuan must be very helpful to amend and perfect the existing recovery articles of the act.

LI, KANG* (Shanghai Univeristy, ikang082006@gmail.com)

The Bureaucracy and the Construction of Risk in China

There were three large-loss fires ignited by exterior-wall insulating materials which made the fire risk of insulating materials a hot topic in the past three years in China. Anti-smoke public policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council that calmed the things down.

This paper is based on a qualitative research mentioned above, which attempts to elaborates the logics of the bureaucracies of China in the process of construction and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict and then risk consensus among the three stakeholders mentioned above. From this research, we can get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segmentations of bureaucracy which all try their best to shift their responsibility, and this leads to the “organizational responsibility” which seems to be a classical concept in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public’s benefit and safety, it’s still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.

LI, YAO-TAI* (University Of California, San Diego, yol059@ucsd.edu)

Diffuse or Enclosed? the Ethnic Communities of Taiwanese Migrant Workers in China

This paper focuses on how the spatial characteristics of cities influence ethnic communities of Taiwanese migrant workers in China. Although Taiwanese migrants and Chinese both fall under a ‘pan-Chinese’ context, most Taiwanese migrant workers still see themselves as a different ethnic group and thus inhabit ethnic communities that are distinct from those of the locals.

Within this context, this paper tries to answer two questions which are directly related to urban sociology and community studies. First, whether the spatial characteristics of cities affects the openness or insularity of an ethnic community and—if it does—why is this so? Second, to what degree does such pan-ethnicity affects the lives of those living in different cities.

By comparing data collected from 35 interviews, as well as by examining other factors such as the cultural practices of Taiwanese migrant workers in Beijing and Wuhan, this paper highlights either the openness or insularity of such ethnic communities, derived from factors not only based on ecological characteristics (such as physical arrangements for work and leisure), or industrial differences, but also on how Taiwanese immigrants perceive and interact with the local Chinese in different cities.

In this paper, I will first define what I mean by the openness or insularity of an ethnic community and how the insularity/openness relates to life styles, social
bonds, and ethnic relations. I will show that openness/insularity is an idea that I have arrived at by combining Claude Fischer’s (1984, 1995) concept of the institutional completeness of a subculture, Louis Wirth’s (1938, 1956) theory on the cultural heterogeneity of cities, Robert Sampson’s (2012) discussion of neighborhood effects, and the subjective experience of the city in which they live. Continuing, I will list empirical indicators of openness and insularity, such as residential pattern, social/ethnic relation, friendship network, and the perception of local societies.

LI, YIFEI* (University of Wisconsin-Madison, yifeili@ssc.wisc.edu)
Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relaxed rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Duijiangyan, Hangzhou, and Tianjin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucracies are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

ZHONG, XIAOHUA (Tongji University)
The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, however, the literature has moved beyond bottom-up, spontaneous, and community-driven forms of urban initiatives. Especially when it comes to urban culture, there is much discussion about the explosion of creativity and entrepreneurialism from below; the state seems to have disappeared from the sociological field of vision.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers' Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organisations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious conglomerate' within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organisation transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of the Tzu-Chi. However, not enough debates have been devoted to the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organisation's modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun's book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers' participations in the organisation's volunteering activities help to consolidate and coordinate lay followers' religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan — Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious conglomerate' which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV networks (CTI TV) and started to broadcast the Da-Ai's prime-time drama (also known as Da-Ai Dramas) on both networks from June, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edutainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous studies on social desirability of mode effect did not observe such findings. The problem of social desirability bias is found to be more severe in telephone interview than in face-to-face interview when dealing with voting turnout (Díaz de Rada, 2011; Voogt and Saris, 2005). The issue of such responding bias with the consideration of mode effect is worth further examination. This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 president election in Taiwan. Data are drawn from two national representative sample conducted the same year after the election to eliminate recall error; with face-to-face survey data from Taiwan Social Change Survey and CATI data from Taiwan Social Image Survey. After weighting by population characteristics, socio-demographic variables will be compared first to examine the dis/similarity of the two samples. Voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students have extended power coming out of the classroom and are intertwined with the adult world and "control".

From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented.

Next, an analysis of this situation will be given.

Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care ("test and treat"), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 66.5% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to "test and treat" among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine's (2007) call for a feminist geography on interactions between social categories and spatial processes, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women's foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of "women alone" in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens and stakeholders' claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of public action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons' Conception Of Societal Community

On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with his functional paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, well over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative American society, and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of modernity. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today.

Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellow Germans agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for so-called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes and social status of respondents into account, a strong correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers’ Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an “adult worker model”, aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly to activation and labour market participation. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probability of ending benefit receipt is evaluated from data on lone mothers and mothers living with a partner. Apart from the household and mothers’ labour market resources, the process is affected by administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection on observable characteristics at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

*Change of Basic Human Values in Europe 2002-2012*

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theoretical framework for value research has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses uses data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PQV-21).

ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefor this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

*The New Normal As a System Challenge*

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that “the low hanging fruit” of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the “more, mobility, and mentality revolutions”. Daniel Albert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism. Tyler Cowen argues that due to Internet, globalization and smart machines “avalanches of data and smart machines” are forcing the real economy to slough off categories of the objectivism such a like an orientalism defined by the western, situs basic values, which means to modernize themselves without loss of their own identity, because the process of Asian modernization at that time had lain between Scylla of nationalism and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues had contended with traditional Confucianism and orientalism of linear development especially in Japan, and had attempted to de-objectivation of Japan and the whole Asia in the name of ‘Great Asia’. On the contrary, Sun, yat-sen, the father-figure of modern China, has attempted with his famous three principles of the people(so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and welfareism. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of ‘Great Asia’, which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of an East Asian Community and to frame alternative conceptions of Asian commonality, this article will examine the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.

Reframing Citizenship in Contemporary Brazil: The Effectiveness of Democratic Institutions

After the highly enthusiastic expectations raised by the re-democratization of Brazil in the 1980s, contemporary sociologists and political scientists are more likely to analyze the effectiveness of political institutions that were created by the democratic constitution in 1988. This work compares the democratic effectiveness of two of these institutions: the conselhos (councils) and the ouvidorias (ombudsmen). Each of them sets a particular way of dealing with popularism, a tradition of democracy in Brazil. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of conselhos is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the constitutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of conselhos and ouvidorias are also analyzed in the light of the broader debate on the reformulation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian’s NGOs

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connotations between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGOs’ experience: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach in order to interpret these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these institutions. Betinho’s biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan

For many children, high quality early learning environment can provide lots of the experiences and skills that help build a foundation for later school success. Among the numerous measures of early childhood education and care quality, some closely linked to later success in school are those which assess school readiness. Many researchers have been claiming that education subsidy is a significant factor related to children’s learning and development. In 2010, the Taiwan authority announced “The Free Education Program for Five-Year-Old Children”. This program which was expected to benefit a larger ratio of population revealed the importance that Taiwan government has attached to early childhood education. However, little information is available about “the effects of this program’s subsidy on preschool children’s school readiness” and “can this program’s subsidy really minimize the gap between disadvantaged and advantageous children”. This study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of children’s readiness. The results showed that subsidy of the free education program has significant influences on children’s school readiness development. Preschool children who are form lower family socioeconomic status are more likely to accept extra subsidy of free education program, and further will reduce the school readiness gap with their counterparts of non-lower family socioeconomic status. That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantageous and advantageous children. The implications of the findings for theory, practice, and preschool education policy are also discussed.

Workload and Wage Gain As Determinant Indicators of Constructing a Composite Index Reflecting Worker Well-Being: Evidence from Taiwan Record-Linkage Data of Manpower Surveys

In light of tremendous institutional changes in the labor markets and working conditions, the research devotes to establish some labor indicators in the hope of reflecting labor transitions and enhancing international comparisons. Although existing official statistics help shed lights on recent development trend, they are not capable of providing us with dynamics and evolution of a complex labor market system temporally and spatially at individual level. Based on 900 thousand individual laborers collected from the 1980-2010 micro data sets of Taiwan Manpower Utilization Surveys (MUSs), the research uses record linkage technique to link individual records of MUSs, creating the so-called quasi-longitudinal MUS (QLMUS). QLMUS is not only large in data size, but also rich in labor information, including demographic characteristics, human capital, work status, employment dynamics, and individual wage income. On the basis of the constructed QLMUS, the research aims to study the evolution of labor well-being in the past three decades. With other factors being fixed, the study constructs an indicator of labor well-being (ILWB) on the basis of joint distribution of individual wage income and workload. ILWB is measured by the joint integral with respect to individual wage income and individual workload, which can not only reflect the collective well-being of labor by social class, region, labor market institution, but also enable us to explore the joint effect of labor market flexibility and security, or flexisecurity, and to reflect various conditions of market structure, worker’s life, labor’s value and labor market inequality. Research findings serve as the base for the design and provision of evidence-based labor market policy.

Education Faculty Members’ Perceptions of and Responses to the Sci-Oriented Academic Evaluation Systems in Taiwan

The main purpose of this research is first to investigate Education Faculty members’ perceptions of and responses to the SCI-oriented academic evaluation systems in Taiwan, and then to analyze the relevant factors of how the faculty members perceive and respond to these systems. Semi-structured interviews * denotes a presenting author. Abstracts are organized by first presenting author’s last name.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks. The conclusions are as follows.

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

**Identity Formation and Social Relations on Facebook for Taiwanese College Students**

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sited approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students’ college life due to cultural globalization facilitated by information and communication technology and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conceptual framework introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

**The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and its Consequences for Social Inequalities**

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to provide a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape.

The author articulates three analytic approaches of migration: the first one focus on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of migration and mobility that structure labor markets; the third one deals with the temporal dimension of migration, in its family and social components.

The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected; transnational migrants’ adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society.

The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

**The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions**

Rapid economic and social changes coupled with the constant changing policies have had impacts on the ways in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by exploring the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajecto...
There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound to abandon the security of marriage and family in search of economic opportunity. Migrant patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experiences using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment and to their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

**A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan**

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age is an M-shape in these two countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe that the curve is only due to cohort differences in women's behavior. The OLS regression model cannot entertain the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women's participation in the labor force correlates with their family obligations or cohort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women’s re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.
This paper explores parallels and dynamic interplays between charismatic Christianity (Pentecostalism and Lutheran charismatic revivalism) and traditional understandings of mysterious power as related to an occult sphere in Iringa, a regional capital of South Central Tanzania. I discuss how notions of mystic power as constructive, defensive and necessary yet also dangerous and potentially destructive are adopted into and partly transformed by charismatic discourses on the realm of darkness and related ritual practices of empowerment, rupture, and spiritual struggle. Attempting to move beyond a rigid continuity-discontinuity dichotomy, suggest that the relationship between Pentecostal-charismatic Christianity and traditional religion/culture may better be grasped in terms of coevalness, intersections and ongoing mutual influence than temporalizing difference.

Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management
During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function to be performed in R&D units towards an integration of technological, market, organizational and institutional dimensions (Tidd, Bessant& Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et.al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need for not only all members of organizations but also external partners, customers and other agents in the eco. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burnes, 2009, Weick&Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include nonlinear interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl&Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hayz & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case
The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries' capacity in maintaining sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors—where the movement is generally from the periphery/semi-periphery to the core region—is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Weick&Quinn, 1999) can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include nonlinear interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl&Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hayz & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

This paper attempts to do three things in following the development of the concept of modernity. First, it is history of the last three decades: from its initial emergence and its early critique in the eighties of the then emerging postmodernity, to the now frequently used and almost indispensable appearing titular informativo o de opinión, y que miles de seguidores se informen in situ .

Influencia De Las Nuevas Tecnologías En La Prensa y Los Procesos De Opinión Pública: Una Nueva Cultura Periodística
El surgimiento de las nuevas tecnologías ha traido consigo un gran impacto en todos los ámbitos de la sociedad pero el más significativo, indudablemente, ha sido el cambio comunicativo, ya que ha supuesto la conexión entre personas, desde cualquier lugar del mundo, con algún tema en común. Así lo ha demostrado, por ejemplo, la teoría de seis grados de separación, recogida en el libro Six Degrees: The Science of a Connected Age del sociólogo Duncan Watts, que intenta comprobar que el “mundo es un pañuelo”. La prensa no es un eslabón perdido en esta cadena tecnológica, pues ha sabido aprovechar todos los recursos que genera la red para propagar sus informaciones. Hoy día se concibe un medio de comunicación que no tenga su espacio en alguna red social como Facebook o Twitter, esta última siendo la horda de sus zapatos, ya que 140 caracteres son más que suficientes para un titular informativo o de opinión, y que miles de seguidores se informen in situ.

LINDGREN, LENA* (Lund University, Lena.Lindgren@soclaw.lu.se)
‘Modern Times’: The Conceptualization of Contemporary Societies
This paper attempts to do three things in following the development of the concept of modernity. First, it is history of the last three decades: from its initial emergence and its early critique in the eighties of the then emerging postmodernity, to the now frequently used and almost indispensable appearing term when it comes to diagnosing contemporary societies. There has thus been a journey from conceptual polarities to its having become a part of the ‘dominant intellectual discourse’. Lyotard’s ‘La Condition postmoderne’ (1979) was probably the starting point. The dichotomy of Modernity versus Postmodernity (Habermas 1980) was established soon thereafter. Later the term gradually became an integrated part of sociological theory and it was declared that “Modernity is itself deeply and intrinsically sociological” (Giddens 1990). Modernity then came to refer to a “global condition” and possibly also the beginning of a future “world sociology of modernity” (Wagner 2012). A second question the paper is concerned with is the explanatory value that the concept of modernity has for empirical research. It appears to be common knowledge that we are living in a period of ‘late modernity’, even if the success of the concept has had on sociological thinking. It appears to be common knowledge that we are living in a period of ‘late modernity’, even if there is not enough statistical evidence to identify the relationship between depression and conflict. The interview is going to be conducted next month, and Repertory Grid Technique (RGT) will be adopted to qualitatively and quantitatively examine the relationship between the levels of the rigidity in terms of the construct system related to personal and social orientations and depression.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change: 1. more flexibility in systems and infrastructures so the public could escape ‘path dependency’ including flexibilisation of large scale water, drainage and sewage systems and water governance systems including water policies and pricing 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account and ensure that “cleanliness, comfort and convenience” is understood as a mobility channel for the Arab minority group to attain social and economic capital: A Bourdieusian Perspective

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one’s life. The situation is definitely different when one is born into a religious community. I.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one’s belief or understanding of the world. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The digital divide is a social side effect of the information age. The technological modernization enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the "second level" digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The goal of this paper was to present the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital; and to characterize the link between the digital divide and social stratification.

The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old. Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from significant to insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing stock has been sold off, at least partly due to its high market value. Meanwhile, the tendency of continuous gentrification is an urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant- owned housing, and the current reluctance of developers to start up new building projects. The point at which the Swedish housing system has been thoroughly deregulated from the 1990s onwards, to ‘gradually become one of the most liberal market-governed housing markets in the Western world’ (Hedin et al. 2012, p.444). The lack of national government interventions and the absence of a national urban policy have led to an increased debate within private sector, tenants’ organizations as well as the growth of new social movements based on housing issues. The social movements articulated around housing provision are fighting against the fear of ‘renovicton’, territorial stigmatization and the difficulties for young people to enter the housing market due to the increased housing shortage.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this ‘dysfunctional housing market’ is a key component of the ‘gendered and racial segregation within the Swedish urban landscape’.

**Confidence Building and Stakeholder Involvement in Nuclear Waste Management. the “Glocalization” of Social Acceptability**

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decisional process. To react to this generalized contestation, it precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear organizations and aims at facilitate the sharing of expertise in order to “ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes”.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2006). This multi-level strategy that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

**The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?**

In most of the European countries that are confronted with the problem of nuclear waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the “participative or deliberative turn” (Lefebvre, 2012; Barthes, 2006). While traditional rationalities (based mainly on performance assessment and quantitative risk analysis) prevailed until the early nineties, they have proved to be unsuccessful and reached stalemate, leading to a paralysis of decisions-making procedures. Experts identified the “societal aspects” of nuclear waste management (mainly the emergence of multi-level contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this “participatory turn” in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the “societal aspects” of high level waste management: it is claimed that the problem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogic account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.
The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a series of social and economic transformations. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing, and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese increased, and now the likelihood of marriage for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio is highly skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Conjectures on Labor-Environment Alliances

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as Germany, England and Korea. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left – cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in a small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are likely to take the helm of social movement sector (cases such as the US, Japan, and Taiwan), and more likely to emphasize the purely ecological dimension of environmentalism and to jettison the class politics embedded in many environmental controversies. We close the paper with a description of possible future paths of convergence and divergence of labor and environmental movements across the world sectors we have described.

Chinese Elite Higher Education and Reproduction of Educational Inequality

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through Gaokao examination only. This new strategy is called Independent Freshman Admission (IFA, or Zai Zhu Sheng in Chinese). Whereas ample evidence exists for the social disadvantages of people with low SES in the ability to access and complete elite higher education in Westernized countries, research on educational inequality at elite universities in non-Western countries has remained scarce. This research, using administrative data from one Chinese elite university in the years 2007 and 2008, presents behind-the-scenes details of admission processes at Chinese elite universities for the first time and demonstrates the impact of these processes on educational stratification in a radically changing society. Significant associations were found in the IFA selection process between students’ socioeconomic origin and whether they passed the multi-stage selection process to access tertiary education. The new IFA system favors students from higher socio-economic origins at the expense of students from lower socio-economic backgrounds in admission to elite universities. Furthermore, this institutional reform of elite higher education will likely have a long-term impact on the social origins of the intellectual elite and changes in social structure in Chinese society.

Relationship Among Fathers’ Occupation, Fathers’ Parenting Behaviors and Children’s Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children’s education. By incorporating cultural capital in Bourdieu’s theory of reproduction, therefore, an empirical study was conducted by putting together a study concept of “economic strata of fathers (occupations) → fathers’ parenting behaviors → accomplishment of children’s education” by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shansi Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu’s theory of reproduction can be applicable to society in China, with a significant influence from fathers’ parenting behaviors on self-esteem and academic performance of children. First of all, parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher obligation of school education than home education. On the other hand, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar

Inequality, Government Trust and Election Participation

It is a hot topic that how to promote Social transformation of the trust in govern- ment and election participation in China. This paper in China. This paper presents behind-the-scenes details of admission processes at Chinese elite universities for the first time and demonstrates the impact of these processes on the convention political participations. The author argues that government trust plays an important role in convention political participation, but contrary to more traditional models, there is regional disparity of the convention political par- ticipation, controlling for other related factors. Finding indicates that inequality is the strongest determinant of government trust and that government trust has a great effect on convention political participations.
Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for Local Economic Transition

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also the result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.
Disability and the Limits of Knowledge. Uncertainties of Expert Practices in Insurance Companies

Disability is one of the most significant insurable risks in human life. Insuring disability, either statutorily or voluntarily, is not an easy task for insurance companies. Ability to work is more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entwined with each other. Experts of these institutions try to prevent disability, define it and control its development in distinctive ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices in disability insurance and rehabilitation in Finland. The focus is on the insurability disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Conflicts Between Artisanal Miners and the Government in Mongolia

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of ‘Gold Program’ in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate without permits, at 65,000-100,000 people, so-called ‘micro miners’ have been working and living without any legal coordination and official registration for the last decade. The Government made an effort on dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the tow sides. Remarkably, no comprehensive survey was conducted on this newly generated community in Mongolian society.

Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were adopted in this paper. As a result the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary activities.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.
Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the “Wild” Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Acts 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach (‘Accelerated Experience-based Co-design’ or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBDC draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients’ eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from patient to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients’ eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from 12 to 6 months and halved costs.

Evaluation: An ethnographic process evaluation was conducted, including observations, interviews, questionnaires, and cost and documentary analysis (including comparison with previous EBDC evaluations).

Results: A total of 96 staff members and 63 patients participated in the four AEBDC projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improvements were similar to those in traditional EBDC projects. But the element of the intervention that has left both staff and patients feeling energised and empowered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBDC can reconnect staff with fundamental values of care and compassion. Patients, too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare.

Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines some of these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate these critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.

Employment and Health Consequences of Care-giving for Older Workers in Australia

In Australia there is continuing policy pressure on older adults to remain in paid work. For many, especially women, participation in paid work is undertaken in conjunction with providing care for sick, disabled or frail family members and/or grandchildren. Recent policy developments in Australia such as the National Carer Strategy Action Plan (2011–2014) articulate a commitment to ‘recognise and respond to the needs of carers including supporting their right to participate in social and economic life. To this end, the Fair Work Act Amendment Bill 2013 extends the right to request flexible working arrangements to mature-age workers over 55 and workers with added caring responsibilities. At the same time, The Australian Human Rights Commission Report ‘Investing in care: Recognising and valuing those who care’ (2013) acknowledges the potential disadvantages, particularly for women, associated with unpaid caring responsibilities and the impact on workforce participation, retirement income and health.

This paper explores the relationship between paid work and care-giving, with a particular focus on Australia’s early baby boomer cohort and the gendered nature of care-giving. Analysis of longitudinal data from the Household Income and Labour Dynamics in Australia (HILDA) survey indicates that being female, having a health condition, higher education, being partnered, and being engaged in paid work and care-giving in 2002 increase the odds of engagement in concurrent activities in 2010 relative to engagement in paid work only. The finding that prior engagement is consistently related to future engagement in the same activity eight years later highlights the value of examining engagement over a longer time period. These findings will be interpreted within Australia’s policy context and the potential employment and health related consequences of care-giving on those providing the care, their families, employers and the community.

LOISEAU, HUGO* (Université de Sherbrooke, Hugo.Loiseau@USherbrooke.ca)

Cyberspace: A New “Fieldwork” Experience For Sociologists

While cyberspace clearly is a new research field, scholars are just starting to study how to grasp the full meaning of social relations in cyberspace. This question puzzles numerous disciplines of social sciences. Traditionally, the explanation of the process of research means that researchers have to go back and forth between the theoretical perspective and the empirical reality. They essentially start from one of these two starting points to get towards the other. But how to do that in the digital world? This space shares characteristics of both theoretical and empirical worlds, but nevertheless, differs greatly from both. The paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a shortcoming found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper exposes three main reasons why and how cyberspace should be designed as a field of investigation: 1) because it is a place (cyberspace is a space in the geographical sense), 2) there are several methods to do research in cyberspace and 3) there is an ethic of research inherent to it. We therefore believe it is possible to say that cyberspace is not a field like any other. It is rather a new mediator between theory and reality. A better understanding of this cyberspace field should provide better tools and concepts to apprehend the social reality in the digital world. The originality of the paper is based on the current inability of different research methods to understand and analyze cyberspace as a research object but also on their inability to understand and properly analyze the social phenomenon of cyberspace.

LOMBARD, CRISTO* (University of South Africa, Cristo.Lombard@gmail.com)
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses; broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutical methods are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of “Western” exegesis characterized with a theological and philosophical criticism. This also applies to the “Western” biblical tradition, which is too often unacknowledged. The underlaying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constructing the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political in nature, may have shared relations with present with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

LOMBARDI, DENISE* (Ecole Pratique Hautes Etudes, lombardi.denise@gmail.com)
Embodying Another Self for Western Shamanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical wellness care the two basic constituents through which the argumentation about health is built up in contemporary Western world. Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and conjugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

LONGHOFER, WESLEY* (Emory University, wesley.longhofer@emory.edu)
Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This paper will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I study philanthropic and charitable activity in what world policy scholars have called a “global moral order” that champions virtue and positions voluntary associations, including foundations and charities, as legitimate actors for solving global problems. The first part of the study draws upon survey data to explore why individuals join charitable organizations in 35 countries. The second part of the study turns attention to the growth of philanthropic organizations in more than 100 countries since the 1970s. Results from the study find that models of charitable activity are structured in the culture of world society.

Educational Changes: The Adoption of Standardizing Reforms

The paper discusses the post-Soviet reform in two educational sectors – general education (lower secondary) and vocational education – from the viewpoint of adoption of standardizing policies by teachers in Estonia.

By being inspired by the concept of social innovation we concentrate on two questions: What has been the outcomes/social benefits (e.g. empowerment of teachers) resulting from the reform process, and secondly, how the reform policies (e.g. curricular changes) have been adopted by the teachers? We base our arguments on a) analysis of the documents and previous researches and b) empirical qualitative studies on adoption of curricula changes.

In the Soviet time, the education system and curricula development was highly centralised and ideologically controlled by Moscow. In 1987-1988, even before the independence, the transition period in Estonian general education begun. The quickest changes were evident in general education where powerful movement of teachers started to innovate the curricula with the aim to de-ideologize it. The general education reform in the post-re-independence time comprised of two radical transformations: from Soviet system to independent education system and neoliberal transition from the second half of 1990. The latter period have comprised both standardization and decentralization (e.g. decentralization of school network and growing principals’ autonomy) tendencies. In VET, as compared to the general education, the reform process started later and has been more inclusive.

Our analysis will show that the impact of standardization has been differentiated on two levels: firstly, the different education sectors (general and vocational education) has been affected by reforms differently; secondly, in the course of the reform, teachers have adopted different coping strategies, in other words, the reform has divided the teachers into different adopter’s categories according the meanings attributed to changes. However, to a certain extent, the patterns of adopters’ categories in both education sectors are similar.

Organization within Organization Studies: From Core Object to Unspecified, Awkward Relic

After the outbreak of the financial crises, scholars and public intellectuals have sought to uncover the roots of the current economic downturn. Prominent in this discussion has been a renewed discussion of the role of state regulation and laissez faire, as well as a critique of the preceding decades accelerated financial deregulation. The current crises, however, should also be seen in conjunction with its organizational dimensions. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizations, including banks, corporations, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of ‘the organization’ seems to have been problematized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies’ core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by reconnecting with and re-appropriating this core object can OS revitalize itself as a practically useful and relevant academic discipline.

Pharmaceuticalisation and Performance Consumption: Differences Between Young Workers and University Students

In the current modernity, the management of personal capabilities gave rise to a broad market and a booming performance industry. Medications play an increasing role in this offering, focusing mainly on cognitive/mental and body performance. The so-called lifestyle drugs and smart drugs are the most visible side of this modern logic of self-management. The production of both pharmaceuticals and natural medicines/supplements participates in this range of purposes,
Socioética y Antropoética Profesional Para Una Educación Universitaria Contra La Desigualdad

La problemática que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para terminar con los males de la sociedad. Por el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apostó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En la vertiente marxista porque la ética es un elemento de la superestructura ideológica que justificaba el statu quo mientras el modelo socialista construiría la igualdad cambiando la estructura socioeconómica a partir de la eliminación de la explotación que implicaba la propiedad privada de los medios de producción.

En este contexto, la educación universitaria tendría que estar sustentada en una capacitación técnica y científico de alto nivel, lo que produciría profesionales que en su práctica promovieran la sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la imposibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la pérdida de la ética como códigos de buen comportamiento sino, además, como un dispositivo indispensable para la mejora la ética como códigos de buen comportamiento sino, además, como un dispositivo indispensable para la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades que muestran por contribuir desde sus campos de conocimiento a la mejora de la ética son preocupantes, si tomamos en cuenta el desinterés de los futuros profesionales en la formación ética profesional que contribuya a la mejora de una ética profesional que promueva la igualdad.

A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality

In previous works (Fachelli, 2009; Fachelli & Lópe-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2007, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. With this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called "structural and articulated typology": we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into "m" factors. Then we apply cluster analysis to classify individuals into "key" groups or "types" on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to "inequality" level. The question that arise is how generate a composite indicator, that we call "social distance", based in a multidimensional measure taking into account the principal factorials components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will show the results based on the analysis of the Labor Force Survey of Argentina in 2012.

From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain

For the past ten years, the management and promotion of circular migration flows has been a pivotal element of migration management policy in Spain, particularly of low-skilled workers in sectors such as seasonal agriculture and hospitality. It was commonly considered that this type of international mobility allows migrants to adapt to receiving countries labour market needs without incurring in the social costs of permanent settlement. Additionally, circular migration is regarded as a beneficial form of international mobility for migrants themselves and countries of origin. The aim of this paper is to analyse the Spanish policies developed in relation to the seasonal migrant workers for agriculture. We try to answer two key issues: (a) how Spanish policies regarding seasonal workers have been designed (b) and what purposes they responded to. We take into account three dimensions of the policy making: (a) national labour market demands (b) international relations framework (c) and the legitimization and meaning of these policies in the domestic political arena and economic relations between enterprises, trade...
unions and levels of government. In this paper we assess the Spanish legislation on migration, particularly of the measures designed to manage the recruitment of circular seasonal foreign workers in the framework of the bilateral agreements signed by successive governments during the first decade of the XXI century. Our analysis suggests that labour market needs were a goal in the design and implementation of these policies which promoted forms of induced circularity. We highlight the idea that the seasonal labour mobility schemes in Spain have been shaped by a constellation of interests and a result of a consensual policymaking process at local and regional level in seasonal sectors with a high dependency on foreign workers. Economic crisis has change the whole implementation of these policies creating new forms of “spontaneous” circular migration.

Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970’s, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000’s.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c), actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to inter- pret security as complex technology – in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combi- nation of different cause-and-effect chains – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, ever increasing time around the airport and increasing economic competition on different levels, we want to explore how it is possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

1. Differences in educational background and professional views on security
2. Differences in organizational backgrounds (bureaucracies, free-lancers, etc.)
3. Differences in institutional backgrounds (ministries, security services, airport management)
4. Differences between passengers and participants, staff

Each of these differences presents special challenges, inhibits various risks and is met by distinct sets of practices that buffer them in a way that the security processes do not collapse. Therefore the aim of our contribution is also to dis- cover how these special forms of managing differences are interconnected and depend on, but also irritate each other.

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

The role of teacher expectations in pupils’ achievements has been heavily researched during the past 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects on learning opportunities and on the pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academ- ic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

However, despite the fact that there is evidence against discrimina- tion in grading or track assignment against pupils with low socioeconomic back- ground and/or immigrant background on pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academ- ic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

This paper tries to shed light on the role teacher expectations play in pupils’ academic performance within German primary schools. The first part of our work is a systematization of the current state of research. On that basis we propose the application of the frame-selection model in order to theoretically explain self-ful- filling prophecies within the schooling context. In doing so we identify conditions under which broad teacher expectations for certain groups of pupils may emerge and how they may be mediated through the class-room interaction. In a final step we empirically test the hypotheses and answer whether teacher expectation ef- fects contribute to the emergence of social and/or ethnic educational inequalities or not.

Employment Expansion, Wage Increases, and More Equal Opportunities: The Suspicous Disregard of Strong Labor Market Performance in Japan

We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of “lost decade(s)” stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long- term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than were to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created
regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regular employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any potential gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general “adaptation problem” referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current post-Civil Rights era. I begin with an overview of what I call the “civil rights mode” of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a “civil liberties mode,” a race-neutral or “color-blind” strategy that has recently gained favor in civil liberty circles. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequenced repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represent and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of social and religious marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large scale) and by different social actors (individuals, groups, social institutions etc). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociability in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the “spatial turn” in the social sciences, relational definitions of space have prevailed; yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relationships between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

BIGGS, SIMON (University of Melbourne)

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of ageism. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with refutation based on lineage, cohort and chronological age. It also deconstructs critical psychodynamic understanding of social relations in so far as a preconceived ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.

Dimensions of Exclusion in the Lived Experiences of Adult Survivors of Childhood Liver Transplant: A Micro-Analytic Perspective

The first paediatric liver transplants were performed in the early 1980s and continue today, saving thousands of children’s lives. Underlying syndromes, the transplant surgery, comorbidies and side effects of medication leave young people looking and feeling ‘different’ from their peers, especially in childhood. Through analysis of in-depth interviews with 27 now-adult survivors of the first cohort of childhood liver transplant recipients in Europe, we take a micro-analytic perspective in reporting how the processes of fear, felt, and enacted exclusion began in early childhood for this group. Exclusion through liver transplant is an additional intersectional dimension to more recognized societal exclusions such as age or gender, and appears to be fluid throughout the life course. Adapting Goffman’s work on stigma and presentation of the self, we see that problems of exclusion are only slowly resolved in a number of social role interactions, where others appear to feel free to comment on the appearance of individuals’ bodies. For example, felt exclusion of schoolchildren often occurred through physical education, where the transplant scar could be observed unless the child learnt to hide their body in communal changing spaces. Learning how to present oneself to others continues throughout the life course. Narrative restarts, such as changing school or employment, appear a common way to ‘pass’ by losing the identity of a liver transplant recipient. However, this strategy is fragile, being contingent on the medical history not being uncovered. Positively revealing oneself as a liver transplant recipient was reported to result in inclusionary practices more as an adult rather than a child. For most, a sense of inclusion appears to be reached by this ‘new’ ageing population only through growing older: the understanding that everybody has ‘differences’ and that being ‘normal’ is something not otherwise defined for self or others.

Growing up with a Childhood Liver Transplant: Medical ‘Pioneers’ and Beck’s Normativity of Diversity

The concept of a stable biographical narrative and its potential undermining by long term health conditions is one that underpins much medical sociology. This is particularly true of chronic illness rather than acute conditions constituting forms of biographical disruption. More recently, the influence of approaches derived from theories of reflexive modernity have started to challenge the salience of the modernist life course, introducing notions of indeterminacy and contingency into how individuals construct individualised narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the ‘side effects’ of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a ‘normativity of diversity’ which has replaced the more simple normativity of modernity) constituted by the ‘side effects’ of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a ‘normativity of diversity’ which has replaced the more simple normativity of

This presentation will look at how social theory can help us understand the situation of the cohort of adults who were the first European recipients of liver transplants as children. The first childhood liver transplants took place in the early 1980s and this group has had to act as a ‘pioneer’ cohort all through their lives. Dealing with the risks of transplant surgery, underlying syndromes, comorbidies and side-effects of medication as previously unencountered phenomena.

This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and on laptop computer and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants’ willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, para-data on time and changes of answers were collected. The results indicate differences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents’ performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

Evaluating Government’s Environmental Performance: Evidence from China

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government’s environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government’s environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents argue that their government has done too little; while 61.7% of the respondents think that their central government has done too much. (2) Environmental performance evaluation in the central government or local government becomes even worse in 2010 than in 2003 CGSS data. (3) As for central government’s environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban residents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government’s performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government’s environmental performance. These results suggest that government’s environmental performance in China today is a mixed system, in which objective environmental problems and resident’s subject perception and social characteristics coexist to determine how the Chinese evaluate their government’s environmental performance.

The Reproduction of Intangible Heritage Successors in Heritage Tourism

With the development of heritage tourism, intangible heritage became a kind of tourism attraction, which holds a fascination for the tourists all over the world who try to touch the landscape, human heritage, and customs of other places. In this way, intangible heritage successors became attractions for the tourists. They can tell the legend, the origin, the meaning of the intangible heritage and they can also show some skill about the intangible for the tourists. What’s more, they can get some financial support from the government because they have the duty to pass the skill on. Gradually, the way of selection of the successors, the explanation of the intangible heritage and the inheritance of the intangible heritage are changing. For they will inherit the heritage within the ethnic group, they will deal with all kinds of relations outside the group, and then another kind of reproduction within themselves can be seen. In this article, the research not only reproduces the research of outstanding hereditary persons but that the successor of the Yi People, the successor of Hu’s Knife-forging of Jingpo and the successor of King Yalu He-roic Poetry of Hmong,
This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of high supportive for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes as consistent with socialization perspective. The study also suggests that parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that are frequent by years, as indicated by the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between copreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literatures conceptualized women’s involvement through strategies of family-owned businesses, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day copreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneurial partners and patriarchal structures. The market uncertainty and the firms’ adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneurial entrepreneurs’ capability, the nature of their specific industry, and family relationships. Wives’ adaptive copreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a stronger patriarchal culture, particularly those in an extended-family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions.

The observations further reveal that wives’ entrepreneurial identity is shaped by the context of the work with the context of daily organizational routines, which can increase their self-empowerment and improve women’s agency. However, lack of opportunity to cultivate their entrepreneurial identity asserts their gendered identity and reinforces marginality.

Communication As A Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. From here, the internal contributions of social networks to the organization at the internal level are not clear enough because it is consider that the commercial issues tend to prevail. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization?

On the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a “brand new” type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others’ sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen for this particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research and data collection safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers). Length of time of researcher’s immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research in the sex working field.

Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Bamako with more than 80,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment.

Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academics cope with a situation characterized by uncertainty and unpredictability? Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, factoring these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

Power without Representation: The Coherence and Closeness of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain these principles, they must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we review the membership of NAS at both countries by filling out the entire NAS, its executive committee, and its three national groups. This analysis shows that even though NAS is highly coherent, it is excessively endogamous: rather than reflecting the diversity of North America, it only reunites a select group of U.S. or pro-US leaders, members of transnational corporations and partisans of free trade. Then, we focus on the agendas of the NAS’ annual regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily well equipped to represent the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a power founded on opinion, rather than on force and material interests— heavily depends on the hard power of established hierarchies.

LUND, REBECCA* (Aalto University, rebecca.lund@aalto.fi)
**The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars**

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

**Social Science and Alienation In School**

School can in many ways be seen as a place distant from life in general: In classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school become more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

**Young Consumers In Sweden**

In this presentation the question of how economic resources influence children's peer relations will be addressed, with focus on the Scandinavian setting. This question is of particularly importance in times of changing discourses surrounding children's role in the consumer society. The ways Scandinavian children are portrayed as consumers have gradually changed, from vulnerable beings towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and field notes from various events, and text material produced over a period of three years.

**Estimating the Causal Effect of Education on Discrimination -- CANCELLED**

We use data from the UK British Social Attitudes Survey 1983-2009 to examine the effect of education on indicators of discrimination and racism. Importantly, we make use of the 1972 Rising of the School Leaving Age (RoSLA) reform to identify the causal effect that education may have on such indicators, using a regression discontinuity design. Our results show that naive OLS estimates describe a negative relation between education and discrimination (more education is related to lower levels of discrimination) whilst using the 1972 RoSLA events as an identifying mechanism suggests that education and discriminatory attitudes are not so connected as is commonly presumed. We comment on the implications of this result in light of contemporary educational policy reforms in Britain.

**Employee Representation in the German Craft Sector – a Neglected Form of Industrial Democracy**

The German Crafts and Trade Code ("Handwerksordnung", HWO) with its strict rules for market access is often regarded as a pure anachronism at it is regularly put into question by the European Commission who sees it as a barrier to the freedom of trade. However, the German regulation of craft is also an example of industrial democracy as since the enactment of the Crafts and Trade Code in 1953 employee representatives are part of the regulatory bodies, the chambers of craft and in particular the vocational training committees. Since this time employee participation has been further developed and democratized.

The paper will analyse the historical background of these developments and carve out the strengths and shortcomings of employee participation in the autonomous regulation of German craft sectors. We will discuss the impact of employee representation on setting standards for the sector in general and vocational training in particular. On the basis of this analyses the paper will draw conclusions regarding the viability of this form of participation in a context that is increasingly shaped by rules of a liberal market economy. Finally, we will ask if employee representation in the German craft sector can be a model for other sectors and countries.
Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

**LYTKINA, EKATERINA** (National Research University, ekaterina.lytkina@gmail.com)

**Transformation – Reality or Simulacrum?**

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value- and institutional, normative change and related phenomena. However, it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

**RC36-629.4**

**LYTKINA, EKATERINA** (Higher School of Economics, ekaterina.lytkina@gmail.com)

**Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context**

The paper is aimed at examination of the difference of nature and characteristics of alienation and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

**LÖFQVIST, LOUISE** (Linnaeus University, louise.lofqvist@lnu.se)

**Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy**

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academisation of policing, as well as altering organizational ideals as pertinent in this process.
The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies of diverging on the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is important to divide the cohort into two groups based on the gender difference of birth size and explore the impacts on education achievement of these two groups separately. And these results are consistent with those that researches demonstrate in many other countries.

Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what intercultural Education Society in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barley, 1986).
Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle class and its perception of the socioeconomic elite. The global emergence of the middle class has also coincided with contradictions (Bourdieu 2010, Kirton et al. 2011, Franco et al. 2011, Dobbs et al. 2012, Ferreira et al. 2012, López & Ortiz 2012, Oliveira 2012, Chunling 2012) has created a renewed interest towards "new" middle classes in global sociology due to its rapid growth and the socio-political challenges that this poses. How do those who belong to the middle classes in emergent countries feel and think everyday about one of the most salient expressions of world inequalities, the socioeconomic elite - i.e. "the 1%"? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen - or not? Our team conducted a study using an experimental methodology based on games that replicate real exercises applied by social scientists through studies in different countries: "unknown persons" and "dictator" games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was located in three cities of different sizes in Chile. In each city, six simulation games were conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes, reproducing or challenging inequalities. The paper will contribute on topics that are relevant to stratification in the context of globalization, such as different discourses in middle classes, their feelings, perceptions, of equality and the social construction of inequality and between the values of hierarchy (hegemony) and re-remodernized (by glocalized hybridization). A major consequence is that these hybrid arrangements possess both the contradictions inherent in the modernization of traditional patriarchy and those specific to post-patriarchy. Recasting patriarchy in this way enables one to grasp the logic of action and internal contradictions of each type of arrangement by identifying their singularities without placing them hierarchically on an "axis of progress". Moreover, this analytical move also makes it possible to compare all gender arrangements according to their relationship to the principle of patriarchy.

Women Appointments and Political Participation in Brazil

This work aims to study the change identified in the women's participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be emphasize the kind of change's patterns followed in what regards women political appointees by two different social agents in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This study uses the social-democracy theory to analyse the social sphere as main focus of public politics and reforms, as well as to consider it as a movement of women's inclusion in politics and a redefinition of their role. Due to cultural history of women's inferior role in the political sphere, the affective relationship of these factors might signify a relatively change in the participation patterns.

Longevity, Leisure and Landscape

This work seeks to develop a critical reflection on leisure from the interaction with natural and cultural landscapes, declared patrimony of humanity, in the city of Rio de Janeiro, in the neighborhood of Copacabana. This site has the second highest concentration of seniors' community, considered by Municipal law "preferred tourist destination of the third age". The theme will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity.

The methodology presents the translation of perception of 60 to 100 years of elderly people and tourists at the site, addressing the participation of government and third sector institutions linked to the work with this audience.

Leisure will be analyzed in its subjective and contemplative dimensions, and in his contributions to re-signification of the quality of life of the old guy, and the strengthening of intergenerational relations, solidarity-based and participatory social model. In this context, the affective relationship will be addressed with the landscape, a place of memory, whose presence preserved is relevant in the biography of who gets old. Thus, these leisure activities, from the aesthetic contemplation, are compatible and suitable for various limitations arising from aging.

Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security, climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity - may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, riverbank erosion and salinity. Smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women's role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent...
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – if at all. Solving this puzzle requires an examination of the trajectories of state movement interaction differed from the more hierarchical worker organizations putting the current crisis of the Eurozone onto workers and have refused to acquiesce to labor oppression or to explicitly support democracy in the globalized world it has helped to create. Toward that end, I take a world-historical perspective that allows a comparison of syndicalist attempts at extending democratic rights across two time periods: the early 20th century crisis of British hegemony and the syndicalist resurgence in the current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crisis-torn state attempts to control and co-opt these movements have been to both enrich and reconfigure the rights of this long-term perspective. In addition, this study reveals how the movement's rights claims to economic democracy (both inside and outside the workplace) underwent a transition from largely implicit to explicit sets of rules, thus facilitating connection with non-labor democratic movements. Finally, tracing state-movement interaction in unstable economic contexts bears on questions of the meaning and realization of economic rights; the crucial test of such rights in periods of crisis becomes the degree to which workers and other stakeholders have democratic input on policy and thus avoid "cost shifting."

MAEDA, TOMOHIKO* (Meijo University, tomogeda@meijo-u.ac.jp)

The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, *Legal consciousness of Japanese*, in 1967, theories of legal consciousness and legal culture have kept the issues of scholarly controversies in various fields of socio-legal studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints for socio-legal studies on global-local and local adaptation. I would argue that theories of legal consciousness and legal culture serve for studies on globalized law and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep the eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the local adaptation of globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, we would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories. I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organizational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulated environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using material from a five-year research project focusing on sense-making processes at sector and organizational level, we can show not only that there is new discourse related to labour-related issues but also how this discourse is reflected by evolving employment policies. Overall, ‘market accountability’ puts long-established professional concepts under strain. However, the ‘sense-making’ is different between...

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegated to women and elderly people. Such a model had strong influences on women and elderly people, who are one of the most career- and family-care dependent population, and will be suffering in the next years from an increasingly higher old age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare projects have been able to attract the attention of the citizens. In this context, we discuss about the presence of the PDAs (Policies and Development Authorities) - a new type of organizations in Japan and the US - and the role of the PDAs in the promotion of child care services. It has been the first time to引入 childcare services in the 60's, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labour market in Italy. However, the financial crisis and the consequent reduction of public funds has put in question the sustainability of Bologna’s model in recent years. In the present paper, we will show results from a series of 8 focus groups involving 34 working women conducted in Bologna during 2013, which have been selected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the work-life balance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50's will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

Possibility of Area Management Organizations for “Bulwark” Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific purpose (such as area management, or historical and business management of historical market), equipped with business specialist-staffs, and also it is governed by volunteer citizen board members. “Half private, half government” entity is run or governed by citizens. Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood’s core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International District’s “IDEA Space” project for assisting local small businesses, using “visioning”method. These trials are expected to be effective “bulwark” against diverting impacts of neoliberal developments. This presentation concretely gazes at the PDAs’ efforts and the like’s of area management organizations to keep local core of cultures, local “life economy” with concrete devices from the stand point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organizations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental action in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persuasion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving different degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the deliberation as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson’s paradox and, in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the concept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.

Social Norms and Policy Influence on Family Formation in Sweden

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equality and low fertility in postindustrial societies. The theoretical framework is derived from the way in which family- and gender-role norms, institutions, and economic context intertwine with the family formation intentions and behaviors of young adults. We focus on two sets of social norms (family- and gender-role norms) in influencing individuals’ intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the “normal” family, and the second dealing with the appropriate roles of men and women in the family and in the public sphere, especially the labor market. Our analytical model seeks to attribute equal explanatory power to men’s as well as women’s opportunities for engaging in positively viewed activities in the spheres of family and work. In our empirical analyses we rely on a mixed-methods approach. In this paper, we combine a quantitative analysis based on data extracted from the Swedish Young Adult Panel Study on attitudes to work, family and gender roles and their possible impact on family formation (intentions) among Swedish young adults in the first decade of the 21st century, with a qualitative analysis of narratives in in-depth interviews (N=80), carried out with women and men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings for the qualitative part indicate that young adults view Swedish family policies as good even when having little first-hand knowledge of them. We discuss similarities and differences across gender and family status, as well as the implications of our findings for research and for policy design.

Development, Modernity and Nanotechnology: The Challenges Of a Time

This paper aims to raise some thoughts on the present time and the relationship between modernity, environment and development, starting from some questions: if we continue to follow the current economic model, of nevevdevelopment and capital expansion, what awaits for us? Is there a future? Will the human species take part in it? How to divert the course of this rudderless steamboat called Progress? In search of clues that point to the possible answers, we walk at some tracks left in late 1960s and early 1970s, by Josué de Castro, on the changes that had already been felt in his time and the threat that hovered in the world due to environment imbalances arising from the development model based in the expansionary logic of capital, the rampant belief in science and technology, then to reflect on the reality of our time and the progress and achievements in the field of science and technology, and the challenges we face against the advance of new technologies - and this is the case of nanotechnology. Nanotechnology is a technology that can have and already has numerous applications. It’s, in the point of view of the market, a safe investment for the future. In this sense, we must discuss the ethical and legal issues that should regulate the use of nanotechnology. There is no certainty about the possible impacts that the use of nanotechnology may have, regarding the health of people and the environment. This paper is the result of the research “Nanotechnology and food and biofuels: recognizing the essential elements for the development of indicators of risk and regulatory frameworks that protect health and the environment” (898/2009), funded by CAPES, a government agency linked to the Brazilian Ministry of Education.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention—measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative "batterer" credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be "treated" in therapy. Accordingly, non-psychological studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batters, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculation, and the role the state plays in their interactions with the justice system. These different meanings are attributable to a number of factors—factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

**MAHI, LARA** (Université Paris Ouest Nanterre, laramahi75@gmail.com)

**Sentencing: 'health Determinants' of Criminal Sanction**

Des travaux en sentencing ont mis en avant les inégalités face à la sanction pénale. Que l'on soit une femme ou un homme (Mary-Portas, 1995 ; Cardi, 2007), que l'on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l'on ait un travail ou non (Herpin, 1977), ou encore, que l'on ait un nom à conso- lidation anthropologique ou non (Jobard, Névanen, 2007), on n'est pas égaux face à la sanction pénale.

En matière de santé, la question de l'impact de l'état de santé somatique des justiciables sur les jugements est systématiquement étudiée au profit de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laberge et al., 1995 ; Cartwright et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l'existence de formes de sur-pénalisation des malades. Y a-t-il un lien entre l'état de santé des justiciables et la pénalisation à laquelle ils sont condamnés ?

Après avoir observé 412 procès correctionnels au tribunal de grande instance de Paris, nous avons analysé statistiquement les liens entre « état de santé du justiciable » et « condamnation ».

Nos résultats font état d'un contrôle particulièrement coercitif, par l'institution judiciaire, des justiciables malades faisant part d'une absence d'engagement dans un processus de soin. Au cours d'un procès pénal, ces derniers sont sur-con damnés à la prison ferme et à de plus longues peines.

Au-delà de la chaîne pénale, ces résultats nous invitent à repenser la définition que donne Parsons (1951) des rôles du malade et, plus largement, à interroger les formes du contrôle social qui pèse sur les malades.

**MAHIEU, CHRISTIAN** (CNRS, christian.mahieu@wanadoo.fr)

**The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices**

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under which individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very act. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collective initiatives and social entrepreneurial communities. We should better know these collective initiatives in order to differentiate their actors at the same times social activists and entrepreneurs. My second hypothesis concerns the role of devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and their alternative devices permit us to see the development of solidarity economic initiatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collective devices and their acting and learning devices are developed at the very heart of co working
spaces and other "third places" described by Oldenburg but also through collaborative web sites and their acting platforms.

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the underprivileged neighborhoods, urban sanitation is on par with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants. Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace's standard of living a challenge to manage. Due to this inefficiency, most the city's periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In favelas, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaks out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Garbage has contaminated the city since the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

Migrants Remittances and the Family

Abstract: Contrary to the perception of the relationship between the individual and the family as a structure, this paper offers a conceptualization of this relationship as a process whereby individuals selectively identify with various available forms of family. It builds on 30 in-depth and unstructured interviews, complemented by ethnicographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants' remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants' relationships to their family in Bangladesh as central to their remitting practices. It recognizes multiple forms of family and community organizations to which the immigrants belong and act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships. For example, it recognizes migrants' relationships to their family in Bangladesh as central to their remitting practices. It recognizes multiple forms of family and community organizations to which the immigrants belong. The study identifies the process of migrants' family identification as a relational orientation that identifies fluidity in the individuals' identification to the family through migration and remitting.

The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1974 in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ programs. Although ROWITE was disbanded in 1998, its concerns were, in part, picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes

Annsofie Mahrs Tråff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describe physical activity in on physical activity research. They asked about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do not agree that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

Global Arenas of Knowledge: Perspectives from the Brazilian Case

This paper aims to present the major guidelines of the project ‘Global Arenas of Knowledge’ and its first results. The project involves theoretical work to reformulate the sociology of knowledge in contemporary global perspectives, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished ‘third world’, and where knowledge institutions are well established: South Africa, Brasil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic work, interviews, documentary work and quantitative methods of citation-analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain.

Legislation and Its Discontents: Consequences of the Peruvian Household Workers Law

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the capital yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourist industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privacy to capital’s growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)

When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom. This practice of domestic labor is broad acceptance in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Limaño society.

I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar ten years ago, though with negligible improvements in the lives of its household workers as the law offers no minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privacy to capital’s growth and yet [arguably] further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limaños.

My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limaño homes, with serious consequences for a future, more egalitarian, and ‘modern’ Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands went to the streets to denounce the Syngygas, as well as to accuse it of being behind the assassination, or to flag out their alliance with it and accuse the US and Israel of killing Hariri. In the following research I study how the political protests that followed the assassination of the former Prime Minister Rafic Hariri turned into sectarian violence that has been framed as “Sunnis versus Shites”. More precisely, I look at the shift in the political salience and the patterns of political, confessional as well as national identities. I have used official records and newspaper archives in order to compile a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in protest patterns and the succession of political coalitions. A meso-level analysis of coalition formations is carried out using social network research techniques. The empirical results show that the Hariri

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
assassination was a “political earthquake” that shifted the attention of the Leba-
nese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of
the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

**Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality**

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to
be the main ‘carer’ in these circumstances. A dedicated income support payment
for some Australian carers has been available since the 1980s. Unlike many other
forms of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fio-
nia Williams’ analysis of the claiming and framing of European care policies (2010),
we argue that changes to Australian carers’ income support have developed with-
in competing frames of social justice and social investment. The social investment
frame, which prioritised paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of social support, such as unemployment benefits, to enable more
people to enter the workforce. However, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people they care for.

**MAKI, YOKO** (Hitotsubashi University, maki.yoko@nifty.com)

**Middle Class Women’s Work and Childcare in Paris**

Today, France draws attention from neighboring countries because of its high
birth rate. French women are also relatively active in their labour work participa-
 tion. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to the
issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare is the registered childcare, the so-called
“Assistant maternels”, and not nurseries as in Sweden. The paper will put the
emphasis on this French registered childcare system.

According to a French national report on childcare, in 2011, 37 % of children
under three whose parents worked full time were left with registered childminder-
s who were approved by the local authorities and received children mainly
under three whose parents worked full time were left with registered childminders
who were approved by the local authorities and received children mainly
in their own homes. 18% of children had places in nurseries, and 4 % were left
with unregistered childminders, usually professional nannies who worked in the
children’s homes.

The French “Assistant maternal” system was passed into legislation in 1977 to
clarify the undeclared work, and progressed during the 1990s to increase jobs
in the domestic sphere. Local authorities conduct home inspections, and 120 hours
of professional training is required for approval. The state takes charge of the
social security cost of childminders.

Now in Paris, many childminders are immigrant women and they help middle
class French women to work outside the home and to get higher wages than the
childminders do. Mothers are generally satisfied with this system because of the
flexibility of working time, which means the longer and less paid work of
immigrant women supports the work and families of French middle class women.

**MAKINO, TOMOKAZU** (Japan Society Promotion of Science, makinotomoyo815@gmail.com)

**The Transformation Of Self-Confidence In Japanese Youth: From 1992 To 2012**

Japan’s economy entered a long period of stagnation, known as the ‘Lost Two
Decade,’ after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
dignity and self-consciousness is a feature of young adult in Japanese society. But we can get another figure of
Japanese youth from the outcome of the research of Japan Youth Study Group,
conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
seves, and feel senses of themselves. They are anything but fragile. By the way,
we can make a merit of comparison of three or more time point is that we can dis-
tinguish between temporary trend and long-term trend. For example, the ratio of re-
spondents of feeling sense of oneself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfi-
cial activities has increased from 2002 to 2012. These means long-term trend of diver-
sification of the self. On the other hand, the ratio of loving oneself had increased
from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What
causes for these? We can consider two matters. First, the cultural-social change 
underpinning long-term trend, for instance, the diffusion of mobile media and
social network service accelerating the diversification of the self. Also, we need
consider what happened in 2002 (about temporary trend). We try to explain the
structure of self-affirmation by comparing the determinant and related item of
self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory
of “Water War”? “Water War” in 2000 was an anti-privatization movement towards the public
water service and it changed the water law and forced a private company to with-
draw.

The goal of the social activists who had played a main role in “Water War” was
to improve water resource accessibility. However, the success of “Water War” did
not solve the water resource problem in Bolivia. Does it mean that the other issue
needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the
water situation not mentioned. In order to investigate a real driving factor that
had caused the problem, analysis of the Water War should be revisited from dif-
f erent angle. A water shortage is classified into two factors: “Real scarcity” and
“Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of
volumetric quantities, incurred mainly from population growth, industrialization
and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the
exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards manu-
factured scarcity. It prevented its focus from real scarcity, which is also pivotal
in order to solve the water resource problem. This study uses the original data
of fieldwork and local newspapers from three times of fieldwork by the author. I
will use discourse analyses to expose the process of why social activists chose to
focus on “Manufactured scarcity” in order to gain the civilian support. I present
the importance of recognizing the each characteristic of water scarcity to improve
the water resource problem. This research intends to provide a new framework
for equitable water distribution.

**Pathways Of Aging: Old Women’s Gendered Narratives and Cultural-Historical Locations**

**Pathways of Aging: Old Women’s gendered narratives and cultural-his-
torical location**

Social gerontology has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a
lifetime’s experiences. In this paper I explore the themes that old Mexican women
themselves identified as important in shaping their pathways towards old age. I
do so by employing a thematic-narrative analysis of multiple in-depth interviews
with 32 women aged 60 to 89.

Throughout their life-course the women’s personal biographies, their current
social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My
intention is to stress the importance of structural and personal attitudes and
behaviors that underpin the socio-cultural construction of aging and old age; the rela-
tion between the objective reality and subjective experiences of aging. By making refer-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering ‘liberating’ narratives, become more evident in the experience of their daughters and granddaughters.

The women’s - formal and informal- participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

MALAINA, ALVARO* (University of California Berkeley, alvaromm@pdi.ucm.es)
The Complex Adaptive Systems Approach, a Sociocybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal character, and mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/subject. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that systems and complexity are primarily attributes of an observer, an operation of “punctuation” in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an “invented reality” (von Foerster) and the system that simulates the real system would be doubly so.

CAS-epistemic limits become more evident in its sociological models called “Artificial Societies”. The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, “self-referential” (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg's historical, archival, found and self-generated. The book is the result of documentation and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections.

Mattinger Difference Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the “developed” world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the “developing” world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even “normal”. The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military’s involvement in disaster management.

*Uneven Development and Social Equity in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?*

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. We find that the United States has undergone a long period of internal variation within United States shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. This paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for intervention and how its influence on environment of severe resource and policy constraints, and the extent to which that in turn dictates rethinking governance roles and responsibilities in shrinking cities.

*Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of a Tropical Cyclone Prone Coastal Community*

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration-decision by the disaster victims is not only related to the socio-economic effects, but also to the socio-political factors. The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability.
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence confidentiality of intellectual ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members. In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered as necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo financius”. In the last years, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in Israel, analyzing the interaction of the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

Social Housing in Sustainable City

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the participation of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the research on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46 000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregular, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

Education-Inequality Trap: State Contributions to the Vicious Cycle

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always never fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to higher earning sectors of the economy is limited by one's social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education—access to it and its outcomes—form a trap that leads to the reproduction of initial inequalities.

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities.

In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state's role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths systems, which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of "education for all." Viewing high inequality negatively as a necessary impedes growth but also restricts people's exercise of their freedoms, the paper also attempts to partake in the discourse of inequality/ies and its relation to development.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second orders. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contradictory hypotheses on occupational life course related with work uncertainties:

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education-work-retirement.
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to study the weights associated to their constraints, the objective is to test a tripartition model exists but it is gendered and different for each cohort.

The results of the analysis suggest:
- The tripartition model exists but it is gendered and different for each cohort.
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: 1. Family and occupational constraints; 2. Social resources and; 3. Institutional performances in each country.

These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.

The project also aims at identifying potential teachers from among the aged and skill them. My arguments are twofold: First, I argue that the impact of work-family policies is conditioned by class. The negative implications of family-policies for lower-skilled women, these effects not only diminish, but also reverse. Second, I argue that when the focus is shifted from a single aspect of gender inequality to multiple aspects that are analyzed simultaneously, the implications of work-family policies for gender inequality no longer appear paradoxical, for it becomes possible to see the inherent tradeoffs among the different aspects.

These results are examined using a wide range of country-level indicators, aggregated from the ISSP data, of 14 welfare states. The indicators encompass most aspects of women's economic activities that have been investigated in comparative research. The indicators are divided into two groups: one that is relevant to advantaged women (e.g., women's representation in managerial positions), and the other to disadvantaged women (e.g., poverty rates). The relationship between welfare-state policies and each group of indicators will be examined and discussed in light of the tradeoff between participation and occupational attainment, and the class divisions among women.

Role Of ICT In Mitigating Social Problems

In India children from poor families get enrolled in free government primary schools. However, due to poor quality of schooling majority of them drop out without completing primary education. To address this problem the present research explores the use of ICT to provide web based quality teaching by developing and also customising already available teaching materials in the internet. The project also aims at identifying potential teachers from among the aged and skill them. They are further helped by providing them an ICT enabled boarding school for girls, with very positive results which is discussed in the paper. After few more trail runs we will arrange for regular supplementary teaching to deficient schools to improve the teaching quality and assess the learning outcomes and aim at replicating this model for wide impact.

Rethinking the Paradox of Welfare States and Gender Inequality

Although most comparative studies of welfare-states and gender inequality highlight the favorable effects of work-family policies on women, a growing number of studies, including my own, provide evidence of the unanticipated, and negative, consequences of work-family policies. The conclusion from these findings is that state interventions to reconcile paid with unpaid work, which are considered “mother-friendly,” have, paradoxically, negative consequences for the labor market attainments of working women.

In this work, my aim is to locate these findings within a wider context – not only childcare, but also the education and socialization of children themselves, but to question the conclusions that arise from them. My arguments are twofold: First, I argue that the impact of work-family policies is conditioned by class. The negative implications of family-policies for women's labor market attainments, found in previous studies, are, in fact, a consequence of their impact on highly skilled and highly educated women. Among low-skilled women, these effects not only diminish, but also reverse. Second, I argue that when the focus is shifted from a single aspect of gender inequality to multiple aspects that are analyzed simultaneously, the implications of work-family policies for gender inequality no longer appear paradoxical, for it becomes possible to see the inherent tradeoffs among the different aspects.

These findings are examined using a wide range of country-level indicators, aggregated from the ISSP data, of 14 welfare states. The indicators encompass most aspects of women's economic activities that have been investigated in comparative research. The indicators are divided into two groups: one that is relevant to advantaged women (e.g., women's representation in managerial positions), and the other to disadvantaged women (e.g., poverty rates). The relationship between welfare-state policies and each group of indicators will be examined and discussed in light of the tradeoff between participation and occupational attainment, and the class divisions among women.

the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as been originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

MANDIC, DANJLO* (Harvard University, mandic@fas.harvard.edu)

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia from 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfullness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

 Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginary horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, piouetting and swirling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2006), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mische 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technological, media, institutions). Strongly connected with the concepts of reflexivity and creativity the “capacity to aspire” has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

 Social Justice and Energy Consumption: The Problem of Fuel Poverty

The social discourse on sustainable development not only focuses questions of intergenerational and global justice, but also increasingly questions of social ecological inequalities in industrialized countries (keyword: environmental jus-
tice). Within this framework, a society’s consumption of resources is associated with inequalities. When it comes to climate change, the focus is on questions of responsibilities and persons concerned, inevitably bringing up the issue of social inequalities and thus a central field of sociology. Likewise, when management tools towards sustainability are discussed, social inequalities are addressed (e.g. in context with environmental taxes). However, social scientists interested in environmen-tal and sustainability research on consumption of resources and social inequalities is still at its beginning regarding both, theoretical conceptualisation and empirical research.

In the proposed presentation, one dimension of this topic will be stressed, namely the relationship between energy consumption and social inequality in general and the issue of fuel poverty in particular. Insights will be given into an Austrian fuel poverty project (funded by the Austrian Climate and Energy Fund, 2012-2014) which has the aims of implementing tailor-made measures of energy efficiency against fuel poverty in households in Austria and of elaborating a national program against fuel poverty. Three different projects (two of them on a local and one on a nationwide basis) covering fuel poor households from urban as well as rural areas serve as examples of implementation. The programmes and measures are evaluated regarding their effectiveness and their improvement of advice services. Benefits (e.g. mitigation of burdens related to fuel poverty, reduction of CO2-emissions) and costs calculated. First empirical results of the evaluation will be presented at the conference and discussed in the light of social-ecological inequalities.
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

**Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network**

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances in network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wm264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—; it is the second world producer of copper and gold; and multinational corporations control 85% of the country’s mineral resources.

In this context, miners have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—but have overlooked the state that has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state’s interventions in the mining industry’s controversy since 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-business tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discusses its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

**Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. The Case of the Mining Industry**

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries; mining is the most important economic activity; and more than 70% of this industry’s workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted miners organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers’ mobilizations and labor law’s trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers’ mobilizations produced divergent outcomes. In Chile, after a successful workers’ movement that founded their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers’ struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers’ organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

MANNING, NICK* (University of Nottingham, nick.manning@nottingham.ac.uk)
**DSM V, a Sociological View**

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analysing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, what are the organizational functions that produce the DSM? *What are their sources of income and power? how do they change? and how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into it. To my knowledge, this has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

MANOHAR, NAMITA* (City University of New York, NManohar@brooklyn.cuny.edu)
**Highly-Skilled Immigrant Women’s Labor Market Access: A Comparison of Indians in the United States and North Africans in France**

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia. It finds that despite their more advantageous position upon immigration—student migrants, single women, and French-styled North African educational qualifications—North African women experience barriers in accessing skilled labor markets—difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategize by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women’s immigration is marked by early disadvantages— their legal status as “dependent” wives, the non-transfer of Indian credentials and re-skill requirements. In the United States, they contribute to the erosion of their early advantages leading to their “categorical disadvantage” - long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the
downward mobility associated with skilled immigrant women is not universal, as it is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

**Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt**

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in constructing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of Ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimating the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of Egypt is characterized by the diffusion of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak's National Democratic Party (NDP) of Egypt was more closely characterized by Patrimonial bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infiath and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

Patterns of ICTs Using and Information Flow: A Study of Rural India

Patterns of ICTs Using and Information Flow: A Study of Rural India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICT appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain unaffected by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include “all” (Chiumenti 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exists in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

**Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities**

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of these refugees’ emigration and returnees’ considerable social phenomenon. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have ideas of ethnic or political loyalty, and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei “American”? The Nikkei’s return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the tension of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

**Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope**

The transformation of New York City into a global corporate city and the consequences of effects on small firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investi- gating the middle class’ desire for diversity and difference and the Nikkei (Lees et al., 2009), as well as the influences of housing-aborption and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.
of ‘home’, they also expose the power relations, contestations and complexities objective, personal and emotional attachment to particular groups and constructs while the discussions in this paper are mainly concerned with belonging as sub-construct an ‘other’ who simultaneously belongs and does not belong. In the end, -

South Africa within Brics: Emerging Society and Sociological Discourse

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant contributions to global growth. In the 21st century, BRICS has become an important platform to increase the participation of emerging and developing economies in the global economic governance system. In the association, South Africa is the largest contributor and holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa's strategic position in Africa, facets of the BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant contributions to global growth. In the association, South Africa is the largest contributor and holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa's strategic position in Africa, facets of the BRICS background: ideological reconciliation, nation-building, economic transition, nationalisation, migration, globalisation and post-globalisation. In the final instance, the paper will sought to – from the South African perspective – analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

Can the Racialised Other ‘Belong'? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging' within the Australian context. Specifically, the paper explores how participants' constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant's experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among black African migrants, we argue in this paper that experiences of racism and racial discrimination are intertwined with aspirations of ‘otherness' evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants' perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being 'needed' (invited) into Australia to fulfill an identified 'need' in the labour market) co-exist with experiences of discrimination to construct an ‘other' who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of ‘home', they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging' particularly when one has to contend with racism and racial discrimination persistently and consistently.

Social Innovation in the Housing Policy in Spain

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to operationalize the impact of social innovation on innovation in the context of housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation

Greece has turned in recent years into an immigration region. While immigration started in the early 1990s, it was only in the early 2000s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the migration process in Greece is the large proportion of women who migrate alone in search of employment. With regard to the integration problem of migrant women many studies indicate that citizenship and access to the welfare system and social benefits are key variables in the integration process. However, it is not clear how access to welfare services and social benefits are associated with citizenship status. In the paper, we investigate the link between citizenship and access to welfare services and social benefits. The results show that access to welfare services and social benefits are key indicators used internationally to measure the extent of social integration of transnational migrants. At the same time, active political participation highlights the level of their integration.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrants in our country based on the results of the above survey. More concretely we will analyze the access of migrant women to social - welfare services, investigating issues related to social security - coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more “the condition of being transparent”. It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is the global IGS system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors of the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a “policies processing software” for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a “barcode” to reveal who proposed an action and how it was designed, implemented and evaluated.

Multigenerational, Demographic, and Spatial Aspects of Stratification and Mobility

Multigenerational, Demographic, and Spatial Aspects of Stratification and Mobility

This paper reviews three closely related developments in research on social stratification and mobility: (1) studies of a broader range of kin connections in and beyond the family (including grandparents and other more remote kin) on the achievements of individuals in a given generation; (2) studies of the interdependence of social mobility processes with the creation and dissolution of families and other social groups that are related to stratification; and (3) studies of the interdependence of socioeconomic and geographic mobility. The review will touch upon conceptual, empirical, and methodological issues involved with the study of multigenerational effects; the interdependence of stratification and demographic processes (including two-sex marriage markets, assortative mating, fertility, and mortality); and how geographic and spatial mobility contribute to socioeconomic and other forms of spatial segregation. The paper will use empirical examples from the author’s own research on China, Sweden, and the United States, as well as related work by other researchers.

MAREKOVIC, ANNA-MARIA* (Linnaeus University, anna-maria.marekovic@lnu.se)

Against All Odds – First Generation Immigrants in Upper Secondary Education

The paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of “late arrived students” enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and foreign-born residents. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students.

An initial survey study in Malmö, Sweden’s third largest city, showed that a majority of late arrived students had entered the same upper secondary school. The additional material consists of interviews with school personnel as well as interviews with ten students at this school who arrived to Sweden between the ages of 13-16 years old. The student group is heterogeneous, different nationalities, different reasons for immigrating to Sweden and different family contexts. The material reveals that in order to get a better understanding of the aspects contributing to school achievement, school culture as well as the individual migratory experiences and social capital need to be considered, and in particular how they interlink. The paper also discusses the open issues that remain, especially concerning language acquisition, and the strategies involved in overcoming them.

MARENT, JOHANNES* (Technische Universität Darmstadt, marent@ifs.tu-darmstadt.de)

Openness, Transparency and Traceability of Public Policies

Openness, Transparency and Traceability of Public Policies

The presentation deals with the research of Hasidic pilgrimage in nowadays Ukraine on the examples of two settlements, Uman and Medzhibizh. The research is aimed to shed light upon the Hasidic pilgrimage through the lens of cultural sociology and the theory of “cultural performance” elaborated by Jeffrey Alexander as the most suitable theoretical and methodological tools in the analysis of this issue. Despite long standing historical prerequisites, Hasidic pilgrimage is still a new issue in Post-Soviet Ukraine which has become a special interest in the world context. The understanding of performativity in the issue helps unravel its stable and emerging elements, as well as show the most problematic areas and possible consequences. It is shown that the Hasidic pilgrimage in Ukraine does possess complex features of different elements of a successful cultural performance: collective representations (as well as background symbols and scripts), actors, means of symbolic production, mise-en-scene, power and audiences. Research methods (which included visual observation, media documents analysis and interviewing) help outline and analyze typical resources, lines of communication and possible conflict areas both in time (2009-2012) and space (two mentioned settlements) perspectives. The author pays attention that the Hasidic pilgrimage is far from becoming an established phenomenon with defined areas of sacred and profane in the contemporary Ukrainian society, though it is constantly bringing new challenges and opportunities.
The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is highly professionalised, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers leading to the creation of city branding strategies. The city’s perspective on how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are discussed in the local media. Lastly, the picture analysis displays what and how local peculiarities are condensed to a coherent image and what stays unaccounted.

Cities around the world try to attract almost the same audience. Within their image production they carefully observe other cities, which are perceived as role models and competitors. This paper presents a comparative in-depth analysis of the image production of Glasgow and Frankfurt, and shows how globally communicated ‘self-representations’ refer to the ‘cumulative texture’ (Suttles 1984) of the local urban culture.

Case Of Cameroon

Myrdal’s notion of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest between “market” and “politics” – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least mediially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase NILS Brunnsson (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s concept of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-
tween neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

MARKLUND, CARL* (Södertörn University, carl.marklund@sh.se)

Shaping the Things to Come: Concepts of Planning and European Modernity

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaks of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belies any simple categorization, making it an appropriate topic for conceptual historical analysis. Yet, it is a key concept whose historical identity is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

Foundational Political Myths in Divided Societies: The Case of Montenegro

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. Environmental Trust: A Cross-National Study

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains underspecified. This research examines environmental trust using the International Social Survey Program Environment data from 2000 to advance the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

MARKQUART-PYATT, SANDRA* (Michigan State University, marqua41@msu.edu)

Pathways to Environmental Activism Across Time and Place

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the relationship between the courses important outcome variables of awareness of consequences, awareness of consequences, and attitudes combined affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.
Families’ Control and Youth Sexuality As Meaningful to Young Peoples’ Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered key junctures in individual life trajectories, with important implications for the socialization of young people. However some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young people’s trajectories, sexuality is often forgotten or, even, insignificanted in their transition into adulthood. Thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children’s play.

Based on 60 in-depth interviews conducted in Central Portugal, with 60 white young adults, aged between 18 and 29 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead aspects related with family control, as, pionnery in the analysis of gender relations and sexuality, can have implications on the ways (some) young people go from young to adults, especially in what concerns educational paths, leaving home, conjugality and parenthood. This happens especially in two main ways. First, the maintenance of some control concerning young women’s leisure time, sociability and sexuality can be associated with a smaller period of sexual experimentation for these young women and with some of them leaving home, entering into conjugality and/or parenthood earlier than the others. Second, the problem of “coming out” and/or assuming a non-heterosexual identity can be related with the need to lie, being (or being afraid of being) kicked out from home, the search for autonomy and the difficulty of becoming a parent.
Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological reactions to emotional expression, theorizing disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfill a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating in-terdictions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize the terminology of disgust for their audience in order to evoke the mutilated, and raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrollable hybrids of the brilliant but mad scientist that aspires to play a demigurhic role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronen-berg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a potential boundary of the artificial-natural divide or the human-animal partition. Cronenberg’s filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexploitation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of art-ists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or arche-typal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alex- ander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature’s patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, ge-ometries, and similar descriptors of spatial patterns. The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No.1142510.

MARSCHNER ALVES DE BRITO, MURILLO* (São Paulo University, murillomarschner@yahoo.com.br)
Social Origins and the Access to Public Higher Education in Brazil

According to the well know MMI hypothesis (Raftery and Hout, 1993; Shavit and Blossfeld, 1993), the class inequality on the distribution of educational opportu-nities tend to decline only when attendance rates reaches saturation at given educational levels for the upper classes. Lucas (2001) challenged this view intro-ducing the EMI theory which proposes that, even when saturation is achieved for a given educational level, inequalities tend to persist in a qualitative sense, with kids from privileged socio-economic background having more chances of going to the better schools or universities. This means that IEO had to be analyzed not only in reference to attendance to a certain educational level, but also in reference to which segment (or track) in the educational system the individual accesses.

This proposal aims at analyzing the association between social origins and edu-ca tional destinations through the selection process of a prestige public high-er education institution in Brazil. Drawing on the notion of tracking, we want to...
Effects of Keepin It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin’ REAL (Marktätne REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to the last lesson, a post-test after the last lesson, and a long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in PPNG were examined. Findings indicate that participation in PPNG and keepin’ REAL had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only keepin’ REAL. These effects, however, were completely mediated by anti-substance use norms – youth whose parent also received PPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results contrast with the Ecdocetaceutical Model of Prevention Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthening the efficacy of youth-only classroom based intervention. Because PPNG was designed with Latino parents and for Latino parents, PPNG is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

**Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these “living together apart” situations in France with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children's sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.**

**Managing Organisational Religious Diversity in Finland**

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state's involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularisation. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not fit the historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states' aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

**Ethics As a Professional Responsibility From a Higher Education Perspective**

Se presentan reflexiones provenientes de dos investigaciones doctorales en responsabilidad social universitaria. Por una parte el desarrollado en la Universidad de Valladolid en el cual se indaga sobre la percepción de la sociedad (stakeholders) acerca de lo que esperan de la Universidad. El segundo estudio desarrollado en universidades de 4 países iberoamericanos (Colombia, España, Perú y Chile) realizó una evaluación del aporte de la educación universitaria a la formación de una ciudadanía responsable. El estudio mostró datos que cuestionan el fomento de unos valores no globales, sino que se da transparencia en la misión y competencias no solamente técnicas sino de carácter transversal y valores solidarios.

La educación superior se alineará con los objetivos del milenio, y capacite no solo a nivel global sino también en su entorno cercano. Las instituciones educativas son agentes de cambio social en la formación de profesionales con sentido ético, responsables y con sentido de compromiso, que finaliza su grado.

**Managing Organisational Religious Diversity in Finland**

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state's involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularisation. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not fit the historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states' aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.
Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices of participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayals, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual diary. This paper considers the ways in which participants discussing their daily practices, indicate that the body is a process of ‘becoming’, a continual bodily ‘project’ (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants' negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing and the body.

  - Cultural Representations of Widowhood: Social Media and the Declaration of a Status

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life course narratives. Cultural gerontology promotes further enquiry into how mainstream sources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, with blogs, websites and interactive messaging, has transformed public representations of widowhood. While older women in particular have traditionally had access to a reference groups of widowed age peers, the defining quality of those interactions is different from the new world of social media. As with structured ‘virtual worlds’ in the past, interaction outside mainstream spaces, brought together in structured situations through the widowhood status they have in common. Through social media, contact begins more anonymously (visiting websites, reading blogs) or highly publicly (creating a website, authoring a blog, filming an online video) and then may lead to interactions and connections beyond one’s local community – through widow conferences and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public ‘wearing’ of one’s widowhood (widow’s weeds’ and other aspects of dress and appearance) – that ended by the 1930s; to the subsequent ‘ invisibility’ and denying of widowhood and bereavement for some decades; to use of social media as a declaration or even reifying of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.

*Indigenous Female Farmworkers in Northern Mexico: Workers’ Rights Violation Under the Veil of Better Jobs*

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, workers’ rights and the health of indig-
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions and precariousness. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

MARTINEZ, MARIA* (Universidad del País Vasco, maria_m_g@hotmail.com)

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women’s situations in a time of crisis, we need a longitudinal analysis that show us the weak points and the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women’s living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complexify and enrich that hypothesis. In a first moment, we will analyse women as a precarious group as a whole by using other recent researches done in Spain around mainly the work and labor conditions of women (Borderías, Carrasco y Torns, 2011; Torns, 2012) and the exploitation of statistical data, but we will try to look into differences among women in a gender perspective by focusing on the results of other social surveys (employment, marriage, age, origin...). It is an attempt to show empirically the feminist theoretical proposals around the diversity of women by examining which variables explain more about those differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precarity (employment, income and education levels) to analyze the paradoxes of a high level of precariousness among women in spite of the increase of women accessing the work place. This paradoxes certifies that the incorporation of women to the work place is always done in conditions of precarization of jobs (temporality, partial jobs...); and that this process might not be separated from an analysis of major changes in the work place (politics of flexibility) that also affects those who were until now considered as “stables”.

Contemporary Japanese Migration Process in Spain: Cultural Boundaries and Social Networks

The relationship between flow and fixity in globalization literature, leads to questions about how a sense of belonging is achieved, especially when given concepts such as home, family and nation are becoming detached from physical boundaries. In adding to the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

In the history of Japanese migration belonging and identity have been managed in different ways. From the businesssman migration system (1970s and 1980s) to the voluntary migrants (1990s, nowadays), migration reasons, interests and lifestyle have changed a lot. However, voluntary migrants are underrepresented in the literature on Japanese migration, and as they do not have the same institutional support structures as the businesssman group, it is important to understand the methods through which they create a sense of belonging.

This project employed a grounded theory approach and collected data through semi-structured, in-depth interviews with 44 Japanese living in Spain. The preliminary outcome suggest that Japanese who have created solid support networks with predominantly non-Japanese clusters have a firmer grasp of their Japanese identity. Conversely, immigrants with few Japanese links are more willing to identify their home in the host society. As a result, a Spanish-Japanese identity based on the reminiscence of Japanese traditions and the willingness to become part of the host society is rising.

By focusing on the experiences of Japanese immigrants within the host community the research results provide insights into the construction and consolidation of social networks and how they contribute to a new sense of Japaneseness. Understanding this process and the relevance of identity within the Japanese community can help prevent inter-group and social conflicts as well as promote a multicultural society.

From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social Social network play an important role in both the decision to emigrate and the choice of location. This paper focuses on migrants and its social networks, very little is known about patterns of integration and community participation in rural and low population density contexts in Spain.

This communication explores these issues and is based on a study, in the province of Teruel (Spain), using a sample of 324 Latin American migrants over the age of 18, selected by sex and place of residence. A standardised test – the Musitu...
and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAS analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations and the immigrants. Prejudices and stereotypes are easily accepted, with a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the 1980's, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrated men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that son's and brother's migration along with other structural changes on sending societies has broken down the traditional system of protection based on son's inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improved their situation, without establishing direct causality relations as women's paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men's migration to USA and finally uses y costumbres (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in Peppar

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program(PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver's metaphor on communication as exchange of information and develops Buber's and Peters' ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness. This notion is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyond “prejudgment”. Extreme cases of anihilation of others can be established without it. Deterioration is not the same as death, and have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implantations, involvement of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

Science without Borders: An Academic Mobility Program from the Brazilian Government

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a postgraduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/ technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to set up lab in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented aims to analyze the results of the program as well as the possible difficulties it faces in achieving its goals.

Intellectuals and Development: Reflection from Diverse Latin America Statements

Intellectuals and development: reflection from divers Latin America statements

Paulo Henrique Martins

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of other national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic relations reactions to question the economic rights of privatization. Additionally, they suggest a new social justice hierarchy that underline the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia's, are interesting ones to reflect about this change of development paradigms.
Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional help. Their financial aid at critical junctures is not uncommon. In the absence of one or both parents, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interviews method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparents than with maternal grandparents. Likewise grandchildren have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private/publicness/publicicity of the domestic space, will be analysed in order to account for different forms of belonging and ways of feeling at home.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies practice regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promoting interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: a building hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Pakistanian Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social placement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The diffused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economic structure, political and cultural tradition. Immigration has become relevant here since the early ‘90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the higher concentration of Pakistani citizens in Italy. Immigrants found employment as both unskilled and skilled workers in the small and medium enterprises which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistan Punjab.

The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place through ethnic and non-ethnic forms of incorporation shaped by the interaction between local traditions and migratory paths - together with the local government practices and discourse, coalesce in defining different trajectories of immigrants’ emplacement in the local society as well as transnational social spaces and urban fields.

Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK

Contemporary studies on intra-EU (European Union) migration have paid in- sistent attention to forms of secondary mobilities, neither in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from the UK. This paper has found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants’ hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European migrant citizenship, settlement in the UK becomes fraught with initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precarious workers in the UK.
rápido y directo a franjas masivas del electorado, el fortalecimiento de su relación con la ciudadanía y la posibilidad de disponer de cuantiosa información para la formulación de las políticas públicas.

En definitiva, el EG constituye un RP que contribuye a generar cambios en la modalidad de ejercer el poder político, deviniendo un instrumento clave en el incremento/deterioro de la capacidad político-institucional de un líder presidencial y dando origen a un nuevo escenario de comunicación, acción y movilización política, en el que cobran entidad los LP y los regímenes democráticos de América Latina.

HOPKINS, ANDREW (The Australian National University)

Paying Bonuses for Safety: Pitfalls and Proposals

Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have highlighted that incentive structures for senior executives worked against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime. Financial incentives have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivation beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage competing objectives in hazardous safety. We explore the way in which people respond to financial incentives in this environment, the potential for perverse consequences, and approaches that most appropriately focus attention on major hazard risk. This analysis is based on qualitative interviews and document analysis on the incentive schemes in oil, gas, chemical, and mining companies. We argue that despite discomfort with the concept that safety decisions might be influenced by money, financial incentives do influence priorities and behaviours. We conclude that financial incentives matter in corporate environments because they do not rely for their effect on economic self-interest alone. Instead they tap a number of human motives, among them the need for approval, the need to belong and the need to be recognised as making a valuable contribution.

Cultural Imperatives: Peacebuilding in Afghanistan through Local Culture and Customs

As the 2014 deadline for withdrawal of coalition forces approaches, Afghanistans fate remains uncertain. Officials have long concluded that the war in Afghanistan could only be won through a negotiated settlement and not militarily. After years of shunning negotiations, in 2011 coalition forces pursued talks with the Taliban, however these ambitious plans have now been deemed as being too unrealistic to achieve by 2014. To promote reconciliation and unity the socio-cultural factors that enable communication among conflicting parties is important. Communication is also a decisive factor in social integration as well as the struggle for solidarity in Afghan society. In the case of Afghans, communication in conflict resolution is central to the concept of jirga and is deeply embedded in Afghan history, practice and people. Jirga refers to the gathering of people for the purpose of consultation. Its integration into national politics is a reflection of the need and success as a mechanism of conflict resolution among most Afghan ethnic/tribal groups; it has national currency. Although the Karzai administration made use of this “national currency” in 2002, the Emergency Loya Jirga, it is evident that it failed in its attempts at national reconciliation due to a multitude of factors. This paper will investigate those factors while examining peacemaking/peacemaking initiatives in Afghanistan. We argue that the use of Afghan indigeneity and methods of local dispute-resolution for reconciliatory purposes. While there is a continuing need for jirga in resolving local, tribal and national conflict, the socio-cultural significance and political potential of jirga is ignored as it has only minimally been adapted to the current efforts in Afghanistan. This paper will investigate the feasibility of a national jirga process and how it can be made more inclusive and widely used, representing both men and women, initially from a grass-roots level and ultimately to a national level.

Beyond the Official Version? Israel Teachers’ Perspectives on Citizenship Education

In societies under protracted conflicts the challenge of teaching about citizenship is inevitably overshadowed by the conflict itself. Stemming from a larger research project, aiming at understanding the dilemmas and challenges of citizenship education at all levels of the Israeli educational system, and across its various branches of general, religious and Arab), this paper is set to examine how teachers circumvent these difficulties and confront the challenge of teaching about citizenship in a society where citizenship is stratified and divided. More particularly, we offer a thematic analysis of in-depth interviews with teachers, from which we learn on the ways teachers, while not avoiding the concept of citizenship altogether, employ more multi-dimensional (educational) acts towards citizenship giving it different meanings and shaping it in various ways as either ‘localised’ or ‘integrative’ conceptions (or in between). This, we propose, allows the teachers...
to deal with the challenges of teaching about citizenship, yet without directly confronting the system that requires from them to teach only the official version of citizenship. We specifically explore, based on the teachers' own perception, what practices are used in delivering their own conceptions of "citizenships", and how they confront the explicit and implicit supervision of the Ministry of Education.

MAST, JASON* (University of Warwick, j.i.mast@warwick.ac.uk)
The Ick Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlins's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlins (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlins was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed in symbolic terms connecting consumption, pleasure, even even such discourse. An insect on an American dinner plate, except in rare and select places, represents "matter out of place" and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ick factor" - the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, there is a difference: while PCSJA declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to choose noncooperation over other possible responses (e.g., flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both exploration of what drives communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (transformation), anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both explores rational, moral and emotional considerations behind the choice.

Japan's New and Old Concept of Ethnic Policy with a Comparison to a Multicultural Policy

Globalization has changed Japan’s population composition significantly by the 1990s as a result of the arrival of a relatively large number of foreign workers for the manufacturing industry. This prompted the development of the concept of “Co-Living among Many Cultures” to facilitate the settlement of new foreign residents who have come mainly from South America and China. Many of the residents have taken up permanent residence or citizenship, instead of remaining as foreign residents on temporary visas. Japan’s large and long settled Korean community who have been treated unjustly in the past are reacting cautiously to the new concept of “Co-Living Among Many Cultures”. A new issue affecting the experience of Japan’s growing Chinese population is the rise of China-Japan tensions which also poses a challenge to the new co-living policy. A major aspect of the troubled relation is the emergence of transnational political action, including the Beijing Olympic torch relay incidents. Such incidents, as widely reported in the Japanese media, have triggered concerns among Japanese in general who treasure “War”, or harmony and peace, a traditional Japanese value and practice.

In this presentation, I would like to point out what the Japanese new concept “Co-Living Many Cultures”, the traditional philosophy “Wa” and the Australian “Multicultural Policy” concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: “love all other nations as you love your own”. We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives follow one faith (almost without exception each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are ethnic Macedonians who are Muslims. Typical examples for this are the Torbeshi who are ethnic Macedonians who follow the Islam religion. But most of them on the last census declared themselves as ethnic Albanians, even though they don’t know the Albanian language. This proves the fact that the religious identity is a key factor in forming an ethnic identity. The appearance of such strong ethnic elements can be expressed only if the religious feelings are weakened. That is what’s happening in the Macedonian state, despite the influence of its basic religious institutions (Macedonian Orthodox Church). The Orthodox Church has the main role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult times and circumstances that in 1991 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.

Coping with Risk and Uncertainty in Civil War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Although commonly portrayed as either mere victims or resources to be plundered, civilians in warzones face a wide number of possible responses to armed groups’ demands and war strategies. Studies dealing with the micro-dynamics of civil war have informed us extensively on some of these responses, such as displacement, obedience and active collaboration. However, other responses such as resistance and defiance have attracted scant scholarly attention. Despite of the high risks involved and the high levels of uncertainty outcomes are subject to, unarmed civilians have chosen to defy armed groups through different strategies of noncooperation. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to seek protection from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what drives communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (transformation), anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both explores rational, moral and emotional considerations behind the choice.
Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons, and functional: level of satisfaction of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Subjective Happiness Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness (r = .291, p<.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = .427, p<.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with only functional social support (r = .516, p<.01) for retired persons. However subjective happiness is unrelated with both the dimensions of support in case of pre-retired and post-retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionship; subjective happiness remains unrelated to social support in post-retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

Keywords: Happiness, Satisfaction, Social Network, Social Support
emotional support in times of trouble, and providing role models for working women.

Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include:wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan

The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group.

MATSUI, Yuka

Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care-giving conducted in the self-help group.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work.

Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of SDF. The first is the nature of SDF as a system of risk management. SDF is a new form of social organization in the context of globalized risk society. Second, SDF has been developed under the influence of previous risk management systems and practices. For example, the process of the development of SDF has been influenced by the development of the nuclear power industry in Japan. Third, SDF contributes to the establishment of a new form of social organization, characterized by collaboration among different stakeholders, including government, industry, and civil society. This new form of social organization is characterized by a high degree of cooperation and coordination among different stakeholders. Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn't find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, it found a kind of gap in pattern structure of trust between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn't find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, it found a kind of gap in pattern structure of trust between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

The paper illustrates sequential steps to transform reluctant respondents sample that—in their collective reconstruction of the past—crucially drafted politics onto religion. A foreign-backed military coup d'état elevated an anti-Islamic modernizer to the position of power, enabling him to tragicly crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hassan Modarres (d. 1937), the prominent Shī ṭūfānī and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded post-revolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation, in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrmeh and a June 2013 principial political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxies for all types of non-respondents - this paper obtains calibrated propensity weights in sequential steps. Two types of propensity scores (i.e. focus is on ‘contactability’ and ‘survey cooperation’) are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on attitudinal variables tested between unweighted and weighted samples. These evaluative items are also compared with the effects of post-stratification weights to evaluate the advantages of using covariate-based weights (e.g. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.

MACHIN, LAURA (Lancaster Medical School)

Deciding 'Quality' Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient; and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they know what constitutes a 'quality' cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between €16,000 to €25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered influential by policy makers in determining the success of treatments. How such a move to establish 'clinical expertise' around cord blood treatments would impact upon perceptions of 'quality' cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive 'quality' in cord blood in a global context, and what factors influence their perceptions, will be presented.

MATSUHITA, NAMIKO* (Hitotsubashi University, namiko.matsuhita@gmail.com)

Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that we will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement. The Japanese government only asked for the abolishment of the 3-month temporary labour permit. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this exam from 254 candidates. In addition to this low pass rate, nurse candidates can take this exam three times in three years and care workers have only one chance in the fourth year. Obviously candidates who can't pass the exam must return to their country. How can they keep their motivation?

Five years have passed since this program started, the number of candidates is declining each year. The most significant problem with this program is foreign care workers were unwanted by the Japanese care industry. Japan takes no account of their former job careers, even if they have a nurse license in their home country. These skills and experience are just a prerequisite for being a candidate. Even though Japan has the most aging population coupled with lowest birth rate in the world, Japanese government are still lacking a long wide vision in regard to migration policy.

MATSUHATA, MINORI* (Kyoto University, minori.matsuhat@gmail.com)

Beyond the Skill Migration: Middle Class North-South Mobility in Asia

Favell's famous work, Eurostars and Eurocities(2008) aroused wide academic interest in mobilities in EU. Under the popularization of international migration, migrants' social background and migration flows from/in North has been diverse. As Scott(2006) claimed, it has "become a 'normal' middle-class activity rather than something exclusively confined to an economic elite." However, these works are limited on the research area. This paper tries to theorize the middle class North-South mobility in Asia, based on empirical work among young Japanese migrant workers in Asian cities, including Shanghai, Hong Kong and Singapore.

In decades, the destinations of Japanese migrants have been gradually shifting from Western countries to Asian countries. This occurs in the economic transition or power-shift between Japan and other Asian countries. Young generation increasingly prefer economic opportunities in Asian global cities. They are not typical expatriates transferred from headquarters, nor project-based temporary professionals, but contract-based and locally hired workers moving individually. This represents a new trend of migration, which has emerged in the last decade. This type of migration has formed in Hong Kong and transplanted to other areas and discuss the characteristics of the migrants. The phenomenon formed a market-based migration system arranged by staffing agencies. Now Japanese companies abroad have two types of Japanese workers; expatriates sent by the same company and locally hired contract workers positioned under different departments. These career plans are often inconsistent with the actual achievements, since they are excluded from the companies' promotion system. Consequently, many of them use their working experience and social networks acquired while abroad and find another career track with entrepreneurship. This shows a pattern that is distinct from career-based skill migration. Through these discussions, I propose a different perspective on the middle class migration in Asian context.
through considering a case of Mike coal mine, which exists in Kyushu, western Japan.

MATSUZAWA, SETSUKO* (The College of Wooster, smatsuza@wooster.edu)

A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China’s fragmented bureaucracy. Despite TNC’s race to save one of the World’s ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation interest among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC’s rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation method.

Thirdly, TNC’s inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea into a national park into its “Growth Machine” (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC’s wish to emphasize community participation.

MATTHEW, JEREMY* (King’s College London, jeremy.matthew@kcl.ac.uk)

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday practices of new media technologies and rapid developments in media. Everyday participants use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet- ing and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news? And how may the various affordances of differing and fragmented web and mobile apps impact the discourses of everyday users?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affording or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

Knowledge in the Wild - from Mad Cows to Alzheimer’s: How Knowledge Mobilization Works

This paper presents analysis of interview data from a study of ‘knowledge mobilization’ as a social process. In doing so it contrasts concepts of knowledge transfer with those of ‘knowledge mobilization’ which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease, Alzheimer’s Disease, ALS, Parkinson’s Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.
The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full-time academicics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concepts of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignment of research topics with institutional research priorities and a tightening of candidacy time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

Digital Technologies and Work-Family Boundaries: A Posthumanist, Performative Approach to Family Research

Our paper draws on a research project funded by the UK’s Engineering and Physical Sciences Research Council that explores how boundaries are being made between work and family in everyday practices, and how technologies are implicated in constituting these boundaries. Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to treat and study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: femininst science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this theoretical and methodological framework. The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and politics. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900. In this paper, I will analyze a twofold translation of knowledge: The first is how academic social science knowledge contributed to the insight that the Social Question was induced by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens with the use of ICT. The use of ICT is defined as the access in modern communicative systems, and as a result marks the “presence” or the “absence” of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

To develop and test a portfolio of methods, drawing on visual, sensorial, mobile and participatory ethnographic approaches (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013: Watts and Urry 2008). An important element of this process is to explore the performativity of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004). Families (with at least one child under the age of 18) are invited to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants. The study involves in-depth work with 5 households in North-East Scotland, with at least one child under the age of 18.

Technology and the (re)Making of Work and Family: Towards a Performative Approach to Visual Practices

Our paper draws on a project funded by UK’s Engineering and Physical Sciences Research Council that explores technology use in work and family practices in the home. Our study seeks to address a number of theoretical, methodological and substantive aims:

1. To develop a conceptual framework for studying work/family/technology practices and boundaries in the home, drawing on material-semiotic, posthumanist, and performative approaches (Barad 2007; Hardaway 1997; Law 2004; Suchman 2007)

2. To explore how work/family/technology are figured – made and remade – through everyday social and technological practices (where social and technological are not treated as separate);

3. To develop and test a portfolio of methods, drawing on visual, sensorial, mobile and participatory ethnographic approaches (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013: Watts and Urry 2008). An important element of this process is to explore the performativity of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004).

Families (with at least one child under the age of 18) are invited to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants.

Our paper will address emerging questions and challenges including: Whether and how visual methods can help us grasp socio-material practices; how we can use visual methods in participatory, collaborative and cooperative ways with our families.
The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerable threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was “Social Hygiene”, as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or “Volkskörper”. Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods were invented at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied considerably and was far away from being included in national legislation.

Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi-polarization of the economic world, whereas especially three great centers are dominating, namely the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the most relevant part of international agricultural trade flows. In this context, both Mexico and Japan are playing an important role, Mexico as major exporter of fresh products and Japan as main buyer of these items. Mexico is located in the sphere of influence of the USA and Japan is the axis of the East Asian economic bloc. Mexican exports are depending strongly on the USA market and Japan's demand of fresh fruits and vegetables is mostly for imports, particularly from USA and China. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Social Systems Form Simulation to Observation

The cognition-computing short circuit is still affecting both neuroscience and computer science today. Social systems theories, on the one hand, and agent-based simulations on the other have once more pinpointed the traditional sociological dualism between macro-and micro-sociology. However, the advent of ‘Big Data’ has paved the way to new techniques of investigation based on the study of new types of data, such as conversations taking place on popular web sites like Twitter or Facebook, traces left by our mobile devices or data generated by wearable sensors. Thanks to these techniques, we can go beyond simulation and observe the operation within the social “black box” in the same way that neuronal functional magnetic resonance imaging (fMRI) does as regards to the brain. This paper discusses the potential as well as the limitations of these new methods of sociological investigation and their spillover effects on the theoretical development of the discipline.

Who Negotiates The Relationship Between Leisure and Quality Of Life?

Increasing user’s quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user’s quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship to accommodate and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user’s outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are "implemented." Locally, I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshal Ganz calls "strategic capacity." This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, political contestation in India, and socio-cultural transformation in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal global process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

In the introduction to their 2010 collection, New Materialisms: Ontology, Agen-
cy, and Politics, Diana Coole and Samantha Frost write of an increase in “scattered
but insistent demands for more materialist analysis” (p. 2). While not seeking to
deny [the] rich materialist heritage” (p. 4) that informs their work and the work
of others taking part in this scholarly conversation, Coole and Frost call for the
development of “renewed materialisms” up to the job of grasping and analyzing our
“materially and discursively fast-changing world” (p. 4). This paper examines
these theoretical and analytic trends from the perspective of institutional ethnog-
raphy. I approach this literature with a friendly curiosity and share my discoveries
in terms of what it’s all about and what new materialists and IE materialists might
have to say to each other.

Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which physicalized acts of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a disciplinary form of identity. The complex relationship between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

MCDONALD, BRENT* (Victoria University, brent.mcdonald@vu.edu.au)

*If It Weren't for Rugby I'd be in Prison Now*: Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific island masculinity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders’ enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such spaces, instead positing them as exemplars of individualism and self-governance.

MCDONALD, KEVIN* (Middlesex University, k.mcdonald@mdx.ac.uk)

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodiment of the discursive strategies of the power structures. Theorists of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective solidarity give way to an ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarized with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident in the circulation of video and music, and the emergence of a quite different form of action evident in networks such as Anonymous. These are grounded in hacker worlds, shaped by a culture of the ephemeral, the hidden and the revealed, with an ethic of lull, the mask and the trickster. This action takes completely different forms from the 'open deliberation' attributed to internet ac-

tivism such as Indymedia. This paper explores the emergence of Anonymous from its origins in a manga site and its initial campaign against Scientology, and considers to what extent this form of action, and the types of public spheres it creates, may extend beyond Internet cultures to point to wider transformations in public spheres and agency.

MCDONALD, RUTH* (University of Warwick, ruth.mcdonald@wbs.ac.uk)

Organising Celebrity – Social Mobility and Symbolic Violence in England’s Green and Pleasant Land

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and ‘noble’ is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of mental breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper drawing on Bourdieu’s Distinction and Giddens’ writings on ‘distanced instances’ suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

Charisma and Subcultural Bureaucracy: Challenging Weber’s Ideal Typical Distinction

What role does charismatic authority play in the inculation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and incubating transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence.

My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the resource-constrained human capital scarcity. Such charismatic leaders strategically offer subordinates “high profile” work that connects them to “big men” who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos, circumscribing high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber’s ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

MCDONNELL, TERENCE* (University of Notre Dame, terence.e.mcdonnell@nd.edu)

Cultural Entropy

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-person interactions because objects can't engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonant meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of protest. I argue that disruptions are much more likely during object-to-person than person-to-person interactions because objects can’t engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonant meaning over time.

In Weber’s typology, charismatic authority is distinguished from bureaucratic and traditional forms of authority because it derives from the exceptional, extraordinary, and individual personality is thought to possess. Being ideal-typed in opposition, charisma may seem to have nothing to do with bureaucracy but, ideal type generalisation does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organizational forms encouraged a number of large bureaucratic organizations incorporating charismatic forms of leadership in adapted forms. These developments haven’t made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to ‘qualify’ products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endowing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceed this role. Through agents, insurance and home credit companies acquired an operative, adaptive ‘grooviness’ by virtue of the channel they established between company and customers. In both sectors, the first self-governing nation to grant women’s suffrage in 1893 and scores high in international indexes such as the World Economic Forum’s Global Gender Gap at sixth out of 135 countries. In recent political history women held the top fourth constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman (2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the state party accountable for the implementation of women’s human rights and their retrogression. The paper explores and analyses the re-awakening of women’s civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand’s seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party’s response to concluding observations and recommendations as Roma are not anchored to a particular territory but rather are geographically dispersed across Europe. Roma nationalism signifies an attempt to make new types of spaces that cut across traditional inter-state borders and has created the belief that Roma are a true European minority. However, Roma nationalism is exclusively a transnational enterprise promoted by ethnic entrepreneurs and lacks legitimacy as well as resources, in terms of local actors and networks, which support the construction of Roma as a European minority. As Roma become figuratively and symbolically removed from the local and national socio-political space they reside in it leads to claims by the majority that Roma do not belong or do not fit in the dominant nation, be that Italy, France, Hungary or Czech Republic. This in turn could lead to further marginalization and persecution.

*An Unequal World: Class, Leisure and Health Outcomes in Older People*

In this presentation, we look beyond the direct physical and social effects of leisure on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of social class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieusian terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement, than the specific occupational capitals that marked their professional working life. During retirement, people may maintain their former lifestyles (tastes and leisure activities) but may also develop new activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their ‘space of possibilities’ for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, leisure activities and health status, conceptualised within a Bourdieusian framework. This study used panel data from the English Longitudinal Study of Ageing (2002-2010) with variables lagged at different time points to maintain temporal/causeural order. The findings show that the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status. In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that activities such as museum-going life, attending the theatre may make older people feel better about themselves and, as a result, be good for their health.

*Fighting Complacency and Retrogression: Re-Awakening Gender Equity Activism In New Zealand*

Fighting complacency and retrogression: reawakening gender equality activism.

New Zealand enjoys an impressive reputation for gender equality. Antonia 2008). New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the state party accountable for the implementation of women’s human rights and their retrogression. The paper explores and analyses the re-awakening of women’s civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand’s seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party’s response to concluding observations and recommendations as Roma are not anchored to a particular territory but rather are geographically dispersed across Europe. Roma nationalism signifies an attempt to make new types of spaces that cut across traditional inter-state borders and has created the belief that Roma are a true European minority. However, Roma nationalism is exclusively a transnational enterprise promoted by ethnic entrepreneurs and lacks legitimacy as well as resources, in terms of local actors and networks, which support the construction of Roma as a European minority. As Roma become figuratively and symbolically removed from the local and national socio-political space they reside in it leads to claims by the majority that Roma do not belong or do not fit in the dominant nation, be that Italy, France, Hungary or Czech Republic. This in turn could lead to further marginalization and persecution.
**Fighting complacency and retrogression: Re-awakening gender equality activism in New Zealand.**

New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women's suffrage in 1893 and scores highly in international indexes such as the World Economic Forum's Global Gender Gap Index. In recent political history, women have held the top four constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman (2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. This paper explores the recent mobilisation of feminist civil society and female-dominated trade unions in New Zealand who are beginning to collectively advocate and litigate on human rights such as equal pay. They are using the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) to harness their frustration, benchmarking the country and hold the State party to account for implementation of women's rights and to prevent retrogression. The paper explores the re-awakening of women's activism around social and economic rights in a nation with a strong self-regard for its international reputation in progressing gender equality. The paper uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women and the Committee's concluding observations and responses to successive governments in relation to Article 11, relating to equal pay and pay equity. It analyses the ebbs and flows of political will and explores the patterns of complacency, frustration and now mobilisation by women's civil society groups who are pressing the case for women's human rights.

_The Challenges For Flinders and Environmental Justice Posed By The Global Panopticon, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World_

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems posed an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next.

The paper makes a plea for a different form of governance that weighs up the social, ecological and environmental impacts of wellbeing, in order to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The study itself is intended to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;
ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not determined;
iii) Strengthening self-determination of people based on participatory democracy and the absence of domination over others;
iv) Monitoring based on democracy and governance;
v) Particpatory management of the global commons as the fabric of life.

Currently the role of the state in Western democracies acts as protector of residual welfare rights in terms of the social contract applied to citizens within the boundaries of a state or federation. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

_When the Other Poses the Questions: Turning the Tables to Produce Data on German National Belonging_

After a change was made in Germany’s census categories in the year 2005, who were Germans? This study explores how a small number of empirical studies suggests that sport participants do not fully capture the gendered effect of sport participation on attainment.

Increasingly Vulnerable and Unequal World

**Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment**

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport rewards shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to long-term socioeconomic American career trajectories or subsequent adult attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the individual level, female sport participants tend to report larger incomes than their peers. While male sport participants report the highest individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

_Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom_

The United Kingdom has seen dramatic changes in the nature of work and family over the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course work-family typologies. Evidence of increasing individualisation across cohorts and the potential emergence of new typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health risk in the two national community? The question of national belonging and national identity is
older cohorts. One of the objective health markers considered in this study inflammation, a significant predictor of chronic diseases such as coronary heart disease and type II diabetes. Early results suggest that gender differences in employment histories remain fairly entrenched across cohorts, and that educational attainment has a stronger relationship with inflammation in mid-life than the subsequent life course work and family trajectories it sets people on.

**MCNAMARA, DENNIS** (Georgetown University, mcnamard@georgetown.edu)

**Asian Developmental States: Innovation, Industry, and Investment in China and Japan**

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan as a “plan-rational” politics initially challenged the neo-liberal assumptions of development in the West. State intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia’s newly industrializing countries (NICs), leading to a mid-range theory of state/market ties termed the “developmental state.”

- China followed a different trajectory, but again with a prominent state role I look here to the current status of the developmental state in China and Japan, to assess capitalism, I focus the study on the coordination of beautiful women in national innovation systems, where both nations have excelled. Innovation offers perhaps the best indicator of future competition between capitalism of the East and West.

The paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two nations, and the role of foreign firms in innovation systems.

- The research of industrial policy evident in NIS efforts suggests three major differences in the state role. As might be expected, China’s party/state plays a far more directive role than that of the Japanese state. Secondly, the Chinese party/state continues to evolve, with curious discrepancies between central and regional administrations. We find more continuity in national government policy in Japan, though with greater formalized levels of participation participation. Thirdly, inward FDI plays a major role in China’s NIS, in contrast to Japan where outward FDI links them to innovation network in the U.S. and Europe.

**MCSORLEY, KEVIN** (University of Portsmouth, kevin.mcsorley@port.ac.uk)

**Visceral Militarism: Embodiment, Intensity and Experience**

This paper provides a critical reconstruction of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of militaristic attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices that materialize war-preparation. The bodily valorization is felt to be normal and desirable, through which militarism becomes assumed and unexamined, as an ‘abstract social norm’ that may inhere within the deepest fibres of our bodily being” (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from the growth of ‘British Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective captivation of immersive military video-gaming, and the intimacies and intensities of helicam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily transformation increasingly articulate with wider military imperatives and corporeal practices. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and de-territorialized flows of affectionate experience associated with contemporary transformations in war-lighting.

**The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP**

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world’s “one percent.” This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the nouveau riche convert their economic capital into symbolic and social capital. Central to such conversations are the gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club organizers and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who distinguish amongst themselves through the display of high-powered women and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of ‘girl capital’ to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize ‘girl capital’ through the circulation of gifts, perks, favors and intimacies to establish reciprocities that free goods sustain relationships between paid brokers (men) and unpaid women, thus masking the labor behind conspicuous leisure and framing economic relationships as friendships. Additionally, women are themselves circulated as gifts among men, largely through their symbolic presence on display. Thus this article documents two levels through which gifting practices sustain structural gender inequalities and uphold a traffic in women systemic: gifts to recruit women and women as gifts. This article also demonstrates how gifting practices are fundamental to stratification among elites. Lastly, this article genderes elite space by revealing the logics of gendered worth within a contemporary high-society arena, one which recognizes and rewards economic capital for men but bodily capital for women.
civil society. Theoretical perspectives examining the role of religion in the public sphere as well as political ecology will be utilized as frameworks for analysis.

Poverty and Unequal Development in Central America

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it excels Costa Rica, which some have considered the Switzerland of America, for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent's poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)

Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)

Abstract  
Dr Alok Kumar Meena

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions.

The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group-oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere. Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

Keywords: leisure and lifestyle, Chaupal, Traditional games, family-oriented activities.

Globalization and Human Rights

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in different forms since time immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human rights was laid down by the United Nations General Assembly on December 10th, 1948.

The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated.

The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the human rights in their respective constitution.

Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society.

Despite human rights becoming the subject of concern to the legal fraternity, the Asian countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

Keywords: International sphere, Vienna Declaration, global consensus, legal fraternity

The Impact of Social Structures on Adolescents' Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran's society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied social structures which impact on individuals' behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological method.

Results: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of up rootlessness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition from the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid ("smart grid") has started. In this project, the major disadvantage of power generation from renewable energy sources is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid ("smart grid") has started. Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their own country’s history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytical approaches? What recommendations can be derived from the existing data?

MELLO E SILVA, LEONARDO* (University of São Paulo, leogimsilva@hotmail.com)
Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism. A lot of trade unions and multinational companies have practiced internationalization of their activities in the last decades but we can function as a kind of counterweight to the advancement of neoliberal globalization. The supporters of that view bear that such initiatives could eventually update the notion of international solidarity, which is part of the labor movement historical heritage. The global union networks of multinationals are nowadays relatively well organized in some branches (chemical, metalworkers), though many accuse them of encouraging an enterprise microcorporatism at the expense of any collective wider interest. Additionally, the labor law reform initiated by the State promotes wage flexibility and encourages subcontracting. The picture is one where “internal” front points to a worsening in both employment conditions and use of labor force, while the “external” front is open to experiences of deliberative participation within corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the “old” and “new” labor internationalism unveils an underlying material and symbolic cleavage which opposes an “old” to a “new” working class.

MELOTTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)
Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “serality” of the festivals devoted to folklore or the new culture of slowness, as well as the inability to properly manage edutainment, are stifling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

MELOTTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, the societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, “liquid” and post-modern orientation could be overcome by a return of “solid” and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Eduación Inconsistente: ejercicio Profesional Desigual

Eduación inconsistente, ejercicio profesional desigual. José César Mendoza-Cornejo

En la historia del hombre sedentario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta “diferencia”.

Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del pobrecito etc. términos que provocan divergencia y estancamiento.

Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla. Se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanista, con el interés colectivo.

Las cátedras sociales no significan minorizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud aniquila la honestidad y destruye la cohesión del colectivo.

Conclusiones

La universidad y su comunidad deben ser ambiciosos y asumir un objetivo humanista y reorientar programas escolares y acciones como el Servicio Social.

Cross-Border or out-of-country Voters? Citizenship and Elections Across the Frontier Between Brazil and Paraguay

Brazilians living in Paraguay are the largest immigrant group in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in homeland elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favour to cross the frontier into Brazil to go to the polls on election days. Furthermore, the Paraguayan residency rules also prevent Brazilians from casting their ballots in Paraguayan elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

MENENDEZ DOMINGO, RAMON* (La Trobe University, ramonmenendez21@gmail.com)

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociologists by means of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. And 25% are overseas-born students, most of them coming from Eastern societies with a high number of authenticity. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald ingehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies divide in relation to experiences of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Misère au Borinage (1933) from Josip Ivens. The first one show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one show the very hard and difficult life of the Belgian miners of Borinage, focusing in their hard and arduous work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capital also reproduces the miners in the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documental film in history to put the working class in the central place as a film subject, Borinage is the first one to show the working class in the process to become a historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of
This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such crimes. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of these crimes, even when the mother's life is in danger. Based on years of fieldwork in Guatemala and observations from El Salvador, I argue that these various forms of violence paves the way for these more visible forms of violence to take place and also sustains conditions of impunity on the part of the governments.

**An Operational Framework for Addressing Socio-Political Environment of Disaster Risk Reduction-Oriented Spatial Planning**

Spatial planning plays a significant role in disaster risk reduction (DRR); UN Habitat has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning. Lack of good governance, incompleteness of institutions and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongolia, Port City in Bangladesh and Medellín in Colombia. Both of these contexts are subject to spatial planning surges in Mongla and flash flooding in Medellín. The obvious differences between them (cultural environment, socio structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local level DRR planning. Its implementation is difficult because of lack of cooperation and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.

**Effects of Rating Scale Polarity on Attitude Measurements with Latent Variables**

Beside the item content, rating scales represent a central data base for survey measures. Attitudes are often measured by a certain number of items thought to present a latent concept. This paper focuses on the polarity of rating scales and its impact on the attitude measurements with latent variables. With respect to complementarity of bipolar and unipolar rating scales, unipolar scales reflect two opposing alternatives (e.g. agree-disagree) with a conceptual zero as midpoint (neither/nor). Unipolar scales (e.g. level of importance; do not agree –agree) reflect varying levels of the same dimension with the middle category presenting the conceptual dimension's midpoint (e.g. modestly). In surveys so called "mixed" rating scales are often used, as for instance a unipolar rating scale with a midpoint that reflects a conceptual zero point.

The present study addresses the question how attitude measures with latent variables are affected by unipolar, bipolar and mixed rating scales. A 2x2 randomized experimental design was implemented varying polarity (unipolar vs. bipolar) and middle category (matching vs. non-matching to scale polarity). Different attitude constructs were measured using these rating scales. The effect of rating scale formats on item loadings, error terms and dimensionality of items were assessed using Confirmatory Factor Analyses (CFAs). The effects were also modeled and tested with help of structural equation modeling (SEM) taking response sets and certain personal characteristics into account. The participants were 522 members of GESIS online access panel representing a probability sample of German residents. The results show an effect of experimental manipulation on item loadings and error term variances. The effect of experimental manipulation on attitude measurements was mediated by response sets. The results are discussed in terms of their applicability for surveyors and researchers.

**Problems of Recognition Extremist Information on the Internet**

In recent years, there is an increase of extremist activities in different countries in the world. Terrorist organizations skillfully recruited new supporters. Internet is one way of attracting people to the organization of extremist activities. Information dissemination placed on websites explicitly or implicitly is directed at destabilizing the political situation in the country and poses a threat to the health and life of many people. Internet users are not always able to clearly define which kind of information they receive from different sites is really extremist information.

In 2013, we conducted the research in a large industrial center of Yaketerinburg (Russia). The method of research is case-study. The aims are to examine
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people, who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believe that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believe that extremist information means call for terrorist acts. In this case, 17% of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

Local Development Agencies

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility.

The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and PÖs (producers' organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development.

This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90's to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

Magic in Social and Natural Worlds: Planting New and More Colorful Technologies in South Africa

Scientific knowledge and technological artifacts travel with experts from centers of knowledge production to the places where they are translated, over an uneven global terrain and amidst a social history of technological failures and coercive public policies. While global in their extent and consequences, however, techno-scientific facts are emplaced and co-constructed within specific sociological circumstances and cultural conditions. As a consequence, accounting for a techno-scientific practice can only be made with regard to processes of local social and institutional transformation. Within a context of risk and uncertainty about water resources — real or perceived — South Africans are faced with a variety of technological options that will affect the nature of these arrangements. Focusing on a ‘disaster mitigation’ approach in a United Nations World Heritage Site in South Africa, I have positioned myself at the access points at which ‘experts’ and ‘lay people’ meet to discuss the “green economy”. Considering the various ways in which a “green technology” is conceptualized, I probe at the concept of ‘trust’ and which a “green technology” is conceptualized, I probe at the concept of ‘trust’ and how it mediates societies relationship with science and technology. In the process I ask: What makes an expert an expert? What empirical factors make-up and account for conceptual innovation? When does an object become a technology? When does it become a problem? And might the object of that problem offer any analytical and methodological tools that are interdisciplinary and area specific?

Indigenous Pathways in Social Research: Addressing Inequities Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that Indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways to social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation by Motheo Koitsiwe, a member of the Bathlako tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a researcher from Spain, who works with the indigenious Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be by “Coloniality of Knowledge and Indigenous Researchers and Epistemologies” by Cesar Cisneros from Mexico. The presentations of the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

Japanese Artistic Traditions: Mimêsis, Politeia and Re-Interpretation

My paper analyses the representation and perfecting of reality (mimêsis)by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for Japanese the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultural life of people or the idea of cultural rights of people are rather foreign to Japanese society. However, the whole idea of being Japanese is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions.

The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has all along been a tendency also to protect the “Japanese” cultural traditions. For instance, nihogu was seen by the early modern policy makers as more Japanese than yôga, regardless of the theme of painting and without much of critical discussion whether nihogu really is that uniquely Japanese. After all, both Japanese nihogu and yôga are inspired by foreign and Japanese artists and each other. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.

TG04-947.6

MERVIÖ, MIKA* (Kibi International University, mmm@tintti.net)

While the Japanese state has used its power and financial resources without hesitation in some fields such as public construction it has conserved resources by making people face many social risks, such as most family-related risks and unemployment, the best way that they can. If people fall ill or face other individual problems Japanese society often has surprisingly little room for such values as social solidarity and compassion. On the other hand, there have been social practices that have served to soften the impact of such social practices, such as the strong emphasis on lifelong employment and relatively small wage differences among employees, especially among the elite salarymen (sarariman).

The characteristics of the Japanese model of risk society are that the weak political leadership muddles along with the rest of the societies with globalisation and social and economic transformation that have occurred in Japan. This has led to a need to adjust to the changed realities the best way they can. On the one hand Japanese society has its cultural values emphasising the merits of social harmony and virtues of intersubjective practices. However, conflicts have always existed openly or been managed under the facade of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
harmony and the new era of even weaker national governance, accelerated by the process of decentralisation (chihō bunken) and deepening fiscal crisis (making politicians powerless and leaving people on their own) have imposed individualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defence and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, especially to families.

Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. However, the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, special housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. However, it is also often connected to other requirements, such as involvement in employment, training or education. In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labour market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

Hooliganism and the Dark Side of Football Events

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Descriptions of fights, stones, lighted flares and wounded innocent victims dominate the coverage. At the same time the term “hooliganism” has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of “hooliganism” is to make sense of seemingly “senseless” violence, to produce a surplus of order over disorder. From the hooligan’s own perspective the violence is by no means “senseless” but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus “fair” – duels, in which the violence is by no means “senseless” but is restrained by a diffuse moral code.

The violence is by no means “senseless” but is restrained by a diffuse moral code.

Thus, social capital can

Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency's "Whole Community Approach" for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational social capital benefits community-based organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organization (NGO) operations (Boer 2000; Meyer et al. 2004). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kopec 2006; Kopcu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations or uses data for disaster situations (Boer, Lai, and Chowming 2010). In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the 'Whole Community' is practiced as well as contribute to organizational theory about social capital's effect on organizational and community outcomes.

JS-60.4

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resilience is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individuals and communities within and beyond the network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure the availability and source of disaster-specific resources in individuals’ social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family results in extreme racial homophily of disaster social capital networks. Further, older family members are more often indicated as sources of financial assistance, which results in further pressure on their often limited resources. Finally, low-income and high-income respondents have similar disaster assistance networks, but high-income respondents will only use family for nonfinancial assistance and...
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other "get by" during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogeneous.

MEYER, ULI* (Technical University of Berlin, uli.meyer@tu-berlin.de)

Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism

The concept of "fields" has a lively history. Starting as one of the crucial concepts in Bourdieu's theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Luckmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jepperson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following the conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

BESIO, CRISTINA* (Technical University of Berlin, cristina.besio@tu-berlin.de)

Modern Times: How Organizational Time Structures Influence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timeframes, routines, and pehorms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes "adjusts" people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (tempora) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical studies which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

Understanding Long-Term Risk Behavior: The Importance of Full Picture

On the example of a qualitative study of long-term injection drug users (IDUs) who remained HIV and Hepatitis C free despite long history of risk behavior (drug injecting) we argue that analysis of non-risk related aspects of the lives of the risk-takers is very important for understanding their risk-taking behavior and its outcomes. To understand safety—in this case not getting infected—we need to understand more than situations and behaviors that put people at risk. Epidemiological theory that focuses on recent injection practices as infection risks cannot help much in explaining how these users “stayed safe” in the long run. In addition, by focusing all attention on drug users’ risk behavior, it distracts researchers’ attention from other important areas of drug users’ lives that are not in themselves risks but may be extremely important in having consequences on various risks people who use drugs face. In short, we need to go beyond epidemiological risk theory to understand risk behavior in the long run. As we shall show, non-drug related practices contribute to peoples’ fates as drug users. More specifically, we intend to show how adjustment of person to drug use, successful mutual integration of drug users’ role with other types of roles are pivotal in defining his life chances, including chances to get infected by blood borne infections. Based on life history interviews with 35 long-term IDUs in New York City, we argue that analysis of their biographies as complex, continuous, and integral life-trajectories is indispensable for comprehending their activities, including drug using and risk taking behaviors. Such an understanding of combining different drug use situations on work-related, social, and institutional resources, our double-negative informants underwent both periods of stability and turmoil without getting infected.

The Dilemma of Feminist ‘double activism’ and the Pressure of Separatism

Feminism shares boundaries with other political movements, often acting in synergy with many of them. The term “double activism,” coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movement with double activists who lived that experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely outside frames of reference controlled by masculine thought. The pressure felt was described as schizophrenia resulting from being engaged in two opposite worlds and not feeling whole in neither of them. This presentation is based on a qualitative comparative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.

MICHEL, PATRICK* (École Hautes Études Sciences Sociales, patrick.michel@ens.fr)

Elements of a Socio-History of the Relation Between Nation and Religion – The Case of Catholicism

The nation has been, simultaneously, a privileged tool of modernisation (that is also a potential tool of perpetuation) of disenchantment) and of the political, and also a potential tool of perpetuation of a new type of enchantment (which is a privileged space for the refusal of modernity). Indeed, should the nation become an object of sacrification, it is ancient politics, funded on transcendence, that is then maintained.

One of the main actors involved in this perpetuation of enchantment has been the process of forced homogenisation aiming at producing ‘sameness’ in a fictional way. If the nation was calling for a progress of differentiation, it was only...
 imposed in the 19th and 20th centuries while (re)producing indifference, and re- sulting in violence. Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred- ible. Should a space which can bring back the current evolutions carried by the acceleration of globalisation exist, the best option would be the one that carries the resis- tance against this process. In a situation that is characterised by the disqualification of the absolute and the passage of ‘sameness’ to plurality, there should be no surprise to the fact that we are witnessing some actions towards the reaffirma- tion of the absolute and of ‘sameness’. To explore this problematic, this paper will draw on the paradoxical relations (and the successive reorganisation of these relations) maintained by the catholic church towards the nation. In an orientation to follow the sign of the times (if not to transform it, at least to inhabit it), religion and the nation are both categories which share with intimacy the avatars of legitimacy, that is the rebuilding (and the partial overall imposing) of complex dispositions to organise the religious. What it play around religion and the nation can only make sense when dealing with the contemporary redeployment of these devices.

MICHETTI, MIQUELI* (Fundação Getúlio Vargas, miquelimichetti@yahoo.com.br)
The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a resource, as a way of generating economic value. It is in this context that arise no- tions bringing together seemingly antithetical terms, as “economy of culture” and “creative economy”. The study aims to show that in this new isomorphism of spirit, the world of culture seems to incorporate both practices and discourses from the new corporate world, which in its turn seems to feed on the cultural sphere. In this increasingly intricate intertwining between economy and culture, it seems to be an isomorphism between the practices of companies of the flexible capitalism and certain agencies of culture. Under the rhetoric of “organizational innovation”, new corporate world, which in its turn seems to feed on the cultural sphere. In these new models of “cultural business”, content producers find themselves in precariousness the promise of eventually monetize their creative capital, they experience temporary and outsourced contracts. As Max Weber teaches us, each form of capitalism needs a corresponding “spirit”, so that will also be a discourse isomorphism between the world of flexible economy and the sphere of culture. The discourses about the non-separation between profes- sional and personal life, between work and leisure that flexible capitalism took from counterculture is easily extended to current artistic and cultural activities because such ideas refer to the historical separation between art and work that founded the very category of “artist”. Through the analysis of similar practices and discourses into the corporate world and in the cultural sphere, the study will show how the precariousness has been rhetorically transformed into flexibility and freedom and how, even under the rhetoric of alternativeness, culture in the flexible economy has contributed to the reproduction of an unequal world.

Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social policy analysis in the past. Nowadays the nature of inequalities and types of inequalities are changing. The paper aims at analysing the inequalities in subjective well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the paper: Does the welfare state reduce inequalities in people’s overall subjective well-being? Does the welfare state reduce inequalities in people’s satisfac- tion in various domains of life such as health or work-life balance?

2. The goal of the paper is to measure and compare, across European coun- tries, inequalities in overall and domain subjective well-being (SWB) based on subjective indicators of well-being. Doing so allows for the evaluation of educational and demographic changes in societies and to provide information on well-being of different groups in the European societies. So the first question asked is of diagnostic nature: what are the inequalities of well-being of parents and non-parents among European countries? Are there cross-national differences in the level of inequalities in subjective well-being belonging to the vulnerable groups due to specific life course stages (parenthood, marital status)?

3. The paper considers the broadly defined cross national, comparative analy- sis of contemporary family policy as well as gender regimes. The paper will assess if the cross-national differences in the level of inequalities in sub-

LARIMORE, SAVANNAH (University of North Carolina at Charlotte)
The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as organizational features of schools interact with students’ individual characteris- tics. The organizational feature of interest in this paper is school racial, ethnic, and social class (SES) composition. This paper asks the following question: “Does school racial and SES composition affect individual’s K-12 reading and language arts achievement?” To answer it, the authors conduct a metaregression of the US social science literature published in the last 20 years on the relationship between reading and language arts outcomes and the racial, ethnic, and SES composition of the K-12 schools students attend. The authors employ a two-level hierarchical linear model (HLM) to synthesize approximately 75 primary studies with 200 re- gression effects. The tentative answer to this research question is a qualified yes; students attending schools with concentrations of disadvantaged racial minority and/or poor peers achieve less academic progress than their otherwise compara- ble counterparts in more racially integrated or low poverty schools. Preliminary results indicate that attending a racially isolated disadvantaged minority school has a statistically significant negative effect on reading and language arts achieve- ment. This relationship is moderated by the size of the sample in the primary study and by the way the independent variable (school racial/ethnic composition) was operationalized. Effects vary for different racial and ethnic minority groups and the effects are stronger in secondary compared to elementary grades. The emergence and widening of the race gaps as students move through the grades suggest that the association of racial and social class isolation with reading and language arts performance compounds over time, illustrating how school composi- tion effects reflect the dynamics of structural vulnerability theory.

TG03-940.4

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@uncc.edu)
The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili- ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US and other multiethnic democratic nations this responsibility is complicated by the growing demographic diversity among students, a diversity fueled by internation- al migration. The central argument of this paper is that integrated schooling is a necessary, albeit insufficient, condition for developing the social cohesion that just, multiethnic democratic societies require to flourish. Using the United States as a strategic case study, the paper synthesizes the US educational, social, and behavioral science literatures on the effects of school and classroom racial, eth- nic, and social class composition on short- and long-term academic and nonaca- demic outcomes across the life course, with special attention paid to immigrant youth. The preponderance of the extant US literature on the topic links integrated schooling to improved academic and non-academic outcomes, and suggests in-tegrated schooling is also a necessary, though, insufficient enabling condition for fostering civic engagement in multiethnic democratic societies. Ironically, despite this growing corpus of evidence, US schools are segregating by race, ethnicity, and/or social class. To be sure, because of international and internal migration trends, the nature of US school segregation has changed so that today it is much more ethnically complex than the Black-White or Brown-White binaries of the past. Nonetheless, studies indicate that today, as in the past, schools with concentra- tions of poor disadvantaged minority students generally fail to educate their students. The paper discusses the implications of its findings for 21st century ed- ucation in the US and other multiethnic democratic societies (especially OECD countries) as well as the opportunities that demographic diversity and international migration pose for delivering educational excellence and equity to all students.

MIDHEME, EMMANUEL* (University of Leuven, emanuel.midheme@sro.kuleuven.be)
Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in Peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthonous framings to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations have been characterized by uneasy coexistence, features of class and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

The Mismatch Between Planning Practice and ‘Actually Existing Urbanizations’: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and more recently the proliferation of street vending. Kisumu, however, is the remote location of the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders’ claims to urban public spaces. The central argument in the paper is that the urban street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu, official planning practice is still steeped in prescriptive ethos aimed at producing the ‘modern’ city. There is thus a mismatch between official planning policy and the practical realities of what Shatin calls ‘actually existing urbanisms’. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and ends of actions. In this paper, I argue the ethic of responsibility with an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends—that is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’—and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one’s action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicate how an ethic of responsibility “takes account of precisely the average deficiencies of people” and can therefore be linked to empirical social psychology. Redefining Weber’s ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

Networking “Cool Japan”: Re-Considering the Notion of “Network” through the Global Spread of Japanese Popular Culture

It has been more than a decade since the global appeal and presence of Japanese popular culture (hereinafter called “J-pop”) became significant and was labeled as “Cool Japan.” Even Japanese government has recently committed itself to the overseas promotion of J-pop, and the result policy set has been called “Cool Japan” policies. In this presentation, I would like to discuss about the efforts of players in J-pop sector to promote J-pop overseas, especially their cooperation with government and players in overseas market, although such a J-pop’s overseas project is planned and implemented on the basis of their close communications and relationships. In this presentation, therefore, I propose to understand J-pop’s global spread in terms of the network of agencies with central focus on the players of a certain overseas business project of J-pop and government. What kind of “power” “energy” and “motivation” is shared and circulated among their entitlements? How can we develop an understanding of the “network” concept through the global spread of J-pop? Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.

Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of “National Debate” after Fukushima Accident

This paper explores the possibility of public participation in decision-making on nuclear energy policy through a case study of “National Debate” on energy choices after the Fukushima accident in Japan. Japan has been pressed to fundamentally reform its national energy policy in order to break away from the excessive dependence on nuclear energy. In the summer of 2012, the DPJ (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DPJ government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the result and the process of the deliberative poll, approximately half of the participants supported the complete phase-out of nuclear energy, and it was reflected on the government policy decision to some extent. Some of the major findings from the participant observation of the deliberative poll are as follows: first, the public participation and deliberation substantially impacted on the policy formulation, producing a complementary effect to a wide range of direct actions such as demonstration and public comments. Second, the deliberative poll provided ordinary citizens with opportunities to question the existing authority of experts and made informed judgments about national energy policy. Third, however, the result of the deliberative poll was abandoned once the conservative coalition took power at the end of the year, and there still remain many challenges

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed from configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond its boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample – 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project “Trajectories of family and non-family social networks: intergenerational dimension”, financed by the European Social Fund (ESF).

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being gap of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000;Waite, 2000). This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the within-country differences across time.

Results show that the life satisfaction gap between the married and the never married decreased over time at a rate that could close the well-being gap between themarried and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the conscious of free-dom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the medial level, it will explore two dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic
and political). At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with board outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

Dark Shades of travel: Death Tourism with its Legal and Social Implications

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of bereavement travel that culminates in assistance to end one’s life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing through digital media, the paper nonetheless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was seen as the major asset in low-income developing countries, how property is passed on and divided between future generations is a significant factor. This paper looks at inheritance through the lens of biographical interviews with several generations of Kenyan families, seeking to explain the how and why of poverty needs to be understood in the wider family context. It analyses fortunes and misfortunes of families over a given time period in the context of property ownership rights. It also looks at the impact of education and the inheritance of cultural capital. When both fertility and survival are high, traditional patterns of land inheritance can lead to the progressive sub-division of land with long-term adverse implications for sustainability. While inheritance in Kenya is male-dominated, the paper nonetheless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was found to be the reality for the overwhelming majority of the participants in the study. The practical implications of this for safeguarding the property rights of women and their children is discussed.

Mō Tātou: Doing It for Ourselves. Developing Indigenous Māori and Pacific Marine Scientists in Aotearoa / New Zealand through Tino Rangatiratanga (Self-Determination)

Persistent ethnic disparities in tertiary success have been experienced by indigenous and minority students globally, especially in the sciences, and more so at postgraduate level. Nevertheless, Te Rōpu Āwhina (Āwhina), a programme based on the Māori (indigenous people of Aotearoa / New Zealand) concept of whānau (extended family) at Victoria University of Wellington (VUW), has substanti-
alised, the paper nonetheless examines the number of Māori and Pacific undergraduate and postgraduate students in the science, engineering, architecture and design disciplines. The kaupapa (goal) of Āwhina is to produce Māori and Pacific scientists who contribute to Māori and Pacific community development and leadership. An important Āwhina initiative, the Āwhina VUCEL Incubator (AVI), is based at VUW Coastal Ecology Laboratory (VUCEL). The kaupapa of the AVI is to develop outstanding Māori and Pacific marine scientists capable of advancing scientific understanding and, critically, contributing to leadership and development in their communities in meaningful and significant ways. Māori and Pacific marine science capability is built through direct involvement in research that benefits those communities. Key aspects of our work and kaupapa are exemplified by two recent activities discussed in the presentation: (1) The Āwhina Summer Cybrospace event where

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
years 12 and 13 rangatihenga (youth) from Ngāti Kahungunu and other iwi (tribes) and Āwhina local community clusters participated in hands-on activities including marine laboratory and field-based activities, and (2) a project developed by Ngāti Kahungunu iwi Incorporated (NKII: the tribal entity for Ngāti Kahungunu) in partnership with the AVI, to increase Māori capability around marine resource management and provide pathways into marine science for Ngāti Kahungunu rangatahi. We describe the partnership approach taken to develop the project with NKII, evaluation of the Summer Cybrospace event, and research being undertaken to demonstrate that Āwhina and the AVI are having a positive influence on Māori and Pacific success in science-related disciplines.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approach 22% of families with children) time use surveys show the level of involvement of fathers in everyday child care has remained very little. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as an equal right. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequity in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included 'tonge' fathers and mothers – 'primary time' parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally. The sociopolitical policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in 'doing family'. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own 'rights' while mothers shoulder a disproportionate burden of everyday 'responsibility' for children (even in 'equal shared care' situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within 'intact' families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan's ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low. The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo's recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourse in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, televi- sion programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed visual and audial methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested the great importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their use by participants point to a complex interweaving of absences and pres- ences cross-cutting the private and public spheres, (and often reflected and re-produced by academic disciplines). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people's family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the social inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

Taking Photos? I Don't Do That Anymore: Critiquing the Photo- Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest among re- searchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects’ (Luttrell and Chalfen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age www.lwobattles.org.uk. The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne’s diary-making method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audial (sound diaries) or textual (written or oral). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making meth- od and an exploration of its limitations.

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in con- texts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged and countercultural artists were highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverished neighborhoods. The author argues that the uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

MILSTEIN, DENISE* (Columbia University, denichom@gmail.com)

From the Inner Workings of Innovation to Historical Accounts of Artistic Development

What mechanisms drive innovation in art? How does exploring this question incite broader understandings of the history of artistic movements? This paper examines the role of innovation in artistic development. It starts from three case studies: A look at the local, regional and international dynamics that impacted these movements reveals repeating mechanisms that both facilitate and limit innovation. The study of Brazilian artists and movements reveals processes relevant to the broader, historical development of artistic movements in Latin America. Methodologically, the focus on innovation in art worlds requires constant shifting among analytical levels in order to grasp transnational influences, the interactions of global and local actors, and the dynamic of change and transformation in art worlds. Adding a relational focus to this multi-level approach helps to unveil the channels whereby artists and their movements develop. The study describes three case studies: (1) The movement of jazz and the evolution of art movements in Brazil over the 20th century. First, a concern with authenticity that led to explorations of “native” Brazilian cultural heritage; second, a fragmented notion of national culture that built on mid-century populism; and third, the critical and grounded incorporation of diverse cultural elements within an international and, in some cases, global cultural sphere. The identification of mechanisms that repeat over time with each step in the development of an artistic trajectory is a tool that may be applied beyond this case. These mechanisms shed light on widely recognized phenomena such as revivalism, nationalism, counterculture and political engagement in art. The paper demonstrates, both empirically and analytically, how it is possible through the study of innovation to build a broader narrative of the struggles through which artists and their audiences build identities within national contexts.

Model Minority and Discrimination: Case of the Second Generation of Cambodians Refugees in France

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghrebian immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asians have never been considered to be a ‘model community’ or ‘silent minority’ in the integration process at the local resettlement and benefited from a warm welcome (Gilles 2000; Simon-Barouh 2003). They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify the status of non-racist citizens (Roqueijofre 2009:118). With this good reputation, they became a ‘model minority’ in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Tarring 2000). However, the idea that their discrimination is accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the context of French society, the positioning of Southeast Asian refugees as ‘exceptional’ resulted from colonial history and the politics of compassion. But this exceptionality risks generating racialised practices. Regarding Second generation, their educational success in science and their typical choice for the sector of the communication industry has been noticed (Le Huu 1996; Meslin 2006; Masse 1996). Are they really success in their schooling and professional career? It is doubtful if they

How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. This condition regresses national discourses redefine the relation with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how public opinion is tolerant of them. However, some remain a part of the national image. The USA’s liberal modifications help to implant a multicultural ethic on its national image while Japan’s transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

MINATO, KUNIO* (Ritsumeikan University, minato920@gmail.com)
Nationalism, Exclusivism, and Purism: An Analytical Description of National Identity in Mongolia

In recent years, Mongolia has witnessed the rise of ultra-nationalists and even neo-Nazis. Their campaigns pillory foreigners, especially Chinese and Koreans, as threats to the “purity” of the nation, and are often accompanied by vandalism and violence. Their target is not only limited to foreign people and enterprises but also to their fellow Mongolians. This state that has been very few in Mongolia, the problem is whether public opinion is tolerant of them. However, some exceptions explain that these ultra-nationalists do not represent the majority of Mongolian people, and that their activities are still in the margins. This is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of “national purity.” Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-Maoist China. The study also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

MINIAN, ISAAC* (Universidad Nacional Autónoma de México, minian.economia@gmail.com)
A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world. One of the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require new institutional arrangements to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

MIQUET, ALICE (University of Montreal) GEERTMAN, STEPHANIE* (Institut national de la recherche scientifique, geertman.stephanie@gmail.com)
Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city’s largest public spaces, which are mostly fenced off and for which entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new understanding of culture in the squares of Hanoi, manifested in skateboarding, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professionals and the institutional planners, this paper provides the understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

MIRANDA, ALEJANDRO* (University of Western Sydney, alexomir@gmail.com)
Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relationships. The paper is addressed to explore and discuss this notion. Son jarocho is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahua and Spanish-Andaluz traditions. It is nowadays reproduced, appropriated and recreated in various locations of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used son jarocho to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is currently also sustained, informed and reshaped by transnational linkages. I suggest that son jarocho is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, Jarochos, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re- appropriated and recreated across transnational social fields.

Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Scholzman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/strengthen the impact of the social background on student’s citizenship participation. The main hypothesis of this study is that country contextual economic indicators as well as democratic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide. The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main objective of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Leisure Unites and Strengthens Family Bonds --- a Case Study on Families That Spend Quality Time on Holidays Together

Family will always continue to remain in one form or other as the basic building blocks of society. Today's world is one that is riddled with competition deadlines stress. With high profile jobs to be managed and education degrees to be attained by children to secure their future it's so important that families make quality time for leisure. The researcher tries to unfold the following objectives:

*To identify the growing problem of families dispersed due to job studies constraints
*To identify the importance of making time for leisure to be together
*How quality leisure time binds groups and contribute to bonding and unity
*The impact of leisure in the family life today and the need for families' world wide to do the same

With the above objectives in mind the researcher is analyzing the role leisure plays in building tight family bonds.

The study will select few cases where girl students who reside far away from homes in hostels but are still close to their family members and share a strong bond.

MIRANDA, PERPETUA* (SOPHIA COLLEGE FOR WOMEN (MUMBAI) INDIA, pep30ctc@rediffmail.com)
Migration and Gender Inequality --- a Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small business, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women's capability to utilize capital productively. With the expansion of microfinance facilities credit is also now available to many of these small business, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women's empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The researcher tries to unfold the following objectives:

*To identify the growing problem of gender inequality in cities.
*To identify the need for micro financing.
*How micro financing contribute to support and empowerment.
*How marginalized women's lives are impacted by micro financing and the importance of replicating this phenomenon.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who "service" India's high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

**Rethinking Pharmaceuticalisation from the View of Japanese Context**

Medicationalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as the process by which, social, behavioral or bodily conditions are treated as normal. In need of treatment, with medical drugs by doctors or patients (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousand hits for “pharmaceuticalisation” in Google and only seven for the topic “pharmaceuticalisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in sociology, the discussion in Japan is not yet sufficient. Therefore, in this report, by considering the reason for lack of the discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalising pharmaceuticalisation without the point of social system would be hard. However, given that a lot of Japanese people use dietary supplements, pharmaceuticalisation might affect individual healthisation. Therefore, by using pharmaceuticalisation that is associated with individual healthisation and social system, it might be available to analyse social phenomena of pharmaceuticals better.

**Gender Inequality and Education for Women**

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society's women have lower status, no access to education, less food and no health care. These women work longer hours, have lowered incomes and little or no access to ownership of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education.

The present study will explore the dropout's girls from schools and how it affects their future life and in turn loss to nation.

**Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E- Health**

Abstracts are organized by first presenting author's last name.
“Health for all” is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

San Francisco and The New Economy Of Desire

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the cultural matrix within which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by the nomena like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partnership.

Net-Base Theory of Social Capital

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theorists’s theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base’. Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and group participation in ordinal individual-base survey. Thus, net-base makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

**The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary**

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through constructing the symbolic language of their scholarly work. It shows how such intellectuals, increasingly motivated by the necessity of trying to prove that they could ‘live in truth’, approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectuals’ role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underlying structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

**RC20-356.1 MIZTAL, BARBARA* (University of Leicester, bm50@le.ac.uk)**

**Trust and Modes of Cooperation**

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices and the consequence of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal regulations and informal means, such as trust, to secure conditions for socially beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.

**Qualitative Analysis for Sociological Study of Various Conditions of Happiness**

What I would like to emphasize in this presentation is that now we need to try analysis of contents (not contents analysis) based on qualitative data for the sociological study of “happiness.” To say it objectively, we need to examine the methods and effects of detective analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination has included open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer “very happy.” As a result, three clusters were found, according to the regions, with different “conditions for happiness.” Feature keywords for happiness are; In the Capital, “above a certain economical level, nation and politics, charity-like service,” in Chiapas, the most southern border state, “economic problems, close people, religious consciousness,” in Puebla, a city in-between those, “autonomy or self-sufficiency, ‘around me’ or ‘social’ situations.” Naturally, many points are shared as well. Almost all the data used by social scientists for analysis about happiness are from acceleration of measurement and scaling logistic curve. We cannot completely solve those problems but can moderate their problem levels by changing the analysis levels from whole happiness to happiness within each cluster.

This result shows two additional points, valuable to the future of sociology. One is the utility of detective analysis and research with a weaker hypothesis; different from the way with a strong hypothesis to prove, test and certify. Another is that open questionnaire, a system we cannot say we have utilized enough, can be an important source of quantitative data. With quantitative data like this, we can effectively classify and objectively treat the elements of “happiness.” Sociology has the method to do it and it must be an advantage to the other disciplines studying “happiness.”

**A Framework for the Sociology of Future: Logistics Curve and the Axial Ages**

Until the later decades of the 20th century, almost “self-evident” image of the history was that of the ever-accelerating progress. That image of history had the objective basis; statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biological laws of the S-shaped logistic curve, we carry a species, with the 3 stages, 1. of slow foreflow, 2. of rapid or explosive propagation and 3. of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970, turning point from acceleration to deceleration. We are already passing the historical point of junction from the stage II to III. Macroscopic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. “Globe” is a paradoxical geometry; infinite and finite. The geographical meaning of the “globalization” lies in this paradox (Jaspers talks of the “Axial Age” as simultaneous emergence of major world religions and philosophy: Old basis of Christianity, Buddhism, Confucianism, and Greek philosophers. Sociological background of the “Axial Age” can be understood as the ensemble of the interrelated factors: 1) Emergence of the monetary systems; 2) rise of the cities and liberation from the communities; 3) crisis of lives thrown into the infinity of the world. Monetary system, urbanization, and the infinity of the life world are the very essences of modernity. That reason, the Axial Age has been the basis of life and world until the final phase of modernity. Modernity can be seen as the stage II. Axial Age was the critical point from I to II.

**Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann’s Social Systems Theory**

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan’s nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own strengths, they discuss specific points regarding nuclear policy with little regard to the wider picture. They all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann’s Social Systems Theory, this paper proposes to frame the different views on the nuclear

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan’s political system acts as a second-order observer of these observations. By undertaking the political role of the social system which acts to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan’s economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little impact on the use of alcohol and tobacco than do friends, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People's Perception in the Perspective of Community Policing

Apposite police-community relationship in India is still in a nascent stage owing to the assorted attribute of the Indian society. Caste, communal and religious discords act as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people’s perception of police-community relations in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by the police in the capital cities of north east India have been successful in bridging the gap between the police and the public. The north east India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has been an area shrouded in mystery and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today’s highly informative society. At a socio-economic dimension, Big Data (and data-mining technology) accelerated the Industrial Revolution in the 20th century. In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community. This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that being learning-disabled and autistic is connected with what was done by others, including the attendants themselves. Therapeutically, it attempts to unravel an unexpected harmful doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

**Doing Occidentalism through Mangaeque Convergence**

This paper addresses contemporary Japan-Italy relations in the field of popular culture and art. It sheds light on the asymmetrical and mutually constitutive process of Occidentalism, Orientalism, and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (H. Jenkins 2006). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological critical examination, nationalism, and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the country with the highest number of anime series broadcast on television outside Japan (M. Pelliteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be examined through a theoretical perspective inspired by relational, intersectional and positional sociology (E. Emirbayer 1997, P. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mangaeque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

**Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance**

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles.

My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka’s performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and offstage. Even on women-only stages, there is an unequal construction of gender.

I will also discuss the audience’s approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society’s gender consciousness.

**MIYAMOTO, NAOMI** (Ritsumeikan University, nmiya@std5.so-net.ne.jp)

**Musicology in Post-War Japan: German Influence and Social Context**

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan. Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicians was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Carl Dahlhaus’s social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the ‘great German music’ from the country’s guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

New Urban Childhoods? Globalisation, Socialisation and Urban Informality on Children in Ghana

Globalisation has fuelled rapid and unprecedented levels of urban expansion. The consequences of which for children’s socialisation have been profound. ‘Urbanisation without industrialisation’ is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear as cause and symptom of lasting economic and social changes. It is argued here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do this, chapter 2 introduces the experience of structural adjustment in Ghana – a ‘poster-child’ for globalised market-led development strategies – and traces through its impact on urban development in terms of ‘informalisation’ (Meagher 1995) and its corollary the growth of wageless life (Denning 2010). Particular attention is given to the implications of these developments for children as both dependent children and the interaction between these processes of re-constitution. As structural adjustment finds a parallel in processes of domestic re-regulation, this paper argues that children’s value to their household is progressively being re-constituted. The consideration of the informal – activity outside the regulative ambit of the family (D inland White 2010) – is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of ‘slums’ and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo

This paper is concerned with the way the development of global migration has made its impact upon Japan’s urban communities. Nowadays, in Japanese metropolitan areas, it is common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing constantly. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new ‘Chinatown’. But this is a new kind of ‘Chinatown’. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan’s other major Chinatowns, such as Yokohama. Nor do we see the concentration of Chinese shops that are often characteristic of Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese commuters who travel to and from the precinct, as well as to the various free Chinese newspapers which inform Chinese residents of applications for visas or accommodation and that are for sale apart from various stalls selling fashion or cuisine. This area is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting compatriots.

Japanese society has been undergoing tremendous transformations in recent years. One of them is the change in the family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation and service-provision, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Institutionalization Among Older Adults in Japan

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver’s capability, rather than the older adult’s declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have been examined on both caregivers and the older adults. However, few studies have focused on the caregivers’ preference for services after the launch of the LTCI. Using ordinal logistic regression, we analyze the claims data on LTCI service use in one city in Japan from 2000 to 2006. The preliminary results show that after the launch of the LTCI, the caregiver’s preference for services is the significant risk factor for institutionalization, among other predictors related to risk of institutionalization, such as living arrangement, characteristics of both the care recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. Despite the home-based services, the primary caregivers’ preference—whether they prefer more involvement of LTCI services or not, and whether they prefer the services at home or in institutions. Therefore, we conclude that the LTCI services have a double-edged effect on family aging care, and the family has great influence on whether the older adult will be institutionalized or not.
Inequalities between Men and Women in Social Work

Inequalities between women and men stem from the assignment of the “care” work to women, and in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skill within the framework of their professional practices denote two different ways of conceiving the place of “care.” “Care” is a state in the context of the “active social state,” because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work—the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by unpredictability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.
need towards the eco-tourism in the state so that the tourist potential can be optimally realized that too, on the sustainable basis.

**MOHANTY, ADITYA*** (Central University of Bihar, mail.adityamohanty@gmail.com)

**Informality and the Forging of an Assemblage Urbanism in the Indian City of Patna**

Right from the Almrita Patel case of branding slums as public nuisance (Ghertner 2001) to the conceptualisation of slums as sites of ‘deep democracy’ (Appadurai 2001), critical urban scholarship on the Indian city acknowledges the resilience of ‘informality as a way of life’ (Roy 2004) in the Global South. In another aspect of informality, the state is increasingly withdrawing from the hegemonic construct of the aesthetic urban space of the new bourgeois persuades urban planners to cleanse slums off the map of neo-liberal cities (Baviskar 2011). In fact in recent times, processes of urbanization in the Global South seem to have engendered shifting patterns of formalization and informalization so much that new logics for claim-making has re-invigorated the very salience of ‘splintering urbanism’ (Graham and Marvin 2001).

It is in this context that the proposed paper shall elucidate upon these issues by presenting a comparative ethnographic vignette of one in situ rehabilitated and another displacement-induced rehabilitated slum site in the Iration city of Patna. The key templates of assessing the resultant assemblages within such an formal/informal labyrinth are: (a) the economy-induced exigencies of translocalization and (b) the graying of formal spaces of habitation. Most importantly these elucidate upon the role that circuits of materiality play in re-configuring the very imbrications within the formal vs informal dichotomy. Lastly in so doing, the paper squints at the emergent forms of urban citizenship, by catapulting the understanding of the formal/informal labyrinth from the ‘political economy’ framework to that of, what may otherwise be termed as, an ‘assemblage urbanism’. In other words, the paper probes into the ways in which stratagems for urban renewal ar-ray in the right mix of communitarian ethos, historical circumstance and political location, so as to make it possible for agency to effectively mutate itself!
MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethnic nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. These rooms departments within these luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focussing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethnic nationalism embracing civic behaviour in the service industry.

DUTTON, KIMBERLY (University of Delaware)

Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization, such as refugees and forcibly displaced families. Moreover, much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structures around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to the forced migration trajectory they hold for their children; their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post-migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013 – Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased especially in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty risk rate. We have estimated the tax-benefit system in comparing policies chosen in the 1990s depression and post 2008 recession. We have estimated the counterfactual poverty rates during 1993-2013 by using the SISSIM microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have nullified the poverty risk rate. Changes in taxation had a considerable larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

The Evolution of Language-in-Education Policy in South Africa

During the apartheid era, South Africa’s language in education policy was ideologically driven by racism and the desire to suppress the indigenous languages of the majority of South Africans. The policy was fiercely resisted and led to unprecedented episodes of collective violence.

In post-apartheid South Africa, the language-in-education policy takes into account the socio-linguistic reality of South Africa’s multilingualism and bestows upon the individual the right to choose his or her own language of learning and teaching.

The political climate in South Africa underwent dramatic changes with the unbanning of political organizations in 1990. A new policy, emphasizing multi-lingualism, evolved. The sociolinguistic reality of multilingualism in South Africa was eventually recognised. The new Constitution of the Republic of South Africa (Act 108 of 1993), which was hammered out and forged by South Africans of all political persuasions, reflects the linguistic diversity of South Africans and recognises their right to exercise their freedom in choosing their own languages. Constitutional Principle XI provides that “The diversity of language and culture shall be acknowledged and protected, and conditions for their promotion shall be encouraged”.

In the presentation, I intend focusing attention on the apartheid language policy in schools in South Africa. The major thrust of the paper will be devoted to sketching the genesis and evolution of a new language policy for schools in post apartheid South Africa.

The Declining Relevance of the Environmental Nation-State

The Environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalization of the environmental state), 1980-1990 (state failure and neoliberalization debates/pressure), 1990s (redefinition and legitimation of environmental states internationally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

"Media Diasporas - Diasporic Media" - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to household’s relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household’s relative income. This research fills a gap in the literature because there are surprisingly few studies that examine inequality by both family structure and education, and even fewer that examine equality cross-nationally and longitudinally. Our contributions are to structural vulnerability theory. Structural vulnerability theory aims to consider how the individual, or the household, is structurally located within a context. Our analysis provides a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

Rethinking the “Exploitation of Self-Realization” Model in Japan

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honda has called the same problem the “exploitation of “Yarigai” (the word “Yarigai” refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the "explosion of self-realization" has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a "contribution to society." This viewpoint compels us to rethink the "explosion of self-realization" model.

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements' scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements' strategies, grievances, emergence, evolution, and impact. Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: 'Caravan for the rights of refugees and migrants'. This network mobilizes against what is defined as a context of exclusion: the 'residence obligation' law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of 'identity construction for emotional benefits', I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest. Two methods have been used in order to explore the construction and interaction of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

MONFORTE, PIERRÉ* (University of Leicester, pm260@le.ac.uk)
The Symbolic Representation of Borders in the Protest Against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states' immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states' territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be found across countries territories.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed. This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stressors, and Mental Health in Older Japanese Adults

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stressors, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey of People Living Conditions (CSPCL) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, marital status, equivalised disposable household income, disease (the five top responses chosen by each group), psychosocial stressors (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stressors of ‘one’s disease/long-term care’, ‘dis-ease/long-term care of other family members’, ‘income/family budget/debts’, and ‘motivation in life’ were found to be significantly related to mental health. In young-old men, equivalised disposable household income, working status, and the psychosocial stressor of ‘one’s job’ were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalised disposable household income, eye diseases, lower back pain, and the psychosocial stressor of ‘relationship with family’. In old-old men, the psychosocial stressor of ‘relationship with family’ was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of ‘relationship with family’ were related to mental health.

This study was funded by a research grant from the Ministry of Health, Labour and Welfare (H22-seisaku-shitei-033). We thank Kenji Shibuya and Hideki Hashimoto for their academic support.

New Forms of Participation in the Social Welfare in the City of Barcelona

A new form of intervention is emerging in local welfare systems. This new way requires a change of attitude and involvement from citizens, public authorities and public and private organizations. It can be defined as a “social innovation” in the sense of the implementation of an idea that is new and that breaks with the prevailing routines and structures in a given system or setting. “Social Innovation” is widely used from many academic, political and social perspectives. No wonder that, in a context of uncertainty and transformations, becomes essential for search for new policies. In particular, in the field of social welfare the experimentation of new policy proposals and social practices has begun in a lot of countries. In this paper, we will analyze new participation forms in the field of social welfare in the city of Barcelona from the theoretical perspective of social innovation. The research is the result of work carried out within the European research project WILCO (Welfare Innovations at the local level in favour of cohesion).

The paper has three parts. First, there is the discussion of the concept of social innovation and proposes a methodology to use them. Secondly, following the conceptual and methodological proposal presented, discusses one policy of the City Council of Barcelona, the program: “Citizen’s Agreement for an Inclusive Barcelona”.

This paper is an example of Social Innovation that increases the co-production of citizens and professionals. In this program, professionals and citizens work together in order to reducing stressors, socio-economic support for young-old men, and prevention of lower back pain for young-old and old-old women effectively promote mental health.

This work was funded by a research grant from the Ministry of Health, Labour and Welfare (H22-seisaku-shitei-033). We thank Kenji Shibuya and Hideki Hashimoto for their academic support.

MONTALVO, ARNALDO* (Capes Foundation, montalvo@ufmg.br)

The Interplay Between Work and School Outcomes Among Adolescents in Brazil: The Role of Prior Orientations and Aspirations

In Brazil and other developing countries, empirical evidences usually suggest that the participation of children and adolescents in the labor market tends to hinder educational outcomes (academic performance, high school graduation and dropout, etc) and, therefore, lead to inequalities in educational and occupational status over the life-course. However, a body of research argues that the interplay between work and school: 1) depends on the intensity (hours) of work;
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographies, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

MONTANARI, ARIANNA* (University of Rome, arianna.montanari@uniroma1.it)

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created the set of institutions allowed to control the imperial power. In the same way the tragic experience of the II° World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unionification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is one of the three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable not to be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power.

At the moment in Europe there are states with limited sovereignty and increasing formations of political, social, and economic conditions after the 1970's. According to Khanna European Union is one of three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable not to be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing power and autonomy to regional and local administrations.

Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older people and their quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successful ageing,...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected. Transnational Aging in Mexico. the Experience about Elderly foreigners, and return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de envejecimiento transnacional en estos dos grupos y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guayuauto y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración y la vejez. Los cambios en el periodo de retiro laboral, los cambios en su identidad y el apoyo al lugar, redes sociales y prácticas culturales.

La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México. Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by examining successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role of labor that “adds value” to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative labor more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainably way to do so. However, indigenous knowledge is not sufficient to support a transition
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Cougnouen, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ small farmer that has informed indigenous knowledge for generations. The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly ‘Peruvian’ or ‘Japanese.’ Preliminary findings indicate that the youth report a range of identities (hapa, Nikkei, Peruvian, Japanese, Peruvian-Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is inextricably linked to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthening their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

MOOREHEAD, ROBERT* (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)

Am I Japanese, Peruvian, or Both? The Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Basing on ongoing research, this presentation explores the ethnic identity formation of second generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth’s parents’ experiences in Japan play in shaping the youth’s ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (hapa, Nikkei, Peruvian, Japanese, Peruvian-Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is inextricably linked to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia which leads them to withdraw from participating in social spaces and, perhaps more crucially, from participating in institutions, out of fear of being discriminated against. Thus, it will be apparent that the Islamophobia that some say exists because Muslims refuse to ‘integrate’ is actually a factor in discouraging Muslims from ‘integrating.’ The situation is more nuanced than this though as I will also argue that despite Islamophobia, Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in combating Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to Islamophobia as a term, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

MORAGA CUBILLOS, MARCELA* (Pontifical Catholic University of Chile, moragac@uc.cl)

The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control

Comparative data from Latin American countries in 2006 locates Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use.

This research analyzes the pattern taken by the relation between school bonding and the involvement with behaviors that usually are considered as risky, like substances use, from a perspective based on social control applied specifically in the Chilean context. The previous descriptive analysis shows i) an increasing prevalence of truancy as students get older, ii) a reduction of students happiness in school, iii) a decrease in the importance of good grades, and iv) reducing the importance that students connect to the generation of positive opinion on teachers. Besides, truancy more than duplicates the odds of tobacco and marijuana consumption in the last year. While the students happiness in school, the importance of good grades and the relevance assigned by students in the generation of a good impression on teachers reduce the odds.

The analysis was based on a panel data from a longitudinal study of tobacco, alcohol and drugs throughout school populations, made by The Pontifical Catholic University. They collected information from variables related to family, school, peers and substance use of Chilean students in seventh grade during 2008 (N=4.387) from townships with a population over 30,000 across the metropolitan region. The students were annually re-interviewed until 2011.

MORALES, ANA* (University of Manchester, anamorales@postgrad.manchester.ac.uk)

The Effects of Socio-Economic Background and Parental Involvement on Children’s Early Cognitive Development: The Case of Chile

Children’s development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style are the most important predictors of the level of cognitive skills at earlier stages of life. Using data from the First Longitudinal Survey of Early Childhood (ELPI in Spanish), this study implements regression models to estimate the effect that socio-economic conditions and parental involvement have on the scores obtained by Chilean children aged between 36 and 60 months in the Spanish version of the Peabody Picture and Vocabulary test, also controlling for parents’ and children’s characteristics as well as geographical location of the household.

Results show that parental involvement, which is a threefold indicator composed by positive parenting, parental stimulation and ineffective parenting, does make a significant difference, where positive parenting and parental stimulation are positively associated with cognitive development scores, while ineffective parenting is negatively associated with the scores. On the other hand, results show that cognitive development scores are significantly higher for children living in the wealthiest households with respect to those in the poorest ones. Furthermore, income can moderate the effect of parental involvement, where a high level of positive parenting has a stronger positive impact on poor children, while the negative impact of ineffective parenting is stronger on children from the higher quintiles, and finally, parental stimulation has a stronger impact on the wealthier children.

From these results, it is possible to assert that parental involvement has the potential to contribute to reduce the gap in the cognitive skills achieved by children according to the level of income of the households they live in, which can be of particular relevance for reducing the inequality-related gap in later life outcomes.

Emergent Multi-Cultural Identities and Practices of Immigrants: Toward the Recognition of Yet Another Integration Trajectory

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Steven Vertovec will relate the conditions of super-diversity of present-day urban spaces which affect migrants' positioning in the host society, their social milieu that cross-cut ethnicities, and cross-cultural social relations.

Ewa Moraw ska will reconsider the premises informing our concepts/theories of immigrant integration challenged by a new phenomenon of the continuous/high-speed out-migration of travellers seeking self-development and exciting adventure.

Thomas Faist will reflect on the role of class, ethnicity, religion, and sexual orientation in structuring inequalities in present-day multicultural societies characterized by cross-cutting identities and practices of their members, and its implications for integration/assimilation theories.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of immigrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optional ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

New Factors of Social Differentiation in Local Rural Communities

The paper addresses the social consequences of proliferation of innovation practices in local rural communities. Particular attention is paid to the susceptibility of different rural social groups to mastering innovations in the fields of production, consumption and leisure and to the impact of proliferation of information and computer technologies on social differentiation processes.

The paper is based on the results of the sociological surveys of the processes of proliferation of and familiarization with innovation practices in local rural communities conducted by the Institute of Agrarian Problems of the Russian Academy of Sciences in one of the Russian regions (Saratov's oblast) in 2010-2011 with personal involvement of the author.

Despite the remaining differences between the city and the countryside in terms of availability of modern opportunities and technology, rural residents are increasingly active in mastering innovation goods and practices. The advancement of modern technology per se does not cause the existing differences to blur, but, on the contrary, gives rise to new forms of differentiation, notably to “digital inequality” not only between the city and the countryside, but inside local rural communities as well.

The analysis of the empirical data allowed:
- to identify the features of propagation of individual innovative practices, high-tech goods and services in local rural communities;
- to identify the principal social groups, differentiated by frequency of use of innovative practices in the fields of production, consumption and leisure;
- to make a comparative analysis of the quantitative and qualitative characteristics of these groups, their life and work strategies;
- to propose ways to provide equal access to the new knowledge and skills required for mastering new technologies to different social strata and groups of rural population.

Disambiguating and Re-Conceptualizing Social Investment

Since the late 1990s, ‘social investment’ has appeared in the policy discourse of international and European organisations, as well as on the policy agenda of several governments across Europe and elsewhere. As a strategy that aims to combat social risks while enhancing economic performance, the social investment perspective seems to have appealed to a variety of governments. Indeed, policy analyses show how the notion functions as somewhat of a ‘catchall’ strategy. This is true also on the theoretical level, where social investment is both over-determined on the ideational level, and under-conceptualized. This paper aims to contribute to a finer conceptualisation of social investment by 1. assessing and re-specifying its normative and social dimensions, 2. by offering a discussion of how we can conceptually and empirically identify investment-oriented policy instruments, and 3. by taking stock of existing analyses of the distributive consequences of social investment policies. In doing so, the paper aims to contribute to a re- conceptualization of social investment that goes beyond an analysis of its economic returns to also address the social basis and social returns of a social investment strategy, and its possible pitfalls.

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings contributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP.

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

According to Douglas Macbeth, "In such cases of inaudibility or incomprehensibility of utterance . . ." (Bauman, 2003) is concentrated. It is a very-known fact that territorial fixation is one of the major difficulties for the people of segregated districts, who are not able to "escape" from there (Wacquant, 2007). But that should not make one forget another difficulty: that is the difficulty of not being able to stay in one place, by having to be constantly moving. Because staying in one place also means setting down (establishing a family, sending one's children to school, having regular dealings with neighbors as a member of the local society, possibility of borrowing money from banks, etc.). On the basis of a survey in the Tokyo suburb area, this paper examines the impact of those changes on (semi) public housing residents, especially where they go and how their lives are changed by their movements.

Toward the Post-Colonial World Connections: Relativizing the Eurocentric Social Movement Theories to Assemble the Citizenship Beyond Nation-States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusim) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-aptic artifact by the US-Japanese homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoh, Kokichi, 2006, Shokoiku no Shatei, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to national and regional differences in educational outcomes. In Japan, national policies to work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people's everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people's understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grand-children, and friends and neighbors and friends? How do their understandings of their world shape, and what are the possibilities of their future lives?

Negotiating Safety in Relationships: Children's Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Australia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenomenology, ethics of care and dialogical ethics.

The aim of the study was to hear children's voices in primary care research about children's safety and resilience in the context of family violence. The research questions sought to understand children and mothers' perspectives on children's safety and resilience; establish how children's safety is realised in the context of family violence and determine how children's voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agen-cy’, informed by the model, implications for policy, practice and further research will be considered.

Moving Through Space

Spaces in urban geography are rich with symbols and signs related to nation-al as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring action of affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived as bringing risks to children. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, employers and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

‘I have to help and improve their life’: Young people’s ‘transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper takes a historical perspective on the ways in which boundaries between childhood, youth and adulthood are blurred, by exploring young people’s past and present experiences of school and work, and their anticipated futures. The paper uses descriptive statistics to show trends in leaving school, and then draws on qualitative longitudinal research from a series of case studies to explore children’s experiences of leaving school and why. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as ‘dropping out’ fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental ‘shocks’. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people’s choices and trajectories. The paper explores the utility of the concept of ‘transition’ and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

‘I have to help and improve their life’: young people’s ‘transitions’ in school in Ethiopia and Andhra Pradesh, India

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of na-tion and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic concep-tion of the nation. The deethnicisation and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ relat-ed to the measures adopted to promote this conception of such a nation. Of par-ticular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The proposed paper examines the manner in which these two seemingly oppo-sitional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

Modern Moralties? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grand-parents/parents, and children. For example, there is clearly a rapid process of marketization taking place, where consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. The paper explores three sets of values that are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived as bringing risks to children. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, employers and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe successful parental role models. A second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and 422 of their G3 children aged 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations: Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Dogan’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”?: Translating IE Research to Community, Government and Academics in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct groups were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interviews, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focused and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.

The Micro-Politics of Poverty and Inequality: Implications for the Real “Hidden Abode of Production” in South Africa

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remain undeniably high. The dominant narrative by most South Africans is “aukho umsebenzi” and “asimamili” – there is no work and we do not have money. South Africa’s transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neo-liberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success. Inequality in South Africa is still very high and growing.

High levels of unemployment and inequality that followed South Africa’s entry into the global economy have shifted the focus of survival and economic activity from the factory to the household. In the absence of an effective welfare state, the poor have retreated to the household and adopted diverse livelihood activities. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogenous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg’s inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a ‘vacuum of belonging’ (Gotz and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, disaffected and delinquent youth. However, the city has witnessed considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation highlights the multiple implications and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource’. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been conducted within European contexts, little research has been conducted which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, interests, ideas and international environmental influences policy making in both countries (the principle of ‘subsidiarity’ in Ireland and the ‘dialogue’ of ‘dialogue’ in India). The paper explores and compares the ways in which youth, young people and young people’s perspectives have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, demography, culture(s) and other economic, social and political factors. However, there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidiarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one’s non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to one’s parents. On the other hand, parents to whom their child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does “family crisis” mean to the parent of a non-heterosexual child?

Previous research on parents’ reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben-Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child of the same gender than that of the opposite gender (Ibid). However, what are the reasons for these differences? Moreover, can the same be observed in the case of Japan?

This paper explores how gender influences a parent’s reaction to coming out in Japan in different social settings. In particular, it discusses how mothers assume gender roles in coping with their children’s disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The
research revealed that mothers of a non-heterosexual child were especially afraid of the collapse of the family they created (i.e. “family crisis”), while father did not present such narratives. Mothers react strongly to the “family crisis” due to traditionally given gender roles, in which they are expected to be more accountable for family affairs. Yet interestingly, these gender roles also influence mothers to overcome the “family crisis.”

Contentious Politics and the Global South

Referring to new challenges in the study of contemporary social movements, Tarrow claims that “To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them” (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the “West,” and a more transgressive in the “Rest”, leaves out many issues around which movements in the Latin America have been contending.

Contentious Politics and the Global South

The belief that by acting together there was a possibility of affecting social change makes a crucial difference: Argentinean activists perceive more global constraints to their fight, whereas Brazilians perceive more national opportunities.

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theoretical structure. As secularization has been called, the “holy alliance” of social scientists and cultivists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in “sciences of religion” that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrarily, there is in the country a process of openness, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and Christian community as authoritarian and intolerant of all forms of individual diversity.
realistically always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

**Homogenous or Not?** “Homogenous or Not? Content Analysis of Japanese Anti-Nuclear Editorials, 1954-1970”

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japan’s nuclear armament was opposed by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy professionals employ the attribute of informality to stave off “Third World” settlements and enable a “First World” lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent “informality” takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite.

Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and conflict on various levels. Firstly, the self-enclosing of the urban elite in “gated communities” is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interactions between these private urban development structures and surrounding marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

**The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City**

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and normatively disapproving construction – of urban informality exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy professionals employ the attribute of informality to stave off “Third World” settlements and enable a “First World” lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent “informality” takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite.

Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and conflict on various levels. Firstly, the self-enclosing of the urban elite in “gated communities” is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interactions between these private urban development structures and surrounding marginalized settlements. **Network Analysis For Discovering Political Conflict In Standardized Interviews**

This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftists or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

**Active Citizenship and Rights Awareness Of Roma In The Czech Republic**

The goal of this paper is to question the reasons for low participation rates of the Czech Roma in political and civil society organizations considering such participation is theoretically perceived as crucial for excluded minorities’ empowerment. Issues related to active citizenship and rights awareness are somewhat low on the public agenda compared to other agendas of social inclusion. Although most Roma face discrimination, there is no mobilization process that would lead to significant empowerment when it comes to political or civic engagement. The Czech government in its annual Report on the State of Roma Community in 2007 defines as one of the 3 priorities of Roma integration the human rights dimension focused on equality and protection from discrimination. However there have been no Roma political parties either in national, regional or local elections therefore there are no Roma representative in the Czech Parliament or any other elected body. Furthermore, the Czech Statistical Office does not desegregate votes by ethnicity, so it’s not possible to say how many Roma vote and for which political parties. However, there have been rumours in media about Roma selling their votes to some parties. Such rumours have not been confirmed before the court but further damage the public image of Roma and possibly discourage their participation. There are 52 civil society organizations concerning in various ways Roma related issues. It is hard to divide them into Roma and other civil society organizations since often bigger civil society organization have special Roma programs and often employ Roma. It’s noteworthy that Roma organization the Association of Roma in Moravia came out of a Roma political party, the Roma Civil Initiative. There are other Roma organizations in the field of media and culture.

**MUHIC DIZDAREVIC, SELMA** (Charles University, selma.muhic@gmail.com)

**Segregation Of Roma Children In The Czech Educational System**

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities, one half, of Roma children have never received education in these type of schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s access to education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose a child with disorders in order for it to be placed in a special school) in terms of improving their diagnostic methods and their work with socially disadvantaged children. In April 2010, the Czech Ombudsman concluded that the disproportionally high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which mainly test imagination and by looking for isomorphic coincidences of different types of network relations, the author seeks to change the discriminatory practice I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some
of the Czech citizens from the education process and what are the main consequences of such approach.

MUIR, KRISTY* (University of New South Wales, k.muir@unsw.edu.au)

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people's transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people's choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

MUIRHEAD, BRUCE* (University of Waterloo, muirhead@uwaterloo.ca)

Losing Control in Western Canada: Private Equity Farms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of community ownership of land and food supply, and a deteriorating environmental and ecological condition? What effects, if any, will this have on land quality, use of resources and food security?

While private property is strongly engrained in the socio-cultural experience of farmers, as well as corporations, their definitions could collide when those of the former relate to identification of time and place and those of the latter relate to profit and exploitation. Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Through an analysis of federal and provincial policy, examining the content of interviews with farmers and politicians from both levels of government as well as with farmers and senior management from private equity firms, and an evaluation of industry documentation, my paper will seek to answer the questions posed above.

MUIRHEAD, JACOB* (McMaster University, muirhej@mcmaster.ca)

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatised in its oversight and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift.

By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests in mind of the broader public and the disadvantaged, in particular.

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Haryanvis of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with difference in age and class. On the other hand, the inbuilt centrifugal mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as ‘inferior others’. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana so that their work per se can be expected by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to engage the leaders of non-profit organisations themselves in the research process. The paper draws on earlier work on the hybridisation of socio-housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences of the institutional context and operations. This method involves collation of responses to scaled surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up depth interviews to explore and interpret the meanings of their responses.

Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese firms in the context of the global construction of gender diversity as corporate social responsibility.
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the with firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

MUNIA, RAFAEL* (Waseda University, ndebud@hotmail.com)
Resistence or Alternative Alienation?
This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneseness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, we can refer to the rigidity of its job-hunting system; the curriculum of homogeneity and individuality suppression that begin in the school and echoes in society; the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging amongst the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness that are counter-hegemonic and promotes these strategies of alienation and self-expression. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born
The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of out-migrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education. Moreover, we show that the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

Effect of Economic Crises on Work Orientations Among European Countries
An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing interest for self-actualization and quality of life. Concerning to work, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression-. The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental view in detriment of the expressive work orientations, as a response to the uncertain and risky labor conditions.
The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level-aggregated and individual-, and will be based on relevant data from the European Social Survey (2004 and 2010).

Evaluación Del Uso De Edublogs Desde Una Perspectiva Comunicativa
Nos proponemos analizar exponer los principales problemas y las ventajas encontrados en la aplicación de edublogs en la docencia universitaria. Recoge una revisión crítica de la existencia de experiencias prácticas desarrolladas en el marco de una red de innovación docente, formada por un grupo interdisciplinar de 43 profesoras y profesores de 9 universidades diferentes, en un proyecto financiado por la Universitat de València. La principal herramienta desarrollada en esta red han sido los edublogs (destinados a asignaturas diferentes), orientados hacia el aula de trabajo colaborativo, tanto del alumnado como del profesorado. Focalizamos la atención en los edublogs en tanto que canales que median en el proceso de aprendizaje colectivo, facilitando la colaboración en un entorno comunicativo. Desde esta perspectiva, describimos y analizamos las cuestiones problemáticas relativas al edublog como canal en las dimensiones del emisor (quien crea el mensaje), el mensaje (los diferentes tipos de contenidos), la recepción (relacionada, entre otros aspectos, con la gestión de los contenidos), el contexto (cómo se inserta el edublog en el programa docente) y el feedback o retroalimentación. Esta revisión de la dimensión comunicativa es imprescindible para superar la posible emergencia de situaciones cercanas a lo que Adorno y Horkheimer llamaron aisluación por comunicación: las disrupciones o simplemente las dificultades en el proceso comunicativo dificultarían la efectividad de los edublogs. De este modo, nuestro trabajo pretende contribuir a la mejora, desde la práctica, del uso
de esta herramienta docente en la creación de un conocimiento compartido y, como diría Habermas, pleno.

The Influence of Linguistic Inequality on the Vitality of Two Otomapan Languages of Mexico: Chichimeco Jonaz and Tlahuica

In this paper we explore the influence of linguistic inequality on the vitality of two related Otomapan languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants Represents the second biggest Japanese descendant group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The ladderising technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionation relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

Local Policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the 'command centres' of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particularly in a long history of technocratic surveillance, human surveillance is still undergoing an uncertain transition in the encounter with global neoliberal capitalism.

Since 2002, under the last Governor of Tokyo, crime prevention has been managed through the Anzen Anshin Machizukuri Jourei (or Community Safety Development Ordinance) which decentralized responsibility for crime prevention to communities, supported by local (ward) government. However, both National and Metropolitan Police Authorities have also initiated their own schemes, including publicly funded video surveillance, crime mapping and so on. This paper reports on empirical research from five case study areas in Tokyo with very different characteristics: a central district partly dependent on the night economy and associated disorder, a wealthy central residential ward, a working class neighbourhood with a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.

Smart City, Surveillance City: Ubiquitous Computing, Big Data and Urban Life

'Smart cities' combine ubiquitous computing and urban management, and are characterized by pervasive wireless networks and distributed sensor platforms from video surveillance to meteorological stations, monitoring flows from traffic to sewerage and providing information in real-time or in anticipation of risks. These have extended from small projects for example, shopping / business complexes with integrated building control systems combining video surveillance, fire detection and crowd flow monitoring or other kinds of customer tracking, through larger but temporary initiatives like the command and control systems established for sports mega-events, to permanent whole-city initiatives like Rio de Janeiro's Smart City, sponsored by IBM.

Although largely civic, corporate and managerial, these schemes have strong influences from police and military sources, from crime mapping and predictive policing models, to new forms of urban warfare involving forms of distributed sensor platforms, and computer analytics, to enable forces to get a 'clear picture' of the complexities of the urban landscape and its inhabitants. In some cases in the USA, these have come together in overt ways, for example in the new 'Domain Awareness' initiative in Oakland, California, which extends an existing port security project way beyond the maritime 'domain' into the surrounding city, combining military and conventional civil government.

Drawing on work in science and technology studies, media studies, sociology, geography and surveillance studies, this paper considers the smart city as the archetypical urban form of the ubiquitous surveillance society. The paper considers the place of human rights in a broad sense, not simply privacy but also equity and access to services and justice, and the ability to flourish, in cities in which flows of people are managed like goods or natural resources and asks whether such rights can be 'designed in' in any meaningful way, or will be written out.

Meaning and Frame Resonance in the Linkage of Social Movement Groups - Comparing Three Mile Island and Fukushima

This study examines why some social movement groups successfully create linkage while other groups fail to do so. Past studies of the development and growth of social movements have provided an explanation from a view of structural and cultural factors. The former theory explains the linkage from existing organizations or networks; the latter employ such concepts as framing, emotions, collective identity, ideology, symbols, and themes. Comparing the anti-nuclear movement that occurred following the 1979 Three Mile Island nuclear power plant accident and the 2011 Fukushima nuclear power plant accident, this study explores the preconditions and conditions with which multiple movement groups create linkages. In the 1979 campaign in the US there was a successful linkage between the national movement organizations and the local movement groups, whereas in the 2011 campaign in Japan, such linkage did not appear to be established. The results of the analysis suggest that a successful result is based on the linkage between movement groups for such resonance to occur I emphasize the importance of meaning. Frame resonance is necessary to establish the linkage across social movement groups, and to attain the resonance the convergence of meanings each participating group attribute to their activities is necessary in addition to conditions laid out by framing theories. In the understanding developed in the area of framing theory, I argue that the establishment of such a linkage heavily depends on the extent of frame resonance and that frame resonance is attained through the convergence of meanings attributed to the actions taken by respective movement organizations and groups.

There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and a widespread fear of radiation as a result. 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying damages could shine the light on possible victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers’ involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men’s Educational Attainment On Their Fertility

We are interested whether the effects of men’s educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study: What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men’s fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women. GGS data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

Knowledge Workers’ Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neo-liberistic logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects’ education and their working activities (Eurofund, 2011; Standing, 2011; Samek-Semenza, 2012). Which relation does it hold between educational levels and possibility of effectively deploying the acquired competences and skills? How do knowledge workers represent and face their precarious conditions? Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 and 31, have been entered in reference to their trajectories between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts. The research inquiries on the one hand the risks the depauperation of knowledge and deskilling of highly educated young workers; on the other hand, the strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers.

In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as “independent and professionals”, though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.

Religion and Risk: Pana-Wave Laboratory and the Risk Society

This paper documents the rise and fall of a Japanese new religious movement known as the Pana-Wave Laboratory. Founded in 1977 by Chino Yûko, the Pana-Wave Laboratory was an ecletic form of spiritualism that adopted doctrines from the several religious traditions, as well as a host of pseudo-scientific conjectures about physics, environmental warfare and space exploration. Led by the aging Chino, a recluse woman that rarely left the confines of her own home, the Pana-Wave Laboratory established a compound for its religious and scientific practices atop Gotaishi Mountains in central Japan. Believing to have the ability to channel celestial figures and a special knowledge of a communist conspiracy to have her assassinated through electromagnetic weaponry, Chino depended entirely upon the assistance of some forty members of the Pana-Wave Laboratory for her survival.

Through their view of the scientifc process, Pana-Wave Laboratory members adopted images of themselves as “scientists,” taking on actual roles that contributed to their appearance and occupations as laboratory researchers. Members constructed of a full-fledged laboratory, complete with instruments and data recording devices to manage their research agenda. They then began to fashion their own laboratory coats, engage in “scientific debates,” and profess their findings in their own “peer-reviewed journal.” In a dramaturgical sense, these Pana-Wave Laboratory members used the principles of scientific reasoning and props from a host of laboratory settings to create and re-create their images, while fortifying the legitimacy of the religious claims. Using a combination of Ulrich Beck’s “Risk Society” thesis, this paper explores one group’s experiment with creating a science and the consequences of doing so in the full purview of the Japanese media. Ultimately, I demonstrate the pervasive consequences of a religious community bound up in fear of human-manufactured risk, as well as the response of its members in averting their own demise.

Nature, Time, Space, and Scale: Confronting the Challenges of Global Environmental Problems

Non-humans in the form of nature’s dynamics have prompted human agents to modify their social practices: earthquakes shook the Japanese population into reinforcing building codes and recently questioning nuclear reactors. For many global environmental problems, such as anthropogenic climate change, there are however enormous time lags and/or spatial distances between causal social processes and environmental consequences and there are issues of scale whereby any one cause can be dismissed as minor. People can discount the future to gain immediate economic benefits and may not experience serious adverse consequences until it is too late to avoid disaster or tip the environment into a new state less beneficial to humans. This is what Giddens labelled as his paradox and what disaster sociologists call the incubation of disaster. Disasters are best conceived of as focusing events that can prompt action, but they can on the contrary be dismissed as Acts of God. Moreover land, water, and atmospheric space on our planet are huge, so it takes an enormous accumulation of pollution and many years before any non-human damage becomes measurable. Some anthropogenic problems are resolved by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory in terms of i) his neglected concept of non-social action, hence expectations concerning actions of non-humans and time, space, and scale, and ii) the enduring conflict of value spheres, particularly economic versus environmental benefits. It calls attention to the importance of assumptions about non-human actors that underpin society’s practices when anthropogenic environmental threats for the distant future are glimpseed, but not known for certain. It brings Adam’s analysis of time to the centre of environmental sociology. It demonstrates how this framework can be used to gain insight into contemporary environmental problems like climate change.

MURRAY, JOSHUA* (Vanderbilt University, josh.murray@vanderbilt.edu)

RC02-60.2
Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized interlocks in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

Comparative Process-Oriented Research Using Social Media and Historical Text

Process-oriented methodologies place a strong emphasis on linking theory with empirical methods. However, in the digital age, this can sometimes be difficult to do. For example, much of our social lives increasingly occur online and we leave behind an enormous digital footprint. These data can be understood through a variety of empirical methods. The same can be said about the digital archiving of historical data. However, it is all too tempting to study these data without an clear theoretical framework. This paper seeks to understand partiality and perspective within comparative, historically-mediated empirical methods. This paper uses two empirical data sources: one contemporary (Twitter) and the other, historical (Google Books ‘n-gram’ data) to make an argument that we can use process-oriented theory to interpret historical research as well. It argues that process-oriented perspectives help bring notions of figuration into data-driven research, which enables sociologists to also see and locate their own figuration. Canonical process-oriented researchers such as Norbert Elias used mixed methods approaches, including visual maps and quantitative surveys. He also used standardized data. This paper argues that quantitative methods are important to process-oriented methodologies and can be successfully used to identify a figuration. Specifically, Social Network Analysis (SNA) does this. This paper uses SNA to visually reveal sub-groups within a figuration using both Twitter data and Google Books ‘n-gram’ data. Elías, this paper examines historical sources and life documents. However, it extends these to Big Data empirical sources and argues that, for example, tweets can be understood as ‘life documents’. Additionally, methods, such as SNA provide important modes to see how a figuration develops over time.

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a response, catalyst, and supporters for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70's, 80's, and early 90's. The organization's type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70's and early 90's? how does this change impact youth power and position in the oPt; How do different types of organizations provide different strategies, forms, of youth engagement?

# Position of Women in Sociology or Female Founders in Sociology

Sister's founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle's distinction between male/female, according to authorship Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, reproduction and activity. Logic of dominance and its objectification, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful biracial cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalestream, independent man vs. independent women, Aristotle's mrosygony.

# Tweets As Democratizing or Reinforcing Existing Inequalities?

Social media platforms including Facebook, Twitter, and Tumblr, etc. have become more ubiquitous. Sociology is well-positioned to explore the power and influence of social media economically, politically, and socially. This paper is particularly interested in gauging the value of the Twitter community and whether tweets can be a democratizing force or usually reproducing current social hierarchies and inequalities. The social media website Twitter has been prominent in association with a diverse set of political movements in the recent past, such as the ‘Arab Spring’. This paper begins by presenting a review of the literature regarding Twitter and social inequalities. It uses tweet data from June-July 2013 to classify sentiments which are associated with agency and lack of agency to draw macro-conclusions of whether aggregated tweets can be seen as generally empowering or not as an overall corpus of text. The paper provides an empirical answer to Twitter's role in influencing global inequalities, a claim often made in popular media. The paper ultimately concludes that though there are limitations in automated sentiment analysis, interesting patterns of perceived agency against inequality do emerge.

# Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The "comfort" women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting rejections from right wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universality that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan's issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize. This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current 'rape myths' and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettable, tolerance of sexual violence against women penetrates even the law. Concluding, in its 2009 Completed, CEDAW/

Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This has several reasons for language shift to take place language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting in languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational developments. Therefore, I propose a new approach to these models.

Indonesian Children of Migrants in Japan

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Successful reintegration into the home country begins in the host country (Kathleen Newland and Aaron Terrazas, 2009). Children are usually not reckoned as vulnerable when migrating with their family. Parents and common people often think that moving temporarily to a developed country will give no distress. However, the true problems have arisen both in integration and reintegration. Indonesian children of migrants have to encounter challenges and inequalities when practicing cultural and religious norms in a country where those are different or do not exist. The interview with Indonesian moslem children revealed a fact that they felt a little “different” when their Japanese friends asked about why they were fasting. Meanwhile, in the reintegration, most of them experienced the phase of silence when they did not feel belong to the society while they know they should. One respondent had experienced an unsuccessful reintegration when his school became one terrifying place because he was bullied for his unreadiness to face language and cultural challenges. He remains friendless until now. In the findings, it is revealed that parents usually claimed that there were no significant problems in both phases. They were all worried only about getting a school and financing the children. While, some children showed the opposite behaviors, telling that their parents did not know their feelings. Some even felt traumatic in migrating to Japan. All children deserve to have a safe place wherever they are in the world. This issue should be well-addressed by parents, schools both in Japan and Indonesia, and endorsed by the government policies to properly support these children in undergoing the adaptation phases, especially the underestimated reintegration.

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

The Role of Qualification in Stimulating Pro-Environmental Behaviour: The Case of Low Temperature Laundry

Changing consumer behaviour is increasingly recognized as a key aspect of the shift to more sustainable societies. However, insights into how this may be achieved at the large scale remain few. This paper contributes to debates on how to stimulate pro-environmental behaviour change, with a case study of the adoption of low temperature laundry in the UK. The case is particularly interesting because the innovation, which requires consumers to alter their behaviour, has been promoted by detergent manufacturers, via existing products. The processes understanding of the change in practice are explored from the perspective of both producers and consumers. A multi-method approach is adopted, drawing data from interviews with households, actors across the laundry industry and a large-scale survey of consumer laundry habits. While efforts to stimulate uptake of low temperature laundry have met with a degree of success, the paper argues that adoption is constrained by the meanings embedded in existing laundry practices, particularly links between temperature, cleanliness and hygiene. The analysis draws on Callon’s (2002) idea of ‘qualification’ which conceptualizes the dynamic, interactive process through which products are attributed meaning within a market environment. Attention to processes of qualification highlights the role of firms in shaping consumer practices, enriching practice-based accounts of consumer lifestyles which privilege consumers as the main actors in the creation of shared meanings. Conclusions are drawn with respect to the role of firms in shaping pathways for change in consumer practices, through their role in shaping the ‘qualities’ of goods.

Contesting Chinese Capitalism

As the developmentalist goal of catching-up with the West is gradually achieved, will China’s political economy begin to gradually converge on an Anglo-Saxon (neoliberal) variety of capitalism? Or, in contrast, will the ‘China Model’ of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades?

This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideational battle to define China’s national development strategy in the 21st century. Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different hegemonic visions for China’s future:

First, the ‘neoliberal’ vision which proposes to further liberalize China’s economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the ‘authoritarian socialist’ vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the ‘liberal democrat’ vision which combines a faith in markets and a distaste for state-owned enterprises.
ership with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

Music As Youth Culture: Case Study in Japan

(Kobe-Yamate University,
NAGAI, JUN’ICHI*

Music As Youth Culture: Case Study in Japan

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool. Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

The study finds that first, the proportion of “jobless people who have a desire to work” increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male “jobless people who do not desire to work” were the most likely to be poor or suffering from a mental illness. For women, however, “job-seekers” and “jobless people who have a desire to work” were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women in Japan.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's media? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic media for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics, qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various ‘applications’. It facilitates exchange of data between the ‘networked networking’ society. The promise of communications technology among other things is the democracy of the user defined nature of interaction of players constructed by it. But the use of ‘bubble’ (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

This paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the ‘bubble’ generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of ‘cultural’ capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.

Costs for Survival

The necessary cost to continue the life increase year by year. It is said a baby was born in Japanese assume a debt 7 million one’s back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility and ability, nevertheless we are aware of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = {welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance}, for Incomes = {bonds, taxes, contribution, monetary-easing}. The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand and that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens’ perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen's life differently according to one's industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

683
by analyzing what determines “what amount of income people think that they should earn.” To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of ‘just income gap’ between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women had a variety of leisure activities in their daily life. The diversity of the routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are embedded in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their boarder cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring “a better life for all”, it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic services (water and electricity) to residents. Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles forced the municipality into its own series of policy formulation processes in response. This paper will explore the culmination of these processes in the City of Johannesburg’s most recent indigent management policy, which, it will show, purs forward a “pro-poor approach” that brings together a targeted model of partly decoupled access to services for those identified as ‘the poor’, that are nevertheless delivered within a system that is run along market principles overall. It will argue that the nature of this differentiated system perpetuates inequality even though it might address poverty by encouraging a particular form of life for those identified as “the poor”.

This paper, we examine jime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo’s experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, jime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of jime can be ascribed to the psycho-social order imposed on the students’ everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several first about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result. The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as “an economic forest” producing firewood. Therefore it is important to support biological diversity. The Guinean mangrove forest has been used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the management activity flockes from the foreign country as the urgent matter.

However, most of these activities or programs entails inequity. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. To overcome this, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.
Effects of Wives’ Relative Resources on Husbands’ Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands’ gender role attitudes among dual-earner couples with children are associated with their wives’ relative resources, namely, their educational levels, occupational status, and managerial positions. Japanese men have more traditional gender ideologies compared to their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives’ economic contributions to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives’ educational levels or managerial posts are higher, wives’ incomes will be higher. The wives’ higher educational levels or managerial posts are not directly associated with the husbands’ gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives’ social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands’ gender role attitudes concern their wives’ provider roles within the family, but not with their wives’ social roles in public. Second, it is speculated that the smaller the difference between husbands’ incomes and their wives’ incomes, the lower the level of husbands’ tendency to adopt traditional gender role attitudes.

First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutions and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shapes the distinct characteristics of the global movements.

The Self Measuring Radiation Movement for Alternative Food Networks

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990s, the localized agro-food movements have spread in several countries; the United States, European countries and East Asia countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11th 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the winter of 2011, many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author’s participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the members can judge the level of the radios by themselves based on the own experiences. They can share not only the data of radiation but also the information about how to minimize the effects of radiation. Finally the implications of this study for AFNs will be discussed.

The Making and Unmaking of the Global Social Movements in the Japanese Sixties

Preliminary scholarships in the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create anti-war and anti-colonialism during the 1960s and 70s based on the Japanese Anti-Vietnam War movement, which created alliance with the movements in the

Entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, cosmopolitanism, nationalism, and political space? By providing answers to these questions. First, what aspects, if any, of the film text can be considered to entail nationalistic period during the Second World War. I ask the following three research uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan's ethnic-na - production of tax rate.

Engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the “guardian.” The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the “tributary.” With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guard - and an ambiguity that works together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably “cosmopolitan” film, My Nightingale (Watashi no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan’s ethnic-natio - nalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolit - an aspects of the film text emerge under the existence of ethnicity-nationalist policies, institutions, attitudes, and behavior existent in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nation and nationalism? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria’s slogan of gozoku kyōwa (peaceful co-existence of the five nations) and deo rakudo (heavenly place of virtuous rule) as simply a political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repression and discrimi - nation of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the produ - ction of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism. Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents’ lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individ - ual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step. Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a haz - ard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man - made disaster. Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

The Means of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epistemological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health prob - lems in children and adolescents, as confirmed by epistemological studies conducted also in Brazil and France. To understand the phenomenon in these coun - tries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children’s experiences beyond adults’ discourse, namely of health professionals and chil - dren's parents.

The research was based on the ethnographic method and took as its start - ing point the experiences of children with mental health problems who receive care in the mental health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCVC), in San - tos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults’ discourses, as well a comparison between the two services.

Children relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and main - ly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpretation between mental prob - lems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children’s life problems towards mental health field, which makes it possible the solution to general chil - dren's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering am - biguous loss. “The theory of ambiguous loss” was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suf -fering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization de - voted to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families’ anxieties about their relatives’ safety almost every day. They primarily try to be sympathetic and receptive to the families’ narra - tives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

Abstracts are organized by first presenting author’s last name.
Involvement in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of re-organization under the tourism context their beaded adornments or their “tra-ditional” appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons' social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family forma-
tion decisions? In particular, I seek to explain the considerable regional differen-
tces that exist in family formation, within the context of the falling birth rate in Ja-
pan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of conve-
tions -- the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an opposite tendency is observed among male lawyers. The index of gender stratification to be used is the relative shortage among different age groups. Additionally, we will need repeated data. Using data at the macro as well as micro levels, it will be a meaningful comparison.

There has been a presupposition in the explanation of ethnicity as sub-groups of a nation-state that there exist persistent, if not fixed, boundaries between these groups. Many scholars have postulated that the modern nation-state im-
poses homogeneous notions of groups that people eventually accept, resulting in rigid social demarcation within the population.

There has been a presupposition in the explanation of ethnicity as sub-groups of a nation-state that there exist persistent, if not fixed, boundaries between these groups. Many scholars have postulated that the modern nation-state imposes homogeneous notions of groups that people eventually accept, resulting in rigid social demarcation within the population.

The case of Betawi ethnicity, the “Batavian Indigenous” who emerged as a creole in the colonial setting, illustrates a distinct contradiction to such conven-
tional wisdom. Betawi people basically accepted the state-sponsored definition of ethnicity, yet they emphasized the similarity rather than the difference between cultural features of different groups and those of “Betawi culture” officially de-
fined by the government, so that people of different group-consciousness could tolerate each other within one broader category. The category of Betawi has come so far as to subsume those of foreign origins who were once labeled as non-Indigenous/inlander and excluded from the category of Indonesian Nation/ Bangsa Indonesia. Today this ethnicity exhibits the potential for delegitimating the persistent and exclusive human classification of “inlander” or “Bangsa Indonesia” which has long been promoted and imposed by colonial authority, as well as by authoritarian rule.

Such notable tolerance to otherness cannot sufficiently be explained by the sole fact that Betawi started off as a creole. The presenter investigates the origin of this phenomenon by describing Betawi’s genesis as Creolization, where different groups are intermingled and fused; and the group’s vicissitude under state cultur-
al policy as Amalgamation, where various ideas of group-consciousness are reor-
ganized and reconsolidated under a broader singular category. The transition of Betawi ethnicity instantiates a paradoxical consequence: universalistic rhetoric of difference that the state applies with the flat-faced demarcation of geographical units in turn become the principle for partial deauthorization of sup-
posed rigid boundaries and incessant inclusion of different senses of belonging.

Caste System and Relative Deprivation in Nepal

This study clarifies (1) how caste system causes individual relative deprivations in contemporary Nepalese society, (2) how these deprivations effect on subjective well-being and dissatisfaction. Caste system is one of the strongest social stratifi-
cation systems which affect on status, occupations and other social attributions of individuals within that society. Officially caste system has been destroyed in Ne-
pal, it still remains influential in their daily lives nevertheless. Relative deprivation which reflects gaps between individual status and his reference group’s status is more prominent in society with caste system, because caste group which one in-
dividual belongs to is always obvious. Ongoing democratization and globalization is throwing the caste system into confusion; some higher caste group is missing their advantageous positions, some lower caste group is uprising economically. We could define relative deprivation between (1) caste groups and between (2) within present/future. We conducted a questionnaire survey in Kavre which contains old Newar community and newly ethno-mixtire community in Nepal. Respondents were asked to evaluate their own status in Cantril’s ladder(0-10). Furthermore, they were asked status of their own group and other(higher and lower) groups. Status is not only that of present but also that of past, future and ideal. From these evaluations we could define several types of relative depriva-
tions. There are different tendency of deprivations between caste groups. It is confirmed that relative deprivations effect on subjective well-being and dissat-
satisfaction. Individual relative deprivation, which comparing individual past-pres-
ent-future-ideal, has no effect on satisfactions but caste relative deprivation, which comparing caste group, has effect.

The Effect of Education on Society Recomposed: Positive and Negative Consequences

This research investigates both positive and negative effects on society of more people seeking and achieving a higher educational level. For individuals, the re-
sult of greater educational achievement has been well studied and documented. It is a major route to higher social status. For a society, however, it may not be unequivocally positive. The economic outcomes may benefit, as there would be a greater num-
ber of capable individuals available to assume highly skilled jobs such as those in high-tech industries. Greater innovation might be a result, also. But as the number of highly educated individuals increases, the competition within the job market at the higher levels will grow as well. Furthermore, as individuals reach higher educational goals, they will become reluctant to work at a lower tech or lower paying jobs. What will eventually, particularly in a poor economy when the number of jobs would be reduced? Is competition always a positive dynamic?

Motivated by such questions, we began to look into unintended negative con-
sequences of changes in society with caste system, because caste group which one individual belongs to is always obvious. Ongoing democratization and globalization is throwing the caste system into confusion; some higher caste group is missing their advantageous positions, some lower caste group is uprising economically. We could define relative deprivation between (1) caste groups and between (2) within present/future. We conducted a questionnaire survey in Kavre which contains old Newar community and newly ethno-mixtire community in Nepal. Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOS) and non-governmental organizations (NGOs) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOS for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in acces-
sibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as the economic environment and the economic circumstance in a temporary basis. The data used in this presentation will be documents on GOS/ NGOs' activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Social Care at Japanese Snack Bars

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called “mama” by customer) is allowed to entertain the consum-
er solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intim-
ate affairs, are employed to allow the customer feel at home or healed after the day's hard work.

Most of the customer is married and belong to companies. They go to Japa-
nese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It's possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of dis-
tributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more inciner-
ators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Dis-
posal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Policy. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-In-
cinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators to realize In-Ward-Waste-Disposal was facilitated when the urgent necessi-
ty to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of incinerationism as the policy paradigm in waste management, while the siting became stagnant when the ur-
gency eased as the economy became sluggish and the influence of inciner-
ationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequity began.

Impact of the Long Recession on Japanese Careers

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman crisis and economic crisis of 2008, many social scient-
ists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. How-
ever, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employ-
ment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condi-
tion of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered as regular workers. In the Japanese labor market, due to the social security system because welfare services provided by the government are fragile, and companies only provide regular workers with welfare services. Therefore, it is inadequate to focus only on the duration of stay in a workplace. In this presentation, I propose to use the data from the Japanese Life Course Panel Survey that was started in 2007 and is followed up annually. The data includes in-
formation on occupation, working conditions, and educational backgrounds, and will help examine the frequency of change of jobs, the duration of stay in a given workplace as well as the other abovementioned issues.
Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new formalization technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interviewers. To satisfy the research for cross-border interviews of great importance in my study small experiments with interviews about “civic society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“The Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstances caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely related to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State about “Viet Kieu”, including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them as an part of Vietnamese community. In doing so, the researchers will interview “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefits from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Game As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and localized ground networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-
This paper aims at studying the interlocking directorates among Indian firms to understand the specificities of Indian capitalism. It draws on a model vis-à-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that characterizes the implementation environment. The paper concludes by observing some disturbing signals associated with the policy.

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents ("anchors"), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multi-actor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The presentation will (a) explain the scope and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.
Esta ponencia resume y profundiza el análisis sobre la influencia de la globalidad en el estatus de la mujer mexicana contemporánea, y de los pormenores e implicaciones que tiene la lucha por edificar el sujeto femenino.

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations between both number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive outcomes measured at different ages: socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Violence Against Women: The Indian Scene

This paper examine violence against women emanates from the social hypothesis of superiority of men over women. Insubordination of women legitimizes gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

Prevent or Cure? – the New Philosophy of Health Care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographical changes and particularly - aging of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system, illness, health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn't be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to specify the determinant of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.
similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

HOFSTAETTER, LUKAS (Goethe University Frankfurt)
Financialization and (Global) Class
The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global "market culture", emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a "global financial class".

RC26-461.3 NEGRI, MICHELE* (University of Tuscia, michelenegri@unitus.it)
Defence and Security Policies in the EU: From Decision Making to Political Culture
What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is involved in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European "Security Research" activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in "civile security". The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

RC15-267.9 NEGRA, LILIAN* (Université d'Ottawa, lilian.negra@uottawa.ca)
MOREAU, NICOLAS (Université d'Ottawa)
Les Représentations Sociales De La Dépression Et L'accès Aux Services De Santé Mentale Des Jeunes Dépressifs: Une Question d'Identité?
La question de l'accessibilité aux services de santé mentale ne peut se réduire à celle de l'offre. D'une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l'âge. Les études démontrées ainsi que les enquêtes ont généralement moins tendance que la population adulte à demander de la faïence. C'est dans cette perspective de tenter de mieux saisir la question de la demande de soins des jeunes en proie à des troubles dépressifs que nous avons analysé des entrevues effectuées auprès de 31 répondants âgés entre 18 et 30 ans qui ont rapporté avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative pancanadienne a été réalisée dans quatre sites: Moncton, Ottawa, Sudbury et Winnipeg par la méthode du réseau d'associations et des entrevues individuelles semi-dirigées. L'analyse des résultats obtenus a été effectuée selon la méthode d'analyse intégrée de contenu des représentations sociales.
Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux: désespoir et stéréotype négatif. Ces éléments renvoient à des dimensions descriptives et sociale de la dépression. Le discours activé par ces deux dimensions contraste avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.), ainsi qu'avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de nature normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

WILLIAMSON, DAVID (AUT)
MIU-CHI LUEN, VIVIAN (Lingnan University)
Cynical Vs Empathetic Worldview Schemas and Fairness Perception
This research explores the contrast between cynical, as a component of Kwon and Hwang’s human social axioms construct, and a more empathetic and altruistic view of the social world. As such it looks at the contrast between what game theorists call “zero-sum” perception and “positive-sum” perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, this seems to capture a critical dimension in human social worldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The research explores ‘cynical’ and ‘empathetic’ orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to undergraduate students in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

RC43-720.1 NEISCH, PAULINA* (Nagoya University, japaulinka.n@gmail.com)
Emerging Dimensions of Senior Friendly Built Environment in Aging Societies
The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimension I summarise buildings in a way that is relevant to the residents’ quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the feeling of well-being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Steward 1998, Duffy et al. 1996). 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home). 6. Orientation – Disorientation – Confusion regarding place, time, personal identity, or social situation – is common in a care housing setting to a home). 7. Sensory simulation is concerned with the different elements of sight, smell, hearing and touch. 8. Concerns related to different building users (because senior care housing is not only a living setting but also a staff’s working place). 9. Participation and contributions of older people.
The objective of the presented method is to compile a comprehensive review of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.

"No Time like the Present": Lessons Learned on Timeliness of Disaster Donations
In the aftermath of each disaster, material goods flow into the disaster affected area. Given with the intention to help survivors, the influx of items often generates situations which the emergency management and donation management view as a “supply and demand” or, in other words, an over abundance of items that are inappropriate, difficult to sort, costly to transport or store, and challenging to distribute. This paper takes a closer examination of one contributing factor to the problems associated with the disaster management process: the timeliness of donations. Drawing interviews following several disasters events that struck the United States in 2012 and 2013, as well as interviews following Hurricane Katrina’s devastation in 2005, this study explores the extent to which donation supply is often incongruous with donation demand. Lessons learned from these disaster events suggest the need for a system that accounts for the progression of need in affected communities.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The social and logistical pressures on organizations to accept non-priority items are discussed, as are the benefits reaped by organizations that employed time-linelines of donations management.

**Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany**

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in numerous shrinking cities all over the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) out-migration was characterized by a predominantly low-qualified population, leaving a residual population of skilled and semi-skilled people, forming a new middle class, mostly from eastern Europe. The migration pattern was observable at a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonn and Muss- terd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city of Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

**NELSON, GLORIA LUZ M.***(University of the Philippines Los Baños, glmnelson2001@yahoo.com.hk)

**Globalization and Philippine Labor Migration Phenomenon**

Globalization and labor migration from the Philippines accelerated almost at the same time. Three revolutions contributed to Filipino labor migration phenomenon: communication technology, economic integration and widening demographic divide between developed and developing regions. As of December 2010, more than 9 million Filipino workers are found working in more than 140 countries with Hong Kong, Qatar and Singapore as the three major destinations of “global Filipino”. Using data in 2000, 2005 and 2010 from the Philippine Overseas Employment Administration (POEA), it was found that the host region of Filipino workers are Middle East and Asia. The nature of occupations of the Filipino labor migrants has changed from production related work in 2000 to service work in 2010. Due to this change in the nature of occupation, males more than females predominate the Filipino labor migrants in the last decade. This study supports the World System theory that labor from peripheral countries like the Philippines supplies the labor demands of the core regions. The annual remittances of Filipino labor migrants has kept the Philippine economy afloat and are now regarded as “heroes”. Due to the failure of the Philippine government to provide job opportunities for its growing labor force population and in spite of the social cost to the families left behind, the Filipinos will search for jobs outside of the country. Thus, labor migration from the Philippines is a global phenomenon for as long as there are market demands for Filipino labor.

**Family Policy and Child Poverty in Global Perspective**

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from universal. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the ‘black box’ of program specification and implementation. Almost four-fifths of the world’s population live in low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (LIS) and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labour force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be...
most important. The reasons for these differences are discussed in the paper, and ventures for further research are outlined.

Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often “implicit” generational welfare contracts that are embedded with social policy making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union’s Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches that take a life course perspective and the risk of ‘policy crowding out’ in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors’ life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
However, little is known what the effect of such policies is: Do policies which fa-
vour the traditional marriage family increase marriage rates and stability of mar-
rriage families? Do policies with a focus on single parents, patch-work families etc.
accelerate the trend to more instable family relations? Do social policies as an
alternative to family security increase cohabitation and divorce rates?

The analysis is based on official national statistics for OECD countries and cov-
ers the time span from 1980 to 2010. The analysis shows that social policies and family
policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and
divorce rates while fertility rates decrease. A generous and benevolent welfare
state seems to provide alternatives to the traditional marriage families. Marriage
is no more a precondition to avoid or escape poverty. Social security and family
policies have lowered the material necessity to enter marriage, and increased the
opportunity to exit unpleasant family constellations.

Family Support and Quality of Life: Structured Ambivalence As
Bridging Concept Between the Individual and the State

The relationship between family support and the welfare state as providers of
support has been extensively researched in Europe. Most studies thereby focus
on the quantitative dimensions, e.g. who provides how much support to whom.
Existing research is descriptive in nature and rarely based on a sound theoretical
on the quantitative dimensions, e.g. who provides how much support to whom.

Structured ambivalence is thereby defined as discrepancy between
people aged 50+ are analysed by applying hierarchical linear models with random
effects and cross-level interactions.

The concept of structured ambivalence as a link between micro (individual be-
avour) and macro (cultural and institutional context) is used to explain these
differences. Structured ambivalence is thereby defined as discrepancy between
individual behaviour and contextual factors and assumed to reduce quality of
life. Our findings show that support providers’ quality of life is not only shaped
by individual circumstances, but by cultural norms and social policies. Structural
ambivalence lowers QoL, e.g. when family members do not live up to prevailing
family expectations and obligations. Doing so, we provide a fruitful application
of structured ambivalence as theoretical concept as well as new insights in the
relation between social policies, individual action and quality of life.

NEUBERT, DIETER* (University of Bayreuth, dieter.neubert@uni-bayreuth.de)

Introducing Technologies in Africa. Between Appropriation and the
Challenge of a Trojan Horse

Current studies on the introduction of technological innovations in Africa un-
derline that we observe a process of appropriation. This is in line with the hypo-
theses of the science and technology studies (STS) claiming that the development,
use and understanding of technology has to be seen as a social process between
people and (technological) ‘actants’. The findings from mostly anthropological
studies focus in the same way as STS on the change of technologies according
with the social conditions of their use and emphasize the influences of the local
context on the technology. Up to this point STS seems to produce in Africa sim-
ilar results as in the Global North (or the industrialized societies). However, the
introduction of innovations in Africa is different, as here the modernization
process has got a cultural and economic background that shape the technology itself. The use of specific technologies may change the
behavior and expectation of the users, too. Modern technology also incorporates
basic ideas of modernity like the mastering of nature. Once new technologies are
used they may act as a Trojan horse of modernity. In Giddens terms the behavior-
al changes are consequences of modernity. Therefore, technological innovation
as a social process takes effect in two ways it shapes the technology but also the
users. Which way these changes take is an open question. STS has shown that
the development and application of technologies is a social process. When we
use this approach outside the Global North we have to admit that the context that
itself plays an important role. We have to put more emphasis on the notion and
function of ‘actants’.

The Ambiguous Relationship Between Middle-Class, Civil Society
and Democracy

Debates on processes of democratization create the impression that the mid-
dle-class and/or the civil society are the drivers of democratic change and the
backbone of democracy. Seen from this perspective either these groups fight for
democratic change or once they have a basic political freedom they will quasi
automatically take possession of democracy. This was the expectation in the USA
before the Iraq invasion (what we may call the “Rumsfeld Utopia”). However, we
have learned that in Iraq, after the Arab spring and in many countries that under-
went processes of democratization during the 1980s and 1990s there was no au-
tomatic process towards democracy. In these transitions the middle-class played
an important role and many of the civil society associations, social movements
and especially their political leaders had a middle class background. But the po-
litical groups and the leaders that opposed the idea of a liberal democracy also
had a middle class background. At least in Africa and the Middle East the
middle-class-based civil society represent competing concepts of socio-political
order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic
rule (or socialism in Latin America). The claim for democratic elections may be
used to legitimize any of the socio-political orders.

Can Teacher’s Gender Explain The Growing ‘Boy Crisis’ In
Educational Attainment?

Gender inequalities in education have seen much change, with females gaining
advantages over males in ways that have not been anticipated just two decades ago.
At the same time, the share of female teachers has grown in almost all countries
of the western world. There is an ongoing, contentious debate on whether this
growing “feminization” of the educational system, in particular at the lower
levels, can account for the growing educational disadvantage of males. In this talk,
I review the literature on the “feminization of teaching” argument and present
findings from two empirical large-scale studies conducted in German elementa-
ry schools which allow me to identify the effect of having a same-sex teacher
for different scholastic outcomes (gender-blind test scores and more subjective
teacher’s grades) and across different subjects (Reading, Literacy, Mathematics,
and Science). My findings suggest that the popular call for more male teachers in
primary school is not the key to tackle the growing disadvantage of boys.

The Validity Of Response Latency Measurement In CatI Surveys

There is agreement among researchers that the measurement of raw response
times from surveys requires a treatment for baseline speed of respondents and
interviewers. There remains disagreement about the appropriate procedure to
transform raw response times to response latency and there is no study that
evaluates the different approaches with regards to their potential measurement
error, which may have an affect on modeling and causal inference. This article
fills this gap by examining the measurement validity of different ways raw re-
sponse times from three separate CATI surveys conducted in Germany in the years 2012 and 2013 where
raw response times where measured manually by interviewers. We apply a Mul-
titrait-Multimethod approach to examine four different operationalizations for
response latencies and their relationship to attitude accessibility and indicators of
response quality. We conclude with remarks about the levels of validity and
potential biases when latencies are used as independent variables.

**Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye**

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event's anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a 'new media event'—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the You Tube video of Dziekanski's death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the re-cording. The recording's electronic nature, we argue, complicated an 'open-shut' case narrative commonly articulated by law enforcement officials when describ-ing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

**Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults**

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve the understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social net-work path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

For Our Children’s Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam’s growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government has catalyzed both rural and urban communities to develop. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience of urbanization in rural communities to urban communities. This research is grounded on a 1080 rural households surveyed through an East Malaysian cross sections. This research is being developed by a team of the Violence and Citizenship Research Group of the Federal University of Rio Grande do Sul, beginning in January 2013 and expected to end in December 2014. The aim is to comprehend and explain the dynamics of production and exercise of the violence within police institutions based on the power relations amongst men and women. The focus on such a male and use-of-force oriented space is still not well framed in gender studies. The dimensions of analysis cover working conditions, the career of police women and the institutional violence of the ambience. Therefore, the study uses mixed methods, specifically, surveys and focus groups covering 13 states in Brazil. The fieldwork is pointing out many challenges for the insertion of women in the Brazilian police forces. The working conditions and environment show that the institutions were not properly adapted, as demonstrated by the lack or pre-curiosity of spaces for women, like bathrooms or accommodation. Regarding the career, many limits related to the professional development can be perceived as well. The data from focus groups also allows for the identification of institutional violence based on daily practices, which sets, sometimes, situations of moral harassment.

Table of Contents
China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities worldwide, still lags relatively behind in terms of investment, human resources, capital into the senior care industry, to cultivate growth of related industries and families is declining. In response, the 12th Five Year Plan (2011-2015) encouraged China's central and local governments to promote the introduction of private

ed aim of fostering more intentionality in the collective project of selfhood and evade closure or imposition of identity.

**Rights in the Absence of Recognized Status: Challenging or Reinforcing the Rightlessness of Irregular Migrants?**

This paper starts from the assumption that efforts to counter the rightlessness of irregular migrants can be divided into two broad categories. A first strategy seems to entrench rights through a shift of status – i.e. through regularization – while a second strategy aims at securing access to a number of basic rights (often conceptualized as human rights) for all residents regardless of their legal status. Demands for provision of medical care and schooling, as well as ability to access public space without fears, all fall within this latter category. Scholars have conceptualized these claims as an instance where the internal border controls of states are being challenged. This reading stresses the transformative potential of this kind of demands with regard to current citizenship regimes. However, it is also possible to read this strategy as insufficient in the sense that it leaves irregular migrants in a permanent state of exclusion. Hence, the implication of the second strategy remains disputed. Should it be understood as a component in a strategy to undermine border control? Or, rather, to entail the reinforcement of rightlessness and the consolidation of a divided society? Providing irregular migrants with a number of basic rights – while withholding access to full membership – can be seen as integral to the creation of a precarious labour force. Drawing on insights from the Swedish debate about irregular migrants this paper seeks to address these questions. The analysis is guided by the assumption that political demands needs to be analysed contextually as their intervention and implication differ historically and spatially. In accordance with this the paper seeks to provide an account of the specificities of claims-making on and on behalf of irregular migrants in different context with a focus on how this relates to different regimes of citizenship and border control.

**Migratory Work/Family-Practices On a Precarious Labor Market**

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and (endeavor to) achieve accountability and stability within their home-market life planning. This session's three thematic lines hence are in very fine accordance with the way I approach my investigation.

My current research concerns mainly Polish construction workers who are commuting between Poland and Denmark in order to improve their life conditions. Following the collapse of the Soviet Union many Eastern Europeans during the 1990s began to work (illegally) in Western Europe utilizing the tremendous gap in wages between the two former totally divided economies. Following the 2004 EU enlargement workers from the former Eastern bloc obtained legal access to the entire EU labour market. In Denmark some 50,000 mainly Polish workers are working primarily in construction, farming, cleaning and other low-wage sectors. I follow groups of construction workers at work sites and in their families (in Denmark as well as Poland), in order to understand the complex relationships between migrant work and family life. Since I regard it paramount to understand this bottom-up outlook also in a more overall perspective, my material concurrently consists of interviews with representatives from organizations in Denmark as well as Poland and moreover with politicians on both national and EU level.

In other words – relating to the two poles of scholarly stand mentioned in the session abstract – I am interested in strategies and mechanisms of migratory knowledge (and everyday life as a whole), but regard it equally essential to understand how this is reproducible and must be understood as an element in maintaining societal cohesion.

Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Neighbourhood Socialisation of Youth's Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we test how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilients respond relatively more adaptively and flexibly to situational demands, while both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient young people are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers' and undercontrollers' work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilients' work commitments are not influenced. In turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents' unemployment is unlikely to be, and socialised by the neighbourhood context. Furthermore, undercontrollers' work commitments and unemployment and overcontrollers' work commitments are influenced by the neighbourhood, while resilient youth remain unaffected. This finding is in line with the idea that resilient youth are better able to cope with environmental demands, whereas overcontrollers and undercontrollers are more likely to be affected by their environment.

Polish in the Hague: The Stories of Long Term Migrants

Different sources estimate the Polish population of The Hague around 5% of the city's inhabitants. Images portrayed in media and by politicians give the impression that this group is a cause of social unrest and negative stereotyping is common. In this paper the stories of migrants themselves are told. They live, work, and have started their families in The Hague. The respondents have all lived in The Hague for more than five years; most of them migrated before Poland be...
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

Space, Time and Symbol in Urban Indonesian Schoolboy Gangs

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt’s (1993) argument about the conditional and compensatory nature of collective masculinities. Second, alcohol plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (gengs) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular-and-Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

NILAN, PAM* (University of Newcastle, pamela.nilan@newcastle.edu.au)

Using Local Cultural Forms To Talk To Youth In The Global South

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is veivosaki-yaga, which in Fijian literary parlance means ‘worthwhile discussion or conversation’. The term veivosaki connotes a neutral sense of conversation and dialogue rather than storytelling. Yaga literally means ‘useful or worthwhile’. By engaging in veivosaki-yaga, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of nongkrong (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom nongkrong is their favourite leisure practice with age peers. Nongkrong is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like talanoa research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

Discovering Ideological Codes in the Professional Work of Daycare Personnel

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children’s cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardized mapping and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes’ and ‘ruling relations’.

The Practice of Control in Risk Activities

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this shift in focus, control practices in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

Legalizing Internet Piracy through State-Invented Religion? a Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopimism As Religion

In 2011 the Swedish Kammarkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopimism (Det missionerande kopimismamfundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

A Discourse on Transnational Crisis of Legitimation

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in reponse to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite often established by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or be misconstrued) as acts of "terrorism".

Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people's practices while referring to the transnational migration in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary laborers under the foreign trainees’ system. We focus on these trainees, called ‘Kenshusei/Jishusei,’ at agricultural villages as well as the fishery manufactories in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism,’ in parallel to ‘actual transnationalism’ and ‘ideal transnationalism.’ While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required for methodological transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators,’ regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the conception of ‘society beyond a nation-state’ along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

NISHIHARA, MARI* (Kansai University, emmo@kke.biglobe.ne.jp)

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture-- the Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women’s culture that it is part of. Specifically, through an analysis of articles (text and images) in female oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from ‘Johnny’s Entertainment’ were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendship and relationships of mutual trust between the members of the group are represented frequently. “The every day” of idols, including events at school and coming of age ceremonies, or family are depicted, and many of them work on physical contact and conversation are made to look like expressions of homosexuality. Situations that consist of sily tomfoolery and play by these idols are usually referred to as “Wachawacha-kan.” What is important here is that the existence of female fans is not represented at all in the discourse of these articles.

In other words, the current male idols is represented as “ideal love partner” for women, but at the same time as someone who could not possibly ever enter into a heterosexual relationship with the reader of these media. In the social background of this peculiar development, links can be made with “yaoi” culture (female made and oriented fiction on romantic and sexual relationships between men) in Japan, as well as changes of heterosexual values. In this way, I consider characteristics of recent Japanese woman culture through magazine media.

Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse “anti-nuclear,” by relating various points at issue with anti-nuclear resistance after Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has started from ten years before. 12 sets of wind power have already worked now.

The results are following: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes become wide, and they have various motivations for the investigation, not only environmental consciousness, but the commitment to windmill and the expectation for a dividend. If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movement with anti-nuclear participants’ various motivations, and the renewable energy movements related with “anti-nuclear” is too simplified.
Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of “no immediate harm,” others alarmed the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, there have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrnad 2012), is an important sites where laypeople’s experience, knowledge, and logic come into contact and negotiation.

This paper attempts to illustrate how popular epidemiology (Brown 1987; 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the different rhetorics. I first analyze the debates around Freximomo Tarō, an activist politician who was elected to Upper House in 2013 by centering his campaign around anti-nuclear policy, and how such online discursive space may have ramifications to the transformation of political in Japanese society.

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades, the role of household work has undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to produce these commodities by themselves or to buy them in the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations. From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household work is embedded in a normative framework about family and gender, affecting the choice of how and to what extent the household work is outsourced. Therefore, the decision “to do it yourself or buy it from the market” is not only a business decision but also a political decision. The choice of either to keep production in the household or to buy it from the market will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, it also sheds light on the debate about the location, at least one partner will have to make concessions when joint locational decisions are taken. Among the various reasons for these tendencies is an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internet, mobile phones and laptops, which make it more possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact?

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disintegration. This research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outbalanced more easily. However, with the rise in women’s employment and the blurred boundaries between the workplace and the home, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact?

Data for this study were collected through an online survey among employees at large companies in the German machine and equipment sector (n=321, response rates between 65% and 95.5%). Work-home/work-home conflict and enhancement were measured using the four scales of the Survey Work-home Interaction—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to home integration (e.g., “I feel like I am at work when I am at home”). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both enhancement scales. We finally discuss the implications of these results.

Institutionalizing ‘living Heritage’: Ecomuseum Development In Rural China

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as ‘museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage practices. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become a core part in tourism and protection of their cultural heritage. The ecomuseum tour aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guiangxi in the Yao village of Huaili. Given the emphasis of the project on a community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community’s view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible cultural heritage discourse impact the local community and shape the system of identity as multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. Drawing on ethnographic research, their orientation is primarily theoretical. The main strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (whose responsibility is it to discontinue), prioritization ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome). I conclude with recommendations for how to support appropriate discontinuation in primary care, including updating guidelines to explicitly acknowledge multimorbidity in patients and the importance of medication prioritizing, creating discontinuation alliances for GPs, e.g. with clinical pharmacists and gerontologists, and developing positive metaphors for ‘discontinuing medication’ to enable better communication with patients, e.g. drug holiday or medication pruning.

**NOACK, CONSTANZETTE** (Heinrich-Heine-University Dusseldorf, noack@phil.hhu.de)

“Everyday knowledge” is constructed in the mass media by debating or interweaving scientific knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the “discourse analysis as well as sociology of knowledge”, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects.

The cases of social upheaval and knowledge production, broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is “new everyday knowledge” and not only repetition of long established knowledge. Therefore the question arises how knowledge, which has the potential to form and distribute new “everyday knowledge”, is being produced by the media.

“Taking up the discourse around a media buzzword such as sōshoku danshi (grass eating or herbivore men) – describing young men who are said to shy away from women, and by doing so seem to uphold another form of masculinity – will help to understand whether and how these media products are distributing socially important topics to the public. Furthermore, I am concerned with the process in which academic and everyday knowledge is forming a part of the knowledge stock of Japanese society and in which ways mass media is taking up the role to form “new everyday knowledge”.

**Comparative Research on Contemporary Youth Social Movements: The Case of the Genind Project**

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called ‘Arab spring’, continued with the ‘Spanish revolution’ of 15-M, the Chilean students protests, riots in some English working-class suburbs, the Occupy Movement in the United States and ended at least till date– with riots in Turkey and Brasil. The antecedents date back to the ‘anti-globalization’ movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French ‘banlieues’ in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indignant Generation. Space, culture and power in the youth movement of 2011 [GENIND]. While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net).The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish case as a reference point and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt) and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on ongoing ethnographic research, their orientation is primarily theoretical. The main
objective of this communication is to present the GENIND project and its main results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

Geographies of the European Spring: The Case of #Spanishrevolution

Along the week prior to the past local and regional elections in Spain celebrated in May 2015, many Spanish citizens took to the streets to denounce social and economic problems that are deteriorating democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the event Two Spains have bumped into themselves. This paper will show how the so-called #Spanishrevolution of the present history of Spain which the urban, modern and young Spain has raised their voice against the rural, tradition- al, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spanishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to lie in their country houses without showing any sign of entre- preneurship, awaiting the arrival public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the #SpanishRevolution is a cry for the modernization of Spain.

Le Travail Migratoire Temporaire Au caerl De La Dynamique De Centrifugation De L'emploi Vers Les Marchés Périphériques Du Travail : Une Perspective Canadienne

The communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l'essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail : 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS) ; 2) les aidés domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PAFR) ; 3) les travailleurs migrants temporaires dits « non qualifiés » embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d'une analyse de l'évolution de ces programmes, il s'agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d'une « armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — des externalisables » tout en préservant l'un des plus grand paradoxes du « libéralisme réellement existant » qui fait de la liberté de circulation pleine et entière, l'apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d'une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l'analyse montrera comment les travaillleurs migrants temporaires ont également été instrumentalisés lors de la récente réforme de l'assurance-emploi au Canada. Nous mettrons ainsi en relief l'instrumentalisation non seulement en termes d'exploitation de cette main-d'oeuvre au rabais, mais, plus encore, aux fins d'une stratégie d'éclatement d'un régime de travail de type universaliste. Ultimement, nous montrerons que l'approche, la logique de flexibilisation place le travail migrant au cœur d'une dynamique de précarisation par la centrifugation de l'emploi vers les marchés périphériques du travail.

Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have triggered a “jobs’ centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance for unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Nature et al., 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different ̶ industries ̶ i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Comeau (2005). It will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’s activities. Finally, it will look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. The pro-referendum campaigners highlighted the signal effect of the legislation as a means to contain the “Islamic threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims.

This perception motivated a group of young Muslims to institutionalize their efforts in countering the anti-Islam activities of the far right. Thus, in 2009, the Islamic Central Council Switzerland (ICCS) was founded.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a “conspiracy” of the far right political parties to “subjugate” the Muslim population.

The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call “production of normality” – namely the recognition of Islam as a “normal” religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly favor eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it.

The paper discusses, however, studies have focused on objectively observable events and other morphological features to understand today’s movements. This practice leaves us with little understanding about cultural and mental aspects of the movement.

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality.

March 11 (3.11)” ignited a volume of civil actions. Day in and day out, one spontaneous action was followed by another. The movement also spread out geographically, so that residents in different localities have witnessed protest actions taking place successively.

explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significa-
tion from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

**Social Movement Transformations in the 20th Century: Japanese Experience**

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan. Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively calm up to the present. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transforma-
tion in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and percep-
tions toward social movements.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

**Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism**

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less perform-
ance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing professionals” (i.e. medical professionalism that includes organizational and man-
agerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach; we see competency as an institutional phenomenon, instead of an individual one, and we focus on medical routines in order to analyze institutional competency. Medical routines represent institutionalized aspects of medical acts and practices and might help of hinder the rise and spread of (innovative) hybrid service delivery that is collaborative and was organized. We especially focus on the many practical and everyday sides of medical routines. We focus on the everyday sides of orga-

zing health care by medical professionals, including multi-professional collabo-
ration and quality and safety management. We (a) explain what we mean by med-
ical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and that causes a reproduction of social structures of domination. Symbolic violence, this "gentle violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimates itself. It contributes both to the recognition of oppression and at the same time to the misconception of its arbitrariness.

This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development.

To theorize the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorization through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its inveterate persistence.

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel WS anti-System etc. It is based on the inner contradictions of WS, and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as "detour from periphery to peripheral" transformation under the influence of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the transtional wisdom, economic (shock therapy) or political (revolutionary removal of Communist elite) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor politological explanations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (continental, restitutive, emulative, and innovative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers' roles have been adapting over the last three decades financial provisioning remains the essence of 'good' fathering and the work schedules associated with fathers' employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers' and mothers' employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents' organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father's involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, and from facilitating influences which shaping parental leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is the mothers' employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child's life, independent of what hours the father works. Furthermore, both parent's employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother worked when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers' work schedules are more important for fostering paternal involvement in both the immediate and longer term.

TG06-965.4
NORSTEDT, MARIA* (University of Lund, maria.norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace.

While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its methodological and theoretical lenses can contribute to a better understanding of their material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long lasting paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals' bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

NORTH, SCOTT* (Osaka University, north@hus.osaka-u.ac.jp)

“What Do I Do Now?” Post-Retirement Leisure in Japan

Japan's bankaijita, the generation that was the foundation of the country's “economic miracle,” are retiring. As their careers come to an end, Japan's "greatest generation" seem to last at least to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure remains cleaves along lines of class, gender, and age. This paper first reviews leisure trends during the past 50 years, noting how they conditioned inequality in leisure practices. Three main factors affecting variation in leisure are then investigated in detail. 1) Class. Who actually retires and how? Analysis highlights the roles of retirement bonuses, pensions, and savings, as well as government supports. Japan's elderly control much of the nation's privately held wealth and many who are not rich have been lifted out of poverty, but poor elderly increasingly continue working out of necessity, while other carry on because work gives meaning in life. 2) Gender. In Japan's strongly gendered society, retirement gives meaning in life. 3) Age. In Japan's strongly gendered society, retirement gives meaning in life. 4) Gender. In Japan's strongly gendered society, retirement gives meaning in life. 5) Age. In Japan's strongly gendered society, retirement gives meaning in life. 6) Age. In Japan's strongly gendered society, retirement gives meaning in life.
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grip on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is 'evil' and therefore requires a 'means justifies ends' rationale where humanitarian ideals are clouded by the ultimate concern. Terrorist groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enticement of universalism can serve to arrest the violence surrounding terrorism.

NOURI, ALI* (Writer, nouri54@yahoo.com)
Investigation Social Factors Influencing on Educational Opportunities Among High School Students of Tehran

This study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran. Reproduction theorists believe that strong solidarity exists between family background and the level of access to the educational facilities.

Network analysis theory holds that inequal transfer of resources and opportunities leads to inequal educational opportunities. This means that people have inequal opportunities in achieving social possibilities and maintaining relationship with those who control the resources like information and bureaucratic influence, which makes the educational opportunities inequal. Having information of school programs, education and job consultation, friends in upper economy section would be some good examples.

The surry method and questionnaire technic used for this study. The sample volume is 300 and the sampling method is cluster sample. The sample is used for reliability and 78 percent result is selected.

According to research data, Tehran school are run 5 ways: boy-e-oman-ye, people specimen, governmental specimen, non-governmental and normal governmental.

In recent years, normal governmental schools that had more facilities or better quality of education became heyt-e-omanaye or governmental specimen.

Low-income families have problem to access appropriate schools while upper class can register to better schools by using their connections network and affording the school fees. Stepping up in socio-economic class leads to increasing educational sensitivity level of parents, as well as increase in communicational skills of students and boosting up their educational motivatin also dire need for access, resulting in educational progress and reducing inequal educational opportunities.

Continuing the recent trend will bring about deprivation of talented students in low-income families from proper educational facilities. This will deprive the society from part of the nation’s talent. Moreover illiteracy and semi-illiteracy of portion of society will lead to subsequences such as inefficienciy, crime, disorder and in security.

Social Stratification and Inequality in Japan

Social Stratification and Inequality in Japan
Silvia G. Novelvo y Urdanivia

ABSTRACT

When one examines the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a significant place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (sakoku). By focusing on the Japanese migratory phenomenon from a historic and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21st century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: The Sociology of Japan in the Post-Globalization Era.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The nikkeijin, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world -Meiji age- and the consequent development of a colonialist mindset and territorial expansion.

Will the nikkeijin of Latin America be able to overcome the deplorable mentality of sakoku and become the solution to the serious demographic problem that Japan is facing?

Key words: Sakoku, Japanese xenophobia, Nikkeijin, Americas, Japanese migratory phenomenon.

Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South/East-European, Post-soviet/Socialist countries), the paper focuses on women’s (and men’s) status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country).

Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervisor, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents’ average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader's gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings do not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. in a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

Post-Disaster Literacy of a Japanese Local Community

More than two years have passed since the Fukushima Dai‘ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will overcome the disaster, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Da'ichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens' civic education is carried out. What is more, this paper provides what Charles Tilly called the 'repertoire of collective action,' in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome some risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

**Characteristics of Becoming Sociologist in Russia**

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as “Notes of the Fatherland,” “Business,” “Knowledge”. One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the “Notes of the Fatherland” was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2nd Petrograd State University. Only in 1916 was an attempt to create a “Russian Sociological Society name M.M. Kovalevsky”.

The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: "In Russia the first sociological apparatus for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible". Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

**Emotional Work During Biographical Research: A Researcher’s Personal Reflection: Researcher’s Experience (ongoing biographical research projects)**

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers’ engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So is it in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctively approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured during mission abroad, both in terms of these constructions, and the ways in which people manage and negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.
**Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.**

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable ‘mapping’ of such types of behaviour as expressed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain socio-spatial area and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical and socio-cultural distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociofugal character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

**Single Motherhood and Anti-Social Behaviour Outcome in Children**

Family disruption through divorce and separation is increasingly becoming a common phenomenon in many sub-Saharan African countries. A few studies have documented the trend, patterns, determinants and effects, yet, much of the effect on children has not been as well documented as in the more developed countries. In particular, the effect of family disruption on children's involvement in delinquent and anti-social behaviour has remained largely speculative. This study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population in 1991 and 13.4 for ever married population in 2006, there are indications from the (media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This study utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children's involvement in anti-social behaviour. The major research question was: are children of single mothers more likely to be involved in crime than children in intact homes? The mean age of the respondents was 29 years (sd = 7.8). Of the 237 inmates who responded to the question on mother's marital status, 60% had mothers currently in a union, 18% were from homes disrupted by divorce or separation and 22% had mothers who were widowed. Preliminary analysis showed that mother’s marital status was significantly related to involvement in any type of crime and the odds of being involved in stealing or armed robbery, violence-related offences and other forms of crime was higher for inmates whose mothers were divorced or separated than for those whose mothers were currently married or widowed. Increasing education and high-wage opportunities for women is recommended.

**Socio-Demographic Factors Affecting Women's Fertility Preferences in Nigeria**

This paper examined socio-demographic factors associated with fertility preferences of women in Nigeria. Women of reproductive age in the country prefer more children than men and women's preferred family size is close to children ever born for women aged 40-49. The country's population is currently estimated at 174m, with the current 2.8% rate of natural increase and Total Fertility Rate of 5.7, Nigeria will be the third most populous country in the world by 2050. The overall aim of this study was to contribute to research, for more effective fertility-related policies and programmes in the country. Socio-demographic factors examined as independent variables were age, marital status, education, religion, husband's desire for children, level of autonomy measured in certain household decisions, number of respondent's siblings, number of respondent's co-wives, age at first birth, and age at first marriage. Dependent variable was reproductive preference measured by a single indicator - ideal number of children. Nigerian demographic and health survey 2008 women's individual recode dataset was used. Result of multinominal regression analysis showed that the odds of pre-

ferring 6 or more children significantly declined with decreasing age, rising edu-
cation, non-Catholic Christian affiliation and husband’s desire for less children. Higher autonomy significantly increased the likelihood of wanting less than 6 or more children, having or not having siblings and co-wives were not significantly related to reproductive preference for 5 instead of 6 or more children. Age at first birth and age at last birth significantly raised the likelihood of preferring 5 or more
children instead of 5. High fertility in a country like Nigeria is rooted in cultural
beliefs about children and number, pre-natal control measures should be target-
more at women's attitude to large family. If Nigerian women's reproductive
preferences decline, overall fertility level in the country will also decline.

NUGRAHA, SUSISANA* (Nagasaki University, susisana.nugraha@gmail.com)
The Extent of Socio-Economic Factors and Its Influence in Mental
Health Condition of the Sixth Batch EPA Nurse and Care Worker
Candidates

The migration of skilled workers such as health care workers has been in-
extricably linked with globalization process. Although migration can be a stressful
event for migrants (Stillman et al., 2006), people migrate to improve their well-
being through an expansion of economic and social opportunities. This research
aimed to figure out the extent of socio-economic background and its influence in
mental health condition of the sixth batch EPA nurse and care worker candidates.
A six-pages long questionnaire has been distributed to 42 nurse and 106 care
worker candidates, during pre-departure orientation. Questionnaire contains of:
socio demographics background (education, age, gender, education degree, socio
economic status), degree of preparation to migrate, degree of knowledge about
Japan, Japan, Japanese language proficiency, satisfaction with pre departure Japanese
language training program, motivation to go to Japan and number of social sup-
port. The General Health Questionnaire (hereafter 'GHQ') was used as a marker of
mental health status of the respondents.

The result of this study indicated that the 6th batch EPA candidates indicated
healthier mental health in care workers than in nurses (p<0.05), being younger
(p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unem-
ployed at the time they applied for JI-EPA program (p<0.05), having better degree
of knowledge about Japan (p<0.001) and having larger number of social support
(p<0.001). While language proficiency, satisfaction with pre-departure language
training and degree of preparation to go to Japan, had no significant correlation
with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates
mostly influenced by socio-economic status of the candidates prior to the depar-
ture to Japan. It can be noted also that sufficient number of information as well
as social support must be provided for maintaining a good mental health status
before leaving for Japan.

NUGROHO, HARI* (Leiden University, harnugroho@yahoo.com)
Politics of Representation of the Workers’ Movements in Indonesia

The paper will discuss the politics of representation of union and different cat-
egories of its constituency in the post authoritarian Indonesia. Amidst the pres-
sure of labor market liberalisation that erodes the union power in the workplace
union starts to develop the strategy of community unionism and tries to play a
broader political role through local electoral politics. The purpose of such experi-
ment is aimed for mobilizing broader support to increase union political bargain-
ing position in front of the state and employers. The union includes other local so-
cial groups such as urban poor, informal workers, and peasants as new categories
of constituency. Consequently the integration of workers and the non-workers
groups into union constituency results in increasing heterogeneity of the con-
stituency. Workers are not a homogeneous category, let alone the non-workers
groups. While the union is mobilizing the constituency, groups within constitu-
ency are actually still fragmented within their partial identities and interests.

The relations between them and the union are vulnerable to contestation. This condi-
tion creates vulnerabilities within the body of constituency. This paper will show the
interplay between the strategic homogenization and the heterogeneous real-
ties. It will discuss how the power relations within the process of mobilization is
dealing with the problems of representation gap. On the other hand, it will also
look at how the labour process as well as external social context influence the
dynamics. The discussion in the paper is based on a case of study on a workers’
movement in one industrial city in the province of Central Java, Indonesia.

NUKAGA, MISAKO* (Wako University, mnukaga@wako.ac.jp)
Becoming “Cosmopolitan Japanese”: How Japanese Adolescents
Employ Transnational Experiences for Their Empowerment

Reflecting the imperatives of the global economy, both the Japanese govern-
ment and private companies have recently begun stressing the need to raise
‘global talent’, especially placing value on English and various other transnational
competences. At the local level, such global forces have led overseas Japanese
middle-class families to adopt transnational education strategies, which enable
them to accumulate what is called ‘global cultural capital’ (Kim 2011; Watamura
2006; Weenink 2008)–English skills and cosmopolitan sociability particularly, at
the same time preserving children’s Japanese language and cultural attitudes (Nuk-
aga 2013). However, the question remains as to how these children are incorpo-
rated into the US host society and how they readapt to the Japanese society when
they finally return home. Based on interviews with Japanese adolescents who had
stayed in the US with their parents since their childhoods and later decided to
return or actually returned to Japan for university, this study examines how they
perceive and employ their transnational experiences to increase integration both
in the US and Japan. Acquiring transnational habits, a double-consciousness that
analyzes aspects of both life ‘here’ and ‘there’, these adolescents are capable of
assessing the value of their global cultural capital and “Japanese” in the US
and Japan respectively. Although feeling a sense of marginalization in both soci-
cieties, they attempt to maintain transnational connections and learn to use trans-
national assets in appropriate contexts for their empowerment. From their own
experience, these adolescents are often critical toward inequalities in both soci-
cieties, yet they show a strong preference to become fully bilingual and bicultural
by keeping their feet in two societies. Such strategy leads these ‘cosmopolitan
Japanese’ adolescents to choose a job that transcends national boundaries and
allow them to stay connected to two or more countries.

Let Go and Remember. Collective Memories and Narratives
of Mass Violence in Finland

Due to its inexplicable and inconceivable nature, mass violence causes a con-
siderable sense of insecurity, the impacts of which are felt far from the center
of the incidents. They extend out to those who are indirectly affected, and
even people who are not personally disrupted by the events. Bystanders to these
incidents are involved in the complex process of making sense of violence and
death through collective memorialization practices and narratives recounting the
incidents. These practices provide a sense of community while also being a source
of conflict. Should the community remember and memorialize the incident, or try
to let it out of their minds and move on?

In this presentation I explore the bystander experience in two school shooting
cases in Finland that occurred in 2007 and 2008. The analysis is based on qual-
itative interviews with residents of the targeted communities – people who vicar-
iously experienced the shootings. The presentation is especially focused on how
these bystanders formed memories of the incidents and recounted their personal
experiences in the interviews. To understand how the bystander experience is
constructed through collective practices, I examine the collective narratives, rec-
collections, and emotions shared in everyday interaction and the media. Public
memorialization, such as attending vigils and contributing to spontaneous memo-
rials, is identified as a defining feature in the bystander experience.

From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This
meant I give up professional activities for specialized UN agencies and become a
full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to
a rural community with 6,000 residents. As I traveled from east to west, I entered
a community where I never lived and where I knew no one. A new socio-culture
came into view as I saw road signs cautioning drivers about a United Nations
hub of rural areas, rather than viewing them as economically dependent .

In this presentation I explore the bystander experience in two school shooting
cases in Finland that occurred in 2007 and 2008. The analysis is based on qual-
itative interviews with residents of the targeted communities – people who vicar-
iously experienced the shootings. The presentation is especially focused on how
these bystanders formed memories of the incidents and recounted their personal
experiences in the interviews. To understand how the bystander experience is
constructed through collective practices, I examine the collective narratives, rec-
collections, and emotions shared in everyday interaction and the media. Public

**NYSTRÖM, ANNE-SOFIE** (Mälardalen University, anne-sofie.nystrom@gender.se)

**Facing Potential Failure: Men, Masculinities, and Self-Worth Protecting Strategies in Highly Competitive Learning Contexts**

The aim of this qualitative project is to explore how male students' self-images and self-worth are negotiated in higher education and, particularly, in an elite program and in relation to potential failure. How do masculine and student identities intersect in a context signified by class privilege and high ability and achievement? How is failure/success constructed and what kind of implications does it have socially and in terms of male students' identities and engagement?

Research on boys and schooling pinpoints how high-status masculinity is associated with 'effortless' achievement, and diligent work and anxiety with femininity in Western countries. To explore if such discourses influence students' identities and practices in HE, or are contested, is thus of interest. While a large proportion of research on education and masculinity has focused on students-at-risk or sub-ordinated groups, there has been a call for more research on privileged groups for a deeper understanding of educational and societal inequalities. Law studies are among the most prestigious and competitive higher education programs, in Sweden and internationally, and are dominated by high achieving students with privileged backgrounds. Prevalence of test anxiety, antisocial and manipulative behaviour has been reported as a part of avoiding failure and striving for top-positions in such high performance oriented and competitive learning cultures.

The study has an interactionist approach; consequently, identities are examined as relational, situated and accomplished in interactions. The design of the study, both theoretically and empirically motivated, is to reside on interviews law student counsellors and Swedish law students. The project is work in process, and expected to contribute to knowledge on how students and staff construct masculinity and student identities in privileged and performance-oriented contexts, particularly how gender and class informs strategies of avoiding potential failure. This small scale study is partly funded by SRHE's Newer Research Prize 2013.

**Predators, Parasites and Ambulance Chasers: Financial Exploitation Of The Elderly In Rural America**

This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents - predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age groups. Some parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

**NYKLOVA, BLANKA** (Charles University in Prague, nylklova@email.cz)

**Stumbling over Emotions When Researching the Czech Feminist Scene**

Since the fall of state socialism in what is today's Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s, Czech Women's Lobby, Czech Women's Union) and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene's representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tensions and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.

**NÄRE, LENA** (Senior research fellow, lena.nare@helsinki.fi)

**Neoliberal Postcolonialism in Skilled Labor Mobility - Filipino Nurses Coping with Deskilling, Discrimination and Ethnic Hierarchies in Finnish Elderly Care**

European societies are facing the crucial question of who will provide care for the ageing populations in the future. In many European countries the answer has been migrant worker force, and Finland has recently started to follow suit. Since 2007, private care companies have been recruiting registered nurses from the Philippines to work as practical nurses in Finnish elderly care homes. The paper has two parts. First it argues that the recruitment is based on a neoliberal postcolonial logic according to which the Philippines is perceived an endless source of labor force for the needs of ageing Finnish society and international mobility as individualized risk taking based on economic calculation. Secondly, the paper analyses how Filipino nurses cope with the deskilling inherent to the recruitment process and with the everyday discrimination and ethnic hierarchies they encounter in the work places. Moreover, the paper explores how the nurses find dignity in their everyday work (Stacey 2005). A common strategy is to create a moral hierarchy based on ethnic differences according to which Filipino nurses have a better work ethic based on fictive kinship, while the Finnish nurses are claimed to have an instrumental approach to their work. The old discourse of care as ‘labor of love’ is then given new meanings in the global hierarchies of care work. The paper draws on ethnographic case study of the Filipino nurse recruitment including qualitative in-depth interviews with Filipino nurses working in Finland (N=20), representatives of the recruitment company and the private care companies employing the nurses (N=14) and a content analysis of the media coverage of the phenomenon (2007-2012).
A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian native title processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-Indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that the ‘tie of history’ had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions

This paper identifies key elements facilitating/inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multi-level phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that are seen as most economically important (EU, 2012). Gender inequality is affected by the strengthening/weakening of other structures and the promotion of other societal or organisational priorities (including neo-liberalism; managerialism; definitions of excellence). At an organisational, interactional and individual level, agents of change include men and women who embody resistance as ‘tempered radicals’ (Meyers and Scully, 2011) on any basis (gender inequality; care; other occupational experiences; collegiality etc). Finally, experiences in particular contexts may not be gendered (Ridgeway and Correll 2004), thus increasing the possibility of the emergence of coalitions.

This framework will be located in a cross national study of senior management, focusing particularly on Irish universities, and including a case study of one university where the proportion of women at professorial level increased from zero to 34 per cent over a 15 year period (O’Connor, 2011a & b)

The Street Politics Of The 3.11 Disaster

In the weeks and months after the Tohoku disaster on March 11, 2011, tens of thousands of people took to the streets in Japan to protest and voice their concerns about the government’s role in exacerbating the crisis. Of particular focus within these protests were the perceived mishandling of the Fukushima Daiichi nuclear accident, and the broader dangers associated with relying on nuclear energy. These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group Shirīto no Ran in Tōkyō, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeter-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strength and cooperative and creative commitment beyond the constraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)politic activist-activism, I will explain how Shirīto no Ran as a non-environmental group did respond quite quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly "invisible" activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan's societal norms but also from its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the concrete, utilizing their network and long-rehearsed creative protest repertoires.

Moreover, long before “Occupy” even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnevalesque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homelessness to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalism and deliberate externality to the mainstream social movements of the local community. Tackling this research question, this paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of “social movements” in Japan on the basis of concepts like subpolitics, prefigurative politics, and DIY-politics.

Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.22 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. In this paper, we analyze how the vast network of social media influences in communicating among families with OFW members. The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process so communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media and internet is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults, we address the following questions: (1) What are the benefits and disadvantages of communicating among families with migrant workers through social media? (2) How often do migrant workers communicate with their families in the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-digitally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.

Care Regimes and De-/Familialization in Asian Seven Societies

As the first page of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women’s employment, changes in family life and welfare reorientation are the reasons behind people’s growing concern on care. However, these are phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies social background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care diamond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialism, faceto-face, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the societies under consideration. The major findings are;

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.

2) The role of the market is increasing dramatically in most societies.

3) People’s expectation of care is increasing in many societies.

4) Socialist countries are showing different paths from other countries. The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

From Cultural Globalization to Aesthetic Cosmopolitism

“Cosmopolitanism” is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday cultural consumption (Cicchelli and Octobre, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amself, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginations (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

In young people, become cosmopolitan via the globalization of cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.)?

This perspective enables a reformulation of the question of “distinction” (Dahel, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivorousm (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the “social distinction”, through the reconsideration of secondary factors which mark new lines of fragmentation in young people’s cultural universes (Octobre, 2010). This talk will address these question through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender institutional and sexism of the labor market. Previous work emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capitals, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males’ wages go up and females’ wages fall.

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnationalism that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants. In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist ethnic or national categories that are rather essentialist at a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialistic categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Child Bearing and Good Mothering: The Case of Turkey

According to most critical social scientists, the body of woman is accepted as a means to fulfill the aspirations of politicians. In this presentation, how the capacity of woman to give a birth is politicised by government of Turkey today. Almost one year ago, the Minister of Health Affairs in Turkey started to not give permission to use the method of caesarean. And support this policy by using the good mothering discourse. This presentation is examined the attitude and behavior of pregnant women related to this policy by using qualitative techniques. How the participants express themselves as good mother and is there any relation between this feeling and this discourse are the basic questions of this presentation.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objective : To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method : A narrative interview that was conducted in 2009 with a male hemophiliac in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results : At first he concealed his hemophilia, HIV, and HCV status after receiving ‘notification of HIV status’, because of prejudice and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after ‘two hospitalizations for the side effects of interferon treatment’, he quit his job, because he had experienced “a sense of crisis about revealing his hemophilia,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different medical institute, he talked about his illness experience and revealed his HIV status. Here, he was “accepted by professionals.” This was a turning point for him. Revealing his status enabled him to “work flexible despite his condition.” However, he faced new difficulties caused by “confusion about his multiple roles as a patient and a medical worker.” This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

ODASSO, LAURA* (Université Libre de Bruxelles GERME, laura.odasso@misha.fr)
Intermarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. “Intermarriages” refers here to couples formed by a European Union citizen and a “Third Country National” (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy EU citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization [Strik et al., 2012; Hajlat, 2010] display an overlapping of these categories [Groenendijk, 2006].

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of “otherness” according to the configurations in which the members of these couples act [Saska & al., 2011].

Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” [Delcroix, 2013; Apitzsch & al., 2008] allows understanding the effects of categories as citizenship, denizenship [Bosniak, 2001] and dis-citizenship [Wodak, 2013] on these families and the
The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue, today, is faced with unprecedented ecological and demographic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man's activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggravated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three core institutional complexes that foreshadow the particular institutional contexts. There is the enlightened context of sports practices, and there is the resistant context's that sees forms of resistance against such 'elitism' of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it's organizational base is low, universities see a growth sport in sport through private-public understandings (e.g. 'Varsity Sport'), and thus the changing nature of the public university from a position outside of its traditional core or academic work, even though there are taught courses and modules in sports related fields (Sport Science, Human Movement Science and the like). Most of these are predominantly natural science and functionalist oriented, though there are exceptions.

The paper will examine the trajectory of one or more of these sports types at (a) particular institution(s) in South Africa, in the three dominant sports of the country, i.e. soccer, cricket and rugby from which a comparative perspective can be gained. While sport remains non-core to most universities globally, it has shifted somewhat on the ground, particularly with elite sportspersons emerging from that level. Various forms of elite sport thus need to be studied in terms of the forms they assume in different university contexts.

Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality education/learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (IGEs) selected from East and Southeast Asia) and the educational/learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent translation of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative educational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environments for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.

Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, Actiz, the Utrecht University of Applied Science has carried out an Experiment of Workplace Innovation. The project was launched to promote and integrate ESD in all areas of learning and hence quality education, work and efficiency. BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar process in their own organization. The experiment was finished in the summer of 2013. The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react to the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially formal level of formal schooling and occupational rank determine access to and participation in employment-related training. However, the paper shows that further training participation during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psychological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratiﬁed by intra-individual differences in the Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Economic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled, in a second step, I apply random-effects logistic panel regression models to 39,633 observations of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model speciﬁcations. Contrary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impact further training, whereas the trained for Off Conscientiousness is more complex. I also show, regarding reverse causality, that further training does not lead to significant changes in psychological functioning. I conclude that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize the person and their psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.
Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are differ by field of study with those from hard study areas (science, technology and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It draws on the literature on gender and migration, the migration process is divided into two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. Previous studies that used a simple regression model assumed supply and demand sides were equilibrium. Such a model may not be appropriate for the analysis of a high-skilled labor market, while graduates from softer areas suffer from the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by difference in human capital specificities which favors specialized over general education. Economic fluctuations have a stronger impact on demands of general skills which translates into more fractured transition patterns.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of "social sorting" shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. In its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers’ own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interactive features of electronic technologies disguise equality and democracy. Yet, unmonitored or unrecorded sites highlight the unequal landscape of surveillance society before social sorting starts.

Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates and determine whether they make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. The research question is whether employers’ hiring decisions are not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. The governance of care work undertaken by the migrants in relation to the national long term care system and examines the inclusion and exclusion of the migrants in the host societies including career prospects, citizenship and racism.

OGIDO, ROSALINA* (Faculdade de Medicina PUC, rogido@pucsp.br)

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three long-term networks among schools and employers (Rosenbaum and Kariya 1989).

We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers’ hiring decisions, rather than students’ vocational skills or academic achievement. Moreover, the result doesn’t confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded (Granovetter 1985) in the labor market.

OGAWA, REIKO* (Kyushu University, reiogawa@law.kyushu-u.ac.jp)

Coping with the Ageing Society? : Migration of Care Workers to Japan and Taiwan

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performed in intimate spaces entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. The governance of care work undertaken by the migrants in relation to the national long term care system and examines the inclusion and exclusion of the migrants in the host societies including career prospects, citizenship and racism.
were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working periods, is a difficulty common to working women and, unfortunately, it remains current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

OGINO, MASAHIRO* (Kwansei Gakuin University, ogino@kwansei.ac.jp)

Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of past-present-future, straight-line perception of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of history. Modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan well as but, as described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women's Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigeria women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of reproductive health issues as their prerogative, issues in which the compliance of their wives is taken for granted. The study employed the women's data from the 2008 NDHS to examine the relationship between women's decision-making autonomy and exposure to mortality risks. Given that the study was interested in the risks of maternal mortality in the country, the analysis was restricted to only the women who had at least a birth in the last five years (preceding the survey). A total of 15,333 eligible women out of 33,365 women interviewed nationwide in the 2008 NDHS, met the inclusion criteria. The analysis was done at univariate and bivariate levels. Also, using logistic regression models, multivariate analyses were performed to estimate the odds ratios for each of the predictor variables in the models. The study shows that 36% of the women did not make a single antenatal visit to a hospital during the duration of their last pregnancy; as many as 63% did not deliver in a health facility (government or privately owned); and about 60% did not deliver with the assistance of a skilled provider. After controlling for the confounding influence of some other independent variables, the study suggests that the "sex" variable (women in household decision-making) gives them a voice that is heard in the house and ability to initiate moves to obtain healthcare without necessarily waiting for "administrative clearance" from adult males within the husband's family.

Social Historical Context Of Health and Illnesses Attributes In West-African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of over time; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. With different words, in order to effectively treat these illnesses, remedies must be both material and spiritual that is herbal remedy and amulets Vaughn, Jacquez & Baker (2009). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate tie between cultural beliefs and health beliefs.

Students’ Learning and Career Choices in the Vocational Course of a General High School in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school.

Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground. There is still a serious problem that must be addressed here. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education. However, previous studies have lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficiently skills, but because that can take more academic class. Compared to students in a vocational high school, more of them are going to college or vocational technical schools. By revealing how the actual practice in this kind of school affects students’ learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

Change of Employment Structure and New Labour Movements in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practices is expected to be terminated with huge implications for social and market, and is becoming difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on shrinking union membership and its bargaining power in Japan.

Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government's efforts to deal with bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. School authorities and policymakers hope for “deviant” families to transition into a “normal” condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as “deviant.” In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as “normal” in the healing program, but this is a context outside of school. Therefore, after they complete their course, the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e. the psychological threshold when transitioning from one stage to another) or social normality.

RC42-716.1
OH, HELEN* (Sogang University, helenoh1@daum.net)
Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e. the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituuls, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.

What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively affect on the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what family factors most positively on harmonious parent-child relationship during the process of child’s future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. Findings also report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship for children on the side of the child, does not appear significantly. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

Religion, Trust and Public Society in the United States

Social integration beyond constituents’ diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jurgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into questions. Therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration. In this study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliations), (2) cognitive types of belief (including images of God, New Age interests), (3) theologies (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostics, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<0.05). Neither religious pluralism nor moral liberalism appears significantly related to trust. Religious experiences show significant relationships to trust in immigrants whereas spiritual/mystic experiences lead to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

Cross-Border Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No.1 on the Internet hit list in Korea and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998–2004, meanwhile Internet has rapidly proliferated in 2000s, young users shared Manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industry, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existent fandom and extends throughout the new-media as Attack on Titan can indicates. Moreover, this phenomenon has observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Houyouyori-dango.

Recently, Japanese popular culture can be seen through formal platform IPTV or Internet contents-stowe besides pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is crucial to provide interface with new and diversified contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.
In Japan, food and people's eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children's unhealthy dietary habits has arisen. Furthermore, some studies have found that mother's food consciousness or dietary behavior affect the related dietary habits at home. However, few empirical studies have examined the correlation between women's dietary habits and whether they have children or not. This study examines the effect of childcare experience on women's dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children “eat all three meals” more regularly but are not conscious of “avoiding eating snacks.” Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a high standard of living. The result revealed the following points. First, women equate consciousness of “avoiding eating snacks” with high standard of living. Second, childcare experience has both positive and negative effects on women's dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women's dietetic habits.

Social Exclusion and Health Outcomes of Single-Mother Households in Japan

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has a negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow up.

OKADA, SOSUKE* (University of Arizona, sokada@email.arizona.edu)
Structure of Cultural Rejection

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals’ perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified positions correspond with individuals’ perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

The Relationship Between Financialization and Accounting Standards: A Japanese Perspective

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is reconsidered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japan is characterized by regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

A Comparative Study of Effort and Examinations in Japan and England

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.”

It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture promotes the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

Giving Sense to Social Policy Implementation and Its Evaluation

Analyzing the Institutional Work: The Case of a French Social Security Local Organization

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Suddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this paper is intended to analyze how organizational context, economic crisis, and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explain how does the organization work, its missions, partners and professional cultures. Second, it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some perspectives for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outputs for beneficiaries.

Australia’s Temporary Migrant Work Programs and its Neighbouring Regions

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a ‘migration and development’ styled program with some nations in the Pacific (the Seasonal Workers Program). TFWs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce.

This is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific working in lower paid work, in casualised sectors of the economy.

This is not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce.

The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play.

These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese diaspora, and more recently migrants from African countries, influences the contemporary mix of people.

Migrants' engagements with more than one society and in various forms of transnational networks are evident in the way migrants make place in the suburb.

The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational politics.

Participation in networks of Asian commerce is demarcated in shops through the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market.

Migrants' transnational experiences, connections and networks are part of the uneven resources available to different groups and individuals as they become embedded in places.

For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnic worlds" (Werbner 1999: 25).

But the places in which these networks are located shape the forms of these networks and the resources they offer.

Drawing on Smith (2001), these networks "criss-cross" and in doing so interact, challenge and shape one another. To take economic examples, transnational connections provide some migrants with access to capitalisation.

In Australia as elsewhere, temporary work carries inherent vulnerabilities.

The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play.

These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV's agency in shaping the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: ‘cultural immunity’ and ‘rights-based’ discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, ‘modernisation’ and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma and its individual and collective levels. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants’ reconstructions of HIV through narratives of ‘injustice’ and ‘neglect’ are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma. The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

Pharmaceuticalization and Social Inequalities: An Examination of Problems Relating to Depression in Japan

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been exacerbated by the pharmaceuticalization of mental health. This trend further promotes the stigmatization of social problems and encourages people to seek hospital consultations. Since selective serotonin reuptake inhibitors were introduced to Japan's pharmaceutical market in 1999, demand for anti-depressant medications has rapidly expanded. It seems likely then that the efforts of pharmaceutical companies, as part of their marketing strategies, to increase people's awareness of mental illness have led people who are not actually depressed to have medical consultations and drug treatments for it. This phenomenon is known as ‘disease mongering’ and has been reported on. Problems exist from the medical perspectival and include the following: expansion of the diagnostic criteria for depression as formulated in the American Psychiatric Association’s Diagnostic and Statistical Manual of Mental Disorders; treatments that rely heavily on drugs; and biomedicalization. Another reason for the increase in medical consultations is the declining function of communal bodies such as companies and local communities, a move that has left individuals to deal directly with organizational and social networks. This has resulted in individuals struggling psychologically, for example, with anxiety, worry, and depression. In summary, this sociological research has analyzed the problems of depression in Japan and revealed how the pharmaceuticalization of mental health accelerates the individualization of social problems, thereby creating new social problems and social inequality.

A Variation Study of Dialect Contact and Obsolescence in Japanese Community in Mexico City

Ever since the first migration to in 1897, Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community in Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been contact between the Japanese regional dialects among them. The study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 5000 minutes of collected through my fieldwork in 2012 and 2013 in Mexico City. The informants are more than eighty of Japanese immigrants and their families. The linguistic variable examined in the analysis is negative suffix. The negation form is realized in different forms according to dialect. The major variants are ~nai and ~n, the former is mainly used in
eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negation system in this diaspora variety of Japanese.

Edgewise Community: Real Estate and Asian Settlers in Tokyo

After the latter half of the 1980's the number of Asian people has increased as "new comer" in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called "edge-wised community." Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents' motives in acquiring the housing and in having relationship with the network and other surroundings. Especially, focusing on the functioning of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes(1931): Chicago School third term, in his research of "Chicago real estate Board" housing land and building dealers are classified in five groups. In this report, combining both Hugh's classification and the reporter's classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between "cooperative channel" and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to "cooperative channel" centering housing land and building dealers in "edge-wised community," improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

The Medicalization of "Depression" Across the Globe

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical systems. While data exist on whether and how individuals across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what attributions they make up the cultural toolboxes of lay diagnosis of depression across countries. Using latent class analysis, we construct the patterns of suggested actions that without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

Housing Well Being and Social Inequality in Europe: A Comparative Analysis

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Though around three quarters of Europe's citizens own their home, and maintaining a home have continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects.

The paradox is that home ownership does not exclude housing deprivation. The hypothesis is that household's social class plays a role in enabling owners to combine home ownership and well-being.

On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergence and convergence of European housing situations and the evolution of housing inequality in a comparative European perspective: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

Social Mix in Deprived Areas: A Solution to What?

Social Mix in deprived areas: a solution to what?

The research study refers to the results of a housing mix policy in Turin (Italy) based on the conversion of the real estate complexes built at the time of the 2006 Winter Olympic Games into social/housing housing and aimed at creating a housing mix capable of generating a social mix. Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers' expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment. Starting from those expected results, hypotheses and outcomes of this specific attempt have been investigated. In the observed neighbourhood social mix has not produced all the hoped-for effects. The greatest benefits have been...
The paper focuses on the process of rules establishing in the making. One and there is an additional one for household expenses? With a wide range shared, two where each has a separate one, or three where each has a separate production of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be marked by rejections of the dedicated and it will be directed towards creations and constructions of the natural. An individual human beings become autonomous-as-non–dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non–dedicated absorption will redefine—but without reference to ethics—Socrates’ cognitive valuation. The subject is the reason.

Handling Money in Close Relationships in Young Family Households in Poland

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Poles who consider the “free market generation.” Young adults (18-39) who were growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

In order to show the social context in which young family households’ monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions (“common knowledge” and “taken-for-granted” issues) about money in young family households and on identification of language patterns related to the issue.

The research has identified money and “monetary rules” as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working full-time? How many bank accounts should a cohabiting couple open: one that is shared, two where each has a separate one, or three where each has a separate one and there is an additional one for household expenses? With a wide range of existing patterns related to the monetary practices in young family households the paper focuses on the process of rules establishing in the making.

Ex-Prisoners Debt: An Indirect Criminal Risk Factor

Studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path. However, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. According to the Danish Administration of Justice Act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, DNA-tests, technical and accuracy investigations etc.). Denmark is the only Scandinavian country, and the only country in the European Union, who does not take the income level of the convicted into consideration, when calculating the legal costs. Nor do they have a common practice of remitting convicted’s considerable legal costs.

Thus, we must regard most ex-prisoners in Denmark as highly indebted to the state. The ex-prisoners debt is generally understood as causing dynamics of regime change in Ukraine and changes in Australian migration policy, the paper suggests there are 3 distinctive periods of post-independence Ukrainian immigration to Australia, the first decade: from 1991 until 1999; the second decade: from 2000-2009 and the beginning of the third: from 2010 until 2013. 51 “personal” stories enables to understand determinative structural factors that deeply influences migration, such as state policies, economic situations, and transnational networks, through comparative perspective in effecting the capacity and choices made by each migrant depending on his/her immigration period. It puts forward the idea that these factors strongly influenced and shaped migrants’ life strategies and mechanisms of integration in recipient society as well as formed the way this ethnic minority incorporated itself in labour market of Australia.

The Al Capone Method in the Danish Police

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method in general has an impact as desired by the Danish Government. However, research has not yet shed light on the unintended consequences associated with the method in a Danish context.

Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow-up-interviews with 16 gang members, carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners’ indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners’ farther from the legitimised socio-economic advantaged affiliations because of their debt to the state.

Moving out of “Their Places” – Structural Factors for Post- Independence Ukrainian Migration to Australia

Using a combination of migration literature analysis and practical experiences of Ukrainian migrants in Australia this paper examines systemic differences in actual mechanisms for incorporation and integration, depending on the period in which Australia accepted immigrants and Ukrainians left Ukraine. Particularly, it explores the role of Ukraine/Australia structural factors in generating post-independence Ukrainian immigration and waves. Empirical evidence from two waves confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners’ farther from the legitimised socio-economic advantaged affiliations because of their debt to the state.

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video, recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dying from a gunshot inflicted by a regime related shooter during protests against the fraudulent Iranian presidential election. Neda almost instantly became a transnational injustice symbol representing the unjust nature of the Iranian regime. The case of Neda is interesting for social movement scholars for a variety of reasons, including the role of new media and the power of photography and citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptual as well as methodological questions about the transnationality of transnational movements. Because while Neda's televised death, motivated various activist organizations and interest organizations to act and criticize the Iranian regime, the activities around the Neda injustice symbol was much broader. Apart from activists, three categories of actors in particular were vociferous and active: politicians/political parties, media, and networked citizens all expressed outrage and demanded changes on the basis of the footage.

This propels us to ask how we can best conceptualize the activities surrounding Neda’s death. Was it a transnational social movement – or something else? In the paper I argue that it was in fact a social movement. Accordingly, I contend that the kind of action expressed. I hope to propose that this way of understanding social movements may be especially pertinent in a transnational context where information circulates rapidly and where actors are increasingly networked, connected, and visible and able to engage in numerous and often different political issues at the same time.

On Policy-Making and Legitimation of the Law in Contemporary Pluralistic Society

The paper's aim is to discuss the substantive dimension, quality and content of current law-policy making and socio-legal legitimation of law in present-day highly mobile, complex, multiethnic society. A special focus will be devoted on the coupling of the epichoral crisis of formal-official State-nation law and the rising differentiation of social and legal sub-systems. Most relevant problematic variables related to such tension are discussed. The paper aims to show that this understanding of social movements may be especially pertinent in a transnational context where information circulates rapidly and where actors are increasingly networked, connected, and visible and able to engage in numerous and often different political issues at the same time.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with worrying consequences on the health of its citizens. In fact, the current economic situation threatens to undermine all dimensions of well-being of a population. The situation is still ongoing, the timing and outcome is impossible to predict, but that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin et al., 2010; Cylus et al., 2012; Artazzco et al., 2004) and data made it possible to substantiate the effects of unemployment and increasing poverty on health inequalities.

In this paper we will try to verify the consequences of the economic crisis on health in Italy, what is the state of health inequalities and what are the risk factors for proximal (material, psychosocial, occupational, environmental and behavioral), most affected by the economic situation.

Using data by “Health for All Italy” we will rebuild the health status of the Italian population in the last 10 years to demonstrate the changes and estimate the consequences of the current crisis, and increase social inequalities.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel Honneth's Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important proponents of a theoretical paradigm for the social sciences centered on the idea of “recognition.” This notion has, of course, entirely different meanings in the various contexts in which it is called upon. In Honneth's specific case, it is of decisive importance the fact that his theorizations around the centrality of recognition relates to gender equality. On the other hand, it will be discussed how women experience their embeddedness in family structures as influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in Southeast-Brazil will be presented. The analysis of the narrative interviews, following the reflexive-reconstructive biographical method, focuses on how the interviewed women define their life course between opportunities and constraints. This is seen in close relation with the social developments taking place around the subjects, as postulated by the biographical policy analysis. The research results can also cast a light on different patterns of generational intercontingency found in the same social milieu.

Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemocratization have strongly impacted relational and material conditions of low-class families. Acute transformations took place especially in the realms of mothering roles, participation in the labor market, division of domestic labor and domestic violence throughout the last decades, as reflected in the life course of women. This paper presents results from qualitative research with two or three generations of women in urban, low-class families in Brazil. The interviews were conducted with several families as part of two research projects in recent years. The reconstruction of women's life stories and biographical self-presentations will highlight the reproduction or transformation of social patterns against the backdrop of new socioeconomic configurations and social policies. This reconstruction will trace, on the one hand, the changes in the perception of women's role in society and family as it relates to gender equality. On the other hand, it will be discussed how women experience their embeddedness in family structures as influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in Southeast-Brazil will be presented. * denotes a presenting author. Abstracts are organized by first presenting author's last name.
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor quality of research have been the objects of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itinere and ex-post) and comparison of the impacts from SSH research, taking into account the large amount of quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

The Student Movement in the (Mexican) Democratic Process

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition—from a seven decades hegemonic party rule to a right wing government—Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral frauds and social crises. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was part of this trend.

The purpose of the presentation is to describe how different modes of expertise change to relations of professional work performance.

Outline of paper presentation

The purpose of the presentation is to describe how different modes of expertise change to relations of professional work performance between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and perceived by nurses and doctors; what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

Austerity amidst Affluence: Cross-National Contrasts

Austerity amidst Affluence: Cross-National Contrasts

Poverty has long been one of the most pressing social problems across the nations of the wealthy, advanced capitalist world. The poverty in wealthy countries is not on the same order of magnitude as in many less developed parts of the world, where grinding impoverishment is ubiquitous, and its impact and death toll staggering. Yet poverty is not only a ‘Third World’ concern. It is often suggested that many poor people in wealthy lands would be considered relatively well off if they were living in a poorer developing nation. But they are not, and the social and economic circumstances of the poor in rich nations often requires a much higher level of income, and access to many additional goods, amenities and services just to reach similar levels of capability and inclusion as those of many poorer people in developing countries.

This paper examines this urgent issue in Canada, the UK and the US where, despite their great prosperity, the rates, severity and consequences of poverty have intensified under neo-liberalism. It also provides cross-national contrasts examining poverty in the Nordic nations which, despite notable increases in inequality and social policy restructuring, still outperform their Anglo-American counterparts. This paper also critically examines dominant and popular theoretical perspectives and explanations that have been advanced to explain how poverty is generated and sustained and assesses the possibility for its eradication.

Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare

Background

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the conditions involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

Study and methods

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and to a large extent the nurses were seen as more the social actors than doctors, who represented the voice of nurses to doctors.

Outline of paper presentation

The purpose of the presentation is to describe how different modes of expert knowledge give rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

OMENMA, J. TOCHUKWU* (University of Nigeria, Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)

This paper is premised on the nomination of 17 council chairmen (not Chairwomen) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party’s policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political ‘godfather’ and women under-representation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria

This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military entity over a large spectrum of Yorubaland by the end of the 19th Century. Ibadan developed a unique patronage structure based on the babaogun clientelistic system. The babaogun system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the babaogun system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general can be traced to the political economy of colonial patronage and succeeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of ‘unfavourable inclusion’ suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living. Our study examines the context of people within a society. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In fact, employment has become a conveyor belt that drives people to these institutions, even when people are included in the form of being actively employed. In this paper, we argue that identifying the social institutions that propagate deprivation of capabilities and functioning as the target of social policy transcends the limitations of social exclusion and inclusion debate.

The “Romantic Love” of Young Adults in Japan

Since the 1980s, the late marriage and non-marriage action has become remarkable and decrease-in-the-birthrate problem has started gaining people's attention in Japan. In these social backgrounds, the importance of research on “romantic love” with sovereignty was also started recognizing. However, the study accumulations of “romantic love” are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their “romantic love” by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with heterosexual sexual single men and woman, born in 1983 to 1993. Each group is divided by social positions such as students, company employees and gender. Using these data, I found that Japanese young adults tie the construal relationship by declaration and whether they are dating officially or not is quite important to have sex because it can be the permission, which shows their sexual relationships are right socially. Moreover, the analysis proves that there are not big differences about sexual behavior by gender; however, it shows that there are some differences in awareness of the marriage and “romantic love” by gender. Especially, women group members tend to set the time limit to 30 years old to get marriage and to think that they should date with people whom they feel they are wasting time. However, from the narratives of survey respondents, it suggests conditions required for marriage and conditions required for romantic love are ambivalence. In Japan where a modern family ideology and a love marriage ideology are left firmly, it could make not only marriage but also “romantic love” difficult.
ceremonies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions has continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999.

There are inadequate numbers of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Survivor rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.)

This study aims to find out post earthquake impact of disaster on children up to their adult ages.

Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher's classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

The Second Group of Keban Dam Studies in Upper Part of Firat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement processes and later on similar to many projects in the world. However, there are on going high dam projects in many countries on the neck of many rivers and river basins. Kariba, Aswan, James Bay I-II, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focuss of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas; short, medium and long term impacts have be classified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions has continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

The objective of the present study is to clarify the competency of private midwives through examination of how midwives help mothers gain autonomy in childrearing. An empowerment approach was used as a conceptual framework. This research was conducted with midwives working at three facilities. Data were obtained by observing each encounter between mothers and midwives; that was realized from the 30th week of mothers pregnancy to 3 months after their delivery. In addition, the midwives and the mothers were interviewed. Data were analyzed by qualitative and inductive analysis. Recorded data were coded and categorized, and a total of 7 categories and 39 subcategories were extracted. The results showed that midwives build relationships of mutual trust with mothers; empowering mothers through psychological and educational support and helping them to be independent. The competency of midwives in independent practice could be classified into the following five types: 1) based on mutual trust, the midwife builds a relationship with each client to facilitate friendly interactions as a health-care provider; 2) the midwife evaluates situations and assesses the skill set of each client; 3) the midwife becomes close to each client and provides individual assistance; 4) the midwife provides reliable techniques in various situations; and 5) the midwife offers information beforehand to prepare each pregnant woman to become a mother and then supports the new family after birth.

International / Military-Public-Private Cooperation in Disaster Relief | Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the viewpoint of the MOD and JSDF. First, it was discovered that there was considerable room for improvement in the US-Japan cooperation in the event of a large-scale disaster, even though they have a half-century record of cooperation under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Cooperation with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster was kept from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake.

A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODA, SHINJI** (Hosei University, shinji-0219@hotmail.co.jp)

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named “Tax for Climate Change Mitigation”) on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in European countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving a low-carbon society, it is essential to find problems of policy making processes and constantly strives for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called “organization theory” forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue “rational strategies” under “structured conditions” defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

ONODERA, HENRI* (University of Helsinki, henri.onodera@helsinki.fi)

Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak's Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called ‘Arab revolutions’ in 2011. Some attribute the young protagonists with more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people’s activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public activism occupied a range of people’s social lives. In times of relative political repression, street protests were the only way of public debate, while others continued taking part in other spheres of life such as studying, work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck’s concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of ‘outsiders’ across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. The argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that boundedness of the state is maintained in spatial terms. The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and industrial estates established by local and foreign investment. These industrial estates require a large pool of low-paid workers who are inevitably employed on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. This paper explains the mechanism of heightened mobility of community members, and describes the community around Jakarta mainly based on my own door-to-door survey of 659 suburban households.

This data revealed that almost all of the residents (83.9%) are newcomers. The people who had lived there before building the industrial estates have already moved, so the activities of the old neighborhood associations (called Rukun-Tetangga /Rukun-Warga) have almost stopped. Nevertheless, 62.3% of newcomers still join Gotong-Royong (traditional mutual assistance activities) and 52.6% of them are involved in religious (Islamic) activities. This implies that people are trying to search for new ways to enhance social unity, away from the old community structure.

OSTERVEER, PETER* ( Wageningen University, peter.osterveer@wur.nl)

Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Stew-
The Role of Leisure in the Reproduction of Inequalities: Puerto Rico Case Study

In the contemporary context of enduring economic crisis the concepts of poverty, inequality, inequity, and exclusion claim great discursive visibility and relevance in both, the academia and the media. The global reorganization of capital has intensified capitalism's increasing trend of labor force exclusion and the possibility of a jobless future for younger generations and displaced workers. This is not the only phenomenon that threatens quality of life and social polarization in societies particularly hit by the economic crisis. Leisure practices and rituals have changed in this economic climate. After a brief analysis of the structures of inequality in Puerto Rico, relying on key socioeconomic indicators, recent government policies, enduring colonial-political arrangements, evidence of an increasing deterioration of the public arena and our participants’ testimonies on their consumer and leisure styles, we will like to argue that (1) the nature and meanings ascribed to leisure by Puerto Ricans have an impact on the reproduction of economic and social inequalities and (2) some of the activities that are identified as leisure constitute an important part of the strategies deployed by the disadvantage to lessen and neutralize the personal effects of social and economic inequality. Our conclusions will be supported by state of the art quantitative and qualitative research conducted by the Grupo de Estudios del Trabajo (GET) from the University of Puerto Rico during 2013. We will discuss our preliminary findings (a) on the allocation for leisure; (b) on the most common activities taken as such and (c) the meanings ascribed to them.

The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislatures through its thus limiting the national Government's possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population's involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions.

The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. These results also suggest the vulnerability of this population when faced with the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicated the legitimization of CEDs as a function of the intrinsic interaction of organizational dynamics, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimation are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a trifecta of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

Fukushima Nuclear Disaster and Theories of Tort Law

The Fukushima Nuclear Disaster brought widespread and long-term damage, which forced traditional theories of tort law face with many difficult challenges. According to the case law, a wrongdoer should compensate any damage claimed by a victim. If the victim can prove that the wrongdoer caused a legally sufficient cause of such damage. However, certain types of damage from the Fukushima Nuclear Disaster are not fit into the traditional theories of damage. For instance, how to calculate non-pecuniary loss suffered by an evacuee followed by the displacement of such damage. However, certain types of damage from the Fukushima Nuclear Disaster are not fit into the traditional theories of damage.

Intermediaries, Facilitators, Agents, Guides: Steering International Medical Travel to Malaysia

Malaysian authorities' desire for foreign patient-consumers from higher-income countries and the spectacular medical tourism infrastructure being developed to cater to them exists in contrast to the actual everyday flows of intra-regional lower-income patient-consumers who, comprising the bulk of medical travellers to Malaysia, have been fundamental in both constituting and sustaining the country's medical travel destinations. This paper draws on interviews with medical travel companies in Malaysia and Indonesia that promote Malaysian private health care to prospective patient-consumers from both higher-income and lower-income countries. It compares and contrasts the functions of these companies, their relationships with patient-consumers and the ways in which they represent and negotiate the differences between health care in patients' countries of origin and in Malaysia.

Moralistic Trust and Rationality: The Individualization of Trust

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin (1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous studies consider that institutional confidence and voluntary association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people's action. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust to members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral value can be rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative analyses based on the questionnaire survey data in Japan.

CATARINO, CHRISTINE (Université Paris Ouest Nanterre La Défense)

The Migration and Development Nexus: Gender Insights

Research on development and migration has mostly stemmed from an economic concern (assessing the volume, cost and contribution of remittances to local development), largely overlooking women and gender issues. The New Economic of Labour Migration (NELM), the transnational paradigm and the livelihood approaches are known to have enlarged the scope of the migration and development nexus (Haas 2010). One aim of our paper is to review how gender studies have also contributed to the shifts in the debate on migration and development and how gender issues have been incorporated.

On the other hand, over the last decade, abundant literature relating to the globalization of social reproduction (the so-called ‘global care chains’) has helped highlight women’s crucial contribution to transnational reproductive labor (Hochschild 2000). However, it largely fails to capture the articulation of productive and reproductive strategies. This paper defends the necessity of rethinking the migration and development nexus according to the articulation of transnational household’s productive and reproductive strategies.

We will review the literature on migrations, women/gender and development. Then, on the basis of case studies, we will assess to what extent do migrants’ productive and reproductive strategies (care and remittances, saving and consuming, housing, health and education) determine the gender relations and the social mobility of migrant household members.

OSTEN, VICTORIA* (U of Ottawa, victoria.osten13@gmail.com)

Canadian Immigrant Women Engineers’ Work Life: Experiences and Change

The number of women in engineering, in Canada, is growing, yet men and Canadian-educated women engineers continue to outnumber immigrant women engineers especially the upper level of the profession. For the last 10 years, the majority of immigrants to Canada have been mostly comprised of highly educated, internationally trained professionals, many of whom are women. Many of these women hold university degrees in engineering and other academic disciplines and almost all of them have work experience in their professions. Yet few immigrant women engineers are reentering their profession in Canada and only a handful of them advance in their career, despite a decade long effort by Canadian educational institutions, the Canadian government, and Ontario’s engineering regulatory body to involve more women into the profession.

In this paper, I introduce the analytic complexities that I will examine in my doctoral research whose theme is an intersectional analysis of the changing experiences of immigrant women engineers in Canada, from various educational, ethnic/race/national origin and social class backgrounds. Based on life history interviews, completed by statistical and other research literature, this paper proposes research which will explore influential social and environmental factors that have
shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity, birthplace, and class relations which considers changes or their absence over time.

"New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities"

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training aims at giving participants an insights into how a career in the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home for courses during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with services facilities. The SAF and the SPES share 50 % of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training. The paper assesses the effectiveness of this new and original project.

OTA, AKIRA* (Tokyo Metropolitan University, arikaota@cd6.so-net.ne.jp)

Comparative Analysis of Regional Governance

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional variations of managing resources for porcelains conditioned by different ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shapes the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources and efforts to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region.

Comparative analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19th century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called "Terasu." These reforms was intended to enhance the student's access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead's study on the quality of legal aid lawyers in U.K. One of the

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women’s participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farming, and in particular, organic farming receives higher supports. Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the Regulated Agricultural Policy (RAP) and the Environmental Agriculture Policy (OPUL). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Meister status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries maintain robust alliance to convert local natural resources into their own wealth on the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a “structure” to be changed by any institutional reform, however, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-Itai disease caused by untreated industrial wastewater under rapid economic growth in 1950’s to 70’s, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting “dialogue and cooperation” as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of “community roundtable meetings” in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by “micropolitics” among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

Gender Pyramid Politics: Trends of Global Changes

Gender Pyramid Politics: Trends of Global Change

Nowadays in the contemporary world the upper pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place. At the same time we can speak about some changes in the presented social scheme. Over the past decades, some states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women’s rights has not existed, and the women themselves do not consider their political advancement as “the social breakthrough.”

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can’t be noticed.

In this regard, the following questions rouse great interest:

What are the social, cultural and legal reasons caused this situation?

Does the economic aspect of the pyramid change with the political advancement of women? Or is the stay of women in the authority only the question of formality?

What are the prospects of gender equality / inequality in the epoch of globalization?

Subsidized Housing and the Concentration of Poverty in the U.S

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies aimed to integrate low-income renters into lower-poverty neighborhoods.

New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty concentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

SARC (Scientists/Artists Research Collaborations)

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well-established, international electronic festival called ISCA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support on the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no policies related to SARC’s ongoing programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the arti-sc world as it develops at breakneck speed. What are the dangers ant-sc collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science: should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science? Supported by the National Science Foundation under Grant No. 1142510

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; this includes the context of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government’s environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council’s target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and internet hubs are, for instance, now part of our everyday sceneries. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society deals with this challenge. Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by attempting to ‘re-engineer’ the ways in which electricity is provided to so-called end-users: for example, voltage reduction. Focusing on the proposed socio-technological aspects of these solutions, this paper discusses how engineers conceive of the problem of ever-increasing carbon emissions, investigating the framework and assumptions about socio-technological provision and usage. This includes, for example, an analysis of how transformation processes in energy systems are understood and configured. We will present our findings from interviews with engineers who are involved in a large-scale European research project that seeks to offer a solution.

Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan

According to Japan's National Police Agency, 30,133 businesses were reported to act in sex industry in Japan in 2012. The number of CSWs are estimated to amount to at least a few hundreds of thousands. Japanese Anti-prostitution law establishes 15 prohibitions paid sexual intercourse. As a result, many kinds of sex work which avoid this law have been created. Most of them offer a variety of sexual services except for sexual intercourse, such as "Fashion health" and "Image club". But there also exists sex work which includes "unpaid" sexual intercourse, such as "Soap land". In soap lands, CSWs have sexual intercourse with their customers who have their own free wills, not as a part of service, though it is an unspeakable agreement that sexual intercourse is included. We conducted semi-structured interviews with 17 CSWs who work for a soap land in Tokyo mainly in order to study their psychological tendencies and problems. We found that all of them had experienced other kinds of sex work not including sexual intercourse before they began working for the soap land and that they liked a soap land job best. Despite a lot of social and psychological disadvantages due to sex work, they gave more importance to advantages. It can be said that Soap land is legitimate, but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about "Should prostitution be made legal?" in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law system. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In A Racist Public Discourse?

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take our concepts about racism and ethnic stereotypes seriously, but also to deal with the young men’s discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants’ successful integration. In these discourses often two racialised images are constructed: the native ‘own people’ who are contrasted by ‘Muslim immigrants’. While the former constitutes the ‘tolerant’ side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the bridge. We have noticed that the focus of attention is shifted to ‘their homosexuality which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

In our paper we will present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

Sociality and Individuality of Language in Durkheim and Bergson

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and others, and the phase of the sociality and individuality which language has. With this intention, I’ll compare the category theory of Durkheim with Bergson’s language criticism.

Human being differs from animal in that he uses language. The man synthesizes the special, the accidental and the individual by the reason, and he thinks by means of universal forms. He can understand the empiric things in the framework of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is the thing of society. He thinks that the concept is essentially an imperative representation. The sign is a system preceding the individual’s birthand given by the society. Not until he think abstractly by the sign did a man become a human being.

Bergson, a contemporary of Durkheim thinks that the self is socialized itself, and the soul of the society is immanent in the language supporting our thinking. But Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with all something else. In opposition to it, he considers that what is gotten by the analysis of the outside
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state. In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and websites. Our findings indicate that state authorities and mining multinationals form a 'pro-mining' coalition against environmental protestors, developing common strategies and tactics against the protests. The intensity of conflicts between the environmental protest movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In these cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant party in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

OZEN, HAYRIYE* (Atılım University, hozen@atilim.edu.tr)
Radical Left Wing Groups and Environmental Mobilizations in Turkey

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations provided decisive in the generation of these grassroots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.

OZTOPRAK, MERAL S.* (Yeditepe University, meral.oztoprak@gmail.com)
What Does Gezi Park Resistance Mean in Turkish Democracy?

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained preeminence. Consequently, wide-spread popular dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force. Gezi Park protests were an expression of the pluralist anxieties and democratic hopes of the people. Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non-pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.

Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian- ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de- nomination and churches in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pastor Sunday Adelaja in Ukraine.

Regulation: The Third Party in the Transformation of Patient-Professional Relations

Regulatory arrangements have the capacity to codify elements of the relationship between patients and professionals. They can articulate the expectations that patients can reasonably have of their treating health professional, and also provide a mechanism to notify and address instances where defined standards of professional practice are not met.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates a systematic analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia’s eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflected through the legislative requirement for community members to sit on all decision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of single register of practitioners that provides improved transparency with patients now able to directly access information about the registration status and qualifications of their health professionals.

The Culture of Women’s Soccer in Senegal: Reconciling Dissonance Among Representation

What does it mean to be a “footballeuse” (a soccer player) in Senegal? In Senegal, women’s soccer is more than a game; it is a counterculture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the “footballeuse” culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how this dissonance creates perceived dilemmas in the experience of the footballeuse around questions of identity and religion. My analysis explores these dilemmas and demonstrates how these women reconcile inconsistencies among cultural representations by constructing new flexible meanings of femininity. Finally, drawing on Jacques Rancière’s theory of disensus, I show how the “footballeuses” in Senegal use this space of dissonance to claim a stake in society, to break the current order of governance, making the practice of women’s soccer in Senegal profoundly political. Data was collected through nine months of participant observation, 40 in-depth interviews as well as analysis of secondary sources such as print, online and televised media.

PADRON INNAMORATO, MAURICIO* (Universidad Nacional Autónoma de México, mauricippadron@gmail.com)
Conciliación Entre El Mundo Laboral y El Mundo Familiar Con Un Enfoque De Derechos. El Caso De México Como Un Ejemplo Particular Para Una Discusión General

Cuando se habla de la necesidad de conciliar o armonizar la vida laboral y el mundo de la familia, se asume que se habla de un tema que involucra solamente a las mujeres, específicamente aquellas que trabajan fuera del hogar. Pero la real-idad resulta mucho más compleja, no es solo una cuestión del ámbito de lo privado, del mercado de trabajo o de las políticas públicas, es un fenómeno que se aborda de manera integral puede ubicarse en el terreno más general de la justicia social.

Su estudio desde la perspectiva de los derechos, implica partir de un paradig- ma de justicia que lleva al reconocimiento y a la creación de mecanismos para la exogibilidad y justiciabilidad de los derechos económicos, sociales y culturales.

La perspectiva asumida implica retomar varios ejes de análisis: las transforma-ciones demográficas, sociales y económicas ocurridas en México en los últimos años, el impacto que estas han tenido en la división sexual del trabajo y en los roles tradicionales de género, así como la responsabilidad y/o correspondibilidad del Estado en los procesos de reproducción social.

El trabajo permite revisar, discutir y (re)elaborar el marco de referencia para el estudio del fenómeno de conciliación entre trabajo y vida familiar, para dar una respuesta más adecuada a las necesidades relacionadas con la reproducción social; enfoque al que algunos autores denominan políticas para la armonización trabajo-familia de segunda generación.

Si bien el trabajo contiene un aparato teórico – conceptual importante, también muestra desde lo empírico los cambios y las tendencias ocurridas en el país en los últimos años, en relación con los ejes centrales definidos. Para esto se utilizan básicamente tres fuentes de información: la Encuesta Nacional de Ocupación y Empleo, la Encuesta sobre la Dinámica de las Relaciones de los Hogares y la En-cuesta sobre Uso del Tiempo.

PAETAU, MICHAEL* (Center for Sociocybernetics Studies, michael.paetau@sociocybernetics.eu)
Bitcoin: Network Based Currency and Its Self-Organizing Emergency

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are based on an open-source cryptographic protocol that is independent of any central authority like a Central Reserve Bank or another administrative institution. Bitcoins are created and administered decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for world wide Internet transactions. In June 2011, Wikileaks and other organizations began to accept bitcoins for donations. That became very important after Master-Cart, Visa, Paypal and other tried to block WikiLeaks from money transfers obviously because of political pressure by the US-government.

In my contribution I want to analyse this currency-system from a sociocyber-netic point of view. After presenting the basic mechanisms of Bitcoin money cre-ation, the value regulation etc. I want to focus the basic processes of self-organiza-tion in this high-complex system.

RC51-824.1
PAETAU, MICHAEL* (Center for Sociocybernetics Studies, michael.paetau@sociocybernetics.eu)
Social Media, Open Government and “Liquid Democracy”

More than 10 years ago André Gorz argued that the use of the term »knowl-edge society« would only make sense if one were able to demonstrate that relevant radical changes in society somehow related to changes in the handling of knowledge in society. Such a demonstration concentrated on the area of democ-
racy will be the object of my contribution. In my paper I want to unfold the thesis, that the present form of giving people more participation within political processes and providing more insights into documents of governance is an intermediate step to change western style of democracy fundamentally. I want to focus the question how new media, especially so-called ‘social media’, may overcome the traditional dichotomy between parliamentary representative democratic tradition and grassroots oriented plebiscitary democratic elements. Since some years this question has been primarily debated under the term of ‘Liquid Democracy’. It stands for the idea to make democracy more liquid, more transparent and more flexible. People should have the opportunity to participate in political affairs complementary to delegating the powers of the sovereignty to a body of human elected from time to time for four or five years. “Liquid Democracy” will give people the possibility to campaign effectively and collaboratively for the issues they are concerned about. The paper will show which social, political and technological concepts for such a liquid democracy exist. Which discourses in different areas and scientific disciplines occur, and which experiences and evaluations are available.

Dialectic of Enlightenment’s Critique of the Civilizing Process As Aufhebung of a Debate

During November and December 1941, the Institute of Social Research delivered a series of public lectures at Columbia University on the question of how National Socialism should be characterized. The positions within the debate could roughly be divided in two major groups; on the one hand stood the conclusion that capitalism helps to govern issues through major transformations, leading to a new order, that of State Capitalism (Pollock); and, on the other hand, a depiction of the current capitalist system as a totalitarian-led monopoly economy (Neumann and the others). Dialectic of Enlightenment – written by Adorno and Horkheimer in 1944 in exile in the USA but first published in 1947 by the small and actively anti-Nazi publisher in Amsterdam – followed this debate and is, in a way, a response to the questions posed in 1941, developing however yet another interpretation. I would like to argue that the book does not make use of the State Capitalist thesis, as forwarded by most literature, but can rather be understood as an attempt to answer the questions posed in 1941, developing however yet another interpretation...

PAIDAKAKI, ANGELIKI* (KU Leuven, angeliki.paidakaki@astro.kuleuven.be)
Analyzing the Socially Transformative Capacity of Post-Disaster Reconstruction

Traditional theories of disaster management have neglected the role of community organizations in building urban resilience to natural hazards. They assume instead that the state, often in coordination with market forces, is the most important agent in dealing with disaster risk. My aim is to challenge this assumption. By studying the emblematic moment of post-disaster reconstruction, I intend to deal with these recurring issues. My working hypothesis argues that local community struggle for permanent housing provision during the rehabilitation period contributes significantly to transforming multi-scalar disaster governance and building resilience to future hazards.

The paper will start with a zoomed-out investigation of the urban socio-environmental problems. It identifies and unravel a) the interconnected economic, political, social and ecological processes that together form uneven and unjust urban assemblages, b) trace and clarify the concepts of vulnerability and resilience and c) uncover their underpinning discourses. This “zoomed-out” identification of the socio-ecological urban problematiques and vulnerabilities and the discourses behind them will be instrumental to “zooming-in” on possible entry points for new discourses for disaster resilience and institutional change in disaster intervention. Through the lens of the long-term reconstruction period, I will analyze the potential of the development and implementation of alternative housing policies in a) enhancing empowerment and social resilience, b) promoting integrated modes of urban development, and c) revealing new institutional perspectives in dealing with disaster governance.

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESON) which set out to examine Europe’s position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization of Europe and its Regions.

Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state / regional level. The authors identify two intersecting spatial processes in European APS-generated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

Positive Aeging and Leisure: Role of Leisure in Healthy Ageing of the Elderly in India

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines healthy ageing as “a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity’. Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related conditions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypotnthesis constructed to direct the study are:
1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in promoting healthy ageing person.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:

Health has two broad parameters, mental health and the physical health. Type of the leisure activity affects the mental and physical health differently. Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

La Transferencia Tecnológica Como Problema Político En América Latina

La transferencia tecnológica como problema político en América Latina

Una de las cuestiones que viene causando importantes polémicas en la región latinoamericana, es el establecimiento de alianzas estratégicas internaciona-
les, with the objective of generating new knowledge and fortifying the capacities scientific and technological existent.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar la pérdida de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de cooperación en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciben la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

Technological and Political Illiteracy: Its Effect on Social Change in Latin America

Technological and political illiteracy: Its effect on social change in Latin America

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where are trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the political power the need to counteract all areas in which acts the capital model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

*From Self-Management to Representative Democracy – the Case of Two Kibbutz Industrial Plants*

Theories of new organizational forms usually assume that in the 21st-century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented.

In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into an almost Weberian structure. In order to do so we will show the parallelism between processes, thus, occurring in many kibbutz communities by analyzing two case studies of kibbutz plants. This is done by studying the interplay between changes in the kibbutz culture and changes in the plant through life cycle theories and organizational culture theories.

Our research methodology was qualitative and ethnographic interviews were held with kibbutz members employed by the organization, with kibbutz members and with CEOs that had held jobs in the past. The interviews were conducted between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

*What Are the Opportunities for Social Investment in the Continental European Welfare States?*

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways since the early 1990s. The Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist childcare support. Recently, an important policy focus has been paced on the Youth in France. However in both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

*Feelings of Ambivalence: Ageing Labour Migrants in Vienna*

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for late life.

Vienna’s labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

*Informalization of Labour: Recent Trends in India’s Urban Economy*

Informalization of labour: Recent trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come
out in last twenty years, which depict the miserable working conditions of India’s informal sector workers.

While workers in the informal sector contribute a considerable amount of output to the country’s GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world’s labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of in-formalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially produce, and this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers’ career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students and in social activities; an opportunity to re-identify one’s own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride industry. It is generally assumed that, when women from developing countries turn to intermarriage and economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the fact that women are seeking intimacy in online contexts?

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue relationships online and why intermarriage dating sites appear to be displacing other ways of meeting foreign partners. It draws on in-depth online and offline interviews with 24 Thai women who have experienced online cross-cultural relationships. The study shows that the development of ICTs and increased accessibility of the Internet in the context of globalization and transnational networks allows women to consider a wider set of possible lives and partners than they ever have before. Although some women might be confronted with dilemmas or stereotypes of seeking cross-cultural relationships online, almost all of the women interviewed perceived intermarriage websites as an important channel leading them to meet and fall in love with Western men in the Internet era.

PANDEY, URGASEN (College Agra University)

Deliver Quality Education In Global Era

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to higher-value-added manufacturing and service industries. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic systems and the global economy. The second task was to provide an assessment of the way in each country of progress towards the three goals of successful engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as ‘victims’, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.

Voting Behaviour Among the Youth in Malaysia

Malaysia’s 13th General Election held on 5 May 2013 was one of the most exciting General Election in Malaysia’s political history. The result showed that the ruling party (National Front) and the opposition coalition (People’s Alliance) contested closely in the 222 Parliamentary seats. Although the results showed a rather status quo in favour of the ruling party, the opposition coalition managed to increase their seats to 89 from 82 from the 12th General Election while the seats obtained by the ruling party reduced to 133 from 140 seats. This paper examines the young voters’ voting patterns to determine the significant of this bloc of voters as both coalition parties were trying to get this inscrutable voters, comprised 40% of the electorate. 12,912,590 registered as voters and the 40% belong to the 21 to 39 years old age group. Before the election, almost 65% of them were labelled as ‘fence sitters’ who were mostly non-partisan and were seen as the deciders. National Youth Survey by The Asia Foundation indicated that the political thinking of the youths in Malaysia are not static but have changed accordingly. This new shift allows this paper to discuss the position of the youth in Malaysia’s 13th General Election: which party benefit from their role and whether youth were the deciding factor or kingmakers in Malaysian politics as reflected before the General Election.
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia’s largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between a Thai commercial bank and Tesco PLC, the world’s second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of sixty-five union members and refusal from management to further negotiate with the Linfox workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an account of the struggles confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

RC02-64.2

PANTUMSINCHAI, PENN* (University of Hawaii at Manoa, ppantum@hawaii.edu)

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the people. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009 dubbed ‘the world’s largest funding platform for creative projects’ (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask for donations for creative projects, Kickstarter puts the power in the consumers’ hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems to work yet there are some problems. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the ‘backers’ (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on the people on the production side of the projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or individual creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are also analyzed to provide a larger picture on the effectiveness of a possible future of consumer-sponsored production.

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the linkages between immigrant associations in voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

This paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be strongly based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

PAPAKOSTAS, APOSTOLIS* (Södertörn University, apostolis.papakostas@sh.se)

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shoving Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of “neighbors war against neighbors”, in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of a society that is argued to have been the reason for the absence of feuds between neighbors. As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random housework-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the ‘typical’ activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one - or the day after.

From the Global South to the Globe: Pathways to Participatory Budgeting

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In 1989, the city of Porto Alegre in southern Brazil implemented the world's first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States' (US) first experiment in PB in the city's 49th ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming). The goal was to find a way of bringing the mechanisms by which the decision of PB has taken place. For example, events such as the World Social Forum, where Chicago Alderman Joe Moore first learned of PB, may have played a considerable role in spreading PB beyond Latin America. But once PB lands on American shores, what kind of support is needed, who are the organisations that provide such support, and which actors from civil society and the state commit to building its success?

In this paper I consider the diffusion pathways for PB, in terms of both the information networks that spread the idea, and the support environment that makes its implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

JS-20.5

PAPE, MADELEINE* (University of Wisconsin-Madison, mpape@wisc.edu)

Participatory Budgeting in the US: The Role of Key Actors in Shaping Turnout

Participatory budgeting (PB) has largely been studied in the context of the Global South, with particular attention given to the case of Porto Alegre. Only in recent years has PB begun to gain traction in the United States (US), beginning with Chicago's 49th ward in 2009. While the PB projects in the US resemble in some respects the famous and similar structure of Porto Alegre, the many unique contextual factors suggest that the American experience of PB is likely to be quite different. A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as well as the expansion of associations in civil society. As PB moves north from the Global South, how is it being adapted, and how does outcome vary?

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to understand the actors that drive the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

Narratives Of Exclusion In The Discourse Of The Great Terror In The USSR

The Great Terror in the USSR of the mid-1930s was actually an implementation of a social engineering strategy aiming at exclusion of certain social, political, and ethnic groups by means of their extermination or isolation. This strategy was based on and partially produced by a very specific ideological discourse. Its key element was a semi-fictional image of the ideal Soviet society enclosed within multiple rigid and familiar structure of Porto Alegre, the many unique contextual factors suggest that the American experience of PB is likely to be quite different. A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as well as the expansion of associations in civil society. As PB moves north from the Global South, how is it being adapted, and how does outcome vary?

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to understand the actors that drive the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic

This presentation discusses the challenges experienced in using institutional ethnography (IE) in a context other than Global North. I discuss the challenges in attempting to translate both linguistically and culturally some of the important concepts of IE into Spanish and the culturally different institutional structures of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this presentation discusses some of the difficulties in owning a national study of the child protection system, when institutional structures were not clearly identified, and when institutional texts were not clearly defined outside the legal discourse –Child welfare Act. The team of researchers used different IE means of data collection: 1) Mapped out the "fluid" structures of the child protection system working toward the protection of children and youth; 2) completed textual analysis of the rules and regulations –or lack of; 3) completed six months of direct observations and finally interviews of different actors within the system. What characterize the child welfare system in different provinces in Canada is a highly regulated and clearly structured system with standards of practices. What characterized the child welfare in the DR is relations of constant flux where practices were not based on any written forms of protocols of practices, but in personal experience and political influence of those engaged in the protection children and youth.

Since the team of researchers are now engaged in new project both in the Dominican Republic and working toward future projects in other countries of the Caribbean and Central America, the questions of applicability and universality of IE outside the Global North becomes very important.

Hidden Ethnic Inequalities. a Possible Global Educational Exploration Using PISA

The international educational evaluation programme PISA analysis the variances of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social background can be overcame. In the PISA framework educational opportunities are distributed equally if the student's educational achievement is independent of own family background. Based on PISA reports one can have a detailed picture about the school integration of migrants, the factors which have impact on their educational outcomes.

It is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some countries the results are presented following the (regional) minority language of test (e.g. Belgium, Spain, Canada), however a comprehensive analysis of native national minorities is failed.

Using PISA databases one can gain some relevant information about national minorities' school outcomes (in at least 20 countries). By a crosstabulation of the language spoken at home and of the language of test (state language or minority language) one can distinguish at least three main students groups: minority students who learn in their mother tongue (language spoken at home: minority language) and minority students who learn in state language, and majority students (who learn in majority language, of course).

Having these students subgroups one can test two basic research questions: 1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnic terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.

The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of "overmanagerialization of academic work" (Todt, et al 2013). Academics' programs that continue to engage on programmatic issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. “Internationalization” of programs has become a buzz idea that most universities in North America are pursuing, but the question remains “What kind of internationalization? And who is benefiting from this process?”

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an “international Youth Right project” during the past two years. The author discusses the steps taken to textually transform the “realities” of the everyday experience of youth advocating for the protection of their rights into textual instruments of control -financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different “project managements processes” required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

SEMI"SIS Y Procesos De Construcci"n De Significado EN La Prensa Digital Colombiana

La adaptación de los medios de comunicación a las dinámicas de la globalización tienen repercusiones sobre los procesos de producción de significado. Las transformaciones han propiciado formas de interacción comunicativa, sustentadas en los valores de la globalización. Esta manera de construir el significado tiene distintos de efectos sociales que repercuten, en la interlocución y las formas como la ciudadanía construye criterios para participar de la vida colectiva y democrática. Esto es relevante en países con industrias culturales monopólicas y oligopólicas que centralizan el proceso de producción y difusión de la información, y que fomentan lógicas de consumo en lugar de formas de participación directa en los asuntos públicos.

Se propone explorar las formas como la prensa digital construye interacción a través de la organización de las páginas web. Se reflexiona sobre el formato, el componente multimedia y la multimodalidad en los procesos de producción de significado. Se identifican las formas como gráficamente se construyen marcas de deíxis, orientadoras del proceso cognitivo y mecanismos de construcción y reproducción ideológica.

El corpus de esta investigación son los print de las páginas web de inicio del periódico ElEspectador.com y la revista Semana.com. El corpus se toma el 1-08-2013, tomando como punto de referencia el conjunto de recursos de interactividad que se apropian para construir significado, con el fin de identificar cómo se propone la interacción comunicativa entre productores discursivos y usuarios-lectores.

Palabras clave: medios de comunicación, formas de interacción, multimedia, multimodalidad

Precarious Politics: Struggles Against Insecurity in the Global North and Global South

My discussion will complement Standings' general analysis by focusing on the collective struggles of two insecurely employed, low-income groups at opposite ends of the globe: low-wage immigrant workers in California, United States, and citizens living in poor communities in Gauteng, South Africa. Both groups compensate for their lack of economic leverage by organizing around demands for recognition, dignity and inclusion. Because these demands are largely directed towards the state, their struggles for economic survival become entangled with struggles around citizenship status. These cases affirm Standing's emphasis on the importance of citizenship and recognition, but paint a more optimistic vision of the precariat's capacity for struggle, and underscore the need for greater attention to differences between the Global North and Global South.

The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restored and legitimized. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples’ everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol (conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizen the fruits of the economic development by the Chaebol and supported the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol's construction companies and ‘Apar’ became a typical dwelling form of middle class in Korea. The middle class people dwelling in the ‘Olympic village’ invented their own consumer culture and lifestyle. That is, ‘distinction’ in Bourdieu’s term began among the citizens.

The middle class's everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college/university in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collect in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth's work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(university) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering second labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)jentry and exit labour market. Especially, it is distinct between Seoul*male group and Non-Metropolitan areas*female group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by gorup caracteristic.
(WWA), I will discuss some of the challenges and key issues of cultivating international solidarity among women workers in different countries. WWA is a women's group in Korea that provides training for grassroots female activists in Asia such as worker-to-worker exchange, capacity building trainings and political education on issues such as gender inequality. The programs are carefully designed in advance to meet the needs of participants as much as possible through pre-visits and pre-surveys. For example, Chinese workers visited Korea to learn and discuss issues related to organizing women workers in 1970s and 1980s, which they could apply to their current organizing efforts. The training programs, which consist of workshops, field visits and intensive discussions in participation methods, have prioritized the continuity of participants over a series of trainings which take place over a 7 to 9 month period. During this period, participants are encouraged to exercise training contents and to bring their experiences back to the next training. Language barriers have been one of biggest challenges. But the programs always provided translators and utilized focal persons for in-between communications.

Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support

Very low fertility is regarded as a serious social concern in South Korea. Korean government has contrived diverse policy approaches to provide various incentives for reproductive behaviors. More or less, the public response to low fertility tends to be basically pragmatic framework of rational choice and assumes that reducing the constraint and cost for reproduction would increase fertility rate. In this regard, the new government of president Park Geun-Hye pledged to provide financial support for child birth and education more extensive than ever before. Setting aside the question whether the promise could be fulfilled given the limited budget, the question of how to achieve the intended policy outcome without proper checks to the endlessly rising cost of reproduction.

Instead of the individual rational choice, this paper proposes a structural and historical perspective on the demographic transition and proper policy and practices. In this regard, this paper examines the origins and development of the fertility decline in South Korea. Fertility decline has proceeded in complex rationalities on which people felt responsible for their own destiny and family, such as the Malthusian ethical check. But also the strong desire for material wellbeing and preferred children’s success contributed to the strict birth control and ignorance for unwanted births.

Life History and Family Changes in Korea and Japan

This study examines important characteristics of family changes and modernities embedded in the life history of Korean and Japanese elders born in the 1920s and 1940s. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elderly people’s own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family in origin, education, experiences of adolescent, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders’ willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elders. Modern construction of patriarchal family and its change are compared. In regard to the period of childhood and the youth, the mixture of kinship and modern rearing, gendered education, and influences of imperial war and Korean war, diaspora and repatriation were interpreted. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.

Making“Koreans” in Japan: Policy, Category and Negotiation

Japan is known as one of the most ethnically homogeneous countries in the world, where the population of registered foreign residents remains less than two percent. Having their origin in Japan’s colonial rule in early 20th century, Koreans have been a typical ethnic minority in the society. Regarding ethnicity as fixed components of society, sociological inquiries on ethnic minorities in Japan have treated Koreans as one of the explanatory variables in construction of racialization, exclusion and identity in Japan. This paper examines how ethnic/racial category of “Koreans” in Japan was re-defined through postwar immigration policies formed by both Japanese Government and Occupational Forces just after the Second World War. In dealing with migration from Korea, Japanese government developed immigration control system and alien registration card, which was a crucial ID card for foreign residents after the issue of the ordinance, inherited the registration system that controlled migration during Japan Empire period. From the interview of former “illegal” migrants from Korea, the following can be pointed out; they made the best use of the knowledge and “common sense” which enabled them to obtain their legal identity, alien registration card, which defined them as “Korean” also thus “foreigners”. In fact, most of the “illegal” immigrants who had lived in Mainland Japan for years before the liberation of Korea, and such migration history and knowledge of Japanese society enabled them to negotiation with Japanese as well as their representation of self in everyday life as “Korean”.

The Structured Dynamics in the World-System: A Network Analysis of Trade Patterns 1985-2004

The purpose of this paper is to analyze the hierarchically structured dynamics of the modern world-system using the network analysis. While the modernization theory presumed that the increase in international trade lead to economic growth for all the participants, the world-system perspective argued that there is persistent underdevelopment among the Third World because all the nation states participating in the world economy are unequally structured. These conflicting perspectives have continued to debate the matter of development. Of all the researchers concerning international relationship, those who used the network analysis did make a great advance in empirical field due to the relational nature of the world-system. However, previous studies have shown the static characteristic of the network of the world-system. In this paper, using bilateral trade data of Standard International Trade Classification(SITC) over 133 countries, we focus on the dynamics of the world system; the range and effects of the international division of labor depend on the sort of commodity. We used three commodities of SITC over 20-years for making clear our research question. We confirmed the main theme of the world-system perspective; a) The relationships between the core were denser than the periphery, b) The semi-periphery acted as a broker mediating the core and the periphery. Also, we found that there are differences among trade commodities in the world-system; a) Machinery(SITC-71) had been transmitted from the core to the periphery, b) Plastics and synthetics(SITC-58) maintained their superior status as the core industry, c) Footwear(SITC-85) showed secondary transmission and division of labor in the periphery and semi-periphery. This dynamics in commodities need to be more sophisticate argument in the field. The long-term changes in the international trades explained how the nation states were structured and also fluctuated by their structural position in the world-system.

Social Patterns of Energy Consumption and Lifestyles: Towards a Low Carbon Society? a Study in Chilean Society

The growing demand for primary energy consumption in many Latin American (LA) countries is carbonized raising a challenge to move towards low-carbon economies. Promoting social patterns of low-carbon energy consumption involves analyzing the lifestyles associated with the current energy consumption. Indeed social patterns of primary energy consumption (lighting, cooking, heating / cooling and transport) are associated with lifestyles. In this sense, according to the thesis of Parshall (2000) environmental pro would be more typical of affluent societies, typical of a post-materialist era. Following this thesis
social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconomic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

'Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters'

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject's on those who purport to be their masters. With this reformulation of Spivak's classic question, I set alongside the anthropology alluded to by a version of James C. Scott's book title from 2008, the paper focuses on the subaltern's alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of 'power over...') and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised 'over' them.

How can a 'power to... be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of Indio, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zeubravel’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes toward more sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizen’s deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria following the 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from violence.

Disaster provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring men’s interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, America and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected improvement in support ratios.

The results show that mortality improvement has the greatest effect on support ratios in Japan and in East-Central European countries. Anticipated mortality improvement is of far lesser significance to Northern and Western European and English-speaking countries. The paper discusses the dependency of the estimated effects of mortality improvement on support ratios on the assumed levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing the processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social embeddedness of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal country that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

PARVEZ, FAREEN* (University of Massachusetts at Amherst, parvez@soc.umass.edu)

Rio Museum of Art in Times of Trouble

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of exhibitory institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the emergence of a shared project. To think about these issues, I have been investigating the debates and controversies and to build consensus around the concepts of modern, contemporary, and a global (and / or creative) city. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city’s image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

PASCALE, CELINE-MARIE* (American University, spascale@american.edu)

Fukushima, Tsunamis and Earthquakes: The Meanings of Risk in the 21st Century

The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daiichi nuclear reactor failed in the face of a combination of natural disaster and human error that resulted in local devastation, national trauma, and global consequence. In a global landscape, the representational practices through which the events of Fukushima have gained meaning are central, both within and across national boundaries.

The representational practices of major media outlets gain even greater hegemonic significance when travel to such catastrophes is restricted or complicated by the catastrophe itself. Representational practices not only produce specific forms of knowledge, they also construct what comes to be understood as legitimate forms of inquiry.

In the United States, the presence and meaning of “risk” in relation to Fukushima reproduced very specific relations of power/knowledge. This paper examines over 2,100 articles about the catastrophes at Fukushima published in 4 major U.S. media outlets between March 2011 and March 2013. The analysis includes articles from two newspapers, the Washington Post and The New York Times and two nationally prominent blogs, Politico and The Huffington Post.

The representational practices that construct “risk” cannot be fully understood without asking “risk for whom?” and “risk to what?” Using a close textual reading and poststructural discourse analysis, the paper deconstructs the representational practices that construct “risk” for plant workers, the general population of Japan, economies, ecosystems and energy resources.

Among the many consequences of the increasing globalization of risk, is the reality that the presence and meaning of “risk” will continue to be highly mediated. This paper contributes to the discipline through nuanced discussion of representational practices and the increasing globalization of risk. It suggests implications for social theory and social research more broadly.

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed on differently situated Palestinians as boundaries for research and to assume that these imposed divisions are the most salient factors in the everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices to the negotiation of border-limited personal and political affiliations. Second, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.

He Is Not Clean: an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores how different forms of political violence within the modern state's security agencies can shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting “collaborators” (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents' reputation, and support for the physical expulsion and even violent death of alleged “informers.” City residents experience political informing as a form of “symbolic dirt” that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predicaments of former “collaborators” who were relocated by the state's security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation across differently situated Palestinian Arabs, this paper aims to theorize the role of the state's security apparatus in shaping emotional relationships and responses among targeted people.

Colonial Legacies, Low and Discourses of Inequalities. An Analysis of Poverty Alleviation

The paper uses the example of a revolutionary poverty alleviation programme (which is now given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a large scope to comprehend the various types of cultural forms and processes that organize inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further frozen a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group-based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehension of these differentiated and cultural practices as they remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary interconnections that manifest differently in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the 'Bologna process'.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four- to six-years courses - to a new sequential system of 'bachelor/master/doctoral programme'. Therefore, bachelor/master reform have been accompanied by the introduction of long courses ('Ciclo Unico'), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelor's degrees are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT- 2011 'Survey on the transition to work of University graduates' to examine the early labour market returns of young graduates from bachelor's, master's and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor's graduates enjoy higher wages and rewarded occupations than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master's programmes.
Gender Inequality and Women's Health: Indian Perspective

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk of diseases in their lives are early childhood and reproductive age inadequacy and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are major causes for higher female mortality between ages one and five and high maternal mortality rates. The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbirth and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assisants in proportion of moderately skilled workers by automate the low status, women are not involved in decision making including use of contraceptive, family size, etc.

The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

Globalisation, Technology Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automate the low status, of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology up gradation in their plants in the recent past, employing organizational survey schedule. The findings show that technology up gradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce. Another outcome of this development is steady increase in proportion of moderately skilled workers by automate the low status, of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology up gradation in their plants in the recent past, employing organizational survey schedule. The findings show that technology up gradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon’ble Supreme Court, all the citizens are to segregate the garbage at source. The waste generated in Kolhapur city per day is 150-165MT. The contract was closed in July 2011. KMC had given a contract of collection and transportation of solid waste to Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. who was not engaging in the solid waste management process and the contract was not successful.

KMC had then given a new contract to Kolhapur Municipal Corporation to Zoom Bio fertilizer Pvt. Ltd. who was doing decentralized composting. But as the company went into liquidation, the project was discontinued. And this is the reason why this project was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. The contract was closed in July 2011. KMC had given a contract of collection and transportation of solid waste to Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. who was not engaging in the solid waste management process and the contract was not successful.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc. The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e. the drift toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to misgivings of western industrial technologies and their non-sustainability. Noteworthy that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations that are based on traditional and indigenous knowledge systems and lately to transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGOs) for which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives. It examines this phenomenon in terms of its social movement body and the applicability of different theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha has been very much supportive to make the movement wide spread. At the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols” aims to investigate the existence of Chineseness in Thai society focusing on their cultural patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese traditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, Gods Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation relate to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can then ‘colonise’ other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure all while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance: - in the funding structure of the public accident insurance (classifying companies into risk groups) - in research priority setting and prevention campaigns of mutual trade associations - in inspection strategies of the Lander (risk-rationalizing the use of limited control resources) - These fragmented and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misrecognised form of risk governance. To enlighten this blind spot, this paper examines the role of territorial self-regulation by the sixteen Lander in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going economi
crisis are widening the gap between upper and lower strata of urban society further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of democentric and community-oriented police practices in urban areas (1) where mi-
nority people live. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continen
tal European Civil Law societies can be observed very clearly as a common de
nominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

The Struggle Against Injustice: Towards an Alternative Theory of Normative Power

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of interna
tional actor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify
certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinctiveness as a foreign policy actor, but this paper is based on the premi
se that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Us-
ing qualitative discourse analysis (Hansen 2006, Hopf 2002, Laclau 1991, Tofring 1999, 2005) and taking the EU as the model case, it then looks at the normative as
pects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic disc
ourse, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.

In Search for Collective Identity, the Production of Estonianness By Means of Choral Singing in Contemporary Estonia

This presentation explores the role singing and performance of national song plays on the (re-) production of Estonian national identity (Estonianness). Start
ning from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern Europe, most scholars have assessed Estonian nation-building as being preva
lently ethno-national (Paldus 2005). In particular, choral singing tradition that dates back to the late 19th century is reconstructed as a vocabulary of historicism interpreted through the prism of nationalism (Bohman 2011). This paper initiates a critique to the above ap
proach by introducing three new dimensions: globalization, Europeanization, and multiculturality. Informed from a structuralist constructivism (Bourdieu 1989) it combines analysis of social structures and institutions with perceptions of in
dividual social actors. The main focus is on power relations incorporated into singing as a tool for identity production. In particular, it will be explored how the singing tradition responds to identity tensions between ‘ethnic Estonians’ and ‘non-Estonians’, namely Russian speakers who constitute 26% of the population (census 2013). Considering singing tradition (1) in a network of social spaces – national and supranational, as well as (2) from the joint perspective of individual experiences and objective structures such as the state, allowing us to examine collective identity building mechanisms in post-socialist context in a nuanced and less deterministic way.

The Immigrant Childhood in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is dis
tant from the essential idea of the childish being, and expressed in different ways across the society in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open genera-
tional and gender relations of power with other actors, both within their fami
lies and in other social areas. Nevertheless, that social role is not often recog
nized in society and in academics. This is due to the adultcentrism that discrimi
nates against them because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2010).

This study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continental European Civil Law societies can be observed very clearly as a common de
nominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

Doing Social Sciences on the Military Field: A Special Operation?

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations and their effects - between:

- the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)
-
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)

- the researcher’s academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland’s most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers, and to see what types of issues were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors, and that the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodology to the local accomplishment of the social with a Marxist insight into people’s active participation in extended social relations that can ‘overpower’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography in Ireland now in a high level headquarters, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcription is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to explore within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possi-
The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has not been accepted or is definitively not regarded as a trustworthy source. To examine how trust between practitioners and users emerges in clinics of alternative medicine, where practitioners are self-regulated, the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes. For health policy makers, it is of utmost importance to understand how trust emerges in the treatment encounter.

PEDERSEN, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)

The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospital management are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and maintained in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: "KRAM screening & intervention", that is registration and detection of patients' so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven.

Conflicts within Finance Capital and Implications for the Climate Crisis

Particularly in the era of financialisation, the logic of financial capital is focused on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on climate issues while other parts eschew them? What motivates climate-interested investors and what is their potential for addressing the climate crisis? We address these questions through a combination of qualitative analysis of interviews and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.
Performance Consumptions, Sleep Management and Risk Perceptions

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about "healthy lifestyles", sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement. The investment that shape consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weight between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. While transnational experiences may signify for a music culture, which travels between places and spaces, are discussed through case studies. Bolivian/Andean urban folk music, which contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied. I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of their identity formation will be described. Aspects about relationships between Andean popular music, Latin American music and Bolivian music, stardom and audiences are addressed. Questions about defining identities and mixing influences are considered. I also try to show how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as how relationships between the local and global music culture and new as well as old identities, articulated on the Internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces and a sense of belongingness in cultural activities of diaspora.

PELLIZZONI, LUIGI* (University of Trieste, pellizzoni@sp.units.it)
Farewell to the Heuristics of Fear? the ‘affirmative’ Turn in Environmental Social Theory

Some of the most interesting developments in social theory are presently occurring at the cross-roads of environment and technoscience scholarship. The paper aims to interrogate two especially salient, and remarkably overlapping, trends. The first one is the return of ‘materiality’. This trend has been around for some years especially in the form of an expanding ‘sociology of practices’ Yet more recently new forms of ‘naturalism’ have been flourishing, which mark a sharp break with the long predominance of cultural/discursive constructivism, without reverting to traditional realist cases. Significant examples come, more than from environmental sociology strictly speaking, from post-structuralist orientations in STS, philosophical anthropology and feminist theory, which converge on accounts of the reality of matter in terms of fluidity of organic and inorganic life or of the multiplication of (human much post-humanist) nature. The second trend is a reworking of the implications of risk and uncertainty. Whereas, for years, awareness of socio-environmental complexities led to a plea for ‘technologies of humility’, now an emerging tendency is for taking ‘braver’ standpoints by which, if uncertainty cannot be avoided, then it has not to be feared but rather it has to be ’ridden’. This is signalled by burgeoning narratives and techniques of vision, anticipation and resilience, for example as regards ‘nano-futures’, human enhancement and climate change. If the ‘heuristics of fear’ has been for decades the trademark orientation of most environmental social theory, this turn towards ontology-focused affirmations questions the need to find endpoints for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obfuscates a major socio-political, perhaps even an anthropological, transformation?
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

*Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia*

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consum- ers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

*Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific*

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting “care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a “care drain” in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

*Living in Transition: How Returned Women Migrant Workers Re- Incorporate Themselves into Rural Origins in China*

China's internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China's development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state policies. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their liminal identity by working on “ruralizing” some "modern" values while others are “modernizing” the "rural" values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu' theory of practice, it puts forward a multi-field perspective in understanding these returned women's identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.

*From Motherhood Penalties To Husband Premia: The New Challenge For Gender Equality and Family Policy, Lessons From Norway*

Given the key role that processes occurring in the family play in creating gender inequality, the family is a central focus of policies aimed at creating greater gender equality. We examine how family status affects the gender wage gap using longitudinal matched employer-employee data from Norway, 1979-1996, a period with extensive expansion of family policies. The motherhood penalty dropped dramatically from 1979 to 1996. Among men the premia for marriage and fatherhood remained constant. In 1979, the gender wage gap was primarily due to the motherhood penalty, but by 1996 husband premia were more important than motherhood penalties.

*Relocation and Perceived Social Support Among Elderly Persons in Rural China*

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address environmental and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and daily life. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support.

This study addresses these issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has no impact on perceived support. However, poverty-reduction and disaster-related relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support. These findings support the view that relocation reduces older adults' perceived access to social support. This is particularly evident with regard to poverty-reduction and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.

“If You Have a Giving Heart”: The Framing of Post-Disaster Need and Donations

The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguin-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman’s (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

PEOU, CHIVOIN* (University of Melbourne, peouchivooin@gmail.com)

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has entailed a new context for youth labor market and mobility. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduate workers, and by a dual youth policy discourse of promoting the entrance of Cambodian youths into the labor market and protecting the ‘at-risk’. Based on a study of the life experiences of young male and female Cambodian migrant labor workers (n=31) in Cambodia in 2011–2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an altered structure of inequalities broadly tantamount to the emerging working and educated middle classes.

PEOU, CHIVOIN* (University of Melbourne, peouchivooin@gmail.com)

Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia

The generalized ‘late’ modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial ‘normal’ life course. This paper attempts at a complex exploration of the embeddedness of opportunities and risks in the individual’s social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the varieties of modernity (Eisenstadt 2000; Schmidt 2010) to make a case for a more specific examination of change toward a modern society. I will then reconstruct the processes of Cambodian transformation and how they feed into the opportunities and risks for new life courses. A theoretically informed but empirically grounded typology of biographical management, based on a study of the life experiences and expectations of different social groups of Cambodian young people (n=51), will be used to illustrate how the opportunities and uncertainties in the new life course are differently managed based on socio-cultural and individual resources during the transition into the labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both new risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.

PEPO, FERNANDO FRANCO* (Centro de Estudios Avanzados, Universidad Nacional de Córdoba / CONICET, fepopo@fibertel.com.ar)

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence”, “gender identity”, “gender equality” among others appear everyday in mass media. Such discourses proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call “gender studies” was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this period of ontological, theoretical and methodological renewal. Therefore, in this paper, I am looking forward to: 1) exploring the origins of the category “gender” as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).

TOMASZEWSKI, WOJTEK (The University of Queensland)

Who Settles For Less At Work? Subjective Dispositions, Job Characteristics, and Job Satisfaction

In recent years there has been growing interest in individuals’ self-perceptions of their wellbeing on the grounds that these complement well-established objective indicators of wellbeing. Wellbeing in relation to work, captured for instance by measures of job satisfaction, has not been an exception. The discourse on work in post-industrial societies has shifted from perceiving labour as a means for subsistence to conceptualising it as an important aspect of individuals’ identity and self-realisation. Consequently, the utility people gain from their work has become an important feature of modern working life and subject to increasing academic attention. However, individuals’ assessments of this utility depend on objective circumstances; they experience it at their jobs and workplaces and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that uncovers how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of workers. To achieve this, we use data from a large-scale matched employer-employee dataset covering the UK - the 2011 Workplace Employment Relations Survey (WERS). Following reference group and relative deprivation theories, we expect to find significant differences in the way in which individuals with different socio-demographic characteristics rate the same objective working conditions. More specifically, we expect female, young, elderly, and migrant workers to be more satisfied with their job arrangements than their male, middle-aged, and UK-born counterparts, respectively. Any such findings would have important implications for how subjective evaluations of working arrangements are to be collected and analysed using survey data and used to inform evidence-based policy.
Emotional Control in the Financial Marketing

In the scope of a major research program about emotional normalization in the contemporary capitalism, I would like to focus on the emotional normalization of the financial investor. By analyzing Behavioral Economics texts about the emotions of the economic man in the financial market, I pretend to show how this bibliography: 1) explains economic crises as consequences of emotional based decision taking, an irrational behavior of the economic subjects responsible for breaking the market equilibrium; 2) normalizes emotions of the investors and offers self control techniques; 3) teaches how to predict and to use the emotional conduct of others investors to obtain economic profits. This bibliography, recognizing the investor as a emotional being, converts emotions in a professional competence that requires previous training to develop human capital. In this way, emotions are regulated and subordinated to a economic logic.
the latter would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of social change. These are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

**Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland**

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business model” and the highlighting of entrepreneurship related subjects in the universities’ curriculum and the urgency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subject to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

PÉREZ-AGOTE, JOSÉ M.* (Public University of Navarra, jose.perez.agote@unavarra.es)

**Mobilization and Performance in the Public Space in 2011: A Comparative Approach**

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidences of social change. Young people who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off social and cultural change, is generated.

These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (JMJ/YWD). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, means of symbolic production, mise-en-scène and power.

PÉREZ-CASTRO, JUDITH* (Juarez Autonomous University of Tabasco, pkjudith33@yahoo.com.mx)

**The Values Of Scientific Ethics: A Way To Face Inequality**

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subject to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitiveness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how these results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the search to the individual, communities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

**Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?**

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Duller et al, 2103) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers’ everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers’ work relates to the influences and interests of others by tracing the constitution of social relations disclosed in relations that emerge between teachers’ perceptions of practice and their enactments. In doing so, the being of the social comes into view.

IE’s recognition of being in practice is acknowledged. To better understand the impacts of these ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger’s (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers’ work.

Analysis of research data offered by practising teachers, confirmed textual mediations in everyday practice. It revealed, too, teachers who practised circumspectly. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

*Women’s Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries*

This paper examines the critical relationship between women’s education and infant mortality. This relationship is a key to the demographic transformation of the global South. This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationship between women’s schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women’s education influences infant survival in the global South. The study reveals evidence that the most powerful societal covariates determining the relationship between infant mortality and women’s schooling, are income poverty, child health services and breastfeeding. Women’s education explains 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance. This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women’s education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global South.

PERLSTADT, HARRY* (Michigan State University, perlstadt@msu.edu)

*The Making Of Obedience To Authority: From Binet To Asch To Milgram*

The design of Milgram’s Obedience to Authority can be traced back through Asch’s classic experiment on conformity to Binet’s experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experiments which is not guided by theory or hypotheses but consists of carrying out systematic variations to the experimental design of a procedure. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on a model board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, “Are you really sure? Is it not the next line?”. In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects. The instructions were varied by the experimenter and the subjects were asked to compare each other to be the first to give an answer. Years later Asch (1951) would combine Binet’s two experiments in his classic study of conformity to groups. The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch’s group conformity and Milgram’s (1974) researcher/experimenter prodding the teacher/learner “to please continue” and “the experiment requires you to continue.”

HOFMANN, JULIA* (Johannes Kepler University, julia.hofmann@jku.at)

*Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis*

Trade unions and labour movements have emphasized solidarity as a universal principle based on common interests of all workers, regardless of borders and boundaries. Despite this rhetoric they have primarily organised national or sub-national collectivities and contributed to establish common identities and moral norms in these contexts. Modern notions of solidarity are thus firmly established at the national level, while at the European level liberal market principles and social indifference predominate. This prevailing social indifference has been challenged by at least two developments: (1) the introduction of a common currency, and (2) European economic governance in response to the Euro-crisis. Both developments have led trade unions to transnationalize their strategies: (1) As monetary integration abandoned the option to devaluate currencies as a strategy to improve international competitiveness, wage setting institutions have come under pressure. This in turn induced trade unions in some sectors to coordinate their wage bargaining policies across borders. (2) Far reaching austerity measures in EU countries had a big impact on labour market and social policies - trade union strategies to respond to these have lead to organizing and mobilising resistance at transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest movements) is guided by the following question: What constrains and opportunities have trade unions in Europe encountered in their strategic attempts to create and maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classic sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Vobruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

PERO, DAVIDE* (University of Nottingham, davide.peronotttingham.ac.uk)

ALBERTI, GABRIELLA (Leeds University Business School)

This paper discusses collective action of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organising initiatives in the cleaning sector such as ‘The 3 Cosas Campaign’ and ‘Justice for Cleaners’ whereby migrant workers have been struggling for more dignified and enable working conditions with the support of their communities and within and without formal and recognised trade unions. This discussion will critically consider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organizations, focusing on the tension between the class-based and so called ‘ethnic’ identities of the diaspora groups under study.

The paper aims to contribute to the theoretical debate on how to apply the framework of intersectionality (Yuval-Davies 2011) to the study of migration and labour movements. Inspired by recent critiques of the resilience of methodological nationalism (Glick Schiller and Caglar 2006; Glick Schiller 2008), our examination will question prevalent theorizations of collective action and migrants’ forms of political engagement persisting in social movements and migration studies. It will also question the ethnocentric and institutionalist focus of traditional industrial relations literature highlighting the benefits of an interdisciplinary approach to the study of migrants’ politics across the literature on migration and labor relations.

PEROTTINO, MICHEL* (Charles University, perrottino@fsy.cuni.cz)

Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between ‘old’ members and experts proposing other resources and legitimacy.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of a less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intra-extra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately useable without being “real” members. Secondly this concurrence of intra-extra party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

Internet Chess and Chat As Interaction Order

Abstract. While playing Internet chess and at the same time using a rudimentary chat function with fixed lines, I have also been observing the chess and chat as a rudimentary interaction order. In this paper I will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Ewing Goffman. My point of departure is that individuals interact with each other whenever they meet, but under different circumstances and those circumstances

conditions the interaction. The paper aims at answering the following research question: How can the interaction order that is developed on an Internet chess site be understood given that the social interaction between the chess players is restricted to the game itself and to a rudimentary chat function? The paper contains a detailed description of the chess play and the chat function at an Internet chess site. What possible interpretations can, for example, be made of one player’s offer to end the chess game with a draw? And, how can one understand the expression “Oooops!” in the chat given the different contexts that present themselves in a chess game? And, finally, how can one use Goffman’s division between expressions given and given off to understand the two mentioned and other interaction situations in Internet chess?

Socio-Geographic Effects On Higher Educational Choices

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can’t be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constraints, often understood as habits. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of blue-collar jobs. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are applying and attending low prestige higher educational programme at local or regional universities despite the geographical possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a sociogeographic effect on higher educational choices that makes it possible to talk about a sociogeographic habitus, collective in the same way as class-habitus but also unique in relation to other geographic areas. In this paper this is discussed in relation to in-depth interviews with students representative to the above described group.

The Ontology Of The Global City-Regions

The ontology of global city-regions.

The global world is made of hundreds of city-regions interlinked and networked. Yet the ontology of the global city-region is still to be defined. It includes a different substance than the XX° century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global then in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomerating substance of global city-region is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory.

The transference of Macao’ administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 80’s and 90’s of the XXth century the end of a migratory experience in a very specific ‘context’, frequently characterized as being almost ‘colonial’.

Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants
who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this ‘new’ political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the ‘colonial’ period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - it is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identitary terms) highlighting the continuities and changes observed.

Portuguese Youngsters on the Move after the Macao’s Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have performed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)
The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2-behavior of self-regulated behavior were used to estimate households’ carbon emissions in the field of residence, mobility and nutrition. Besides site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the “Schwartz value inventory”, people’s perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or “milieu” segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequity encompassing the ‘subjective’ dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households’ income, thus trying to identify different “social milieux”, i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

PETERSSON, FRIDA* (University of Gothenburg, frida.petersson@socwork.gu.se)
The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society’s most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients’ lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals’ talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinical practice. For example, at the clinics, “drug-free” and “drug-abuse” are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that these substances should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a “drug-free”, “normal” life with methadone, as long as it is distributed by the clinics and ingested according to the staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as “drug abuse”, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staffs’ arguments or “narratives of resistance”.

PETTERSSON, KARINA* (Linnaeus University, Sweden, karina.petersson@lnu.se)
How and When Belongings and Living Conditions Is Made (In) Visible in School

This paper explores how and when principles of categorizing groups related to residential area and living conditions, are present and are of importance in educational and social relationships in school practice. The background to the study is that on the one hand, there is openness and a welcoming of immigrants in Swedish society and in schools, for example, through policy and political objectives. On the other hand, there are clear structural differences and segregation in schools related to the area affiliation and ethnic origin. Interest in gaining an understanding of explanations for the ambiguity that emerges between policy and what happens in the school’s daily life have contributed to the study’s aim. The aim of this study is to investigate and analyze whether, and if so, how and when students in a secondary school in a medium-sized town in southern Sweden, are identified and categorized in relation to the belonging residential area and living conditions within education and social relationships, as well as its relevance for pupils in school practice. The focus is on how the changing demands and social relations are managed, organized and perceived by different actors, when school is becoming a common arena for students from different areas and with different living conditions. The analysis is based on an ethnographic study based on observations, interviews and informal conversations in school practice. The study’s result show that pupils belonging and living conditions is made visible and contributes to categorization in certain contexts in school practice, while it is made invisible to categorization in other contexts, where other factors connects pupils to a group or network. It is also found that the different categorizations overlap each other.

Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.

The research question is: “Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?”

The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readerhip. Secondly, through the method of qualitative content analysis we will focus on the connection between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

High Quality Education: Globalization and Problems of National Educational Systems

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the transformation of systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia. While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions and conditions. The Russian educational system is focused on the role of the State, while the United States system has a clearly defined role of the private sector. Both systems have developed for a long time and finally with mobilization or innovative types of development. But today, under the influence of globalization, we can state a convergence of educational systems in Russia and in the United States within the paradigm of a pluralistic educational system. Russia moves away from etatism, political monism to political system's pluralism which facilitates it to the political system of the United States.

World experience of the recent decades shows that in this area a flexible system of control (often direct and indirect in the form of influence) should be conducted where there is no rigid centralization and where the balance of governmental, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)

Abstract

The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readerhip. Secondly, through the method of qualitative content analysis we will focus on the connection between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless - very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture. In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive. The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

Corporate Social Responsibility Practice in Russia and in Western Countries

The aims of study is to determine the dominant practices of corporate social responsibility in Russia and to compare them with the features of the model of corporate social responsibility of business organizations in Western countries. This allows to quantify the nature of corporate social responsibility in Russia and to find the advantages and disadvantages of the domestic model of corporate social responsibility. The empirical base of the research was information on websites of 570 largest companies in Russia. In study it were examined sections of sites about the activities of companies in the field of environmental protection, social responsibility, advertising, etc. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. Content analysis of the data published on the Internet has allowed to identify three areas of social responsibility of Russian companies: operating in the interests of their employees, charitable initiatives and efforts to protect the environment. It was found that the presence of social responsibility in Russia is significantly different from Western models, due to the specific socioeconomic problems, philanthropic traditions, religious norms and the role of the state. The results can be used in future comparative studies of social responsibility of business in Russia and abroad, and to improve the efficiency of Russian business practices in the area of social responsibility and accountability to stakeholders.

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, and more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

PFADENHAUER, MICHAELA* (Karlsruhe Institute of Technology, pfadenhauer@kit.edu)

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care

Our main interest is the professional use of “social assistive robots” (Kolling et al. 2013). We call them “emotion simulating & stimulating robots” as they are designed to fulfill “experiential aspects of belonging” (Klein et al. 2013). Our empirical subject is a so-called Paro robot developed and manufactured by AIST, a leading Japanese industrial automation pioneer. Whereas this as interactive robot with highest therapeutic effect praised machine is getting usual in Japanese private households, in Germany it slowly finds its way into Elderly Health Care Institutions. According to that we are interested how the robot becomes embedded in the carer-resident relationship.

To which aim use carer the robot in their caring activities and routines? Which meaning is transferred with this special usage? Not only the singular performance but also the object with which the action is carried out is a carrier of meaning. However, not only the subjective sense but also the objective meaning of people, places, actions and material things recurs to interpretation (and interpreters). In terms of sociology of knowledge we are interested in the process of objectivation and institutionalization of technical artefacts which is embedded in the communicative processes of the distribution of knowledge. The robot as an in fact impresive technical artefact neither is a social actor or a “sociofact” but an integral and powerful part of social action with the potential to change culture (i.e. of Caring). According to that and in regard to the zoomorphic design of Paro which looks like a pet toy we are especially interested in the haptic use of Paro. As touch and institutionalization of anti-aging medicine in Germany shows in an exemplary way, change of care work can no longer be viewed as a change within a dualistic one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

The interviews show the profound impact of anti-aging on the individuals’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presentig oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

RC19-329.1

PFADENHAUER, MICHAELA* (Karlsruhe Institute of Technology, pfadenhauer@kit.edu)

Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with regard to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

Welfare states have established new, paid forms of semi-formal and formal care work within the family household. This change has led to an erosion of the boundaries between the two spheres. These new forms are also connected with a new type of social rights. It is argued that in order to capture this change appropriately, the social quality of care work can no longer be viewed as a change within a dualistic model; as a shift from private to public care, or as a formalisation of care. Instead it must be understood as a multidimensional change.

In the paper, a conceptual approach for analyses will be introduced. Moreover, it will analyse the development of the new forms of paid semi-formal and formal care work in childcare and care for senior citizens in France and Germany in a cross-national comparative perspective. Finally also it will explain the development with social change and cultural change.

RC25-440.2

PFADENHAUER, MICHAELA* (Karlsruhe Institute of Technology, pfadenhauer@kit.edu)

From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives

At least since the founding of the AAM (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way.

Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical Life plans for aging”.

The interviews show the profound impact of anti-aging on the individuals’ biographies. Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? And how is it possible to explain cross-national differences? The paper introduces the theoretical approach of the “gender arrangement” of the author as an explanatory framework for cross-national differences. This approach emphasizes the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actor’s constellations and action, which form the societal context for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European countries. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.
Over the past decades social inequality has grown in France, as in many other countries. Paradoxically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent clever disavowals and rephrasings to describe the structure of French society. However, these substitute discourses were soon gai-said by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had far-reaching consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

Women’s Empowerment As a Determinant of Fertility Change in Southeast Asia

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries who have experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women’s empowerment has not reached a consensus. Women’s empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women’s empowerment includes the percentage of women’s education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women’s holding manager’s positions. At individual level, women’s empowerment can be measured by women’s educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women’s empowerment. Most studies have been looking at women’s empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women’s empowerment and the framework of relationship between women’s empowerment and fertility changes will be reviewed. Furthermore, the current situation of women’s empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women’s empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women’s empowerment plays a role in the region’s demographic change.

Violent and Non-Violent Logics in Contemporary Greek Protests

The research is focussed on crisis ridden Athens as radicalisation becomes accentuated during economic and political turmoil. I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces: migrants, anti-capitalists, anarchists, neighbourhood activists, and radical leftists. From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and refections on violence performed by themselves and others.

In the case of Athens the consequences of increasing cleavages and precarisation by the ‘Euro-Crisis’ are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a hub for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and laterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper explores the ways in which class is or is not to be taken as a meaningful unit of analysis; the core social relationships in old age. The consequences arising from this include: a combination of globalisation and long-term economic change is restructuring society; second, the weakening of the idea of generations as a meaningful unit of analysis; the third, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

PHILLIPSON, CHRISTOPHER* (University of Manchester, christopher.phillipson@manchester.ac.uk)

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground for a number of reasons: the continued role of class in the construction of social identities and the increasing role of subjective conditions (or life histories) in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

Austerity and the University in Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst the government has been in power, there has been a sustained governmental policy to increase the participation of 18-to 30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

PIKARD, SARAHH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Strikingly, this #DEMO2012 had three themes: “Educate, Employ, Empower,” rather than only higher education and it was attended by far fewer demonstrators. This talk will analyze the social movements organized by young people against higher education reform since 2010 in Britain. It will focus especially on the 2012 demonstration, in order to ascertain to what extent it can be gauged to have been a failure. Drawing on interviews I made with protesters, as well as photographs I took of the demonstration, the talk will reveal that the different types of participants were very polarized about the best course of collective action to take. For example, the extreme-left wing radicals and anarchists accused the NUS of cooperating with the Government, whilst the NUS claimed the extremists were not focusing on the issues at stake. This lead to highly confrontational scenes during and after the demonstrations which detracted from criticisms of the Conservative-Liberal Democrat Government and its youth policy. Instead of uniting and fighting, the protestors were divided and ruled by Government cuts in an era of austerity and lack of social change.

This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participation in EDL actions provides young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of resistance’ in which heightened social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumscriptions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has enveloped the political system, the paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘reconcile all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3).

Institutional Contradictions and the Organization of Emergency Management

This paper provides an institutional analysis of Australian emergency management from the early twentieth century to the present and highlights the institutional contradictions that generate conceivable barriers for effective organization. Building on the literature in organization and management theory that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerges in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state. Since the 1990s, Australian emergency management organizations, like many other organizations, have attempted to improve the institutional performance and structure to pursue strategic goals, to meet performance objectives and to ensure accountability. The reliance on risk calculation and management has intensified in the aftermath of disastrous floods and fires in the early twenty-first century. These technologies of risk bring into effect markets that deal with the uncertainty of different objects such as water, fire, and society. Emergency management organizations are also tasked with the sovereign responsibility to protect the population, a task that is arguably at odds with the dynamics of markets. When the sovereign and entrepreneurial logics are elaborated in emergency management, risk can materialise in monstrous ways, well beyond the reach of formal organization.

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different ‘Bolivarian Missions’ offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been included, which represents an important gap in the literature that deals with the Venezu-
el case. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphant, consistent with the public discourse around the existence of the so-called “Mission Sucre”. This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many “Aldises Universitarios” that operate throughout the country’s regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

**PINEDA OLIVIERI, JESUS HUMBERTO** (University of Goettingen, [jesus.pineda@ocides.org])

**From Exclusive Meritocracy to Differential Inclusivity: What Has Changed in Venezuelan Higher Education?**

Since the beginning of the Bolivarian Revolution in 1999, a constant comparison between the so-called “4th Republic” and the rise of the Bolivarian Revolution has divided the history of Venezuela into two major periods. When it comes to the education system, since 2003 the government has implemented a variety of educational programs and a constant process of unprecedented expansion has taken place. At the higher education level, the system has been expanded through the municipalization of higher education. This process occurred in the framework of a political system that aimed at tackling social inequality and its educational repercussions. These reforms and initiatives worked under the assumption that the previous organization of the educational system was meritoric and exclusive. Although some official statistics suggest that the participation of students in higher education in Venezuela has been widened for all, I argue that the inequalities have not been addressed, given that the current higher education system is divided into two parallel systems of education with different quality standards and student conditions. This paper will reconstruct the creation of Venezuela’s Mission Sucre and will analyze the paradox of inclusion in the Venezuelan context from a sociological perspective using insights from Bourdieu’s work. I conclude that the implementation of a parallel offer to include students from disadvantaged environments or backgrounds may exacerbate the educational gaps, as well as, the social and political polarization in a system like the one under consideration. This analysis is based on my ongoing doctoral research and presents some reflections coming from the literature review, as well as my empirical work in Venezuela.

**PINNET, NICOLAS** (Université Paris Diderot - Paris 7, npinet@wanadoo.fr)

**Elements for a Grammar of Revolt: Comparative Sociology of the September 1991 Lootings in Kinshasa, Zaïre**

Popular politics and resistance, in Africa as elsewhere, take shape both through the ordinary (Asfet Bayat, Life as Politics) and the extra-ordinary. This paper focuses on one extra-ordinary case of popular unrest: the riots and lootings that occurred in Kinshasa, Zaïre (now Democratic Republic of Congo) on September 23rd and 24th, 1991.

Contrary to previous studies that focused mainly on the historical context, this paper sets the analysis in a broader context through a comparative approach. Drawing on both primary (media and testimony) and secondary sources, it intends to scrutinize these two days of lootings while confronting them to the mirror of contemporary Latin American riots: the Caracazo (Venezuela, 1989) and the Santiagueñazo (Venezuela, 1989) and the Santiagueñazo (Venezuela, 1989). This allows to delineate elements of a shared grammar of revolt: lootings always occur in a temporality of breach (Martin Breaugh), they are akin to carnivalesque because they are a breach not only because they are festively and because they momentarily invert the ongoing power relations; they oppose groups of actors whose positions on both sides of a social frontier appear with more accuracy during this carnivatic moment. In Kinshasa, the lootings supposed people who considered they hadn’t benefited from the distribution of resources and privileges made by President Mobutu Sese Seko, and those who benefit as having benefited from them. The discourses made by the protagonists claim that direct action was made both necessary and legitimate by social inequalities, injustice and deprivation, as noted by E. P. Thompson in a complete different context (“The Moral Economy of the English Crowd”, 1971). Finally, the collective violence unleashed in the lootings expresses a desire to put an end to a situation deemed unbearable – the generalized use of fire is symptomatic – and start things anew. This last point invites to take also into account, with Carlo de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Leisure and Family : A Mutually Supportive Relationship

W. H. Davies in his lovely poem ‘leisure’ states the wonder of a life worth living where one has no time for leisure, why we are so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand between the boughs and stare as long as sheep or cows. No time to see, in broad day light streams full of stars like skies at night. A poor life this is if, full of care we have no time to stand and stare.

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.

**PINNET, NICOLAS** (Université Paris Diderot - Paris 7, npinet@wanadoo.fr)

**Subaltern Tactics and Spaces for Decommomodation: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood**

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefebvre, Esprit et effect: Manuel Castells, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often make oneself feel as economic domination. In that sense, the subaltern political practices take notably practical form of tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper focuses on tactics devised by homeless people living in the area I’m engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especial ly telling case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of “free” food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).

**Leisure and Family : A Mutually Supportive Relationship**

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.

**Tu Casa Es Mi Casa: Squatting in Eastern Europe**

Cities have been the arena for social movements actions for long time, however with the recent changes in urban development (privatization of public spaces, reduction of public services, gentrification, etc.) recently there are more movements that focus on the city as the focal point of their activism. In Central and Eastern Europe, which is the ground of intensive introduction of neoliberalism the transformative processes are more intensive than in other parts of the world with intensive re-privatization, increment gentrification, rapid technological changes in social composition or the emergence of gated communities. Various social mobilizations and social movements are trying to oppose these tendencies and the squatting is the most radical amongst them. It is particularly interesting as it usually tries to combine down-to-earth problem solution (i.e. campaign to save a park or against privatization of a public space) with radical appropriation of space. The overthrow of the symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).
it is new and was desired and such movements are not deeply rooted and emerged in the last 25-30 years. This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squattting activists, made several participant observations and analyzed media coverage (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squattting movement and moderate movements such as tenants movement to show the transformative power of the squattting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw complementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

JS-85.4
PIOTROWSKI, GRZEGORZ* (Södertörn University, grzegorz.piotrowski@sh.se)
Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggregation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissonant movement slowly shifting to (neo)liberal positions and looseing the touch with the workers base as well as the young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way.

The popularity of these youth movements partially lies in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moreover, this subcultural-political connection seems to have an impact on today's radical movements making them mostly a young people's domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements' publications (printed and online) collected over the years.

Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinian social science system (institutions, agenda, researchers' profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country.

In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentina's scientific field is currently dominated by a dynamic, predominantly public and professionalized system, that has witnessed a growth in the last decade. Both the public universities and the National Council of Social Sciences (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:

1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences;

2) the structural heterogeneity of Argentina's scientific field, featured by the split between CONICET and the public university system;

3) the national undergraduate circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.

4) There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
be divided into four groups: communities of general orthodox theme, communities where the main content is presented by the quotations of revered fathers and modern members of clergy, and also parables and cautionary tales, issue-related communities (question to priests, for youth, family, devoted to beneficence, etc.), and at last territorially united communities (the communities of bishops, youth orthodoxy, diocesan districts, etc.).

Each orthodoxy group in VKontakte and its own unique target audience on the basis of which the group administration chooses content: by format (articles, news, fillers, quotations), by form (text, photo, audio, video), by the functionality of VKontakte social net (discussions, meetings).

In orthodox communities VKontakte the model of social interaction ‘online-of-line’ is actively developed. Within the framework of this model the participants of communities are informed about offline events running (rapidly erected temples buildings, beneficence, meetings with interesting people, etc.) via VKontakte functional messages, meetings. Due to communities participants high degree of loyalty the information about future events is spread by ‘virus’ method by the means of likes and repost system.

*The Fourth Paradigm*

The paradigm shifts which featured the systemic thinking from the 1980s to the end of the last century and the very beginning of the 21th lead to some radical epistemological changes at the crossroads between communication sciences and sociology. This paper on one side reconstructs the key paradigm shifts in system theory from the whole /part one (P1) to the system environment one (P2) and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather unlikely in systems theory and still the key global economical, technological, social challenges of our times required revolutionary shifts. The other side of this paper is essentially focused on theorizing a fourth paradigm shift which selects the fragments of the late XX century epistemological debate turning them in a systematic (in the Mertonian meaning of the term) redesign of the concept of system itself revealing that design and evolution are two faces of the same coin. In “any event, we have changed our own evolution but not ended it”.

(Barash 2008: 25)

“Some increase in plasticity is to be expected [...]. It represents the extrapolation of a trend toward variability already apparent in the baboons, chimpanzees and other cercopithecoids what is really surprising however is the extreme to which it has been carried. Why are human societies this flexible?”

(Wilson, 2000: 548)

**PITASI, ANDREA** (Gabriele D’Annunzio University, profpitas@gmail.com)

*“Hypercitizenship” and the Evolution of a Global Identity*

The idea of the citizenship moves from the consideration of autonomous agents and global flows eventually converging by means of autopoietic systems. This work reframes the topic of the reconfiguration in the evolving social scenarios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a multidimensional and multiparticular convergence among different kinds of citizenship. With its four conceptual dimensions, Hypercitizenship, features the strategic attitude of those areas in which capitalism is turning into turbogenetic capitalism. Its main features are the following: Cosmopolitan, scientific, societarian and entrepreneurial. The Hypercitizenship concept is focused on the fact that communication about key challenges of our times is increasingly meaning communication and public understanding of science and technology for governance and policymaking on a global, global and cosmopolitan scale.

From this point of view, law becomes one of the most important challenges to social experimentation due to the absence of institutionalized dialogue between finance industry insiders and outside critics. A noteworthy exception is the recent development of Islamic investment banking in Malaysia, where (external) Islamic scholars are in an institutionalized dialogue with (insider) investment bankers. This dialogue has created an ongoing project to create “sukuk,” a novel financial instrument designed as a moral replacement for sovereign and corporate bonds. “Conventional” bonds are understood by many Islamic scholars as immoral because they are unthethed from “real” economic activity and produce revenue streams based on “interest.” In contrast, sukuk are alternative asset-backed securities (ABSs) putatively tethered to the real economy and generating moral revenue streams without recourse to interest. This initiative is ambitious and global: in 2012, $137 billion sukuk were created (issued) worldwide in a number of currencies.

To theorize the social mechanisms and governance structures that enable such dialogue, this paper investigates two questions centered on how theologians understand and control investment bankers. How do Islamic scholars and financial engineers speak with one another with sufficient expertise so as to co-construct new asset-backed securities that conform both to theologians’ interpretations of Islam as well as to bankers’ perceptions of marketability and profitability? Moreover, how can religious scholars control financiers sufficiently to enforce minimum standards of moral compliance?

To investigate these two questions, this paper draws on 48 focused, ethnographic interviews conducted in 2012 and 2013 in investment banks with financial engineers and Islamic experts who co-produce sukuk. The paper and presentation synthesizes the cases, theorizes social mechanisms and governance structures, and hypothesizes implications of the case for other morally-committed financial reform projects seeking to dialogue with and control investment bankers, such as Occupy Wall Street.

*Contemporary Adults: Understanding Youth through Intergenerational Comparison*

Although sociology has already deeply analysed the profound changes occurred to youth and paths of transition to adulthood in the last decades, it is often possible to notice two glaring deficiencies in many sociological works: firstly, young people are frequently conceived as a category of its own, a specific social group that is somewhat isolated and studied separately, making it a most a comparison with the previous young generations; secondly little attention has been paid to adulthood, the final destination of youth. Adults should be a model for young people’s transitions, but within the contemporary context this stage of life’s standard model is threatened by contemporary transformations and late-modern processes (individualisation, flexibility, globalisation, juvenilisation) and it has become more and more complex to define what is ‘young’ and what is ‘adult’, where youth finishes and where adulthood starts, which functions characterise these two ages and which are their reciprocal connections. All that has huge consequences on the (individual and social) identity both of young people and adults, on their intergenerational relationships and youth transitions.

The intent of the proposed contribute is to think youth in a generational way by studying young people in relation and in comparison to the co-present adult generation, lighting up the contemporary features of adulthood. The proposed contribute - based on an empirical research which involved 30 Italian young people aged between 18 and 24yo and their significant adults through semi-structured interviews- aims at contrasting the specific interpretations of adulthood emerging from the representations and practices of adulthood of two generations: the baby boom and the millennial one. Through this comparison the presented research highlights the processes beneath contemporary intergenerational dynamics inside and outside the family, allowing a deeper knowledge and understanding of contemporary youth.

National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified [in ways not specified] as leading national social thinkers, though there are also some cases where the contexts of their national journals [identified as such in ways not specified] are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a national sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understood, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust—fidelity, competency, integrity, and global trust—and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among healthcare providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). Discussion: The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Understanding the nature of the public’s skepticism and uncertainty about the risks and benefits to themselves and their communities of interest can inform future development of information governance and data brokerage.

PLUEZ, CAROLINE* (Nanyang Technological University, pluess@ntu.edu.sg) Cosmopolitan and Essentialized Societalities in Transnational Spaces

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, societalities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several nations for at least 12 months, over a 12 month period, I analyse the kinds of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflexive engagement with ethical issues as we emerge in the research journey (Sime 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.
Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are variegated and have own features demanding on different factors (mainly of territorial administrative character). The sociological researches within Kashirskoe and Nikolys deaneeries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. “The churches with elderly communities unclosed in soviet period”. The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parish in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants; those who were in the church in soviet times and those who came there in post-soviet period;

2. “The parishes with constantly varied community” are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;

3. “The churches in holiday villages with cottagers communities” and “The guest church”;

4. “The parishes with the community of “the active” are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;

5. “The parishes of specific destiny”. There are parishes which are known for their unparalleled features, as for instance one of Satino-Russkoe of Nikolys deaneery: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church against the background of luxurious houses raised around and even its own parish tragedy – the murder of a priest.

’seduction’: A Pattern of Interpretation

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically; an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real – and fantasized - potential of their National Socialist parents to annihilate experienced by children. The biographical case construction I want to present concerns the life story of a woman born in 1928. Her socialization took place in a family with National Socialist values and within Nazi institutions, and she experienced sexualized violence as a child, by her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be the interpretative pattern of ‘seduction’, which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of ‘seduction’ allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region’s high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region’s challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voicevsky-Katchalov Estate Project in the Vologda Region and the Ugory Environmental Project in the Kostroma Region

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the “Abramovich’s case” is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyzes the visual indicators of the “Manor Khvalevskoe” – restored by the famous financier Yuri Voicevsky-Katchalov (“Standard bank”), the family estate of the 19th century in the Vologda Region in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region, which is on wealth than in the past. But the most advanced villages already realize the significance and value of the ‘old style’ living. A new migration force is about to radically change the profile of local community life but tends to preserve diverse ‘indicators’ of old times. The dramatic crisis of urban life enables sizeable groups of middle-class professionals and IT-experts to consider moving to environmentally balanced areas in the North of Russia.

Informality and Policy Making: Evidence from Post-Socialist Spaces

Informal practices can impact policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a "culture of corruption" to introduce the concept of "(non-)state socialism," defined as a system for redistribution of welfare based on human interactions. Informal channels (voting) or consolidated tools (contentious politics) may be able to informally renegotiate a policy that they are unable or unwilling to comply with. The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wroclaw.

Renegotiating Social Policy through Informality: A Post-Socialist Perspective

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation (at the formal and informal level) of social and welfare policies in post-socialism. Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialisation one. As a result, research has been preoccupied with the need for redistribution (trafficking, narco-traffic). Although both "illegal" the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in a lack of strict control by the state, that lets the citizens relatively free to act. When this happens, even if the state is not ineffective, the society re-regulates itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wroclaw – the economic centres in the two post 2004 migrant destination countries. Northern Ireland (NI) and Scotland became net-in-migration countries in the early 2000s. A significant share of their immigrant population is composed of workers from Poland – a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers' subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with different shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy. The research is set in several political economy contexts of new immigration destinations. Being part of the UK, Scotland and NI share many features of liberal market economy and liberal welfare regime but at the same time NI has been characterized as retaining strong elements of Keynesianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The study is funded by the European FP7 Marie Curie Training Network "Changing Employment". Website: http://www.changingemployment.eu

Feeling Intensely and Changing Radically: How Emotions Felt in Protest Lead to a Cultural Change

The aim of the paper will be to present our proposal of analysis that links the emotions felt in protest and the transformations of consciousness and behaviour considered as outcomes of the protest.

Aware of the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest, in which people decide to take part in the struggle and define themselves to it, changing their way to see the world and their relationship and bond with other people in a process that leads to transformations of consciousness and behaviour and, finally, to their empowerment.

Based on previous empirical research where we have studied different experiences of movements, protest and resistance in Spain and Mexico (indignados, #yosoy132, two Oaxaca's women collectives, Mexican anarcho-punk movement and a few resistances against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-structural literature cannot perceive. The methodology that we have
developed throughout our research is based on in-depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

POMA, ALICE* (UPO and EEHA-CSIC, alice@poma@gmail.com)

Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riaño valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolás) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Images des latino américains dans la direction de la composante militaire de la MINUSTAH (Mission des Nations Unies pour la Stabilisation en Haïti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti.

The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thoughts of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the “imagined Haitian nation.”

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercial has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in society. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.

Equidad Étnica Y De Género EN LOS Estudios De Posgrado. Casos EN Las Universidades AUTNomas De Chiapas Y Yucatán

Lo que aquí se expone forma parte de una investigación más amplia realizada en México bajo el título “Ética profesional y posgrado. Valores presentes en las prácticas de generación y transmisión de conocimientos que llevan a cabo cuerpos académicos y grupos de investigación educativa”, buscando comparar experiencias de formación ética profesional en programas de posgrado que ofrecen instituciones de educación superior en distintas entidades federativas.

Chiapas y Yucatán son dos estados de la República Mexicana con diversos grados de desarrollo socioeconómico en los que habitan pobladores pertenecientes a diversos grupos étnicos. A lo largo de los años, las inequidades sociales que caracterizan a las sociedades poscoloniales por motivo de la etnia y el género han mostrado algunos cambios en ambos estados, sin embargo persisten rezagos en materia educativa que se hacen más evidentes en los niveles de educación superior. En esta comunicación se realiza un análisis comparativo que muestra cambios ocurridos del año 2000 al 2013 en la composición de la matrícula que estudia en programas de posgrado en las universidades públicas más importantes de la región sureste de México, las cuales se ubican en estos estados: la Universidad Autónoma de Yucatán (UADY) y la Universidad Autónoma de Chiapas (UNACH).

Variables

Young College Students and Their Values: A Comparative Study Between Brazil and China

Young college students and their values: a comparative study between Brazil and China

Marilena Nakano

Marília Pontes Sposito

This is a quantitative sampling research held within the scope of the Brazil-China Agreement. It compares the Brazilian college youth with the Chinese, in the 17 to 24-year-old age bracket. The data was obtained in 2012, by means of a same questionnaire in both countries.

The paper will privilege the data related to values and visions about the best and the worst aspects of being a youngster. It will analyze the differences between young men and women. In spite of similarities, what attracts most attention is the configuration of the two distinct modes of being young: a Brazilian and a Chinese.

There will also be some reflections about the research conduction process and the interactions between the researchers and the different cultures and countries are also to be considered.

With regard to the results, the peculiarities of each group are being identified. Thus, for example, for Brazilian college students, the best thing about being young is to have “dreams and objectives” and the worst part is to “not be able to be self-supporting”. On the other hand, for the Chinese youngsters that were interviewed, the best thing is “to be healthy and fit” and the worst is “to be insecure regarding the future”. It is interesting to note that they fear they can be “easily influenced”, whereas this fear is not strongly representative among Brazilians.

Notwithstanding the singularities observed between the youths of each society, it can be observed that there are some transverse points of contact that allow us to go ahead in drawing up the contemporary juvenile condition, incorporating the differences of genders as a fundamental aspect.

An “Area Study” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas was a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connections between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions were less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6th Division of the Ecole des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Des articles issus de la presse quotidienne et hebdomadaire française sont ainsi étudiés à travers la méthodé de l'analyse du discours. Nous tentons par la suite de mettre en évidence les liens qui s'établissent entre des catégories d'individus et les actions et les caractéristiques qui leur sont attribuées. Nous observons ainsi que l'individu handicapé est celui qui bénéficie d'une prothèse et dont les performances sont augmentées par ce dispositif. Au final, la personne n'est plus proprement dite déficiente. Elle est "en situation de handicap", mais elle est capable de s'autodépasser, devenir de cette manière un membre de plein droit de la société néolibérale.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reprod- uctive Health in Newfoundland (Portilla) and the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negoti- ating ideas about sex and reproductive health between three generations of fam- ilies in the province of Newfoundland in Canada. The oldest grandmother partic- ipant was born in 1910 and the youngest granddaughter in the mid 1980s, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affect- ion and innovation.

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greenness and politicization of consumption, similar to what has been occurring in other countries. In this process, consump- tion practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodologi- cal phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil, Rio de Janeiro and São Paulo; and (2) a focus group cultural aspect of Brazilian society, namely the way that individuality and a sense of responsi- bility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contrib- utions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member’s strategies, but they are also part of broader transnational dynamics particular to global capitalism, with a hierarchy of mobility rights existing, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contempo- rary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it’s hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions have to determine its boundaries; for instance, to determine who are involved in the transnational family practices. Second, the dominance of the network’s approach (informal connections, remittances, individual strategies)
overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a posteriori perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and paternity are essential. Also, we must include the contribution of gender studies: in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

“Transnational Families” Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for “unskilled” workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants’ activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families’ lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

Encrucijada Latinoamericana en Bolivia: El Conflicto del TIPNIS y Sus Implicaciones Civilizatorias

El presente ensayo busca interpretar las implicaciones civilizatorias que venimos presentes en el conflicto del TIPNIS (Bolivia), resaltando la importancia que para el caso poseen los aspectos socio-espaciales, ambientales, culturales, etc. con la finalidad de mostrar el rol de las fuerzas sociales en la configuración del conflicto del TIPNIS. En la primera parte se hace un análisis desde los múltiples espacio-tiempos que están implicados en el conflicto. En segundo lugar se centra en la evolución en las acciones presiones desde dinámicas socio-espaciales, especialmente de ampliación del capitalismo en frentes de expansión/invasión, que constituyen tensiones territoriales sobre y alrededor del territorio y territorialidad de los pueblos indígenas del TIPNIS. El estudio resalta el papel de los movimientos sociales bolivianos en la configuración de las nuevas luchas políticas emancipatorias en el mundo encarnadas a los diversos actores sociales e instituciones, que en el caso de Bolivia, tienen un rol protagónico en el conflicto del TIPNIS. El estudio se centra en la evolución del proceso de conflicto y las formas de legitimidad que tienen en el país.

Incivility and Disorder in Urban Public Space of the Czech Republic: Normativities and Instrumental Interests

The paper focuses on the changing definitions of incivility and disorder in urban public spaces of the Czech Republic. After the fall of the totalitarian regime in 1989, the notion of urban public space as a site of social interaction, negotiation and conflict appeared, first legally defined in 1990. The following years saw a process of negotiation of the limits of acceptability in urban public spaces. The terms disorder and incivility were employed by various actors, including courts of justice, local municipalities, activist groups, NGOs and the media, to define acceptable conduct and exclude undesirable elements from the newly emerging public spaces of Czech cities. This paper focuses on how the meanings of disorder and incivility were defined in the process. Two perspectives are identified in the discourse: (a) normative perspective, identifying the notions of disorder and incivility with respect to values of public order, safety, health and others and (b) instrumental perspective, where the notions of disorder and incivility are used by various actors to promote their particular interests in the conflicts over the use of public space. The conflation of these two perspectives and their mutual relationships are discussed, using the empirical material of local and municipal ordinances and regulatory plans of city administrations. The data shows that the conflicts over the definitions of disorder and incivility point to a larger dispute about the nature of public space and about the notions of citizenship and social inclusion.
but one important issue has been legal change. The introduction of no-fault di-
vorce in the post-war years contributed to the rapid increase in divorce, and more
recently the idea that same-sex marriage will be sanctioned by law has stirred up
significant public controversy.

Debates around the legal recognition of same-sex marriage and other related
matters such as a debate in Germany and California that circumstance
constitutes physical abuse of the child have only served to unite and unify oth-
erwise separate and disconnected religious groups – fundamentalist Christians,
ultra-orthodox Jews and conservative Muslims. This erosion of religious issues
into the public domain – over creationist teaching in schools, wailing in public, cir-
cumcision, gay marriage, and Shari’a law – illustrates the ideas of ‘public religions’
(Casanova, 1994) and appears to confirm recent commentaries on post-secular-
ism. The argument presented by Habermas (2008) of post-secularity will be used
as a framework to examine the impact of religion as a cultural resource in debate
and decision-making in the public sphere. The proposed paper seeks to examine
whether the inclusion of religious and spiritual arguments in the public debate
on same sex marriage positively influences, as Habermas claims, the democrac-
tic quality of deliberative outcomes and contribute to the enhancement of social
cohesion or whether on the contrary public religions play a divisive role in dem-
ocratic debate.

Our paper draws on an Australian research grant to study the same-sex mar-
riage debate in Australia and New Zealand, and on a second grant proposal to
undertake a comparative study of legal change in relation to marriage in Australia,
France and the United States.

Political Decisions in the Area of Public Security and the Action of
Death Squads: The Case of the Violence Crisis in 2012 in São
Paulo, Brazil

The purpose of this communication is to present our findings of an original
research that is being conducted at the Center for the Study of Violence of the
University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the
public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected
from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations - hooded men, shooting their victims from a motorcycle
or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the
organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions,
around which a dynamics of action-action seemed to be installed. For now, our
main hypothesis is that previous political decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings
between members of the State of São Paulo Military Police and members of the
PCC (First Capital’s Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying principles as well as the
routines and different sources of tensions surrounding the politics of truth com-
misions that are currently convened in Brazil by systematically cataloguing them
and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions
in Brazil did not occur at the onset of the emerging democratic regime. Instead,
they are an important phenomenon, appearing in the context of an already mature
democracy, and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff
in May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-
petrated by its own agents during past military governments (1946 to 1988), but
does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxiliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

Ranking Regimes, “World Class” Universities, and the
Impoverishment of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are
highly ranked according to their “impact factor.” A world-wide movement has
pushed scholars to publish in English-language journals, to the detriment, we
argue, for intellectual life at the national level. We first document evidence for this
pressure then discuss the consequences of funding mechanisms and research
assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest
in the new managerialism and standardized research exercises; 3) the
privatization and finance of commercial scholarly publishing, which takes
advantage of the preceding developments by charging high prices to maximize profits; 4)
decisions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.

The Overseas Chinese Population in Circa-2011

In circa-2011, there were over 40 million Chinese people living outside China
(broadly defined). We discuss the data on the overseas Chinese; we show their
distribution among the world’s countries and regions. We discuss their patterns
of change in past decades. We present recent data on the larger of the non-Chi-
inese diasporas to enable us to better evaluate the significance and importance
of the Chinese diaspora. We discuss the major patterns of previous Chinese emigra-
tions. Then we present our data on and analyses of the overseas Chinese around
2011. The overseas Chinese population in the world in 2011 is larger than the
population of Poland and Canada, and almost as large as Argentina. The Chinese
diaspora is the third largest of all the world, behind Ireland and Germany. The over-
seas Chinese continue to have important and significant influences in many host
countries and are certainly not an inconsequential population.

The Residential Segregation of Homosexual Households from
Heterosexual Households in Metropolitan Areas of the United
States, 2010

Residential segregation is a major area of research in demography and sociol-
ogy. Most of the research has focused on the segregation of racial/ethnic minori-
ties from the majority race/ethnic group in cities of the United States and several
other countries. Few if any analyses have dealt with the spatial segregation of
sexual minorities from the majority. In our paper we analyze homosexual-to-het-
erosexual household segregation. There is a void in the literature about the ex-
tent to which gay men and lesbians are residentially segregated from heterosex-
ual households. There are some studies of “gay spaces” and enclaves, but most
are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves
and political force and activism. There are no systematic empirical studies of met-
ropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and
lesbian households are residentially segregated from heterosexual households.
Our paper addresses this void. We use two dissimilarity measures of residential

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that gay male households are more segregated from heterosexual households than are lesbian households. And we show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenges. In the institutional and special education systems can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, educational changes, and individual contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, evidence gaps are important for education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

HIV, Dating and Mating: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration of Human Rights counts among its fundamentals the right to marry and found a family (Article 16), it is often informal societal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their stigma prior to sexual activity, in essence moving them directly to what Goffman (1963) calls discredited. Despite overwhelming evidence that sero-discordant couples can effectively manage HIV transmission risk through safer sex practices, positive men must negotiate their status in a dating landscape often characterized by stigmatizing language that polarizes gay men in to “clean” or “dirty” states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discredited, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website craigslist.org, the advertisements are qualitatively analyzed for stigmatizing language such as “clean only,” “drug and disease free (DDF),” and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

No One “Likes” Sandy: Facebook and Post-Hurricane Recovery In Long Beach, NY

Technologies, like social media sites, have made it easier to communicate and can capture the “ephemeral” cultural artifacts found during periods of upheaval and change (Stallings 2006). However, due to its relative newness, social media’s role in recovery efforts after natural disasters has not yet been thoroughly explored. This report adds to existing literature and demonstrates how social media technologies supported and facilitated localized recovery efforts and memorializations from below in Long Beach, New York. The Long Beach Hurricane Information Facebook page, created by two transplants to keep out-of-towners informed has since morphed into a virtual bulletin board that provides support and information for local residents. Residents both near and far see this site as a place to share information, organize local responses, and importantly remember. Referencing their personal memories of Long Beach, posters reference local symbols and sayings to perform solidarity and community in this virtual space. This site bears witness to the resiliency, frustration, and strength as well as the shortcomings and failures of institutional recovery efforts. While they struggle to rebuild, they work together; defined and connected by the “Long Beach sand in their shoes.”
Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies. This paper, through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show how to the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices. Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows how these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a ‘Commons’ Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it developed different strategies for ensure its activity paving the way for the strengthening of informal practices.

PRANDNER, DIMITRI* (University of Salzburg, dimir@zg.ac.at)

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping strategies of those specific communities. These narrative strategies are figured and refuged to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press (“Die Presse” and “Der Standard”) did discuss potential futures in relation to international terror from 2001 to 2011 and how those futures were continuously included into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do they refer to those figures built within their national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

WG01-892.4
PRATA, ANA* (California State University Northridge, ana.prata@csun.edu)

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women's state agencies, parliamentary members, and activists in both countries have inserted issues of gender equality and women's empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women's position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have taken up these issues and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as 'a problem' at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women's state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies' focus seems to be more the increase in domestic violence, and less on issues of women's unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)

Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed collective politics. This paper investigates how the rioting in Greece in December 2008 was one of these instances which although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktismeno’ (Indignants) responding to the economic crisis in Greece in 2011.

RC47-766.5

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)

Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now

The use of social media during the first wave of protests responding to the crisis and the following agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktismeno’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt anger and suspicion towards the existing forms of democratic representation (Pretoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organizational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.
Politico-Geographical and Personal Influences on Willingness to Participate in Political Action in the Middle East

This paper examines individuals' willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the World Values Survey. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals' willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate to the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geopolitical attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals' views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did have a significant effect as would be expected from earlier studies of different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Politics of Intergenerational Conflict: A Comparative Study of the UK and Japan

Internationally we are witnessing renewed conflict over political settlements and attempts to forge a new moral economy of welfare in economically straightened times. In some (but not all) advanced economies these disputes are crystallising around the concept of intergenerational equity with a noticeable re-positioning of older people as the selfish welfare generation. In this paper we consider the recent resurgence/emergence of discourses of intergenerational conflict in the politics of financing later life, especially pensions and social care, in the UK and Japan. In both countries there are calls in government and public life for a re-balancing of public expenditure in favour of youth, while age-divisive policies set up the intellectual and political debate as a matter of intergenerational tension. Both are wealthy, advanced democracies, with old and ageing populations, facing prolonged austerity. Yet in many cultural, political and institutional respects they are quite different and have historically combined different modes of governing in the interests of social welfare. The UK emphasises free will, individualism and market solutions, whilst in Japan, the emphasis is on balancing free-market thinking with some sense of social responsibility and community, along with calls for reforms of existing collectivist policies, all in the context of strong traditions of intergenerational solidarity and filial piety. We consider how and why this policy prescriptive language has emerged in both countries, what purposes it is serving, and what the consequences might be for the distribution of resources in later life. We then assess analysis of each country in comparative perspective, highlighting factors that contribute to differences or features that transcend national boundaries. We conclude that publicly framing the allocation of financial resources as a matter of intergenerational conflict masks inequalities in the social distribution of resources within all age groups that arise with the increased marketisation of late life welfare.

What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparents' childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as childcare is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a mother is not working in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers' employment, particularly in Southern European countries where there is little formal childcare.
Despite a range of deprived and affluent neighborhoods in Belfast (Northern Ireland) - see: [http://www.communitygreenway.co.uk/]. Using novel methods of data analysis that focus on semantic networks and how ‘things’ are connected, we explore lay views about the use of the park as a ‘therapeutic landscape’, and indicate the implications of our work for health policy and civic governance in general.

**Vocaloids, Virtuality and Vocality: The Case of Hatsune Miku**

Where does the voice go in contemporary culture? How is it composed, decomposed, constructed, reconstructed and made apparent? What are its signs and dislocations, its logics and movements? What are the expectations and reasons for the voice’s presence as a particular kind of expression and information? In exploring how we might set out to answer these questions, this paper is divided into two parts. In the first part, and drawing on insights from the sociology of culture and technology, it argues that the birth of modern popular music is also the birth of a permanent coalescence of the voice and technology. For the voice does not sing alone, it is always accompanied by, is implanted in and mediated by technologies. Paradoxically, just as it attains the status of a unique expressive carrier and index of untrammeled experience and personhood, so it is a whole plethora of machinery that reveal that carrier to be radically hybridised.

The second part takes the form of an exploratory stage assigned to a particular vocal modality. It aims to show how, in the case of the Japanese virtual idol singer, Hatsune Miku, complex entanglements of human and non-human entities are not only rationalised, but also played with, ironised and turned into aesthetic forms that unsettle the foundations on which the voice sounds out. Here, not only does the voice become a pliable object of information, enmeshed in machinic vocalisations and subject to the microscopic transformations of digital technologies, but it also represents a simulacrum of the hyper-sexualised female body as a performative object and act. From the Miku phenomena we learn much about how the body, the voice and digital technologies fold into one another in an era of global transformation.

**Negotiating Masculinities in the Context of Transnational Bolivian Families**

The transformation of gender identities and family models within migration projects increasingly highlights the gender perspective as an elementary variable of migratory politics. At the same time, a variety of practices, identities and by stitutions (“Hondagneu-Sotelo, 2000). While scholarship on Latin America migration and gender has concentrated on women, less research has been undertaken on migrant men, particularly in the research on transnational families.

Thirty percent of the Latin American immigrants to Brazil are Bolivian. Based on the theories of intersectionality and hegemonic masculinity, the paper draws on my research project aiming to understand how transnational Bolivian migrant men residing in the Brazilian capital Brasilia negotiate their masculinities in a context of transnational family relations. To explore this issue, the paper draws on D’Aubeterre’s (2001, p.32) observations to understand the transnational family as “a locus of social and emotional support, but also as a field of conflicting movement of power relations between different members that constitute the family.”

Moreover, according to Sinatti (2013) an intersectional understanding of family relations allows researchers to grasp how masculinities may be redefined as people move across cultural, social, and national borders, and as they encounter and cope with different regimes of power at the intersection of other social categories. The different dimensions the masculinities are negotiated in challenges as sociations with hegemonic masculinity and intersect with other variables such as ethnicity and class. In the context of the Bolivian migrant men and their families, the multiple localities they are finding themselves in influences the negotiation of the masculinities involving family-, care- and intimate relationships, father- and parenthood- not only within their family structure but from multiple perspectives.

**Wellbeing of Return Migrants in Rural the Northeast Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing**

Wellbeing of Return Migrants in Rural the Northeast of Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing

**Abstract**

There has been a popular view concerned with negative impacts of migration of rural people to seek jobs in modern economic sector. This type of arguments emulated family breakdown, loss of land, environmental degradation, increase indebtedness, etc. This notion therefore suggests that migration will result in ill-being of rural dwellers. This paper explores the implication of migration on wellbeing of return migrants in the Northeast of Thailand. This paper argues that while migrant leave their village in seeking material wealth, they continue to maintain a high value on bonds and relationships to their natal village. The bonds they have to their rural village limited their objective wellbeing, because of low returns of agricultural and low wage works in rural. But the limited seeking material wealth through migration on the one hand also enhances or fulfils their subjective wellbeing. This study also found that the rich seems to be experienced higher happiness after returning to the village, while the poor do not experience subjective wellbeing in the same manner.

PRUISKEN, HENRIK* (Bielefeld University, henrik.pruiskен@uni-bielefeld.de)

Locus of Control and Cumulative (Dis-)Advantage in the Labor Market

The relationship between Locus of Control (LoC) and occupational outputs has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities lead to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale measuring the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of "Fixed-Effects-Models" I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

PRUISKEN, HENRIK* (Bielefeld University, henrik.pruiskен@uni-bielefeld.de)

The Effect of Inequalities within Families on Work-Values of Adolescents

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents’ development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the paper investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social comparisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a "de-identification" is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (GSOEP) for the years 2000-2011. In the GSOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of "Sibling-Fixed-Effects-Models" I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

Neoliberal Rationalities in Vocational Higher Education

The increasing function of universities as institutions for mass education might affect democracy and the universities’ contribution to society. Students as choice-agents need to be involved in these processes. This paper scrutinises how students’ practical considerations for future choices in education and occupations correspond to policy objectives of socially productive educational choices. These objectives currently follow neoliberal rationalities regarding how to divide the responsibilities between the state and its citizens. In this context, choice-agents have to learn to identify themselves as economic subjects able to cope with economic transformation.

The aim of our research is to examine the correspondence between educational policy objectives and students’ educational choices in practice. The research questions posed are to what extent students’ choice motives reflect a neoliberal instrumental rationality? Is there a resistance against such rationalities in students’ actual-choice-strategies? This issue is empirically investigated via a semi-structured questionnaire (n=840) with students from 14 vocational Swedish Human Resource programmes in higher education. The case of higher education programmes was seen relevant, since weak professional university programmes tend to stimulate rationalities amongst students that ritualise the role of education in terms of its formal credentials. Vocational programs are also a significant growth sector in higher education, with large proportions of non-traditional students.

What is unclear, however, is whether these forms of education reinforce a desired policy ambition with regard to instrumental choices in education. These are policy rationalities that are questioned in the paper from a critical semantic approach indicating that the policies fundamentally rest on manipulative powers where human agency is forced into instrumental decision-making. The results of the study point to patterns where students tend to resist instrumentality and integrate their decisions in education as reflexive and relative autonomous personal projects in relation to the recognized social powers of the labour market.

Interrelation Between Organizational Trust and Organizational Innovativeness from a Context Perspective

The paper explores the interrelation between organizational trust, which is defined as an attitude combined of affective and cognitive components (McAlistier, 1995), and organizational innovativeness, an organizational capability to create new ideas, experiment and engage in creative processes and which is operationalized as a five-dimensional construct consisting of product, market, process, behaviour and strategy innovativeness (Wang and Ahmed, 2004). We study the interrelation from the perspective of innovation context and take Lithuania as a case of a low innovation context and Finland as a high innovation one according to the Global Innovation Index (2013). The research question is whether different components of organizational trust can result in different organizational capability to engage in creative and innovative processes.

The empirical data for this study were collected by means of a standardised electronic questionnaire from 3 organizations in Finland (n=719) in 2011, and so far 4 organizations in Lithuania where a survey is still carried on since 2012 (current n=536, survey to be completed December 2013). Based on preliminary findings of regression analysis, the emotional component of organizational trust has a much more significant effect on organizational innovativeness than cognitive one. Its effect on the dimensions of behavioural, process and strategic innovativeness exceeds its impact on market and product innovativeness. These findings imply that creativity may be malpracticed in organizational setting and more self-purposeful rather than result-oriented.

The research findings will have theoretical implications concerning the role of emotion to organizational innovativeness, discussing the need for golden mean in practicing organizational trust. From a managerial perspective, potential risks arising from high organizational trust and certain dimensions of organizational innovativeness will be discussed considering the innovation context.

Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only Integrat-ed project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
sented here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

New Alternative Masculinities Against Gender Violence

This paper presents a South’s contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promotes a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Homes en Diàleg (Men in Dialogue), a men’s organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2011), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state’s inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while the state and inherited ties to the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

Social Implication of Inequity in Higher Education; A Comparative Study of Formal and Non-Formal Mode of Education in Andhra Pradesh of South India

A B S T R A C T
SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India
*Dr. P. Koteswar

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in the post globalized era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequent the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means. India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society.

However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn's production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers' suffering from work pressure, anxieties and desperation at an unprecedented level.

PUN, NGAI* (Hong Kong Polytechnic University, punngai@gmail.com)

Communism Revisited: A Third World Perspective

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn't succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if we would like to name it. Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn't vanish but this didn't put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an Idea of History.

There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state. Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Communism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.
Classifications and social valuations of culture and the arts vary cross-nationally and historically. Recent studies have questioned the role of classical highbrow culture and its status marker in Western countries and suggested that the self-evident bourgeois “good” or legitimate taste is becoming less hierarchical and more open. The famous idea of cultural omnivorosity, that the taste of the high status groups is no longer exclusive but inclusive, is one way of conceptualizing this trend. Omnivore scholarship, however, has concentrated mostly on the consumption rather than the production side of culture. Changes in the social value and composition of the legitimate taste as expressed in people's dispositions and preferences should nevertheless receive support, or even be preceded, by transformations in cultural institutions which consecrate legitimate art. Since art journalists and intellectuals play a crucial role as cultural intermediaries, the changes in dominant taste patterns should be reasonably recognizable in their evaluations and writings, i.e. in how cultural classifications and aesthetic standards are represented in the media. Sociological studies of such cultural institutions that would include both the cross-national and cross-temporal dimensions have so far been rare. This paper presents the first results of a research project examining cultural pages of the main newspapers in five European countries, Britain, Finland, France, Spain and Sweden, from 1960 until 2010. Since we are interested in changes in the legitimate taste and the processes that have created space for omnivorous tastes, we pay special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and “serious” art. By using both quantitative and qualitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (The Guardian) and Finland (Helsingin Sanomat).

In this paper however, I raise another issue. To what extent are our theories reflective of social lives beyond our tangible geographical moorings? Ethno-sociological theories (Connell, 2007) reflect embedded hierarchies (including knowledge hierarchies) within nation-states and between nation-states. At the same time, sociologists who are in tune with theory-making and well-developed knowledge systems in different parts of the world are aware of co-existing frameworks that describe diverse social realities. Some of these co-existing frameworks have been identified and described as Southern theories, indigenous theories etc. and co-existing frameworks in different parts of the world are aware of co-existing frameworks that describe diverse social realities. Some of these co-existing frameworks have been identified and described as Southern theories, indigenous theories etc. I have been paying special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and “serious” art. By using both quantitative and qualitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (The Guardian) and Finland (Helsingin Sanomat).

The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-class perspective of culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy - both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction.
The Gift, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g. Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift of ceremonial gift exchange needs to involve some generosity and thus at least be guided by the ideal of the pure, absolute gift, if it is to avoid being turned into sheer market exchange. And, from the other way around, even the gratuitous giving in pure loss seems to presuppose at least a minimum of reciprocity – insofar as the gift is accepted by the givee – if it is not to remain illusory, utopian, and abstract.

The paper reports on a theoretical and historical research project comparing two contrasting social movements that shaped China’s immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966–76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China’s international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directed to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

A case study of Wuhan City about research on improvement strategies of the state-owned mining shantytowns under the guidance of ecological civilization construction

With the rapid development of China’s urbanization, industrialization, expansion of urban population, housing becomes a growing problem, especially the growing problem of settlements decline. At present, our old settlements regeneration are mainly used in large-scale reconstruction of the tear down, and it has brought up housing prices, the differentiation of urban living space, the loss of urban form and urban culture and other issues. Under the impetus of the living environment development of the 21st century, the harmony of “Man and Nature” became the theme of urban development, which requires the city old settlements to provide a sustainable development of rehabilitation programs, the sustainable development concept of “Reconstruction – renewable urban settlements came into being, it is designed to improve the living environment, optimize the layout, and enhance the quality of the living, and inject new vitality to the healthy development of the city, while also promoting China’s housing market in the context of rapid healthy urbanization and stable development, to build “eco-society”. Through the study of the planning of Wuhan City and the state-owned mining shantytowns settlements regeneration from the planning and material transformation level, proposed to construct an ecological society proposed to try new ideas to improve the living space for vulnerable groups such as the shantytowns, and other cities.

New Religious and Nonreligious Organisations: Competition, Contest & Communalities

What are the communalities and differences between religious and nonreligious organisations? With ‘nonreligious’ I am referring to groups that are generally considered to be not religious but are nevertheless related to ‘religion’ in important ways. Obvious examples are atheist, rationalist, and secular humanist organisations. Despite their roots in the 19th century, their apparent growth in many parts of the world and their realignment in the contemporary world make them in many ways new forms of (nonreligious) organisations. My engagement with such groups will primarily draw on a long-term study of rationalist and atheist organisations in India (Quack 2012) as well as data from atheist groups in the Philippines and humanist associations in Sweden and Germany. These organisations try to spread an explicitly secular worldview, provide secular alternatives to religious life-cycle rituals, and stand in direct and indirect competition and contest with religious organisations in various ways. To analyse these relationships, I will critically engage with the ‘theory of religious and secular competition’ devel-
oped by the sociologist Jörg Stolz (2009) to complement the ‘religious economies approach’ within secularization theory. Based on a relational approach to study ‘nonreligious’ groups and organisations (Quack 2014), I will further engage with the organisations’ struggles for various kinds of capital within institutional and field-related ‘logics’. On this basis, I discuss the ways in which nonreligious organisations can be situated within the ‘surroundings’ of a religious field, thereby complementing Bourdieusian studies of specific religious fields.

**Reconfiguring Personal Communities In A ‘Divorce Biography’**

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and policy discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decay and focuses instead on the ways individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call ‘a divorce biography’. These spaces include the ways in which individuals either terminate an unsatisfying marriage, decides on the terms of divorce, copes with the crisis, organises one’s personal relationships and makes plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choice, navigate around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

**Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe**

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be cumulated into a common source database for building even longer, denser, and geographically more complete trends.

The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given the variety of languages, question and questionnaire formats, and other design properties of the individual surveys. The database presently comprises more than 800 time/country samples from 32 European countries or regions and covers almost all years from 1986 to 2010. Analyses aim to establish the presence or absence or particular national and supra-national trends, identify aberrations of samples from trend patterns and investigate possible methodological factors behind such aberrations. Further, the analysis may eventually contribute to answering such questions as what the effects of different response formats, sampling design, administration modes etc. on reported average attendance levels are.

**Understanding Patterns of Political Participation – Are National Borders Natural Borders?**

Different modes of political participation are often seen as expressions of the local identity or contingent on the population lives in. Institutionlized, formal participatory behaviors such as voting or petitioning are understood to signal compliance, support and trust for the political system, non-institutional behaviors such as boycotts or participation in demonstrations are understood to signal conflict and risks for social cohesion. Obviously, the likelihood that respondents report certain behaviors depends - besides respondent characteristics - on the incentives and opportunities for such behaviors found in their home society. For comparative studies this means that we have to expect cross-national variation in the measurement properties of scales for political participation, even for substantive reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

**Genre Et Vieillissement : L’expérience De Femmes aînées Immigrantes**

Cette communication présente certains résultats d’une recherche qualitative menée auprès de 90 femmes aînées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les aînées immigrantes sont rares et presque toutes sur le rôle de grand-mère (échanges de services, liens avec les petits-enfants, impact de l’âge géographique) (Attas-Dion, 2008; Phillipson, 2002; Tress and Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche visait à comprendre l’expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comme aînées dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise –égalité dans les relations de discrimination, de solidarité). Les femmes aînées immigrantes rencontrées lors d’entrevues de groupes appartiennent à trois générations (65-74 ans, 75-84ans, 85 ans et plus), sont originaires de différents pays (Haiti, Colombie, Japon, Roumanie, Liban, Egypte, Croatie, Colombie, Chine, Portugal, etc.) et ont des parcours migratoires et de vie variés. Dans le cadre de cette session du congrès, nous aborderons des femmes aînées migrantes et des actions déployées par les femmes pour organiser leur quotidien. (Dubet 1994). Les vieillissements aînées sont des transpositions de leurs expériences de vie, de l’expérience qu’elles ont vécues dans leur pays d’origine, voire d’émancipation.

**Regulation of Private Expenditures in Cross-National Perspective**

Over the past decade, health spending in many developed countries has grown faster than gross domestic product, leading governments to consider alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on both population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater governmental regulation of the private insurance industry.

This paper will examine this hypothesis with the Health Insurance Access Database (HIADB), by demonstrating the variation over time, by health service and...
across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across 10 countries (Australia, Canada, Denmark, Finland, France, Germany, Italy, the Netherlands, United Kingdom, and United States). These countries were selected to provide a range of variation (and thus to allow for contrasts) with regards to Esping-Andersen’s Welfare Regime classification (Liberal, Social Democratic, and Conservative regimes). This type of health system (comprehensive, welfare oriented, entrepreneurial) and the OECD’s typology of the role of PHI within that system (primary, primary substitutive, supplementary, duplicative or complementary).

This research will inform and feed the current debate on the future of health care in developed countries and on the interplay between the public and private sectors in these changes.

Quality of Data Collected from a Vulnerable Population: Using the Calendar Method and Third-Party Help

In the field of social sciences, collecting extensive retrospective data such as life histories has been fraught with recall errors compromising the quality of the data. Collection of life histories gets even more challenging when it has to be done among vulnerable groups, such as poor households who are victims of involuntary displacement and resettlement due to disasters or infrastructure projects. Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The substantive focus of this study is to obtain ‘social capital’ histories on the level of neighbourhood, households, and heads of households. In addition to the usual aided recall features the calendar procedure included the option to allow, in certain parts of the interview, the help of “third parties” in the recollection of the requested information. These “third parties” are either household members or friends of the respondent who also reside in the same community. Collaborative recall generally increases accuracy of information that is shared socially between community members, since different people may remember different aspects of the memories. A natural field experiment was designed in which data quality was compared between the conditions ‘with help of third parties’ and ‘without help of third parties’. Data quality was assessed regarding ‘numbers’ (of household related transitions), ‘names’ (of community leaders) and ‘dates’ (years of public services). The study examines whether integration of “third-party help” in the calendar method can enhance the recollection process among respondents and may lead to better data quality. In addition, it was also discussed how “third-party help” may interact with calendar procedures and what consequences arise for related data collection procedures.

The Problematic of Gestión in the Soft Industry

The ponencia se orienta a dar respuesta, en base a un estudio de caso en la industria del software, a la pregunta de qué manera las organizaciones, los gerentes y los trabajadores, lidian con las tensiones relacionadas con la innovación. ¿La hipótesis es que dadas las características del trabajo en esta industria, sobre la innovación en conocimientos y con una fuerte autogestión de sus trabajadores, su gestión no puede apoyarse solo en las estrategias de los empresarios o gerencias de RRHH, teniendo éstas que articularse con el componente “humano”. Estas nuevas modalidades de gestión por ende deben tener como eje central la construcción de relaciones sociales en la organización. Esto conlleva, una fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad. Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y articulan tres dimensiones problemáticas: a) normativa: Supone dar cuenta de la construcción de normas internas desde una perspectiva amplia que considere tanto las normas formales como las informales, las reglas autónomas como las de control, las normas jurídicas como las de tipo ético. B) la dimensión es relevante en un mundo que parece poco estructurado en relación a otros sistemas productivos, b) performativa: Esta dimensión tiene relación con el concepto de eficiencia, de su construcción in situ. En ella cobra relevancia la distinción entre los conceptos de productividad, más acorde al mundo industrial, y el de performance, más acorde a la dinámica del sector. C) Cognitiva: Refiere a la reflexividad que emana de la implementación normativa y la dimensión performativa aportando una mirada dinámica de los procesos de gestión. Importa en esta dimensión la construcción social del conocimiento y las identidades construidas en torno al mismo.

Guidelines for the Creation of Laws and Intuitions in Order to Eradicate Poverty in Mexico

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty. The situation we try to we try to reuse some transcendent aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the rights that are set forth in the Constitution. What we would like to posit is that actions, both legal and institutional, are required in order resolving this problem: actions that take into account the economic/social context and that contribute to transform it.

Social Discourse about the King of Spain and Freedom of Speech. Pragmalinguistic Analysis of Slander

Discursos sobre el rey y libertad de expresión. Análisis lingüístico pragmático de la injuria

La monarquía sigue siendo hoy por hoy el primer gran tabú informativo en España. Pese a la libertad de expresión que garantiza la Constitución, el artículo 490 del Código Penal singulariza la figura del Rey con especial protección contra calumnias e injurias. No resulta difícil encontrar ejemplos de discursos públicos (tanto periodísticos como políticos), que han sido denunciados como injuriosos contra la Corona, siendo sus autores procesados y sentenciados, algunos con pena de prisión.

Pero ¿qué es exactamente una injuria? Su valor semántico no es estable, y depende del contexto su determinación. La definición de diccionario no nos resulta de mucho en este sentido (según la RAE “agravio, ultraje de obra o de palabra”, “hecho o dicho contra razón y justicia”, “daño o incomodidad que causa algo”, “delito o falta consistente en la imputación a alguien de un hecho o cualidad en menoscabo de su fama o estimación”). Y la interpretación jurídica no es única frente a los mismos hechos o dichos, como demuestra la existencia de sentencias categóricas que identificaban un discurso como injuria, posteriormente revo- cadas por errores tribunales de superior rango, con el consiguiente debate judicial en torno al valor del término.

Mediante el análisis del discurso de algunos casos importantes (como el caso Otegi y el caso Martínez-Inglés) podemos acercarnos al estudio de la injuria como hecho comunicativo y lingüístico. Un método pragmalinguístico que toma como base la teoría de la relevancia de Sperber y Wilson permitirá adentrarse en el proceso inferencial de interpretación de la injuria, con especial atención al contexto en el que se produce y se recibe.

ROSS, ALINE* (LEXIA insights solutions, aline@lexia.com.mx)

Posibilidades EN La Base De La Pirámide

Los estudios sobre la base de la pirámide se han centrado, de forma tradicional, en comprender las causas estructurales de la pobreza, así como sus aspectos psicosociales. México lleva a cabo numerosas campañas para apallar los niveles de pobreza en el país, desde los programas OPORTUNIDADES hasta la “Cruzada contra el hambre”, ambas auspiciadas desde las instituciones y el gobierno e integradas en los aspectos estructurales de la pobreza y en el impacto comunitario.

Este paper propone una visión alternativa a la percepción dominante en México de la situación de la pobreza basada en los estudios realizados por C.K Prah- alad. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionando dignidad y empoderamiento a las familias de bajos recursos.

Este paper propone una metodología en tres fases:

- Por un lado una investigación sobre los distintos programas gubernamentales y sus efectos reales sobre los individuos y las comunidades.
- Por otro una investigación en los datos estadísticos como los índices de pobreza del INEGI o el reciente estudio sobre “Pobreza y bienestar subjetivo” realizado por el INEGI y FLACSO México.

Contested Claims over Space: Discourse and Politics Among Fishers and the Oil Industry in Mexico

This paper examines hybrid forms of resource governance and the involved struggles over space and subjectivity among coastal fishers, the Mexican government and the state-owned oil industry in Tabasco, Mexico. The analysis builds on the study of contested claims over rights to off-shore space in an area established as a security measure exclusively for the use of the oil industry by the Mexican government in 2003. The study is based on research material collected during intensive ethnographic fieldwork among coastal fishers, government actors and oil industry representatives in Tabasco in 2011 and 2012.

The study focuses on the “how” of hybrid mechanisms of resource governance, with particular interest in the strategic use of legal measure, corporate social responsibility programmes and political discourse in the claims over resource space. The research takes part in post-Foucauldian theorizations of space as so- cial arena, constructed in political frictions between private capital, state, society and nature.

We argue that fish-oil governance in Mexico operates as a combination of different logics and technologies that work towards the displacement of fishers as legal subjects from politics and their subjection to ideologies of entrepreneurship. Simultaneously, the multiplication of transnational actors in the oil industry’s CSR programmes provides a new political venue for the continuance of the fishers’ subjection to clientelist arts of governance while it makes the identification of accountability and responsibility diffuse. In this context, the fishers’ resistance is constructed through individual networks and opposition to mechanisms of self-responsibilisation and through fragmented political resistance which keep the extractive politics volatile. Our study of these less visible struggles over re- source redistribution and political representation seeks to provide new perspectives to the prevailing forms of environmental governance and the contestations regarding them.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The article combines literature from political science, development theory and social psychology to discuss the relevance of procedural justice to the achievement of sustainable development goals. Participatory environmental governance is framed as contributing to the fulfillment of the equity ambitions of sustainable development. However, there is a tendency within environmental governance to depoliticize environmental issues and decision-making, for example by making participation conditional and by linking strategies of sustainability with the perceived neutrality of bureaucratic regulation. A depoliticized governance process can create situations where controversial issues of ethics and justice are obscured or even avoided; watering down basic functions of democracy, such as representation, dialogue, and accountability. Scholars argue that marine governance has been severely neglected by the social sciences and has not been exposed to sufficient reflection regarding its specific purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

The theoretical discussion in this article is illustrated by drawing on empirical material from two case studies of marine nature reserves establishment in Sweden and a case study of ENGO participation in regional marine environmental governance platforms managing the Baltic Sea. Interviews with different actors address how procedural justice affects legitimacy of decisions made on the back of this processes. Furthermore, based on the material, unequal distribution of various resources affects the perceived balance of justice between actors in favor of more resourceful actors as participants and agenda setters. The findings show that actors’ ability to act upon opportunities given by society seems highly dependent on the actors’ access to different kinds of resources/capacities. Weak actors may risk getting ignored, neglected, manipulated or even abused. Problems are put forward in the draft White Paper but here alternative policy directions will be suggested.

Participatory environmental governance is framed as contributing to the equity ambitions of sustainable development. The trend of formal delegation of power to decentralized institutions of various kinds has been extensive. It can be questioned however, if these more pluralistic approaches can adequately deal with and balance uneven power relationships between stakeholders or if existing power relations are reproduced through these processes. As a result of pre-existing inequalities weaker actors may risk getting ignored, neglected, manipulated or even abused. Marine governance has also adopted these democratic ambitions, but empirical examination of practice has been severely neglected by the social sciences. Arguably, as a result marine governance has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

In this paper, I draw on the concept of procedural justice linked to power to examine and compare the establishment of St Anna archipelago and Gräsgår arkipelago nature reserves in Sweden. The former case has been characterised by authorities as consensus oriented while the latter has been seen to be conflictual. By employing the procedural justice concept over time in this under studied and novel empirical setting the present paper aims to develop new understandings concerning its own epistemological conditions of possibility. For instance, can age de- or re-construct the evolutionary temporality in which it was initially conceived? How can age divisions and differences be re-constructed in view of emancipatory ideals of children? Hasn’t age contributed to an under-socialized notion of children? Modern childhood owes its origins to the emergent historical importance given to human differentiation along the life course, a principle which came to preside over the formation of organisms, individuals and societies. Chronological age became the index which testified to socially and biologically relevant changes against the backdrop of an individual’s identity. How human differentials along the life course should be signified, predicted and legitimated became an accomplishment of age taxonomies or life stages. Studies of childhood emerging in the second half of the twentieth century, like sociology and anthropology, problematized the contextually unbound nature of age changes and its reifying effects and subjectivities. Did the categories of age that were tagged by age were brought to converge, although age, as an explanatory concept, was not entirely overcome lurking beneath the constructionist efforts to understand childhood and children. Age constitutes, then, a “complex” given its overall adherence to modern as well as contemporary perspectives of childhood studies. Problematic age points in the direction of inquiring about the nature of the disputes and conflicts of age-related social groups and the limits of such a politics of age.

In this paper, I draw on the concept of procedural justice linked to power to examine and compare the establishment of St Anna archipelago and Gräsgår arkipelago nature reserves in Sweden. The former case has been characterised by authorities as consensus oriented while the latter has been seen to be conflictual. By employing the procedural justice concept over time in this under studied and novel empirical setting the present paper aims to develop new understandings and formulations of justice and thereby contribute to the literature on participatory environmental governance, marine governance, nature protection, and environmental justice. The paper will show that issues related to legitimacy, identity and representation are substantial in both cases, as well as conflicts between public and private interests and that a long-term struggle for ‘independence’ is being played out in the setting up of nature reserves.

Ambiguous Collectives - Creative Workers and Their Integration in Urban Space

Looking at people working in the areas of arts, design, architecture, fashion, multimedia, communication and consulting, it is hardly possible to identify a more or less homogeneous “creative class” (Florida 2002) that would contribute to the competitive advantage of urban regions by producing cultural values apt to create a distinct identity in the global competition. From our point of view, they rather form ambiguous collectives that are continuously reconfigured by the transformation of urban space.

As Marazzi (1997) argues, the organisation of cooperation in post-Fordist labour organisation passes from wage form to space form. Creative workers have a peculiar function within this process, because they help to transform urban space into a source for economic production and organisation. They do so by asigning symbolic value to cultural peculiarities of quarters, by exploring the limits between private and public space, between working time and leisure time, between economic interests and cultural values. Creative workers enact the game of exploring these limits as essential part of their professional and cultural identity. Yet, as stated, this form of “identity” is ambiguous, since it indeed may function as a driver for gains in social distinction, for accumulating cultural and social capital (Bourdieu 1997), but distorts and veils real differences in income and social security.

We will refer to two phenomena regarding creative workers’ use of spaces: 1) the founding of common spaces like office communities and 2) the organisation of protests against the structures of the social insurance system. This enables us
to address the question if the need for collective organisation is necessarily subordinated to the capitalisation of cultural production via the valorisation of city quarters in terms of real estate prices, or if shared spaces are an opportunity for enhancing participation in the shaping of urban environments.

RADAKOVICH, ROSARIO* (UNIVERSIDAD DE LA REPUBLICA, rosario.radakovich@yahoo.com)

"Serious Leisure": Film Festivals As Techno-Audiovisual Capital

Author: Rosario Radakovich

Film festivals are considered as par of a "serious leisure" for the audiences. Most of them are considered as a "distinct" cultural activity, also an specific "techno-audiovisual" or "techno-cultural" capital (O’Keeffe: 2009). Film festivals give audiences the opportunity to be part of an specialized knowledge, a creative and innovative environment –with filmmakers, cultural journalists, etc.-, be included in premieres, and be part of the atmosphere of contemporary global culture. (Singer, 2001).

As a result, audiences expect festivals provide a certain "quality guarantee" in order to show to the friends and family the value of this prestigious activity. According to De Valk (2006) festivals audiences use the experience as evidence of cultural capital in conversations between friends and family. In this context, what are the forms of 'serious leisure' associated to audiovisual cultural capital?

This paper will analyze the case of the International Film Festival in Montevideo organized by Cinemateca Uruguaya, in order to explore the consumption of film festivals as a "serious leisure" in Uruguay. The methodology includes personal interviews and focus group study with film festival "selected" audiences. The results are part of a research about uruguayan audience cinema, developed in the Information and Communication Development Program in the Universidad de la República (PRODIC UDELAR), with an interdisciplinary research team between 2013 - 2015.

RADFORD, LORRAINE* (University of Central Lancashire, lrdford@uclan.ac.uk)

Domestic Violence, Coercive Control and 'Risky Parenting'.

This paper will consider the concept of risk in relation to parenting in the context of domestic violence. Since the 'discovery' of violence in families in the nineteenth century and the 're-discovery' associated with the birth of second wave feminism in the 1960s, definitions of 'violence' and 'child abuse' have expanded in high income nations. In the UK the official definition of domestic violence has been changed to include the concept of 'coercive and controlling behaviour' defined as 'an act or a pattern of acts of assault, threats, humiliation and intimidation or other abuse that is used to harm, punish, or frighten their victim' and 'a range of acts designed to make a person subordinate and/or dependent by isolating them from sources of support, exploiting their resources and capacities for personal gain, depriving them of the means needed for independence, resistance and escape and regulating their everyday behaviour'. In paper, Stark's (2005) concept of coercive control will be applied to fathering in the context of domestic violence. Child care after separation or divorce has become a gendered political issue. The implications of applying the concept of coercive control to fathering for equality, safety and justice in managing violence and risk in post separation relationships between parents and children will be discussed.

RADFORD, LORRAINE* (University of Central Lancashire, lrdford@uclan.ac.uk)

The Victimisation of Childhood – Understanding Children and Violence

The media and campaigning organisations have influenced public perceptions of violence and young people by focusing on rare and sensationalist events such as homicides, extreme cases of child abuse and young people orchestrating riots from smart phones in inner city areas. Representations of children and young people as either 'victims' or 'villains' has consequences for their wellbeing – their experiences of violence are misrepresented and over simplified, fragmented accounts of the causes and consequences hinder progress in policy and practice. Taking a feminist approach to the sociology of childhood and drawing on recent research findings, this paper will consider what is helpful to know about the risks of abuse, neglect and violence when working or interacting with children and young people.

Key questions addressed will be:

What is known about the prevalence and impact of abuse, neglect and violence in the lives of children and young people today?

What are the gender and age related risks? Who does what, to whom? What are the risks to children and young people at different ages from different perpetrators? How much abuse and violence is committed by children and young people?

Is the world a more dangerous place where children experience more violence and commit more violent crime than ever before?

Are adults fears about and responses to child abuse and children's violence part of the problem?

What are the challenges and opportunities we face in putting children's experiences of abuse, neglect and violence and their rights and agency at the centre of thinking and practice?

Sugar BABY - the System of Medicalization's Around Childhood Obesity

Obesity is considered a pandemic and childhood obesity is considered one of the most serious public health challenges of the 21st century by WHO. The medicalization of childhood obesity is a clear example of the medicalization of risk. It is believed that the obese child is more likely to have high blood pressure, elevated cholesterol or of becoming diabetic already in childhood but also in adulthood. This paper analyses the risk of the methodology of the health sector, the problem of the political economy of the system of medicalization and the study of the effects of the model of medicalization in society. An analysis of the factors that influence the system of medicalization of childhood obesity is made to understand the causes and mechanisms that can influence the development of a specific model of medicalization of childhood obesity.

The present paper shows the first evidences about the comparison of health promotion programs on childhood obesity in Europe from the European Charter on counteracting obesity (2006) to the most recent Vienna Declaration on Nutrition and Noncommunicable Diseases in the Context of Health 2020 (2013) made by Institutions, health professionals and European Food Companies.
Using pooled data from TIMSS 2003, 2007 and 2011 – an international survey project of competences among 8th grade students – we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variation in the context conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining these data, we take a look into the future of educational inequalities. Our results confirm the existence of systematic cross-country regularities and suggest that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence of occupational variables on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relationship between economic context and family background effects on educational careers.

Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamic, social world is both ambiguous and conceptualization of CSR stems from its social construction, an idea which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper trains the spotlight on the business side of the discourse on CSR. The paper shows how Philippine companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The paper looked at thematic changes in Philippine business CSR discourse from the 1970s to the present and found an increasingly explicit presentation of a business case for CSR over the past four decades.

Reported Premarital Sex: Explaining India’s Gender Divide

The popular media tell us that the Indian premarital sex rates have risen sharply in recent decades. On closer examination, these reports appear to misrepresent the data. Local surveys have been portrayed as national. Research on one age cohort has been reported as if it covered multiple decades. The only multi-decade national survey to ask detailed sexual history questions is National Council’s National Family Health Survey (NIPS). Confining the analysis to sexual and marital history of men and women at the age of 24, it is possible to draw appropriately comparable samples of respondents from this survey representing different age cohorts based on year of birth. This shows no clear increase in the level of reported female premarital sex over time. For male respondents the rate rose from a low of 2.45% for those born in the period 1962-66 to a high of 6.98% for those born in 1977-81. The discussion below suggests some social forces that may have reduced the level of female premarital sex, but these do not explain why the reported rates are not symmetrical between men and women.

Challenges of a Global Sociology: Centers and Peripheries in the Geo-politics of Sociological Theory

Debate about the possibility of building a global sociology has gained increasing importance in recent years. In dialogue with works that argue in favor of post-national sociologies as well as literature that criticizes the hegemony of the theoretical center, socio-scientific articles aim at reflecting the idea of global sociology. The main sustained theoretical hypothesis is that the national experiences must be understood as bearing the potential of making important contributions to stimulate the theoretical discussion about sociological theories and concepts formulated in the centers. By mobilizing some sociological concepts such as public sphere and right to the city, originally formulated in centers, we suggest that peripheral sociologies could contribute to broaden theoretical formulations. In this sense, the theoretical construction of sociological theory must involve an equal dialogue between sociologists from the center and the periphery in order to construct a global sociology.

Deviance and Camouflage City: Sexual Deviance and The Construction Of Invisible Urban Spaces In Post-Revolutionary Tehran

This study is an attempt to explain the relationship between sexual deviance and urban space in the context of post-revolutionary Iranian society. It focuses on Tehran, a major metropolis where gender segregation and heterosexual norms in the form of family institution appear to dominate societal norms. But this study instead offers an ethnographic account on various “sexual deviant” practices including homosexuality, transvestic fetishism, sadism, and necrophilia in diverse city spaces to shed light on a hidden world in post-revolutionary Iranian urban life. The notion of “camouflage city” underscores the complex relationship between embodiment and city space and argues how behaviors deemed “sexually deviant” in Tehran continue to undergo illumination for concealment through heterosexual normative practices sanctioned by the Islamist normative discourses and practices. The study specifically looks at transsexual practices both in terms of everyday and institutional life in the context of changing state official and public perceptions of sexual deviancy. It also looks at how such practices tend to resemble a particular cultural form of a distinct urban space, where everyday sensibilities become fused with ways sexual deviance is practiced and made (in)visible in shifting daily/nightly life situations. In the final section, the study theoretically examines deviancy as performative act which is always spatial practice and that it involves a de-labeling process to destabilize the societal norms whose infraction constitute sexual deviance.

Mobile Media, Digital Divide and Social Movements: The Case Of Iran

This study attempts to offer a theoretical interpretation of the political and social dynamic of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of text messaging and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimage the public in affectively contentious ways. Yet the emotive is not “outside the public” but rather a further layer of the public that dramatically and socially construct and shape communication across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. The mobile media practices, along with its close connection with online social media, during the 2009 demonstrations, I argue, foster embodied engagements through distinct camouflage practices, largely hidden from the official order of state surveillance. However they do so in a socio-economic context that is shaped by the market and state institutions. The study finally explores the conceptual relationship between digital inequalities (on an institutional level), computer-mediated practices and state power.

Asian Migration Policy: A Comparative Analysis

This paper addresses migration policy of major receiving countries in Asia from a comparative perspective. The paper identifies seven interwoven, underlying features that underscore the edifice of migration policy in the region. The study elaborates these salient features with an emphasis on three major international migration flows: low-skilled labour, skilled labour and student. Despite each individual country’s policy-making initiatives that prioritize one’s own national needs and interests, this paper reports that migration policy converges in core principles

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
and practices throughout the region and the exclusionary principles accentuate this convergence in Asia migration policy.

Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances. Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant households. These two-way surveys are complemented by participant observations and focus group discussions.

Institutional Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasepuhan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (Company/ concession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutions has clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasepuhan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

Cluster Dependency, Social Capital and Social Innovation: Insights from the Engineering and Plastic Clusters in Chennai, South India

In most developing countries a focus on the development of MSME or Micro, Small and Medium enterprises is evident. Operationalising this goal in the Indian context has been a conscious planning has been adopted not only to strengthen existing enterprises, but also to create ‘clusters’ of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters -the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters -engineering and plastic in and around the cities of Chennai, South India. The cities however is well known for its automobile clusters. Significantly different in size, technology used and labour utilised, these ‘clusters’ have innovative practices to mobilise labour, access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nevertheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of environment where they are located. As most of their labour is unskilled ‘social capital’ in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on insights obtained from a sample survey of these clusters. Questions raised include How do they ensure continuity of labour? How do they access capital and technology? How do they sustain production and marketing?

Essentially, the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlight the innovative practices at the workplace in a developing country like India in the context of MSME.

The Poverty in the Midst of Plenty: The Case of Fisher People

The urban poverty being widely discussed among the discourse on urbanization and poverty, the present paper attempt to shed light on the pockets of poverty in the urban area with specific reference to coastal belt and among fisher people. The fisher people living along the coastal belt are subject to all urban poverty problems notably of housing, water and sanitation, health and education. Their living environment is of poor quality and social security measures unsatisfactory. This is to say that they live in permanent settlement regions like the coastal belt where skilled labour in marine fishery defying the general conviction that urban poverty has direct linkages to migration and unskilled labour. The paper is based on the data from the census of households in the coastal wards of Thiruvananthapuram Corporation, urban local body in Kerala. The fisher people dwell in the coastal belt are generally backward in terms of basic amenities and socio-economic conditions. The coastal belt of urban area is also not an exception. The paper highlights backwardness of fisher people in the survey area in education, health, basic living amenities like water, electric power, and clean living environment. Does the Corporation need to usher in more inclusive programmes, efficient management, and delivery mechanisms? Do Policy makers and implementing personnel be sensitized for fair and judicious practices? These are some of the pertinent questions addressed in this paper.

Re-Establishing the Nexus Between Sustainable Development and Disaster Risk Management: Exploring the Scope and Challenges in Stakeholder Participation

The stakeholders involved in sustainable development are also involved in risk and disaster related activities. Disaster situations bring together multiple stakeholders. This is one of the complexities of disaster response and management in general in which many actors ranging from public to private come into play. Governmental agencies create new roles to respond to disaster needs. Similarly,
non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organising relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved. 

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and emergency response programs. Given the process of repeated learning over disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states place on issues of vulnerability. It is therefore important to address issues of development during disaster reconstruction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

**International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India**

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 along with his Holiness, the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore.

After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their Union city education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces. They are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are a highly religious group but their religion is facing a competition from western influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

This study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to new social spaces. The paper tries to examine the gendered changes.

**Gender Segregation in Hospitality Sector – Extent and Consequences**

Hospitality is one industry in which women are preferred and are found in large numbers. However allocation of responsibilities in hospitality organizations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process And disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediately levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be occupied by their male counterparts. It is the women staffs who are made to face and absorb the idiosyncrasies of the clients, who are mainly strangers, requiring them to work under stress, strain and risk. The findings further indicate that the extent of segregation appears to vary significantly with the size and sector of the establishment and the negative implications of such segregation appear to be more marked in smaller private establishments.

**Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin**

There has been an unprecedented increase in opportunities for migration form India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethno-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of culture conflict, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women’s support networks to address issues of gender based violence.
The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

**The «Italian Paradox» in the High-Tech Industries**

There is an “Italian Paradox” in the development of the high-tech industries. As it is well known, Italy is under-specialised in the high tech industries and, during the last decade, has recorded disappointing performances in these sectors. In particular, the innovative capacity of Italian firms is quite low. 1) Patenting is below the European average: 7.4 patents per million of inhabitants in Italy vs 19.6 per million of inhabitants in the EU. 2) Furthermore, despite being the fourth largest economy in the EU in terms of GDP, Italy is only sixth for high-tech applications to the European Patent Office.

However, Italy has a potential in these industries, which has not been fully exploited yet. In fact, it ranks third amongst European countries for the number of high tech firms and for added value. Moreover, the percentage of employment in high-tech and medium-high-tech sectors on the total of workforce (8.1%) is similar to the European Union average.

On the basis of this data, how can the Italian Paradox be explained? I will try to answer this question focusing on two aspects of the “Italian case”: 1) the weakness of its National system of innovation and 2) the territorial unbalances of its economic development. In fact, according to the 2013 European Innovation Scoreboard – which gives a comparative assessment of the strength of EU27 Member States’ innovation systems – Italy ranks only fifteenth in Europe in terms of innovative capacity. Furthermore, Italy is characterized by a high degree of internal diversity. So national averages do not render the internal complexity and diversification of the economic development of a “regionalized form of capitalism” as that of the Italian case. To corroborate this thesis, I will present the results of an analysis carried out on the Italian geography of innovation.

**Greening in Construction: What Changes for Workplace Innovation?**

This paper investigates how construction companies innovate their organisations in response to the shift to energy-efficient construction. The changes in product and process induced by green construction confront companies with detailed technical instructions, severe accuracy requirements for all operations and no room for improvisation. As a result, construction involves more specialisation, a growing length and complexity of the value chain (with more contractors involved), more standardisation, the modularisation of construction components, a shortening of lead-times, etc. Overall the process becomes highly sensitive for disturbances and requires rigid coordination and logistics. To investigate the impact of these changes, case studies were carried out in two Belgian construction companies. Each included interviews with 6-7 management representatives, 5-6 workers and on-site visits. Two contrasting work organisations were observed. The first can be characterised as an ‘enlightened’ employer-centred organisation model based on participation. The work organisation combines the centralised design and off-site prefabrication of some components with on-site empowered teamwork and investments in skills of the workers. These aim at reinforcing decentralised process coordination and regulation capacities. Subcontractors are included as partners in the on-site construction teams. The need for contextualised knowledge, decentralised problem-solving and high involvement of all dominates in this corporate strategy. The second company, in contrast, opts for high levels of division of labour, standardised and short-cycled off-site preparation of prefabricated construction components, centralised and bureaucratised process coordination, risk-transfer based subcontracting and a strategy of constant productivity increases and rationalisation. High levels of control and process-orientation are the key-words in this corporate strategy. It appears that the ‘greening’ can as such not be identified as a main driver of workplace innovation in construction. The second corporate strategy may be the reason for concerns for new risks affecting the sustainability of jobs in this industry against the background of an aging work force.

**Capitalism World System, Clash of Civilizations or Violence Civilizing in Contemporary World**

Luego de la caída del muro de berlín y la profetización del fin de la ideología y el último hombre el mundo contemporáneo ha estado lejos del unanimismo propuesto por Francis Fukuyama, la explosión de manifestaciones sociales en casi todos los aspectos de la experiencia humana no ha dado espera, movimientos sociales que van desde las clásicas reivindicaciones de clases y soberanía nacional, hasta enfrentamientos por la diferencia, el género y la sexualidad, pasando por movimientos ambientalistas y animalistas, son parte de un abanico de manifestaciones que no han obedecido el advenimiento de la sociedad liberal mundial. Esta explosión de manifestaciones no ha estado ausente de grandes procesos de violencia a nivel mundial e intervención militar en distintos países del planeta, Irak, afganistán, Libia, Siria son algunos de los ejemplos más significativos de los conmplejos procesos surgidos con el “fin de las ideologías”. Las perspectivas teóricas en la comprensión de estos fenómenos son sugerentes especialmente las surgidas desde perspectivas económicas como la marxista, con el análisis de Samuel Huntington, el ultimátum humanista de Samuel Huntington y las propuestas de-coloniales de múltiples intelectuales del sur global. Esta ponencia busca plantear el debate sobre la “naturaleza” civilizatoria de estos conflictos, pero a diferencia de Samuel Huntington, y en coherencia crítica con Wallerstein y el Giro decolonial, desea plantear que de lo que se trata es de un proceso de expansión civilizatorio, que a diferencia de Huntington y su choque contemporáneo de civilizaciones, este inició hace cinco siglos en América y se ha expandido por el resto del mundo, India, China, Japón, medio oriente hasta nuestros días.

**Palabras claves:**

**Microcredit and Poverty Alleviation In The Mexico Contemporary**

Microcredit as strategy for poverty alleviation grows stronger in the last decades of the twentieth century, from successful experiences in different parts of the world, both in developing countries and the developed; numerous studies beginning to emerge about microcredit; however these studies are mostly empirical. Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in overcoming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, and it creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the governments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called “Opciones Productivas”, which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary Mexico.

HACIA LA CONSTRUCCIÓN DE UN MODELO ECOLÓGICO DE SALUD DESDE LAS CIENCIAS SOCIALES.

Resumen.

Vivimos en un mundo en donde las relaciones causa y efecto han dejado de ser insignificantes, la capacidad de reciplicidad del planeta ha venido disminuyendo con el paso del tiempo y las fuerzas productivas a lo largo de estos últimos treinta años que a diferencia de décadas anteriores las consecuencias son cada vez más importantes sobre la calidad de vida y diversidad ecológica del planeta; en la reunión del club de Roma, se advirtió a los líderes mundiales la necesidad de poner límites al crecimiento debido a las posibles consecuencias irreversibles que su acción traería sobre la vida en el planeta, especialmente sobre los más jóvenes. Fenómenos como el calentamiento global, la escasez de agua, la pérdida acelerada de biodiversidad, el aumento de la violencia e ilegalidad serían realidades presentes de no asumir límites y formas de distribución justas frente al crecimiento. Frente a esta situación las ciencias sociales han demandado constantes sobre salud pública, individual y colectiva, que sin embargo no han logrado una adecuada conceptualización de las relaciones salud/enfermedad, especialmente porque el paradigma mecanicista, newtoniano y el dualismo mente/cuerpo no ha sido superado completamente en dichas perspectivas teóricas que sí bien abogan por una comprensión holística y relacional de los fenómenos sociales vinculados a las relaciones salud/enfermedad, no son suficientes para comprender de manera adecuada estos fenómenos. Ellos no permiten comprender la complejidad de la "trama de la vida" las complejas interrelaciones existentes entre ecosistemas, especies y sociedad. Ante esta situación llena la pena preguntarse: ¿qué nuevo paradigma, qué nuevos conceptos y maneras de entender la realidad se necesitan para solucionar la situación por la que atravesamos en el mundo actual?

Palabras clave.

Salud/enfermedad, crisis ecológica, mecanicismo, modelo ecológico.

Does Violence Begets Violence? Evidence from Mexico

One familiar argument to explain violence rates is the common sense affirmation that violence begets violence. Imported from the biological sciences, this organic metaphor is well rooted in the discursive explanation of crime. However, the empirical evidence around this supposition is quite scarce. A typical combination of the "violence begets violence" argument with the lack of proper empirical evidence is easy to find in countries dealing with recent outbreaks of criminal violence. This is the case of Mexico where the recent trend of criminal violence has been explained with a wide array of arguments including the spread-contagion argument. This one in particular has gained presence among the media and policy makers. Moreover, this assumption is being increasingly used to justify the design of prevention programs where significant amounts of public resources are being invested. In view of this, this paper presents the results of a study on the empirical validity of the hypothesis behind the "violence begets violence" assumption. For my research purposes I have selected a set of relevant hypotheses on the contagion of violence to verify its empirical validity for the case of México. With a combination of different quantitative techniques I have analyzed homicide rates at the local level for the city of México from 1990 to 2010. The results of this work will throw light on the empirical pertinence of the contagion of violence hypotheses, and it will help to inform public debate and public policy about the characteristics of criminal violence in México.

Placing Food and Nutrition Security: The Co-Production Of Land, Dietary and Livelihood Relations In Four Sites Of Northern India

Patterns of land distribution in association with local agro-ecological conditions play crucial roles in shaping the dynamics of food and nutrition security in the global South. The relevance of the local is highlighted in this paper, which examines the differences existing between four rural communities in northern India. Using evidence from 389 in-depth household interviews, the paper identifies the connections which exist between household assets, nutritional outcomes, and livelihood strategies. The paper argues that the considerable differences found by the study cannot be explained by a single case study analysis using statistical models. There may be many importance of processes of social and cultural embeddedness in determining food and nutrition security outcomes.

Trust Under Conditions of Extreme Risk: Exploring Trust Networks of Clandestine Activities

Trust is important in all types of social relations, but its role is crucial in secret activities of clandestine organizations operating under conditions of extreme risk. The paper explores the sources of trust in secret activities of underground publications (so-called samizdat) of Soviet Lithuania. Samizdat was one of the most persecuted means of oppositional activity in post-Stalinist Soviet Union. Therefore, building a network of samizdat publication and distribution required extremely high level of trust among collaborators. What are the sources of trust in a situation when a correct judgement on trustworthiness of a person is a question of life-and-death? Using social network analysis, the paper explores the trust networks of several samizdat publications in soviet Lithuania, including the most successful underground publication in the Soviet Union, ‘The Chronicle of the Catholic Church of Lithuania’ which was continuously published from 1972 until the breakdown of the regime in 1989. The data is drawn from face-to-face interviews with the main publishers of the selected publications. The results of the research refute the claim of the theory of secret societies that to solve the problem of trust clandestine networks are built in pre-existing strong ties among collaborators.

CAPRARÁ, BERNARDO (Federal University of Rio Grande do Sul) The Impact Of Cultural Capital On Students’ Performances In Brazil

The main goal of this study is to verify the effect of cultural capital on students’ performances through an official test applied by the Brazilian government (Prova Brasil), the students are part of the Brazilian Elementary to High School Evaluation System (SAEB). The data set used is from the year of 2003 and involves 52,434 students and the standard test applied in the SAEB year in the fields of mathematics and Portuguese. Along with the test a questionnaire is applied to identify students’ demographic characteristics as well as their families’ profile. The research question is: what is the impact of cultural capital on students’ performances in high school? Specifically, there is a significant and positive correlation between parents’ education, ownership of computer, access to the internet and newspaper reading with the performances in the SAEB test.

RAMOS ZINCKE, CLAUDIO* (Universidad Alberto Hurtado, cramos@uc.cl) Sociological Narrative Accounts Guiding Society: Work and Network of Production and Diffusion of Three Chilean Sociologists (1970-2013)

The most significant sociologists in Chile, in the academic field and the public sphere, have been makers of narrative accounts or stories about the reality of the country and its process of transformation which have served as guidance for social actors. Such sociological stories have helped to constitute the socio-political world and the processes occurring in it: structural transformations under Popular Unity Government (1970-1973), resistance and criticism under the military dictatorship (1973-1989), transition to democracy (late 1980s, early 1990s), etc. They have played a performative role, actively becoming part of the reality they describe. This is not merely the result of the force of ideas, but is rather a product of complex networks producing such narrative accounts, in which the authors are prominent nodes that manage to become obligatory passage point. The research examines three remarkable sociologists who have contrasting trajectories, orientations and institutional links and applies with marxist critical orientation, connected to left political parties; Pedro Morandé, in the Catholic intellectual tradition, connected with the Catholic Church; and Eugenio Tironi, in a Durkheimian tradition, with participation in the State. With regard to them and in reference to the period 1970-2013 three main matters are analyzed: (1) key axes of their

Abstract
As god is a creator of flora and fauna, a woman is a creator of family which leads to society and Nation. The Indian society considered women as weaker sex. Such sociological and cultural traditions have kept women dormant for quite a long time. Despite of all hurdles Indian women stand tall from the rest of the crowd and are applauding for their achievements in their respective field. The aim of this study is to discuss the issues regarding women entrepreneurship in Kanpur. Different stakeholders are playing pivotal role in women’s economic development. This paper is mostly based on Primary, secondary data and some observations as and when require. The paper talks about the status of women entrepreneurs and their competitive skills in world of business environment. Skill, knowledge and adaptability (SKAs) in business are the main reasons for women to emerge into business ventures. The Paper also focuses on the problems in front of women during setting up a business enterprise and running in the competitive world. Some issues related to lack of financial support, availability of resources as well as support of stake holder etc. are major barrier in development of women entrepreneurs in India. It will also suggest the way of eliminating and reducing hurdles of the women entrepreneurship development in Context of Kanpur.

Keywords- Women Entrepreneur, Socio-economic, Small and Medium Scale Enterprises, Competency.

Improvisation Of Destination Awareness Through Festivals and Events: Special Reference To India

As travelers become more sophisticated, destinations need to become more originative in capturing those tourists. A potential tourist destination needs to create a brand image to compete in the global tourism marketplace. India, a land of vast cultural and regional diversities, has multi-faceted festivals. One can immediately draw a long list of religious festivals associated with various gods and goddesses, regions and traditions like holi, diwali, christmas, id (ul-fitr; ul-zuha), GurPurab, etc. The study focuses to examine the awareness of Indian festivals and their intent to travel. However, here the purpose is not to discuss the common religious festivals. It is an initiative to scrutinize upon only those festivals which are the main centers of tourist attraction. This study based upon several theories as theory of Reasoned Action, Theory of Planned Behavior, and marketing theories related to Awareness – Interest – Desire – Action (AIDA) sequence. The research is positivistic, quantitative research paradigm in which consumer behavior approaches prevail. The paper postulates there is significant relationship between promotions of festivals, events and awareness of destinations. The study reveals some promotional aspects which may help in transforming the attitude of tourist towards festivals and events in India.

‘festivals are the features of cultural diversity’

Globalisation and Indian Media: Certain Policy Implications

Media conglomerates and media corporatisation are phenomenon which have been studied by a number of scholars. The process of liberalisation, deregulation, globalisation and digitisation have transformed the media landscape. In India there has been a proliferation in the type of media. Simultaneously there has been growth in the quantity and quality of media content available for consumption. Like in other industries even in the media industry globalisation and diversification work hand in hand. Deregulation and convergence have also further affected the media industry. In the television industry there is segmentation and commodification of content. Programmes like “Who wants to be a millionaire” are adapted to the Indian scenario. Global content is transformed into local content by involving local actors. Internet is also fast becoming a segment of multi-media business. There has been a rise in the new form of communication known as mass-self communication (Manuel Castells). It is mass communication because it reaches potentially a global audience. It is self communication because individual...
The paper seeks to address health care, early marriage practice, reproductive health status, awareness about small family norm, housing conditions and health, role of media in health, awareness, utilization of medical facilities, habits and health etc. The paper explores that health of tribal women is affected by many inter-related socio-economic and cultural factors. The study reveals that women in general and tribal women in particular are the worst sufferers. Despite modernization, medicalization, globalization, marked improvement in global health and other ongoing developmental processes, the exposure of tribes in general and tribal women in particular, to modern system of medicine is not significant. The paper explores the paradoxes of continuity study and change in the tribal health care practices and interventions. This could also be observed as the contrast between ethnicity and modern-post modern changes. Thus different patterns and levels of health inequalities could be identified among Indian tribal women. The findings will be a contribution to Medical Sociology, Sociology of Gender Studies, Social Anthropology, and to the health of tribal women.

Open Your Own Data - Creating Individual High Value for Little People from Big Data

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas.

Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision-making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - "know yourself" - you could generate more informed choices when purchasing a phone company. With full availability of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual's own interest.

Children’s and Preschool Teacher’s Photographs of New Preschool Architecture: Issues of Participation and Interpretation

Children's and preschool teacher’s photographs and experiences of new preschool architecture Kim Rasmussen

In an ongoing project (2013-2014) about children’s and preschool teacher’s interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the physical and social environment. A numbers of photo-elicited interviews with the preschool teachers had been held over the summer too. These actions have created increased awareness of the relationship between the physical and social environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, inspired from action research, new childhood sociological, and phenomenological research, is to create knowledge (on basis of experiences, narratives, observations/field notes, photos/visual knowledge) about the preschool environment, which might qualify the discourse of kindergartens and the new architecture.

The architecture in new childcare-institutions breaks on several points with the former idea of “kindergarten” (small environments with an emphasis on domesticity, development and play), new preschools in Denmark are bulkily, contains many children (some more than 200 children), and are highly transparent (wide-spaced glass in both front and exterior walls). The new architecture is based on (neoliberal) ideas of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another

is how the buildings are "lived" and coded/decoded (Bernstein) and experienced by the participants. The paper and presentation will focus on issues of interpretation visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the asymmetry between children and adults: preschool teachers play a key role in the interpretation of children's photos, while it is difficult to invite and involve children (2-5 years) to interpret their own photos and words.

RATCLIFFE, PETER* (University of Warwick, Peter.Ratcliffe@warwick.ac.uk)

Public Sociology and the Impact Agenda: A Case Study

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying 'impact' (in accord with the current neoliberal agenda demanding accountability and ‘value for money’). The concepts 'public sociology' and 'impact' are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalizing impact in a research project that demands the deep, and unwavering, involvement and commitment of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the 'messiness' of the demonstrable 'impact' mirrors that of the research process itself, and the pursuit of a 'public sociology' in this context conflicts with dominant characterisations in the literature.

La Strada Network As an Example of Transnational Mobilization Against Trafficking in Women

My presentation will explore mobilization around trafficking in women for the purpose of exploitation in the Central and Eastern Europe (CEE). I will focus especially on the La Strada Network (LS), which is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking mobilization at the national level as well as internationally.

This network because of its roots as a cooperation between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activism networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists form Netherlands and CEE.
