Refugifying and Centering Housing in Political Economy

The issue of “housing” has not been granted an important role in post-war political economy. Housing as policy was relegated to social policy analysis and to a growing field of housing studies that have both shown little interest in the issues that political economists are usually interested in. Housing as market was likewise relegated to mainstream economists. The latter’s obsession with “free markets” and the lack of analysis of state involvement beyond the statement that it hampered the functioning of markets, has also broken ties with an integrated analysis of housing as a crucial part of political economy. In recent years, there has been a growing recognition of the increasing centrality of housing to the political economy of advanced capitalist societies. Yet we still lack a coherent and relatively comprehensive conceptualization of the “place” of housing in the contemporary capitalist political economy.

This paper sets out to offer that – partly to help bring together existing but typically self-standing arguments about different elements of the political economy of housing, and partly to help frame and connect up ongoing research in this area. It argues that housing is implicated in the contemporary political economy in numerous critical, connected, and very often contradictory ways. It makes this argument – and offers its conceptualization – by going back to what it is arguably the central category of political economy, capital, and identifying the multiple (and ever more complex) roles of housing when “capital” is considered from the perspective of each of its four primary, mutually-constitutive guises: as social relation, as process of circulation, as accumulated value, and as ideology.

Political Culture and Communication: A Study of Forthcoming General Elections of India

The paper makes an effort to present the cultural and communication perspective of the general elections of India scheduled to be held in 2014. However, its preparations are on full swing and the political alignments are on for the political battle between the Congress led (ruling) UPA (United Progressive Alliance) and the BJP led NDA (National Democratic Alliance).

The proposed general elections are symbolic in many respects and hence the political culture has proportionately got mobilized. A glimpse of tussles between the two arch rivals of contemporary Indian politics is going to affect the power structure and corresponding cultural texture of the society at large. Hence, the situation demands hair-splitting analysis of the culture and communication of the political forces shaping and sharing power.

The paper tries to encompass the bipolar political structure and the probability of the emergence of the Third Front in the coalition era at the centre. The political compulsion of different political parties to align themselves to mainstream national interest is something that Indian politics has yet to negotiate. India appears to be a cake being disputed over by the BJP and the Congress. The paper reflects the stakeholders of politics being at different camps and at loggerhead for political gains, putting the nation state at stake. The paper also makes an effort to look into the political dynamics having bearings on the functioning of the nation state and its future course of action. The exploratory research design in combination with clinical method is adopted to look into the political forces generating a particular political culture and communication.

Conceptual Foundations for Assessing the Meaning of Wellbeing

For a survey to have content and construct validity, it is first necessary to establish a clear understanding of the concept being measured. Although studies attempting to measure wellbeing in many different disciplines and settings abound, conceptual and theoretical development of the construct has been lacking. This paper reports the methods used, outcome, and benefits of undertaking systemic foundational research to develop a contextualised concept of wellbeing in each of two quite different workplaces. Abbey's phenomenographic, concept-building approach used innovative interview methods from marketing and education to tap into participants' experiences of wellbeing in their workplaces. The projective value of visual images (selected by participants) as metaphors communicated social meaning, thought, embodied experience and emotions (Zaltman, 1996). Questions based on Sykes et al. (2006) study of Learning from Past Success elicited schematic personal wellbeing experiences. Resulting data were analysed to derive a multilevel, multidimensional concept of wellbeing for each workplace. Comparison of the concepts suggested that wellbeing in work settings is best understood as a class of concepts with a constant structure of three domains – a structure that is comprised of locally contextualised common elements and one domain that clearly differentiates sites. Cross-national survey development can benefit from understanding this domain structure and how elements within it might vary according to site. More critically, the study points to the value of undertaking foundational research in any site to tap local subjective meaning. This will ensure that the concepts to be measured and quantitative devices have clearly identified boundaries and constituent elements.

Socially constructed meanings behind odours in everyday life are highly contextual and dependent on how social actors interpret smells. Through these interpretative processes, odours perceived as foul are often treated as threatening, car-potentially as a social impotency and repel anyone approaching him or her. This paper focuses on the sociocultural forces that affix persons with ‘smelly mouths’ and bad breath – or halitosis – as deviant and interrogates the implications these constructions have on various dimensions in their social life. Within this web of constructions, the author discusses three interconnected dimensions related to such olfactory transgressions. First, odours are important markers of moral status. Second, odours are imbued with connotations of social class and with these concomitant notions of lifestyle and presentation of self. Third, and given the often strong responses against persons with bad breath and the disruption to social interaction, I show how persons with bad breath respond to such ‘disruptions’ by invoking discourses from biomedical institutions and treatment interventions which appropriate and regulate such perceived transgressions as ‘medical problems’ that have primarily been dominated by rational, scientific models. By closely unpacking these processes, I attempt to demonstrate how and why the basis of the taboo of bad breath is not so much a ‘natural’ illness per se, but rather a response borne out of contextual, everyday life ‘sensory scripts’ as circumscribed by different social actors and institutions. This therefore lends support to the notion of the socially constructed roots of halitosis rather than its nature as an inherent, medically treatable illness.

LOCAL Community Resilience in the Context of Global Climate Change: A Case from Maluku Indonesia

This study driven by two research objectives: to observe the risk and vulnerability of the northern coastal region of Ambon island due to climate change from the subjective point of view of the Asilulu’s fishermen community in particular; to analyze the adaptation strategy and resilience of the Asilulu’s fishermen and the northern coastal region of Ambon Island. The research was carried out through qualitative process and specific observation on fishermen community of Asilulu Village of the Leihitu sub-District, Central Molucca District of Molucua Province, as case study. Two important results arise from the research. First, over the years local fishermen have developed adaptation strategy to cope with the risk related to climate changes such as adapting the fishing period to changing season, temporary seeking demersal fish, reduce sailing risk by fishing together in groups, use of new type fishing boat, develop new fishing gears, revitalize local institution, develop livelihood strategy and social security networks, as well as strengthen the relations and revelations to the God the Almighty. The adaptation strategy could potentially reduce the vulnerability of the Asilulu’s fishermen and their surrounding community. Second, although the Asilulu’s fishermen have develop adaptive strategy to reduce the vulnerability related to global climate change, however, based on the eight elements for coastal community resilience (US Indian Ocean Tsunami Warning System Program 2007), the socio-ecological resilience of Asilulu’s fishery and its north coast region of Ambon Island can be categorized as low. The governance, society and economic, coastal resource management, land use and structural design, risk knowledge, warning and evacuation, emergency response, and disaster recovery; are resilience elements that are not fully taking place or exist at Asilulu’s village and north coast region of Ambon Island.

Peer-Surveillance and Management of Uncertainty through SNS in Japan: Obligation of Keeping Good Company and Its Impasse

When the usage of the Internet became prevalent in 1990s, scholars and critics envisioned a coming future where people can expressively interact to each other as Netizen (net-citizen). As two decades have passed since then, many of the Internet dreams have come true thanks to rapid innovations of information and communication technologies. But, the reality of the Net in which we now live is a virtual world where digital dream of participation and democracy is not so much a ‘natural’ phenomenon, but rather a virtual society where digital dream have proposed.

This paper explicates how societies thrive amidst a multiplicity of languages in particular cultural, social, economic, political and religious contexts, resulting, invariably in linguistic inequality which affects language attitude, language shift and subsequently, language endangerment. Using 2 major Nigerian languages, namely Yoruba and Igbo, the paper explores the influence of attitude on pro-environmental behavior. To this end, we conducted a survey in Minamata, Japan in November 2010. Respondents are all 3rd-grade junior high school students and their parents in that city. Our results are as follows: 1) Between parents and children, the correlation of attitudes toward the environment is weak; 2) the actions of families favorable to the environment and environmental study in school have a positive effect on ecocentric attitudes and the anthropocentric attitudes; 3) the pro-environmental actions of families, experiences in nature, and environmental study in school have a negative effect on environmental apathy; and 4) among the three environmental attitudes, ecocentric attitudes have a positive effect and environmental apathy a negative effect on pro-environmental behavior. Therefore, ecocentric attitudes are significantly improved and environmental apathy significantly reduced by experiences in nature, environmental study in a school, and the action of families.

How Does Environmental Educational Affect the Environmental Attitudes?

Previous studies have clarified three effects that promote a particular pro-environmental behavior: situational understandings, action costs, and norms. We can assume, in addition, the general attitude toward environment which promote the behavior no matter what the behavior is: ecocentric attitude, anthropocentric attitude, and environmental apathy. The general attitude is also assumed to be formed by education at school as well as at home. This paper thus explains the effects of environmental education on some aspects of environmental attitudes. Moreover, it specifically explores the influence of attitude on pro-environmental behavior. To this end, we conducted a survey in Minamata, Japan in November 2010. Respondents are all 3rd-grade junior high school students and their parents in that city. Our results are as follows: 1) Between parents and children, the correlation of attitudes toward the environment is weak; 2) the actions of families favorable to the environment and environmental study in school have a positive effect on ecocentric attitudes and the anthropocentric attitudes; 3) the pro-environmental actions of families, experiences in nature, and environmental study in school have a negative effect on environmental apathy; and 4) among the three environmental attitudes, ecocentric attitudes have a positive effect and environmental apathy a negative effect on pro-environmental behavior. Therefore, ecocentric attitudes are significantly improved and environmental apathy significantly reduced by experiences in nature, environmental study in a school, and the action of families.
and cultural factors that subordinate women. We have underscored how gender inequalities intersect with other forms of inequalities, such as, for example, those due to immigration or minority status; how limited rights, lack of equal access to resources and exclusion from participation in decision making processes impede the elimination of violence against women at the micro, meso and macro levels. In this paper we investigate the role of the state in addressing domestic violence, especially in the context of immigration in the neo-liberal era. By doing so we problematize state regulation of gender itself. Mobilization by the battered women’s movement in the last few decades, increased media attention, and legislation at the state / provincial and federal levels have increased both government awareness and support to address violence against women. However, activists and researchers have also critiqued the problems with invoking the power of the state in seeking a solution. Drawing on a multi method approach, we critically examine how Canada and the U.S approach the problem of domestic violence. In particular, we focus on how domestic violence has been framed: how the U.S. and Canada engage at the micro, meso and macro level in ending domestic violence; how abused women and mainstream and immigrant organizations that address domestic violence encounter the state; and what are the most common forms of intervention and outcomes. Finally, what the gaps in the discourse are as they emerge from the experiences of domestic violence in the US and Canada.

The Role of Reciprocity in the Creation of Reputation

We seek to identify social mechanisms which explain the production of reputation in economic relationships between actors. Reputation is often assumed to be freely available in social systems. However, since people have to give away exclusive information the production of information is not for free per se. The higher the costs of producing reputation, the stronger is the tendency to overcome this obstacle by appropriate incentives. Since reputation has been shown to play a crucial role in economic and social systems, the identification of such mechanisms is crucial for our understanding how exchange between actors work. We argue that reciprocity can be a strong driver for information transfer in social systems. Based on the idea of an effective norm of reciprocity in social and economic systems we derive hypotheses on the role of reciprocity for the production of reputation in small networks. We distinguish between direct and general reciprocity and argue that both may foster the flow of information about exchange partners in economic systems. Moreover, we examine the interdependency between competition and reciprocity and how these hypotheses are tested by employing an experimental design. A standard trust games is used where reputational information can be exchanged between individual agents within a population but does not become generalized. We find that both settings are important drivers of the transfer of information about a seller among a group of buyers. Moreover, competition dampens the production of reputation considerably.

Globalization and Third Way Theories: The Beleaguered Family and Marginalization of Women

The neoliberal logic of globalization that shape today's world imposes a certain role for the family and the community as important social units to regenerate civil society. This is done best through the reform discourse of third way theories. The concept of the third way of thinking resurfaced in the vacuum created by the collapse of the Soviet bloc, the retreat of socialism, and, the inadequacy of unfettered neo-liberalism to emerge as an effective alternative. The third way third way theories to create a public space through the family and the community—that is separate from the structures of the state and the compulsions of the market place to foster “dialogic democracy” and civil morality—is very problematic for women. The first relates to the renewing of the family and the community both of which are “essentially contested concepts” without addressing the inequalities embedded in these units. The second concerns the shift in theonus of renewing and regulating democracy from the state to the civil society in which individuals gain agency erasing class/caste/gender/race and other structural differences. Globalization intersects in ambivalent ways with already existing caste/class/gender/race relations making the notion of using these social units as tools for civil regeneration, complex.

Third way theories do not necessarily re-invent the family and the community as social units but they merely re-orient them to the demands of neo-liberalism. These theories must locate the family and the community within the global context of restructuring of capital and perceiving capitalism as both setting limits to the extent to which these units can be reformed or regulated. I will discuss these theories in relation to India.

ABRAHAM, TAISHA* (Federal University of Rio de Janeiro, taisaabraham@hotmail.com)

GLOBALIZATION AND THIRD WAY THEORIES: THE BELEAGUERED FAMILY AND MARGINALIZATION OF WOMEN

Brazil has today one of the most ambitious capacity building program in Latin America. In 2012 it has conferred 42 thousand MSc and 12 thousand PhD titles in all scientific areas. An interesting feature of the Brazilian system, however, is that women are the majority of MSc and PhD graduates: in 2008 women accounted for 54% of MSc and 51% of PhD graduates. This paper will look at the reasons for this success and discuss whether this has resulted in a full and equal participation in the science and technological system of the country. The paper will look at the extensive graduate system and discuss its characteristics and specificities that lead to the massive presence of women scientists. It will show that large number of women are present in the entry levels of the system, but that their participation...
at the higher positions is still weak and that differences in pay are important when they enter the workforce. It will conclude that in spite of a complex and sophisticated policy framework put in place in the last sixty years, further steps should be taken if Brazil wants these highly trained women scientists to participate fully and to be involved in the highest decision making positions of the system.

Gender Equality in Science and Technology in Brazil: Successes and Remaining Challenges

The paper will discuss the policies, factors and actors in the Brazilian national STI systems which affect the participation of women and girls, using the framework on Gender Equality and the Knowledge Society. In the last decades, Brazil has advanced considerably towards addressing social issues and reducing social inequalities, although there are still many problems to be dealt with. With a steady economic growth and contained inflation since 1994, Brazil has managed to uplift 35% of its poorest inhabitants out of poverty and has vastly increased its middle class. It is also today an urban country, with 85% of its population living in urban areas, 30% in metropolitan areas. Brazil is today a thriving democracy, with free universal elections for president every four years and an active congress, both at the lower house and the Senate. Women economic, political and social rights are guaranteed by the 1988 Constitution, which ensures complete legal equality between men and women in public and private life. So Brazil stands out well in the majority of the indicators, including education, where women are the majority of graduates at all levels. Brazil is today one of the few countries in the world where women are the majority of PhD graduates, the result of a steady effort of capacity building in the last sixty years. However, when you look at the higher decision making positions of the STI systems, women are still few in number. The paper will make an attempt to understand why this is so and what are the steps needed to have women participating fully in the Brazilian knowledge society.

Racism in Children’s Advertisements: Two Content Analysis Studies in Brazil

The main objective of this research is to understand representations of Afro-descendants in advertisements directed at children in Brazil. Two studies of content analysis were applied to evaluate the advertisements in our sample. One of the studies investigated advertisements in children comic magazines and the other observed advertisements exhibited while children programs were presented. SPSS TREE analysis was conducted on the data and the results revealed that this ethnic group is portrayed in secondary roles, in non-family relationships, in business or social contexts and less frequently represented as adults.

Investigations related to representations of Afro-descendants in the media in Brazil are welcome because, in spite of this group constituting 50.7% (being that the Mulatto are 43.1% and Negros 7.6%) of the population of the country (Varella, 2011), most studies have demonstrated that compared to the composition of the population, it is still, percentage wise, little portrayed in the media (Araújo, 2000; Barbosa, 2004).

In general, the results of these investigations reveal that roles associated with the Afro-descendants are impregnated with social stigmas (Barbosa, 2004; Carvalho, 2003; Rodrigues, 2001). Moreover, analyses of speech demonstrate that there is a depreciation of this ethnic group in the media. In fact, research on the subject has identified that the new stigmatization strategies of Afro-descendants in the media have become subtle and complex. Studies on the subject pointed out that messages in mass communication reflect the racism that is ingrained in Brazilian society (Araújo, 2000; Carone and Bento, 2003; Carvalho, 2003; Rodrigues, 2001). It is on this context of concern that the present investigation is founded. The goal of this research is to examine how portrayals of Brazilian Afro-descendants are presented in comic advertisements (those which appear in children comic magazines and those presented while children’s programs are been broadcasted) are displayed to children.

Roles Portrayed By Women: A Content Analysis in Brazilian Television Advertisements

The main purpose of this paper was to examine female roles portrayed by advertising. More specifically, the questions that motivated this research project were “What messages about women have been given to society through advertisement?” and “Have these portrayals been changed during the past decades?” The study consisted of a systematic content analysis of Brazilian commercials from 1973 to 2000. The population from which this sample was drawn consisted of Brazilian commercials which got an award in international and national festivals. A probabilistic sample procedure was employed. Ninety five pieces were selected. The categories and operational rules used in the study were developed based on previous research. This study has proposed that female images in advertising are depicted in three different ways: stereotypical, idealized, and plural portrayals. Our results have revealed that some female images have changed, however, they continued to be stereotyped and idealized.

Research related to female portrayals in advertising has been the focus of attention of many academic studies because mass media messages about women have often depicted them in a stereotypical manner, such as women are irrational, fragile, not intelligent, submissive, and subservient to men (Courtney & Locke, 1971; Venkatesan & Losco, 1975; A. Belkaoui & J. Belkaoui, 1976; Goffman, 1978 Blackwood, 1983; Breti & Cantor, 1988; Jolliffe, 1989; Luebke, 1989; Kang, 1997). In addition, these investigations have shown that these portrayals haven’t reflected changes in female roles in modern societies. Indeed, mass media has conicted women’s image mainly as sex object, wife, and mother whose primary goal in life is to look beautiful for men (Kosimai, 1971).
ent study concluded that socioeconomic difference has great impact on health status of the older population.

Use of Education and Inclusion Subsidies By Children in Low-Income Families: Who Is Left behind?

Economic deprivation among children and adolescents is a highly relevant issue in Germany, as children face a high risk of living in relative poverty and their poverty rates are even on the rise. Therefore, Germany increased political efforts to overcome this problem. In 2011, the Federal Government introduced “Education and Inclusion Subsidies” for children in low-income families. These additional means-tested benefits are aiming at improving material welfare as well as social inclusion, e.g. through covering costs for school trips, daily meals or cultural activities. From the very beginning, the question was raised whether the new benefit program really meets its objectives. One major problem is that complex and restrictive bureaucratic procedures of the program may provoke serious inequalities in terms of access to subsidies due to lack of information and opportunity costs. Claiming for subsidies may require substantial resources, such as knowledge of eligibility rules, expenditure of time as well as availability of participation possibilities at the place of residence. Thus, claimants with a low level of resources might be less likely to get access. Our main research questions are as follows: Are descendents from immigrant parents with limited knowledge of German and children with several siblings underprivileged groups who are left behind? Do the usage patterns differ across urban, suburban and rural regions? The analysis is based on representative micro-level data from the most recent wave of the German Panel Study “Labor Market and Social Security” (PASS), which is available from October 2013. PASS is a novel dataset in the field of labor market, welfare state and poverty research in Germany. The questionnaire includes several items concerning knowledge of “Education and Inclusion Subsidies” for the first time. It also contains comprehensive information on the income and living conditions of different types of households.

ACHENBACH, RUTH* (University of Hamburg, ruth.achenbach@uni-hamburg.de)

Gendered Migration Decisions: Shifting Priorities of Highly Skilled Chinese in Japan in the Life Course

Japan, although suffering from a shrinking population in times of economic stagnation, fails to tap the full potential of women and retain international talent in the national labor market. For highly skilled female migrants, this makes Japan an even less attractive option to advance careers and fullfill roles in families. Yet, with the notable exception of Liu-Farrer’s (2009) work, this group has not featured in scholarly literature on labor migration to Japan, which tends to focus on (highly skilled) male migrants and reduces female migration to less skilled migrants. To improve Japan’s immigration policies and increase female labor force participation, not only policy-related but also economic policy and economic frameworks need to be examined but specifically individual decision-making processes have to take center stage. This paper focuses on Chinese highly skilled migrants’ (re-)migration decisions. It analyzes factors influencing Chinese men and women in Japan in three influential spheres: perceptions of a) responsibilities to the family (e.g. towards ageing parents, for children's education, spouse’s preferences), b) career considerations (appellability of skills, income level, career chances) and c) personal preferences (life style, political values etc.). Migrants aim for the best balance between those factors. In addition to these considerations, migrants’ decision-making processes are influenced by the position in the household (influence of parents, partners and children), and migration policies and economic development of return and migration destinations. Priorities shift with life stage and differ with gender. Based mainly on quantitative and statistical analyses of interviews conducted in 2011–12 with 56 female/64 male Chinese migrants to Japan, this study sheds light on the status and agency of women in Chinese and Japanese societies and labor markets. It identifies gendered differences in migration decision-making behavior and provides the basis for better understanding and for improved policies to support badly needed female labor migrants.

ACHENBACH, RUTH* (University of Hamburg, ruth.achenbach@uni-hamburg.de)

Revisiting Life Choices: Remigration Decision-Making of Highly Skilled Chinese in Japan in the Life Course

The economic rise of industrializing nations leads emigrants of these nations to reconsider their (re)migration decisions. With a return of the “lost brains”, the destination countries that often face demographic change and ensuing skills shortage may lose important talent, challenging their competitive ability. However, with the notable exception of studies by De Jong & Gardner (1981) and Kley (2009), migration decisions remain understudied and little understood. In case of highly skilled migrants, migration decisions are often reduced to rational career considerations or a macro-perspective on economic development gaps. This study addresses this oversimplification and fills the even larger gap in research on return migration decisions by analyzing decision-making processes of highly skilled Chinese in Japan. Drawing on a qualitative study based on interviews with 120 Chinese migrants to Japan (interviewed in China and Japan in 2011–12), the study categorizes factors influencing return migration decisions and traces their influence for both genders in different life stages. By examining migrants’ willingness to migrate what is best for themselves, their careers and their families, this study analyzes which combination of factors is decisive for staying, delaying the return decision or returning. While it adopts an individual perspective, the position of the migrant in the household, developments in his profession and the economy as well as politics of both nations are serving as the larger framework. It hypothesizes that with rising responsibilities within the company and for family (aging parents, spouse and children) priorities shift and decisions are revisited at life course events (e.g. end of training in a company, promotions, marriage, birth of a child, start of schooling).

The resulting model of return decision-making in different life stages refines overly simplified existing models. In addition, the understanding of influential factors can be used to better support highly skilled migrants (and retain talent).

Changing Reproductive Behaviour and Migration As Response To Climate/Environmental Change: Evidence From Rural Northern Ghana

The Upper East Region is one of the poorest regions in northern Ghana. With a predominantly rural population, over 70% of the population is engaged in agriculture and its related activities. As a pro-natalist society, the area is characterised by high fertility levels and large family sizes. Aside the population density in the area which has led to pressure on the existing limited arable land, climate change over time have resulted in rainfall variability, prolonged dry spells, environmental degradation and loss of soil fertility with implications for agricultural production and yields. The physical-environmental stress being experienced in the face of population growth have undermined the livelihoods of the people and exacerbate the already appalling poverty and food security situation.

With the Bongo District as the study area, the study draws on the ‘theory of multiphasic response’. It is noted that aside the many responses that households make, it has been observed that people also migrate to southern Ghana and have changed their reproductive behaviour by reducing their fertility levels. Using qualitative interviews and secondary statistical data, the study highlights the role of rainfall variability, environmental degradation, crop failure in the face of population growth in influencing migration and fertility change in northern Ghana. This finding implies migration for fertility explanation of fertility change is not enough to explain the seemingly lack of correlation between fertility change and contraceptive usage in northern Ghana and also contribute to the on-going population-environment nexus debate.

Keywords: Upper East Region, Bongo District, Migration, Population Growth, Fertility Decline, Environmental Degradation, Climate/Rainfall Variability, Floods, Agriculture

Negotiation of Gender Roles Among Young Muslim Women in Britain: Career, Family, and Faith

The purpose of this presentation is to investigate how British Muslim women manage plural social roles and identities, and to scrutinise the negotiation strategies which they adopt in this process of integration. Consequently, the presentation discusses young (aged 16–35 years) Muslim women’s attitudes regarding career, family and the economy as well as politics of both nations are serving as the larger framework. This study addresses this oversimplification and fills the even larger gap in research on return migration decisions by analyzing decision-making processes of highly skilled Chinese in Japan. Drawing on a qualitative study based on interviews with 120 Chinese migrants to Japan (interviewed in China and Japan in 2011–12), the study categorizes factors influencing return migration decisions and traces their influence for both genders in different life stages. By examining migrants’ willingness to migrate what is best for themselves, their careers and their families, this study analyzes which combination of factors is decisive for staying, delaying the return decision or returning. While it adopts an individual perspective, the position of the migrant in the household, developments in his profession and the economy as well as politics of both nations are serving as the larger framework. It hypothesizes that with rising responsibilities within the company and for family (aging parents, spouse and children) priorities shift and decisions are revisited at life course events (e.g. end of training in a company, promotions, marriage, birth of a child, start of schooling).

The resulting model of return decision-making in different life stages refines overly simplified existing models. In addition, the understanding of influential factors can be used to better support highly skilled migrants (and retain talent).
are perceived as being oppressive to women. Some participants use Islam to negotiate with their family about the duties imposed on women and to justify their own life and career choices. This does not necessarily mean that the participants are critical of all ethnic and cultural practices; rather, they recognise some social and emotional advantages to their ethnic backgrounds. By referring to Islam, they find compatibility between following some gender roles assigned by their family and building a career. The analysis results provide a complex picture of young British Muslim women, who endeavour to negotiate their gender roles and participate in modern society as Muslims. The presentation also contributes to the sociological theory on reflexive modernity, which emphasises the importance of agency and information to reproduction and change of identity and society.

“Sem Medo De Ser Feliz”: Brazilian Horsewomen, Cowgirls and Equestrian Leisure

Equestrian sport and leisure activities are often praised for their ability to “democratically” integrate different types of people. Women and men of all ages, with differing levels of physical ability and often from different social backgrounds, may find a place for themselves within equestrian cultures, which include a wide range of activities in Brazil, although there has often associated with activities of elites or well-off members of urban middle classes who take part in dressage and show jumping, our own research has shown popular equestrian traditions engage people from across the social spectrum, men and women, girls and boys, riding from both rural and urban areas. Furthermore, the ideas that are so often expressed in popular international literature – whether fact, fiction, or lying somewhere in between - claiming women’s liberation, and what kinds of conflicts they face as they negotiate access to the time and resources their equestrian activities demand. Their struggles are poignant testi-

Rethinking The Conceptual Foundations Of Social Policy: Theoretical Insights and Lessons From The Global South

This paper starts with a set of arguments regarding some of the contemporary foundations for Social Policy theorising. We commence with the proposition that Gosta Esping-Andersen’s notion of “de-commodification” (and “commodifica-
tion”) in characterising social collectivisation of risk misrepresents the processes involved. While driven more by Karl Polanyi, Esping-Andersen, nonetheless, suggests that he drew from the other Karl (Marx).

First, the idea “commodification of [the] workers” is misleading. Second, transfer income in welfare regimes involves, in large part, ensuring that people contribute to receive benefits in commodity relations. Third, even from the side of social services, the proposition that something stops being a commodity because you are not paying for it at the point of consumption misses, fundamentally, the point about circulation of capital across various departments. Here, Polanyi becomes less helpful. We must turn to Marx, and his legacy, and wonder if the use of the idea of “generalised commodity relations”: at best an ideal-type capitalism but which should not be confused for actually existing capitalism, economy, or society.

As a starting point for rethinking the conceptual foundations of Social Policy we ask whether rather than Polanyi, who may find a place for themselves within equestrian cultures, which include a wide range of activities in Brazil, although there has often associated with activities of elites or well-off members of urban middle classes who take part in dressage and show jumping, our own research has shown popular equestrian traditions engage people from across the social spectrum, men and women, girls and boys, riding from both rural and urban areas. Furthermore, the ideas that are so often expressed in popular international literature – whether fact, fiction, or lying somewhere in between - claiming women’s liberation, and what kinds of conflicts they face as they negotiate access to the time and resources their equestrian activities demand. Their struggles are poignant testi-

Exploring the Narratives of Sociology in 21st Century Nigeria: Some Prospects and Challenges

The trajectories of Sociology as an externally induced discipline in Nigeria are the production of theories and methodologies equal to the European tendencies and ideas as well as the knowledge of domination initiated from outside. How-

However, these trajectories have created avenue for serious crisis of relevance to the extent that the discipline now has more critics than admirers. Some of the major challenges that face the discipline include the belief that it contributes little to nation building in terms of policy formulation and implementation, as well as pro-
ductive incomes of the societies where it is practised. This study attempts to fill the neglect by exploring the narratives of Sociology in Nigeria. The study will consider the research question: “Are the narratives of Sociology in Nigeria relevant to national development? To answer this question, the study adopts the methodological approach of narrative research, using primarily documentary sources. The study examines the narratives of Sociology in Nigeria and explores the role of Sociology in national development. The study recommends that Sociology should be included in the national development agenda, and that Sociology should be integrated into the national development strategy. Sociology should be used to tackle the major challenges facing Nigeria, such as the political, economic, and social challenges. Sociology should be used to address the major challenges facing Nigeria, such as the political, economic, and social challenges.

ADEWUMI, FUNMI* (Labour Studies & Human Rights Education, funmiadewumi@rocketmail.com)

Workers’ Rights in the Era of Globalisation: How Protective Are International Labour Standards

International labour standards, codified in Conventions and Recommendations, remain the main instruments employed by the International Labour Organisation (ILO) to ensure that people work in dignified and safe conditions. These in-

struments contain minimum conditions under which workers offer their labour power while also conferring on them some basic rights. This paper looks at these international instruments and the extent to which they have been able to protect workers, particularly in the context of the global economic order driven by the desperate quest of international finance capital for competitiveness, profitability and survival. It is argued that rather than Polanyi, Amartya Sen may offer a more viable conceptual option for making the discipline more relevant both as an academic, practical and pro-people oriented discipline. Challenges that may face new option are also addressed.

Gender Inequality In Party Politics In Nigeria: Insights From South-West Nigeria

ABSTRACT

Gender inequality has remained a persistent phenomenon in many developing countries. Even in the developed countries, some countries still grapple with gender discrimination and women marginalization in policies. But in the poverty-stricken African nations, gender inequality is more of a serious development issue. The reason is that, many women still remain trapped in age-long discrimina-
tion in national politics occasioned by traditions, colonialism and imperial capital-
ism. This paper argues that, gender inequality is still a serious problem in the South-Western Nigeria using Lagos, Oyo and Osun States as case studies. The paper reports a survey carried out on women politicians of two major political parties in the South-West i.e the ACN and the PDP. The survey was carried out between the years 2011-2014. The method was complemented with 20 in-depth interviews of women politicians. Findings from the study showed that, gender inequality, gender discrimination and marginalization are still the major constraints to women participation in Nige-
rrian politics. Based on these findings, the paper recommended greater emphasis on the “Affirmative Action” recognized by Nigerian laws.

Key Words: Gender Inequality, Women, Politics, South-West, Nigeria.

The Middle and Political Transformation In Nigeria: A Critical Appraisal Of The Role Of Asuu and Nba

ABSTRACT

Since the end of the Cold War in 1989, many African countries have come to the conclusion that, political transformation is an inevitable process of attaining polit-
ical and economic development. This process, is expected to engender economic growth, guarantee their citizens' unfettered access to good governance and sus-
tainable democracy. In order to achieve these objectives, many African countries have embarked on deliberate reforms of basic state institutions like the judiciary, the Police, the education sector, the oil and gas sector, the banking industry, the aviation industry, the electoral process, as well as the legal system. In these trans-
formations, many state actors and non-state actors have participated nationally and internationally in order to ensure that African countries are re-democratized. With concrete empirical data and qualitative interviews, this paper argues that, the middle class in Nigeria, has been very central to hitherto Nigeria's political progress. The paper argues that the Academic Staff Union of Universities (ASUU) and the Nigerian Bar Association (NBA) are some of the forces behind the current Nigeria's political change. The paper avers that, despite its contributions to na-
tional development, the middle class has remained one of the most marginalized classes in the federation.

Key Words: Middle Class, Political Transformation, State, Nigeria, ASUU, NBA

New Modes of Integration: Individuality and Sociality in Digital Networks

The proposed paper connects some of the loose ends of current debates re-
garding the social impact of the new media with a discussion of social integration in contemporary modern societies. Globalization, individualization, diverging in-
terests of increasingly detached social groups and milieus, it is feared, lead to a fragmentation of contemporary democratic societies and render them unstable in a socio-cultural sense. Contemporary media change, i.e. the ascent of digital media is often blamed for contributing to the downfall of communicative social integration and the decline of the public sphere.

The paper provides a theoretical framework for researching how digital media may contribute to social cohesion by providing communicative references and new forms of sociation. The latter depend on referable sets of culturally available signs, traditionally provided by central social institutions, especially the mass me-
dia. While the advent of decentralized, highly variable media usage in the wake of digi-
tization has initiated new patterns of communication and social interaction, these new phenomena are not necessarily detrimental to social integration.

The contribution suggests that we are witnessing an important moment in the organization of communications given the current conjuncture of long-
term socio-structural change processes with the advent of new technological and individual ways of communication. Contemporary internet-based media technol-
ogy – above all Social Network Sites (SNS) – may provide the groundwork for a new form of communicative integration through the emergence of what may be called Neo-Mediasphere.

Since the 1950s, the Armed Forces of the Philippines (AFP) have been utilizing civil-military operations (CMO) as one of the main strategies in combating local insurgency. The diversity of insurgency movements with its complex cultural, religious and historical origins necessitates the evolution of CMO strategies implemented through the years. In the latest Internal Peace and Security Plan of the AFP (January 2011) called “Bayanihan,” the role of the non-combat civil-military operations and development oriented activities of the AFP was once again re-iterated.

Broadly, this paper examines how the emerging CMO technology being adopted by the AFP impinges on the construction of the self-identity of the members of the Philippine Marines. The study finds the shifting of identities from that of a “warrior” primarily concerned with the management and application of violence to that of a “protector” defining themselves as primary agents of peacekeeping and humanitarian work. At the same time, these reformulations of identities also provide the avenue for the members of the AFP to redefine the character and nature of their relationships with the other agents and institutions of the Philippine state.

Women's Religious Authority in a Sub-Saharan Setting: Dialectics of Empowerment and Dependency

The western scholarship on religion and gender has devoted considerable attention to women's entry into leadership roles across various religious traditions and denominations. However, very little is known about the dynamics of women's religious authority and leadership in developing settings, especially in sub-Saharan Africa, a region of powerful and diverse religious expressions. Guided by a concept model that intersects religion, gender, and power, this study analyzes women's religious authority and leadership in a predominantly Christian yet denominationally diverse setting in southern Mozambique. It uses a uniquely rich combination of household and institutional survey data with in-depth and focus group interviews collected over several years of fieldwork. I first identify the prevalence and patterns of women's formal leadership across different denominational groups. I then define and examine four main pathways and forms of women's church-based authority: office authority gained on their own merit; office authority gained by virtue of association with husband congregation leader; charisma-derived authority acquired through prophesying; and agency-based authority gained through church women's groups. In conclusion, I reflect on how these forms of women's authority both defy and reassert the gendered constraints of the religious marketplace and the broader gender ideology in this developing setting.

Transformation of Medical Professionalism in Turkey: Erosions and New Divisions in the Wake of Reforms

This paper aims to examine the impact of recent market reforms in the Turkish health care system on medical professionalism and identifies new divisions within the medical profession. The research team carried out 60 interviews in the summer of 2010 in Istanbul, Turkey, at two different public hospitals. The findings suggest that the new economic and social context of medicine, which is marked with marketization, consumerism and managerialism, is significantly transforming medical professionalism in Turkey. Physicians indicate growing frustration as the reforms such as introduction of pay-for-performance methods or practice of full-time employment of physicians in public hospitals are being implemented and public hospitals are reorganized as autonomous entities. Physicians report lower levels of professional status, lack of respect on the part of the patients and policymakers and increased violation from patients and their relatives. Many physicians blame the government for erosion of the public trust in physicians and growing violence, claiming that the reformers undermined the credibility of the physicians by renaming them as “service providers.” Institutional complaint mechanisms that have recently been established as part of the reforms appear to strain the doctor-patient relationship even more. On the other hand, physicians who occupy managerial positions in the same hospitals provide a somewhat different assessment of the reforms. The discourse of these physician-managers includes other improvements: while the physicians complain about the inefficiencies in the public hospitals and view some steps like pay-for-performance payments as useful incentives to get their colleagues work more efficiently, they hesitate to embrace the reforms aimed at granting autonomy to public hospitals. They also agree with their colleagues that the patient complaint mechanisms are not working properly. The paper highlights serious threats to erosion of professional status of physicians and emergence of new hierarchies among the practicing physicians and physician-managers in Turkey.

**Same-Sex Sexual Relationships in South African Female Prisons**

Although same-sex sexual relationships in female prisons have been a topic of scholarly discourse for a long time, they have mostly been concentrated in the United States of America. Same-sex sexual relationships between females in African prisons have received little attention by researchers since studies on prison sex in Africa tend to focus on the sexual relationships between male prisoners, especially the coercive nature of such relationships in male prisons.

Drawing on the retrospective narratives of five female ex-prisoners, this study examines same-sex sexual relationships in South African female prisons. The dynamics and socialization process involved in such relationships, as well as the different forms that it takes are analysed. Specifically, research participants discussed the prevalence of same-sex sexual relationships in female prisons.

The findings of this study show that sexual relationships among females in South African prisons can be either consensual or coerced. Some of the participants believe that the motivations for female prisoners’ engagement in sexual relationships with other females in prison are the desire to satisfy material and sexual needs. However, other participants opined that the motivating factors for participating in same-sex relationships in female prisons include not just material and sexual needs, but also emotional needs, and the desire for friendship and companionship. Some of these relationships are characterised by jealousy and violence. The reactions of female prisoners to same-sex sexual relationships between bars vary from indifference to amusement and dislike.

**Technologies De Communication Et Inégalités En Côte D’Ivoire**

Au début il n’y avait que le radio nationale en Côte d’Ivoire à l’échelle nationale, et internationale : RFI, BBCI et VOA. C’est 3 ans après l’indépendance, en 1963 qu’est née la télévision nationale. Les deux médias nationaux n’étaient pas accessibles partout. Il a fallu un programme d’installation des stations relais pour permettre aux gens de tous les départements d’accéder au média d’Etat. Le manque de couverture totale et parfaite demeure toujours dans les localités les plus reculées. Ce n’est pas le cas des média internationaux. S’agissant des presse écrites d’Etat et celles étrangères, même aujourd’hui, les quotidiens papiers ne parviennent pas à certains bureaux de presse des chefs-lieux de région qu’en fin d’apres-midi. Quant à ceux mis sur internet, ils ne sont pas accessibles par tous et dans toutes les régions pour des raisons de manques d’ordinateurs et surtout de réseaux de communication ou de perturbations constantes de couverture de ces réseaux.

Depuis 1990, un développement rapide des technologies de communication se fait. Les chaînes de télévisions étrangères se sont multipliées par le canal satellitaire. Les radios de proximités ont pullulé du fait de l’avènement du multiformat. Pendant la guerre, une télévision des rebelles a fonctionné dans la zone occupée. Cette hétérogénéité de ces technologies pose un réel problème de maîtrise des flux d’information, tant montants que descendants. Le contrôle des émissions devient de plus en plus difficile tant dans l’éducation même des jeunes que dans l’information de ces jeunes et des adultes. Certaines personnes ferment leurs appareils récepteurs pour cette situation et celle de la perversité. La question des non-usages des média est complexe en Côte d’Ivoire. L’accessibilité de tous aux media qui était vue sous le seul angle de la démocratie et des libertés, révèle des effets pervers de diverses natures. L’étude empirique vise à mieux cerner le tout.

**Kenya’s Green Belt Movement: A Collective Effort Towards Gender Equality and Environment**

Kenya’s Green Belt Movement, a social movement with a difference was founded by Wangari Maathai (Noble Prize Winner) in 1977 as a way to empower poor women. With over one-lakh members, this civil society organization believes in bringing about a change by consensus instead of traditional conflictual approach. The first decade of the movement focused on transforming the social arena through reforestation and education. The next five to six years of Kenya’s Green Belt Movement were openly challenging the political arena. Later, it expanded its wings in many African countries as the Pan African Green Belt Network and also as Green Belt Movement International. It integrates the principles of sustainable development into country policies and programmes; tries to reverse loss of environmental resources and works for the promotion of gender equality and empowerment of women. Its branch ‘Women for Change’ helps young girls and young women to face the challenges of growing up, making complex decisions about their sexual and reproductive health, and gaining knowledge and skills to protect themselves from HIV and AIDS (UN). It provides different ways to promote bee-keeping, economic empowerment, and healthy eating habits of indigenous food crops. This paper tries to analyze the contributions of Kenya’s Green Belt Movement and also examines the issues raised and strategies adopted in relation to the goals sought.

**Community, Social Participation and Education**

The starting point for the experiment presented in this paper was the conception that active communal and social life creates an increased individual demand for participation in public life. Consequently, active social participation could renew the democratic functions of society. At the beginning of the research we adopted the view that under the present social circumstances of new capitalism the reformation of democracy, its ‘re-democratisation’ is essential. We observed the proportion of those communities and people in the society who are capable to formulate and enforce their interests, and we also considered the possibilities how this proportion could be increased. Social participation was measured with a persistent index in which the indicators of social life, public attitude and public praxis were aggregated.

The level of social participation was described in our national representative survey (Hungary, 2009, N = 1051) with a 5-category hierarchical index that we derived from cluster analysis.

Only 3, 6% obtained the top-level index and 17, 4% got the second highest results. The members of these two groups had a wide range of social relationships, an intense communal praxis and demand for social participation; moreover, their public attitude, their public participation and their public-political praxis were constructively as well. According to the statistics of linear regression, the chance for getting into the two upper groups depended on participants’ childhood social praxis and their level of education. In other words, the most active participants of social and public life already started to form social connections in their childhood. Later, in their adulthood, the high level of education enabled them to comprehend the necessary information about public issues and initiate their active social participation.

**La Compatibilité Des SHS Et Des STIC Pour Une Analyse Des Usages**

L’objectif de la communication est de montrer que les inégalités d’usages et d’appropriation dépendent d’une double analyse : celle des objets techniques (STIC) et celle des représentations et/ou compétences liées aux usages (SHS).

Dès lors, le problème vient de la multitude des approches SHS possibles et de leur réduction à une modélisation (STIC) dans un objet technique et son cadre d’utilisation. L’usage est donc d’abord une vue de l’esprit qui associe les interactions humaines, la médiation des outils, la cognition et les intentions qui permettent à l’utilisateur d’agir sur des problèmes concrets. Au-delà d’une faiblesse logique qui anacondigue savoir, croire et faire, la notion d’usage prend donc son sens dans la perméabilité entre les champs de recherche et sa réduction à un simple aménagement d’un modèle linéaire entre des logiques de conception et des logiques d’action.

Le corpus théorique proposé pour l’analyse des usages articule l’approche des outils (Simondon, Norman), celles des représentations (Goody, Vergès) et l’analyse de la tâche et de l’activité (Leplat, Hoc). Elle met clairement en évidence la relation qui existe entre la représentation que l’on a d’un objet technique et les compétences mises en œuvre pour son appropriation. Nous y discutons particulièrement la notion de dispositif d’action conjointe (Foucault, Widmer) qui crée un dédoublement du social qui fixe à la fois les règles et les ressources qu’on retrouve dans les usages.

La méthode présentée reprend une expérimentation dont la finalité est la construction de l’interface d’une application pour le web qui doit aider des décideurs à mieux comprendre une enquête participative. Nous présentons particulièrement le contenu que nous avons utilisé les représentations saillantes des individus pour faciliter l’appropriation de l’interface.

Enfin nous discutons et mettons en perspective la nécessité d’une telle démarche pour replacer l’utilisateur au centre des développements des applications et usages des objets numériques.

**Gender & Legal Profession in India: A Critical Sociological Analysis**

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The Constitution of India not only grants equality to women but also empowers the State to adopt measures of positive discrimination in favour of women for neutralizing the cumulative socio-economic, education and political disadvantages faced by them. However, the ground reality of the socio-cultural reality shows heavy gender based inequality in occupations, particularly legal professions. This further jeopardizes any effort at effective empowerment of women. The proposed paper attempts at a critical sociological analysis of the situation. This is would be specifically justified in view of the following statistics for instance: A total of 20.4% women were employed in the organized sector in 2010 with 17.9% workers in the public sector and 24.5% in the private. The labour force participation rate of women across all age-groups was 20.8 in rural sector and 12.8 in urban sector compared with 54.8 and 55.6 for men in the rural and urban sectors respectively in 2009-10 (NSS 64th Round). The female share of total Central Government employment stood at 10.0% in 2009. The share of female employees in the scheduled commercial banks was 15.9% in 2009 which rose slightly to 16.6% in 2010. In 2012, women occupied only 8 out of 74 Ministerial positions in the Central Council of Ministers. There were 2 women judges out of 26 judges in the Supreme Court and there were only 54 women judges out of 634 judges in different High Courts.

**The Determinants of Time Use By Women and Men in the Performance of Housework, Paid Work and Leisure Activities in a Brazilian City**

The paper discusses the use of a regression model designed by Heckman to study the determination of paid work by women and men, also to ascertain the determination of time used to perform housework, and other time use variables, with the objective of highlighting the differences in the frequency of these activities reported by women and men. The methodology literature discusses well the regression models to be used in order to handle the wide number of zeros that occur when respondents do not report a given activity on the research dates that the time use diary is answered, but may well have performed that unreported activity on another date. The paper is concerned with another source of zeros, socially determined, as the differential enacting of housework, paid work and leisure presented by women and men in their daily lives. It is argued that the zero activities reported are not likely to be performed on another date, as they depend on gender attributions. This paper uses the Heckman double hurdle model in which the probability of performance of an activity is calculated along with the factors that determine the amount of time used in each activity, by women and men, in each variable examined. The paper uses as a source of information, a probability survey in the city of Belo Horizonte, Minas Gerais, Brazil, in 2001, with 1124 diaries answered for the days of the week and 1133 diaries for the days of the weekend.

**Toward a Sustainable Migrant Workers Community on Adonara Island: How They Adopt and Cope with State Policy and Their Culture**

International Migration has been one of the significant elements of national development in Indonesia since the 1980s by expanding work opportunities abroad and increasing access to foreign capital (Lindquist, 2010: p119). The proportion of migrant workers in Adonara, a small island near Flores, eastern part of Indonesia is almost a quarter of the island’s population but they have broader social and economic impacts towards the development of the region. In contrast to their contribution, migrant workers often face unsolved problems during departure, pre departure and post departure processes. Migrant workers originating from Adonara, who are usually categorized as self-migrating, mostly work in Sabah, West Malaysia. They go abroad as part of their family strategies for survival or social mobility (Asis, 2003:105). In the case of self-migration like in Adonara’s community, the government failed to protect and fulfill their rights because they argue that their duty is only to take care of the migrant workers with legal documents. So, migrant workers from Adonara are considered to be choosing to opt out from the government protection scheme just because they don’t have legal documents. However, the idea to ease the process of obtaining documents on very much alienated island from the center of development is not easily applicable due to several reasons.
“Safety migration policy” as a new approach of migration studies in Indonesia is not found it ground yet. People from alienated island tend to repeat their proponent who has been migrating for more than a century rather than obey to government policies on safe migration which cannot guarantee their safety. This abstract would like to explore how is strategy of migrant workers on Adonara Island to create a sustainable migrant worker community

Political Empowerment and Social Transformation

Local self government known as Panchayati Raj institutions are vital for self-governance at the grass-root level and provide an ideal forum for decentralised planning and implementation for development work in accordance with people's needs and aspirations. With this assumption the government of India made 73rd Constitutional Amendment in December, 1992. An important radical measure underlying this legislation is regarding the reservation for women, scheduled castes (SCs) and scheduled tribes (STs) not only in membership but also in positions of office such as sarpanches/pradhan. It was expected that the new amendment would usher in an era of egalitarian society in place of the present unequal, stratified and hierarchical society. The main focus of this paper is to address the question of empowerment of the hitherto excluded categories, the scheduled castes and women. How the process of their inclusion in the local self government transformed their social position in society?

Postmodern Organization and Service Delivery: An Empirical Exploration of Structural Transformation in the Nigerian Banking Industry

ABSTRACT

Post structural banking has employed electronic based practices that have challenged the continued dominance of the traditional Weberian bureaucratic model to improve service delivery. These global practices are anchored in postmodern organization. In a bid to be globally compliant and to improve on service delivery, the Nigerian banking industry adopted a postmodern structure in its operation in spite of the country’s low technological and infrastructural development. Postmodern theory, Structuration theory and theory Z were used to explain structures of postmodernism, extent of postmodern organization, employees’ actions within in the work environment, the role of external environment and effect of postmodern organization on service delivery. The study was conducted in six banks selected from the twenty one existing commercial banks in Nigeria. It employed both quantitative and qualitative methods of data collection and analysis. The findings suggest that the adoption of postmodern organization, employees’ actions within in the work environment, the role of external environment and effect of postmodern organization on service delivery. This paper maps out the current scenario is highlighted. It was concluded that the level of technological development of a society has bearings with the level of success achievable in the adoption of postmodern organization for banking.

Japanese Women Professional Wrestlers’ Embodied Experiences and Their Identities

Women professional wrestlers in Japan develop muscles as well as fat for professional wrestling. As a result, their bodies are very different from the ideal female body in Japan (i.e., thin bodies without muscles and fat). The author conducted in-depth interviews with 25 women wrestlers between 2004 and 2005. Through interpreting women wrestlers’ narratives, the author explains how the bodies of women wrestlers provide them with physical and/or mental strength. Women wrestlers who acquire physical strength are indeed “empowered” based on the definition of empowerment. Kubota (2005) argues that “empowerment” means the process where people who have been prevented from fulfilling their potential regain it. In the current Japanese society, most women cannot reach their potential in terms of physical strength. In contrast, women wrestlers have obtained a physical strength not yet acquired by most women in Japan. Therefore, women wrestlers are in fact empowered. On the other hand, some women wrestlers face several conflicts because their bodies disturb the normative sex-gender boundary which requires that if one is a biological female, one has to adopt “feminine” clothes, hair style and physique that let others perceive that one is a female. First, some cannot fit into cute clothes sold in Japan that are targeted only for the ideal female bodies. They, however, do not take it seriously because they gave priority to becoming a wrestler. Second, some are misjudged for men in daily lives. The reason, they believe, is that they have specific physical characteristics such as short hair, casual clothes and big bodies. Since they definitely identify themselves as women, they want others to perceive them as women regardless of their physical appearance. They, however, do not attempt to change their bodies to let others perceive them as women. Therefore, they unintentionally challenge the normative sex-gender boundary.

Eléments De Reproduction De La Division Sexuelle Des Rôles Domestiques. Enquête Menées Auprès D'un échantillon D'Étudiants Universitaires Japonais

“Pourquoi vous ne voulez pas vous marier ?” Cela a été la question la plus fréquente parmi celles que un groupe d’étudiantes japonaises de l’université de Saga a posé à leur collègues français, au cours d’une série de rencontre qui ont eu lieu à l’université de Toulouse II (le Mirail) en février 2013. J’année après avoir assisté à un séminaire du sociologue Daniel Welzer-Lang ayant comme sujet la situation actuelle de la vie en couple en France, ces étudiantes japonaises (filles âgées de 19-20 ans) n’ont pas cessé considérer le mariage en tant que préservation de la vie en couple ainsi que garantie du sentiment amoureux. Au cours des rencontres, les étudiantes japonaises ont du mal a imaginer que cela puisse leur arriver un jour : au cours d’une enquête que nous avons mené à l’université de Saga auprès d’un échantillon d’étudiants en couple, nous avons pu remarquer leur quasi complète confiance dans le mariage en tant qu’élément de consolidation de leur liaison. Pourtant, le mariage au Japon signifie aussi, en bonne partie, assumer une spécificité division sexuelle des rôles domestiques et familiales : en effet, le 51,6% des japonais (48,4% parmi les femmes et 55,1% parmi les hommes) considèrent que les femmes mariées devraient rester à la maison. Au cours de notre communication, nous irons présenter les résultats de notre enquête menée auprès d’étudiants japonais, celle qui vise en premier lieu à analyser la dynamique de reproduction de la division sexuelle des rôles domestiques.

Financial Trading for the Masses: An Ethnographic Study of Independent Israeli Day-Traders

Sociologists and anthropologists of finance have noted the development of a mass financial culture that is marked by a widespread involvement in and a popular inatuation with financial markets. Most ethnographic studies on the topic have narrowly focused on financial professionals and elites. This paper maps out the current scenario and can only constitute a partial depiction of financial market cultures which have spread far beyond the bounds of professional contexts and elite networks. Presenting data from an ethnographic study of the day-to-day lives of independent, non-professional Israeli online day-traders, this study explores the complex set of cultural orientations which inform and shape these traders’ understandings of financial trading, their beliefs about and imageries of the market and market processes, and their experiences with speculation. Relying on in-depth interviews, offline and online fieldwork in sites such as trading courses for the general public and financial blogs, forums, and internet trading rooms, the paper maps out the terrain of popular, online day-trading in this context. Moreover, it discusses the types of self- and social-awareness that are implicated by the traders’ speculative enchantments and financial dealings and precaptations. It shows how market outcomes become a form of self-reflexive grammar through which the traders define and experience expertise, maturity, and personal weakness. Moreover, it unravels the paradoxical ways in which these market outcomes are simultaneously endowed with and deprived of social meaning and significance for the traders.

The Meaning of National Identity in Global Financial Trading: The Case of Day-Traders in Israel

Over the past three decades Israel has adopted a series of neoliberal financial reforms in the context of which many have become actively involved in financial markets. This study explores the cultural orientations that shape and that are
shaped by actual engagements in these markets. It presents data from an ethnographic study of the day-to-day lives of independent Israeli day-traders who pursue global online financial trading. Relying upon in-depth interviews, offline and online fieldwork in sites such as trading courses and financial forums, blogs, and internet trading rooms, the paper explores three interrelated questions: how are notions of national identity (re-)constituted by the discourse on global financial trading? How do the traders make sense of and experience the globality of the market? And what meanings do they attribute to nationality within the market? The findings indicate the traders’ sense of a meritoric ‘freedom’ from the symbolic baggage and other features of political identity when trading in a field of economic activity where one’s success is not dependent upon the politics of identity that is characteristic of global organizational contexts and paid work. Nevertheless, while in this sense losing significant symbolic weight as a marker of personal and social identity, national identity figures heavily in traders’ abstract, calculative evaluations of the value of financial assets and markets. The paper discusses the implications of this aspect of the financial and calculative reconstitution of the meaning of national identity within the global, computerized networks for our understanding of the impact of financial globalization on national imagery, cross-cultural perceptions, and “glocal” market cultures.

Who Is Responsible: SITUATING MENTAL ILLNESS WITHIN THE FAMILY IN NIGER

Who is responsible: SITUATING mental illness within the family in Niger
Most studies in social sciences (cf. theories of pathological communication for example, the school of Polo Alto, and these of labeling) concerned with understanding the interaction between the family and the mental illness have been greatly influenced by the paradigm of family responsibility. These studies likewise did the contributors known under the umbrella of movement of de-institutionalization of the psychiatry in Europe and USA in the second half of twentieth century emphasized the family role by considering it as the main support of the individual patient. Following this lead, they paid attention to emotional and social aspects of the family as a relational entity. This body of knowledge, foremost, however, not all, developed by sociologists, is characterized by a lack of attention paid to the everyday interactions of the patient within a relational field of the family. This is what informs the perspective of my paper.

To find a more empirical material collected between September 2011 and December 2012 in Niger, I will highlight the social consequences of the mental illness within the family. Using both an attentive approach to interactions at the quotidian and “long-term analysis” aiming at examining the personal biographies of the patient, I specifically interrogate the dynamics within the family resulting from the mental illness. I present several cases from my fieldwork to describe the “negotiated interactions” of how relatives of patients deal with mental illness. Here, I centrally pay greater attention to economic, therapeutic and the choice of the place of residence defined by these. In fine, the paper shows how important is to place the family within an extended field of relation in order to comprehend its implications at practical and etiological levels and how these, ultimately influence the trajectory of the person ill.

Comparative Study of Ability and Examinations in Post-Manufacturing Societies, from Interview Surveys in the United Kingdom and Japan

In the 2000s, both British and Japanese societies were faced with new social changes caused by post-manufacturing industrialization. Education policymakers are changing and updating national examinations to measure the new skills needed in these societies.

Our interview survey was taken by various persons, including statesmen, local government officers, company managers, school leaders, and local educational authorities in both the United Kingdom and Japan, over three years. From the results of this survey, we identified new relationships between examinations and new post-manufacturing societies. These new relationship have emerged in part as a way of trying to cope with social polarization and construct new school systems that sustain excellence and equality in society. In the present era, social polarization leads to a situation where that some people with high talents are educated to have very high levels of skill related to some professional role; in contrast, others learn attitudes towards work rather than advanced skills because they do not require such skills. Our survey supports the presence of this tendency in both societies; however, we find some differences between the societies as well. For example, Japanese voices often place importance on communicative and on proficiency in English or other languages. In contrast, British voices often emphasize more basic numeracy and literacy or their own (English) language rather than foreign languages. These differences may reflect the image of the skills needed to succeed in the workplace in each society.

This study analyses whether embodied musical experience remain children’s memory. To find out whether this premise is true, we examined the case of Japan’s most famous classical music festival Saito Kinen Festival Matsumoto. Every year, this festival invites students of 70 junior high schools in the local area for...
The purpose of this study is to clarify the differences of influence of social capital on health in welfare state regimes.

Recently, studies in sociology, political science, economics, and social epidemiology have addressed the relationship between social capital and health. Large number of studies have found that social capital improves health. However, the students’ social capital on health may differ in welfare state regimes, because there is a possibility that absence of state support is compensated by social capital. Therefore, we need research to identify the differences in the importance and meaning of social capital in welfare state regimes. This study analyzes whether the influence of formal and informal social capital on health varies among welfare state regimes through international comparative analysis of a multilevel model.

Using data from the 2007 International Social Survey Programme (ISSP), we analyze the individual-level data which have been linked with national-level data. The study reveals that writers apply ideological discourse strategies in online newspaper readers’ comments on two social crises in Nigeria within 2012-2013. The study reveals that writers apply ideological discourse strategies in online newspaper readers’ comments on two social crises in Nigeria within 2012-2013.

An investigation of discursive constructions becomes necessary because it is observed that they are laden with ideological music. The cause of the difference derived from the method of teaching to embody musical memory. That is to say, some teachers succeed that students embody musical experience through the lessons held before and after the opera performances; however, this effect was diminished for many students after six months. But some students remain these interests for opera or classical music. The cause of the difference derived from the method of teaching to embody musical memory. and because the expression “social systems observe” is almost equivalent to the frequently used expression “realities are socially constructed”. By using systems approach, we will be able to define precisely what is meant by the term “social” in such context.

In Luhmann’s theory the component of social systems is not defined as action, but as communication or communicative event. However we consider the definition of observation, the unity of distinction and indication, is not satisfactory to define social system (i.e. system of communicative elements) as a particular kind of observer. We insist that the definition of social systems should imply duration or continuity of observation as well as with the other observing systems. At last we conclude that, especially in the era of social media, we should distinguish between “the social (i.e. communication) as an element of social systems” and “social systems (i.e. system of communicative elements)”. Systems Thinking and Sociological Thinking: Observing from an Asian Perspective

In this paper we raise a question: How can we connect systems theory to sociology properly and effectively? In the process of answering this question, we will examine whether the Asian tradition can contribute to develop sociological systems theory or not.

Generally speaking, systems theory offers us a tool to see things otherwise. Therefore it could be useful to develop sociological way of thinking. However, introducing systems theory to sociology is not an easy task. Here we regard it is because of so-called “epistemological obstacle” in western way of thinking. To overcome this difficulty, we have to get rid of the obstacle.

It seems that non-western tradition does not have something new to develop systems theory itself. Rather, it could be bridge systems theory and sociology because systems theoretical perspectives are similar in some respects to the Asian traditional thought.

In conclusion, beyond the distinction between western and non-western, systems theory could be a tool to think sociologically but it needs something that has bridging function between systems theory and sociology. Asian tradition could serve a role of bridging the gap between them.

AKHMEDOVA, MUSLIMAT* (Russian State Social University, muslimina11@rambler.ru)

Sustainable Development in Terms of Social Inequality

The evolutionary process is always the unity and interaction of two tendencies which balance each other - the stability and instability. Both groups in their contradictory unity are necessary for the development of the system. At the same time, there are various forms of conflict resolution between the above tendencies, and one of such forms is to achieve balance. But if one of the tendencies dominates the other, the development will stop. Even in the case when the stability prevails over the instability, the development of the system is exposed to an exceptional damage. The social history of humankind for centuries demonstrates a confrontation between two types of social dynamics. In one of them there is a strong guiding action to the ideas of natural selection and the struggle for existence as an engine of progress. Further ascent of humanity is seen by struggle and displacement of the weak and unfruit forms. The purpose “to displace” and “to develop” won’t be able to ensure the survival in the long term. This is the technical dynamics, commercial, parasitic, leading to the establishment of a rigid unipolar world order. To achieve the harmonious development of humankind, the concept of sustainable development refers to the need to reduce the gap between the rich and poor, and make greater efforts to protect the environment.

Culture of Innovation in Higher Educational Institutions

In modern society one of the most significant goals of higher educational institutions is to support the development of innovative culture. The modernization of all sectors of economy and society depends on the formation of new skills and patterns of behavior for the new generation.

In Russia the culture of innovation is forming under the influence of rising territorial inequality, stratification of higher education institutions (the allocation of specific types of high schools), growing diversity in organizational, personnel, technological conditions in different types of schools.

The paper analyses the culture of innovation upon the integration of education and science. The positions of the two main subjects of innovative process are observed: teachers and students. It is based on the survey of academics and students from different types of universities (federal, research, regional – that types are result of the Russian education reform). Using the results of the survey, we can show what model of integration of education and science is emerging and what are the prospects of this interaction in building of innovative culture.

Filipina Wives in Rural Akita

This paper examines the migration and integration process of Filipina wives in rural Japan. Southern Akita in Tohoku Region has long been plagued by the stagnant economy, aging population, and out-migration. Since the 1990s a trickle of Filipina women working as “talents” married local Japanese men, forming transnational families in the traditional agricultural community.

Through surveys and interviews with the wives as well as with local leaders and government officials, we look at how gender and family has played an important role in the migratory process of these women and the manner in which they were incorporated into the family structure of rural Japan, and by extension the local community.

Gender has at times constrained choices that these women can make, while it has also become an empowering factor, as Filipina and Japanese women meet in schools and local cultural institutions and forge bonds over childrearing and care-giving in their families. Local language classes, staffed by volunteers (mainly local Japanese women) as well as support organizations (again led by local Japanese women) have played a critical role in the incorporation of Filipina wives into the local community.

Now one or two decades into their residence in Akita, these wives are facing a critical juncture, whether they be changes in their careers, the departure of their children from their homes, and the care of their now aged-in laws. Once again, their position within the society, both in regards to their “foreignness” and their gender, is being tested. We will therefore add to the existing literature on Filipina wives by examining their experience in later stages of their life in Japan.

Workers of the Globalized World: Explaining Difference in Workers’ Attitudes to Globalization

Workers of the Globalized World: Explaining Difference in Workers’ Attitudes to Globalization

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Without any doubt globalization affects the life and work of workers. Increasing international trade and labor mobility poses challenges to individual workers. Labor movements’ response to these developments are to protect national (and regional) labor markets through further regulation of labor markets, in order to soften the blow for those workers who are the ‘losers of globalization’. However, workers can be heterogeneous and the way in which globalization affects the life of workers is not equal for all workers: some groups of workers will have a lot to gain from globalization.

How do workers perceive the effects of globalization? In this paper we explain individual workers’ attitudes towards the impact of economic globalization on several aspects, such as their selves and his/her family, the organization they work for, national employment. We explain their attitudes by demographics, labor market positions, occupational variables and political affiliation and attitudes.

After a review of the literature, we formulate hypotheses on which workers will perceive economic globalization and which workers’ attitudes to globalization is a positive development for different aspects of their lives, their career and employment.

For the empirical analysis we use data from the web based survey “Distribu- tional Conflict in a Globalized World, 2011”, a representative survey of the Dutch population (N=600).

Our study contributes to our understanding of the consequences of global- ization by analyzing individual level attitudes of workers. In an era of continued trade union decline, knowledge of different types of workers attitudes towards globalization may better enable the labor movement to represent the interest of all workers. Knowing which workers view globalization as a threat, and for whom globalization offers opportunities, helps labor organizations to developed more informed and differentiated mobilization campaigns.

The murders of Aqsa Pervez in 2007 and the Shafia sisters in 2009 increased the public’s interest/concern in honour related crimes and religious accommo- dation in Canada. The Muslim identity of the victims and perpetrators was a cru- cial factor, as evidenced in subsequent media reports which erroneously linked honour related violence with the Islamic faith/culture. Many extrapolated these murders to the justification for the ‘war on terror’. The media illustrated to Canad- ians that the war on terror was involved in Iraq and Afghanistan to save similar Mus- lim women from Muslim men. This resonated with literature which argues that Canadians that Canada was involved in Iraq and Afghanistan to save similar Mus- lim women from Muslim men. AKTHER, SHARMIN* (University of Dhaka, sharminbd.du@gmail.com) The Environmental Refugees: A Comparative Study of Displaced Women in the Coastal Districts Khulna and Bagerhat, Bangladesh

It is well recognized that unsustainable development projects all over the globe, especially in the developing global South, have resulted in various kinds of ecological hazards like salinity, floods and so on displacing a huge chunk of popula- tion, known in the current text as the ‘environmental refugees’ from their ances- tral homes and conventional livelihoods. In this context, it has to be kept in mind that all people who are displaced and are termed as ‘environmental refugees’ do not migrate. The decision to migrate in crisis situations like environmental haz- ards depends on a host of institutional and structural factors. Thus, not only the degree of vulnerability of an individual or a family in crisis situations depends on the institutional and structural factors as observed by various studies, but the capabilities and opportunities for mobility also depend to a large extent upon these factors. Keeping this in mind, the present paper through an ethnographic study in a few salinity-prone villages of the most backward coastal districts (in terms of Gender Development Index and Human Development Index) of Ban- gladesh, namely Khulna and Bagerhat districts, tries to find out how institutional and economic groups. The cases of Khulna and Bagerhat represent a unique situation of displacement of huge number of population, caused partly by the salinity due to sea level rise and partly by the cyclone Aila and Sidr. The main finding of the study is that migration in many of the cases, especially for the women-headed household, has often proved to be an enabling experience. The field study indicates that many households have been able to escape the perils of starva- tion death caused by loss of cultivable land and other livelihood resources from the engulfment hazards.

RC02-59.1
AKYEL, DOMINIC* (Max Planck Inst Study of Societies, da@mpifs.de) From Social Taboos to Economic Evaluation: The Construction of Quality in the German Funeral Business
From a sociological perspective, the funeral is a rite of passage in which the deceased individual is symbolically excluded from the world of the living and transferred to the realm of the dead. While the goods necessary to perform this transition were for a long time collectively provided by members of the family and community, funeral goods are nowadays produced by professionals for a profit and are exchanged on markets. But due to the structural and moral specifics of this market, buyers and sellers scope of action is highly constrained. There are strong social taboos against many strategies of profit maximization that are used in other economic fields such as extensive marketing and prize competition. Despite of this, funeral directors must take measures to attract customers and to gain advantages over competitors. In this analysis I look at how morticians in Germany circumvent the moral taboos in the market in order to establish trust and construct and communicate quality. I argue that the structural and moral specifics of this market create opportunities for entrepreneurs to deceive customers in order to increase their profit. This analysis therefore addresses key issues in economic sociology concerning the assessment of quality in markets and the translation of value from one scale of value to another. In doing so the study helps us to better understand the moral preconditions and social constraints to the operation of markets in modern capitalist economies. Data for the analysis stem from participant-observation, expert interviews, and document analysis.

The Experiences and Meaning of Empowerment for Omani Women in Tourism Entrepreneurship
This paper describes a doctoral study, which focuses on female tourism entre-
prise in Oman. A Muasal cultural context. The paper outlines current thinking on the research and reflects critically on the key theoretical and methodological issues. The paper also presents emerging findings from the fieldwork. There has been limited research conducted on women in tourism entrepre-
neurship and this has made it difficult to identify key emerging issues surround-
ing this area for women. There is also scant research that has looked specifically at female tourism entrepreneurs in Muslim countries. One key emerging issue that has been frequently addressed in existing studies is women empowerment through tourism entrepreneurship. However, a critical analysis of tourism entrepre-
neurship opportunities for women and the subsequent implications of these opportunities is needed in order to determine the potential for tourism entrepre-
neurship to empower women. The experiences and meaning of empowerment for female tourism entrepreneurs in Muslim countries may have distinctive char-
acteristics due to their social status. Such empirical evidence can further develop existing knowledge regarding women empowerment through tourism entrepre-
neurship. Thus, the study aims to explore the nature and experiences of female tourism entrepreneurs in Muslim countries with particular regards to empower-
ment.

A female descendant (second or third generation) of migrant families resident in Germany, this paper looks at the asymmetrical power relations between the couples (pertaining to the citizenship, labour market, language competency, knowledge of dominant norms and rules of the receiving country) and examine how the notions of womanhood and manhood will be renegotiated in the context of transnational intimate relations. Thus, drawing on the concepts of transnational family networks and the concept of world-families combined with the insights of sociology of intimacy (Eva Illouz 2012), the paper raises the question whether the male marriage migration might be ending up in the change of constellation of familial power relations, and in gender relations between married couples, hence denoting the reversal of gender order in migration context. The paper is based on biographical-narrative interviews conducted with Turkish and Moroccan couples in the frame of the research project “Reversal of the Gender Order? Male Marriage Migration to Germany by North African and Turkish Men”.

Exploring Factors Associated with Willingness to Donate Organs Among Migrants Adults in Lisbon: A South Asian Comparison

This study represents a community-based death perspectives assessment of a hard to reach population in Lisbon. It aims to attain a South Asian comparison concerning willingness to donate organs, while exploring gender, age, educational and religious-related differences.

A cross-sectional population-based study was conducted among immigrants from Bangladesh, India and Pakistan. Snowball non-probability sampling technique was used, through interviewers with privileged access to the target-population. Between November 2012 and February 2013 trained interviewers collected qualitative and quantitative data through face-to-face interviews, namely sociodemographic characteristics and health conditions, willingness to donate organs (subjects were asked if they would like to have their organs donated; ‘yes’, ‘no’, ‘in-different’, ‘don’t know/don’t answer’) and other attitudes towards death. Logistic regression was performed to identify factors associated to willingness to donate organs in univariate and multivariate-adjusted models for each population and gender.

Willingness to donate organs was higher among the Indian (41.7%), namely Hindus, and lower among the Bangladeshi (9.5%) and the Pakistani (15.8%). For all the three populations, a bad/very bad self-rating quality of life was associated to willingness to donate organs. Bangladesh women were more willing to donate organs than men, while among the Indian and Pakistani, educational level was a more important variable in what concerns the explanation of organs donation commitment phenomenon. Among the Bangladeshi men, migration length was also related to willingness to donate organs; and an increased number of self-reported diseases among women.

Models by country of origin highlighted inter-and intragroup differences. There were gender-based differences on organs donation among the groups. Religious commitment was not an explicative factor.

Previous studies indicate that the act of organ donation can be perceived as involving personal costs, namely costs related to religious beliefs, and that the meaning of organ donation is more than just being and having a body (Hayward, Madill, 2003).

FREIRE, CARLOS (Universidade Sao Paulo)

The Struggle for the Public SPACE in the Historical Center of Latinamerican Cities, the Case of Mexico City and Sao Paulo

The struggle of the public space in the historical center of Latin-American cities.
The case of Mexico city and Sao Paulo

The expansion of the street hawkers in many cities of the emerging countries is the last link of a legal and illegal commodities value chain coming from Asia through the “globalization from below”. Informal economies have multiplied and internationalized as a result of local, national and global political, economical and social interactions: economic liberalization and crisis, demographic growth and migration, social inequality, poverty and unemployment.

Low income population has adapted to these changes by creating survival jobs as local distributors of global production. However, these activities are in conflict with many local and national laws, and confront governmental and private interests set upon the “renewal of the historical centers.”

These papers aim to analyze the corporatist and clientelist relationship between the hawkers’ organizations and the government as well as the use of repression tactics from the local authorities regarding the use of public spaces in the center of the cities.

A Decade of Turbulence and Mismatch—Changing Child Care Policies in Changing Economic Times in the Canadian Context

This paper brings together findings from two studies that I have been working on that focus on child care in Canada. The first study (with Professor Rauhala in Ryerson's School of Journalism) maps the coverage of child care over the first decade of the 21st century in four Canadian daily newspapers. It shows that the voices of mothers and child care providers are virtually absent from policy discussions. The second study involves interviews with mothers and child care providers in two policy jurisdictions, with two very different approaches to child care in the provinces of Ontario and Quebec in Canada. This paper provides a look at the impact of the rise of women's non-standard, service sector employment on gender roles, identities and relations, and compares the complex task of creating and managing formal and informal non-parental childcare in rural and semi-rural communities in two policy jurisdictions (Provinces of Ontario and Quebec). It seeks to understand the ways in which the neo-liberal reconfiguration of local economies impacts on the experiences of employed, non-urban women with young children—mitigated by provincial policy decisions—through documenting the strategies mothers adopt to cope with new and increasing challenges when managing this family-market-state nexus. This paper focuses on some of the unique challenges some rural mothers encounter and the strategies they develop to manage their changing child care needs. It also shows how absent these realities are from the coverage of child care in Canadian newspapers.

Organizing Intersecting Identities: Trade Unions and Precarious Migrant Workers Across the Atlantic

A key challenge for trade unions in this period of globalization is not only the need to rebuild power and survive as organizations, but also to overcome workforce divisions in fragmented labor markets where migrants tend to be employed under poor and precarious conditions (Alberti et al. forthcoming; Standing 2011; Wills et al., 2009). This paper draws from a comparative study on union strategies towards irregular workers across four countries: Germany, France, the United Kingdom and United States conducted between 2008 and 2011 (Adler et al. 2014). It explores the ways in which migrant workers’ identities are mobilised and become ‘strategic’ in labour organising campaigns. Three campaigns where unions collaborated with community groups to advance the working lives of low-paid migrant workers in Los Angeles and the ‘Justice for Cleaners’ and the ‘Hotel Workers’ campaigns in London. The findings point to the persistence of barriers to migrants’ involvement in unions with a strong industrial tradition, i.e., those that target industrial sectors in which immigrants ‘happen’ to be found rather than identifying their specific issues (e.g. language, legal advice, immigration problems, temporary contracts). In contrast, positive examples emerged where unions engaged with workers while taking account of their migrant background through a mix of individual case-work and collective mobilisation; where a clear choice was made to collaborate with migrant-based organizations such as worker centres; and where unions’ receptivity of the organizing tools and cultures that diasporas bring with them was higher.

The main argument highlights the need for unions to make their structures more porous and develop forms of ‘contingent membership’ able to accommodate the specific demands of precarious migrants and diasporas that are still ‘in transit’, while valorising the political and educational baggage held by those who are part of already organized communities.

Transitioning out of Care: An International Comparison on Aging out of Foster Care

Aging is a universal phenomenon of life yet it is not universal in experience. While aging is often perceived as the natural progression through life stages, the societal consequences for these transitions are socially constructed and culturally specific, with particular ages carrying with them varying freedoms, expectations, and restrictions. Some demarcations are fairly widespread in their range of international acceptance, yet others are more variable such as age of retirement and marriageable age. For foster children who are supported within state care, the significance of the cultural link of the age of majority, the age that children become adults by law, carries especially weighty consequences; forcing them to exit the foster care system. This often involves cutting off much needed resources and supports from these already disadvantaged individuals, which may help to explain the high rates of homelessness, incarceration, unemployment, and poor mental and physical health found within this vulnerable population. This research compares how Organisation for Economic Co-operation and Development (OECD) countries manage the transition of young people from state care. National and state legislation designating services received both before and after children become adults are examined along with specific programs and efforts aimed at easing the transition from ‘foster child’ to ‘independent adult’. Comparison on this scale shows massive gaps in national transitioning programs for the transition to adulthood, yet offers the opportunity for cross-country discussion of policy arrangements. This research will enlighten scholarship on the complex relationships between governments and the life course, including how governments succeed and fail at overcoming gaps in life course transitions. Questions pertaining to the importance of using a set age of majority are then discussed and the need for program outcome measures is brought to center stage.

Inequality in Post-Socialist Mongolia: A Case Study

Since the collapse of the Soviet Union, Mongolia ‘de facto a sixteenth republic’ of the USSR (Murrell 1999, 216) started its transition into market economy and democracy in parallel with other former communist countries. In contrast to the belief that ‘recession will be short and sharp before better times’, transition in most countries including Mongolia have been a very difficult, long and painful process (Luvxandorj and Nixson 2000). Today, Mongolia is worse off in terms of quality of life, unemployment, poverty etc. than it was in 1989 and despite the significant increase in per capita growth, the high level of human and social development achieved during the socialist era has been left to deteriorate.

Nonetheless, over the past two decades, the majority of studies on Mongolia’s transition has focused on the country’s features of economic transition and political development rather than emerging social issues in general and inequality in particular. As there has been little discussion about the role of development policy choices Mongolia has adopted in lingering social inequality, this paper attempts to fill this gap by measuring, documenting and comparing the depth, forms and changes in social inequality in Mongolia since 1990.

The paper differs from other studies on Mongolia by employing different aspects of inequality and by examining its interrelations with social mobility, historical and policy legacies and current economic growth. It also uses a mix of quantitative and qualitative methods. The paper finds that not only there is an increasing polarisation, but also there are selected excluded groups and stratas emerging in the society within these polar.
majorities that agreed with the statement that homosexuality should be accepted by the society, with the Philippines ranking 10th among the 17 countries.

Filipino gay rights groups, however, were not impressed with the survey, which they believe are based on the perception of accepted stereotypes of gays. They mentioned that once a gay is outside of the accepted stereotypes, that is where they encounter rejection.

In June 2013, Social Weather Stations (SWS), a non-stock, non-profit research institution, developed questions in order to look deeper at how to measure homophobia in the Philippines. This survey was conducted among Filipino adults 18 years old and above. It found that Filipinos believe that: a) gays and lesbians have the right to be protected against any form of discrimination, b) they contributed a lot in the progress of the society, and c) being gay and lesbian is not a form of mental illness. But the most notable finding that the survey found is majority believe that when they have a gay or lesbian in the family, they would like to change them to become straight men and women.

The paper will also delve into new topics in the forthcoming SWS nationwide survey to be conducted in December 2013. The new topics will measure agreement/disagreement with the following statements: Being gay or lesbian is contagious; Acquired Immuno Deficiency Syndrome or AIDS can be considered as a sickness to the modification in both the organization and the operational policing practices within institutions of social control. The idea which has guided this research is that the modification in both the organization and the operational policing practices within institutions of social control. This analysis approaches the problem of policing in China, rendering focus on the comparative approach has strengthened the research and facilitated a more rigorous approach to analysis. First, it has required me to explore and specify more precisely the characteristics of working holidaymakers and their positioning within each socio-cultural context. Second, it encouraged a focus not on unelaborated generalities about “cultural” differences, but on specific factors (e.g., recruitment practices) that may be associated with differences in each context. Third, the research design allowed the identification of important factors in societal discourses in each context, to be used as sensitizing concepts for interviews across contexts. I illustrate these arguments by using preliminary data from interviews conducted in both the UK and Japan.

This presentation will trace the origins and development of the “strong program” in cultural sociology. In the face of the unproductive struggle between a functionalism that equated culture with social integration and a conflict theory that negated culture altogether, there emerged an effort in the 1980s to reread the classics in cultural terms that would undermine the tradition/modernity divide. One result of this rereading was that the late Durkheim (1912) of sacred/profane, symbols, rituals, and solidarity displaced the middle period Durkheim of Division of Labor, Rules, and Suicide. Alongside this rereading, the effort to create a new sociological approach to culture turned to developments in the humanities — to linguistic turn in anthropology, to structural linguistics and anthropological theory, to semiotics and post-structuralism, and to narrative theory in literature. Some of these developments had already been made available to sociology in the writings of the trio of cultural anthropologists that had emerged a generation earlier, the 1960s and 70s — Mary Douglas, Victor Turner, and especially Clifford Geertz. There had been a “cultural turn” in European social science, motivated by these same developments, which produced a turn toward culture in the critical works of Foucault and Bourdieu and the Birmingham school of cultural studies. The strong program argued that these European reactions to the cultural turn failed to recognize the relative autonomy of culture. Sociologizing a series of key concepts in the humanities, the strong program developed a way of thinking about culture in a new way.
a study of the Australian mining industry that investigates the complex overlap of multiple inter-organizational networks and additional linkages with inter-personal networks. There is a large amount of information available from industry handbooks and we report on methods for coding and categorizing inter-organizational relationships for the purpose of subsequent network analysis and the integration of personal network data in this framework. The dominance and centrality of global corporate players in the inter-organizational networks is mirrored in the memberships and networks of industry associations across the mining industry. Finally, we report a case study of industry mobilisation against the Rudd government’s proposed Resource Super Profits Tax (RSPT) in May-June 2010. This case study illustrates the dominance of the global corporates in framing an ‘industry’ strategy for dealing with the government but also their success in creating a comprehensive and appealing self-identity for the industry and its workforce that glosses over the actual divisions within the industry.

**Capitalism and Injustice As Seen through the Lens of Massive Inequality and the Marikana Massacre**

**Capitalism and Injustice - As Seen Through the Lens of Massive Inequality and The Marikana Massacre**

The paper explores the relationship of capitalism and injustice, doing so through the lens of South Africa’s massive social inequalities and the 2012 massacre of 34 strikers by the South African Police. These inequalities are extreme but they are not unique, and span, among others, now has a higher rate of unemployment than South Africa. Treated as what William Sewell defines as an ‘event’, the massacre is used to reveal key aspects of social structure. Different meanings of ‘injustice’ are discussed and these are related to the workings of capitalism.

**By Any Other Name: Neoliberalism, Post-Secularism, and Establishment Religion**

... The paramount goal is compassionate results, and private and charitable community groups, including religious ones, should have the fullest opportunity permitted by law to compete on a level playing field, so long as they achieve valid public purposes, such as curbing crime, conquering addiction, strengthening families and neighborhoods, and overcoming poverty. ...  

... George W. Bush in 2001 [1]

Then-President Bush made this statement in connection with establishing a White House Office of Faith-Based and Community Initiatives (“WHO-FBI”) to cultivate contacts with the religious sector. Under massive “welfare reform” legislation, U.S. welfare recipients may only remain on the welfare rolls for a two-year period, after which time they have to enter the workforce. It was the task of the WHO-FBI to recruit religious groups as third-party contractors to provide job-readiness skills to the nation’s welfare recipients. Whatever euphemism one uses – be it “massive welfare reform,” “Compassionate Conservatism,” or “Neoliberalism” – the retrenchment of the welfare state from providing a safety blanket for society’s downtrodden has pushed religion to the forefront of the public sphere.

By drawing upon the U.S. experiment with “colonizing the poor” under the Reagan administration and other so-called traditional religious communities...
decriminalised only in 1992. There were signs of an emergent movement since the late 1980s and a number of pioneering NGOs were established in the 1990s, although a strong umbrella organisation remained absent. In the most recent period several NGO-s have been established but subsequently closed down for various reasons.

Today, Estonia’s LGBT activism is very much a youth movement, rather lesbian-centred, loosely connected and with a number of distinguishable clusters of activism. Different NGO-s focus on various issues and in some represent smaller groups. A specific cluster in the movement is related to political art and feminism, which is becoming rather visible in Estonia. Theoretically Estonian LGBT movement is conceptualised as identity-based movement insinuating of strategies of involvement.

The empirical part of the paper considers the findings of participant observation in various events organised by LGBT activists in 2012-2013, and in-depth interviews with them. In particular, the paper considers: how LGBT activism is defined by individual participants involved at the moment; explanations of the female-centeredness in LGBT activism, and gender specific differences on these explanations.

ALLEN, HENRY LEE* (Wheaton College, hank.allen@wheaton.edu)
The Future of Teaching and Research in Universities: Global Transformations

Around the world, global transformations have been affecting the structures, dynamics, and outcomes of universities. Indeed, acute transformations in information and communication technologies (ICT) have reshaped academic labor via MOOCs, distance learning, assessment, and for-profit higher education. In the United States, for example, the professoriate has become dominated by contingent labor rather than full-time employment. Outside a core of prestigious research universities, academic labor has been progressively marginalized. Even within universities, academic capitalism or commercialization has proliferated, spreading a virus that has distorted humanistic and scientific learning away from basic research or theoretical questions. Academic freedom is precarious, compromised by the dictates of applied research. Public higher education has been engulfed in this tsunami of social change for decades, carrying along the academic professions in the merry-go-round of politics.

Two decades of sociological research exists on these matters by this author and other scholars in The Almanac of Higher Education published during 1993-2004 by the National Education Association of the United States. Thus, this article will examine data sources from the National Center on Education Statistics, the National Science Foundation, the Royal Society of the United Kingdom, the Office of Economic and Cooperative Development, the European Union, the United Nations, the National Study of Postsecondary Faculty, the Library of Congress of the United States, and other venues to provide a scientific analysis of future trends or scenarios transforming research and teaching in universities. While ideas and evidence will center on conditions in the United States, international comparisons will be made wherever possible. In the same way that alert climatologists monitor climate change, sociologists must continuously investigate ‘academic climate change’ on a global scale.

ALLEN, SUMMER* (Michigan State University, allensu6@msu.edu)
GUAGNANO, GREG (George Mason University)
Ecological Identity: Underpinnings and Expressions

In a presentation to the National Congress on Behavior Change for Sustainability, Stern (2010) suggested that private sphere behaviors such as recycling have large intent quotients but relatively minor actual impact on environmental quality. Activism, on the other hand, has an ability to influence governmental and corporate policy and may be the most impactful activity. It is also an activity that requires a critical mass of public support to achieve that impact. To change policy or behavior, the activist relies on the power of mobilizing public opinion or resources to force accommodation from a government or corporate entity. One potential way to achieve and sustain that critical mass is through identity-based group formation. Membership in such a group may also increase the likelihood of an individual participating in public activism.

In the research reported here, identity connected to environmental concern was explored in a small (125) cohort of environmentally-committed respondents. Specifically the relationships between pro-environmental values as an enduring basis for an identity, environmental experiences, the presence of an “ecological identity” (Thomashow, 1996) or self-identification with nature, and the management of that identity as a social role were examined. Using measures from Stern, Dietz & Guagnano (1998); Burke & Stets (2009); Clayton (2011); and our own experience items, we found that environmental experiences and pro-environmental values coincide strongly with the presence of an ecological identity, but that these have a significant effect on how an individual manages the expression of that identity in relation to other identities held.

ALLUM, NICK* (University of Essex, allum@essex.ac.uk)
CONRAD, FRED (University of Michigan)
An Evaluation of the Effect of Mode-Switching in Panel Surveys Using Recall Data

A key concern about the web survey data quality is difficulty garnering a probability sample because there are no good frames of email addresses for a general population. In a panel survey, it is possible to switch respondents to web mode after recruitment via face to face methods (FTF), thus mitigating the problem of sample selection and allowing the collection of rich information at lower marginal cost. However, web respondents generally seem more likely to take short-cuts than respondents in interviewer-administered modes (e.g., Heerwegh and Loosevelt, 2008). This may even be exacerbated by switching from F2F to web: by contrast to an interview, self-administration feels particularly “unsupervised” and, without an interviewer to motivate them to be conscientious, web respondents may take shortcuts and minimize their effort compared to their style of participation in previous F2F interviews. This raises the more general issue of whether it is possible to maintain the integrity of time-series in which there is a midstream mode switch (FTF to web). In this paper, we report results of an experiment in a panel survey (the UK Household Panel Survey Innovation Panel (UKHLSIP)) that compared the accuracy of past event recall, validated by responses at previous interview, comparing respondents who were switched to web mode with those that were not. We also assess how asking for pre-commitment to careful answering might mitigate any potential loss of data quality resulting from switching to web. More generally, our results allow us to understand a little better how mode-switching interacts with cognitive processes underlying survey response to produce data of varying quality.

ALLWOOD, CARL MARTIN* (university of gothenburg, cma@psy.gu.se)
Social Science in Development: The Indigenous Psychologies and the Concept of Culture

The so-called indigenous psychologies are currently a lively reaction to mainstream psychology, mostly in Non-western countries (Allwood & Berry, 2006). They are a large and diverse set of psychological theories and practices whose origins can to a large extent be seen as a post-colonial reaction that became clearly visible after the independence of many Non-western countries after World War II. What they react to is basically what is seen as the culture basis of mainstream psychology and their aim is to develop a psychological science that is both indigenous and culturally relevant. Indigenous psychologists aim to be pragmatically relevant to their domestic society and to be rooted in the culture of their own society. In this presentation I will review some recent debates in English written literature on the indigenous psychologies that have resulted in a more collective and more theoretically based approach and that can be seen as a further development of the indigenous psychologies.

The first theme to be discussed is the idea of an identity, environmental experiences, the presence of an “ecological identity” (Thomashow, 1996) or self-identification with nature, and the management of that identity as a social role were examined. Using measures from Stern, Dietz & Guagnano (1998); Burke & Stets (2009); Clayton (2011); and our own experience items, we found that environmental experiences and pro-environmental values coincide strongly with the presence of an ecological identity, but that these have a significant effect on how an individual manages the expression of that identity in relation to other identities held.

Young College Students: Within Physical and Numerical Territories, Different Processes for Individuation

The intention of this research is to present the results of the comparative study made between young college students connected to two Brazilian universities: a public-state university located in an urban environment marked by agribusiness;...
the other being a public-communitarian institution located in an urban-metropolit-
ian environment, marked by a strong and vigorous industry base. The two groups
that were studied circulate in physical territories, as well as in numerical/digital
territories. In the socialization and sociability processes that they experience, they
reveal circulative practices marked by similarities and differences. The majority of
the young fathers connected to the public-state university exercise a student-life in
a style that is termed “social moratorium”, circulating through the territories of
family-home, university and cyber space. Many of them undergo transient or
permanent migratory processes. On the other hand, a significant percentage of
youths connected to the public-communitarian university combine their univer-
sity-student condition to a job, where they work, and this is why they add work-
ing time/space to the circulative processes experienced by the public-university
youth. Thus, if there are intersecting points that mark the condition of these
young college students, there is also a diversity of juvenile experiences that differ-
entiates these two groups much beyond the social differences/implied caused by
gender, race/ethnical and place of abode. Therefore, throughout their student
life cycle, they demand distinct “supports” and experience dissimilar individuation
processes.

Complementary and Alternative Medicine and the Reprofessionalisation of Medical Doctors in Portugal

The aim of this paper is to present an ongoing project entitled ‘Towards the camisation of healthcare, having acupuncture and homeopathy as two case studies. It also
developed the concept of ‘camisation’, which refers to the process of legitimising
CAM treatments and solutions for everyday human problems. Furthermore, it
analysed the attitudes of key actors within healthcare towards camisation. For
example, although the position of the Portuguese medical profession towards
.camisation has been fluid and changeable over time, there has been a growing
number of medical doctors ‘incorporating’ (Saks, 1995) CAM into their medical
practice as a strategy to cope with CAM practitioners’ encroachment into Portu-
guese healthcare. Acupuncture and homeopathy, for example, have been incor-
porated by Portuguese medical profession both at the institutional and interac-
tional level. This paper aims to theoretically explore the consequences of medical
incorporation of CAM for the medical profession, from the point of view of
the sociology of professions. The topic of reprofessionalisation of medical doctors
who committed themselves to CAM therapies is under-explored in the sub-field
of sociology of CAM and might be useful to understand recent trends within
the medical profession in Portugal. Reprofessionalisation means the restructuration
of education and redefinition of boundaries of knowledge. This paper discuss-
es the extent to which the incorporation of CAM by the medical profession can
be viewed as reprofessionalisation, in order to meet new challenges and threats
posed by camisation and CAM therapies.

KAUFMAN, GAYLE (Davidson College)

Fathers, Work and Family in Sweden and the US

This paper investigated Swedish and US fathers’ experiences of work-family
conflict, possible solutions, and actual changes to their work situation in relation
to becoming a parent. The Swedish data were drawn from interviews completed
in 2008 with 16 fathers with a child born in 2005 or 2006. The US data came from
interviews conducted between summer 2005 and 2007 with 26 fathers with at least one
child age five or younger. The semi-structured interviews were analyzed accord-
ing to grounded theory. In terms of conflicts, half of the Swedish fathers mention
time pressures or stress, with some referring to work-life balance as a puzzle.
Findings indicate that the US fathers think that they work too much overtime as
well as shift hours, and they also mention arguments with their partner about re-
sponsibility at home. At the same time, a majority of both US and Swedish fathers
emphasize family as a priority over work. In terms of possible solutions, a com-
mon theme among Swedish fathers is to mention that ideal work hours would be
less than their current hours, with some wishing for a shorter work week (e.g., 4
days) and others a shorter work day (e.g., 6 hours). US fathers most commonly
wish for a more flexible work-life situation. In terms of actual changes, several
fathers adjust their work lives in response to their family life. Among Swedish
fathers, the most common changes involve working fewer hours, adjusting their
start and end times, and taking advantage of flexible hours. Swedish fathers also
emphasize trading off with their partners, including ‘shift parenting.’ As for US
fathers, some have changed their job to be more at home, some changed from
working three shifts and some fathers solved the situation by intense work during
a limited time.

ALONSO-FRADEJAS, ALBERTO* (International Institute Social Studies , fradejas@iss.nl)

Politics of Land Grab-Driven Agrarian and Labor Regimes Change in Guatemala

It is proposed to present and discuss one of the experiences of the Incubator of
Solidarity and Popular Economy Initiative(IEPS/UFEs - Incubadora de Iniciativas
da Economia Popular e Solidária da UFEs), extension program of the Universidade
Estadual de Feira de Santana-UFEs (State of Bahia, Brazil); the process of incuba-
tion of a informal group of people (mainly women) that explores, since March
2013, one of the University canteens. Among others activities, the IEPs/UFEs
accompanies the group in the drafting of the rules governing its operation, with
respect to the principles of self-management, cooperation, solidarity, democracy
and appreciation of work. The adopted methodology begins from interviews with
individual members of the initiative, picking up aspects of their personal expe-
riences, expectations with the cooperative work, their advantages and difficul-
ties. Afterwards there have been “conversation circles”, where rules on division
of duties, the group’s fruits, rights and duties of the group members, procedure
for making decisions, sanctions, conflict mediation and organization of activities
have been collectively discussed and constructed. Even though it looks forward
to the further elaboration of a traditional statute, in order to make possible the
legal formalization of the group, it was elected as a priority the construction
of rules that are able to discipline the coexistence in a original and constructive
manner, strengthening in particular the ideals of solidarity and self-management
that guides the Solidarity Economy. The process prioritizes the use of informal
language and effective participation, in order to guarantee that the group rules
reflect the relations of power and senses of morality and justice concretely expe-
rienced by its members - even if it stays outside the state law.
Changing land resources access and control relations due to sugarcane and oil palm agribusinesses-led land grabbing since the mid-2000s is a major catalyst of political contention in the Maya-Q’eqchi’-populated Guatemalan northern lowlands. Arguably, such contention does not have to do so much with a Polarian (1968) counter-movement against land and labor commoditization as with a contestation of the ways in which such commoditization is happening. The combination of Market-Led Agrarian Reform and freehold land titling on facilitating access to local land resources to “outsiders” with the international politico-economic scenario of multiple crises which sees land resources as global commodities has allowed for commodification intensification to mushroom. Eulerian analysis on research since 2006 this paper argues how Maya-Q’eqchi’ lowlanders’ unrest is rooted in historical agrarian grievances and in those emerging from the “terms of incorporation” (Du Toit 2004:1003) to the emergent, hyper-commodified “labor regime” (Bernstein 1988) into which many feel have been adversely incorporated through flexible labor arrangements either as plantation workers or as contract farmers. Such grievances are amplified by narrowing or breaking inter-class reciprocity mechanisms (Thompson 1971, Scott 1976) which if anything allowed for the continuous (re)negotiation of minimum survival standards between dominate and subordinate classes. Unrest is turning into practices of resistance framed as “defense of territory” and articulated through a repertoire including everyday and more militant forms of contention. Dominant state and social actors frame their governable space-making efforts as “developmental” and “responsible”, employing a repertoire based on “divide and win” and “rule of law” strategies articulated through discrediting, delegitimation and violent mechanisms. Indeed, land grab-driven agrarian change has triggered a new “cycle of contention” (Tarrow 1998), its outcomes being not a story foretold but the becoming of multiple politics between, across and within state and social actors in contention at different scales and places.

Inequality in Social Capital Transition within Family: Time Diary Evidence

In this paper we investigate inequality in social capital transition to children using time diary evidence from American Heritage Time Use Study (2003-2012). We first identify set of activities that are particularly salient in social capital acquisition and examine whether parents involve in these activities together with their children in daily life. Specifically we look at absolute and relative differences in parental time spent in (i) leisure activities at home (ii) out-of-home leisure activities (iii) meal time together and (v) volunteering activities. We also look at time spent in watching TV as this is identified as one of the reasons in decline in social capital in the US (Putnam 2000). The study shows significant inequalities in social capital transition by parental education and ethnic background. Low-educated parents spend more time in leisure activities and less time with their children in meal time and volunteering activities compared to high-educated parents (total number of minutes) and relative times (in proportion to total time in watching TV). For example, ceteris paribus, white mothers with post-college degree spend 50 minutes less in watching TV daily while they have their children in care. The corresponding figure for white fathers is 37 minutes. On the other hand, high-educated parents are far more likely to involve their children in their out-of-home leisurely activities relative to their low-educated counterparts.

Young People’s Time Use Patterns and Future Labour Market Outcome: Does Studying Pay-off?

Time use data is not adequately exploited to understand adolescents’ time patterns (Furstenberg 2000) and life course perspective is, “nearly absent in time use research” (Gauthier and Furstenberg 2002:155). In this paper we address this gap and investigate the effect of young people’s time use patterns through life course perspective using a rich dataset. Our central question is its longitudinal study and time diary evidence.

We exploit the four-day time diary survey collected for the 1970 British Cohort Study (BCS70) respondents in 1986, linked to previous and subsequent waves of BCS70. We hypothesise linking the accumulation of various sorts of embodied capitals (social, cultural and economic) out of daily activities, to the result of deployment of these capitals later in life. We ask, for example, whether time spent in school-related human capital formation activities at the age of 16 predicts earnings or probability of being in employment at later ages; and whether this effect varies by gender and class.

Preliminary findings suggest that regular studying in adolescence positively affects future earnings even after controlling for parental background. However, the effect of time spent in school related activities has a stronger effect on future earnings of those coming from better-off households. The effort in adolescence is not enough to compensate for gender inequality in earnings later in life.

The Concept of Good Life in Ecuador Between Indigenous Movement, Mestizo Intellectuals and State Politics

The concept of Sumak Kawsay, Buen Vivir or Good Life has entered the political and societal discussion Ecuador since the 2000’s. After a slow integration into the discourse of the indigenous movement that understood Good Life as a territory and identity-based harmony between individual, society and nature, the Constituent Assembly 2007/2008 lead to a further dissemination of this concept. In this context, two other discursive streams won importance: a left-leaning group of “intellectuals on a Latin-American level, amongst them Alberto Acosta and Eduardo Gudynas, and the Ecuadorian State that declared the Good Life in the 2008 Constitution as its central principle. Both groups differ from the indigenous definition, highlighting -in the case of the intellectuals- the contact points to other discourses, such as socialism or environmentalism or -in the case of the state- the possibilities of implementation. In both cases, the territorial and identity implications are downsized.

This presentation will resume the history and development of the concept of Good Life, concentrating on the different conceptions of Good Life by the three main groups that work with this notion. By this, the different political backgrounds and implications and the conflicts that are based on them will be worked out.

Recognition, Trust and Reputation in Youth Travel Practices

The study investigates the issues of recognition, trust and reputation focusing on the dynamics of an online community promoting worldwide free hospitality: the couchsurfers.

With the only guarantee of the information displayed in users profiles, this website enables a potentially risky exchange, where people share their private spaces and time with unknown travellers. I analyse the process of trusting a stranger in terms of recognition of a cross-national common ground and of strategies that users can adopt in order to orientate themselves while dealing with global diversity. Mutual hospitality is here seen as a concrete experience of Kant’s cosmopolitan right, based on a willingness to engage with foreigners and on a sense of belonging to humanity that it perceived, pursued and performed by youth.

In order to illustrate this process, I have collected the data from 5 networks of 11 users, 482 online references and 15 qualitative interviews. The 3 key-elements that my work identifies are: 1) the expression and recognition of three cosmopolitan ideals that create that sense of commonality that enables the communication among members: the value of Sharing, the search for Authenticity and the desire of learning while travelling (the Bildung); 2) the creation of pathways of trust that can diffuse cooperation through the same global mediums as those of risk and fear; 3) the development of ‘social devices’, like the use of a system of public online reputation, for decoding transnational reality and for engaging with others worldwide.

Are We Protected? Model for Predicting the Level of Perceived Securesness in the Face of a National Emergency in Israel

Introduction: National emergencies are characterized by a destructive potential of causing a severe damage to a community's social fabric, worsening the psychological well-being of citizens, and even causing death. A war and major earthquakes are among the most relevant types of national emergencies in the Israeli case. Aim: The aim of the current research was to construct an innovative comprehensive analytical model for understanding the mechanisms that characterize human perceptions of national emergencies prior to their occurrence.

Towards a broad understanding of the phenomenon, a novel measurement tool and a new holistic concept of "perceivedsecureness," that encompasses both risk perception and perceived preparedness, were created. Results: The results of this first of its kind analytical and empirical study indicate that regarding an earthquake in the Israeli context there were found strong and significant relationships between the three dimensions of perceived secureness: national and local (r = 0.86, p < 0.001), national and household (r = 0.79, p < 0.001), local and household (r = 0.82, p < 0.001). However, the results regarding a war reflect a different pattern: the relationship between national and local perceived secureness was found insignificant (r = 0.08, n.s.) as well as between national and household secureness (r = 0.08, n.s.); while the relationship between local and household secureness was found strong and significant (r = 0.93, p < 0.001). In addition, all the cross-context (earthquake, war) relationships between the perceived secureness' dimensions were found insignificant.

Conclusions: The novel parsimonious concept of perceived secureness was found to be context- and dimension-sensitive. In terms of context, it distinguished between an earthquake and war and in terms of dimension, it distinguished between the national, local, and household level. Consequently, it may serve as an effective tool for scientific analysis, risk communication monitoring and public policy consolidation.

Gender Policing in Latin American Societies

Latin American policing is among the most conflictive and low quality government services in the continent. In particular, policing street people and particularly young people is an area with great opportunities of improvement. This paper compares ways of policing in five countries in L.A. Argentina, Brasil, Colombia, Guatemala and Mexico. Will make an effort to show the more problematic areas of the relations between police and the youth. I will also make a strong content analysis of gender bias policing in this countries. The paper will draw from a set of individual and group interviews in ten cities of the countries marked. I will describe the different types of verbal and physical encounters between police and young women, evaluate the quality of the encounter and make an interpretation on how gender is define and or exercise through this encounters.

Justice, Legality and Legitimacy: Youth Sense and Use Of Legal Norms In Urban Contexts In Latin America

In the midst of an extremely violent war against drugs, against gangs and organized crime, Latin American elites have implemented a series of disputable institutional reforms to the justice and legal systems. This implementation has been corroded by the inability of the same elites to perform and even respect these regulations, because there is strong corruption and impunity mainly among the political elites.

In the middle of these battles, youth population has been targeted—blamed for the major crimes that are committed by different armed legal actors. One important issue is youth involvement in these illegal activities. Another is juvenile perception of changes, even more social and policy changes, and implementation of the new limited legal norms (such as the provision policies against drugs).

This paper will present a result of a comparative study of youth conceptions of norms and their sense of legitimacy and justice in 10 Latin American cities.

This paper claims that in spite of the sociological general opinion about legal cynism, juvenile population in Latin America knows and even accept legal norms, and use them to a certain point in more practical terms than the rhetorical strict social behavior. But they contested certain conceptions that they consider unfair and unjust. They know that laws and regulations are very limited, some of the unfair, particularly when they target-label youth people as potential criminals. They consider this new context unfair, discriminatory, but they tend to accept and aspire to an overall fair and equal system of justice, a regime that political elites and regulations have not been able to provide for this population. The paper is based in focus groups and surveys develop in 2012 in 10 Latin-American cities, about the uses and acceptation of legal norms.

Bodily Practices of Elderly and the Methodology of Oral History

The category of bodily practices refers to phenomena that are shown primarily in body expression, of which constitutes social expressions and are expressed as a form of language (FALCÃO & SARAIVA, 2009). It is also understood that the bodily practices refers to social phenomena such as dances, games, leisure, physical exercise, sports, the gymnastics, martial arts (LAZZAROTTI, 2010).

Brazilian public policies and social programs aimed at health promotion that have bodily practices as an axis, in general, they have been structured with the anatomical and physiological issues as central references. (SILVA & DAMIANI, 2005) This character is also present in programs offered specifically for the elderly where, in general, only strictly biophysiological goals are important to be conquered in order to combat the physical declines that come with advancing age.

Opposed to this narrow look of the body presentation in these program offerings, the category of bodily practices seems to offer us the opportunity to think about the bodily expressions beyond of their biological condition. This category has been increasingly defined making use of theoretical and methodological frameworks from the social sciences and humanities in order to look for a body that also presents a condition that is social, historical and cultural.

Reflecting on the possibility of enhancing the bodily experience of an old person, in other words, looking beyond the achievement of goals that only combat physical decline, one can think of the potential of the memories in order to know about old practices that this old person experienced along his life by making use of the methodology of Oral History (VON SIMSON, 2003). Memory narratives produced in the elderly can evoke about how bodily practices may vary by gender, culture context, social class and education in a life course, producing different body experiences at this stage of life.

Language and symbolic thought in Albert Einstein's relative space-time: new interdisciplinary perspectives in Einstein's Mechanics of relativity

Our paper discusses Albert Einstein's conceptual ontology with special focus on the grounding of RELATIVE SPACE TIME concept. It understands that Einstein's ontology given its tropological nature, it builds essentially the concept of relativity among the relations between language and thought according to a semiotic perspective. So, the main objective of our paper intends to analyze Einstein's relative space-time conceptualization, figurativisation, metaphorisation of relative space-time. The second objective aims to present new interdisciplinary perspectives between Anthropology and Semiotics, when it analyses Einstein's innovative method in Modern Physics. Einstein's method verified interpret the physical universe in terms of conceptual and theoretical frameworks from the social sciences and humanities in order to look for a body that also presents a condition that is social, historical and cultural.

Reflecting on the possibility of enhancing the bodily experience of an old person, in other words, looking beyond the achievement of goals that only combat physical decline, one can think of the potential of the memories in order to know about old practices that this old person experienced along his life by making use of the methodology of Oral History (VON SIMSON, 2003). Leadership Development Programs in Organizations: New Dimensions, Impact and Evaluation

We want to identify how the concept of leadership has evolved in recent years, the implications of that evolution for managers’ work, and the impact of leadership development programs on the lives of organizations and their employees. We will describe the main sources of evaluation of the effectiveness of these programs. We will focus on the learning transfer process from the classroom to the
companies and people in the real world. Leading change in organizations entails changing people’s behaviours and, in order to do that, appropriate metrics and rewarding mechanisms need to be developed.

Leadership development interventions will be analysed and their forms of assessment such as: interviews, feedback forms, in-depth consultation. Participants in those programs draw very interesting conclusions contrasting their newly acquired knowledge with their previous first-hand life experiences. Implications for business schools, universities and learning institutions in general are also to be considered, particularly with respect to their role as change agents and mobilizers of knowledge.

We will describe the new leadership dimensions and how they affect the roles and responsibilities of those holding a leadership position. Is there a change in the role and purpose of business leaders? What are the main characteristics of that change? Does this change extend beyond business boundaries? What are the effects of these changes for people in organizations? We will further analyse concepts such as Community and Collective Leadership, Distributed and Shared Leadership, and others closely related to them: corporate social responsibility, coaching, relational management, motivation, communication, empathy and personal connection, commitment, engagement, career development, work-life balance.

Our investigation will be based upon the last five years’ published research from Ashridge Business School, a very well recognized institution for translating theoretical organizational knowledge into best practices in organizations.

ALVAREZ RUIZ, FERMIN* (University of Buenos Aires, ferminalvarez@gmail.com)
TORTEROLA, EMILIANO* (University of Buenos Aires, etorterola@yahoo.com.ar)
GRONDONA, ANA LUCIA* (University of Buenos Aires, antrondona@hotmail.com)

The paper that we hereby present looks into the singular ways in which the problematicatization of Gemeinschaft-Gesellschaft was “translated” into Argentinian sociology in the 1940s, prior to its institutionalization as a scientific discipline in the context of the University of Buenos Aires (UBA).

In our work we test, in a preliminary way, the hypothesis that, in this conjuncture, more prone to essayist writing than to methodical and scientific inquiry, “community” acquired a “culturalist”, “essentialist” or “primordialist” meaning, closely related to the concepts of “nation” and “pueblo”.

To carry out this task, we will explore, fundamentally, some works of the Argentinean Alfredo Povia and the Spanish Francisco Ayala.

The first of them, Alfredo Povia, presents a changing profile, mainly regarding his political orientation. In the first place, he is closest to Peronism and then to authoritarian projects of communityist nature, such as the J. C. Onganía’s dictatorship (1966-1970). He developed his work, mainly, in the National Universities of Córdoba and Tucumán. In particular, we will analyze his presentation for the First National Congress of Philosophy in 1949 in Mendoza (“The sociological idea of community”), as well as his work Ontological Sociology Issues, published that same year.

On the other hand, Francisco Ayala, a Republican exile, played, from the National University of the Litoral, a prominent role in the Latin American academia; at the same time he is a key-translator (among others, of F. Tönnies’s Community and Society) and as a producer of texts. Among the latter, his work around the “sociological concept of Nation” (1941) stands out and will be the focus of our analysis.

New Citizenship, New World. A Theoretical Analysis of the Last Social Movements in Spain (2003-2013)

Citizenship was articulated as a social science concept by the differentiation between civil, political and social rights that Marshall proposed in 1950. Nevertheless, as a result of globalization, translational migrations, new social movements and the transformations of identities and their referents, Martian citizenship has been questioned. New claims, new demands of recognition and new social practices have transformed the classic references on which citizenship relays, such as time, space or nation. In this paper we explore the different academic proposals and we will revisit at least three major perspectives of analysis (structuralism, the liberalism and social actors) that aim to address the future of citizenship, social movements and political practices and systems of Western liberal democracies. We will focus our analysis in the Spanish context and the last well-known social movements as the 15M or “No a la Guerra”, but always taking into account the complexity of the local-global realities.

Network Models of Minority Opinion Spreading

The shaping of public opinion through process of social interaction has been subject of significant interest in social sciences. At present, this topic has gained especial relevance due to the proliferation of online social media such as Twitter, Facebook or Youtube, and rising social movements related with the use of these platforms (e.g. Arab revolts, May 15th, Occupy Wall Street, etc.). Despite there are different models in literature that analyze the dynamic of opinion formation, less attention has been paid to explain how the structure of social network and contextual circumstances can influence the course of public opinions. This work is aimed to ask three basic questions: (1) how can affect the structure of social networks to minority opinion spreading, (2) how committed agents can influence in this process, and (3) how mass media action, as a contextual factor, can vary different agents’ opinions and network composition. Agent-based modeling (ABM) is used to perform a network model of preferential attachment that is used to explore how phenomena of minority opinion spreading can evolve under different simulated scenarios. This study shows that the success of minority opinions depends on the network structure and composition, and thus external factors such as mass media action that can mediate the strength of these determinants. In spite of people tend to remain silent when they feel that their opinions are in the minority pole, our findings suggest that prevailing majority opinion may be replaced by formerly minority opinion if core agents in the network structure support this view. These results might be relevant to understand the communication process involved in formation of public opinion and the emergence of collective behavior in complex social systems.

El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual

Desde hace al menos tres décadas la noción de comunidad se ha vuelto central para una variedad de disciplinas asociadas al campo de las humanidades. El asunto “renacimiento de la comunidad” supuso la tarea de retrazar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es sabido, a lo largo de la historia del pensamiento de la teoría sociológica fue mediado por el siglo XIX impactado de manera decisiva en la formación y el desarrollo del concepto de comunidad. La indagación acerca de las transformaciones en los usos y significados de dicho concepto requería un acercamiento más concreto y específico, de ahí la aparición de nuevas corrientes de pensamiento que propusieron métodos y técnicas para explorar esta noción. En este trabajo se pretende explorar el concepto de comunidad a través de una serie de enfoques teóricos que han venido a enriquecer la comprensión y el conocimiento de esta realidad social.
concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potencialidades de diversas herramientas y propuestas teórico-metodológicas provenientes de perspectivas no específicamente sociológicas. En este trabajo nos proponemos, entonces, analizar, de forma crítica y programática las posibles confluencias de la investigación teórica o metodológica en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la "historia conceptual" y la "historia intelectual".

Good Press: Why Movements Get Covered and with Substance

When did and why do movements and SMOs sometimes gain sustained newspaper coverage and when and why is this coverage sometimes substantive? Our story-centered argument holds that the social organization and operating procedures of the news media account for its differential treatment of institutional political officials and movements, but also provide openings for sustained and substantive coverage for movement actors, a potential cultural consequence for movements. We argue that the main routes to both sustained and substantive coverage are for movements to mimic and challenge institutional political actors and processes, such as by contesting political elections; presenting legislative processes, and launching court cases. Other routes include mounting successful strikes and waves of protest. Routes to sustained coverage that are not expected to be substantive include investigations, trials, violent opposition, and occupations. We use the data from the Political Organizations in the News project to identify the longest sustained coverage “runs” for SMOs across the twentieth century. The results show that 37 high-profile SMOs gained sustained coverage 302 times. Analyses of the subjects and the assignments of authors in these coverage runs provide preliminary support for our story-centered arguments.

Neither Here Nor There: Transnational Identity Of French Immigrants Employed In Israeli-French Companies

Recent waves of French immigration to Israel exhibit the unique characteristics of a transnational movement (Bowen, 2004). This movement is distinct in the immigrants’ strong and continued affinity to their country of origin, despite efforts to integrate them into the host country’s job market, and form cultural communities. This pattern of immigration invites scholars to rethink concepts such as: integration, assimilation and national identity, and perhaps even replace them with the terms “global nomads”, cosmopolitan, and “children of the third culture”. These terms seem to better describe the existential limbo these immigrants experience (and even foster deliberately) (Bell-Villada, Sichel, 2011). We thus feel that a better understanding of life on the borderline between cultures is warranted.

In our case, the hybrid identity cultivated by the French immigrants is maintained and even fortified by their preference for working in French speaking organizations. The research reported here examined the formation of trans-national identities among French immigrants employed in companies providing services in French to French audience. Many of whom are employed in telephonic call centers, where vast aspects of the work is technologically mediated, and workers are employed under various forms of non-standard employment which deprive them of job security. The present study asks how this employment pattern, and work environment impact the manner in which immigrants’ relate to the Israeli culture, construct their identity, form communities of belonging, and integrate into the Israeli society.

Based on 40 in-depth interviews with French immigrants working at various French oriented companies we show how the sense of temporariness and instability characterizing their field of work contributed to their construction of a hybrid ethnic identity. The francophone identity provided an important social and cultural resource that many immigrants felt they should preserve.

Islam, Public Space and Cosmopolitanism in Senegal: Between Local, National and “Universal”

In Senegal, as well as in other sub-Saharan countries, Muslim communities have been contributing to a development of public spaces. In capitalities like Dakar, Bamako or Niamey, Muslim dynamics framed by various Islamic events (conferences, religious meetings or festivals) take place in different areas in the city, new mosques are inaugurated every year in suburbs, Islamic television and radio networks diffuse their own programs and sometimes broadcast live different activities and rituals (prayers, pilgrimages), etc. Some recent works analyze this trend as an emergence of new modern “public islam” developing in West Africa, promoting Islamic moral and social values through younger generation (Samson) and, in some cases, connected to universal religious revival or “reformism” in Arabic countries (Holder). Today, Islamic dynamics are changing the whole social fabric of African societies, promoting both local and national identities, developing transnational networks, adapting to various influences and thus, improving what we can even call, new Islamic cosmopolitanism.

Based on case studies in Senegal, this paper analyses the roles of Islamic dynamics and their symbolic performances in the recent political and social change in Senegal. The reconstruction of public spaces by Muslim communities and their cosmopolitanism can be seen as a solution to various problems that State and society are facing today in the modernization of political modernization.

What are the features of new (local, national or transnational) Islamic dynamics and what are their roles in the (re)construction/re(organization) of public spaces in Senegal? What are the relations between the state politics, Islamic transnational networks and the local initiatives? How local, national or “universal” Islamic factors. Furthermore, this study seeks to reveal how the development of vulnera-

Transmuted Inequalities of Class, Race, Religion and Nation among South Asian Migrant Workers to the Middle East

This paper examines the intersectionalities of class, race, religion and nation among migrant workers from South Asia going to the Middle Eastern and North African countries. In particular it examines how the class positions of the migrant workers in the “destination societies” are racialized and how exclusions experienced in this racialization process impact on the religious and national identities of migrant workers. By focusing on South-South migration processes regarding religious and national identities to become more important and adding a critical dimension to their nation- ascription. This paper concludes with discussions of how inequalities of class and nation are transmuted into inequalities of race and religion and the consequent politics of belonging in both sending and receiving countries. The analysis is based on data collected from 2011-2012 from 275 migrant workers from Bangladesh, India, Nepal, Pakistan and Sri Lanka to the Middle East. We found that South Asian migrant workers, shared an experience of racialization and exclusion in relation to the host country populations, whose content was based on religion and national identities. Exclusion had similar outcomes on Muslim and non-Muslim migrant workers by shifting their religious identities to become more important and adding a critical dimension to their national identities, while also increasing the sense that their national cultures were better in terms of the status given to women and the treatment of strangers. Using the intersectionality framework for analysis, the paper concludes with discussions of how inequalities of class and nation are transmuted into inequalities of race and religion and how these transmutations are impacting on the societies of origin of the migrant workers. This paper thus allows us to understand how inequalities in the societies of work/destination shape and produce inequalities in the societies of origin.

Internal Migration Among the Women and Street Trading Activity: A Poverty Elevation or Reduction Strategy?

A major ingredient for unabated increase in street trading activities within urban centers of developing countries has been the need to migrate from the harsh effects of poverty from the poor households or family and rural communities. Ironically, the activity is shrouded with myriad of challenges and robust arguments on financial benefits or welfare improvement accruing from the activity are very rare. This study therefore questions the role of urban street trading in welfare improvement and probes into its possibility of aggravating the burden of poverty among women who are the most vulnerable. Data was extracted from a pan-Nigeria street trading survey funded by Covenant University Centre for Research and Development (CUCERD), Nigeria. The study locations consist of randomly selected Central Business Districts (CBDs) in three major cities across three geopolitical zones in Nigeria. Data were analyzed using univariate and binary logistic regression analysis. The result indicated that the average daily income level above N2500 would likely enhance a positive change in welfare is not significantly related to higher income among the migrant women (p-value ≤ 5%). Variates and binary logistic regression analysis. The result indicated that the average daily income level above N2500 would likely enhance a positive change in welfare improvement and probes into its possibility of aggravating the burden of poverty among women who are the most vulnerable. Data was extracted from a pan-Nigeria street trading survey funded by Covenant University Centre for Research and Development (CUCERD), Nigeria. The study locations consist of randomly selected Central Business Districts (CBDs) in three major cities across three geopolitical zones in Nigeria. Data were analyzed using univariate and binary logistic regression analysis. The result indicated that the average daily income level above N2500 would likely enhance a positive change in welfare status of an average woman street trader, the study concludes that women migration and street trading could be escape routes from unemployment but not an escape from poverty among the women. Alternative income yielding jobs are recommended for women especially in urban centers.

Risk Assessment in Men Convicted of Intimate Partner Violence: the Adaptative System Data Integration (ASDI)

In any society, violent phenomena occur and they always build a complex situation whose study involves considering different perspectives. Inside a relationship, violence against women is a good example. In this context, the analysis of the victim risk is crucial and being a major challenge for researchers. This paper presents the Adaptative System Data Integration (ASDI). This system is an analysis tool to organize and analyze qualitative and quantitative information (Amozurrutia, & Marcuello, 2011). The ASDI is based on a model that allows continuous updating of their evaluation criteria. Using this method it possible to link two or more observables for data integration into categories and their representation synchronic and diachronic as text.

In this research, we study a sample of 45 convicted male batterers who participated in a psychological intervention program. The (ASDI) performs a risk assessment from nine variables that collect information from scales: Buss-Perry Aggression Questionnaire, Inventory of Ambivalent Sexism and Attribution of Responsibility (Minimization Subscale). Also we get information of initial interview to offender -before starting the treatment- and the therapist who performs the procedure.

The scores are compared with the Spousal Assault Risk Assessment Guide (SARA) and the therapist’s assessment done at the end of treatment. The results show statistically significant correlations between the ASDI and the therapist assessment but no with SARA scores.

Spreadsheet Model for Complex Variable Integration: A Sociocybernetic Approach to the Emotional Component in Violent Actors Interviews

Sociocybernetic perspective tries to adapt available cybernetic strategies and conceptual resources to problem solution through a heuristic approach (Geyer, 1995). In the case of capricious observable conditions in social analysis there are situations in which the empirical information presents irregularities difficult to overcome. On the one hand difficulties begin with incomplete information in an observation unit missing several dependent variables (Ibañez, 1994). In the other hand, there are unstable and very significant emotions behavior that may alter the explicit observable attributes, (Guba y Lincoln, 1994)

Incomplete information in first order techniques present a headache from statistics perspective. It is not possible to accept an observation unit with two or more data missing (Padua, 1982). In second order techniques like discourse analysis the number of observations associated with several paragraphs may not allow an integration of variables into categories for analysis inference (Ibañez, 1994). Although intelligent analysis may be done out of theoretical principles i.e. that of size definition of samples in statistics or the necessary existence of all variables needed for category integration, in both cases there is not enough theoretical criteria to make it rationally valid.

Emotional issues in violence situations are strongly difficult to record and evaluate. One strategy is to make analogies between real violent moments with post-violence narrations. Text analysis with implicit emotionality contents modifies descriptions, judgments and assessments. Logic in the algorithms that emulate the valuations of these conduct should include the non-linear behavior.

In this research the problem of integrating variables to study a single case is treated in a spreadsheet model with the use of the Adaptive System Data Integration (ASDI). The ASDI is based on a model that allows continuous updating of their evaluation criteria. Using this method it possible to link two or more observables for data integration into categories and their representation synchronic and diachronic as text.

In this paper I present an algorithm that proposes a better alternative to resolve the above cases just referred and the inclusion of emotional behavior. It is implemented in a Spreadsheet language that configures an application for social analysis. The model is applied to a real case involved in interviews of violence actors.

Core Time Diamond and Its Applications to Seven Asian Societies

This paper suggests a quantitative way of analyzing welfare mix in care provision. It is conceptualized as care time diamond which indicates the distribution of care provision between state, market, community and family, measured in time. Welfare states not only de-familialize the caring function of family but also familialize it. The degree in which the informal care is formalized may be mediated by familial practices and notion or preference towards provision of care. Care time diamond is an effective tool to understand relationship among the four pillars in care provisions and its changes over time.

As a way of applying the approach, it is suggested to distinguish care time from caring time and gross care time from average care time. We tried to collect care time data from seven Asian societies but only Japan, Korea and Thailand have developed time use survey which is prerequisite for utilization of the approach (on caring time), and Thailand's data is only about elderly care. Some societies have gross cared time data, and others have gross caring time data. In the mean time, some societies do not have time data but have care related data, or data of gross number of children/elderly cared in each sector. Therefore, our discussions focus on Japan and Korea but we draw upon its implications for other societies in Asia. All in all, we highlight the usefulness of the approach as a way to understand the care mix in societal level.

AN, MI YOUNG* (Kookmin University, myan@kookmin.ac.kr)

Familialism in Transition: The Development of the Childcare Regime in Korea

This paper traces the development of the state's intervention in childcare in the Republic of Korea. Building on Leitner's typologies of familialism, the paper shows how Korea has altered childcare arrangements over time. The paper argues that state intervention in childcare in Korea has strongly relied on defamilisation, characterised by selectively subsidised market provision. The reforms of recent years have signalled a move away from selectivity and towards universality, and the redistribution of care costs have encouraged the role of the family as a childcare provider. These continuities and discontinuities are attributed to a top-down policy process and are driven by the imperatives of economic development and electoral competition. The paper also considers the implications of the childcare regime, with a focus on gender equality. The paper questions whether the market mechanism is the most effective method for facilitating women's paid work and for achieving a regime centred on gender equality, and asks whether more attention should be paid to the redistribution of time, rather than money.

Natural Resource, Economic Opportunities and Population Dynamics Among Bagdiao Informal Settlers in Batangas City, Philippines

The dynamic formation of informal settlements are important to consider in analyzing environmental and developmental issues due to its implications for sustainable development and social well-being. Additionally, understanding environment and resource dynamics requires critical consideration for populations

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
involved within that particular environment. Of particular concern for this study are the Badjao, indigenous maritime people originally from the southern Philippines, but some have since migrated toward other parts of the country. One of the cities where the Badjao peoples have migrated to is Batangas City, a city in the north-central part of the country with an average income of P400 million pesos or more. As a result of the presence of the Badjao community, issues and concerns have been raised by the city local government unit (LGU). At the same time, the Badjao also experience social, economic, and environmental problems in the city. Using key informant interviews, focus group discussions (FGDs), critical review of related government agency reports and documents, and field observations, this paper examines migration patterns of the Badjao peoples and its nexus with the existing environment and economic conditions present in the area.

Home Owners As the New Precariat: The Mobilization for Dignified Housing in Spain

Since 2008, there has been a sharp increase in the number of house evictions in Spain and mobilizations in favor of “dignified housing” (vivienda digna) have multiplied. They are mostly based on unemployed home owners facing downward mobility that depart from the traditional profile of radical youth active in the squatters’ movement (okupa) or the global justice movement.

We contend that these home owners constitute a new segment of the precariat (Standing 2011). They are middle and working class people that benefited from easy access to housing in Spain in the 2000s, during the real estate bubble. When the bubble burst and they lost their job, they became unable to pay their mortgage and faced eviction threats from the banks.

In order to explain the multiplication of mobilizations in favor of “dignified housing,” we focus on a particular organization created in 2009 in Barcelona and which has become the most visible and influential actor of this movement: the “Platform of people affected by mortgages” (Plataforma de los Afectados por la Hipoteca, PAH).

We argue that the growth of the PAH is not a mere side-effect of the crisis. Many other categories of people are affected by the crisis but do not mobilize as much. We need to look at (1) local legacies, (2) the internal dynamics of grassroots organizations, and (3) national structural as well as institutional configurations.

Highly Skilled Migration, Race and Economic Integration

The intended paper will explore the links between the rhetoric of Canada’s skilled immigration policy and the realities of highly skilled visible minorities. Canada under the Federal Skilled Worker program, a persuasive media and the need to compete globally for talent embodied in people selects those believed can integrate into Canadian society based on language accessibility, prior work experience and education. The Federal Skilled Worker program is couched in expansive, inclusive, meritocratic and colour blind language that belies the realities of highly skilled visible minorities.

Underratification of highly skilled immigrants’ skills and education is a significant issue for those who have gone through Canada’s Federal Skilled Worker program. For immigrants of colour there continues to be barriers to gaining employment commensurate with their education, prior experience or skill. This is compounded by the oft requested and elusive concept of ‘Canadian Experience’. The pernicious impact of implementing a colour-blind skilled immigration policy is evidenced in subtle micro-aggressions and a refusal to acknowledge race related grievances in the request of “Canadian Experience” from potential employers of highly skilled immigrants.

There is decline in the economic integration of immigrants relative to that of native Canadian’s with immigrants facing more of a bleak future prospect despite increase in high skills since 1990s. This results in feelings of alienation that negatively affects the financial, mental and emotional health of skilled immigrants. As a result, economic integration and inclusion remains an enormous challenge.

I argue that non-recognition of international credentials and prior work experience is attributed to a deficit model of difference. That non-recognition negatively affects skilled visible migrants regardless of their gender. In a country such as Canada that considers itself a multicultural society, the role of the society is its commitment to cultural pluralism, but Canada’s endorsement of pluralism is superficial.

The Resonant Places of Transnational Union Struggles: Reflections on the Organising Strategy of the International Transport Workers’ Federation

This article explores a dilemma at the heart of union organising in Transnational Corporations, namely, how to circulate union power across a broad spatial terrain? In actually existing labour struggles are generally restricted to single sites? Reflecting on the experience of the ITF, this paper argues that single site campaigns have been the most tangible aspects of federation’s organising campaign so far.

It is noted that these struggles are resource intensive, and have few ‘spillover effects’ (Lipshutz, 2004) within the TNC. At the same time, it is argued that the workers’ identity that defines these struggles is rare, and as such they should be theorised foundational ‘resonant places’ in a wider global organising strategy.

Combining Economic Trend Data with Suffering Narratives for Disaster-Struck Nations

Some scholars of suffering have noted that the most intense moments of suffering not only cannot be quantified, but the experience cannot be described in words. To the extent that this is true, empirical generalizations about intense suffering can only be inferred from subjective observations or experiences. Yet, instances of national disaster such as Rwanda’s mass genocide, where upwards of a million people were killed with huge knives in 1994, beg to be understood within the quality of life (QOL) framework. Can such instances of mass suffering be represented in the traditional QOL framework? If so, can they be observable in national economic trend data? This study attempts to answer both questions using trend data from the Human Development Index as well as narrative descriptions of major national disasters such as Rwanda’s 1994 genocide, Zimbabwe’s political violence and refugee crisis in the past decade, Japan’s 2011 earthquake and tsunami, and Tajikistan’s civil war after independence. In these instances of social and political chaos, we find evidence of significant economic downturns but not always in the aftermath of a disaster. And while we find considerable repugnance to the atrocities, world attention to a crisis is sometimes very short-lived or negligible. Speculations will be offered on how wide variation in global attentiveness to humanitarian crises affects the perception of QOL. This analysis is premised on the need for indicators of human progress that differentiate social change at the
negative end, as well as the positive end, of societal attributes such as civility and social solidarity.

ANDERSON, RONALD* (University of Minnesota, rea@umn.edu)

Purposefulness, a Key to Happiness in Selected Developing Nations

Researchers have long puzzled over the high level of life satisfaction, happiness, and optimism found in most Latin America and several African countries. In these nations, indicators of happiness and well-being are high but economic, education, and health indicators low. Existential psychology claims that meaning and purpose are the central ingredients of personal happiness. Research has found that Latin American adolescents have a stronger sense of meaning than other ethnicities. Observers of Latin American culture claim that close family relationships are a key to understanding the Latin American character: their social values, interaction patterns, and culture. This presentation applies the Gallup World Poll data on responses to the question “Do you feel your life has an important meaning or purpose.” Latin Americans were more likely than any other sector of the globe to say “yes.” A very large share of the people, 89% across all countries surveyed, claimed to have a purposeful life. None-the-less, there is enough variation across countries and regions, that the patterns add to our understanding of the role of purposefulness in people’s lives. Using data from the Human Development Report (HDR 2010), this paper shows that Latin American purposefulness provides a partial explanation for their extreme happiness compared to other global regions. On the other hand, perceptions of social support do not account for happiness or national well-being. If Latin Americans are more likely as individuals to have a sense of meaningful purpose in life, this probably translates into contentment and happiness. Large differences in meaning and social life exist both between and within Latin American countries, which will be examined as well. A taxonomy of meaningful purpose will be offered to help clarify the relationship of purpose and happiness.

ANDERSON, TIM* (University of Sydney, t.anderson@usyd.edu.au)

Why Inequality Matters

Sociologists tend to assume inequality matters; economic liberals tend to assume it does not, saying inequality generates dynamic incentives in competitive markets. It is not that there is nothing to this argument, as regards mild degrees of inequalities. However grave inequality has a corrosive effect on social foundations. Why is it that there is a consensus of the need to eliminate poverty, but division over the need to address serious inequality? Beyond this, what are the key reasons for grave inequality being anti-social? This paper engages the economic liberal paradigm, arguing that grave inequality is as socially incapacitating as, and often constitutive of, extreme poverty. It makes a distinction between the ‘foundational’ problems of grave inequality and its consequential effects.

The foundational problems are that grave inequality: denies the social identity and agency necessary for realising the right to self-determination; blocks individual citizens’ active participation in society, necessary for democratic development; excludes citizens as respected members of society; and is constitutive of poverty and similarly incapacitating. The consequential problems (both as effects and as feedback to the foundational problems) are that grave and persistent inequality: is perceived as illegitimate and thus generates resentment, crime and insecurity; creates disadvantage in a range of key social fields such as education, health and social security; and it drives anti-social feedback effects by undermining social cohesion and entrenching inequity across generations. Identifying these principal or ‘foundational’ anti-social features of grave inequality, this paper argues, is important to building a broader on the idea that inequality does matter.

Deconstructing Racial Boundaries: Case Study of an Emerging Urban Movement in Tel Aviv

During the last few years, Israel has been witnessing an unprecedented level of racism against the African refugee community. Not only immigrants are racialized as the “threatening other”, but also the spaces they create and inhabit are coded as racialized. The marginalized low-income neighborhoods of South Tel Aviv, the new home of the asylum seekers, became the primary arena of struggles, conflicts, tensions and intolerance. I draw on ethnographic research conducted in South Tel Aviv, to examine the ways in which an emerging social movement, “Power to the Community” attempts to provide a radical alternative by constructing a bridge between the Africans and the veteran residents and thereby turning the “place of fear” into a “home for all”. I look at the innovative tactics the movement uses to reshape symbolic, relational, and physical boundaries in the community. In particular, I investigate the renewed victimization and vilification discourses and the ways in which the movement gives voice to insofar silenced concerns about the broader socio-demographic status quo within the city of Tel Aviv and Israel in general. I combine insights from work written on framing, tactics and innovation in the social movement literature with studies of NIMBY-ism and urban geography.

Analyzing the Internal Votes in the French Political Parties

Analyzing the internal votes in the French political parties

Since about fifteen years, the political parties multiplied the procedures of internal votes of their members. Then they opened primaries to the non-members. It aims for objective – at first – the revival, the innovation - and the consolidation - of democracy in political organizations. According to organizations, the project of paper suggests reviewing the diverse procedures of vote: nature of the electorate, objectives of the votes, chronology, modalities of vote, participation in intra-party elections, official results and analysis, possible disputes. Beyond an empirical research – which concerns procedures and electoral data – the paper will also review the evolution of the relations between the « party in central office » (politician elites) and the « party on the ground » that shows the development of these votes. Which changes introduces the development of internal votes in relations top-down and bottom-up ?

From a more theoretical point of view, it will be important to analyze how these procedures question the oligarchical tendencies of the parties. Besides, in what and how these procedures question the evolutions of parties analyzed more recently by A. Panebianco or P. Mair and R. Katz who underline a professionalization of parties or a monopolization of resources - of all kinds - by elites ?

TRANSFORMING THE SNCF – FRENCH STATE-OWNED COMPANY : FROM HISTORICAL UNILATERAL MODEL TO MULTIPARTITE ENTERPRISE

Since 1970s, the French railway sector has undergone massive changes. The European institutions have demanded the opening of the rail transport market. The sector also faced competition by other means of transportation (especially trucks).

In this context, SNCF (the national state-owned railway company) endeavoured to adapt itself to policy reforms and the competitive environment. The company partially replaced its former model of development (based on public service à la française, i.e. offering low-price tickets and committed to egalitarianism) with a new model, identical to that of private companies. The new model transformed the internal functioning of the company (type of employment contract, pay scale, and nature of industrial relations) as well as market strategies (economic model, pricing strategy).

Changes introduced by the SNCF top management encountered resistance from employees, trade unions, transport users associations and some high-rank transport officials. The struggle between all these actors resulted into a hybrid organization of the railway sector. By now, each activity of the SNCF works autonomously: the various divisions of the company develop their own work modalities and have their proper representations etc.

What is the nature of this new heterogeneous organizational model? How does national railway company, which transformed after structural improvements, strategic realignment, redefinition of networks and product offerings, internationalization, and efficiency improvements, adapted to structural shifts and uncertain economic and legal context? Which divisions of the company are the most affected by change?

This paper will attempt to answer these questions, by examining the deconstruction of an old organizational model and its transition and transformation into new one. Our focus, while analyzing the structural shifts, will be on the description of internal conflicts and representational gaps among different SNCF stakeholders and their effects on the functioning of the company.

The Role of Private Sector in Global Climate Governance

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The private sector plays an active role in implementation of mechanisms concerning the mitigation of climate change, including the Kyoto Protocol. In spite of that, the corporate actors play a limited direct role in international arenas when it comes to negotiating the design of climate regime. The climate governance United Nations system remains state-centric, but the active participation of corporate actors in the design of climate regimes is essential to increase the efficiency of the climate governance. Business is not just a subject of a regulatory climate and energy imposed by the state; rather, business is an intrinsic part of the fabric of climate governance, as “rule maker”. This article analyses the role of the private sector that has been played in the global climate governance. The focus of this study is an analysis of the ways in which the private sector responds to the agenda of climate change and climate governance. The private sector does not only play a “rule taker” role in the climate change regime, as it does not seem to act as passive observer. The results suggest that the private sector is able to play a key role in the changing architecture of global climate governance based on the principle of multi-stakeholder participation in global decision-making.

The Political, Economic and Social Crises and the Creative Sponsorship of Young People in the Carioca Slums – Rio De Janeiro/Brazil

This abstract arises from the extension of the research in Cultural identity performed since 2004 by University of Rio De Janeiro State (UERJ) with teenagers and youngsters at the Cartola Cultural Center (CCC), in Manguera’s Favela. The main results are published in the book “Pink and Green Territory: psychosocial constructions at the Cartol Cultural Center”. Alongside the worldwide economic crisis, which has also ravaged Brazil in the form of a lower growth rate than expected, unemployment and violence, the city of Rio de Janeiro is experiencing a housing crisis of devastating social consequences. In the turn of the 19th to 20th century the occupation of hills of the city began, giving birth to the slums favelas. Since the beginning the favelas draw the attention of the government, which tried to come up with a solution to put an end to those types of dwellings. Despite government investment, they survived and today have more than 100 years of history founded on cultural and political creativity, and identity coming from: the time period of its founding, type of occupation, economy, origin of its inhabitants and their relationships, not to mention the intense social life fostered in its inhabitants. Government action has been aimed at trying to improve and improve the housing conditions of those families, but without success. The private sector has tried to come up with a solution to put an end to those types of dwellings.

It Is All in the Family: An Evaluation of Social Class As a Measurement for Family Background Characteristics in Analyses of Sibling Correlations

Sibling correlations have gained increasing interest in inequality studies as a broad measurement of the impact of family background and community influence on individual outcomes. In this paper we analyse how much of this influence that siblings share in their long-run income is due to social class origin. Data is from Statistics Denmark and consists of 151,484 individuals born between 1968 and 1974. The paper is motivated by studies showing that half of the family and community influence on siblings are uncorrelated with traditional intergenerational measures of family background, such as parental income and education. We use variance component analysis to test how different class schemes explain the sibling similarities. The result shows that a modified version of the Erikson-Goldthorpe-Portocarero scheme that accounts for both the emergence of professional classes and the persistence of old classes of self-employed and entrepreneurs has the best fit and accounts for approximately 3 per cent more than parental income and education alone. When parental income, education and social class are included we gain an even better fit as we account for 12 per cent of the sibling similarities in long-run income.

Educational Leadership Blind Spots: How Institutional Ethnography Helps in the Rethinking of Administrative Practice

The nature of educational governance in the US in which there is federal, state and local control of public schooling creates a variety of institutional arrangements for delivering education to students from kindergarten to university. Historically, US educational institutions have struggled with providing equal and equitable education for all students. Laws and policies have been implemented to address these concerns, yet inequalities and inequities persist. Policy implementation usually resides with those in education administration – a profession influenced by many different management and leadership theories. There are scholars who have argued for studies of educational administration that examine institutional processes, ways that schools and universities are organized, how services are delivered and such, however, few have considered the role that Institutional Ethnography (IE) can play in rethinking and reworking administrative practice. At the same time, IE scholars remain puzzled with leadership and management theories and practices as they relate to ruling relations and the organization and coordination of people’s everyday work, work that people in places like public schools do. The paper will explore the missed opportunities to show just how inequalities and inequities actually happen given current educational leadership theory and practice, provide examples of how IE adds a different perspective to the organization and coordination of educational work, and suggest ways to improve administrative practice and outcomes by including key elements of IE.

Between Project Enthusiasm and Routine Demands: Conflicting Logics and Unintended Consequences of e-Health Innovation and Diffusion

For a long time, and in most corners of the world, great promises have been made about ICT innovations in health care, both in regards to quality and efficiency. A related challenge for social science has been to explain the details of ICT diffusion; what makes some ICT innovations succeed and other disappear. In studying a wide range of such innovations (e-health, telemedicine) and diffusion processes in Norway, we have identified a conflicting logic - between innovation enthusiasm and routine responsibility - as a major explanation of how promising projects only rarely are transformed into normal routine. Understanding the detailed aspects of project organisation and enthusiasm-based driving forces, and how these act as system correction/crique, is necessary to comprehend what can be expected as far as success, or missing diffusion. In this study we have investigated what innovation projects, in the making, bring with them on a managerial level in health care institutions. We have observed that the heterogeneity between innovation and routine within health-care delivery is handled by separating project management/funding from continuous organisational practice. We find separation eases both normal routines and innovative projects, it also delays expected diffusion. What may be technological successes may therefore be organisational failures. Unintended consequences from innovation projects - including learning and understanding action alternatives - are seldom bases for assessment. The paper suggests that a sociological exploration of logics, including financial, professional, technological, as well as organisational, needs to be tighter connected to innovation.

ANDREJUK, KATARZYNA* (Polish Academy of Sciences, katarzyna.andrejuk@gmail.com)
Defining National Belonging in the Post-National Era: The Case of Polish Repatriates and Privileged Naturalisation in Poland

European countries are subject to many processes which deconstruct the traditional category of “national belonging” and make the political community more inclusive towards foreigners (developing the category of the European Union citizens, mass migration flows). However, the notion of an ethnic community and the importance of ethno-national dimension still prevail. This is confirmed by political and legal measures, enacted by different European states which aim at enabling particular ethnic groups to obtain the citizenship of their ancestors. The objective of the presentation is to explore how various groups are included and excluded from a national or ethnic community and the importance of ethno-national dimension still prevail. This is confirmed by political and legal measures, enacted by different European states which aim at enabling particular ethnic groups to obtain the citizenship of their ancestors. The objective of the presentation is to explore how various groups are included and excluded from a national or ethnic community.
for some groups of immigrants coming to Poland. The analysis will focus on the normative features of the privileged naturalisation and how they are interpreted by state officials. Various conditions of being acceptable for privileged naturalisation are depicted in the Law on Repatriation and include a mix of objective and subjective criteria which refer to ethnic, cultural and historical aspects of a nation. These measures, addressed to the descendants of Polish exiles, indicate how the category of “belonging to a nation” is constructed on the political and legal level. The presentation, set in a comparative perspective, also aims to answer the question why the policies of privileged naturalisation are commonly accepted in some countries (Poland) and contested in others (Hungary, Germany).

European Educational Migrants on the Labour Markets. Europeanised Professionals or Workers of the DDD Sector?

The presentation will investigate the question whether the higher education received in the host country facilitates immigrants’ access to the primary segment of the job market. According to a prevailing conviction and empirical research, immigrants are most likely to be employed in the secondary segment of the labour market, where they perform works which are described as “DDD”: dirty, dull and demanding. However, this finding may be inaccurate in case of educational migrants, who also work while they study and after graduation. The aim of this presentation is to analyse the situation on the foreign labour market and career paths of mobile Europeans who migrated to take up education abroad. This question is especially intriguing in the light of the European Union attempts to standardize the educational curricula and university degrees in European countries. I will explore the problem basing on qualitative and quantitative inquiry: interviews with Polish students abroad and data from POLPAN (Polish Panel Survey 1988-2013) questionnaires describing the situation of educational migrants from Poland to various countries. The findings will provide an answer to the question whether migrants who receive higher education abroad are able to overcome the pitfalls and limits, imposed on foreigners on the labour markets of the receiving countries.

Mobility, Family Life and European Citizenship: Marriages Between Legally Precarious African Migrants and Peripheral Europeans

Transnational marriage has become a door opener to international mobility and migrant legality and, as is well documented, aspiring migrants can achieve geographic mobility through marriage by claiming their right in family life. This paper examines the marriages between West African migrants and EU citizens in the Netherlands and analyses a reverse strategy in which international mobility is the means to secure family life and legality. The Netherlands, as many other countries, has imposed many restrictions on family migration (provisions for family re-unification) making this process more selective, difficult and costly. Of course, these regulations apply only at the national level. At the same time, EU citizens and in extension their family members can exercise their rights to intra-European mobility, residence and employment. On that basis, legally unauthorized African migrants can legalise their stay in Europe either by getting married in the Netherlands to a non-Dutch EU citizen, commonly Eastern or Southern Europeans, or moving with their Dutch spouses to another EU country (often known as ‘the Belgian route’). In this pattern, marriage and family is not a condition that precedes international mobility but the opposite: citizens must move to another EU country in order to claim not as national but as EU citizens their right to stay and work in another EU country along with their family members. In this instance, European citizenship is valorized higher than national citizenship but in order for Europeans to make use of their rights as EU citizens they have to move out of their home country. This paper examines ethnographic material collected in multi-sited fieldwork in the Netherlands, Ghana, and Greece and engages into a theoretical discussion over mobility, citizenship and marriage in the EU context.

Leisure-Time Activities: A Sociological Analysis of Professional Women

Leisure and dynamic attitudes help in constituting a style of life. One's style of life may be defined as the personal manner in which each individual conducts his or her daily life. The individuality of many a person is best asserted during his or her free-time activities and less during the work that he or she has to perform. Through their activities, the individual has the time and means for developing his or her own character even with respect to his work. Seeking and realizing a style of life, gives leisure its greatest significance. Leisure time appears as the framework of an attitude that is by no means marginal but that is a mediator between the culture of a society or a group and the reactions of an individual facing situation in daily life.

During the last two decades, the importance of leisure behavior has occupied the attention of researchers demanding for more study in this area. Among these studies, the examination of leisure activities via-a-vis the time factor as a result of various contributions has made significant impacts on the conceptual and theoretical understanding of this area.

More women are entering into the professional life; therefore, it becomes important to see what the opinion of working women towards leisure activities is. Furthermore, this paper also tries to delineate the effect of leisure time activities on professional work of professional women and also vice-versa. Satisfaction and dissatisfaction from leisure time in turn affect the working capacity at work site and also at home. The paper examines the findings of an urban-based empirical study which assessed the impact of time constraint in particular on leisure activities of professional women's.

The Second Mortality Transition: A New Look at Long Term Trends in Mortality Decline

Demographic transitions occur in stages. We argue that there have been two mortality transitions, and that the European and European overseas countries for which reliable long-term mortality data exist completed the first stage of the
mortality transition around the middle of the twentieth century. In the first stage, or First Mortality Transition (FMT), from the nineteenth to the middle of the twentieth century, mortality decline occurred mainly at younger ages, survivorship to age 50 increased, and there was a secular growth in the rate of ageing (the rate of mortality increase) over and above that due to the decline in the mortality rate at age 50. By 1950, however, this transition was more or less complete, and the underlying level of survivorship to age 50 began to stabilise. In the Second Mortality Transition (SMT) the main weight of mortality decline thus shifted to older ages, above age 50, and the secular trend in the rate of ageing now shifted from positive to negative, offsetting the continuing decline in the rate of mortality at age 50. There are important differences between countries in the patterning of these changes, and in particular, the patterns differ for males and for females. However, the changes over time have been identical for both sexes. Analysis of country-level variations, by sex, will enable us to understand further the reasons for this shift from the First to the Second Mortality Transition and the differences in the pace at which it has occurred.

Lessons from Field Resistance

Close-up examinations of economic life are necessary to understand the complex dynamics and cultural meanings of commerce. But what happens when these inquiries apparently fail? Put otherwise, what happens when a scholar is faced again and again with strong resistance from field participants to the point of almost derailing a project? Relying on a comparison of forms of resistance in three field-settings that I investigated, my paper aims to draw lessons from field resistance that go beyond any given inquiry and argues that a better understanding of forms of resistance can advance our scholarly work. The diversity of settings discussed (i.e., an aeronautics factory, a business school, and a business school) as well as the variety of forms of resistance encountered (e.g., aggression, threats, and silence) motivate, in part, this analysis. The first example entails a study of factory theft and centers on retirees of a French aeronautics factory. The second example is an examination of commerce in human cadavers for medical education and research in New York State. And the last example looks at faculty socialization dynamics at the Harvard Business School, one of the U.S. centers of business education. Overall, the goal is not only to classify forms of resistance in ethnographic inquiries, but also showcase how such a classification exercise illuminates the broader pursuit.

Educational Fulfillment Index

The aim of this study is to present a new measure of evaluation of educational state at the national level. The index is based on a multidimensional model of indicators and it is an instrument developed to determine the students’ and teachers’ view of the education role in the process of life self-fulfillment in the context of a systemic and sociological approach: education as adaptation, education as self-regulation, education as self-organization and education as self-profession.

Sociological Evaluation of a Serious Game Designed for Building of Epistemic Competency of Military Students

Serious game applied in education and training is relatively new. Some skills needed for military action could be acquired through traditional (real) training methods, but, at the same time, as the computer games has been evolved, some skills can be obtained through the serious game as attractive and efficient method – virtual method. In terms of costs and risks, using a training solution based on a computer games scenario is also advantageous.

This study evaluates a serious game (SG) that is being applied in a Romanian Defence University context. It was designed in order to enhance the epistemic competency of the future military commanders at all levels of decision making process. Evaluation is conducted summative, after development of it; the study examines whether the serious game is efficient, appropriate for training goals and well accepted by the learners.

The findings provide evidence that serious game is genuinely beneficial for anticipated learning and training results and it could be used in future training process to assure required skills for new defence missions. Introducing games in the military training is based on all these advantages revealed through the evaluation.

The epistemic competency obtained using serious games can provide necessary knowledge to action in a real experience.

Towards a Multi-Plebsician and Multi-Populist Collective Action?

Introduction

The aim of this paper is to analyze the transformation of populism and charismatic phenomena in contemporary societies. The argument is that the effects of diffusion of new technologies and structural changes in the functioning of social systems are ceding to increased fragmentation of democracy.

Main Results

Contemporary social, economic and cultural transformations have been driving society to both a new public sphere and relationship between populism and charismatic power. Simplifying analytically, on one hand, as a matter of fact, a layer of population, mainly old and/or with a limited cultural capital, lives (almost) exclusively inside the public space created by mass media, by other collective intellectuals and by the most important public intellectuals. On the other hand, following the prompt coming from new intellectuals that operate through the Net, there is a multiplication of niches of consumption, of ways of living, of political opinions. The possibility of the synthesis declines in this new public sphere. On the contrary, the space of “charisms” grows up. In add, economic dynamics and neo-liberalism thinking makes a pressure to eat up in decision-making processes: the myth of the “strong man” rises. Nevertheless, each kind of media advance a different kind of charismatic leaders: thus, we have got several charismatic leaders for each communication and social target group. Charismatic power is not more opposed to rational-legal power: a multiple charismatic groups and leaders represent the normal work of the post-democratic political system. Populism is universal style of this multiple-charismatic politics in contemporary societies. In fact, Populism is not only communication technique but a replacement demand of democratic participation too in a run-way world.

The Advertised Crisis: How Advertising Is Facing the Issue of Social and Economic Crisis

This period is collecting different types of storytelling concerning social and economic crisis the world is facing with, depending on which media and which particular gaze they reflect. We can quote, of course, not only what the media, and especially the news sphere, is telling us about crisis, but also movies, tv fiction, contemporary literature, and so on are depicting a shared frame on it. But it could be of particular interest analysing how advertising deals with this issue, particularly because it has to talk and engage consumers differently from the past and from its usual patterns. A traditional way to conceive advertising’s role was based on the assumption that it has the power to create and develop a reality totally positive, where everything is at its best in every shade. This led J. Baudrillard to call this totally different reality “hyperreality”. But nowadays consumers aren’t so well disposed towards this kind of advertising that has to rethink itself in a different way, being more respectful and loyal with consumers, their lives and their feelings.

So I’ll mention in this paper different cases and different manners with which economic, social and political crisis enters also the advertising stories and became part of its narrations. We can call it synchronization between social system and advertising (Luhmann; Antonioni) and maybe it could be the right key to the effectiveness of the latter. So I can say that the semantic of crisis affects also advertising, its storytelling and its working routines at different levels that this paper will try to enlighten.

“Is That Me?” Images of Ageing and the Underestimated Role of Active Ageing in Advertising

The concept of complexity is one of the most useful to describe contemporary society, because it implies also the leading role of communication and of its dedicated system, that is to say mass media system (Luhmann). But, or in accordance with this perspective, another helpful description could be the one that defines our society as based on images, referring to the primacy of the visual sphere.

This premise leads us to consider the production of images not only as one of the most important for the reproduction of society, but also as one of the most

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
compelling for individuals and the construction of their composed identities. Following this theoretical background, we have to consider the role of advertising and its peculiarity of constructing an imagery ready to be socially diffused, but also the peculiarity of absorbing – sometimes – the ideas, perspectives and feelings emerging from society or different social groups.

In this sense, it could be of particular interest observing how advertising depicts the reality of ageing, if and in which manner gives back a heterogeneous picture of the different ways of being aged. This kind of research, in fact, tries to clarify which kind of imagery regarding ageing is offered and spread within society in general, but it could also test if the concept of active ageing is practiced in advertising. So in our paper we will present the results of a qualitative research on images (one of the main traditional research stream of visual sociology) (Grady), taken from the advertising field. The research results will concern the Italian context, trying to compare it with an international context and producing a specific typology. Is our aim also to test this typology with a sample of aged interviewees, trying to prove if they recognise themselves in it or not.

Psychological Effectiveness of Interactive Advertising in Russia

Purpose. The investigation was aimed to check the hypothesis that the interactive advertising is more effective than usual one. As the criteria of psychological effectiveness of advertising we allocated trust to advertising and active personal position. So the hypotheses were that during perceiving the interactive advertising the respondents show: 1) the higher level of trust; 2) the higher level of “active personal position”.

Design/Methodology. 109 respondents were tested online. The control group consisted of 59 people, and the experimental group consisted of 50 people. The experiment included three stages: 1) the respondents viewed the advertising in two variants: a) interactive advertising for experimental group; b) usual advertising for control group; 2) the respondents answered the questionnaire which included the questions about attitudes to the advertising and associations about advertising, the technique of A.Kupreychenko “The trust / distrust of person to other people, the world yourself” and the scale of psychological effectiveness of advertising elaborated by A.Kupreychenko; 3) 12 people were interviewed to get more information.

Results. The hypotheses were partially confirmed. We have shown that there is no difference in the level of trust to the interactive advertising as compared with the non-interactive one, but the respondents perceive it more personally, are involved into the interaction with the characters, and act as if it were the reality. We can conclude that the psychological effectiveness of interactive advertising is higher.

Limitations. It remains to be tested if the results will be the same for another countries and cultures.

Research/Practical Implications. The results can be used in the development of advertising products for Russian consumers.

Originality/Value. The study is the first attempt to investigate the trust to interactive advertising among Russians. The theoretical value is caused by using trust and active position as the criteria of psychological effectiveness of advertising.

The study focused on the impact of economic recession on labour conflict resolution under the military in Nigeria. The data show that the military presence did not significantly affect the labour conflict resolution scenario even though a combination of economic recession and repressive military rule produced a tense labour conflict situation in Nigeria between 1984 and 1992. Thus, there was no significant difference in the number of conflict, tools of conflict expression and mechanisms of conflict resolution between the pre-recession and recession periods. In spite of this, the data conceal the fact that the fear of military repression affected labour conflict and the economic recession had an inverse relationship to conflict. Moreover, the military in the period of economic recession made glaring use of corporatist strategy in caging labour. Insightfully, corporatism as a tool of conflict resolution between the pre-recession and recession periods is initiated among the organizational leaders, the implementation process includes only few people into the working group. Hence, the change seems to be primarily based on individual and not on organisational level, but not in the organisational level. We need effective models of collaboration to bridge the gaps between researchers, social workers and policy makers.

Informalising the Formal: Women in Ghana's Banking Sector

Despite the conventional policy wisdom that formal work more closely approximates "decent" work, the process of institutionalization increasingly makes difficult a straightforward dichotomy between 'good' formal work and 'bad' informal work. The paper discusses the nature and impact of the use of employment agencies in the banking sector. We argue that the activities of employment agencies have introduced informality into an area of work that was quintessentially formal. We examine the impact of employment agencies on work conditions and work cultures, highlighting the ways in which female bank workers experience these new sets of conditions. We find that female employees hired through employment agencies experience conditions of work that resemble conditions in the informal economy in terms of contracts, security of tenure, wages and channels of negotiation or redress. We link the advent of employment agencies and the kind of labour relations in which they participate to the macroeconomic reforms that Ghana has undertaken which are themselves part of a global phenomenon of economic liberalisation. These processes connect the experiences of employment agencies to the nervous condition for which the world whose work conditions are becoming increasingly informalized, thus challenging the idea that women's progress on the economic front can be charted by their entry into formal work. We rely on survey data among banks in Ghana, as well as interviews with both full time/permanent and agency workers in these banks and find that while agency work has opened new opportunities for women in the banking sector, it has also introduced new strictures and transformed banking culture more generally.

SARDO, STEFANIA* (European Centre for Living Technology, stefania.sardo@unive.it)

Constructing Shared Narratives of Sustainable Local Development

Contemporary societies are facing and generating social and environmental crises, which involve multiple dimensions and different actors at various levels. Policies have to deal with them and guide communities transformations. Therefore, in Developing as well as in Western countries, it is not just a matter of finding and providing financial resources, but to tailor them according to contexts and addressing communities’ governance and capabilities building. Moreover, policies’ orientations and goals should always consider the consequences and transformations (material and immaterial) that can be induced by their implementation – and that cannot be foreseen a priori – and therefore should develop the capacity of being adaptive and self-reflexive. But how to? And how can local communities participate in the design and implementation of their own change?

The aim of this paper is that of providing some theoretical and methodological reflections on how to conduct and prospectively observe local development processes, focusing on two case studies based in Southern Italy’s mountain and rural areas: the Green Communities (GC) project, a one year long project, top-down driven, funded by the Italian Ministry of Environment and the EU, and Rural Design, a bottom-up driven project initiated by some of the political representatives, technicians and “active citizens” previously involved in the GC project. Through them we will discuss different orientations to sustainable local development, but also a new evaluation approach, the Dynamic Evaluation (DE), developed within the Emergence by Design project (FP7-ICT-2011-C program). The DE is based on the complex systems approach and on the hypothesis that the iterative generation of feedback loops contribute to the construction (and enactment) of shared narratives that can help in dealing with unpredictable settings, where goals and consequences are emerging and changing rather than being predetermined and fixed.

ANZOISE, VALENTINA* (European Center for Living Technology, valentina.anzoise@gmail.com)
SARDO, STEFANIA* (European Centre for Living Technology, stefania.sardo@unive.it)

Narrative Analysis of Local Resources Management

The aim of this contribution is to provide a methodological reflection on the following issues: how to frame and conduct local development and innovation processes dealing with cultural and environmental resources, and how to proactively observe them and evaluate their impacts? How to take into account all the people and organizations that will be affected by their consequences? To what extent the current trends in research and evaluation methods are providing outcomes and feedbacks that can be constructively used to design and implement policies?

The Green Communities project, a one year long project, funded by the Italian Ministry of Environment and EU, based in the mountain and rural areas of Italy, will be analyzed and discussed.

The broader aim of the project initiators was that of providing local communities with new tools and procedures to identify and manage natural and cultural assets, and to deliver pilot feasibility studies on buildings' energy efficiency and functional sustainability management from where communities could start a sustainable process of change. Nonetheless, the project team underestimated the importance of communities’ engagement in the construction of a new collective perspective that could “ensure” they could take charge of the project’s outcomes after its official end of the project, in December 2012. Conflicting orientations and needs undermined the full deployment of the project’s generative potential.

Therefore, in the paper we will discuss the need for a different approach to innovation processes evaluation, the Dynamic Evaluation (developed within the Emergence by Design project, FP7-ICT-2011-C program). The DE approach is based on the complex systems approach and on the hypothesis that the iterative generation of feedback loops, contribute to the construction (and enactment) of shared narratives that can help in dealing with unpredictable settings, where goals and consequences are emerging and changing rather than predetermined and fixed.

Social Problems of Parents Who Have Children with Schizophrenia in Japan

Background: In June 1995, The Mental Health and Welfare Act was enacted in Japan. This act makes families with mentally disabled children responsible for looking after their children, regardless of their children’s age. In addition, social services which care for people with mental disorders are absolutely lacking. Because of these harsh conditions and these situations, some families suffer great anguish. Tragically, these circumstances can drive parents into making the terrible decision to take their child's life. Actually, in June 2008 a mass suicide happened in prefecture X. A mother killed her daughter with schizophrenia because of her despair over her daughter's future. Since July, 2010, I have continued the research necessary to comprehend complex parents' feelings with children affected by schizophrenia. Schizophrenia has a lot of inherent characteristics which affect their parents. In addition, incomplete social system tends to force their family member, especially their parents, to bear the full burden. Most parents care for their children by some sense of duty more than the law.

Aims: The purpose of this study is to illustrate social problems of parents who have children with schizophrenia in Japan. Especially, how traditional family norm in Japan influence their parents be focused largely on in this study. Thus looking at family which mediates the interaction between Japanese society and individuals in great deal will offer the social norm as social problem.

Method: The life story approach is appropriate because it allows for the researcher to know how and what the social problem is personalized. Researcher myself has a side of suffering mental illness and having intense conflict with my parents. In the sincere dialogue between interviewer and interviewee, we can create a social reality and realize master narratives. The respondents in this survey are some parents who have adult children with schizophrenia.

AOKI, YOSHIIKU* (The University of Tokyo, jyoderoshi@gmail.com)

Identity As a Variable for Violent Protests - a Case Study of Korean Student Movements in Democratized Korea -

Literature of collective violence has argued that violent protests decrease in the democratic countries. However, Korean student movements chose forms of violent action, such as Molotov cocktails, even after the political democratization in 1987. Why did student movements continue to employ violent actions in democratized Korea?

Existing studies on Korean student movements have pointed out that the influence of North Korean Chuche ideology, which is the North Korean state ideology of self-reliance which justifies violent revolution, as the cause. Yet, as ideology is an inflexible notion, ideology oriented studies failed to determine the process in choosing violent actions in protest. In order to overcome this limitation, this paper applies collective identity, through narratives, symbols, and rituals it manifests, as a variable.

Identity is viewed as a key variable in social movement studies. However, with the exception of Charles Tilly's work, there is no research that examines the relationship between collective identity and violent construction. In his seminal work on collective violence, Tilly argued that the construction of exclusive collective identity severs the inter-movements networks which results in polar-
in Japan the first national leisure policy was made from 1966 to 1974. Before 1966, it was a regulation of manners and customs. Moreover, it was divided vertically into divisions. However, in 1966 Japanese government began to pay attention to leisure as a social phenomenon. Finally, government made special leisure departments at the Ministry of International Trade and Industry (Tsusyo Sangyo Syo) and the Economic Planning Agency (Keizai Kikaku Cyo) in 1972.

It had three purposes. First, in those days, rapid industrial development caused urbanization, ruralization, and mechanization. Human alienation was increasing that juvenile delinquency was one of the social problems, and productivity at factories was falling. Government estimated that leisure can restore national humanity. Humanity was thought as the base of productivity and much pleasure from leisure activity expected to satisfy young desires.

Second, at that day, farming, fishing and heavy industries had been replaced by tertiary industry. That means Japanese government had to spread domestic market. For that purpose, government thought that leisure industry is a good new market. For example, Discover Japan Campaign by Japanese National Railways (Kokutetsu) and Expo ’75 in Okayama (Okayama kokusai kaiyo hakurankan) were main plans for promoting leisure and tourism industries.

Lastly, the leisure policy is the start of “disciplination”. In this policy, “Whole-some leisure” is an important keyword. Government assumed that tourism and sport were good leisure for people, but gambling and watching TV were type of unwholesome leisure, because they were decadent and defensive. In short, Japanese government tried to enlighten Japanese people in leisure policy. Today, we are forced to have self-responsibility for our daily life and self-defense from social problem such as poverty. It is a result of national leisure policy from 1966 to 1974.

Climate Change Governance and Media: Media Exposure, Public Opinion and “the Most Important Issues,” By the Japanese Public

This paper explore the relationships among media exposure and public perception towards the climate change issues, to understand the role of the media and public opinion for better climate change governance of Japan. After the Great earthquake in March 2011, it is said that public has lost their interest with climate change issues, but for the Japanese government, the nexus of climate change-energy option-nuclear power has been paid more attention than before. Using the results of our public opinion survey in 2008, 2012, 2013, and monthly survey from 2005, we discuss the role of media, economy, and nuclear power generations from the Japan’s climate governance point of view.

In addition to the earthquake and climate change, the perceived importance of the national and global economic situation also changed over time. During our survey period, the world experienced a serious economic crisis after the collapse of Lehman Brothers. These events with global impacts clearly revealed the environment-economy trade-off. After the earthquake and tsunami on March 11, 2011, Japan’s economic situation worsened. However, the nuclear accident at the Fukushima plant forced the Japanese people to think about energy issues, which are closely connected to climate change mitigation.

Reversal of the Gender Order? Male Marriage Migration to Germany By North - African and Turkish Men: New Forms of Gendered Transnationalization of Migrant Generations in Europe

Marriage migration is today the main possibility of legal migration from outside the EU to EU countries. Studies of marriage migration published in recent years focused on women as migrants. Although these studies all notice that men as well as women are migrating, there is no study focusing exclusively on migrating men in the context of marriage. My paper –in contrast- presents the results of an investigation regarding the phenomenon of transnational marriage of male Muslim migrants.

My hypothesis is that this marriage migration does not necessarily have a traditional background. On the contrary: women of the second or third generation of well integrated migrant families within Western European countries are hoping for a realistic chance of establishing a family and bringing up children by marrying a partner from the country of origin of their parents or grandparents, while these studies all continue to work and remain the breadwinner in the country of immigration and thus strengthen their autonomy (while their husbands wait for work permits and/or job opportunities and meanwhile have to take over care obligations within the family). In general, I want to show that male marriage migration can be seen both as a cause and effect of changing gender orders.

By means of the biographical analysis of narrative interviews with male marriage migrants from North Africa and Turkey and their spouses, the related ongoing research project at Frankfurt University (2011-2014) is dealing with the debates about problems of language and integration into the labor market, gender relations and dynamics within the migrant family, (un)changing conceptions and visions of manhood in migration processes and the contestation/negotiation of migrant masculinities.

Coping with Climate Change: The Role of Local Knowledge in Rural and Peri-Urban Communities in the Eastern Cape, South Africa

National and continental studies on climate change in Africa mostly measure the extent of climate change and its related impacts. Little attention is paid to how local knowledge helps communities to cope with adverse environmental conditions. Despite the wide-ranging contestations about the role of indigenous knowledge, studies conducted in Mexico and some Asian countries reveal that one of the factors that have increased people’s vulnerability to the adverse impacts of climate change is the low priority that policy makers and environmental institutions attach to indigenous knowledge, especially in the planning and management of climate change responses. This factor combines with others such as political

Anxiety and Refusing Food: Consumers’ Attitudes and Understanding of Radioactivity

After the accidents of Fukushima, large area in the east part of Japan were exposed by radioactivity. As a result, foods from those regions were contaminated by radiation, but producers have made great effort to produce less contaminated foods at their land. Gradually they began to sell them at the markets. But prices are still far lower than before the accidents.

We investigate consumers in the metropolitan area about consumption of those foods, especially about images of radioactivity, understandings, degree of anxiety, and information seeking behaviors for those foods by focus group interviews.

Our results are as follows.

1) Participants have ambiguous but significant degree of “fear” for the health effects by radiation. Their images of radioactivity are not based on scientific evidence, but images from TV documentary programs, movies and other images on mass media: a cracked flat glass, skin disease, airborne dirt. Participants expressed “invisible”, “bad for our health”, “no chance of recovery once contaminated”.

2) Participants seldom “measured” actual level of radioactivity at their home. They have almost no attention to the level of radioactivity of foods, although local governments or local NGOs offered those measurement services. It seems that participants refuse “right” information. They just seek information that tells them worse or worst cases, from friends or families.

3) Although there were some participants who are more knowledgeable, and have deeper understandings, they told us, “knowledge and emotion is different, though we understand those foods are safe enough, my feeling cannot admit to eat them.”

4) We have one group of people from Tohoku region, they told us “people in Tokyo did not recognize that their excessive response to radioactive contamination of foods suffers us. They ignore our efforts and also sufferings.”

Those “divided” consumer-producer relationships makes people face economic difficulties in many aspects.
weaknesses and the use of inappropriate technology. It is against this background that this paper explores climate change-related adaptive mechanisms that are embedded in local cultural (and particularly agricultural) practices in South Africa. The paper reveals the ways in which indigenous plant medicines, water-conserving hedge plants, and specific uses that local people make of indigenous social capital help households to cope with adverse climate change impacts. The paper is based on interview, focus group and community survey data obtained from five rural and peri-urban communities around East London and Port Elizabeth in the Eastern Cape Province. The paper highlights the need to take the local context seriously in dealing global environmental challenges.

Disrupting Professional Hierarchies : New Interprofessional Collaboration Between Artists and City Planners

Urban projects are political, technical and social entities where public authorities and urban planners work with a growing number of stakeholders such as property developers, non governmental organisations and citizens, who have different professional cultures and academic training. Thus urban projects are multi-actor systems where interprofessional collaborations occur at different levels:
- among professionals from different technical fields (architects, landscape architects, urban planners and engineers),
- among professionals of different affiliations (public or private),
- among professionals from different competences (political, technical and social).

The relationships between these different stakeholders remain largely hierarchical in spite of the literature that advocates for collaborative and heterogeneous processes. A recent phenomenon, the introduction of artists to this system, not as a creator of networks in public space, but as an actor of the urban project process itself seems to shake up established order and existing professional hierarchies. This paper presents the results of a research based on five case studies where artists have worked with urban professionals on issues related to urban projects in France such as architectural heritage, uses of the public realm, risk awareness.

We will first discuss on how the implication of artists in the project disrupts internal hierarchies inherent to political and administrative structures in charge of the project. How does the implication of artists transform relations within and between technical departments and among different hierarchical levels? We will then show how the artists question the relations between the contracting body and the service providers. How do artists (i.e. the service provider) manage their relations with the contracting body (i.e. the city officials) and his requirements? In which way this disrupts professional routines of the contracting body?

El Uso De Las Tecnologías De La Información y La Comunicación En El Alumnado Universitario

Introducción
Desde la generalización del término “nativo digital” (Prensky, 2001) se da por supuesto que las generaciones nacidas bajo la influencia de las nuevas tecnologías de la información y la comunicación (TIC) presentan patrones similares tanto en la comunicación interpersonal como en el proceso de aprendizaje.

Objetivo
Describir el uso y apropiación de estas tecnologías por parte del alumnado universitario, analizando su presencia en las actividades cotidianas así como en el desarrollo de su proceso formativo.

Metodología
Encuesta personal en una muestra aleatoria (N = 920) de la población matriculada en la Universidad Complutense de Madrid (España), curso 2012-13. Sección según cuotas de sexo y área de conocimiento. Análisis estadístico mediante el programa SPSS v.20.0.

Resultados
Se evidencia un importante y constante uso de las TIC en la vida cotidiana, tales como el teléfono móvil de última generación. No hay diferencias significativas según sexo o edad, siendo los indicadores parejos. Con respecto a la plataforma virtual de la Universidad, sí se muestran diferencias significativas en su acceso y uso según área de estudio: mientras que el alumnado de las humanidades y ciencias jurídico-sociales lo utilizan preferentemente para tareas de carácter administrativo (inscripciones y matrículas, consulta de agenda y calificaciones), los estudiantes de las carreras experimentales y técnicas lo emplean también para descargarse material de lectura y apoyo en el proceso de formación, trabajando colaborativamente o participar en foros, chats o blogs mantenidos para la comunicación entre alumno-profesor.

Conclusión
Más que a la generación de pertenencia o al sexo, la utilización de las TIC está claramente asociada a la adscripción de los alumnos a una rama determinada de conocimiento. No obstante, nuestro estudio no permite conocer si ello es achaicable al perfil tecnológico docente, más débil quizás entre los profesionales de las humanidades y las ciencias jurídico-sociales, lo que resultaría en una menor motivación para su incorporación y uso generalizado por parte del alumnado.

The Financialization of Housing Developers and Cooption of Social Housing Policies. Territorial Impacts of a Market Policy

The paper examines the restructuring of real estate sector in Brazil and its relationship with political changes implemented in the last 10 years, with a special focus on analysis over the territorial impact of those process on Rio de Janeiro metropolitan Area.

Since the late 90s the real estate sector began a restructuring process focused on two dynamics: the financialization of real estate developments and the spreading of activities of few construction companies over the country through a monopolization process.

Between 2003 and 2004, other processes reinforced these previous trends: (a) Real estate companies have made IPO on the Stock Exchange, capitalizing on and diversifying their operations; (b) Changes in regulatory funding policies expanded exponentially the credit conditions; and (c) Economic growth has been fostered by government policies, with a progressive fall in general interest rates and increases in wages and incomes for lower and middle classes.

The 2008 crisis strongly affected real estate sector that by then had invested large amount of capital in land banks. As a solution to the crisis in the sector and as a countercyclical instrument to foster economic growth, the government launched a new housing program called “Minha Casa Minha Vida”. The scope of the program has intrinsic impact on urban structure, inducing increase of urban inequalities.

Since 2005, a continuous and sharp increase in property prices, supported by the credit expansion and also by local policies aiming the preparation of cities for the mega-events (World Cup and Olympic Games), influenced the configuration of urban space of Brazilian cities, emphasizing the social segregation. As an empirical case, this paper will analyse the location of MCMV projects in Rio de Janeiro combining the spatial pattern with the changes of housing prices. The paper will explore the economic, social, political and territorial sustainability of this model.

Nose Picking in Vietnam: A Comparison of Colonial and Post-Colonial Practices

This study focuses on nose picking, a regularly observable occurrence in Vietnam. Elias said that in the civilizing process self-regulation is a gathering force and the act of nose picking is not perform in public. To better understand the reasons why nose picking is a regularly observable occurrence in Vietnam, I analyze content from Thanh Nghi, a magazine published from 1887-1945 during the French colonial era and created by Vietnamese intellectuals to further the spread of French civilizational ideals. This study has two purposes: first, it clarifies the role of Thanh Nghi as an intellectual proponent of French colonialism. Second, it explores different aspects of the civilizing process. By achieving these two aims, the study illustrates the effectiveness of the civilizing process in colonial society.

Youth Choosing Bad-Careers for Social Success:Youth Subcultures Referenced in Gyaru and Gyaru-o Tribes

This paper clarifies the social perspective of youth subcultures with a focus on members of tribes formed by youth referred to as gyaru and gyaru-o. The author spent 5 years participating as a member of a gyaru/gyaru-o tribe and conducted club events held in the streets. Afterwards, through 10 years of participation-based observation as a researcher, the author conducted quantitative research to form the following opinion.

These tribes practice heterosexual lifestyles, committing anti-social acts to the extent that will not result in arrest. They life lifestyles based on “bad” values and seek to gain attention through provocative means. They view these “bad-values” as a career that will lead to future self-realization.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
They believe that establishing both the “bad” career gained through their activities and an official career will lead to future social success. And they hold dramatic, story-like image for self-fulfillment wherein embracing these careers will lead to success in normal society.

The youth observed in this research have been deemed to be passive towards what is generally considered as success in normal society. However, this research has shown that these youth are proactive towards self-fulfillment in terms of forming careers that will lead to future social success.

In previous research into youth subcultures where it is has been shown that youth believe their “bad-careers” will benefit them in the future, this was defined merely as phase to which the individual would progress or as an internal phenomenon of the same subculture.

However, this research brings a new view to youth subcultures research in showing that these youth view their “bad-careers” as something that will benefit their success in general society, thus as something that transcends the framework of any phase or subculture.

The Power of Wives of Merchant Families

In this presentation I will describe the wives of merchants in Osaka and the changes they underwent with the modernization of the merchant business. The Osaka area had been the center of business in Japan. Osaka has been known for commerce since the 16th century. Many people had come to Osaka to be merchants from about the 17th century to the middle of 20th.

Traditionally, the wives of the Osaka merchants had great influence and considerable power in the management of the family business. In Osaka merchant stores, the merchants’ families lived with their employees, and the workspace was also the living space. The wives of merchants had the role of caring for, disciplining, and managing the boy apprentices both in the house and the store. Especially, the women’s role of providing discipline to make the apprentices good merchants was very important for the family business. These relationships between the wives of merchants and the employees continued for a long time. Under these circumstances, it seems inevitable that women took a dominant role in the management of the house, as well as the store. It was this merchant family system that gave them much power.

The merchants in the Osaka area continued to operate under this family business system for a period of twenty years; to the end of the Second World War. However, as the merchants adapted to economic development, along with democratization and rationalization after the war, they chose the modern management system of separating their homes from the store. Owners and employees began living separately, and the roles of the husband and wife changed with the husband working and the wife staying home. As the stores become larger, the wife stopped being involved in the business and instead focused on being a housewife.

Mental Health of Immigrant Adolescents in Spain

This paper explores and explains migrant-native differentials in psychological health of adolescents in Spain. As a recent immigration country, research on integration outcomes in Spain is attracting, significant levels of international academic attention both because Spain was the second largest destination of international migration only after the US from 2000 to 2007 and the impact that the Great Recession is having among migrant families and other disadvantaged groups. Our paper is inspired by a growing body of research from United States showing that Latin American immigrants tend to show the highest risks for mental health, even after controlling for age, gender and socioeconomic status. Despite of the large number of Latín American immigrants in Spain, research on immigrants is underinvestigated and more importantly, research on mental health and psychological wellbeing of immigrant youth is particularly limited due to the absence of appropriate datasets.

In this paper we take advantage of a special data set, the Chances (2011) survey, which sampled schools and students enrolled in the 3rd and 4th grades of secondary education within the municipality of Madrid (n=2,734). The survey includes a large number of immigrants and information on the life of adolescents, including their mental health and other socioeconomic outcomes, relation with their families, friends and school mates. The Chances data also allows us to examine the impact of contextual factors such as schools and neighbourhoods. The data also include information about family conflict and other family characteristics collected from the school.</br>
Our findings suggest worse mental health outcomes of children of migrant families compared native families in Spain. Using several indicators of mental health outcomes (e.g. difficulties to concentrate, sleep) as dependent variables, the paper examines the effect of parent characteristics, family conflict, and school and neighbourhood context on adolescent mental health.

Social differentiation has been identified since the so-called sociological “classics” (Durkheim or Simmel) as one of the most important structural features of the emergence of modern societies and modern Individual. The evidence of this thesis was ever thoroughly questioned despite by historians, and especially that by anthropologists. Departing from empirical evidence resulting from a study on differentiation processes in current Chilean society, this paper aims to discuss in which sense and under which parameters it is possible to conceive the relationship differentials – individualization nowadays. Based upon our results we will specifically discuss four theoretical – methodological issues: (1) The relationship between social differentiation and social complexity. (2) The sociological registers of individuality. (3) The relationship between structural changes and forms of individuality (in a sociological sense). (4) The meaning that might be assigned to the goal of this differentiation is to evaluate the sociological perspective. This discussion should lead us to the basic argument of this paper: It is necessary to interpret the sociological forms of individuality taking into account the plural modalities that structural complexity acquires in each society, and, consequently, the plurality of experiences confronted by individuals. This does not imply that everyone is modern, as supporters of globalization or multiple modernities due to different reasons seem to affirm. This demands us to understand how in every society, at present or in the past, at the “center” or at the “periphery”, social structures - due to their distinctive features in each one of them - induce divergent social forms of individuality. The former implies that we might understand the foundational sociological narration about differentiation and individualization simultaneously as a general interpretative model and a very specific historical path.

The average wage gap between men and women is well known. The wage inequality between men and women across the income distribution is, however, often masked by the female labor force participation rate. The female labor force participation rate has shown a large increase in the past several decades and has increased by 60%. The last percentile of wage income showed greater gender inequality. At the 99th wage percentile, women earn 44% of what is earned by men.

Differentials in Labor Market Outcomes in Brazil - 2000-2010

In past research (Guimarães, Barone, Alves de Brito, 2013) we argued that the transformations that the Brazilian labor market went through in the past 50 years (from 1960 on) meant the consolidation of a movement towards “marketization” of the Brazilian labor market. This movement seems closely related to increasing participation rates especially between women, at a different pace compared to what was observed in other countries, as opposed to race differentials in those chances, that didn’t seem to change so much in the period. That means a decrease in the differential between participation probabilities of men and women in the labor market through the period that we were analyzing. But that doesn’t say too much about the outcomes of participation, and the decrease in the differential on chances of entering the labor market does not necessarily mean decrease in the differential of outcomes between men and women once they decide to sell their labor force in the market. That’s the intend of this proposal. Drawing on the analyzes of Guimarães and Biderman (2004) which
shows how, in a scenario of employment retraction, the sex and color attributes tend to have a very important role in determining wage differentials, so we wanted to analyze how the effects of those attributes vary in a context of increasing formal employment, like we observed in Brazil between 2000 and 2010. With our current research we had seen that the chances of labor market participation between women had dramatically changed and with this proposal we want to go further in that investigation in order to access what kind of effects this change in the chances of entering the labor market meant changes in labor market outcomes between men and women.

Preparation for a Career in the Sociology of Aging

Session Organiser: Sara Arber, Professor of Sociology and Co-Director, Centre for Research on Ageing and Gender (CRAG), Department of Sociology, University of Surrey, Guildford GU2 7XH, Surrey, UK (s.arber@surrey.ac.uk)

Session Chair: Anne Martin-Matthews, Professor of Sociology, University of British Columbia, 6303 NW Marine Drive, Vancouver, BC, Canada. V6T 1Z1 (amm@mail.ubc.ca)

Abstract: This session is targeted to trainees and early career researchers in the sociology of aging. A panel of RC11 members (with editorial board experience and experience on research grant making bodies) will make presentations on key issues in successful publication and grantscraft in the fields of sociology of aging and also in sociological gerontology. Issues of disciplinary strength and multidisciplinary collaboration are discussed.

Confirmed presenters:
Merrill Silverstein, Syracuse University, USA; Editor, Journal of Gerontology: Social Sciences
Christina Victor, Brunel University, UK; Editor, Ageing & Society
Anne Martin-Matthews, University of British Columbia, Canada; past Editor, Canadian Journal on Aging
Sara Arber, University of Surrey, UK; Co-Director, Centre for Research on Ageing and Gender; Member of various Grant funding bodies.

An open discussion session with opportunities for input by all session participants follows.

Sleep As a Potential Mediator Between Marital Status, Marital Relationship Quality and Health

A wealth of literature suggests a link between marital status and health. Consistently, and across populations, evidence has shown that married people live longer, happier, and healthier lives than their unmarried counterparts. However, much of this literature has conflated marital status with marital quality and nearly all studies have ignored the role of sleep as a potential mediator. This paper examines the following research questions: (1) How is marital status and marital relationship quality associated with health in the UK? (2) How do marital status and marital relationship quality influence sleep? (3) To what extent does sleep mediate the link between marital status, marital relationship quality and health, and how does any mediation by sleep differ by gender?

The paper analyses data from a nationally representative UK survey (Understanding Society, n=34421), 2009-10. Mediation models are run using SPSS. The independent variable is a derived variable which merges marital status with a ‘perceived quality of relationship’ scale (giving the categories, ‘single’, ‘married and in unhappy relationship’, ‘married and in happy relationship’, ‘separated but legally married’, ‘divorced’, ‘widowed’, ‘lives with partner and unhappy’, ‘lives with partner and happy’). The dependent variable is self-reported health.

Findings highlight how it is not just the ‘form’ that marital status takes, but also the quality of the relationship. Being in an unhappy cohabiting relationship, for example, has a greater negative impact on health than being in a happy cohabiting relationship. Sleep acts as a significant mediator of the link between marital status/marital quality and health – even when controlling for other mediators; such as subjective financial well-being and number of children. The role that sleep plays as a mediator differs for men and women. This is most notable for those who are divorced, where sleep takes on a greater role in the pathway for women.

Changes in Exposure to Industrial Air Pollution Across the United States from 1995 to 2004

At the basis of a large part of the environmental justice literature is an interest in understanding how exposure to industrial toxins varies by race and class in the United States. However, since the beginning of this field deindustrialization has created dramatic declines in industrial air pollution, the toxicity levels of these pollutants, and shifts in the spatial patterns of racial and economic groups. Current work in this field has rarely taking these trends over time into account. Because environmental justice theories in this area are based on industry and how it puts some populations at risk more than others, to understand how these industries are changing over time is important for evaluating the continued usefulness of current environmental inequality theory. This paper addresses these limitations by examining the annual exposure to 572 industrial chemicals weighted by their toxicity to human health across the United States for the years 1995 to 2004. Results show that greater socioeconomic success does not translate into increased protection from exposure to industrial toxins in the same way for African-Americans, whites and Hispanics. These results provide an argument to amend current environmental justice theory to consider how federal environmental regulation of industry interacts with changes in demographics.

Corruption, Trust, and Inequality in Modern Societies

Social inequality and corruption are now the significant economic and social problems, not only in developing countries but also in the developed world. Often, corruption is studied in the context of economic development, and social inequality is considered in conjunction with the structural nature of society. We suggest to pay attention to this issue as the relationship of corruption and inequality in modern societies, and to expand it with the category of trust, which is certainly an important concept in modern societies.

There are different points of view of modern research on the relationship of corruption and social inequality. We propose to examine this relationship and to interpret it based on the current social situation.

First, it should be noted that there is a direct link between the levels of corruption and inequality. The high level of corruption is usually associated with high levels of inequality. But the hypothesis of a strong direct relationship between these concepts is controversial.

In this linkage as an important element, which is also a significant problem of modern societies and is closely linked with corruption and inequality. It is a problem of trust.

Trust is one of the socio-psychological foundations of social cohesion and largely determines the dynamics of the basic social processes, the integrity of the society.

The path from inequality to corruption may be indirect through trust, but this relationship is a key to understanding why some societies are more corrupt than others. But it is not so simple. If we look cross-country studies, the correlation between inequality and corruption is weak. But exactly correct to say that inequality leads to corruption increase by the trust. Inequality and corruption are not directly related, there are deviations from this relationship.

Studying Doctor-Patients Interaction through Narrative Inquiry: Advantages and Concerns

Studying Doctor-Patients Interaction through Narrative Inquiry: Advantages and Concerns.

There is clearly greater recognition of the advantages of the study of narratives in the field of healthcare. Nevertheless, most of the narrative interviews are focused on the study of illness experiences, while there are relatively scarce attempts to understand doctor-patient interaction through narrative study. This paper examines stories which people tell about interactions they had with their doctors. The study draws on data from qualitative in-depth interviews with 22 middle-aged middle-class Jewish Israeli men and women, generally healthy, who were asked to describe interactions they recently had with doctors. The stories they told us were classified according to their performative characteristics and self and other positioning. The data point to a large gap between the narrators’ expectations of the interaction with doctors and the actual experiences. The paper discusses the advantages of narrative inquiry for the study of patient-doctor interaction, and in particular the fact that it allows for expressions of deep notions of vulnerability which usually stay un-voiced. The study also raises questions and concerns regarding the ‘tellability’ of stories about ‘good care’ vs. the tellability of stories about ‘bad care’.

Life-World of Youth in Japan: Focusing on the Social Attitudes and Social Consciousness

It is often pointed that the transition process has become unstable and the individualization has become one of the dominant key words in modern society. And it is said that the individualism and individuality among people has become a serious issue. With these as a background, this study focuses on social attitudes and social consciousness of young people in Japan, for the purpose of understanding more about their current life situation.

The data we use is Youth Cohort Study of Japan (YCS), which monitors the educational and vocational trajectory of young people and surveys their attitudes once a year in autumn. With this data, we analyze sense of self-responsibility, praise of meritocracy, a feeling of dissatisfaction with the government and/or social welfare system, recognition of opportunity and needs for redistribution. And we consider who might be more precarious and difficult situation among the young people.

To analyze the differences among the young people, we focus on some factors, such as gender, educational background, job status and trajectory patterns. Then, we get some findings from the analysis, for example, levels of sense of self-responsibility increased during 2008-2011 especially among secondary school graduates and jobless people, who were less satisfied with their current situation. We can see that some young people who experience difficulty might strengthen the consciousness of self-responsibility instead of sense of social welfare and redistribution.

Figuring out the “Figuration” of the Kishiwada Danjiri Festival

The purpose of this paper is to clarify the “Figuration” (Elias 1969) of the Kishiwada Danjiri Festival, focusing on its management, by tracking competition within and around the organization as well as the members’ career paths in the festival.

The Kishiwada Danjiri Festival is one of the most famous float festivals in Japan, known for its dangerous performances. Running in rhythm to the music of bells, drums and flutes, about a hundred people tow the three- to four-ton floats (named danjiri) as fast as possible. The highlight of the festival is called Yarimawashi, wherein the float turns the corner without slowing down. To achieve the perfect Yarimawashi, the team members are required to have strong ties of solidarity and flawlessness.

The festival is managed by two organizations, one that tows the float and another that controls the whole festival. The former is called cho-nai, which recruits members from neighboring districts to perform Yarimawashi; the latter is called nen-ban, which selects and associates members from the cho-nai organizations to run the festival. Examining these two organizations, the cho-nai organization is vertically structured, based on seniority, and the nen-ban organization is horizontally structured, based on the members’ careers.

This paper analyzes every aspect of competition between organizations, groups, and individuals. Because the festival is run by two organizations, a unique and intriguing path is created and produces “festival-elites.” These elites alternate between and experience both organizations to develop a network and skills by competing with others, to obtain “capitals” and become the future leaders of the festival.

In addition, we reveal that the mechanism of this festival has a nested structure in which competition and solidarity coexist. This paper shows the figuration of the festival as a complex and dynamic cultural event.

Communal Life Practices in a National Sanatorium for Hansen's Disease

The purpose of this study is to clarify the various aspects of communal life practices of patients in a national sanatorium for Hansen's disease in Japan. I take up an example of small groups which lived in a national sanatorium called Touhoku Shinsei-en in the 1960-70s in order to describe the characteristics of communal life practices of the patients under heavy segregation policies.

The Japanese government's policy towards the patients of Hansen's disease was very cruel in the past. Almost all these patients were obliged to be segregated in national sanatoriums. However, the patients kept struggling for creating better living conditions. In order to make this sanatorium a better place, they had recourse to various activities among themselves, often taking informal, sometimes even non-admitted methods.

Besides clarifying the processes of the creation and development of such communal life practices, this study also examines the effects and meanings of these practices for the participants. The case in this study shows what happened after these patients kept trying new communal life practices again and again not only for financial interests, but also for the fertilization of their own lives. Concretely to say, the following meanings about their practices can be distinguished: (1) one refers to the securing of various autonomous living zones in the sanatorium, by distributing “employment” roles among themselves, (2) another one refers to the creation of slight hopes saying that their lives were worth living, and to sharing these hopes with other patients, (3) the third one pertains to the extension of their living area by making contacts between patients and non-patients.

By understanding the meanings of these practices through which the patients of Hansen's disease attempt to fertilize their lives, we become able to explore new aspects of their extremely difficult every-day life.

However, the patients kept struggling for creating better living conditions. In order to make this sanatorium a better place, they had recourse to various activities among themselves, often taking informal, sometimes even non-admitted methods.

Besides clarifying the processes of the creation and development of such communal life practices, this study also examines the effects and meanings of these practices for the participants. The case in this study shows what happened after these patients kept trying new communal life practices again and again not only for financial interests, but also for the fertilization of their own lives. Concretely to say, the following meanings about their practices can be distinguished: (1) one refers to the securing of various autonomous living zones in the sanatorium, by distributing “employment” roles among themselves, (2) another one refers to the creation of slight hopes saying that their lives were worth living, and to sharing these hopes with other patients, (3) the third one pertains to the extension of their living area by making contacts between patients and non-patients.

By understanding the meanings of these practices through which the patients of Hansen's disease attempt to fertilize their lives, we become able to explore new aspects of their extremely difficult every-day life.

Revolution and Constitution-Making in the Arab World and Iran

Considering constitutions as the formalization of the political reconstruction and the establishment of new ruling bargains for regimes, constitution-making in the three countries where the Arab revolution of 2011 succeeded in toppling old regimes: Tunisia, Egypt and Libya. The paper compares the pattern of constitutional politics in these countries as the struggle for the new political order among competing social and political groups and institutions that will entrench
the emerging ruling bargains by making new constitutions. The comparisons are centered around four sets of variations: variation in the traditions of the rule of law and those in the character of the old states and the power structures sustaining them, a distinction between negotiated revolutions, where the old state persists and negotiates a new ruling bargain with the opposition, and the ones in which the opposition is destroyed by the revolutionary power struggle among competing groups determines the outcome of the revolutionary process. The mode of negotiation for the new ruling bargain differs considerably in the two cases. Tunisia and Egypt fall into the first category, Libya, in the second. The last comparisons concern the constitutional placement of Islam between Iran and its Islamic revolution and the 1979 Constitution of the Islamic Republic of Iran, and the role of the Islamist parties in the constitutional politics of the Arab revolutions of 2011. The Iranian constitution was based on a clericalist Islamic ideology that made Islam the basis of the new political order and its constitution, whereas, with the passing of the age of royalism, Islam is proposed by the Arab Islamist parties in the suspended Egyptian Constitution of 2012 and in the Tunisian constitutional laws as a limitation on the legislative power of the state and not the basis of a new democratic political order.

Voters’ Mobilization Where Partisan Attachments Are Weak. Mayors and Electoral Mobilization in Mexico

Political parties are expected to play a central role in mobilizing citizens to participate in elections to win new democracies, where party attachments are weak and parties and elections might lack legitimacy, the absence of a stable party membership makes canvassing efforts more difficult. In nascent democracies that have undergone decentralization, electoral mobilization is likely to rely on local level politicians, who are responsible for providing basic services crucial to citizens’ well-being. I explore this proposition by looking at the influence of mayors on electoral results in Mexico, a polity that has recently experienced transition to democracy and remarkable fiscal decentralization. Because of their expenditure responsibilities Mexican mayors have comparative advantages relative to other local politicians who are not directly responsible for delivering policy benefits (e.g., state governors and city council members). Beside city and town perceived closeness to their constituencies, mayors are stronger vote brokers than local politicians with executive powers but whose constituencies are larger or more diffuse (i.e., the state governor). The hypothesis is tested by analyzing the effects of mayors’ power on the electoral results obtained by the three main Mexican parties, PAN, PRI, and PRD between 1990 and 2012 in all elections (federal, local, executive and legislative). The analyses control for the socio-economic determinants of the vote and for historical voting trends. The causal mechanisms are explored through in-depth interviews with 20 local politicians. The results show that mayor’s party has a positive and significant effect on the vote shares obtained by each party in all elections. These findings contribute to the discussion about voter mobilization in new democracies.

On the Sociological Relevance of Ethnomethodological Conversation Analysis

Ethnomethodological Conversation Analysis has occasionally been criticized of lack of sociological relevance. However, I will suggest that it has minimally sociological potential because of three grounds: 1) ability to identify and detail social action, 2) the micro linkage between action and social structure, and 3) be sensitive to social change by identifying new kinds of actions. CA analyzes the ways in which participants in interaction form a joint focus of attention, where the perception of perceiving formation of a joint focus forms the basis of a joint social action in election, and therefore, the analysis of sequential accomplishment of action in interaction allows CA to explore emerging social actions. Most of the CA studies decipher and reverse engineer the constitutive sociostructural resources for the activities in interaction, they themselves provide evidence of the structuration in force. The analysis of the ways in which social structures become demonstrably relevant and consequential for formation of action, provides CA’s answer to the duality of social structure, i.e., that structure exists only through its demonstration relevant and consequential for formation of action, provides CA’s answer to the duality of social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its social structure, i.e., that structure exists only through its public health is one way to maintain ontological security when normalcy is possible by a meeting of intellectual advancements and emerging new data management technologies. Currently, online social interaction still waits for a formalization of research interests that would transform the abundance of new data into sets of findings. There is not yet available any systematic methodology for the scrutiny of online communicative behavior. I will focus on three central interrelated issues: 1) the construction of an online communicative act, 2) the nature of screen-to-screen interaction, and 3) the interface between screen-to-screen and face-to-face interactions. The establishment of a research field requires a distinct perception of the research objects, that is, the units of analysis, a theory about their systemic relationships and positioning of the field within established fields. For instance, the well-known simplest systems of turn-taking (1974) formulated conversations as a research object consisting of turns at talk with systemic relationships, and a relative autonomy. As for online communication, we may explore the sequential units, such as turns in a chat or a forum thread, as independent units. Alternatively, the communicative acts may be inspected contextually as a part of a situated offline activity. Both positions are sustainable, but distinct. When it is time to alternate. It would be tempting to unite them, but that may not be feasible in terms of resources, or efficacy. As for the systemic relationships between online communicative units, Karen Knorr-Cetina’s notion of synthetic situation is fascinating providing some methodological hints for the advancement of the area. Finally, irrespective whether we start from the autonomous units or contextual reflection, we end up inspecting the embeddedness of online interaction to offline world, which forms the ultimate challenge for studies on online communication. Instead of a final solution, I will discuss some examples with the help of which we may address the interface between screen-to-screen and face-to-face interactions.

ARMSTRONG-HOUGH, MARÍA* (Meiji University, mjoh@meiji.ac.jp)

Performing Prevention: The Construction of Risk and its Consequences in Japan during H1N1 2009

Japanese policy makers and health care providers mirror American Centers for Disease Control (CDC) recommendations for most public health matters, frequently citing them as the gold standard for best practices. In the case of influenza, however, standard Japanese recommendations and practices significantly diverge from the U.S.-based recommendations. While the CDC recommends that individuals wash their hands frequently and avoid contact with infected people, the Japanese medical associations add frequent gargling and the use of surgical-style masks. The order of priority groups for immunization have also historically differed. Drawing on approximately 89 semi-structured interviews with patients and medical professionals in Japan and ethnographic fieldwork during the H1N1 outbreak of 2009, this article elaborates on the work of theorist Anthony Giddens to examine continuing differences in prevention practices in the face of communicable disease outbreaks like H1N1. The concept of risk creates the possibility for prevention—behaviors intended to “reorganize the future of suffering” (Frankenberg 1993). Giddens calls this the “colonization” of the future (Giddens 1991: 111). But the risk society also necessitates the development of new techniques for maintaining ontological security. I argue that faith-like acceptance of recommendations produced by systems of expert knowledge such as medicine and public health is one way to maintain ontological security when normalcy is interrupted, as in the pandemic H1N1 influenza outbreak during 2009.

A Study of Organizational Coping and Resilience: An Academic College Under Fire

Our research is a case study of organizational coping with a state of war at an academic college in Israel’s northern periphery. We defined this situation as an unexpected crisis caused by an external factor beyond the college’s control. The study focused on the coping processes initiated by college leaders in their attempt at crisis management. A qualitative retrospective case study design was chosen to explore the ways in which the different sectors in the college perceived,
experimented, responded to and influenced the organization’s efforts to deal with and adapt to the threat. Our goal was to describe the organization’s coping during the crisis situation by tracing the chain of events, the stages of crisis management, understand issues related to leadership and analyzing the fulfillment of major tasks involved in dealing with crisis and uncertain situations.

Based on insights gained through understanding the main themes of this case study we sum up what we have learned and propose practice guidelines for future situations of organizational crisis of uncertainty.

Organizational coping under uncertain and risky circumstances is a recognized topic for research and discussion. However, coping by an academic institution under fire is a rare topic for academic research and discussion. Unfortunately such situations are not unusual in many war regions throughout the world. By this study we throw light on an important topic in higher education managerial policy. Such case studies along with comparative studies of this topic may contribute to the understanding of this unique phenomenon.

ARNON, SARA* (Tel Hai College, armons@mgamla.co.il)
Relocation of Families after Uprooting with and without the Help of Community

The paper deals with the question: Does the community’s social capital strengthen the practical resilience and emotional wellbeing of its citizen families and support them to establish psychological and social harmony in their lives after a traumatic stressful event?

This question was investigated among Israelis who were evacuated from their homes and communities as part of an Israeli government peace process initiative. Some of the families chose an individual way of life after evacuation and most of them relocated with their former evacuated community friend families. The research compared these two groups, investigating their success in recovering from the evacuation trauma and effectively adjusting to the change in their lives. Data was collected by face-to-face mixed structured and open interviews with a sample of 120 people.

The general finding was that the “individualistic” group coped better than the “community” group, both with the practical aspects of life such as working and building a new life and with the emotional wellbeing ramifications of uprooting. They approached a new sense of balance in their new lives earlier than those who chose to conserve the community continuity.

Thus, in contrast to general theory, a community is not necessarily a guarantee in advance for better coping of families with situations of pressure, stress and crisis. Its embrace may be double edged and may have two different contradicting influences: It may be a positive influence which strengthens and empowers its members. But it also may be a restricting element that limits and inhibits flexible and innovative functioning and may inhibit establishing new healthy psychological and social life.

Is There a Digital Divide Among University Students?

Introduction
Under the term “digital native” (Prensky, 2001), it is widely accepted that generations born into lives heavily influenced by extensive and intensive use of information and communication technologies (ICT) have similar patterns in interpersonal communication as in the learning process.

Target
Describe the use of ICT’s by university students, analyzing their presence in their everyday activities and in the development of control of their learning process.

Methodology
Personal survey research conducted using a random sample (N = 920) of students enrolled in the Complutense University of Madrid (Spain) in the academic year 2012/13. Students were selected according to gender quotas and area of studies. The statistical analysis was performed using SPSS v.20.0.

Results
The results show a significant use of ICT in everyday life e.g., the use of smartphones and households’ availability of various devices (pcs, laptops, tablets). No significant differences according to gender or age were found. Regarding access to mobile phones and households’ availability of various devices (pcs, laptops, tablets.

How Green Are The Dams and Hydropower Projects Of Northeast India?: Divergences In Government Mission and Local Perception Of Energy Security

Dams and hydropower projects taming river waters have long been associated with technocratic pursuit of economic growth, energy security, and the idea of sustainable development. In 2002, the Department of Development of the North Eastern Region (DONER) openly declared India’s North-eastern region with its undulating topography containing numerous perennial rivers (such as the Brahmaputra and Teesta) to be India’s future powerhouse. This region has a hydropower potential to generate an annual 3420 Megawatts and government agencies are pursuing a hydraulic model of development for financing human development and alleviating poverty.

More recently, much debate has been engendered on how green are dams and hydropower? Do dams and hydropower projects constitute a renewable source of energy and exemplify sustainable development? This paper reviews the inter-connections between global and local contours of this debate, and the impact of resistance to dams and hydropower projects on the local-global perception of hydropower as solution to the energy crises. Based on fieldwork and review of relevant literature, I analyze the hydropower projects located in Sikkim, Manipur and Arunachal Pradesh located in Northeast India to understand the divergences in the development vision of the government and the affected local ethnic groups. On the one hand, the power companies, development experts, and the government are advocating the hydraulic model of development and energy security, while on the other hand there is a vocal criticism of such policies and programs by various ‘other’ experts, environmental activists, and the affected locals (villagers and tribes) whose land and rivers are proposed or already have been acquired and nationalized. This paper highlights the competing visions of poverty alleviation and energy security and the contradictions within the trope of environmentalism and its effective use as a tool for imposing and resisting hydropower projects.

**Cuerpo, Subjetividad y Construcción De Identidad En La Vejez Avanzada: El Caso De Adultos Mayores Fisicamente Dependientes**

El estudio explora la dimensión subjetiva del cuerpo en la vejez y su relación con la conformación de la identidad individual y social en adultos mayores que cursan enfermedad y dependencia en la ciudad de Durango, México. Por lo tanto, este trabajo da cuenta de la representación del cuerpo que tienen las personas de edad avanzada que se encuentran en condiciones de dependencia física y falta de autonomía para las actividades básicas de la vida diaria. En la vejez, al cuerpo se le relaciona principalmente con la enfermedad, con la falta de capacidad y flexibilidad necesaria para la funcionalidad de la entidad que representa el cuerpo. En nuestro estudio, la discapacidad y dependencia física, como consecuencia de la enfermedad crónica, producen un cuerpo frágil de los ancianos, cuyas imágenes se construyen en torno al dolor, a la falla y/o deficiencia. Desde la metodología cualitativa, se emplearon entrevistas profundas a 20 hombres y mujeres mayores de contextos rurales y urbanos. El análisis de los significados del cuerpo, en los participantes, se centró en torno a la relación discursiva/enfermedad/representación del cuerpo, en los cuales destacaron aspectos subjetivos (imágenes, representaciones) y aspectos objetivos (enfermedad, limitaciones funcionales). En los resultados, el uso de metáforas, para expresar la imagen corporal y cómo la representan, da cuenta de la percepción que tienen de su cuerpo enfermo y la constante lucha con un “ideal” del cuerpo que predomina de manera hegemonica en nuestra cultura y que ellos han dejado atrás hace muchos años.

**Augmented Self : Digital Quantified-Self Practices As Socio-Cognitive System of Self-Regulation**

Con la evolución de tecnologías digitales, las prácticas de self-tracking han aumentado considerablemente, particularmente en el campo de la salud (medicina y deporte). La medida de su cuerpo y sus propias capacidades no es un nuevo fenómeno. El deporte y la salud se vuelven medidas de self-tracking (Wiederhold, 2012) que incluyen el valor de los datos de movimientos y el valor de las medidas de la salud. Los datos de self-tracking pueden ser utilizados para evaluar su progresión y para motivar a las personas a cambiar su comportamiento. Sin embargo, esta práctica puede llevar a la fragmentación del cuerpo y a la fragmentación de la identidad personal. En este estudio, utilizamos profundas entrevistas a 20 hombres y mujeres mayores de contextos rurales y urbanos. El análisis de los significados del cuerpo, en los participantes, se centró en torno a la relación discursiva/enfermedad/representación del cuerpo, en los cuales destacaron aspectos subjetivos (imágenes, representaciones) y aspectos objetivos (enfermedad, limitaciones funcionales). En los resultados, el uso de metáforas, para expresar la imagen corporal y cómo la representan, da cuenta de la percepción que tienen de su cuerpo enfermo y la constante lucha con un “ideal” del cuerpo que predomina de manera hegemónica en nuestra cultura y que ellos han dejado atrás hace muchos años.

of communication or observation of decisions, opinions and behaviour of the significant others.

In the last fifty years science research activities have grown from localised activities of small groups of scientists and research laboratories or little science, to large groups of scientists working in huge research facilities and groups, spanning different countries and spread over several years, also referred to as big science. What is the significance of the reference groups for scientists pursuing little science and those pursuing big science, as reflected in their direct and indirect communications? In this exploratory study an understanding of the role of reference groups is sought geographically contributing to re-search communities based on interviews of senior scientists who have been associated with little science as well as big science projects.

**Housing and the Crisis: Changing Housing Positions of Younger Households in Europe**

Over the past several decades, advanced economies have seen a dramatic shift towards homeownership. Alongside a shift in preferences, government policy in many countries has heavily promoted homeownership. With housing property being the most important source of individual wealth and in the face of diminishing state support, homeownership is seen as key towards securing future household welfare. Nonetheless, housing wealth and access to home purchase remains uneven. A rollback in certain homeownership subsidies, continued relatively high property tax, restricted credit access, unstable labour conditions have contributed to socio-economic and education paths all had contributed to difficulties in accessing homeownership, especially among younger people. The financial crisis of the late 2000s has only exacerbated these trends. Using cross-national datasets, the research looks at the situation of homeownership access for younger people across Europe before and after the crisis and evaluates how these changes have potentially contributed to exacerbated intra and inter-generational inequalities. The study examines variations across countries and attempts to understand these differences with regards to varied macro social and economic experiences of the financial crisis.

**ARUNDEL, ROWAN** (University of Amsterdam, raruendo@uva.nl)

**The Role of Intergenerational Wealth Transfers and Family Support in Shaping Housing Positions**

In the past few decades, there has been a strong shift towards increasing home ownership rates across many developed countries and housing has taken on a more important role through trends towards a privatized asset-based welfare model where housing property is seen as a key investment and a central component of household economic security. Decreasing support for other housing tenures, high house prices, increased mortgage indebtedness, volatile financial markets, restricted access, unstable labour conditions have contributed to socio-economic inequalities between those able to gain purchase in the housing market and those who are not, as well as differences among those that ‘bought at the right time’ and those that face high risks on their housing investments. Generational divides have been noted between relatively ‘housing wealthier’ older cohorts and younger cohorts who face difficult housing positions. Within these contexts, it would appear that family support and intergenerational wealth transfers have become more important in enabling, especially younger, households at gaining better housing positions. Through an analysis of micro-data on households across several European countries, the research attempts to gain an understanding on what extent intergenerational transfers are important in securing favourable housing positions and how these dynamics are mediated by the specific welfare regime and housing system contexts.

**Young People’s Strategies for Facing Uncertain Transitions to Adulthood: The Case of the Basque Country**

The instability and precariousness surrounding the labor trajectories of young people cause the clash between the future expectations which they built in the past and their present reality. This clash, in this specific transition period from youth to adulthood, leads to a variant of what has recently been called the phenomenon of ‘waithood’. Basque young people show that there are multiple strategies to manage this uncertainty surrounding the transition from youth to adulthood. These strategies depend upon two factors: the economic and the cultural one. The economic factor refers to the quantity and continuity of the economic resources that are available to these young people (irrespective of whether these resources come from their salaries or from external sources such as their families). The cultural factor, in turn, alludes to the socialization patterns upon which these young people built their future expectations in the past, and which determine the way they manage the aforementioned clash between these future expectations and their present reality. The main objective of this paper is to analyze the four main strategies that result from combining these two axes: flow strategy, standby strategy, drift strategy and flexibility strategy. To accomplish this task, we will draw from the main findings of twenty-four in-depth interviews conducted between late 2012 and early 2013.

**Changing Trends in Academic Practices in Higher Education - Reasons and Remedies**

Professional engineering education has projects, practical learning and training, and internships as important components, besides the usual lecture and tutorial components. They are important for the application of the knowledge gained through these. They also provide an essential exposure to professional work culture and facilitate professional role taking.

Based on fifteen years of teaching experience and close interaction with the students in an undergraduate college located in a metropolitan city of India, it is observed by the author that the importance of some of these core academic practices followed in the educational institutes has gradually declined. Their role in transfer of tacit knowledge (Polanyi) through personal interaction is not given due importance. In some premier institutions of higher learning these practices are either significantly reduced or replaced by information and communication technology enabled virtual learning modules.

An effort is made to explain the reasons for these changing trends in academic practices. Three interrelated mechanisms are identified as having advanced this process, increasing incremental value of higher education, academic consumerism and a widening gap between professional education and industrial growth in India.

These changes have important implications on knowledge growth and quality of skilled manpower. Based on the feedback of the educationists and faculty members, recommendations are made to increase the involvement of all the stakeholders in encouraging academic practices through experiential learning.

**Creating Learning Opportunities, Creating Protection: Migrant Learning Centers in Thai-Burma Borderlands**

This paper presents results from the study of learning centers, their roles and effort in the education and protection of migrant children and youth around Thai-Burma border in Mae Sot District, Tak Province of Thailand. The past decades saw frequent migration of people from several ethnic groups from Burma into Mae Sot District. Many of these migrants are children and youth whose illegal status deprives them of legal protection. From 1998-2012, the number of migrant learning centers was continuously on the rise to accommodate the flow of migrant children into Mae Sot area. These learning centers have a major role in protecting migrant children. Centers become social institution to provide...
self-identity and connection with other people, and the children feel that they become a significant unit in this small community. Learning centers serve as a communication link between children, youth, teachers, parents or guardians, and migrant community. They serve as a platform for negotiating meanings and power as they have to be in contact with local government offices, to ensure safety for teachers and children, to negotiate with employers should the children seek child labor, and most importantly, to identify funding sources and to administer educational and personnel affairs. Educational management for borderlands migrant children is especially difficult due to diversity in gender, age, language, ethnicity, religion, living status, and personal background that may require particular attention or assistance. Children and youth living in borderlands may also face other difficulties and challenges with their family, community, and with conflicts and violence occurred in border areas. This makes them especially vulnerable. Therefore, future educational policy has to consider the roles of centers and schools in rehabilitating and healing these inner wounds.

Resilience Strategies Carried by the Residents and Volunteers: A Study of Great East Japan Earthquake

OTSUCHI-cho, IWATE prefecture suffered a heavy damage by the great tsunami caused by Great East Japan Earthquake in 2011. According to the population census of 2010, there were 15,000 people in OTSUCHI-cho. Approximately 1,700 people became dead person or were missing, by the great tsunami. The Volunteer Center of Meiji Gakuin University began the reconstruction support project, named “Do for Smile at East Japan”. The center called for volunteer center to stakeholders and faculty members, and composed some volunteer teams. The teams have regularly visited KIRIKIRI, which was one region of OTSUCHI-cho, from April 2011. The purpose of this study is to report resilience strategies that were carried by the residents of KIRIKIRI and volunteers, and to analyze sociologically the meaning of the strategies.

At first, the Volunteer Center began the fund-raising, as the emergency-relief work. The donation was spent as the travel expenses for the teams to go to KIRIKIRI. We helped the KIRIKIRI’s residents to move the evacuation center from KIRIKIRI to the new one. We also helped to reopen KIRIKIRI elementary school. These activities can be regarded as the respite care in a wide meaning. The support activities for the residents who have lived in the provisional housing, the members of the teams were taught how to cook the local cuisine, named “KOMA-KOMAJIRU”, by the residents. The reason why the activity to learn how to cook the local cuisine, named “KOMA-KOMAJIRU”, by the residents. The reason why the activity to learn how to make local cuisine from residents functions as supportive activity will be explained by the activity theory in social gerontology. Volunteers helped with the reproduction of “the KIRIKIRI dialect dictionary” most of which had been carried away by the tsunami. This activity gave the residents the pride for the KIRIKIRI.

Socio-Spatial Structure Analysis of Tokyo Metropolitan Area: Based on “Social Atlas of Metropolitan Tokyo”

The purpose of this study is to describe the spatial formation processes of Greater Tokyo since 1960’s, with a special focus on leading industries and residential area. In the processes of industrialization, the 23 Wards of Tokyo were divided into two parts, the eastern part, which was the blue-collar residential area, and the western part, which was the white-collar area. According to the industrial transformation from the manufacturing stage to the finance and information stage, many factories have moved to the peripheral part of Greater Tokyo. Because the sites of moved factories were sold as residential area, some white-collar residential areas have begun to appear in the eastern part of the 23 Wards of Tokyo. After the post-industrialization, the Greater Tokyo now consists of the central area at which the tertiary industry is prospering and of the peripheral area at which the secondary industry remains.

Health for All: The Nigerian Experience with Health Insurance

Health reforms targeting universal coverage have intensified in Nigeria since the dawn of the new millennium, and the National Health Insurance Scheme, in particular, has been hailed as the panacea for and appropriate framework towards realizing the desired goal of “Health for All by 2015”. Two years to the target goal however, the reality is bleak and the task of achieving the goal more daunting than ever with a significant cohort of the population still excluded from the health scheme and from accessing health services. Explanations for difficulties in meeting health targets are discussed, pointing to weak governance, economic challenges, and socio-cultural variables as important interacting factors slowing down the process. The paper concludes by outlining some important emerging possibilities for strengthening the health system, including the liberalization of the health sector, strengthening intersectoral cooperation, enhancing public-private partnership, and for policy makers and international technical partners to recognize key socio-cultural factors in designing health policies towards achieving health goals.

Health Sector Reform in Sub-Saharan Africa: Challenges and Prospects

Sub-Saharan Africa (SSA) has witnessed significant health sector reform since the 1980s and in the process has introduced user-fee, experimented with various forms of health insurance, and encouraged public-private partnership towards improving health equity and accessibility with the overall aim of achieving universal coverage. Fiscal restraint, starting from the 1980s, which necessitated a partnership with the Bretton Woods’ institution leading to varying structural adjustment programmes, have conspicuous effects on health care delivery in all countries of the sub region. This paper describes health reforms embarked upon by sub-Saharan countries and chronicles public health care evolution with reference to key features of actors, process, design and context. A comprehensive review of the literature and relevant documents forms the basis for analysis and discussion. The review is guided by three overarching questions: What social and economic conditions necessitated health reforms in SSA? How well have health reforms addressed issues of health quality, accessibility, and equity? How have the reforms improved or worsened health conditions of citizens? Salient lessons to be drawn from the thirty years experience of SSA on health care delivery are highlighted and the future prospects are discussed. It is noted that efforts to meet IMF conditions, the World Health Organization’s millennium development goals, and other international health partners’ demands without the required capacity and structural machinery to match the design and execution of health reforms serve to unveil the dismal performance of health sector reform in SSA. It also brings to bold relief the need for the sub-region to take ownership of health programmes by designing health policies that are both endogenously crafted and sensitive to local conditions and contexts.

Interrogating Tourism As an Anti-Poverty Strategy in Middle and Low Income Countries of Africa

This paper considers the proposal of tourism as an anti-poverty strategy used by African countries to increase foreign revenues and create job opportunities for their citizens. The ability of tourism to attract foreign revenue into middle income countries in Africa is creatively projected through international mass media in the form of adverts and documentaries. The mass media, using picturesque scenes of nature, encourage foreigners to seek for leisure and entertainment away from their home countries. The philosophy that leisure costs money and must be invested, planned and saved for makes tourism a very attractive option for bringing in foreign revenue into Africa.

This paper interrogates this notion and questions just how effective it has been in eradicating/reducing poverty in middle income or even low income countries in Africa. The paper considers inequalities that arise due to tourism in the creation of fantasy scenes and relaxation spots that separate the tourist from the realities of the host country. The economic condition of the host countries means that majority of its citizens cannot afford the leisure and educational benefits their counterparts have. The paper analyzes the organizational structure of tourism and argues that, as with other foreign investments in Africa, the exploitation of the economy, land and people brings to the front burner, questions of inequalities and oppression in the continent. The question projected is how much of the revenue that accrues from tourism goes into alleviating the poverty level of the population who are around the tourist site. Secondly, how much of the accrued revenue does the government of the host country actually use in developing the country’s physical infrastructure, man power, economic advancement, and national growth as a whole. It concludes by suggesting the development of blueprints for tourism that would ensure poverty alleviation, sustainability and national development.

Reconstruction of Life and Mental Health in High School Students at Two Years after the 3.11 Disaster in Fukushima

Although Act Concerning Support for Reconstructing Livelihood of Disaster Victims was enacted in 1995, life reconstruction of victims from the 3.11 disaster is progressing very slowly.

Under the social condition high school students living in disaster stricken areas would have experienced changes in three domains of their life such as school life, family life, and community life. Impact of life changes related to the disaster may damage their mental and physical health. Differences in processing life reconstruction may influence their mental and physical health in different ways. We assume that students who are victims from nuclear meltdown of three of six Fukushima Daiichi nuclear reactors are less likely to reconstruct their livelihoods, so that their mental health would be poor.

We performed a questionnaire survey to examine associations between reconstruction of life and mental health in high school students after almost two years since the disaster. Five hundred and eighty one out of 627 students in a high school responded. About half of the total was suffered from tsunami and earthquake: 11.7% the total were victims from meltdown and radiation with or without tsunami and earthquake: fortunately 34.3% reported that they have no damage from the disaster. Thirty two percent to 40% out of all students report they feel other hand, rural revival family, or community are still influenced by the disaster. About 56% of the students are sensitive to a lesser tremor because they concern a big earthquake may occur. By our preliminary analyses, mental health assessed by the CES-D was related to unstable economic condition in a family, life changes in a family life, insufficient community resources, and changes in community life.

In our presentation, we will show how students experienced the reconstruction of life and how their experiences are related to their mental health.

ASAMIZU, MUNEHIKO* (Yamaguchi University, masamizu@yamaguchi-u.ac.jp)

Challenges in Human Resource Development for Rural Leisure Activities in Japan

This study offers a brief general description of rural leisure activities in Japan. Japan has less land area than many of countries in Asia, but the landscape of the archipelago has a rich and varied terrain broken up by sea, mountains and rivers. This small land itself comes in many varieties, and differs between Hokkaido (in the far north) and Okinawa (in the far south). This variety has aided the growth of various types of rural leisure activities. Mountain villages and small isles offer rural experiences that are unfamiliar to most urban people.

On the other hand, human resource development is one of the most serious issue in the management of rural areas. The Ministry of Public Management, Home Affairs, Post and Telecommunications (Somu Sho) has established an initiative called Chiiki-okashi Kyo-yoku-tai (Supporters of Regional Revitalization). In addition, some prefectural and municipal governments have established support organizations aimed at rural activities.

This study explores a few cases in Yamaguchi Prefecture (the far west of Japan) to assess potentials and challenges. The Yamaguchi Prefectural Government is allocating some of its budget for volunteer activities in rural areas. Due to depopulation, volunteers from urban areas are increasingly needed to support rural leisure activities. However, the small number of repeat volunteers from urban areas poses a key problem in developing sustainable rural leisure programs.

ASANO, TOMOHIKO* (Tokyo Gakugei University, tasano@u-gakugei.ac.jp)

Leisure Activities and Civic Engagement in Japan

The research question in this presentation is:

RQ1: Is there a positive relationship among Japanese youth between being a participant in a leisure group activity and civic engagement? RQ2: What conditions affect that relationship?

In this presentation, the focus is on the function of groups for leisure activities. Robert Putnam argued that in societies where people participate in various voluntary associations, including those for leisure activities, they are also active in social, political or civic activities. That is because, according to Putnam, interaction between people with different backgrounds in these associations develops a general trust.

Since Putnam proposed his thesis about voluntary associations and civic engagement, a lot of researchers have tried to examine it. Some of them could find a positive relationship between membership in such associations and civic engagement, others either could find no connection or a very weak connection. What about Japanese youth? That is the question in this presentation.
We contrast two successful cases of populist mobilization in the Eurocrisis context: the Independent Greeks and the True Finns, which, while unfolding within different environments, present striking affinities in discursive produce. Our methodology comprises of a content analysis of party documents and speeches, within which we identify and assess ‘populist frames’ and their composition. We find that, given the opportunity, populist discourse which pits the ‘moral people’ against the ‘corrupt elite’, can be constructed in countries with widely diverging political, cultural, and economic conditions, with equal success.

Populists in Greece and Finland may well understand each other as foes, with the True Finns portraying Southern Europeans as economically reckless recipients of undeserved aid, while the Independent Greeks argue against Northern Europeans who blatantly intimidate the Greek folk with cruel austerity demands. However, antithetical these populist framings may seem, containing opposite constructions of ‘the enemy’, they are indeed identical in terms of structure, reinforcing the overarching significance of the moral distinction between ‘people’ and ‘elites’ when it comes to forming populist discourse. Having shown what dissimilar contents populism can accommodate, we contribute to the literature on the concept by comparatively illustrating the importance of this discursive structure. Thus, we argue for a focus on the form, rather than the specific content of populist appeals.

ASCHOKAKOV, YURY* (St.-Petersburg State University, yaschkov@yandex.ru)

Liquid Stability in Theory and Society

The legitimacy of sociological theoretical knowledge cannot be provided by just a simple logical proof of its categorical system. It is provided by the presence of a relevant system of meanings and denotations, objectified in the practices of everyday life. Specialized sociological theories designate different social objects, and by redescribing the connections between these objects, they produce alternative models of the social world - i.e. define the project of social reality - to the individuals acting in the world of everyday life. In simple and traditional societies, presuming high stability level, the institutionalized monopoly on the projection of social reality was possible and also definable as a factor of social-structural stability. Their models of official symbolic universe were resistant enough to withstand emerging “heresies” (alternative symbolic projects) suppressing them through the therapy and the denial.

This paper argues that contemporary societies as complex “life worlds” are being transformed into a regime of “liquid stability”. These alternative symbolic projects supporting the need and the necessity for the existence of such. The very historical project of sociology as a new science about society supposed its development as an alternative version of social reality which was still non-existent. Its further advancement is connected to the presence in its theory of the different irreducible theoretical tendencies that cannot fit into the frames of a single paradigm. Social theory of the contemporary society cannot exist in a form of an enclosed self-sufficient complex of propositions, it tends to become an active self-challenge. The self-alternative theories construct the efficient first response to the unlimited possibilities and uncertainties of social dynamics.

Mediating Between Exclusionary/Inclusionary Politics and Migrant ‘Model Minority’

Regulatory migration regimes implemented in South Korea have evolved from a strictly exclusivist ethno-nationalist position into a more ‘inclusive’ and accommodating stance. Exclusionary policies (i.e. non-citizenship for migrant workers, astringent reunification, short-term work contracts, long-term citizenship rights) continue to be implemented alongside efforts of employing inclusionary approaches (multicultural plans for ethnic Koreans and marriage migrants, the Employment Permit System, the amended Nationality Act, etc.). In this paper, I posit that the exclusionary tendencies of these policies are not only steered by the strong ethno-nationalist sentiment but also by developmentalist politics which gives primacy on economic development over migrants’ rights. Despite the political and cultural barriers, policy outcomes suggest that there has been both ‘relative success’ and ‘failed attempts’ in making migration regimes more inclusive through the concerted efforts of Korean civil society for migrant advocacy and the accommodation of migrants’ demands by the Korean state. As a result, inclusiveness is present in selected policies with an attempt to integrate migrants in a “stratified and segmented” manner. However, this very same inclusiveness sometimes turns into a facade for exclusionary tendencies that are still entrenched in the structures.

Through in-depth analysis of existing Korean migration policies and multicultural project, I draw out the inclusive/exclusionary stipples of Korean migration strategy and how these influence the various strategies for claims making and
informal politics of migrant-serving mediating structures which serve as bridge between the Korean state and migrants being reconfigured as ‘migrant model minorities’. Based on a 12-month ethnographic research in South Korea from August 2012 to September 2013, I examine the two-pronged mediating roles of migrant civil society in (1) mitigating the developmentalist exclusionary aspects of migration; and (2) cooperating with the Korean state to reinforce inclusionary migration policies.

ASPINALL, ROBERT* (Shiga University, aspinall_robert@hotmail.com)

Risk and Reform in the Japanese Education System

This paper argues that the Risk Society paradigm developed by Ulrich Beck provides a framework that can reconcile the twin developments affecting Japanese education at the start of the 21st century: the parallel trends of individualization and globalisation. In Japan, education reform proposals from the 1980s onwards have aimed at encouraging a freer educational environment that can nurture strong individuals and future entrepreneurs. The Ministry of Education has also consistently argued for reforms that can better prepare young people for the challenges of globalization. Traditionally, however, educational practice in Japan has stressed group harmony and cooperation and so the forces that resist change are considerable. Most efforts to reduce pressures to conform to the group, therefore, have had disappointing results, as have programs designed to encourage greater communication with foreigners.

The government has to bring about meaningful reform to the education system has resulted in a failure to prepare young people for the challenges of contemporary society. Young people who do not have the skills to negotiate the new social and economic landscape are increasingly falling into low-paid, insecure employment, or withdrawing completely from society. This has given rise to the phenomenon of hikikomori; wherein large numbers have confined themselves to their rooms and cut all connections with the outside world. Also, many young people are deciding against having children – a trend which has resulted in a crisis of low fertility and a shrinking population. To use Beck’s terminology, these are people who have been unable to adapt to their role as ‘risk manager’ of their own life. The ethnographic feedback suggests that snowball sampling, beyond the question of statistical representativeness of the samples, maybe inadequate with the social and economic transformations at the global and national levels.

Structuring of Current Religious Practices in Polyconfessional Regions

Start of XXI century synchronizes with the next stage of secularization, transition to new cultural policy in world’s social space. Oppositely, for Russian civilization it’s a period when a religious identity is forming up. It’s a time of rational religious self-identification, time of reflecting about personal relations with sacral. Simultaneously, we can trace two main trends. First, we fix the modeling of religious practices on the basis of extended submissions about correct religious behavior. Second, new practices, that represents religious-life intensions of low fertility and a shrinking population. To use Beck’s terminology, these are people who have been unable to adapt to their role as ‘risk manager’ of their own life. The ethnographic feedback suggests that snowball sampling, beyond the question of statistical representativeness of the samples, maybe inadequate with the social and economic transformations at the global and national levels.

Interweaving Time and Space: An Analysis of Superflat and Japanese Lolita Fashion

In recent years, Lolita, a Japanese youth fashion and community that emerged in the 1990s, has perplexed scholars. Its name mirrors the 1955 novel by Vladimir Nabokov, and yet, its members, while often dressing in childlike attire, starkly oppose reference to it. They borrow and allude to historical periods both from their own country and others. They selectively prune Victorian, Rococo, and Belle Époqueness clothing, manners, and ideals. Simultaneously they reach back to shōjo, the girl culture that originated in the Meiji Era, which initially revolved around literature composed by and for female youth. In this paper, I will explore how their fashion relates to superfant, a term coined by visual artist Takashi Murakami, which examines the ‘flattening’ of time and space in the contemporary era. Through the lens of superfant, I will investigate Lolitas’ allusions to historical periods in differing geographical locations, and how they integrate those allusions into their community, and the wider Japanese society, through material means as well as through performance.

ATZENI, MAURIZIO* (Loughborough University, m.atzeni@lboro.ac.uk)

The Organization of Precarious Workers in Argentina: Between Marketplace, Workplace and Associational Power

In the global context, previously accepted divisions between formal and informal employment are losing ground. The last three decades of neoliberalism, rather than reducing the gap between protected and unprotected workers, have made work more precarious. Not just workers traditionally employed within the so-called informal sector of the economies have increased in number. Precarious employment is becoming the standard in formally regulated systems of employment and this across the Global North/GLOBAL South divide. Despite common tendencies, the possibility for collective organizing among precarious workers however differs consistently, between countries but also between different economic sectors of activity within the same country.

Drawing on fieldwork research currently conducted in Argentina, the paper aims to give a country overview of the factors that can explain the forms and strategies adopted by different groups of precarious workers in their attempts at collective organizing. Argentina in the last two decades has passed through deep crises and economic recoveries, processes of de-industrialization and parts of the economy to industrial production and has moved, in a relatively short time span, from a formalized and extended system of work protection and workers’ representation, close to the one existing in postwar Europe, to a system of employment that remains based, despite recent economic growth and government’s policy changes, on the precariousness and informality of the majority of the working population. In this sense and for its history, Argentina might be considered as a good example of the way in which structural processes continuously shift the borders within which precarious workers’ action takes place. Socio-political context, institutional framework and history of workers mobilizations are the general factors that can be outlined. However, the level of precariousness, skills, strategic location and technological development of the sector in which workers develop their activities also profoundly affect possibilities for action.
In our paper we offer a Master narrative of spiritual capital that moves beyond the public and private spheres, of paid and unpaid work, of different societal sectors intuitively-complex. Rather than an Analyst narrative, we need the Lacanian opposite analysis of the relations between capitalism and crisis. Main issue will be the economic shift in academia and democratization that opens up universities inter alia development of information and communication resources among the subjects of particular risk, control each other.

In the international competition for 'excellent' scholars universities refer more and more on gender equality policies that stem from human resource strategies, like Diversity Management, to become attractive employers. These policies do not only aim for promoting gender equality, but also go along with the market-efficien
tient re-organisation of universities. As one part of this also care responsibilities, for children fewer for elderly, are questioned.

Results of our qualitative research projects (documents and expert interviews) show how the entrepreneurial universities are transformed into (more or less) ‘caring’ ones, which are combining contradictory aims and concepts of gender, excellence and care politics.

Our conclusion will discuss the universities’ care concepts. They follow the tradition of social policies of the company. Recently a new mixture of caring activities can be recognized which is embedded in the entrepreneurial university's care management and administration and in the welfare regime of the two countries.

The paper argues that in the contemporary crisis of finance, economy and the welfare state a fundamental problem of modern and especially capitalist societ
ties arises in new forms: By prioritising the market economy capitalist societies are not able to care for their members in respect to life as the end of caring instead of caring as a mean of economy. In the first step this connex will be elaborated by a feminist and intersectional discussion of Marxist, Weberian and contempo
dary system may contribute to make of bilateral open dialogue between the state and society. This is possible through using of information and communication resources, which leads to confusion.

The modern society has new information technologies, which allows people always being in the process of communication. Development of communicative environment is developed public control, and also contributes to the formation of public opinion, which could resist the state will. Moscow is the initiator of the de

...
Inequality of the Russian Population: Quality of Life and a Preferred Social Order

Contemporary state of social inequality is especially dependent on level of life quality. Our analysis shows that interconnections between social inequality and quality of life influence people's view of social order. Based on sociological surveys across Russia, analysis shows the current state of social inequality in the country depending on type of settlement and region. Used synergetic method showed different preferences of Russian citizens towards different types of social order, including social democracy, liberal democracy and "middle" type and their dependences on quality of life in these regions and settlements. Unequal social positions of different groups correlates with their choice of social order and, therefore, ways of increasing their quality of life. According to the theory the higher is the person's quality of life the less probability is there for him to change social order because this pattern is non-linear and multidimensional which current survey tends to prove.

Gender Inequality Through Sonography Centers In Maharashtra, India

Dr. Smita Awachar, Associate Professor, Dept. of Sociology, Dr.Babasaheb Ambedkar Marathwada University, Aurangabad, India. India has one of the worst gender ratios, indicating gross violation of women's rights in the world. The main reason behind this is the practice of 'Dowry System'. It is considered that the birth of girl child in the family indicates the beginning of financial ruin and hardship. Indian society considers woman as burden on the family's resources. This attitude gives boost to avoid a girl child's birth. This problem is getting worst as scientific methods of sex determination and "middle" type and their dependences on quality of life in these regions and settlements. Unequal social positions of different groups correlates with their choice of social order and, therefore, ways of increasing their quality of life. According to the theory the higher is the person's quality of life the less probability is there for him to change social order because this pattern is non-linear and multidimensional which current survey tends to prove.

Leisure Time Activity of College Students – New Experiment in Rural Maharashtra, India.

Leisure or free time is time spent away from business, work and domestic chores. It also excludes time spent on necessary activities such as sleeping and, where it is compulsory, education. College is a place where students are studying there higher studies. They don't have any specific role to play in society. Young age always known as age when person can do what where can do. This age is treated as period of preparation of future. With the degree which they acquired after the completing higher education they may fruitful role to perform.

But in college affiliated to Dr. B.A.M. University, Aurangabad, Maharashtra, India one experiment is going on from last few years. This experiment gives skills and exposure to various professions to the Students.

In this research paper authors are trying to evaluate this experiment. This paper is based on primary as well as secondary data. Last 10 years, Collegen, Jalana, one of the backward Districts in Maharashtra, India, introduced new innovative program for their students every year.

1. Understand the pattern of leisure time activities.
2. Leisure time activities can transform in to main earning source for youngsters.
3. Younger generation is ready to learn more skills while pursuing formal education.

Young generation in India is ready to accept new skills to shape their personality during their free time means leisure time.

Graduates of Lebanese Institute of Social Sciences: Which Equality in Learning, Which Equality in the Job Market?

The Lebanese Institute of Social Sciences was established in 1959. This institute teaches Social Sciences among four private universities in Lebanon. In its mandate, research and teaching are the two pillars for its work.

This Institute was working in light of this aforementioned direction till the Lebanese civil war erupted in 1975 which resulted in hindering its activities. However, during this period, while the situation of educational institutions in Lebanon remained static, higher education witnessed significant structural changes at the world level with the increasing impact of globalization.

In 1990, with the civil war coming to an end, Lebanon entered a rehabilitation and reconstruction phase, and the institute of Social sciences like other educational institutions, was launched into many structural modifications. For instance, since 1990, the institute turned to mass education and is consequently stamped by the highest level of enrollment in comparison with other universities teaching Social Sciences in Lebanon. Moreover, it is the only institute in the Lebanese University which did not yet adopt the LMD system. However, the curriculum was not substantially updated to keep pace with the evolution of the job market.

In light of this fact, one of the most important questions to raise: does the equality of chances in enrolling in higher education programmes in the Lebanese University provide the same equality in the job market?

Another pressing question to be answered is about the capacity of the local tertiary institution, which has no opportunity to coin its own conditions of graduation and its own job market, to make a fair integration in the labor division of the scientific world.

Third Food Regime, Agribusiness Companies, Food Security and Poverty Alleviation: The Case Study Of Contract Farming In Antalya Kumlaca-Turkey

Rapid increase in the demand for high value export crops has been propelled by the needs of agricultural industries. Contract farming through which high value export crops are produced has been heralded as a ‘golden opportunity’ for producers for its ability to ensure optimal resource use and poverty reduction. This paper, based on a fieldwork carried out in Kumluca region of Antalya in the summer of 2012 and 2013, aims to challenge the contentsions about poverty reducing and resource optimization impacts of contract farming. It specifically questions the optimistic visions of the World Bank, the Ministry of Agriculture and Transnational seeds and agribusiness companies by arguing that under the ‘Third Food Regime’ developing countries’ countryside is being transformed in such a way that a new process of re-peasantisation is gradually underway. Contract farming enables international capital not only transform the countryside to ensure the production of high value crops needed by agricultural industries and supermarkets but also to take advantage of patriarchal cost calculation of peasants in the process of production. The empirical material collected in Antalya region in Turkey shows that contract farming has extremely complicated new forms of labour relations. Instead of using their own family labour contract farmers utilise share cropping arrangements with migrant farmers traditionally involved in grain production but no longer able to survive due to cuts in state support. The paper argues that greenhouse production of vegetables for import markets through contract farming arrangements utilises pre-capitalist forms of labour while using the most sophisticated production techniques and inputs controlled by transnational agribusiness firms. As such family labour of migrant workers is over-exploit-
ed while seed firms, local intermediaries and international supermarket chains manage to accumulate capital. Thus the claim that contract farming manages to mobilise the poverty reduction mechanisms is far from the reality.

SUELL, SHIKIRA N. (Arizona State University)

Examining a Paradox: The Differential Effect of Years Lived in the United States on Birth Outcomes for Latina Women

The unique stressors often faced by Mexican women living in the US, particularly for immigrant women, through limited financial resources, cultural beliefs regarding health and illness, lack of social support, and inadequate English language mastery, have been associated with poorer birth outcomes. Drawing from the Latino health paradoxes, birth outcomes are expected to be better for recent immigrants through health selection, health behaviors, or living in neighborhood ethnic enclaves. Conversely, birth outcomes are expected to worsen as Latinos acculturate within the US. This study examines the effect of maternal years lived in the US on birth weight. Data for this study come from a randomized control trial of 440 pregnant Latina women (81% Mexican origin) visiting a hospital that provides services to low income, prisoner, or immigration detainee populations. Upon enrollment, participants completed a baseline survey. Once the baby was born, medical outcomes from electronic medical charts were obtained on 332 of the participants. Using linear regression, the impact of the maternal number of years lived in the US on the baby’s birth weight was examined, and models controlled for number of contacts, income, age, number of pregnancies, and current cigarette and alcohol use. Results indicate a significant curvilinear relationship between years lived in the US and birth weight (R2 = 40.83, p < .05), with women living in the US between 6 to 15 years having higher birth weight babies, while women living in the US less than 1 year and women born in the US having similar lower birth weights. While the majority of all births fell within the average full-term weight between 2700 and 4000 grams, these analyses point to the complexity of the Latino Health Paradox, as both recent immigrants and those born in the US had lower weight babies, an unexpected finding.

RC29-500.3
AYODELE, JOHNSON* (Lagos State University, johnson.ayodele@lasu.edu.ng)

Crime Location and Reporting Practices of Victims in Lagos, Nigeria

Differential concentration by government of its development projects on urban areas at the expense of rural upgrade causes variation in the character of victimization and citizens’ responses to crime from rural, through semi-urban to urban communities. This paper examines the influence of crime location on crime reporting practices among residents of Lagos, Nigeria. Both quantitative and qualitative methods were adopted. Multistage sampling procedure was used in selecting 948 respondents for the survey. Six In-Depth Interviews, 12 Key Informant Interviews and 10 Case Studies were conducted with divisional crime officers, crime victims, victims’ relations, traditional rulers, landlord associations and religious leaders to elicit complementary qualitative data. Data analysis involved the use of simple percentages, chi square and content analysis.

Findings showed more respondents (62.5%) were victimised at public than other locations in the study area. Crime locations without light (49.3%) and those lacking network coverage for police notification by phone (49.3%) discouraged crime reporting. While 53.3% of respondents identified some crime incidents as too trivial to deserve reporting, fewer respondents (46.8%) insisted that serious crimes will be reported despite the crime location. About 59.1% rural, 47.1% semi urban and 46.7% urban respondents knewlocated crime location influenced their crime reporting practices, implying that 40.9% of rural, 52.9% semi urban and 53.3% urban respondents did not report their victimisation experiences. Chi-square analysis indicates that location and crime reporting were significantly related in the study setting (P value < 0.05).

The study concluded that disparity in resource allocation and security commitment to the diverse communities of Lagos accounted for respondents’ differing responses to crime through reporting. While public policy gives equal development and security concern to the communities in Lagos, the study suggests that police authorities should pay renewed interest to human safety to reduce residents’ vulnerability at public spaces in the study area.

RC29-504.3
AYODELE, JOHNSON* (Lagos State University, johnson.ayodele@lasu.edu.ng)

Public Confidence in the Police and Crime Reporting Practices of Victims in Lagos, Nigeria

Despite government’s recent huge budgetary investment in the police, the level of public confidence in the police continues to decline with corresponding fall in crime reporting by victims and witnesses of crime. This paper therefore examines the influence of public confidence in the police on crime reporting practices and associated factors for the absence of public confidence, among residents of Lagos, Nigeria. Both quantitative and qualitative methods were adopted. Multistage sampling procedure was used in selecting 948 respondents for the survey. Six In-Depth Interviews, 12 Key Informant Interviews and 10 Case Studies were conducted with divisional crime officers, crime victims, victims’ relations, traditional rulers, landlord associations and religious leaders to elicit complementary qualitative data. Data analysis involved the use of simple percentages, chi square and content analysis.

Findings indicated bribery (51.4%), ineffectiveness (49.1%), corruption (48.1%), lack of integrity (47.4%), complicity in crime (40.0%) and nonchalance (33.3%) as some of the factors responsible for declining public confidence in the police. Besides, rural dwellers have more confidence in the police than their semi-urban and urban counterparts. Thus, crime reporting diminishes in intensity from rural through semi-urban to urban communities of Lagos State. Though there is no significant association between public confidence and crime reporting, victims’ fear of offender revenge, crime and court processes, crime location and socio-cultural conditions of victims are responsible for low crime reporting in the study area.

The study concluded that declining confidence in the police results from the failure of the regulatory body to enforce professional ethics among personnel. This negligence has caused the reluctance of citizens to engage with the police to tackle crimes by making local intelligence available through crime reporting. Therefore, the study suggests that the police commission should enforce police codes of ethics and retool the police to earn public approval of their services.

Intergenerational Transfers in Families Across Welfare Regimes

Intergenerational Transfers in Families across Welfare Regimes

This paper presents a comparative study of intergenerational transfers (financial and social support) in light of recent financial crisis based on the most recent OECD, SHARE, and EU data available.

In this paper, I consider the following information to measure intergenerational transfers: (i) occurrence and amount of financial support from or to someone within or outside the household; (ii) occurrence and amount (in hours) of social support such as personal care, house work, child care, and other social help from or to someone outside the household. Similar to previous studies, I expect to find that a common transfer pattern which is a net downward flow from the older to the younger generations, both by financial transfers and by social support. Transfers from the elderly parents to their children are much more frequent and also usually much more intense than those in the opposite direction. I also expect to find some evidence that show differentiated patterns that correspond to a four-fold welfare regime typology.

Work and Life Balance: New Challenges for Women in Turkey

This paper highlights the roles of the family in welfare distribution and how work-life balance has been affected by the social policies, with particular emphasis in recent family provisions and labor market reforms. Furthermore, it examines whether a neo-liberal economic process leads the Turkish welfare regime to adopt the characteristics of the Liberal welfare regime. There are two main objectives in this chapter. First, it aims to highlight major characteristics of the Turkish welfare regime and its family policies. That is, it seeks to examine how the welfare regime has evolved in view of actors representing the interests of state, market, family, and local actors. Second, it aims to analyze the ways in which the Turkish

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
welfare regime and its family policies are affecting the welfare of the different cohorts and genders. That is, it seeks to scrutinize how changing families affecting equity across gender and generations. This paper shows that despite important gender equity reforms and significant increase in women's labour force participation, the Turkish welfare regime has still some inequality problems in terms of generations and genders and affects women's life balance.

Changing family structure and work-life balance will be analyzed in light of welfare regime theoretical framework. Turkey has revealed significant similarities with other Southern European countries through its familialistic structure, the residual nature of social assistance, and patronage. The methodology to be used in this paper depends on quantitative secondary data and previous studies on welfare states and family policies. I will use mostly comparative data on family policies, labour market, and demographic indicators from the OECD and the Turkish Statistical Institute to understand the transformation of the Turkish welfare regime and family structure.

A Global Profession: Pilots of Helicopters in Brazil and Mexico

La profession de pilote d'hélicoptère au Brésil et au Mexique est symptomatique des deux traits constitutifs de la mondialisation, l'uniformisation et la différenciation. Elle illustre dans quelle mesure, partant d'un cadre contraignant, les acteurs bousculent l'existant pour l'infléchir et éventuellement imposer leurs marques. La situation opérationnelle est proche à la construction de toute profession. Dans le cas examiné, la démarche visant à légiférer une profession en plein essor, au Brésil, est mise en tension entre, d'un côté, les exigences liées à la spécificité de la profession et, d'autre, la préservation des droits et statuts des travailleurs au vu de la recherche de flexibilité voulue ou subie par les professionnels. Au Mexique, les différends sont d'ordre institutionnel ; ils portent sur l'accès à la profession et la professionnalisation des pilotes. Il en ressort que la manière de gérer les dissensions diffère sensiblement d'un pays à l'autre.

Ainsi, même pour une activité professionnelle aussi normée que la navigation aérienne, soumise à des règles dictées par la législation internationale, le cadre réglementaire institué localement ne rend compte ni de la richesse des inter-actions ni des réalités. L'institutionnalisation de la profession fait appel à deux ordres différents. L'un, qui renvoie à la construction des normes, met en relief les tiraillements entre militaires et civils au Brésil, entre civils au Mexique ; il illustre les arrangements institutionnels propres à des arènes de pouvoir en voie de consolidation ou qui font encore l'objet de négociations. L'autre, celui des pilotes d'hélicoptère, fait appel à la consolidation de la profession dans un univers institutionnel instable ou en construction, rendu plus difficile par son caractère dispersé. La bataille qui s'est nouée récemment au Mexique autour de la profession est symptomatique des tensions qui prévalent dans la construction des normes et leur capacité à s'imposer.

Restructuring Foreign Worker's Policy in Malaysia

This paper attempts to analyze current regulations regarding foreign workers policy in Malaysia and how Malaysia can learn from the experience of several friendly-foreign workers countries. Malaysia is one of the most rapid growth economies in Asia and she is now facing shortage of labor to fulfill this growth. As far as current regulations and enforcement of foreign workers is concerned, Malaysia needs to reform these regulations, so that foreign workers can be fully integrated in the process of long-term economic transformation towards vision 2020. Empirical experience from friendly-foreign workers countries such as Canada and Sweden has shown that both countries benefited greatly from forming a dynamic policy and regulations governing foreign workers. This paper is based on secondary data from empirical studies of friendly-foreign workers countries and primary data from interviews foreign workers and local authority in Malaysia. The combination of both data will contribute to new inputs for restructuring of foreign workers policy in Malaysia. The result from this study shows that one of the conditions towards vision 2020 will be based on the superior of her labor market policy.

Socio-Cultural Influence of Gender Roles in Women's Health Care Utilization in South-West Nigeria

Socio-cultural factors are threat to women's health and well-being. A culture reinforces the gender role and life style of husband and wives. No matter how equipped a health facility is, it is the patronage that makes the difference to good health. People's socio-cultural background play vital role in seeking and acceptance of health care. The consequences of these factors on the use of health facility among pregnant women is a major cause of maternal morbidity and mortality and a powerful brake on the road to the achievement of MDGs as well as overall development. Maternal mortality in Nigeria is very high, with an estimated 52,900 Nigerian women dying from pregnancy-related complications out of a global total of 529,000 maternal deaths. It is not encouraging to note that 62 percent of births in Nigeria occur at home and 96 percent of women who received ANC services delivered at home. Several factors lead to health care facility utilization and among these the least studied is the socio-cultural dimension and hence the focus of the paper. The study was carried out in Ado-Odo/ Ota local government area with 260 eligible respondents, selected randomly from the eight wards in the local government. Interview approach was employed with the aid of structured questionnaire to elicit required information from the respondents and data analyzed using SPSS. The main objective of this study is to understand the influence of socio-cultural factors influencing health care utilization among women during pregnancy and child birth. The findings show that husband perception of pregnancy complications, age at marriage, who pays ante-natal bills, family type, treatment place decision are significant towards use of health care services by mothers. Paper provides recommendations for improving the use of maternal health delivery services in the study area and beyond.
alternative to extraordinarily complex regression models of rising inequality. Diffusion can occur either through emulation (a macrophenomenological mechanism) or through coercion (a macrorealist mechanism). These two mechanisms are not mutually exclusive. Either or both can be used by national elites to effect major changes of policy regime. Diffusion by emulation and diffusion by coercion are two macro-level mechanisms that can be used as a template for understanding the implementation of inequality-increasing social and economic policies in diverse countries around the world. They can be differentiated through examination of the micro-level mechanisms through which diffusion occurred in specific historical cases. This injection of agency into the inequality debates requires extensive micro-level work on individual countries, but the clear existence of macro-level trends suggests that this micro-level work should be done within the context of some form of macro-level diffusion model.

The World Social Forum (WSF) emerged as an alternative response and project to the World Economic Forum. It is envisioned and mobilized to construct “Other Worlds” in opposition to the neo-liberal global neoliberalization. The WSF is made of a great variety of alternative and grass roots movements, associations and peoples coming together in an “open space.” Seeking and constructing alternative ways to deal with the ongoing world global crisis, which includes environmental, social and political strategies, confront and solve the global climate crisis. This is why it can be linked to recent development in entrepreneurship research and practice, beyond its conventional scope, seeking to enlarge and broaden its conventional view. By so doing, entrepreneurship is reclaimed as a vital societal phenomena and as a social force for change in our times (Steyaert & Katz, 2004; Spinosa, Flores&Freyfus, 1994; Schumacher, 1973; Johannisson &Schwartz, 2012). Our aim with this paper, based on extensive experiences from participation in WSF activities, is to identify entrepreneurial dimensions and features observed in World Social Forum. To achieve this research objective, we focus on types and levels of interaction and networking taking place within the World and European Social Forum processes. WSF can be approached as a social space, as an organization, as a process and/or as a movement of movements, exhibiting a very extensive and activist-oriented kind of entrepreneurship (Gawell, 2004), that might entail a number of different balancing acts. For instance, between open and democratic processes at the grassroots level, while being also partially centralized and restrictive in various ways. From the perspective of entrepreneurship theory and praxis, one finds a delicate balance between concertated attempts to construct collective entrepreneurship to achieve greater impact, while also trying to act as a venue for a variety of distributed entrepreneurial initiatives, innovations and interactions.

The mystic is one of the most particular characteristics of the Brazilian Landless Social Movement (MST) that has been extended to many other social movements, both in Latin America and worldwide. It is considered as an undefinable notion that mixes ethics, aesthetics, subjectivity, identity, feelings, emotions and ideas, and takes place through many artistic forms (dance, music, theatre, poetry, etc). A really transdimensional and complex practice that articulates the symbolic, emotional, thinking, communicative and socialising dimensions, the mystic offers an analytical scenario for understanding some of the most important challenges faced by social movements and the changes they set to the notion of “organization”. From the case study of the MST, the text aims to assess the mystic summarizes, at least, two debates on the organizational and communicative dimensions of social movements, it is, the interrelationships between: 1) emotions and reasons and, 2) visibility and articulation. Given the specificities of the mystic, it challenges the traditional boundaries set by social sciences on these pairs - really transdimensional and complex dichotomies-, giving the possibility of thinking it in terms of interrelationships and dialectic dualities. We aim to explore the innovations this practice sets for the communicative dimension and the organizational dynamics of social movements, as a singular mediation (Barbero) that offers a new sense to the notion of “totality” (given its transdimensional nature) and avoids the tension between action and structure (due to the senses of the mystic practice and the particular individual-collective articulation proposed by it). Going beyond borders (the reason/feelings, or individual/collective divides) the mystic provides a scenario for the analysis of how a collectively organized practice from an important symbological and communicative dimensions, generates a strong sense of belonging to the social movement, reinforcing the organizational dimension.

The Global Diffusion Of Inequality Since 1970

Since 1970 income inequality has been stable or rising in almost every country in the world. It has not, however, risen at the same time or at the same rate throughout the world. This suggests the globalization, skills premium, and technological change explanations that prevail in the economics literature are likely incorrect, since all of these processes should in principle have relatively uniform global impact (Maddison, 1982). The constellation of data from differences in inequality bear the hallmarks of a diffusion model. Inequality has not arisen simultaneously around the world; it has “spread” from country to country in recognizable and sensible patterns. The diffusion model offers a simple, intuitively-appealing

BACALLAO PINO, LAZARO M.* (Universidad Nacional Autónoma de México, bacallao@yahoo.es)

Reading the Past and the Present, Imagining (and living) the Future: The Practice of Mystic in Social Movements

Opposite to the so-called revolutionary strategy in two steps (first, to take the power-it means, the state; and, second, to change the world), social movements propose a process of social change from here-and-now, taking their experiences and practices as an advance of the new society to be built. In this scenario, we aim to analyse the role of the mystic as symbolic mediation between the past-the present where social movements come from, and the present-the future they try to configure. The mystic is one of the most particular characteristics of the Brazilian Landless Social Movement (MST) that has been extended to many other social movements, both in Latin America and worldly, and we will analyse it through the discourses on it. It is considered as an undeniable notion that mixes ethics, aesthetics, subjectivity, identity, feelings, emotions and ideas, and takes place through many artistic forms (dance, music, theatre, poetry, etc).

A really transdimensional and complex practice that articulates the symbolic, emotional, thinking, communicative and socialising dimensions, the mystic offers an analytical scenario for understanding this creative temporal tension between past-present and present-future. Given its particular symbolic and emotional dimension, the mystic plays a core role in the process of creation, articulation and -what is more important- "imagination" of projects and visions of future, from a past-and-present based approach, and in the (emotional) mobilisation of individuals around those purposes and the unity for making it real. Finally, we aim to discuss how the mystic's special articulation of emotions and reasons, feelings and ideas, sensibility and reflexion -breaking traditional divides- becomes a central mediation (Barbero) in understanding the process of re-invention of new societies that are in the making.

The Job-Seeker and The Data Double: How Employers Use Information Seeking On The Internet In The Recruitment Process and Its Consequences For Interaction With The Job Seeker

Over the past years it has become increasingly more common for employers to search the internet for information on job-candidates, creating a situation were the interaction between the job-seeker and the employer becomes influenced by the information that the employer have retrieved from the internet. The different types of information packages that an employer takes part of during a recruitment process can be understood by Goffman's concept of roles. A person uses a number of different roles in daily life, which he or she characterises as 'front'- or 'backstage'- roles. In the situation were the employer uses information from the internet, employers may come to see job-seekers in their other roles and in setting that can be characterised as front- as well as backstage, and job-seekers will be evaluated based on whether or not these roles are perceived as compatible with the role of being an employee in the organisation in question.

In this paper we ask how employers interact with this "data double" and how the data double influences the interaction between the employer and the job-seeker. The study was conducted through qualitative interviews with employers from the private as well as the public sector in Sweden.

Polpan 1988 – 2013: Challenges for Constructing Questionnaires for Longitudinal Researches of Social Structure and Inequalities

The Polish Panel Survey POLPAN is a unique program of panel surveys carried out since 1988 in 5-year intervals, and focused on describing social structure and its change during the last 25 years in Poland. The resulting POLPAN 1988–2013 dataset will be invaluable for the social sciences, as it will allow for testing hypotheses about the impact of intellectual and social resources on individuals’ biographies, and more importantly, how the latter shape the social structure. The project’s theoretical approach is based on major assumptions of the rational action paradigm and life course analysis developed by Blossfeld and Perin (1998), Mayer (2009), Goldthorpe (2006), dePrete (2006, 2007) and Breen (2010).

Last edition of the study, due to the decision to rejuvenate the panel and the initiation of a new panel cohort, necessarily involved the need of redefinition and reconstruction of the research tools used in last waves.

Between 1988 and 2013 Poland underwent transformation - from the “old” and “new” elements in the social structure, differences in the standard of living, labor emigration on massive scale and its impact in understanding career and education paths, patterns of professional and family life with clear implications for social inequalities. In addition, the twenty-one-year-old of 1989 was a completely different person than his peer in 2013 – there was necessity of in-depth analysis of the findings of global self-evident questions in previous waves, take account of the changes of realities and consider questions posed during the communist era will be understood and does not change the meaning today. The challenge was to combine the necessary changes in the keen of maximum comparability of panel waves.

In a paper I intend to describe most important of mentioned challenges and give examples of solutions worked by POLPAN team.

The Adoption of ISO 14001 Across Korean Business Firms

This study asks why Korean organizations adopt environmental self-regulation programs; I focus specifically on ISO 14001. My analysis draws on a unique longitudinal data set to offer a new institutional explanation of the spread of ISO 14001 across Korean business firms. I argue that Korean firms have adopted this program in response to the passage of The Promotion Act for Conversion to Environmental-Friendly Industry Structure of 1995. ISO 14001 is more to have been adopted when large firms in that industry had adopted it and when firms have a connection with management standards consultants who have marketed international standards. These findings extend recent theorizing about legal ambiguity and the mechanisms of “coercive isomorphism.”

Explaining Intellectuals: A Proposal

In this paper we assess the potential of positioning theory for explaining intellectual life. Positioning theory pays attention to how intellectuals, like other people, use various rhetorical and dramaturgical devices to position themselves vis-à-vis others. The positioning of intellectuals affects the extent and nature of their symbolic and institutional recognition, as well as the diffusion of their ideas. We illustrate positioning theory through a number of case-studies, at least one of which will be dealing with the realm of academia and one with the phenomenon of public intellectuals. We demonstrate the advantages of positioning theory compared to rival perspectives in the sociology of intellectuals such as Collins’s network approach and Bourdieu’s field approach, paying particular attention to the different ways in which the issue of agency is dealt with in last waves.

Family and Parenting Values of the Youth: Stability in Shifting Russia

In consequence of long-term depopulation tendency in Russia the issues of the importance of a family, quality of a parenting are actual. Their research assumes the analysis of valuable orientations concerning family and parenting. Studying of youth values is especially important because it is somehow possible to influence views of young people.

The article presents the results of qualitative research of young people’s opinion about family and parenting. We used biographical research method and analyzed 147 essays of Russian students at the age of 17-21 years. This survey was conducted in Russian cities in Ural region in 2013. The childhood and adolescence of respondents matched the difficult period of social and economic reformation.

The analysis of the papers revealed three categories of the respondents who had given different descriptions of a parental family: “gratitude-description”, “neutralilty-description” and “problem-description”. There is a close interrelation between the inherited social experience of the relations in a parental family and image of their own future family. At the description of a parenting there are such words as “pleasure”, “happiness”, “care”, “responsibility”, “work”.

Results demonstrated the high value of a family in Russia today. Describing the desirable relations in the future family students emphasize stability and indisputable monogamy of its members. They deny divorce. The marriage unions of grandparents are often accepted as a model of marriage relations and positive experience.

Our results inspire a certain optimism about the demographic prospects of Russia. They show that the modern Russian youth who were born at the breaking point of Russian history successfully admitted traditional family values and behavior models. It creates conditions for carrying out the demographical policy oriented not only on growth of population, but also on improvement of quality of the human capital.

BAHAT, ESTHER* (University of Haifa, ebahat@gmail.com)

Leadership, Person-Organization Fits and Organizational Commitment

In the 21st century the world has become a constant changing and turbulent place. Moreover, the economic situation, in recent years, affects us all as private individuals and within organizations. We can reasonably expect greater needs for human resource and less funding to meet them. This study is offering a kind of leadership that develops organizational commitment (OC) not only by calculating the needs fulfilment of workers, but also by psychosocial aspects: Moral and self-perception (level of value realization and level of self-identity expression). While the OC research literature deals a lot with needs satisfaction as a contributor to OC, there is no theoretical reference to “self-processes” and no study examined there contribution to OC. This absence seems a bit peculiar given that the social psychology literature has devoted substantial attention to the “self” as a driver of behaviour.

The study examined the relationships of three aspects of person-environment fit (P-O Fit) that contribute to OC – degree of: Needs fulfilment, values realization, and self-perception expression. With manifestations of OC: “Identification”, “contribution”, “presence”. The study was based on a questionnaire given to 444 respondents, all members of community organizations who also were workers in business/work organizations. Findings showed fulfillment of needs to be central in its contribution to OC manifestations, and that its highest contribution was to the component expressing “presence”. However, satisfaction with values realization and self-identity expression also contributed to OC. Moreover, the three types of P-O Fit were distinct from one another, they contributed differentially to the explanation of OC manifestations, and their respective contributions to the prediction of OC level were additive. Therefore, leaders of organizations that put emphasis on satisfying the worker’s needs but also allow realizing values and expressing self-identities should extract a higher degree of commitment from their members.

BAILLAT, ALICE* (Sciences Po Paris/CERI, alice.bailat@gmail.com)

Analysing Discourses - Analysing Future Politics. A Study of Discourses on Climate-Related Migration in Bangladesh

Discourses on climate-related migration have recently emerged in Bangladesh and have gained a higher profile in the broader climate change discourse of this vulnerable country. More than 60 semi-structured interviews have been conducted in Bangladesh from 2011 to 2013 with a broad range of actors and stakeholders - including practitioners, bureaucrats, elected representatives, journalists, NGOs - that are involved in a field concerned with displacements due to climate change hazards (disaster management, migration management, development planning, etc). The analysis of these empirical data with a discourse analysis approach (framework of the discourses) gives some interesting results to understand how and why these discourses are constructed depending on the social authority of the producers, their professional and individual background and their institutional constraints. This discursive analysis, that combines both qualitative and quantitative methods, also aims to draw a mapping of those discourses and to identify the motivations and intentions behind them.

Referring to a discourse analysis perspective – in particular the Critical Discourse Analysis perspective – seems particularly relevant to understand how climate-related migration are perceived in Bangladesh and how those discourses shape the future national policy response (or, on the contrary, the lack of policy interventions). In other terms, how those discourses, that are constructed or even manipulated, shape future climate-related migration scenarios and the policies tailored to these new challenges.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Finally, this paper explores – through an original discourse analysis - the importance of problem-framing and social determinants that influence the emergence (or the non-emergence) of a new public problem and its political aspects. Using a set of concepts and methods from different disciplines – sociology of organisations, sociology of public problem, political science, linguistic etc. –, it also invites to transcend disciplinary boundaries and to develop an innovative thinking.

Where My Peoples at? New Orleans’ Bounce Rap and the Experience of Disaster

The connection between place and cultural expressions, such as music, is well established by scholars. This is particularly true for New Orleans where multiple forms of music like jazz and brass bands are thought to be both unique to the city and representative of social conditions there. While there have been a number of studies on the importance of New Orleans African American music practices, little attention has been paid to those native to the city’s most disenfranchised areas. Bounce rap is ‘New Orleans project music’ and is a patently local form of expression that gives voice to life in very poor areas of the city. Since Katrina, numerous housing projects, home to many bounce artists and audiences, have been torn down and replaced with mixed-income developments. Largely lauded as a positive move, the loss of the projects is not without consequence and has further disrupted long-standing communities that were dispersed by the storm. Many residents, including local musicians, remain displaced. Little is known about what bounce rap music demonstrates about the artist’s perspectives of life before and after Katrina. We examine this issue through a thematic content analysis of pre-and-post Katrina bounce rap music lyrics. The research addresses what bounce music, as a reflection of life in New Orleans, reveals about changes in the social structures of low-income black neighborhoods of the city. We also discuss if and how such significant cultural practices has been transformed by the storm.

BAIR, JENNIFER* (University of Colorado at Boulder, jennifer.bair@.colorado.edu)

Lead Firms, Joint Liability and the Regulation of Work in Global Supply Chains

This paper examines how the concept of joint liability can be applied to labor organizing in the context of global supply chains. It does so by revisiting the history of jobbers agreements in the U.S. apparel industry. Jobbers agreements were collectively bargained contracts that were negotiated between jobbers—companies that marketed but did not make apparel—and the unionized workers employed by the independent contractors that filled their orders. The paper then explains how the jobbers agreement model is inspiring new efforts to negotiate “buyer agreements” with modern-day jobbers: brands and retailers such as Adidas, Wal-Mart, and Apple that sit atop global supply chains. Such efforts leverage creative forms of organizing and enlist students, activist consumers, and other stakeholders to demand recognition of modern-day jobbers as de facto joint employers.

BAKER, NATALIE* (University of California at Irvine, nbaker@uci.edu)

Producer Relations in Hungary

This article studies the relationship between privatisation and income inequality in Western China, based on survey from 11 Western provinces, collected in 2004-2005. The Chinese government in 2000 initiated a campaign to develop Western China and reduce local and regional inequality. Privatisation has been a central component in the campaign. A key question is therefore whether a higher degree of privatisation contributes to reduce income inequality. As a macro-level socioeconomic structure, privatisation may have great impact on individual social positions such as education and occupation. This can influence individual income levels, and be further aggregated to the outcome of income inequality. Inspired by Coleman’s theory of micro-macro relation, the study first explores the macro linkage between privatisation and income inequality. Using multilevel random coefficient modelling, it then studies how the impact of individuals’ education and occupation on their income level varies between different regions with different degrees of privatisation. Finally, it simulates the macro income inequality based on multilevel models. The study shows that income inequality appears to be higher in regions with higher degree of privatisation. Furthermore, the study confirms that individual income is strongly affected by education and occupation, which supports the market transition theory in the context of Western China. This relation varies across regions with different degrees of privatisation.

BALAZS, BALINT* (Environmental Social Science Research, balazs.balint@essrg.hu)

Agriculture-Supported Communities: Experiences in Consumer-Producer Relations in Hungary

This article presents the case study of a rather underdeveloped and experimental Hungarian CSA sector which gained recognition in recent crisis driven times to show how consumers, small agro-food businesses, non-profit groups and citizens radically enact sustainable food consumption in Hungary. Although their beneficial existence has been widely acknowledged in governance, their economic performance is still that significant, while they also show a substantial awareness raising potential. This study examines the practices of CSAs to understand the economic, environmental and social motivations behind running or joining a CSA operation. Our findings are based on qualitative interviews and data from stakeholder meetings where we facilitated a structured vision to action workshop to identify the main mechanisms and strategies of building alternative food networks. The article presents results on the shaky, non-self-sustaining foundations of CSAs to analyse how they catalyse social change to enhance consumer-producer cooperation and regain control over the ways in which food is produced. The research found that current share prices of CSA farms do not reflect all of the costs of production, and hence might not be an economically viable approach to sustainable agriculture if CSA farms continue their current pricing strategy. This aspect has not received enough attention from scholars and local food advocates who tend to see CSAs as ideal examples of sustainable food systems. The study concludes by pointing out at what role do strategies of building alternative production of the Hungarian food system by providing a model for more profound social transformation.

BALDASSAR, LORETTA* (University of Western Australia, lorettabaldassar@uwa.edu.au)

Achieving an Adequate ‘Distant Co- Presence’: Polymedia As Vibrant Matter in Transnational Family Life

Both mobility and technologies, and their intersections, need to be theorised as integral to transnational family relations. In this paper, I employ a framework of circulation (Baldassar & Merla 2013) as a methodological tool to ‘follow the thing’ that is, care, across distance and over time, as well as its intersections with various dimensions of social reproduction. I also apply Madianou and Miller’s (2012) theory of polymedia, combined with Jane Bennett’s (2010) notion of vibrant matter, to explore how communication technologies are not only sustaining, but transforming, circuits of distant care. These transformations in distant care begin to stretch the limits of some of our distinctions between proximate and distant family life, in particular through transformations in co-presence (the feeling of ‘being there’), which challenge the epistemology of intersubjectivity.

Perverting Autochthony: The Local Festa As a Rite of Institution Informing Public Debate on Migrant Belonging

The intersections of migrant, racialised, and autochthonous belonging were spectacularly evident during an altercation that took place at the annual patron saint festa in Prato, Italy, 2010. Home to one of the largest Chinese migrant communities in Europe, Prato has been living what the locals refer to as ‘a difficult moment’ in history. The economic context is shaped by a beleaguered historical textile industry perceived by locals to have been ‘stolen’ by a new cognate ‘ready-to-wear’ fashion industry championed by the Chinese migrants. The left-leaning local government, in office for over 50 years, was defeated by a new right government (with links to the Lega Nord) on an overtly anti-Chinese migrant campaign, which appealed to notions of autochthonous centuries-old belongings. These political and economic tensions came to a symbolic head at the start of the annual historic procession through the streets of the medieval town center. The left-leaning Provincial Government invited migrants (many with Italian citizenship) to join their section of the procession. The Mayor intervened to publically forbid the migrants from participating, explaining that their presence perverted (s naturava the historical ritual. Drawing on Bourdieu’s notion of rites of institution, I examine the local government’s representations of the local festa over the past few years to explore the shaping of public debate on Chinese in Italy.

Me? A Secretary? The Moderations of Class and Gender in India’s Elite Law Firms

Following market liberalization in 1991, the Indian legal profession has had more demands for cross-national legal services than ever before. One of the ways in which the country has responded to this global work and clientele, is by reorganizing its professional spaces in new, competitive ways. On the one hand, there has been a burgeoning of new, elite law schools that train young lawyers in comparative, cross-national law and include rigorous clinical curriculum. At the same time, there have emerged, especially over the last decade, a set of big law firms that are, in the Indian context, relatively new legal organizations that deal primarily with transactional corporate work for large global and domestic corporate clients. These firms have expanded and grown institutionally in many unprecedented ways, but a striking feature of their emergence—especially among the largest and most prestigious firms in the country—has been the growth and success of their women lawyers. Preliminary interviews suggest that women in these big law firms are not discriminated against or disadvantaged as compared to their male peers in that they receive similar organizational rewards (pay, promotion, client attention) and interactional status among clients, peers and superiors alike. This is an intriguing finding in that it does not correspond to mostly gender-disadvantage accounts of women in high status professions universally. We know that critical stratification scholars have long credited the unique power of intersectionality in understanding disadvantage and discrimination. I offer that a similar extension of this framework is useful in understanding the success of these big law firm women lawyers. My research probes the ability of class to moderate that impact of gender within high status professional organizations. Put simply, it asks: is this unique “gender-neutral” advantage (to the extent it exists) limited to certain kinds of women?

Women in Black: Gender Negotiation in India’s New Organizations

Over the last three decades, the feminization of the legal profession has been a constant feature across all fields of law. The main exception to this trend has been in India, where women have consistently been less than 10% of the practicing Legal Bar. It is of especial contrast then, than in two most prestigious law firms in the country, women constitute about 50% of the workforce and record similar professional rewards and advantages as their male peers. Using in-depth interviews with past and present lawyers, this research will investigate comparative frameworks to test and explain this unlikely finding about institutional change. For instance, one reason for this advantage might be that both these unique firms emerged as new “global” workspaces following, and necessarily responding to, market liberalization in the early 1990s.

This project is empirically significant because its dissonance is unique to the Indian context as well as everything we know about women in prestigious workforces more generally. Investigating these organizations and women is theoretically significant because it speaks to important literatures on organizational emergence (Powell and Padget: 2011), gender stratification (Ridgeway:2012) and the influence of globalization in emerging markets (Meyer & Rowan: 1977).

BALLANTYNE, GLENDA* (Swinburne University of Technology, gballantyne@swin.edu.au)

Mobile Ambivalence: Turkish Alevi in Australia

The idea of ambivalence has emerged as a particularly apt interpretive prism for analysing the experience of migration. The co-existence of contradictory emotions it speaks of provides an illuminating frame for analysing the feelings of loss and new possibilities that are frequently part of migrants’ lives, and as analyses in the area have shown, the lens of ambivalence has lent itself to interpretive nuance, distinguishing among objects of ambivalence (place of origin and place of destination) and responses to ambivalence (negative, positive and mixed). In this paper, I attempt to delineate the frame that is, I attempt to explore a case of ambivalence associated with denigration in a place of origin that has been transported into, and affected feelings towards, a place of destination.

The case is that of the Turkish Alevi in Australia. The Alevi are a socio-religious minority in Turkey with a long history of fraught relations with the region’s ruler and religious regimes and Sunni majority. Their markedly heterodox traditions, originating in Anatolia and rooted in but going beyond Shia Islam, have been subject to repression and denigration since the 16th century. Australia has been a significant destination for Turks emigrating in the postwar period, and Alevi are a significant proportion of them. My research into transformations of Alevi collective identity in Melbourne suggests that ambivalence towards Turkey stemming from this historical experience is replicated in feelings of ambivalence towards the broader Turkish community in Australia, adding a further layer of ambivalence to Alevi complex relationship with their country of settlement.

MAZZELLA, SYLVIE* (LAMES, Mazzella@mmsh.univ-ax.fr)

“Free Movers” and Exchange Students in Europe and around the Mediterranean Sea: Antagonistic Figures or Two Sides of the Same Coin?

The European student mobility Erasmus Programme, born 25 years ago, has attracted interest and many millions of students in the European Union (as well as students from outside the Union). Student mobility is multifaceted and can not be assimilated to a single type of mobility that could be qualified as “organised” or “institutionalised”. To consider the state of the art, on the injunctions and incentives to mobility in Europe and around the Mediterranean sea and the obstacles to students migration, will go back over the main research undertaken in recent years on the subjects in Europe (Erlich, 2012; Ballatore, 2010; Mazzella, 2009; Murphy-Lejeune, 2001; Agulhon, Xavier de Brito, 2009; Cammelli, 1999; Maiworm, Teichler, 1997...).

First of all, we will take a particular interest in the construction of an European space of Higher Education and its historical link with the Mediterranean area, then we will pass through comparative analysis on European and Mediterranean student migrations, to finally look at projects, expectations and free movers’ and exchange students’ experiences. We will develop the idea that, general speaking, a part of the European research results leads one to believe that exchange programs would only foster forms of “in-depth tourism” and would have little to do with others forms of “free mover” migration. The “acculturation” of students would be as temporary as the stay. We will wonder if this mobility could be predicated of others types of migration and conclude also underlining that in Europe...
the competition paradigm seems to have won the pot over the cooperation one, which is at the base of student exchanges and that, even today, still lacks a lot of studies and reliable data which would allow one to compare “organised” and “non-organised” mobility, student and professional mobility, as well as more general research on particular types of migration in Europe.

Segmented Labour Markets and the Ongoing Blending of Cultures of the European Commission Skilled Workers

The European Commission of Brussels is often seen as a European-minded body of privileged civil servants. These civil servants hold varying positions varying between trainees, contractual staff, interim staff and experts. Looking closer at the diversity of the workers in terms of age, gender, social and schooling backgrounds and at the hybridization (In Globalization theory, the ongoing blending of cultures) inside this institution, we can see people performing their activities under different types of job contracts. These are increasingly influenced by the logic of the market and are becoming more precarious. In other words, today in the field of Eurocracy, there are deep differences between permanent and non-permanent positions. The gap between official and contractual staff did not exist previously and has tended to increase in recent years.

In this paper we focus on this new population of highly skilled workers, who invest their own resources, empathy and individual autonomy to try to enter this specific labour market. Doing so, we will try to construct a picture of the migratory paths and social backgrounds of these employees before they enter the institutional upswing a survey within the European Commission in Brussels. We will analyse 1234 questionnaires, 22 interviews and some direct observations to develop a critical discussion on the conditions faced by these knowledge workers. We will explore their representation, experiences and the way they see their future. Hence, we will address the question of spatial, national and social inequality for this newly formed European transnational elite.

How Professional Groups Defend Their Interests through Incentives to Parliamentary Members? the Cases of France and Germany

How do professional groups such as managers, artisans, employees or even unemployed people get in contact with parliamentary representatives and how do they succeed (or fail) to convince MPs to stand for their own interests? It appears that one of the reasons why professional groups succeed in having their interests defended lies on the nature of the incentives that these groups can propose. These incentives can take various forms: financial, symbolic, social or political. Thereby, we would focus on the sociological and political dimensions of the notion of "incentive" and "interest". As a result, multiple questions arise. How do these groups introduce their interests to MPs? What type of arguments do they use? Where do MPs and professional groups meet? How do professional groups suggest their incentives to MPs? Is it necessary to propose powerful incentives to have their interests represented?

Through these questions we would like to propose an analysis of the processes during which professional groups develop the incentives and the interests introduced later to MPs. Also, we would like to propose a detailed answer of the question: Why do MPs agree to defend the interests of specifics professionals groups against incentives? To do so, we would propose a comparative analysis between France and Germany based on 70 face-to-face interviews with institutional representatives of professional groups and MPs as well as observations led during meetings between these actors and archives (around 900 documents). By focusing on the financial committees in the Bundestag and the Assemblée Nationale, we would propose an analysis of the interactions between professional groups (through their spokespersons) and MPs on different issues related to taxes. More generally, the comparison would allow us to draw some national trends to understand how professional groups succeed in being politically represented.

Gendered Nationalism and Global Citizenship in Nigerian Beauty Pageants

This paper focuses on the Nigerian beauty pageant industry and its links to the development of Nigerian gendered nationalism. It focuses on the “beauty diplomacy” narrative used by Nigerian beauty queens to present themselves as worthy cultural citizens. This narrative connects them to other ordinary Nigerians and promotes their own voices and that of the public in the national arena. Beauty contestants insisted that they could use the attention garnered through pageants as a tool to amplify their voices, make a difference in the country, and reach for their goals. Throughout the course of the competition and during their subsequent reign, a beauty contestant’s sexuality is judiciously protected and project ed as “pure.” This ‘purity’ is linked to their ability to be recognized as suitable role models in Nigeria whose charity, development, and goodwill is appreciated.

Through their celebrity status they craft special platforms to address issues of national concern and do social work during their reign. These women are not only the face of Nigeria, but also groom themselves as “citizens of the world” through their travel and participation in major international contests. I focus on the complex process these contestants must navigate in representing and propelling their country’s progress to a global society. Contestants stressed their own symbolic role in which showcasing their own positive attributes served a larger function of highlighting the good elements of Nigerian society both domestically and to the broader global community.

BALOURDOS, DIONYSIS* (National Centre for Social Research, dbalourdos@ekke.gr)

Aspects of Poverty in a Period of Recession in the Mediterranean Countries: A Gender Perspective

This paper aims to identify the impact of the economic crisis on woman’s poverty in the Mediterranean countries, the most affected by the recession. The research questions are: Is it cross-cases? In what roles do unequal sharing of unpaid care and housework burdens, gender roles and gender stereotypes compound to produce unequal life chances for women? Can gender perspectives in policy design be a response to the financial crisis?

Based on recent research, this paper’s objective is to depict the current position of women in poverty in a comparative perspective. The analysis focuses on the “traditional forms of poverty” from one generation to another and is mainly linked to economic factors and to the “new urban forms of poverty” consisting of a domino effect (loss of job, low income, in work poverty, family breakdown, “delayed” fertility, separations and divorces).

Provided evidence demonstrates that due to the recession even more women have fallen into poverty, with the loss of jobs, wage decreases and with the increase of uninsured people pushing many women into an uncertain and potentially devastating financial situation. The paper also examines another field often overlooked when it comes to discussing the leading causes of poverty among women: The fall from middle class standards due to divorce. Data confirm that typically divorced women especially older women or single mothers are the most vulnerable, while the poverty risks are lowest among married women and dual-earner families. It seems that financial hardship is a major cause of family breakdown. Low-income parents are more likely to break up and to remain poor after the split than others. Consequently, poor economic conditions have strong impacts on fertility behavior.

BALOURDOS, DIONYSIS* (National Centre for Social Research, dbalourdos@ekke.gr)

The Impact of the Crisis on Child Well-Being and Poverty: A Challenge for Social Economy?

In Europe, around one in three children will experience poverty during childhood. For most, poverty will be transitory; however, for those growing in countries affected mostly by the crisis, poverty persists for many years. Children experiencing such a persistent poverty are more likely to be born into single-parent families, have mothers with low education level and to be unemployed or even in low-paid work not guaranteeing a path out of poverty. Theories suggest that experiencing poverty during childhood may affect one’s life social and economic opportunities. Empirical studies confirm that deep and persistent childhood poverty is likely to be passed on to future generations, consolidated, hard to eradicate and starting even more early on in life.

In periods of recession, the social sector of economy can be the driving force for the social integration of children and poor families. Numerous initiatives at local level show that the involvement of actors, workers, stakeholders and beneficiaries in the “social enterprise”, can enhance their societal success and contribute to employment creation and to a fairer income distribution.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper is based on recent research on social enterprise and partnership initiatives to promote local development, regeneration and combat child poverty and social exclusion in the countries most affected by the financial crisis. The paper analyses the respective impacts of these new ‘business-community partnerships’, including their legal framework, financial resources and governance schemes on communities and ecosystems on relative poverty and social exclusion. Although this attempt is yet to be completed and the quantitative data are not enough to be able to draw any definitive conclusions, the key finding confirms that social economy enterprises can play an important role in improving equal access to numerous services for families and children, thereby preventing and providing solutions to the increasing poverty problem in society.

The volume of information available for research has grown rapidly in recent decades. According to the Cisco Systems, we are beginning the era of Zettabyte. The access and analytical treatment of this enormous amount of information have created a debate in social sciences about new methods, epistemological and theoretical conceptions. This study is based on systems theory, sociocybernetics and new propositions of the computational social science. Four concepts connect the areas of knowledge involved in this project: complexity, emergence, change and evolution. The fundamental premise to make sense of the data is that a social organization evolves or transform over time. Data can be conceived as a registry of how systems are organized and how it changes over time. In the classical sociocybernetics, the same idea constitutes the fundamental concept of the social process, which can be identified through social patterns. It means that social phenomena emerge from social relations, even if individuals are rational agents of these changes. The methodological challenge consists in observing and selecting data to reveal patterns of social relations and unravel the interaction between the components of a system. The intention is to understand emergence of social phenomena (migration, inequality, etc.) and the consequent change in the social system. This study, conduct by the Laboratory of computational sociocybernetics (INFOsoc - UEL), has approached agent-based simulations in comparison with observed data from social networks. The first conclusions are the volume of data is less evident in a general resistance to any collective leadership, and preference for loose coordinating structures in lieu of solid organizations. This methodological challenge consists in observing and selecting data to reveal patterns of social relations and unravel the interaction between the components of a system. The intention is to understand emergence of social phenomena (migration, inequality, etc.) and the consequent change in the social system. This study, conducted by the Laboratory of computational sociocybernetics (Infosoc - UEL), has approached agent-based simulations in comparison with observed data from social networks. The first conclusions are that the volume of data is less significant than the analytical capacity to select specific data in order to identify social interconnections and find patterns of systems complexity.

The Social Role of Organic Intellectual: Four Amendments to Gramsci

Based on a study of the social role of intellectuals in the Middle East, this paper explores evidence that suggest that the role of intellectuals in the public sphere can be analyzed with the aid of four important revisions to Gramsci’s old outline of the notion of the “organic intellectual.” First, while the organic intellectual may be a product of a social group, that figure may also be understood as a producer of such a group. Second, organic intellectual activity seems to be most effective when it is intertwined with the intellectual demands of complex everyday life, rather than with any specific ideological program. Third, the organic intellectual tends to have a nuanced connection to “high culture,” which such an intellectual tends to regards as a vehicle for one's own social program, rather than as its own fetish. And fourth, the effectiveness of the organic intellectual can be measured in the extent to which the intellectual transforms the audience’s reality even as he or she claims to preserve it. At the end, the paper suggests that organic intellectuals ought to be seen in a more comprehensive way in terms of standing in for a specific group. It also suggests that their social role is enhanced through a particular balancing of the dialectics of innovation and rootedness, a dialectic that the organic intellectual is more equipped to handle than any other.

Economic Attitudes in Postsocialist Countries

More than two decades after the fall of communism in Central and Eastern Europe and Eurasia, and the collapse of socialist economies, these countries have undergone monumental transformations. The fall of socialism coincided with the rise of neoliberal policy advocacy world-wide, and many postsocialist governments have adopted neoliberal economic policies. In this paper we examine what extent the economic attitudes of citizens in these countries have changed over time, what the role of the recent economic crisis might have been, and how attitudes compare to those held by their Western counterparts. Using European Values Survey and Life in Transition Survey in different waves across time, we examine citizens’ attitudes about economic governance, inequality, markets, welfare, unemployment, and corruption. We compare postsocialist countries that...
are now members of the EU with Russia and the CIS, and the Balkan postsocialist countries.

Headteachers’ Conceptions of the Professional Competence and Professionalism Among Newly Qualified Teachers

Education scholars globally are agreed that the teacher is the most important resource in ensuring quality delivery of education. Using data from a qualitative study, this paper focuses on the conceptions of headteachers of the professional competence and general professionalism of newly qualified teachers in secondary schools. Data were collected through interviews from eighteen headteachers. An analysis of findings revealed dissatisfaction from headteachers regarding the professional competence and professionalism of newly qualified teachers. The article’s analysis incorporates detailed examination of the concepts of professional competence and professionalism and offers explanations for their lack among newly qualified teachers. It identifies as a gap in teacher professional development the under-prioritisation of matters of professional ethics which lead to most newly qualified teachers having difficulties transitioning from being a student to becoming a teacher. It is further observed that training newly qualified teachers generally lacks regulatory and quality control mechanisms that many other professions are subject to. Inadequate training, uncoordinated professional and organisational socialisation all conspired to create several challenges to the system in general and for the newly qualified teachers in particular in the execution of their duties. There is no difference between males and females regarding both their levels of professional competence and attitudes towards professionalism. To address the identified challenges and improve professional teaching practice headteachers used several methods including Continuous Professional Development and deliberated teacher reflection.

Key words

Professional competence, newly qualified teachers, professional development, professionalism, Madalitso Khulupirika Banja.

The Theoretical Metaphors of Chicagoan Human Ecology

The theoretical metaphors of Chicagoan Human Ecology.

The reception of the Chicago sociology in the Russian sociological discourse traditionally was concerned with the “Chicago style” in empirical research. Recent re-evaluation of the Chicago heritage put ahead its theoretical peculiarity, namely – Human ecology of Robert Park as the post-Simmelian sociology of space. The outline of the main metaphors driven from the Human ecology and used to represent the reassessed significance of the Chicago theoretical perspective includes the following ones:

1. The ontological metaphor: Society as a “Process” (VS “System/Structure” in the post-Chicago sociology). “CCAA” as the structure of the social process. “CCAA” and “AGIL” – the homology of the contraries. The “Cycle” as a way of functional metaphor for the social process and the recurrent form of the “immortal ordinary society”.

2. The methodological metaphor: “Dynamic disequilibrium” -- interactionism, atomism and “sympathetic identification” on the micro-level (spatial dimension) and evolutionism (from biotic to social/moral) on the macro-level (temporal dimension).

3. The epistemological metaphor -- “Laboratory” (Racial relations, or The City). “Empirical bias” rendered as a tutorial problem and as the way of institutionalization rather than a prospective for the discipline development.

4. “Marginalization” and “in-betweenness” as the core of the sociology of Space. The ideal social type of the “marginal man” as the embodiment of the “intelligent creativity”.

5. “Social order” and “freedom” as heterogeneous multileveled and interweaved phenomena.

ALVARENGA, JOSÉ PEDRO (Federal University of Goiás)

The Body in the Brazilian Congress of Sports Science

This text shows partial data of an exploratory bibliographic research, in which the objective is to identify the principal conceptions of body, aesthetics and health into the scientific production of Thematic Work Groups “Memory, Culture and body” And “Body and Culture” in the CONBRAE, from 1997 to 2009. Quantitative data have been collected from the Proceedings of the Brazilian Congress of Sports Science (CONBRAE). The focus from the survey was the Thematic Work Groups (TWG) “Memory, Culture and body” And “Body and Culture”, and it was considered the production since 1997. Partial results have been shown. Of all the pieces of Work presented in CONBRAE, it had 625 proceedings; 312 in the specific TWG. From the total, 171 were in the TWG Memory, Culture and Body and 141 in “body and Culture”. It identifies the increase of proceedings from 1997 to 1999 in the TWG “Memory, Culture and Body, there is a decrease from 1999 to 2003. The proceedings also decrease in the TWG “body and Cultures” in 2009. Of the Selected Works, 97.73% has the keyword body, 17.05% aesthetics, and 9.66% health. The FURN (Federal University of Rio Grande do Norte) was the institution that presented most part of Proceedings in the TWG, moving the knowledge production to the center South-Southeast, becoming the most important center of knowledge production in Brazil around this theme. The research is still in its initial phase, but it is possible to understand the ways, clippings and focuses on how the education is expressed in body, health and aesthetics conceptions in the TWG’s productions and its implications to physical education teachers’ formation.

BARALDI, CLAUDIO* (University of Modena and Reggio Emilia, claudio.baraldi@unimore.it)

Children’s Active Participation in Institutional Interactions

The concept of children’s participation enhances different versions of the relationship between children and society. This paper aims to clarify the meaning of children’s participation in the relationship between children’s individual action and the social treatment and consequences of this action. For this purpose, the paper explores the integration of different theoretical approaches that can shape research on children’s participation, looking at interactions, complex social systems that include interactions, and narratives that are produced in these complex social systems. This integration allows understanding the ways in which children actively participate in communication processes, the ways in which social structures condition children’s active participation, and the ways in which children’s active participation can enhance structural change in social systems, through the implementation of “promotional interactions”. This theoretical perspective is exemplified in the case of the education system, in which different forms of interaction can have different consequences for children’s participation.

The Role of Family Background and Gender Stereotypes in Determining Boys’ and Girls’ Mathematics Achievement

The presentation reports the results of the 2010 empirical research examining the role of family background and stereotypes about mathematics as male domain in boys’ and girls’ mathematics achievement in Croatian compulsory education (N=677, 52.4% female). Individual roles in determining mathematics achievement of both these variables were widely confirmed (Bourdieu, 1996; Sirin, 2005; Eccles, 1987). This presentation focuses on exploring their possible interaction effects on boys’ and girls’ math achievement.

Family background was operationalized as a composite of indicators of socio- economic background (parental work status, and status/subject capital (parental education, possession of relevant goods), modelled after Bourdieu (1977). The scale assessing stereotypes was constructed for the study purpose and validated in pilot study. Mathematics achievement was operationalized as a composite of mathematics school grades.

Two-way ANOVAs revealed some gender specificities in the effects of the IVs on DV. Results obtained for girls indicated both main effects and interaction significant. Girls who belonged to higher status families and those who reported lower status families achieved better in mathematics. Significant interaction effects disclosed that being from lower status families and supporting stereotypes achieved better in mathematics. Significant interaction effects were found for boys’ mathematics achievement. Boys who belonged to higher status families and those who reported lower status families functioned as a barrier for the stereotype effect. As for the boys’ math achievement, only family background appeared to be relevant. As expected, boys from advantaged family backgrounds attained better math grades. Although below the significance level, the data trend shows that boys’ poor success in mathematics coexisted with the combination of lower family status and
stereotypes rejection, while good math grades related to higher family status and stereotypes endorsement. This analysis uncovers girls from non-advantaged families as most-in-need group for stereotype reduction programs.

Does European Country-Specific Context Alter Motherhood Penalty and Fatherhood Premium?

This paper contributes to the discussion on the effects of childbearing on men's and women's employment in the developed countries. While the literature on motherhood penalty due to childbearing is voluminous, there have been no empirical studies that systematically compare the size of the effect of fatherhood on employment cross-nationally, net of selection into fatherhood. Furthermore, previous research for women has usually either compared the effects of childbearing across countries assuming exogeneity of family size to women's employment or examined these effects by using methods which deal with endogeneity of family size and simultaneously focused on single countries. In this paper, we overcome these shortcomings. We employ instrumental variable models with instrumental variables based on data on multiple births. Using data from European Survey of Income and Living Conditions (EU-SILC), we examine the cross-country variation in the causal effects of family size on employment of men and women across the groups of European countries with diverging welfare state regime and gender norms.

Heterogenous Impacts of Sibship Size on Educational Attainment Across Countries – Results from Meta-Analysis

The literature reports a negative relationship between the number of siblings and educational outcomes in the US and Western Europe but the pattern is less clear in several other countries. Some researchers have argued that the availability of relatives, who share the costs of childrearing by providing care and covering financial costs, can offset the dilution of parental resources. We expect that the same mechanism applies to the role of state: the state policy may provide services and funds that support parents in raising and educating children. As a result, the inverse relation between sibship size and educational outcomes should be weaker or even not apparent in countries that implement such policies. We test this hypothesis by conducting a meta-analysis of available studies on the relation between sibship size and education. Our study contributes to the on-going debate on the way the institutional and cultural context shapes individual educational opportunities.

BARANOWSKI, MARIUSZ* (Adam Mickiewicz University, mariusz.baranowski@amu.edu.pl)

Socio-Economic Contradictions Of Capitalism: The Nature Of Social Stratification and Inequality Today

Sources of contemporary social problems are seen more rarely from the perspective of the direct (or even indirect) causes, because thinking in terms of effects have become a standard analysis of contemporary social reality. By examining current systems of social stratification and forms of inequality especially in developed countries, one can easily fall into the ‘universalist’ pattern of thinking where divisions and tensions are seen as dysfunctional elements that need to be addressed on the one hand, but not necessarily looking for their sources on the other. Referring to Daniel Bell's The Cultural Contradictions of Capitalism, I want to extend the area of the contradictions of the capitalist economic formation by taking into account socio-economic factors, which in my opinion are the basis of unequal allocation of opportunities in modern societies in two dimensions (Harman 2009; Harvey 2006, 2010, 2012; Husson 2011; Therborn 2006; Wallerstein 2001). The first one concerns the distinction between developed countries and their peripheral quasi-partners (e.g. Amin 2011), and the other – often overlooked – is focused on rich societies. The consequences of capitalist relations of production together with a system of socio-political representation are crucial not only for the situation of the distribution of social opportunities (stratification systems), but also for the social relationships that may in the future develop a more egalitarian forms of production and governance (Sen 2010, 1992).

WG02-900.2

BARANOWSKI, MARIUSZ* (Adam Mickiewicz University, mariusz.baranowski@amu.edu.pl)

The Welfare State Sociology About Inequality

If sociology is unthinkable without the subject of power and property (Marx, Weber, Simmel and others), then the issue of inequality seems to be inherent in the structural conditions for the existence of the sociology as science. This is because both the power and property are characterized by asymmetric access, which consequently creates social division (and thus social inequality). This in turn necessitates a comprehensive conceptualization of the problem of inequality, as it is a multi-faceted phenomenon and indexed differently in the context of theoretical and ideological approaches. The proposed paper draws attention to – the above all – the need to articulate the welfare state sociology (Baranowski 2013), which would be a counterweight to the economic and political inequalities shots. Describing the concept of inequality in the context of the polemics of political science and economic dimensions of analysis, particular attention will be paid to the structural dimension of inequality and the so-called “new forms” of inequality (Fitoussi and Rosanvallon 1998). Particular reference will be determined by the issue of (political) power and (economic) ownership, which issues will have been addressed in the actual examples of hate speech, the paper will demonstrates why it is important to establish which articulation of hate speech emerges as a relevant point of departure for critique and may result in a potentially more substantive meaning of “linguistic injury”.

BARÁT, ERZSÉBET* (Central European University, zsazsza@lilt.u-szeged.hu)

Linguistically Mediated Injuries: Differentiation Between Naming and Stigmatization

This talk seeks to explore the advantages of a discursive approach to critical studies of language use for understanding institutionalized social and cultural inequalities. It will discuss the importance of understanding ‘discourse’ as a concept that is to grasp the dialectic differentiation of the text/context distinction that is structured by ‘plurality’ within specific relations of power. The talk will try to challenge the reduction of discourse to sign systems (including language) as well as the binary perception of Foucauldian and Gramscian concepts of ‘power’. In order to go beyond the valorization of one side of the binary of positivist universalism of reality versus constructivist relativity of representations, the paper will look at various types of linguistic stigmatization over the past twenty years in Hungary and develop a ‘constitutist’ position, bringing together particular arguments developed by Butler 1993, Sedgwick 1993, Gee 1999, and Harding 2006. With the help of the actual examples of hate speech, the paper will demonstrate why it is important to establish which articulation of hate speech emerges as a relevant point of departure for critique and may result in a potentially more substantive meaning of “linguistic injury”.

BARBALET, JACK* (Hong Kong Baptist University, barbalet@hkbu.edu.hk)

A Template for the Asian Values Debate: Reactions to Weber on Confucianism

If orthodoxy is a European phenomenon and orthopraxy an East Asian one, then value debates are originally a western preoccupation, turned into a principle of sociological method by Max Weber. The paper argues that the debate concerning the significance of Asian values is refracted through Weber’s account of Confucianism in his work The Religion of China (RoC). In RoC Weber presents Confucianism as a ‘mentality’ that is inherently traditional which bears an antithetical relation to the possibility of capitalism development. This understanding of ‘Asian values’ parallels the outlook of early modernizers in China in particular and East Asia in general, who regarded traditional and especially Confucian values as barriers to the advancement of Asian societies, especially in their struggle against the colonial and imperial encroachments of Western powers. Since the economic growth of Japan and the four ‘Little Dragons’ – Hong Kong, South Korea, Taiwan, and Singapore – and more recently mainland China, the possibility of a positive role for Confucian culture and Asian values has arisen, and ‘Asian values’ are advocated by political elites in support and legitimation of state economic development strategies. Coincidentally, Weber’s account of the relationship between Confucianism and capitalism is widely criticized from this time in scholarly circles in both the US and East Asia. The paper shall consider both Weber’s argument and that of his detractors and also the cases of Singapore, South Korea and China in their alternating treatment of Asian values from the onset of capitalist development to the present time.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper demonstrates that the concept of trust requires very careful specification if it is to be applied as research. It does this by examining sociological treatment of Chinese guanxi, an asymmetrical form of favour exchange based on enduring affective ties in which enhancement of public reputation is the aspirational outcome. English-language assessments by both foreign and Chinese authors emphasize the basis of guanxi in relations of trust between the seeker and provider. Through a careful examination of the structure of guanxi relations it is shown that not trust but relational obligation, third-party monitoring and fear of loss of face serve to support and enforce guanxi relations. Rather than trust, then, there are other forms of socially cooperative engagements based on different bases of solidarity. The paper shows that the concepts of trust and trustworthiness must be clearly distinguished and that the understanding of trustworthiness in Chinese cultural contexts operates not as a correlative element of trust relations but as an index of personal intimacy and interactive familiarity that are based on interdependent relations of normative obligation or loyalty associated with role prescriptions. The paper demonstrates, then, that theoretical problems ensue if reference to and understanding of trust in cross-national comparative studies fail to take proper account of the wider social, institutional and cultural contexts in which socially interdependent relationships occur.

The UN Rules for the Treatment of Women Prisoners: Human Rights and Clinical Sociological Practice Implications

In 2010, the United Nations adopted the United Nations Rules for the Treatment of Women Prisoners and Non-custodial Measures for Women Offenders (the “Barberis Rules”). This was a landmark step in adapting the 1955 Standard Minimum Rules for the Treatment of Prisoners to women. As ‘soft law’, they are human rights principles that recognize that female prisoners have different needs from male prisoners. They are also reflective of previous reform efforts on behalf of women in prison around the globe. They take into account the presence of high levels of victimization among women prisoners and their greater propensity for self-harm and suicide; the lower risk of most women prisoners yet higher classification levels; the special status of some women prisoners as mothers of children; the distance of women’s prisons from home communities and the difficulties of prison visiting; the particular health and hygiene concerns of women, including the stigma and discrimination facing women prisoners; the use of prisons as shelters for women’s safety, as well as their use for ‘immoral crimes’; the need for gender-responsive programs and activities for women in prison, yet on a par with the opportunities given to men prisoners; and the particular needs of indigenous women prisoners and those from diverse religious and cultural backgrounds. They call for gender-responsive and gender-sensitive policies and programs in prison in a wide variety of areas: intake, classification, and mental and physical health care, mothering in prison, searches, women’s safety, and the development of pre- and post-release programs that take into account the stigmatization and discrimination that women face upon release from prison. The history and background of these rules will be examined, as well as their implications for clinical sociological/criminal interventions related to women in prison around the world.
pregnant and married women of 15-49 years suffer from iron deficiency (NFHS-3).

Considering the risk criteria of height less than 145cms & weight less than 38 kg, (Sarma, 1989), the present paper tries to reveal the nutritional status, height and weight of 390 adolescent girl students commuting from urban and rural peri-

cpheresies to a College in Kolkata Metropolitan. To correlate family status with women

health and to inculcate the high obstetric risk associated with it, the respondents

from urban and the remote village background (Sunderban delta) are chosen .Food habits (Rice eater 70% rural students and 90 % urban students are junk food eaters) and physical structure correlation is observed through weight and the pattern on Sudden sickness, indigestion, anemia, headache, getting senseless, irritable stomach ache are common rural women symptoms .Obesity or O figure syndrome for urban students. Difference in attention syndrome in the single daughter families and the both sex children families are looked up as an exception. A number of empirical studies in two difference family structures in both rural and urban centres.

Indian Fathers in Transition; Visionary Father Vs Father in Reality

The concept Father was totally different in Indian tradition. He had been explained as a figure staying much above the normal family surrounding. He was expected to be a person concerned with food and shelter of the family members and not as a person within the inner circle of a parent child family. Post Globalization image made a drastic change in father image. In the nucle

ar bread winner parent families , he is expected to be more practical .The role model of a father figure existing in him has been challenged . His outer image to a care taker has been converted into a co-partner and care taker of the children born to a nuclear working mothers families .Considering this significant shift in the role of the father from a father from care taker to Care giver , a role conflict arises in himself . In Indian middle class families, especially to the transitional period (link years of Pre and the Post Globalization era) puts him to a dilemma .From a visionary father he prefers to convert himself to a loving father but is obstructed by his traditional fatherly ego inherent in him . The present paper tries to observe the inner conflict of an Indian father about his own status in the family and his visionary status . The empirical evidences collected for the purpose involved two generation fathers belonging to both the pre-globalization and the post globalisation era with an intention to explore the ratio of acceptance of caregiver role among both the transitional fathers and the post globalization fathers . How far they are able to overcome the concept in reality . The study concentrates on two contradictory fatherhood image present in a Indian male 1. Father as a visionary figure and 2 Father in reality.

Rice Agriculture and Food Security in West Bengal, India

West Bengal stands among top three rice producing states in India. Rice is the staple food for the state and cultivated annually in 6.2 million hectare. How-

ever the state registered an average of 32% households live below poverty line (BPL) and who can not meet the minimum daily requirement of calorie. The percentage is much higher in rural areas. It is fourth populous states of India and seventh in global standing. The state remains in moderately alarming category considering the hunger index. Poverty looms in the rural household at large. Earlier study showed a family of four consume 2kg of rice per day . Daily meal lacks protein at large. The NFHS-3 revealed that 72% of the children 66% of the pregnant and married women and 45% of the men are anemic. The agricultural scenario of the state ,having seventy percent small and marginal farmers, is not promising too. Productivity and production of the rice is either staggered or less than average in half of years over a decadal period. Rice production decline by 12.2% between 2002-11 - a negate signal for food security. Predicted in some change also a danger for this environmentally fragile state. Traditional Poor rice production system failed to meet food requirement of a ever growing population, was overtaken by modern rice management since 1970’s. That too fallen short of requirement in late 90’s.Weak rice economy, high inputs cost debarred farmer’s adoption of modern rice technology and sustain livelihood. Seeds of climate resilient traditional rice cultivars depleted significantly because of their low productive sustainability. Indigenous rìcers having different health and social value rejuvenated in a limited way under new global market. With their semiotic practices of ‘cultural hacking’ or ‘cultural jamming’ both types of actors try to semiotically subvert the imagery of dominant brands. Brands are decoded and “verfremdet” in order to expose internal contradictions and power structures of capitalist consumer culture. The paper theoretically interprets these practices as semiotic expressions of a politics of affects from perspectives of new critical concepts of culture (post-hegemony) and democracy (post-democracy).

BARKER, EILEEN* (London School of Economics / Inform, E.Barker@lse.ac.uk)
Which Tradition Shall I Reject? The Dilemma of Second-Generation Members of New Religious Movements

Whilst some young people leave the religion in which they have been raised because it is perceived to represent many of the beliefs and values that they want to reject, other young people prefer to stay within the womb of the traditional religion with the expectation that they themselves will carry forward its, their family’s and their family’s traditions. The situation is more complicated, however, when one grows up in a family in which one’s parents have rejected the main society and expect one to follow their new Truths.

Research indicates that the first cohort of second-generation members of new religious movements (NRMs) are likely to reject and leave the movements, while the second-generation members are more likely to accept the movement’s beliefs and practices. The paper will examine this phenomenon and discuss some of the possible explanations for its occurrence. It will draw in particular, but not exclusively, on some of the author’s research into the Unification Church, the Children of God/ The Family, the International, the International Society of Krishna Consciousness and other NRMs that became visible in the West around the late 1960s. Comparisons will be made between first-generation converts in the 1970s and ‘80s, and the first and second cohorts of second-generation members. The discussion will focus on what might appear to be pertinent changes in the movements’ beliefs and practices.

Culture and Social Movements: The Case of Disability Protests Cross-Culturally

Methodological Issues in Comparing the Disability Rights Movement Cross-Culturally

Many scholars have compared disability movements in two or a few countries, but few have attempted global comparisons, in part because of the methodological complexities involved. But increasing globalization and increasingly widespread mobilization around disability issues suggest the need to examine such issues.

This paper is drawn from analysis of over 2600 cases of disability protest from around the world. If social movement activities are collective, contentious, and politically non-normative, methodological issues include cross-cultural differences in all of these. What disabilities are involved? What activities are considered to be non-normative? What are the cultural and political meanings, including the threat level posed and the degree of acceptance, of the tactics used? Even defining the Disability Rights Movement raises definitional differences in what constitutes disability (AIDS to Obesity?) and what word can be used to describe it (disability, handicap, impairment, challenge?). Sometimes a specific disability label, such as developmental disability, in one society may refer to a different physiological condition than in another. Defining ‘rights’ is also problematic: Issues which are framed as ‘rights-related’ in one context may be framed in others as being ‘services-related.’ Some types of impairments are more stigmatized in one society than another, which affects mobilization and effectiveness of protestors, as well as, possibly, by the media. Issues related to the likelihood that a protest will be noted at all, as well as the availability and translation of media reports, are also important. Variability, therefore, is a priority. Unless each variable were coded based upon its own cultural context, biases will occur. However, doing this would add extensively to the time and other resources needed for the research. Thus this paper raises questions about if, and under what circumstances, cross-cultural social movement research would be possible.

Variety and Emergence in Complex Environments: The Role of Innovation in Organizational Competitiveness

Nowadays, the advancement of global society and economy along with the rapid growth of Information Technology and Communication (ICT) have created significant challenges for those companies, who pursed both their permanence and their development in the markets where they compete. Thus, enterprises have responded with the adoption and/or generation of innovation mechanisms to manage and improve their organizational effectiveness. Firms have understood that intelectual capital is a mechanism to add a value to their processes, products or services that they offer to their clients, therefore to maintain their competitiveness advantages that help them to have a better position before their markets.

The aim of this work is to generate a first approach, essentially theoretical in nature, that when seen from complex systems, help to characterize the complexity of this environment and to understand how companies have developed a variety of known responses to everyday problems. Moreover creating emerging nature mechanisms that have served them to generate responses, which have helped them to successfully face the challenges of innovation that the market required in order to maintain its competitiveness.

How Do Rural Popular Groups Mobilized? Investigation about Local Resistances Against the Closings of Classes in the French Context

The contemporary reform of the State, in France as in other democratic countries, has various implications on the lifestyles of the populations. It induces for example a reduction of the school offer in the rural contexts. For mainly economic reasons, the pupils are concentrated in the same schools—‘school poles’—which often deteriorate the families with important daily displacements. In parallel, this school concentration induced the closing of proximity small schools of campaign. Then changes of the public services of education are often the occasion of collective actions protagonists which enable to question, in an exemplary way, the relationships of the civil society and the State to the prism of these collective resistances. Methodological investigations were conducted on the impacts in French rural spaces. The ethnographic investigation is based on observations (close to the institutions and social groups), with about forty interviews (with varied elected
members, different administrative officers, and parents of various social backgrounds, militants or not, on archives (administrative and from associations of parents). From these materials and by comparing different cases (closing of class or not, maintenance of closing or reopening further to local mobilizations, etc.), this study underlines how particularly marginalized groups as the rural popular groups can attempt to resist collectively to the political reforms and the under State control power by taking support on the experiences of their daily life. The analysis of the release of these mobilizations, dynamics of their progress (repertoire of action, etc.), and their conditions of success (or failure) shows that the most important is the rural popular families succeed to be opposed collectively to the State only while being combined with other more favored social groups (like farmers or teachers) and leaning on political supports (local elected members).

After years of delays, the blackout did finally happened on 2013, however there are now many doubts about how this could affect social inequalities, as perhaps 7% of the population in Tijuana has now lost access to TV. Studies on social inequalities have recently focused on the problem of access to different forms of social capital (cf. Rodríguez Gallardo, 2006). Nevertheless, what does it mean for social inequalities to shut down the TV? Particularly, how does access to telecommunications and media affect social capital? Does being able to watch TV diminish social capital as a consequence of individualizing free-time, or does it increase it through a sharing of experience that allows connectivity to society and the world?

In this presentation we approached this phenomenon and to reflect on the possible implications they have on a better understanding of the inequality gap on access to communications technology and contents.

When It Rain It Pours: Reality Shows and Charades for Climate Change Tragedies

In September 2013, Mexico was quashed by two hurricanes during the same week. One came from the pacific and the other from the Gulf of Mexico. The consequences were tragic and colossal. Days prior to the storms the Mexican government was warned by the Mexican National Weather Service about the magnitude of the catastrophes coming, but they were more focused on “cleaning off a teacher’s demonstration at Mexico City’s main square. National TV networks were mainly focused on blasting the teacher’s movement. And only when it was too late they started a campaign to help and rescue the victims. One of the actions that became particularly emblematic was the preparation of a reality show screening an infamous TV presenter heroically ‘helping’ the victims. The farce was unmasked by a very important Mexican political magazine and one of the main journalists questioned the staging, the TV presenter has a very belligerent reaction. The scandal is in progress at the moment of submitting this abstract. Social networks are been particularly virulent at this point. In this presentation, it will be shown how this episode could be explained using sociocybernetics tools and following previous presentations of the author, it will be developed how critical sociocybernetics model would work to explain media performance and the emerging role of cyber-activists in the face of climate change disasters.

**Commodity Based Tourism: A Dialogic Proposition Via Local-Base Development**

In the inequality context, the theories about development turn to local spaces and a increasingly number of researches have been approaching the relevance of culture, and favoring local experiences, knowledge, traditions, aspirations and needs. It is necessary to understand that local must be perceived within its relations with the globalization process, its differences, specificities, traditions, and in the continuous processes of change existing in social-cultural processes. The touristic phenomena - intrinsically related to the globalization process - favors multiple possibilities for new social actors, new identities, new references, and new practices. This process of exchange due to the articulation of "localglobal" shall foresee the development of new innovation, and enhancement with new productions of urban environments. Besides the globalization process, there is, undoubtedly, the renewal of interest in the local. A conception of development that approaches the local as reference must rely upon the harmonization of endogenous and exogenous factors, returning to all the local transformations adequate to each reality. In such perspective, this research aims to analyze Tourism of Comunitarian Base (TCB) as a development proposition, where each city must live its own modernity brought by its own multiple, multiformal and multidimensional innovations achieved by the adoption of its own innovative and diversified ways of development. The TCB constitutes a proposition that has great contributions for the local development, as it has as major objectives the social inclusion and equity for the inbound tourist community, the valorization of the culture and traditional knowledge, the experience exchange, and the respect for natural resources.

**Leisure and Participation: A Social and Cultural Issue**

In the context of today’s inequalities it is important to consider leisure, as an individual option, and the participation that is produced within the social dynamics by this activity that can be understood as a social and cultural issue. By this perspective it is important to respect the local social actors in the identification of their own problems, and their ability to develop innovative solutions for themselves. An important issue that arises is how to respond to the commitment to participation in face of development processes aiming life quality improvements.

The major mean and purpose of development is to allow the expansion of individual liberties, so they can be able to achieve better life standards. Within this process of expansion of liberties, the population can reclaim opportunities for equality in the face of development in such social integration process where all can be more participative. To achieve this development proposition, it is necessary to conceive quality of life within social sphere and its different relations, where leisure plays a fundamental role. For Joffre Dumazedier, leisure highlights elements that drive the individual to fulfill their social wellbeing-ness, and to foster a more active participation in the achievement of individual, family and professional, cultural and communitarian orders. Leisure enables individuals with conditions to develop themselves as they receive or increase elements that, regardless, constitute them. Reflecting about the dynamic of the society, leisure is more than a simple complement to work, it is a source of production for new sets of values. It is necessary to conceive social and cultural valorization of leisure as both social circumstance and global cultural feature.

**BARTHOLO, SABINE** (*Center for Metropolitan Studies, sabine.bartithol@metropolitanstudies.de*)

**Greening the Global City. City Networks in Environmental Knowledge Production and Policy Transfer**

Environmental governance becomes more and more embedded in a set of different scales, institutions, and actors. In which cities and metropolitan regions play major roles. City governments transverse different scales rather than merely act as subunits within a hierarchical state organization. At the center of this paper are two major global city networks that engage with environmental issues on a global scale: C40 Cities Climate Leadership Group and ICLEI - Local Governments for Sustainability. They are working on developing innovative environmental and climate protection programs and policies and cities often serve in this process as the laboratories for pioneering technologies and policy programs. Knowledge production is thereby incorporated into governance practice that shape planning ideas, policy innovations, and “best practices”. This development has led to an institutionalization of knowledge/policy interfaces (Chilvers and Evans 2009) through policy networks at local, national, transnational and global scales.

To understand how policies and planning practices within the metropolis are entangled with global governance and economic development, it is necessary to look at the institutions, ideologies, and actors and the connections and inter-linkages they establish between different levels. The question is how environmental objectives are framed by institutionalized discourses on a global interurban scale, and how these frames of knowledge are in turn interrelated with local regimes of environmental governance? The study of the two city networks will thereby function as a lens through which to search for a different school. On the other hand, school principals have partial control over their intakes, especially in the case of oversubscription. Four different indicators of potentially disadvantaged pupils were calculated: a) poverty; b) parents’ education; c) ethnic background; d) age/grade “distortion”. Interactions among these variables were also tested in order to focus on “superdeprived” pupils. The results indicate that: 1) around one third of the pupils change schools in the first four educational transitions - 1st - 5th grade; 2) the unfettered movement of pupils presents specific patterns that appear to increase the overall level of segregation; 3) between-school segregation declines in the last transition observed (5th - 6th grade), mainly due to a massive decline (45%) in the total number of schools. However, within school segregation (also called “school shift effect”), increases in the same period/transition. The interpretations suggest that the results observed can be attributed to bureaucratic paternalistic practices and loopholes in an unclear regulatory regime.

**The Ethics of Care and the New Habitus: Rethinking Community in the Age of Shale Gas Exploitations**

The lack of care for the environment has often been deemed to be one of the most important contributing factors leading to the overuse of natural resources. While feminist philosophers and bioethicists have developed analytical tools explicating the ethics of care, scholarly debates in environmental sociology have generally overlooked this body of literature. The purpose of this paper is to bring these two bodies of literature in conversation with each other, particularly by linking the ethics of care as articulated by N. Wong and R. Dworkin, with the notion of social practice and habitus developed by Pierre Bourdieu. Staring with Boudieu’s theories of habitus and social practice that have been incorporated in the analyses of community-based natural resource management we explore tensions between care as a mode of living that is oriented toward sustaining and preserving the environment and the limiting effects of routines, social relations, and economic logic on such care. We argue that care about the environment as a social practice is dependent not only on social milieu and culturally embedded class identities but also on normative attitudes of a care-giver. As a case study, we focus on the Zygiaicai community in Western Lithuania against the efforts of the international energy giant Chevron, to explore and extract shale gas in the area. Zygiaicai community has become the symbol of anti-shale gas development in Lithuania and East Europe more broadly, while also spearheading a public debate about the responsibility of the national and supranational states vis à vis corporate interests, national security debates, and energy independence. Through the analysis of public discourse, we will highlight the emerging new articulations of care and responsibility and relate it with ethical theory which reveals importance of relationships for developing a caring attitude towards environment.
How Is Demographic Decline Translated to Bureaucracy?

Populations Numbers As Calculation Devices of Local Government

Max Weber’s “classic” ideal type of bureaucracy has inspired organizational theory and many critiques of public administration. Both strands of the literature seem to agree that public organizations coming close to Weber’s ideal type are ill prepared to adapt to new problems. As a consequence, prescriptive texts recommend the alignment of public and private organizations – often by marketization. The proposed paper presentation will investigate, how local public administrations respond to declining population numbers (in the face of lacking market environments).

Declining population numbers are especially likely to challenge established structures of local government as municipal service provision was established historically during times of growing or at least stable population numbers. Demographically induced changes in demand are regarded as problematic because some of the costs for public service provision will remain largely fixed (e.g. buildings and staff) even if capacities are not used. This diagnosis (from public finance scholars) implies that there are effective organizational devices translating statistically observed demographic changes to demands in public services. The thesis of this paper is that bureaucracy might translate demographic change into relevant administrative problems by its own means. But which are these?

After 1989/90 most countries in the former East Bloc witnessed dropping birth rates and also out-migration. Therefore, the empirical part of the paper draws on 62 expert interviews with decision makers in 21 Municipalities from West German states and also out-migration. Therefore, the empirical part of the paper draws on 62 expert interviews with decision makers in 21 Municipalities from West Germany, East Germany and Poland (with West Germany providing contrasting cases on the transformation context). From these interviews population numbers emerge as administrative devices for the calculation in-kind of public services approximating changes in local demand.

Interestingly, the empirical material shows that a seemingly antiquated organizational theory proves to be highly relevant for current adaptation processes. Calculation in-kind makes bureaucracy responsive to demographic change without eliminating political discretion.

Refashioning Sociological Imagination: On the Conceptual Significance of Materiality and Iconicity

One of the key challenges of meaning-centered cultural sociology is to face the findings about numerous distant struggles. Today the world is full of conflict and associated visual strife. Struggle for power blends with struggle for recognition, blurring the symbolic boundaries between the two. Each national outbreak has the potential of shaking the international stage and even punching above its own weight, provided it is properly shown and referenced. If this social process does happen, it is possible in no small measure because of sustained visual exposure that helps turn a given local occurrence into a translocal event, or – to use Bruno Latour’s parlance – “a matter of fact” into “a matter of concern.” Conversely, if sustained visual exposure and iconic contextualization don’t happen, even genuine rebellion can remain across an ethnorhegemonic, or simply go unnoticed. All kinds of media, old and new, are the usual suspects here, but just about any social occurrence is subject to the constraining influence of visual framing and rhetorically deployed. Thus, visibility and iconography must be theorized, “practices of looking” unravelled and the politics of visual culture scrutinized. Similarly, the importance of the specific spaces at which protests take place must not be underestimated. The present paper explores these themes in the context of the Gezi park civil unrest that shook Istanbul and the international community in 2013.

The effect of diversity on civic participation is a hot issue in social sciences during the last decade. While some authors point out that diversity erodes social capital and decreases political participation, other researches prove that different type of diversity (namely ethnic or linguistic diversity) have different effects on political and civic participation. The current research focuses on the effect of religious heterogeneity on civic participation, taking into account the effect interaction between the religious heterogeneity and individual belonging to a particular religious denomination. The result of multilevel hierarchical models run on EVS 2008 data shows that religious heterogeneity has a negative effect on civic participation, but the moderate effect depends on the individual religious denomination.

Taking Place, Becoming Iconic: What It Takes for Urban Protests to Become Visible and Significant

We seem to be living in a time of revolutions which do get televised or at least tweeted, or both. Yet, for a given observer, most political upheavals are remote “news” about numerous distant struggles. Today the world is full of conflict and associated visual strife. Struggle for power blends with struggle for recognition, blurring the symbolic boundaries between the two. Each national outbreak has the potential of shaking the international stage and even punching above its own weight, provided it is properly shown and referenced. If this social process does happen, it is possible in no small measure because of sustained visual exposure that helps turn a given local occurrence into a translocal event, or – to use Bruno Latour’s parlance – “a matter of fact” into “a matter of concern.” Conversely, if sustained visual exposure and iconic contextualization don’t happen, even genuine rebellion can remain across an ethnorhegemonic, or simply go unnoticed. All kinds of media, old and new, are the usual suspects here, but just about any social occurrence is subject to the constraining influence of visual framing and rhetorically deployed. Thus, visibility and iconography must be theorized, “practices of looking” unravelled and the politics of visual culture scrutinized. Similarly, the importance of the specific spaces at which protests take place must not be underestimated. The present paper explores these themes in the context of the Gezi park civil unrest that shook Istanbul and the international community in 2013.
the cultural and social constructions, and the social transformations perpetuating abuse and addiction.

Following the analysis of the “inside stories”, I will discuss how these stories can be used in social, political and therapeutic interventions. At the same time I will discuss the methodological and moral pitfalls related to life story interviewing of vulnerable individuals.

BARTRAM, DAVID* (University of Leicester, db158@leicester.ac.uk)

International Migration and Life Satisfaction in Europe

A core finding of research on subjective wellbeing – concluding that an increase in one’s income does not generally bring greater life satisfaction - suggests that economic migration (motivated by hopes of an increased income) would not result in greater life satisfaction. Income affects life satisfaction mainly via the way it signals status to others. This is the case both within a destination society than in their origin society. This paper also considers the economic migration scenario “in reverse”: people who move from wealthier countries to poorer ones might attain a higher status position in the destination, relative to the status they enjoyed in their country of origin - and, if so, then perhaps they would experience an increase in life satisfaction. The paper assesses these proposition via analysis of European Social Survey data – in the first instance investigating people moving from eastern to western Europe, and (for the second proposition) on people moving from wealthier countries in northern Europe to Mediterranean countries, including Spain, Portugal and Greece. In general, migrants do not appear to gain life satisfaction as a consequence of migration – and in some instances (particularly for migrants moving to a poorer country) migration appears to reduce life satisfaction. Migrants certainly expect migration to improve their lives, but it is not clear that these expectations are generally met in their experiences.

BARTRAM, DAVID* (University of Leicester, db158@leicester.ac.uk)

Welfare, Religion, and Values: An Investigation of Ultra-Orthodox Jews in Israel

Welfare states and welfare policies are commonly understood as mechanisms for addressing material deprivation (and, perhaps, the social exclusion that follows from being poor). In some cases, however, welfare programs as experienced by recipients have more to do with a religious and/or cultural imperative: state support enables people to reproduce a particular way of life, especially by making it possible to preserve without sacrificing a distinctive religious identity. This paper explores that proposition via analysis of ultra-Orthodox Jews in Israel, where many of the men in very religious families prefer to engage in full-time religious study rather than holding regular jobs. These arrangements are controversial, producing resentment among secular Israelis who believe that ultra-Orthodox men impose unfair fiscal burdens on the state and taxpayers.

The paper argues that welfare systems should indeed consider religious and cultural differences of this sort, rather than assuming that material sufficiency is only relevant value. The Israeli welfare state helps a distinct group of citizens to resist systemic pressures to become “normal” members of society (e.g. focused on conventional goals such as consumption, leisure, and career advancement); with state support, ultra-Orthodox Jews have more scope for pursuing goals and values of their own choosing. In the Israeli case, however, one must balance that with state support enables people to reproduce a particular way of life, especially by making it possible to preserve without sacrificing a distinctive religious identity. This paper explores that proposition via analysis of ultra-Orthodox Jews in Israel, where many of the men in very religious families prefer to engage in full-time religious study rather than holding regular jobs. These arrangements are controversial, producing resentment among secular Israelis who believe that ultra-Orthodox men impose unfair fiscal burdens on the state and taxpayers.

The paper argues that welfare systems should indeed consider religious and cultural differences of this sort, rather than assuming that material sufficiency is only relevant value. The Israeli welfare state helps a distinct group of citizens to resist systemic pressures to become “normal” members of society (e.g. focused on conventional goals such as consumption, leisure, and career advancement); with state support, ultra-Orthodox Jews have more scope for pursuing goals and values of their own choosing. and, they showed a reluctant attitude toward gaining applied and clinical skills through participating to implement an applied and clinical project. For this reason, in the second semester, new group of attendants were 20 people; newly graduated ones were encouraged to apply. The training in the second semester provided for the attendants both, a basic vision about applied sociolinguistics and a predisposition in taking responsibility by joining an applied team.

In the third semester, an “applied sociology project development group” was created, by selecting from the second semester successful attendants. During this semester, it was asked from group members to prepare a project by developing the idea of providing advancement for, and through the participation of the sociologists, recently employed in the Ministry of Agriculture. The attendants were taken “European Union Project Cycle Management” training course; and developed a project titled as “Advancement and Applied Clinical Skills for the Agricultural Sociologists”. In the fourth semester, the project started to be implemented by providing the support of relevant governmental institutions.

In the paper, it was presented as a case study 1. the problems -faced in the stages of training, project development and project implementation- of both, the sociology graduates attended the training program through four semester, and the agricultural sociologists participated in the project implementation; and 2. the attempts developed to deal with these problems through all the stages.

Black Immigrant Youth Inequality in Another France

This paper uses in-depth interviews with first- and second-generation immi-
grants of African descent in France to understand their integration process. I first examine identity, by addressing the following question: Where do these young immigrant descent individuals see themselves fitting in French society? I use respondents’ voices to identify cultural and structural factors that define their integration experience, and then present initial findings as they fall within three areas: 1) identity formation, 2) religion as a mechanism, 3) and the importance of race and immigrant statuses. Then, I apply the cultural materialist framework to explain an unequal world and integration challenges using two particular cases: Alita, a first-generation young woman’s integration, and the 2005 riots of immi-
grant youth in France’s suburbs.

The Linguodiversity Crisis in the ‘Glocal’ Age: Factors, Processes, and Policies

Throughout human history, language varieties have disappeared in an on-
going process that is likely to have accelerated in the twentieth and twenty-first centuries, a period in which major economic, technological, political and demo-
graphic changes have had a negative impact at the linguistic level. Knowing how to take appropriate action to halt current processes of language shift requires an accurate understanding of the causes and intergen-
erational dynamics at work. Sociolinguistic experience in the Catalan-speaking territories, focused on understanding the processes of language shift and the political actions taken to reverse them, can provide us with theoretical models inspired by the perspectives of eco-socio-cognitive complexity, potentially of great use in addressing other similar processes.

From this point of view, a comprehensive grasp of the phenomena of language permanence and abandonment needs to take into account the different levels involved (i.e., cognitive-emotional, interactional, group-specific, demographies, economic, institutional, media analogous) and it must do so simultaneously in an inte-
grated and processual manner. These domains continually interrelate with one another in the sociolinguistic reality, resulting in situations that evolve much as ecosystems or complex adaptive systems do. The need, therefore, is to under-
stand these phenomena in their horizontality and in their multidimensional trans-
versality, like a polyphonic or orchestral score.

As human kind becomes increasingly interdependent and societies face the need for polyglotisation, general principles of linguistic organisation are called for to enable us to reconcile the normal maintenance of the languages of different groups with broader issues of human intercommunication. Toward this aim, the present paper sets out new concepts and principles, such as “linguistic sustain-
ability” and “linguistic subsidiarity”, as a basis for a new organisation of human languages.

Does Religion Make Any Difference?

Today it seems to be a certain consensus in pointing out that the main problem of a modern society is to answer to the challenge of pluralism without forgetting the aims of social cohesion, equality, liberty and justice.

But pluralism is not a mere amount of different behaviours it is based on com-
mon bases that allow each one to choose, and develop, the kind of life he or she wishes.

Religion has traditionally have a pre-eminent place in the definition of a pluralistic society even if nowadays there are many other variables used to give sense to life projects and to question the category. In that conditions which are the functions of religions in modern societies? Is it difficult to find in present days a researcher who has not thought about the subject often to underline the role that religion can play in our societies and not only for believers. As one example, Habermas has pointed out that religion articulates the conscience of what has failed and is still missing in our societies.

In an individual level, religion is considered a good tool to be more confident and to face life in a more honest manner.

But, do we have any test to check if all this is in fact happening? Are those that declare their self as religious more honest? Do they trust more the others? Do they participate more in social organizations aiming to create better societies? What are the variables that link religion with religion in the explanation of the possible differences? Does the increasing religious plurality reflect pluralism based in common values?

I will try to answer to these questions comparing three countries (Spain, Ger-
many, Sweden) and using the data of both the European as well as the World Values Surveys.

Interwar Constitutionalism and the Remaking of Social Policy in Latin America

The establishment of the 20th century welfare regimes has often been viewed as an outcome of continuous processes of national policy implementation conditioned by local levels of economic development, democracy, and position in regional influence systems. This paper concentrates on a normative shift that has become a blind spot in the comparative literature of the welfare State. Specifi-
cally, this paper seeks to shed light on the influence of a constitutional reform movement that took place across Europe and Latin America in the Interwar peri-
od. The Mexican Constitution of 1917, the Soviet Constitution of 1918, and the Weimar Constitution of 1919 established the recognition of social and economic rights as fundamental rights of the individual. This idea travelled rapidly across Europe and spread towards Latin America over the next decades. I argue that this constitutional movement underpinned the ‘universalist’ expansion of social policy that characterized the post-war Welfare State by giving the right to welfare the status of an individual right. Empirically, this paper traces how the Interwar constitutional movement took root in Chile (1926) and Brazil (1934), and how this in
In Indonesia, transnational labor migrations have become a major source of foreign currency over the past twenty years. New migration routes are shaped by various forms of collaborations between official and irregular actors and networks. In this context, migrating becomes a very uncertain journey, and migrants are often subjected to abusive, sometimes violent or even deadly experiences abroad. Yet, the "migration industry" can count on increasing numbers of candidates. How, then, migrant workers relate to this risky adventure?

As it appears, local conceptions of "fate" help to neutralize fear: the opacity of migration routes is not conceived of in terms of uncertainty; as it is rather perceived as time, since destiny lays ultimately in the hands of God, dealing with it is a matter of faith: Only by surrendering sincerely to Allah is one able to insulate his future in this dangerous milieu. In this cognitive framework, incidents are lived as cobaan Tuhan – godly trials - , full of meanings, which are meant to test one’s faith in God. And bad experiences, rather than being seen as contingent are perceived as godly signs, which need to be interpreted in order to comply with God's will.

Laying on ethnographic materials collected during a 12 months fieldwork spread between Java, Kuala Lumpur and Singapore, we will try to show how this ethos tends to reduce the perception of risk and/or uncertainty under the concept of nasib and/or takdir (fate, destiny), and through its connectedness to God and faith.

**Global Population Challenges in an Unequal World**

This roundtable will engage panelists and attendees in a discussion on the impact of political and social change on demographic transitions; and vice versa, how demographic transitions trigger important social and political change. In this context, panelists will reflect upon what they consider are present demographic transitions and socio/political currents at the forefront of contemporary and future social change. Finally, how concerns over social justice emerge and will continue to emerge within the context of rapid demographic and social change as underscored by all panelists.

Topics for discussion are broad and general and include themes with wide social and political ramifications such as: the impact of poverty on the demographics of Latin America (Guillermo Gonzalez Perez, Universidad de Guadalajara (Mexico): European austerity policies resulting from the deep economic and financial crisis worldwide and its consequences in terms of class and fertility, births and the welfare of the elderly in Spain (Gerardo Zamora, Universidad de Navarra (Spain)); the global significance of the Chinese diaspora (Dudley Poston, Texas A&M University (United States)); the relevance of gender policies, inequality and education in India (Rajendra Patil, Shivaji University (India)); and the race-ethnic transition in the US, as the Latino population continues to grow while the white population declines (Rogelio Saenz, University of Texas, San Antonio (USA)).

Discussants for this roundtable will include Encarnacion Aracil Rodriguez (Universidad Complutense de Madrid (Spain), Farhat Yusuf (Australia), Elena Bastida (Florida International University (USA)).

**Social Justice and Health Outcomes: Poor Health and Low SES Among Native and Foreign Born Mexican Americans in an Economically Disadvantaged Border Region**

This paper presents data collected along the US/Mexico border region to highlight the poor health profile exhibited by native born and Mexican immigrants in this economically disadvantaged region of the United States. A random cluster design consisting of 132 sites yielded a total of 1237 food insecure participants reporting a high number of chronic diseases. Individual self-reported health conditions were further validated through laboratory intakes to include blood pressure; pulse; fasting glucose, and a detailed lipid profile.

Data analysis indicated high numbers of obese and overweight participants with as many as 84% of all participants in these two categories. Overall, laboratory results and self-reported data present a poor health profile for this population, consisting mostly of immigrants to the US (73%) with a median age of 46 years with many lacking any medical care for these conditions. The latter is coupled with low educational achievement, low wages and lack of access to health care, exacerbated for a large number of the Mexican born who do not qualify for social programs, such as Medicaid or indigent care for health services.

The disadvantaged health profile of this population is discussed within the context of existing socio-political currents in the United States which seriously impede their incorporation to the larger society; since it is conditional upon the much broader and frictional backdrop of the present US political environment. Concerns over social justice arise when conducting research with this population since their poor health lies at the intersection of two highly contested political and social discourses that range from public consensus and political will to action in order to bring about positive change: immigration and health care. Extensive ethnographic data will be employed to further support the social justice argument.

**An Analysis of Social Indicators in Brazil after the “Real Plan” (1994) until 2012**

Brazil, during the 1990s, went through a period of profound economic and social transformations. Economic openness advocated in the early 1990s, during the government of President Fernando Collor de Melo (1990-1992), marked by a severe economic recession corroborated by blocking monetary assets generated a serious social and police crisis cooperated to the “empeachment” of the president and demanded a drastic change in relation to economic policy. “The Real Plan”, conceived during the administration of President Itamar Franco (1992-1995) fostered a profound social and economic transformation in the Brazilian economy. Implemented in 1994, “the Real Plan” was crucial for promoting monetary stability and exchange rate of the country. From this plan, considerable improvements in basillan economic indicators began to be observed, such as: GDP growth, expansion in inflows of foreign capital in the country, the positive evolution of the trade balance and expansion in employment and domestic income. Based on these positive results, the aim of this paper is study the evolution of the social indicators in Brazil after the “Real Plan” in 1994, until the year 2012. The methodologies used for this study are descriptive statistics and literature review. The results showed that the expansion of the economic indicators echoed directly in the improvement of social indicators in Brazil: There was expansion of HDI, improvement in the Gini index by regions, reducing the infant mortality rate, expansion of life expectancy, expansion of Gross National Income, expanding access to public health, significant reduction of the population in extreme poverty, and increasing access to goods and services by Brazilians. **Professional Couples, Stress and Social Support: An Empirical Study**

The present empirical study has tried to explore the role of social support in balancing work and family among doctor couples in Kolkata. In India, metropolitan cities have certain specific features that are different from that of traditional semi-urban culture. This study wanted to take a snap-shot of the doctor-couples at their very crucial time period when it is important for career building and parenthood as well. As being the members of nuclear family: (i) how do they balance between work and family and (ii)how do they perceive the role of social support in this balancing process? We do recognize people who are considered as “supportive” for us, from whom we receive support, and to whom we often give it. Parents are usually our earliest sources of support, augmented and eventually supplanted by friends, spouses, children, and various people with whom we have more limited and specific relationships - workers, neighbours, colleagues, domestic helpers, physicians etc.

The main objectives of this study was to examine the importance of social support in balancing between work and family among doctor couples in Kolkata. This study have identified four types of social support: Emotional, Appraisal, Informational and Instrumental. It also tends to reduce the perception of risk and/or uncertainty under the concept of nasib and/or takdir (fate, destiny), and through its connectedness to God and faith.

**Note:** Abstracts are organized by first presenting author's last name. Alpha

? denotes a presenting author.
It is found that in Kolkata social support has more significant role in balancing between work and family in case of female doctors than of male doctors. Types of getting social support are also gender related.

The Filipino Istambays and Transition Crises: Locating Spaces of Social Sufferings and Hope

This paper examines the layers of transition crises experienced by a loosely-organized sector of relatively young Filipinos who are “waiting for employment”, generally known as “istambays” (on standbys) in the Philippines. It relates the impact of such crises by taking into account theistambays’ poverty and their failure to translate educational capital into employment, which hinder their social mobility into becoming productive adults. It argues how these istambays negotiate their work problems in two-edged realms of protection and disconnection. In times of crises, istambays appear to be protected from discouragement by the cushioning effect of the Filipino “familial-faith dynamic” providing a sense of dependence and resilience among them. On the other hand, istambays disconnection from the state reflects their lack of trust in the government due to its failed attempts to provide them sustainable employment. In the end, this chapter articulates how these transition crises unravel both the istambays’ social sufferings and spaces for hope in reversing their “waiting status” into having sustainable futures that address cycles of intergenerational poverty and inequalities.

Russian Modern Educational System and Its Trends

The article studies the educational system as a two-facet unit. Firstly, as the process of production and transmission of systematized knowledge and skills through studying in specialized institutions. Secondly, as a social institution with the functions of adapting to social and cultural atmosphere, preparing and including young generations into different spheres of social life.

The authors examine the specifics of the educational system in modern Russia, define the tasks, solved under the pre-school, school, and professional education. The article analyzes the dynamics in the population educational level according to the census data. The authors single out the main criteria of pre-school, general, and professional education in Russia from 1990s up to 2011. They define the basic trends in the development of the Russian educational system under global and national social processes, determined by system transformations (such as changes in the structure and size of the demand for education due to the changes in demographic situation; general growth in interest to education; using by the young of the life strategies that actualizes the necessity for supplementary educational services) and by institutional changes (such as introduction of competence approach, diffusion of integrated institutions of continuous education providing three-dimensional connection – science – business – position), peculiarities and competitive advantages in the market of educational services.

They especially examine the changes in the legal regulation of the educational system as the most discussable question of the educational system.

BATISTURA MURTA, MARIA HELENA* (SUPRAM LM, mhbmutra@gmail.com)
Water – A Social and Strategic Issue for National Defense

A few years ago the United Nations annual report made projections not very good for the future of humanity. The UN noted that in 2050 more than 45% of the world’s population will not be able to rely on the individual minimum portion of water for basic needs. According to statistics there are today more than 1.1 billion people with virtually no access to fresh water. These same statistics project chaos in little more than 40 years, when the population reaches the figure of 10 billion individuals. Brazil is one of the richest countries on the planet’s water, and holds 12% of the world’s reserves of fresh water. This water, however, has a very uneven distribution.

One of the main problems that emerged in this century is the growing water contamination. She has been polluted and contaminated so scary, especially in coastal areas and in large cities. What difficulties will meet to draw up a strategic plan for national defense, taking into account this reality? The problem of pollution and contamination, according to the World Health Organization (who), more than 80 cases of diseases in the world resulting from the ingestion of contaminated water, with more than 25 different types of illnesses. Deforestation and pollution of rivers makes this situation even more serious and, as a consequence, almost half of Brazilians (45) have no access to treated water services and 96 million people live without sewage. From these data we can admit that the next world war could be triggered by lack of water and oil.

As if these problems were not enough, there are still 40% wastage of treated water supplied to users in Brazil.

Contradictory Ruling Regulations in Practice – Empirical Evidence from an Implementation Study on Tolerated Refugees Access to the Vocational Training System in Germany

In our qualitative implementation study “Vocational Training of Young tolerated Refugees in Germany” we are exploring the pitfalls and challenges in transforming modified ruling regulations into organizational practice. Legal changes that have been introduced on the federal level since 2009 are the background of our research. They are to reduce vocational training boundaries for young refugees who are only timely-limited ‘tolerated’ and aim at opening up new legal avenues to transit to a legal residence status in the aftermath. This marks a sweeping novelty in German migration and integration policy. So far, tolerated refugees have been object to a broad-based institutionalized exclusion.

Evidence from our interdisciplinary (Sociology, Political Science) research reveals the legal inconsistencies and organisational difficulties in the implementation of the new regulations in various institutional subsystems. Empirically it is based on document analysis and long-term, multi-site fieldwork. Since 2010 we have been conducting semi-structured individual and group interviews with a wide range of experts and participated at expert meetings in order to uncover the organisational practice and ruling relations that may transform the vocational participation opportunities of this marginalized group of young non-citizens. Migration authorities’ social practices in the application of the modified legal rulings prove to be of a particular relevance. They may act as institutional gatekeepers either supporting or constraining the vocational inclusion of young tolerated refugees in a specific local context. This results in regionally diverse vocational training boundaries for the target group.

In our presentation we would like to touch upon these questions: How differently are the new regulations being transformed into practice within the relevant organizations of the immigration system? How may we explain these differences? Which lessons do we learn for scientific policy advice? To answer these questions, we outline the legal framework and present central findings of selected regional case studies.

BAUER, ZSFIA* (Corvinus University of Budapest, bauer.zsofia@tk.mta.hu)
Experiencing Assisted Reproductive Technologies in the Digital Age

As having children is considered an inherent stage in family development, inability to procreate can be considered as a crisis on both a family and an individual level. Since the advent of infertility treatment is also a life event that may result in significant emotional distress as well as long-term embeddedness into a professional, medical context. Thus it is equally imperative to concentrate not only on how patients experience their own childlessness, but how they perceive their successful or unsuccessful treatments within the medicalized and institutionalized 21st century.

Present paper (funded by OTKA-K108981) investigates everyday life experiences of infertile women who have decided to seek medical treatments which employ assisted reproductive technologies (grounded in a volatile relationship with the health care facilities), based on a systematic and in-depth qualitative analysis of topic related on-line discussion group messages. A central focus is on how the participants make sense of their conditions and treatments, what questions they find worthy of discussing and how they communicate among their own internet community. This paper outlines the individual construction of technologies, concepts of the changing doctor-patient role and theories of rising consumerist attitude brought to the research, focusing on the ART treatment within the context of the Hungarian health care system. The research investigated the constructions, tones, themes, portrayed topics and problems of the individual contributors, focusing on the newly evolving patient-doctor relationship, whilst not neglecting the dynamics of the online group.

This unique research design permitted studying the discourse of the participants in a natural, non-controlled environment, where the presence of the researcher had no influence on the results.

Main findings suggest that while lay expertise and condition based knowledge is rising in the digital age, the supremacy of trust towards medical professionals and institutionalized medicine is fading, a new dynamics in attitudes towards treatments is emerging as we speak.
Well-Being of Displaced Workers after Reemployment. Survey Evidence from Switzerland’s Manufacturing Sector

Employment fulfills some of individuals’ fundamental needs such as regular activity or social contacts and provides them with a social identity. As a consequence, if workers lose their job, their well-being is likely to be substantially affected. This leads us to the question whether workers are able to regain their former level of life satisfaction when reemployed.

Previous research has shown that this may not be the case for all workers. It has been argued that the quality of the new job plays a paramount role in how displaced workers experience the transition into reemployment. In this paper, we investigate how job loss in the aftermath of the Great Recession affects workers’ subjective well-being and whether there are increasing inequalities in life satisfaction among former colleagues.

Our paper is based on a survey of 1200 workers displaced from Switzerland’s manufacturing sector in 2009. The workers were surveyed two years after their job loss which enables us to study their occupational transitions. The design of the study tackles potential bias by surveying the entire workforce of companies that closed down completely and by combining survey data with data from the unemployment insurance register.

We find that those workers who were reemployed at the moment of the survey are on average much happier than the still unemployed. But there are substantial differences among the reemployed and not all individuals were able to regain their former level of life satisfaction. We show that some aspects of the job quality explain these differences better than others. However, job quality alone does not explain the entire variation; other factors such as changes in workers’ social relations or health conditions also seem to influence the unequal consequences of the Great Recession for workers affected by job displacement.

Mobilizations across Boundaries: Latinos and New York’s Environmental Justice Movement

In this proposal, I argue first, that while the U.S. environmental justice (EJ) movement has been painted mainly as an African-American struggle, there is a long undervalued Latino contribution in New York City. Second, there are transnational dynamics in Latino environmental activism in New York (between the diasporic community and the home country) that may serve as a model for other immigrant activists in New York. Finally, as a political scientist, my focus is on the results of Latino (EJ) activism on particular policies, programs, and projects. I am interested in the several decades of Latino (especially Puerto Rican) social/environmental justice activism in New York and the transnational processes between mainland and island activists. While Puerto Rican activists are not, technically, transnational given the island’s political status, their behavior is similar to transnational Cuban or Dominican networks (e.g. Duany 2011) or environmental justice networks working on both sides of the U.S.-Mexican border (Carruthers 2007).

I begin my overview with the public health and sanitation campaigns of the Young Lords in the late 1960s early 1970s and how this coincided with a growing environmental consciousness in Puerto Rico over the excesses of industrial development in one of the most densely populated places on earth. I next chronicle how Latinos have been at the forefront of conflicts over urban greenspace—particularly for culturally relevant greenspace with casitas and community gardens—starting in the 1970s. In the late 1980s, I chronicle several “classic” EJ battles over disproportionate siting of noxious infrastructure (e.g. incinerators, waste transfer stations, transportation hubs, and energy plants) in poor neighborhoods. I end with the “victory” of sorts in Vieuxques, which ended the Navy presence in 2003 but where justice activists still fight to remediate sixty years of military toxics.
Extreme inequality is a hallmark of neoliberal times. How to fight against it? The paper focuses on the paradoxes of struggles against neoliberal inequality. It proposes that while the ‘market society’ has contributed to waves of spectacular revolutions and protest movements in recent years, the dissent has taken place not just against, but also within and often shaped by the neoliberal logic. Consequently, the nation states themselves have been mostly limited to protestation against what they do not want, failing to articulate a vision of what they actually want and how they can achieve it. It is largely in the marginalized communities, those least influenced by the neoliberal logic, wherein a measure of relative autonomy and somewhat alternative arrangements in working life and self-world may be realized. The paper draws largely on the experience of the Middle East in the past few years.

Othering and the Poverty Discourse. Narratives from the Periphery of Mexico City

Together with the analysis of the material basis of poverty, it is necessary to understand the symbolic and relational dimensions that contribute to create, maintain, and reproduce deprivation. This paper is based on ethnographic work conducted in an area of concentrated poverty in the periphery of Mexico City. Through in-depth interviews with neighborhood residents exploring perceptions, experiences and life trajectories, the analysis attempts to dismantle the myths, stereotypes and stigmas on the poor and their places that underlie the public discourse of poverty.

From a sociological perspective, the paper seeks to understand how the poor coexist with, resist and adapt to a dominant discourse that stigmatizes and denigrates them, daily and systematically. It explores the processes and social mechanisms through which the poor are constructed as others (othering) and its implications for the experience of poverty, social policies and social coexistence. It examines how the dominant representations of poverty contribute to legitimize, consolidate and reproduce social distances, obscuring the political and economic nature of inequality, wage deterioration, job insecurity and the limited dynamism of the labour market. It is not only a question about the extension of poverty, but about the different levels of tolerance for inequality that characterize the Mexican society, in particular, and Latin American societies in general.

The Impact Of Economic Empowerment On Women's Risk Of Intimate Partner Violence In Turkey

Violence against women; a major violation of women's human rights; is defined as "any act of gender-based violence that results in, or is likely to result in, physical, sexual or mental harm or suffering to women, including threats of such acts, coercion or arbitrary deprivation of liberty, whether occurring in public or in private life" by the United Nations. Sadly, women are at great risk of facing violence where they should actually be the safest: their homes. Violence against women is a major issue in Turkey. The National Research on Domestic Violence against Women (NRDVAW) carried out in 2008 in Turkey showed an increase in the most extreme form of violence against women in Turkey in the last decade:emics where women are killed by partners or close male members of their families. The NRDVAW also shed insights into the other types of domestic violence women experience. According to this nationwide survey, 39% of women aged 15-59 experienced physical violence at least once in their lifetimes. Moreover, 15% of women reported experiencing sexual violence; 44% reported emotional violence; and 27% reported economic violence. This study aims to focus specifically on the linkage between economic empowerment of women and domestic violence. Although there is vast literature on the issue; the conclusions reached are far from being parallel. When some findings suggest a positive effect of economic empowerment on domestic violence, other studies suggest otherwise. We further aim to see whether economic empowerment, specifically house or land ownership act as a deterrent for women. We will also attempt to see the effect of economic empowerment on physical and economic violence in a multivariable setting. Further analysis will provide information on how exit seeking behaviors differ by economic empowerment.

Professional Bullying - Do Ethics Matter? Ethics In Research As A Way To Cope With Excessive Evaluation Anxiety (XEA) and Bullying

This paper explores the XEA phenomenon proposed by Donaldson and his colleagues[1], and presents a guide for identifying and managing it. XEA can be a destructive factor and have negative consequences such as preventing access to important information and data, encouraging the generation of false reports, and triggering the ethical conflicts which can be either negative or positive (i.e., causing positive stimulation, awareness, and a desire to improve performance).

In the course of evaluating a new training program, we encountered difficulties that were manifested by professional bullying and caused by what we discerned as XEA. After reflecting on the evaluation process and these difficulties, we reexamined the evaluation contract. We found that most of the contract’s technical aspects (timetable, methodology, etc.) were addressed, while the ethical aspects were taken for granted and neglected. We assumed that the lack of a detailed contract that addresses ethical aspects (rights, obligations, commitment, etc.) was the trig-ger for these difficulties including professional bullying. We suggest that formulating an acceptable contract which addresses both “ethical” as well as “technical” aspects and clearly defines these components may enable coping with difficulties emerging in the process of evaluation and reduce XEA and bullying. Furthermore, we have developed a guide that contains: (a) XEA signs, consequences and ethical guidelines for reducing XEA and (b) strategies for XEA management and possible applications and solutions in evaluation contracts that contain “technical” and “organizational” aspects. This guide may be useful for coping with complex situations like professional bullying in research.

BECK, SYLVAIN* (University of Paris 4-Sorbonne, sylvain.beck@yahoo.fr)

This presentation proposes a multi-scale and multi-level analysis about ‘expatriates’ from a multi-sited ethnographic research and semi-structured interviews among French teachers in Casablanca and London. The situations of French teachers abroad are particularly interesting to grasp the complex meanings of what are empirically French ‘expatriate’ attitudes. The reality appears at three inter-terrelated scales: individual, institutional, and socio-historical.

Firstly, the attitudes and the feeling of belonging appear connected with the imperialist function of teaching French language or following French programs. Thus, individuals are face of their cooperation with the French imperialist mission, more or less aware of it, and dealing with this position. Individually, the forms of representations of tensions with the hosting society are closely related with the professional status, that are more often influenced before the departure itself, and closely related with the backgrounds and the representations of traveling. Secondly, extracting the individual experiences from structural differences in both places, it appears two main differences following employment institutions. On one hand, the professional status, especially for those practicing within the French schools abroad (that are under French administrative supervision) emphasizes strong differences: economical conditions, responsibilities, social status, subjective space-time definition, and consequently, various everyday lives at local, national and trans-national scales. On the other hand, others conditions, status, and everyday lives are provided by the status of the school, especially for those practicing in local schools, private or public. Thirdly, the position of individuals in local and global social structures is nearly related with socio-historical national backgrounds, historical international relations and current global competition.

In this view, how considering French people as ‘expatriate’ or ‘migrants’? Which reality are those words’ meanings reflecting? In depth, this presentation suggests empirical data to highlighting the semantic distinction usually made by French ‘expatriate’ attitudes. The reality appears at three inter-related scales: individual, institutional, and socio-historical.

PAPE, ELISE* (Goethe-Universität, Elise.Pape@misha.fr)

Interrelations of Migrants to/from the South and to/from the North: Reflecting on Social Change and Crisis

This presentation aims to discuss the connection between two forms of migration which are most often studied separately in migration research: migrations from the North to the South and migrations from the South to the North. From two research projects, one on French migrants in Morocco, and the other on Moroccan migrants in France, this paper will discuss the interrelations at work between Moroccan migrants going from South to North and European migrants.
going from North to South. The studies indeed show that encounters between migrants and the local Moroccan or French population shape migration paths from South to North and vice-versa.

This paper will also explore how migration choices are related to the collective and familial history of the migrants encountered. Some of the French migrants in Morocco have had a morbid and migratory history because of their family past, by the fact that number of them had ancestors who had lived in Morocco during the colonial period. The Moroccan migrants in Europe on the other side were also motivated in their migration by their complex experience of transnational collective and familial history in the colonial era. Because of these experiences, both familial and national, the encountered migrants had been connected to the “North” and the “South” long before their physical migration.

These cross-cutting perspectives will raise the following questions: how do the interrelations at work between migrants in/from the South and in/from the North affect migration flows? How does the past, here the colonial experience, connect individuals to/from the North or the South even before their physical migration? How is this interaction affected in times of crisis and how is it reflected in an unequal global context?

I define the notion of ‘cosmopolitization’ as different modes of simultaneous inclusion and exclusion of ‘the global other’ - the ‘global other’ is in our midst. ‘Cosmopolitization’ is descriptive not prescriptive; it is not about ethics and philosophy (cosmopolitanisms), multiversalisms but about facts. There is nothing as informative as a significant example to illustrate this: fresh kidneys.

The surplus of medical transplantation (and not its crisis) has swept away its own ethical foundations and opened the floodgates to an occult shadow economy supplying the world market with ‘fresh’ organs. The excluded of the world, the economically and politically dispossessed – refugees, the homeless, street children, undocumented workers, prisoners, ageing prostitutes, cigarette smugglers, and petty thieves – are lured into selling their organs and this way becoming even physically included and socially excluded at the same time.

It fundamentally affects and transforms all kinds of intermediate institutions worldwide, like family, household, class, local cultures, ethnicity, generation, labor, elites, publics, schools, villages, cities, sciences, monothestic religions, and nation-states. And a cosmopolitan turn in social sciences.

In the name of neo-liberal capitalism and the basic democratic right to unlimited choice, fundamental values of Western modernity – the sovereignty of the body, the human being and the meaning of life and death – are being sacrificed without anyone noticing this for what it is: a process that symbolizes our age of cosmopolitization.

Discretionary Birth: Assisted Reproductive Technologies and the Rationalization of Decision Making Around the Beginning of Life

This study applies Machado’s (2005) theoretical concept of “discretionary death” in order to generalize the notion of rational discrete decisions from the domain of end-of-life studies to ethical questions concerning the beginning of life. Birth “as deed” (ibid.: 792) reflects a “new in-between class of situations” for medical personnel and (future) parents where natural birth is complemented by a range of prenatal (and postnatal) medical techniques including among other interventional (and postnatal) medical techniques — in the context of assisted reproductive technologies — preimplantation genetic diagnosis. This is neither birth “without human intervention nor an unnatural” birth (ibid.). Just on the contrary these medical interventions and ART are intended to provide new opportunities for having children. As in the case of assisted dying this is “a realm of high social professional responsibility calling for normative regulation” (ibid.). The medical contexts of firms offering IVF and genetic analysis as well as hospitals and birth clinics make up a professional sphere where the beginning of life is partialized in discrete choices and reflects rationalization and optimization of formerly “intimate” matters and “natural” processes. Together with the increased application and knowledge about ART and discretionary birth technologies (DBT) the social sciences gain importance besides medical and bio ethics: While morality politics analyses the processes of gaining influence on public opinion by political leaders and interest groups, sociological and survey research focus on tendencies in attitudes as well as the use of ART/DBT and how birth becomes negotiable. This paper presents empirical evidence from a pilot survey in Germany (2013, n=900) on the semantic framing of the beginning of life and contextualizes these results in the light of a rising biotechnology industry and the implications for the meaning of the beginning of life in the process of discrete subsequent choices that become available.

The Political Economy of Drought Conditions in an Indian State

This paper uses primary agricultural data collected from six villages in the western part of the state of Odisha during the period 2010-2012. Odisha was declared as severely drought affected for two consecutive years during the period. This paper critically analyses the institutional arrangements of the Odisha government in the context of severe drought conditions. In the final analysis it is found that the western region of the state of Odisha is severely food insecure and insufficient institutional arrangements is further contributing to loss of livelihood. In essence, the paper provides a political economy framework to understanding the food insecurity conditions of the western region of Odisha.

De-Capitalising Women Due To Development Induced Displacement: A Case Of International Fishing Harbour Project In Kerala

Kerala is a well-known state in India for its human development index. As the shortage of land and population density of Kerala are bigger problems in Kerala, displacement due to development project affect the most marginalized people and it multiplies their vulnerability, particularly to women. Women are removed from their productive system, commercial activities and livelihoods due to displacement. Subsequently, they lose both natural and human capital. This study tries to analyse the case of International Fishing Harbour project at Vizhinjam, Thiruvananthapuram. This study tries to analyse the problems faced by the women who lose their employment due to displacement and how it affects stress level of women. The present study could found that it affect their self-esteem and confidence in society and feeling of justice and it deepened their vulnerability. The present paper also tries to analyse the practices which lead to ill-health of women. Here displaced women do not avail the monetary compensation but also lose of social networking. One side, women projected as the social capital of the state but on the other side they are voiceless and oppressed. Development projects tend to ignore the women’s needs and aspirations and are making the women from one form of subordination to other form. Loss of livelihood impoverishes them further but even among them women suffer more than men do. Women have received less attention in the developmental process of the country. Moreover, the prevailing cultural practices and socialization process, market situation etc devaluing women's critical contributions to the society. There is much effort is required to consider them with their own skills, strength and capacities to improve their condition for an inclusive growth. A gendered approach is needed in the planning, implementation of developmental projects for the conducive development.

BEEGOM, BUSHRA* (University of Kerala, bushrabeeegom@gmail.com)

Displacement and Protest Movements –the Kerala Experience

Kerala is an Indian state located on the Malabar Coast of South West India. It is far ahead in the Human Development Index than any other state in India. Kerala has a great tradition of protest movements against displacement caused by large projects like Silent Valley power and irrigation project in 1970s. Development projects definitely bring displacement. The geographical constraints of Kerala intensified the magnitude of the problem. This displacement causes impoverishment of the local people and their surroundings. As displacement and protest movements have wider sociological implications, this study focuses on, namely, ICTT (International Container Terminal Project) and International Fishing Harbour Project Vizhinjam (IFHP) in Kerala. These projects were implemented in the midst of public protests. This study tries (1) to make a comparison of trajectories of mobilisation of these two projects (2) to find out whether the strategies used by the protestors helped them for getting proper compensation and rehabilitation, (3) to assess the nature and extent of these protest movements. Finally this paper examine the way in which it is faced by the Government. This study could found that this protest movement of people could really helped them to go ahead with their livelihood and sustenance to some extent. Both of these projects had been evicted a number of people from their land and thousands of people became landless and homeless. In this case, people demand only a fair compensation. They are not even aware of culturoicide and ecocide. Orthodoxy development theory promises “growth with redistribution”, while development policies have failed in practice to distribute growth benefits equally. The findings of the study reveal the lacunae in the policy with regard to development.

BEHLING, FELIX* (National University of Ireland Maynooth, felix.behling@nuim.ie)

Creating Certainty from Uncertainty. Paternalism, CSR and the Mechanisms of Employee Welfare

What does it need for a successful employment relationship? How socially responsible can a company be towards its employees? Businesses face these questions when they hire and decide the scope of potential in-work benefits. In historical perspective, such activities were subsumed under a paternalist agenda, describing an employer’s authority claiming for in-work benefits in exchange for stable employment. In contemporary perspective, corporate social responsibility (CSR) programs, management, and employee relations are framing the form of employment and define its scope. However, what is the link between these two perspectives?

The paper’s answer comes from a systemic analysis of the employment related key CSR and historical paternalist activities of British and German companies. It is argued that a company cannot be socially irresponsible in its CSR employment activities and that, while management indeed professionalised from the historical paternalist relationship, the mechanisms of providing in-work benefits remained the same. CSR is a business’ means to communicate with its non-business environment by ordering the complexity of demands and addressing some of them. In outcome, businesses gain legitimacy and present themselves as a good member of society; violating commonly held societal norms would prevent such a status. Moreover, businesses typically operate within prescribed economics and structures. They exist to turn profits and actions are chosen on the basis of their previous and likely future success; CSR is part of these operations. In the past, paternalist employers also used these two mechanisms: they conformed to societal expectations and provided benefits that were commonly held to be acceptable; and they used their own experiences to model employment in their companies.

The paper contributes to critical discussions of CSR by providing a theory informed analysis of options and limitations of employment-related welfare activities. It additionally contributes to comparative research of in-work benefits and shows their historical continuity.

Violence and Dissidence. Political Imprisoned Women In The Former GDR

As Ingrid Miethes (1999) study of the biographical background of former East German oppositional women has shown, there is a strange connection between experienced violence in the family and the genesis of dissident behavior in totali-
The main goal of this project is to carry out an interdisciplinary analysis of the meaning of violence for the indigenous youth of Reserva de Dourados, Mato Grosso do Sul-Brazil. Violence in this population has different variants of those known in the Western society. This is extremely important for us to act within the cultural dialogue towards public policies proposals based on indigenous and human rights.

The constant traffic of that population between the cities and the border, makes it produce a hybrid discourse in which, often, acts considered normal and usual are appointed as violent, and with ambivalent attitudes.

A great example is the fact that youth, mainly women are beaten by their companions frequently. They know that, in the surrounding society, this is not considered normal, but, at the same time, “it has always been that way, since the times of our mothers.” However, many times they rise against it and go in search of justice outside for help, but, soon, they repent and justify the beating: it occurred because the man had drank.

This kind of ambiguous attitude represents the disagreement that exists in the negotiation between the Western values and those of the Indigenous People, in our case, the ethnicities Arawak and Guarani Kaiowa and Guarani-Ñandeva.

The methodology of this research was based on action research between the health workers, the indigenous teachers who work in the Reserve, me and the Indigenous youth who attend the Youth Indigenous Action of Dourados. We held six workshops about the meaning of the violence and acts of violence and how we can avoid them.

Visualising an Interiority: A Self-Reflective Process of Collage

I propose a self-reflective case study of a synthesis of the thinking through making, as an artist exploring her own ageing process and searching for a method of inquiry through creative practice which merges the making and the textual. Collage appears to offer versatility as it allows one to express subjective experience through reflexivity and its intrinsic multiple interpretations of the 'image'. Collage is derived from the French word, collage, to stick, a familiar cut and paste process going back 1000 years to when Japanese calligraphers used torn bits of paper to embellish their written texts. More recently, it could be said to have paved the way for Postmodernism, which is itself almost 'collage-like' in that it disrupts our sense of reality and the generally understood aesthetic unity of things by reflecting the way we see the world, with objects being given meaning not from something within themselves, but through the way we perceive how they stand in relationship to one another. It does not preclude conventional 'artistic skill' but something within themselves, but through the way we perceive how they stand in relationship to one another. It does not preclude conventional 'artistic skill' but does encourage creative exploration; therein rests its inherent attraction for artists/researchers as it offers the gift of multiple voices.

This study investigates the subjective experience of ageing through the gaze of an older woman artist, viewing her own transitioning, examining the inter-subjectivity of the artist/researchers as it offers the gift of multiple voices.

Images & Ethics in Contemporary Argentina: The Art of Post-Dictatorship

Presenting the guiding argument of my recent work in Argentina, this paper argues that aesthetic interventions can be understood as ethical endeavours that accompany but exceed any political-legislative or juridical project. Insofar as aesthetic enterprises constitute forms of 'memory work' they risk being understood as attempts to put the past to rest, or even as melancholic returns to the scene of the past to rehearse the stories encountered there. But this 'return' is not a real return and is not about but is instead 'before Memory' in Derrida's sense. In other words, the concern is to respond to the past by enacting and inculcating a responsibility, an ethics. The examples I discuss concern the relation to the other characterised by Levinas' concept of the Infinite, and are therefore as futural as is possible. Thus while many artist activist interventions (such as the poster interventions, or by the interviewers themselves).

Interviewer Variance Of Interviewer and Respondent Behaviors: A Comparison Between Calendar and Conventional Interviewing

Past work in retrospective reporting in surveys has looked at calendar and conventional questionnaire interviewing in regards to interviewer variance on responses (Sayles, Belli, & Serrano, 2010) and verbal behaviors among respondents and interviewers (Bilgen & Belli, 2010), but interviewer variance on calendar behaviors has not yet been examined. In this research, we compare the interviewer variance of interviewer and interviewer verbal behaviors between 165 calendar and 162 conventional interviews. The types of interviewer behaviors that were examined include those for retrieval probes, standardized associated behaviors, conversational behaviors, feedback, and rapport. The types of respondent behaviors examined include the use of retrieval strategies, probe disagreements, expressions of cognitive difficulty, conversational behaviors, and rapport. We find that almost all of interviewer variance of the behaviors differ significantly between calendar and conventional methods, the lone exception is for respondent laughter. The interviewer effects in all remaining respondent behaviors in calendar interviewing is higher than in conventional interviewing; however, the size of the interviewer effects for interviewer behaviors between methods are not in the same direction. By relating the interviewer variances on key verbal behaviors to their prevalence between the two interviewing methods, we infer whether the interviewer effects on the behavior were driven by the methods requiring different styles of interviewing, or by the interviewers themselves.
people for a progressive alternative in a non-revolutionary situation, the promises and perils of coalition politics with elite political parties, and the possibilities and problems in linking a progressive international agenda with a local reform agenda. Among the questions my intervention will seek to answer are: Where does the corruption and governance issue fit in a progressive agenda? How does one promote distributive reform in asset and income distribution in a period when people's movements are weak? How does one link a local reform program to a strategic post-capitalist agenda? How does one promote a reformist foreign and global policy agenda that addresses climate change, the crisis of globalization, continuing interventionism on the part of the United States, an increasingly assertive China, and geopolitical rivalry between the United States and China.

Children's Autonomy and Parents Responsibility in Urban Spaces

The aim of the proposed communication is to demonstrate that, despite the increasing attention to children's autonomy and the arising of policies devoted to this principle, a decrease in spaces of responsibility awarded to children is occurring, so that they have limited decisional power, a restricted use of public spaces, fewer "unsupervised" relationships within peer groups, dependency on adults and mandate to adults in their courses of action. The hypothesis of increasing risk of dependence of 9-12 years old children from adults' control is based on a research focused on Turin area, part of a national project on children's autonomy and adults' responsibility.

Analysis pointed at the different ways in which autonomy/dependence ratio, referred to the children's space management, is declined by adults, either in domestic or in public spaces. Variations are considered depending on children's gender and age, family social condition and type of neighbourhood of living. Different degrees of autonomy and responsibility are related to different family social condition.

As regards methodology, 46 in-depth interviews were carried out to 9-12 years old children sons/daughter's school grade and their parents contacted through two selected school, located in two different neighbourhoods and characterized by a different class composition. Four focus group, involving teachers of the two schools have been realized.

The Construction of Everyday Consumption By Children and Their Families

This study aims to explore ways in which parental responsibilities are exercised, by analysing consumption experiences together with their accompanying negotiations and avoidance practices, as implemented by parents and children. In recent years, the issue of parental responsibility has inspired reflection and clarification in several disciplines and reflects changes emerging - at least in Western societies - in the social, cultural and legal regulation of family relations (Leira, Saraceno 2008). A multi-method research analyses consumption experiences both qualitatively and quantitatively. A first research step concerns a series of focus groups with 25 children attending the last year of primary school (age 9-10). Then twenty narrative interviews and a focus group was carried out with their parents focusing on the theme of family consumption and negotiations with children. The thematic maps resulting from these two steps were used to elaborate a questionnaire for a survey that involved 494 children and 374 parents.

Results describe social representations of children and parents as consumers and practices of consumptions and negotiations. It highlights a typology of very young consumers which is highly sensitive to gender and cultural differences, where peer culture plays an important role to orient choices. Responsibility-giving and responsibility-depriving practices on the part of parents emerged during the description of day-to-day negotiations.

Children reveal competencies as to qualify them as competent actors of consumption, despite the image prevailing among the public at large. The exercise of parental responsibility reveals an ambivalence described in the literature (Qvor-trup 2003; Hockey, James 1993; Jents 1996; James, Curtis, Birch 2008) between child-protecting needs and the need to recognize and reinforce children's autonomy and responsibility. These aspects would seem to reflect the differing but often coexisting representations of children as passive subjects or individuals endowed with agency.

BELOUSOV, KONSTANTIN* (Russian Academy of Sciences, beloysovkonstantin@gmail.com)

Higher Education in Russia As Institute of Social Control of Student Deviant Activities

Social control plays for the society a significant regulative function, is a complete mechanism of maintaining of public balance, facilitated with a wide range of tools, forms, methods of impact on undesirable to a society manifestations of human activity, which find first of all expression through social institutes. A social institute of education (higher education in particular) takes on special significance. However many modern scientists say that an institute of education keeps actuality and a realization of significant controlling function. Modern universities limit its objectives only to information transfer and miss the formation of character, moral and civic principles, and also could hinder the development of social qualities of the individual and its behavior, that have socially useful nature.

Few questions, which need its answers, acute before the system of social control in Russia. First, could modern universities be elements of social control? Does it exhaust its correcting, controlling potential?

It is fair to say about serious lag of the university system of social control from quickly developing proliferation trends of deviation among students. Few factors, (it is the author's opinion) can have a major impact. For example: attempts to silence or denial of the problem's existence; secondary importance of the distribution of deviant behavior among students before such problems as an improvement of the quality of the educational process; government support of social control programs and preventive measures place emphasis on schools, without affecting institutes of higher education...

It appears that the initiation of a broad discussion in Russia, scientific understanding of the problem among specialists, practical activities aimed at implementation of coordinated preventive measures in the institutes of higher education could remove the existing tension and serve as a beginning of the formation of a system of social control and preventive measures at universities of Russia.

Arts, Popular Culture, and Chinese Migration in Spain. Dialectics of the Incorporation

This paper discusses how the Chinese origin people in Spain it is present and active in the Arts and popular culture of the country. Besides that only very recently the Chinese population volume is significant in Spain, since the very beginning of his presence the art and popular culture have been a way for the Chinese incorporation to the Spanish society: circus, acrobats, painters; and very soon it also developed another phenomenon as some of the Spaniard magicians adopted Chinese names for their presentation into the public. This kind of ways incorporation is still at work.

In this paper we will analyze how the Spanish arts and popular culture use the “Chinese” and how they are incorporated to the mainstream as well as to the marginal societal. At the same time, Chinese in Spain are agents/actors/producers of arts and popular culture that interplay with the rest of the society showing an incorporation dimension where the class level is also at play. This dialectics of the incorporation will be analyzed through different artists and creators' cases studies.

Are 'New Wars' Rational? Symbolic Violence in Israel's Recent Wars

The burgeoning academic literature on new wars is still grounded in the rationalist assumption that wars are a means of achieving material or ideal goals. However, this presentation argues that the new wars of the post-Cold War era of reflexive modernization and globalization are not rational purposively in their episteme but substantively (following Weber's separation between the two). Accordingly, unlike previous conventional or civil wars, the goal of new wars is not solving problems. Instead, they are symbolic expression of the idea that ethnic, ethn-national, or religious differences should be preserved, and conflicts along these lines are unsolvable. The presentation demonstrates this hypothesis through the case of Israel's most recent wars.

S. N. Eisenstadt : The Challenge Of Social Change

S.N. Eisenstadt: The challenge of social change

Social change was one of Eisenstadt’s major areas of interest. In his view, the possibility of innovation and change is not something external or accidental to any institutional system. It is given in the very nature of the process of institutionalization and systems. He applies this principle of dialectical transformation to his analyses of the dynamics of civilizations and modernity. SNE perceives socio-historical transformations through an emphasis on the multiplicity and variety of forms that civilizations may adopt and where human agency and creativity play a major role. Hence, such developments are made possible by the emergence of new types of elite. It is in this perspective that SNE discusses inter-class and inter-elite struggles, demographic expansion, domestic and international difficulties of states. SNE’s analyses favour cultural and ideological premises. SNE sees modernity as the emergence of a social reality where the legitimacy of the social order ceases to be taken for granted and becomes an existential problème for people, as members of society. This perspective, which developed in Western societies in the context of given civilizational legacies, has not remained these societies’ exclusive privilege but has quite rapidly conquered more and more spaces, intermingling everywhere with singular cultures. This is what qualifies for SNE’s notion of multiple modernities. SNE, however, does not indicate anything that transcends modernity in the social world. Under this angle, the project of modernity can be seen as a variant of ‘the end of history’ theme. Modernity is not only ‘on endless trial’, but also ‘on an endless trial’. Obviously, present-day globalization, transnationalism and multiculturalism have tremendous influence on individuals - diasporans and non-diasporans – as well as on society. Are we now seeing signs heralding a new sequence of modernity or are they pointing out to a new era?

Dominant Parties In Non-Western Countries

Dominant parties in non-Western democracies

In general, it is assumed that dominant parties are able to maintain themselves in power either after election thanks to their immense power which they manipulate in order to retain their status. The current presentation refers to Kaldor’s Crisis and compensation and suggests that a major factor that accounts for parties to gain strength in non-Western democracies and remain in power for protracted periods stems from their capability to respond efficiently to ongoing social, political and economic challenges. This capability warrants parties’ retention of dominance – or at least dominant influence – over the years. Even if they do not retain an exclusive hold on governmental power, they do imprint their perspectives on the setting’s political scene as a whole. This presentation validates this perspective by analyzing the cases of Japan’s LDP that has been (and still is) in power for five decades, and Israel’s Likud which succeeded to ousted the Labor Party from its dominant party position for 40 years.

Negotiating National Identity: Inequality and Uprising

In this colloquium, we intend to analyze the question of minorities in the North of Africa particularly in Algeria and Morocco. Our proposition about this question has an aim to understand why the ethnic tensions and Arabic spring took place in almost all the Arab countries except in these two countries. Our study intends to predict based on analyzing what happen in the coming years. Our research terrain is both countries as they have several ethnic and political problems. Then, we ask the following question: What would the future hide as events for these two countries basing on the social change factor as a fundamental point. This sample “ethnicities in Algeria and Morocco” - as second factor- are considered as elements influencing in the social cohesion and having as a possible result a real political, social, and cultural Revolution. As a matter of fact, we consider that the political borders are not coherent with the geographic borders. To understand this matter, it is necessary to study the internal factors in the two countries in the first place (social, psychological, political and cultural structures) as means of inequality in the society. In the second place, we have to study the external factors related to the French and American interests in this strategic region. We try to understand if the failure of transformative politics is behind the ethnic incension and how this could introduce a revolution spirit in the two countries. We think that such failures often force minority groups to devise other means of self-protection. Basing on the Jacob Mundy’s book on failure of transformative minority politics in Algeria, we will examine the question on inequality and its impacts on the social and political cohesion.

Non-Standard Professional Workers and the Demand of Representation: Do Knowledge Workers Need Collective Organizations?

Since at least 30 years, the processes of economic and social change in industrialized countries have been weakening the collective dimension of working conditions. This is especially the case for young non-standard workers experiencing a more individualistic relation with work and labour market. Indeed, the decreasing participation to unionism can be partly explained by the individualization of work. Italy is a particularly interesting case at this regard, as several labour market reforms took place since the end of the 90s pushing high-skilled young workers into non-standard contracts and positions.

The aim of the paper, based on a qualitative survey involving 75 young professionals’ living in Milan (Italy) and 16 organizations, is to understand whether high-skilled non-standard professional workers express a specific demand for representation, and what kind of answer traditional and innovative organizations are likely to offer.

Our leading hypothesis is that, as a consequence of a general disappointment toward politics and unionism and of the change of workers’ social identity, young professionals do not refer to unions but pursue individual strategies to solve their conflicts within the labour market. Non-standard workers constantly refer to rhetoric on personal autonomy and freedom against the ‘boring standard long life full time job’ (not existing any longer in the real life).

Our results in Milan, the Italian metropolis which usually anticipate national changes in the labour market, shows a mismatch between job conditions of these workers that have strongly worsened in the last decades, and the awareness that these conditions are shared by a large part of non-standardworkers, and their (in) capacity of collective representation and action. The lack of sharing a common capacity of work is one of the elements to understand this mismatch. Given this scenario, the possibility for unions and other associations to organize these workers is very unlikely.

Leisure and Health

Mental or emotional health refers to overall psychological well-being. It includes the way we feel about ourselves, the quality of our relationships, and our ability to manage our feelings and deal with difficulties. Good mental health isn’t just the absence of mental health problems. Being mentally or emotionally healthy is much more than being free of depression, anxiety, or other psychological issues. Rather than the absence of mental illness, mental and emotional health refers to the presence of positive characteristics. Similarly, not feeling bad isn’t the same as feeling good. While some people may not have negative feelings, they still need to do things that make them feel positive in order to achieve mental and emotional health.

The positive characteristics of mental and emotional health allow us to participate in to the fullest extent possible through productive, meaningful activities and strong relationships. Taking care of our body is a powerful first step towards mental and emotional health. The mind and the body are linked. When we improve our physical health, we automatically experience greater mental and emotional well-being. For example, exercise not only strengthens our heart and lungs, but also releases endorphins, powerful chemicals that energize us and lift our mood. The activities we engage in and the daily choices we make affect the way we feel physically and emotionally. If we maintain a balance between our activities and strong relationships. Taking care of our body is a powerful first step towards mental and emotional health.

The aim of the paper, based on a qualitative survey involving 75 young professionals’ living in Milan (Italy) and 16 organizations, is to understand whether high-skilled non-standard professional workers express a specific demand for representation, and what kind of answer traditional and innovative organizations are likely to offer.

Policing and Social Activism in Château Rouge, Paris

denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The neighbourhood of Château Rouge in Paris’s 18th arrondissement is home to a large foreign-born population of residents and has been called “Africa in Paris.” However, while the neighbourhood is often labelled as “exotic” it has also earned a reputation for being one of the more dangerous and lawless neighbourhoods in Paris. In 2012, Château Rouge was listed as one of 15 “priority security zones” by the French government, leading to increased police action on unlicensed vendors, prostitution, theft, occupation of public spaces and drug trafficking. While the local government has created political and economic interventions that seek to solve these problems, local residents have taken to online blogs and forums to complain and raise awareness about what they deem to be Château Rouge’s “real” problems: the failure of the police, the municipal destruction of old buildings and classic architecture for redevelopment, and “mono-commercial activity,” or a lack of commercial diversity in the neighbourhood. However, while these online discussions often commence with a statement of support for the neighbourhood’s cultural, religious or national diversity, it is evident that some of the products of Château Rouge’s multiculturalism—halal butchers, African hair salons, “ethnic” grocery stores and a large concentration of African migrants—are a source of discontent for many residents. Based upon ongoing research in Château Rouge, this paper presents evidence of social and political policing efforts and governance that seek to control a “transient” and “dangerous” neighbourhood while concealing growing discomfort with this “ethnic enclave.”

Protest Mobilizations at the Beginning of the 21st Century: J14 as Part of a New Global Cycle of Protest

In the aftermath of Arab spring, throughout Israel there were massive protests, indeed, on a per capital basis, the “cottage cheese” revolt, or J14 (June 14), can be seen as part of the Global cycle of protest. According to Schechter (2012) three phases of the Israeli J14 can be identified: 1) The public phase, 2, Immediate Post – tent city phase, and 3) Long lasting projects born out of the protests. Like many, if not most of these movements, the mobilizations were responses to neo liberal globalization, which has had adverse impacts on Israeli youth, especially rising costs of living. But like many of these movements, they were not simply workers, or even socialist unions, but a wider range of actors, especially youth, not just seeking a better standard of living, but dignity, recognition of their humanity. But did these movements have any impact? Let us note that to gain the support of many, the occupation of Palestine, a huge drain on the economy was not made an issue. But that said, the “success” of Lapid, limiting the “victory” of Netanyah must be noted. While he remained in power, that power was weakened. More recently, the likelihood of the USA and others to negotiate with Iran, and the growing discontent over the Palestinian issues, seem to have made a weakened Bibi more bilocose and intransigent than ever. Noting parallels with New Dawn in Greece and the Tea Party in the USA, which have been losing actual support, it might be suggested that while the movements of 2011/12 may not have resulted in short term change, or perhaps things even worsened, these movements have just been the opening shot in more long term progressive mobilizations.

Are Some Nations More Creative Than Others? a Macrosociological

Bibliometrical studies show systematic differences in the scientific impact of nations, as measured in their shares of highly cited publications. They show similar differences between countries’ academic institutions in terms of their bibliometrical impact. Even though creativity cannot be equated with bibliometrical impact, and high impact not necessarily with groundbreaking research, the systematic differences − even if checked with funding of research per capita − indicate that there are institutional differences that shape the possibilities of both universities and individual researchers and teams to do research that influences science at the aggregated level of scientific impact but also the creative environments of their universities and the individual scholar’s capacity for devising and executing research that challenge the frontiers of knowledge.

Pathways to Social Marginalization in a Scandinavian Welfare State

This paper analyses different pathways to social marginalization in a Scandinavian welfare state. Conceptually, the paper builds on a multi-faceted life course approach which recognizes that, first, marginalization involves economic, social, and cultural deprivation and, second, routes to marginalization are complex. Empirically, the project draws on longitudinal data from Danish administrative registers which covers the population of cohorts born between 1983 and 1988 over an extended period of time from 1999 to 2013. We follow each cohort in a 9-year period from their early 20s to their early 30s. The period from age 26 to 32 is a period from the early to mid period of young adulthood. We here define young adulthood as the early phase of life with young people making their transition to independence and starting in career paths. The early phase of life is a phase of transitions, where the individuals are in transition from their family of origin to their own family of reference and from education to work. The paper draws on data from the Danish Labour Market Survey, which covers all individuals of working age. The survey has been conducted since 1983 and includes questions on employment, education, family background, etc.

The United Nations Security Council unanimously passed Resolution 1325 (UNSCR 1325) on women, peace, and security in 2000. This resolution recognized women’s involvement in efforts to maintain and promote peace and security and the right of women and girls to protection from human rights abuses such as gender based violence, and prosecution of perpetrators for such crimes. It stressed the importance of integrating a gender perspective into all aspects of and stages of the processes involved in conflict prevention, prosecution and punishment of perpetrators, provision of adequate and effective protection of victims, and building, and post-conflict reconstruction. This paper will examine what progress has been made to implement and institutionalize this resolution in selected West African states. National Action Plans are one of the key ways that governments take steps to implement UNSCR 1325 into policies and programs, irrespective of whether they are recovering from conflict or engaged in peace keeping activities. Women activists also make use of this document to pressure governments to include women and a gender perspective in peace negotiations, to promote gender friendly legislation, increase women’s representation in decision making bodies, including elected office and the judiciary, and to advocate for equal rights for women (Cockburn, 2007; McCormack-Hale, 2012). Drawing on primary and secondary documents drawn from United Nations, NGO reports, and scholarly publications, we will examine initiatives governments have taken to formulate and implement National Action Plans, reduce sexual and gender based violence against women, repeal discriminatory and statutory customary laws, conflict prevention, prosecution and punishment of perpetrators, provision of adequate budgets to effectively implement policies, and monitoring and evaluation frameworks. Our analysis will be informed by sociological and feminist conceptual and theoretical approaches applicable to West African contexts.

Changing Caring Practices and Ideals: The Effects of Intergenerational Transmission and Migration on Transnational Family Life

This paper combines a life-cycle and migration history perspective to explore the influence of intergenerational transmission and transnational caring arrangements on changing ideals and practices in family life. By investigating past and
current family life of African parents in the Netherlands, the paper aims to identify how migration and individual family experiences intersect and impact on emerging transnational family ideals and practices.

The paper focuses on Angolan and Nigerian parents in the Netherlands with children abroad. The history and migration trajectory of parents from respective countries differ, and the economic and emotional challenges they face in the Netherlands with and without children. These differences in the crises and mobilities are described, yet the analysis goes beyond country/group level variation. The paper explores how individual family history impacts on transnational family life. To what extent do parents view transnational caring arrangements as new phenomena in the family? Are experiences with fostering, rural-urban migration or separation through war - to different degrees applicable to Angolan and Nigerian migrants - experienced as precursors of the transnational experience? How do childhood experiences affect the imagined roles and responsibilities of either racialization or masculinities, by focusing on the emmeshed negotiations of race, class, gender and sexuality. The analysis shows how male artists often challenge racialized discourses, but in ways that simultaneously draw on racialized stereotypes as a means for performing heterosexuality. Furthermore, attention to female artists’ critique of the sexism of their male colleagues, and queer analysis of male homosexual desire, reveals how hip-hop is often very radical and conservative at the same time. In this way, I seek to complicate our knowledge of how racialization and masculinity are constructed, negotiated and challenged, by focusing on what I call an ‘intersectional politics of masculinity’.

Factors Affecting a Prolonged Working Life for the Older Work Force. The Swedish Case

Sweden is facing the challenge of an aging population and an increasing dependency ratio. The issue of prolonging working life is therefore a top priority. Sweden has made major changes in the pension system to create incentive for participation. During the last decades the participation rate for 55-64 years has increased significantly. Beside the altered pension system and a general trend of healthier population, also changes inside working life is suggested to explain the increasing participation rate of older. However, the mechanisms that retain the older work force are still unclear. This paper will study mechanisms behind the older work force’s decision to stay employed. Two hypotheses are discussed. Firstly, the decision to stay is a function of the type of work one have. The explanation for a larger participation rate is therefore a compositional effect implying a larger share of white collar jobs in the occupational structure. The second hypothesis is that it has been a general improvement in the working conditions making it possible for a larger share to continue to work.

Gender Differences in the Path to Full Professor at Two Liberal Arts Colleges in the United States

This paper examines whether gender, rank, and barriers to promotion affected how satisfied faculty at two highly selective private liberal arts colleges in the northeastern United States were about their opportunity for advancement in rank. A work climate survey was sent to the entire population of 370 and tenure track faculty at the two colleges, one formerly all male and the other formerly all female. The response rate was 70%, yielding 237 respondents. Multiple regression was used to examine factors predicting faculty satisfaction with their career progression. College of employment, gender, rank, and promotion barriers were significantly associated with faculty satisfaction with their opportunities for advancement in rank. Faculty at the former men’s college were more satisfied with their opportunities for advancement in rank than faculty at the former women’s college. The former men’s college has two pathways for promotion to full professor, including one that does not require a significant publication re...
cord, while the former women's college does not. While gender had no effect at the former men's college, female faculty at the former women's college were less satisfied than their male peers with their opportunities for advancement. In contrast, rank had no effect at the former women's college, but associate professors were less satisfied than full professors with their opportunities for advancement at the former men's college. These results suggest that more support for associate professors and female faculty from the time they are tenured until they are promoted to full professor would improve their satisfaction. Colleges need to provide sufficient resources, including time, to enable faculty to complete the work necessary for promotion to full professor. They also need to provide feedback to associate professors about their progress towards promotion to full professor. Finally, they need to protect associate professors from too heavy a service burden.

Public Support for Harvesting Mountain Pine Beetle Infected Trees in British Columbia: Economic Impact or Environmental Attitudes?
The mountain pine beetle (MPB) epidemic is the largest recorded outbreak in British Columbia's history currently covering almost 10 percent of British Columbia's 9.2 million hectares of forest. The problems it poses are not merely ecological but also social and economic. An evaluation of the public's perceptions of MPB management alternatives provides decision-makers with information needed to make publicly acceptable decisions concerning the use and recovery of affected areas. A survey was administered to 312 respondents, half in Prince George, a forest-dependent community, and half in Kelowna, a less forest-dependent one. This research found considerable public support for increased harvesting of MPB infected trees. The public appears to have accepted the position of the Council of Forest Industries as well as the federal and provincial governments that increased harvesting is the appropriate approach to managing the outbreak. Though public debate and policies often emphasize the economic consequences of natural disturbance events, concern for the economic impact of the MPB was not associated with support for harvesting. Instead, education, age, and environmental value orientation distinguished support for harvesting MPB infected trees among respondents in these two communities. The OLS regression results revealed that an ecological modernization viewpoint was the strongest predictor of support for harvesting. Respondents who scored high on this environmental attitude index downplayed the importance of environmental concerns and relied on economic and scientific progress to solve environmental problems. The driver for supporting increased harvesting appeared to be a belief that human intervention can solve environmental problems. These findings support norm-activation theory's explanation of environmental concern. This research also demonstrates the value of examining the social determinants of public support for strategies for managing natural disturbances as part of the policy making process.

Differentiated Implementation Of Human Rights: A New Research Agenda
One of the major issues attracting the attention of scholars studying global norm regimes is under what conditions and how transnational regimes impact state behavior. Focusing on the human rights regime, we propose to broaden the research agenda of the literature dealing with the implementation of norms in domestic settings by re-conceptualizing implementation. We show that the research examines the institutionalization of human rights norms within the local sphere uses the state as the unit of analysis and therefore implicitly assumes that the processes of implementation are uniform and consistent across the population. We introduce the term “differentiated implementation” to capture variations of implementation across different social groups within a given society (descriptive level), and use perspectives and methods from the sociology of inequality to explain specific patterns of implementation. We present two case studies to illustrate our argument – the right to vote in the US and the right to work of people with disability in Ireland. Our effort to connect the implementation literature with the sociology of inequality can encourage human rights scholars to examine the impact of local structures and processes, and prompt inequality scholars to explore the global human rights context

Young Researchers in Germany: Different Forms of Examination and Evaluation of Academic Careers
To be under examination is a quite common experience for young researchers. In the German university system, young researchers are confronted with examinations (a dissertation, the doctoral exam), as well as with examinations in a broader sense (e.g., regular evaluations of teaching, peer review). From our perspective, it is important for a comparative sociology of examinations to look at different formats/forms of examinations and evaluations within specific fields in the Bourdieusian sense. Thus, we intend to compare the various formal and informal processes and instances of examination and evaluation young researchers experience during their careers. In the same vein, we draw on phenomena of trust/mistrust in the academic trajectories.

In our presentation we will (a) differentiate between formats of examination and evaluation which are typical for academic careers in Germany. We will then fo-cus (b) on how young researchers cope with different forms of examination and evaluation. The presentation is based on a research project on academic careers in Germany with a special focus on trust funded by the German Federal Ministry of Education and Research (BMBF). At the current stage of our project we mainly use qualitative interviews to analyze the relevance of trust for academic careers.

Exploring the Predictors and Outcomes of the Adulification of Adolescents
The purpose of this study was to assess the predictors and outcomes of children who are asked to perform adult roles during their childhood and ado-lescence. Adulification is the exposure of youth to adult knowledge and roles within the context of their families. In the most extreme forms, adulification can be termed parentification, where the child and the parent have essentially switched roles. In its less extreme forms, adulification can be beneficial as the adolescent child gains skills toward independence, adulthood, and employment. In 2007, Linda Burton provided a model of adulification that was written from ethnographies. Burton’s (2007) Conceptual Model of Adulification of Economic Disadvantaged Families was partially tested in this study. Using the first and third wave of the National Longitudinal Study of Adolescent Health (Add Health), the relationships between perceiving oneself as having been adulified in adolescence and family context in adolescence (e.g., parental time, parental physical and emotional availability, family closeness, family poverty, neighborhood safety, family closeness, culture, and immigrant status), as well as adolescent attributes (e.g., age, birth order, gender, physical and emotional maturity) were examined. In addition, outcomes of being adulified in adolescence (re sponsible behaviors, mental health, risk-taking behaviors, and civic participation) were assessed as participants progress through the school years. Results showed that the having healthy parents, having parents who lack parenting skills, and having family closeness were the strongest family context predictors of adulification. Adulification was also predicted by the adolescent’s psychological availability, lack of autonomous decision making, and working less within the home (suggest ing poor job employment). Adulification is a process that can be disad-vantageous to the outcomes of living autonomously in adulthood, the number of transitions of emerging adult-hood (e.g., education, marriage, etc.), number of sexual partners the subject had, but positively related to smoking marijuana and binge drinking. Future directions are discussed.

Crisis As Marketization: Social Policy In Southern Europe (2008-2013)
The marketization of social policy as evidence of a larger paradigm shift is especially evident than in austerity-ridden eurozone countries. Ireland, Greece, Italy, Portugal and Spain are comparable in that a short-term, large-scale change in social policy is currently being undertaken. With the significant exception of Italy, all cases have entered the eurozone as relatively recent cohesion countries with specific well targeted models that did not fit neatly into traditional categories advanced in the welfare state literature. Recently, they have arguably entered a path-depen-dent process of convergence towards marketized social policy. The introduction of market mechanisms in benefits provision, healthcare, education and housing has then been practiced and initiated in a way that means the ways of operating in these contexts is producing new cleavages while reinforcing gaps which had seemingly disappeared. These countries, where unequal social relations were the norm for most of their modern histories, now face an externally-induced push towards
marketized social policy without accompanying compensation mechanisms, such as strong civil society participation rates and institutionalized conflict procedures. In this paper, we test this convergence hypothesis by tracing social policy orientations and transitions in the context of larger institutional change. As these countries now face critical junctures, they are important test cases on the impact of external shocks to domestic social policy and the consequences of pushing market mechanisms into welfare provision in the context of unpredictability in political and economic outcomes.

BERNARDO, LUIŠ* (Humboldt-Universität zu Berlin, luispaibsbernard@gmail.com)

Hesitant Secularists: The Politics of Secularism and Post-Secularism in 21st Century Portugal

How secular is Portugal? Is it a post-catholic polity, transitioning from mono-confessionalism to religious pluralism? Is it, in that sense, a post-secular polity? Recent events suggest that post-secularity might underpin a specific mode of governance to a larger and deeper extent than previously thought. Research on the religious field in Portugal has been dominated by Church-centric frameworks, eschewing Bourdieusian field theory in its richness; moreover, that research stream has rarely taken steps towards a keener understanding of intersections between religion, religious traditions and public policy. As a consequence, debates on the categories of secular, secularism and secularity are limited to discussions on crude distinctions between the separation of private and public spheres, without regard for contemporary discussions on varieties of secularism, the emergence of post-secularism as a descriptive term as well as a mode of governance, and the redeployment of religion into a richer societal landscape where, as Charles Taylor states, it is one among many options in the collective knowledge and meaning-making pool. This is quite clear in Portugal, where the religious field has faced significant reconfigurations since the early 1990s. Moreover, corporatist modes of intermediation bring secularism to the fore as a relevant conceptual tool to scholars envisioning the emergence of new formations of the secular in polities where the usual tropes of secularization theory were hardly ever applicable. The Portuguese polity is an interesting test-case in this regard, as its regulatory environment regarding religion has evolved largely according to governance procedures that have its roots in normative visions of what is secular, non-secular and perhaps post-secular. The interplay between these categories in a largely unknown conceptual territory and empirical context is thus the object of this paper.

Financialization in the Backyard: Shrinkage, Welfare State Restructuring and New Housing Investments

The paper discusses the interplay of local planning policies, welfare restructuring and global financial markets in the “making” of social segregation. It builds on an empirical study in Halle-Neustadt, a shrinking New Town in East-Germany and uses a mix of survey data, interviews and document analysis and as well as fieldwork.

In Halle-Neustadt, the paper argues, different developments come together: First, Neustadt has experienced dramatic population losses, which stimulated large scale demolition programmes as well as planning policies which aim to transform parts of the neighbourhood to a green space. Second, Neustadt has experienced two waves of privatisation in the last two decades, leading to a complete change of ownership structures. Thereby, municipal and cooperative owners have been largely displaced by national and international financial investors which hold their stock as an asset and aim on short-term gains, rather than long-term development. Third, welfare cuts have put more pressure on welfare-recipients to accommodate in cheapest housing available on the local market which led to a “business-model” profiting on low, but state-subsidized, rents in peripheral estates.

The paper discusses how these developments work together to produce new concentrations of poverty households in a prototypical shrinking city. With this, we expand on the already fairly developed debate on the financialization of urban development and provide new insights on (a) financialization in shrinking, low-de-mand markets; (b) the interplay between planning, state restructuring and financialization in a German context. We demonstrate that the political economy of housing follows different dynamics here which are owed to both the weak-market situation and the path-specific restructuring of the German planning and welfare system. We conclude that research should put the state more into the centre of explanations and take different paths of state restructuring as well as different socio-economic contexts more seriously.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
action: the succession of steps an individual actor takes to try and reach one of her/his significant goal(s). Indeed it takes planning, mobilizing information and means, finding support, focusing efforts, anticipating obstacles, (re)defining tactics and strategies to move a project forward through months and years. Examples are: getting a degree; looking for a decent job; moving upward in organization (career) by finding a place to live; attaching to oneself a desired partner; buying a flat; raising a child (long and tricky course); divorcing; changing one's job; setting up one's own business; fighting an illness; getting rid of some addiction; becoming an activist of some cause; emigrating and settling in another society… All these courses of action may lead to altering one's social status: from student to graduate, unemployed to employed, bachelor to married, childless to parent, ill to healthy, from passive to active citizen… In a constructivist perspective, millions of such courses of action contribute together powerfully to shape societies and their history. However none of empirical sociology' standard methods has been designed to observe a course of action. Indeed it takes narrative interviewing with actors to try and reconstruct, admittedly with imperfections, what they did, with whom, in which context(s), how they did it (and why). For instance, only through series of (focused) life stories – the damned method? - collected in the same social world may one understand sociologically what are its inner workings, how they are re-produced, how they change. Furthermore these informative testimonies will cross-check each other, solving several validity issues.

Social policy by numbers – numerical tools in global social policy making

The paper investigates the role of a special class of tools in the formulation of global social policy: the use of numbers and quantification. We argue that numerical tools, beyond their technical function of supporting decisions, shape or even constitute the ‘social’ in the global sphere, and that they enhance the legitimacy of policies that make use of them. We draw on recent sociological theories of quantification and numbers, on world society theory and on the constructivist theory of social problems. Empirically, the paper flows from an ongoing research project on basic social protection worldwide, a field replete with quantitative tools of policy formulation and implementation. We compare three types of international organisations (IOs) as to the degree and the varieties of numerical tools they use in designing and spreading social protection policies worldwide: lending IOs (World Bank, Asian Development Bank, the latter producing the Social Protection Index) with governance IOs (World organisations (IOs) as to the degree and the varieties of numerical tools they use in designing and spreading social protection policies worldwide: lending IOs (World Bank, Asian Development Bank, the latter producing the Social Protection Index for Community Poverty Reduction); standard-setting IOs (ILO) and non-governmental advocacy IOs (HelpAge).

We pursue two questions: In which ways are social problems and related social policies constructed by numerical tools as globally comparable and applicable? How do numerical tools create legitimacy for policies advanced by IOs, making up for the lack of electoral legitimacy (e.g. the strong role of quantitative communicative in achieving the unlikely global consensus on ‘social protection floors’ by the ILO in 2012)? Overall, we hypothesize that these practices change the meaning of ‘the social’ as compared to conventional national social policies, initiating socio-technocratic ‘policies by numbers’ in both global and national arenas.

Key words: global social policy, world social theory, policy by numbers, international organisations, international non-governmental organisations

Figures of Hope in Supporting Terminally Ill Relatives

The ‘end-of-life’ notion doesn’t really make any sense to relatives who take care of a seriously ill person, even when the latter suffers from a life-threatening disease. The risks of aggravation of the physical or mental condition and the bare perspective of death always go hand in hand with a kind of hope that organizes the horizon of thinking and influences the ways of acting. This term of ‘hope’ does not here refer to afterlife or religious representations. Rather, it refers to an analytical category useful for understanding the ways these close relatives support the ill person as well as the relational balance between all the individuals concerned: as early as a diagnosis of a potentially fatal condition is made, what kind of emotions are suitable to be shared with the ill person? Is it necessary to intensify one’s presence? Is it appropriate to communicate openly with children, friends or coworkers? For how long? And on which grounds is it possible to assess the consequences of actions taken and attitudes adopted during this period of time filled with uncertainties? This presentation will address these questions. It is based on an ongoing empirical research, entitled “Supporting a dying relative: between working and end-of-life care” (September 2012 – August 2015) and financed by the Swiss national science foundation, through its national program on end-of-life (www.nrp67.ch). Drawing from about sixty in-depth interviews with informal carers who consolidate their professional activity and the support of their ill relative, this communication aims at presenting an analysis of how the various components and forms of the ‘hope’ category segment and organize the day-to-day experience of this period of temporary vulnerability, a period that can be obviously associated with the ‘end-of-life’ denomination only after the ill person’s death.

French Catholic Environmentalists and the Church: Suspicion, Expectations and Mutual Reliance

The French Catholic environmentalists are in an ambiguous position halfway between political ecology as supported by the Green French Party and a Catholic field largely hostile to any environmental issue. It results from this position an aversion to political commitment, as I could perceive it during my qualitative survey of forty French catholic environmentalists met in Catholic movements concerned by the environment.

Far from leading to a denial of any political commitment, Catholics avoid the obvious, and promote a commitment of the Church on environmental issues. Sometimes seen by activists as a political force able to mobilize a significant part of French population, they also highlight Church skills as international actor capable of producing a meta-political discourse overstepping the borders that can be understood by all Christians in the world.

The Church of France faces these expectations, positioning itself as a concrete objective and neutral actor, ready to restore a democratic dialogue between the government and environmentalists (especially in Bure, future center of nuclear waste disposal, or at Notre-Dame des Landes).

The links developed between environmentalist believers and Catholic Church illustrate, in a specific way, the complexity of relationships between social movements and institutions. For being relevant to the institution, (Cf. D. Her vie-Léger, 1979), there is an indivisible bond that connect institution to social movements. In theory, the political commitment demanded by activists should be calculated to the expertise wanted by religious bodies. However, this polarity is not absolute. And inevitably it ends up, at the crossroad, with an interdependence that will result in a form of commitment in the expertise wanted by Catholic institution concerned about the “signs of the times” (Cf. W. Ossipow, 1978) while the discourse of militants called by the institution turns into expertise to remain audible. (Cf. S. Ollitrault, 2008.)

Parent-Child Relations in Young Adulthood: Evidence from Switzerland

In times of economic crisis, insecure labour markets and the rising importance of tertiary education, young adulthood is characterized by prolonged dependency from the parental generation, making it necessary to renegotiate the subtle balance between autonomy and attachment. While parental resources like socio-economic status or cultural capital are well known to shape the career opportunities of young adults, research about their influence on ties between adult children and their parents still remains sparse. However, recent relevant additions to the Swiss TREE survey ("Transition from Education to Employment") now offer the opportunity to investigate intergenerational family relationships of young adults. This study therefore focus on two concepts of intergenerational solidarity that seem salient and stable across the life course as well as through the layers of society: affective solidarity (emotional closeness) and associational solidarity (contact). How do the crucial transition markers, such as the achievement of financial and residential autonomy, influence parent-child bonds? Will ties loosen, once independence is established? Or does the relief of achieved autonomy actually enhance feelings of attachment? In what way do individual, familial and societal determinants explain different patterns?

The overall hypothesis, based on need and opportunity structures of individu- als and family events, suggests that financial or residential dependence of young adults strains the intergenerational relationship, whereas a (financially) secured position leads to higher emotional closeness. Using the TREE panel data, multivariate analyses of the relationship between 26-year-old respondents and their parents have been conducted. The results support the main hypothesis, but also show remarkable differences in both individual and family relations, both due to life course events and broader familial and societal contexts.
Transitions in Regional Context: Structural and Cultural Difference and the Influence of Family Ties

BERTOLO, MARIA CARLA* (RC47, carla.bertolo@unipd.it)
Subjective-Life As Protest and Change

In late modernity we observe a relocation of places of conflict: the higher locus of resistance against subjection and dominion seems to reside in the "subjective subject". Given the impossibility for a Movement, as known until the '90s of the last century, the change takes the form of a process for empowerment, self-reconstruction (integrating emotions, sensations, sensitivity, reason), and recognition of their own expectations, needs and wishes, for a life that one believes is worth living.

The Subject is the encounter of the individual with self-consciousness; a self-production, accomplished through reflexive processes for subjectivity and individuation. Becoming a Subject requires efforts to sustain the ability to look at oneself and assume responsibility in the absence of meta-protections (religion, ideology, belief). This call for the possibility to tap into emotional, cognitive and symbolic resources which are no longer available in the market-society, in order to address and support a process between two poles: the deconstruction of Me (social determinant) and the growth of one's own conscious individuality, which is a prerequisite to the action for a socio-cultural change.

An exponentially increasing number of women and men react to contemporary civilization by choosing Body-Mind-Spirit practices in which women and men can find resources for a claimed subjective-life, coping and opposing the dominant Western economic-cultural orientations. A turning point, necessary for the reconstruction of subjectivity and self-determined life which has to do with states of consciousness, emotions, sensations, feelings, ethos and involvement in social matters.

From a survey on people engaged in activities like Yoga, I can argue that their concern doesn't mean an utilitarian individualism nor an expressive individualism, but a new framework space and contents for a relational subjectivity. Values, symbols and practices B-M-S are sources for substantiating the inter-fusion between meaningful relations and autonomy: a movement of "subjectivities-in-network".

What Roles for French Fathers in Different Familial Arrangements?

Over the last few decades, family arrangements have become more diverse in France: mono-parental, same-sex, migrant, bicultural and step families. This new context redefines the roles of fathers within the family and outside, in relation to work and social and care institutions.

Within the framework of a research project about parenthood (with the financial support of the French National Family Benefits Fund), we used data from the French longitudinal studies of children (more than 18 000 children born in 2011) and we interviewed 60 families of different types: large, with step-mothers and step-fathers, migrant or bi-cultural and same-sex families. We chose families with a new born baby because birth situations put at stake family roles and the links between families and institutions are reinforced at children's birth.

According to our first results, the major differences between the family types involve the form of parenthood: more or less reflective, authoritarian or negotiated relationships, more or less linked to gender.

The communication explores different ways of being a father, in relation to family structures, from two perspectives:
- How do fathers contribute (and want to contribute) to children's care and education?
- What do mothers expect from fathers?

Key words: fatherhood; families; institutions; France

BESTE, JONAS* (Institute for Employment Research, jonas.beste@iab.de)

Dynamics of Income and Living Standard

In poverty research, many different approaches of measuring poverty have been developed. The most basic distinction is between indirect and direct approaches. Indirect measurement concentrates on the resources available, while direct measurement tries to capture an actual deficiency. The resource approach based on income is the most popular indirect measure. The standard of living approach provides a direct way of measuring poverty. It refers to goods of the household and the pursuit of activities of household members. The living standard is generated primarily from resources. However, similar resources must not lead to a comparable living standard. There are several reasons responsible for differences in the transmission. In addition to individual preferences, also debts and assets, support networks, education level, household composition and regional differences can affect this process.

At the transmission of resources into living standard also the course of time is of central importance. Despite strong fluctuations in income the living standard can stay on a nearly constant level due to foresighted economic activities. Even during periods in which the income falls (e.g. unemployment) the living standard can still be kept at the previous level and decreases only delayed.

This paper examines the relationship between available resources and the actual living standard of households over time. This implies the following research questions:

• How does the living standard respond to changes in the resources? Do households fit their living standard at temporary changes in income or do changes in living standard more depends on long-term changes?
• Are there differences between several dimensions of living standard?
• How do debts, savings, networks and education affect the living standard?
• And what is the short-term and long-term impact of changes in employment status?

For empirical analyses the Panel Study ‘Labour Market and Social Security’ (PASS), a longitudinal data set for Germany, is used.

Mesurer Objectivement Le Handicap : Fiction Juridique Ou Utopie Contemporaine ?

L'objet de cette communication concerne la construction juridico-administrative du handicap. En Suisse, l'essentiel des prestations sociales auxquelles peuvent prétendre les personnes en situation de handicap dépendent de l'assurance-invalidité (AI), qui prévoit des compensations « en nature » (principalement orientées vers la réadaptation) ou « en espèces » (sous la forme de rentes) en cas d'atteinte de la capacité d'emploi. Pour être reconnus comme invalides, les dîsordres corporels qui fondent la demande de prestations doivent entraîner une diminution manifeste de la capacité de gain, conformément à la définition juridique de l'invalidité.

Cette communication porte ainsi sur une optique d'un type particulier : celle consistant à vouloir mesurer les atteintes à la santé d'autrui sur la base d'une appréciation externe, réputée neutre et objective. En s'appuyant sur un corpus de données provenant de dossiers administratifs, de l'observation directe de la parole que les bénéficiaires potentiels développent au sujet de leur propre situation, il s'agit d'interroger les enjeux de l'ingénierie institutionnelle qui accompagne la vérification du droit aux prestations d'invalidité.

Scientific Career Trajectories – How the US-Academic Field Affects the Researcher's Habitus

It has been shown that there exist crucial inequalities in the distribution of financial resources among US-universities. With Pierre Bourdieu's concepts of field and capital universities can be described as actors competing for economic and symbolic capital what is also reflected in ranking positions. Research has also indicated that the level of prestige of US-universities plays an important role for academic career opportunities of PhD candidates. Based on Bourdieu's field theory (1) constructed an academic field that indicates these inequalities on a macro level by using Multiple Correspondence Analysis (MCA) to identify different prestige groups of US-universities. In a second (2) step, data on researchers' career trajectories have been analyzed with event history analysis to detect significant factors of career paths according to the prestige of a researchers university. Finally (3) interviews with researchers shed light on different formations of habits according to their position within the academic field.

BEZIRGAN, BENGI* (London School of Economics, b.bezirgan@lse.ac.uk)

Interrogating the Encounter of Facets of Nationalism(s) with the ‘Difference’

This paper intends to address the discursive and representational facets of nationalism and their encounters with the 'different' ethnic-religious identities. Moving beyond the analyses on the repressive and restrictive aspects of nationalisms, critical scholars draw attention to 'how nationalisms are lived out in quotidian life, how these become part of the taken-for-granted social environment, how nationalisms produce particular accounts of history and cultural identity' (Puri 2004:60)

[1] New approaches, as Ozkirimli (2010) terms them, underlie the discursive and contested traits of nationalism and national identity. These approaches were mainly affected by the 'cultural turn' in social sciences which ensued by the increased awareness of social movements in the 20th century that questioned the homogeneity of national cultures and identities (ibid: 169). This emphasis on the heterogeneity of cultures and identities also led to the academic quest for the new forms of nationalism(s) in different contexts which also stands for the discursive and representational facets of nationalism(s) and their relation to minority groups.

Following Finlayson's (1998:105) emphasis on the need for examination of 'the contents of nationalist discourse' and idea of exploring 'the ways in which nationalism(s) operates as a specific kind of ideological discourse', I aim to scrutinise how 'Armenian question' in Turkey becomes a field to construct, reproduce and challenge the discourse of nationalism(s) and nationhood. The critical discourse analysis of media representations of Armenians, as an ethnic and religious minority group, in Turkish national newspapers and the interviews concerning their ideas and daily experiences will allow me to explore the discursive and representational aspects of nationalism(s).

Scales of Power: Garment Workers and Transnational Campaigns in Lesotho, South Africa and Swaziland

This paper explores worker agency in garment factories in Lesotho, South Africa and Swaziland. The interest is to identify various sources of power mobilised by workers and the scale at which such power is exercised in order to respond to the extremely low wages paid by garment manufacturers, as well as a lack of state regulation of wages and working conditions. In the case of Lesotho, major campaigns around labour codes of conduct were used, but often stood in at the symbolic level for real factory-based organising - i.e. the global at the expense of the local. In the case of South Africa, a country that is seen as one with progressive labour laws, trade unions focus their efforts on institutional representation in national bargaining forums and 'buy South African' campaigns at the expense of local level organising or transnational campaigns. In Swaziland, trade unions experimented with labour codes of conduct, but retreat into local organising after a negative experience with a supplier to the retailer Wal-Mart. The comparison highlights how different sources of workers' power over related to scales of organising and suggests possible ways in which these could be mobilised more successfully in future. At the theoretical level, the paper engages the literature on labour geography (Andrew Herod and others), as well as sociological work on sources of worker's power (Eric Olin Wright, Beverly Silver, Jennifer Chun, and my own work with Rob Lambert, Edward Webster and others).

Beyond Love: Gender Power and Desire Amongst Young Africans

African teenage sexualities are often framed within the context of death, danger and disease with little attention to the affective investment young people make in relationship dynamics. In the context of HIV, sexual coercion and gender violence, the continued focus on teenage sexualities within the context of structural inequalities, gender power imbalances and the suffering of young women in particular remain important particular in South Africa where sexual violence has become a concern of epidemic proportions. Beyond representations of violence in everyday life within the schoolyard, this paper seeks to demonstrate the ways in which teenage Africans make claims to love and the social processes through which love is articulated. Drawing on an interview study of teenage Africans in the KwaZulu-Natal province of South Africa, the paper shows how the construction of love creates possibilities in relationship dynamics that alter familiar versions of masculinity and embedded within care, negotiation and agency. Such newer versions of sexuality however are in tension with the continued vulnerability faced by young women in particular emphasizing the importance of attending to gender ideologies, economic dislocation and masculine power. Addressing teenagers as sexual subjects, as agents of love instead of agents of violence alone and constrained by social, gendered and economic processes is important in working with and developing interventions that seek to increase sexual well-being amongst young Africans.

BHANA, DEEVIA* (University of KwaZulu-Natal, bhanad1@ukzn.ac.za)
Young Girls in South Africa: Addressing Sexual Risk in Primary Schools

What role can primary schools play in the social protection of young children and how does this role interface with the home? This paper focuses on the ways in which the home and school and other informal institutional settings under-stand their role in addressing and supporting the social protection of young children from sexual violence. It draws on qualitative interviews with teachers, school managers and mothers to explore the school's potential in addressing sexual violence beyond the traditional role of teaching and learning to explore both the opportunities and the limitations of the school's pastoral work. The potential for the school to address issues around sexual violence was notable in teacher positioning within feminized understandings of their role in care-work which permits children to disclose sexual violence, well as a strategic interconnectedness of the school with the Department of Social Development. However, the opportunities and limits are shaped by an interplay of factors that limited engagement with issues of gender violence, the continued focus on teenage sexualities within the context of sexual violence, the continued vulnerability faced by young women in particular emphasizing the importance of attending to gender ideologies, economic dislocation and masculine power. Addressing teenagers as sexual subjects, as agents of love instead of agents of violence alone and constrained by social, gendered and economic processes is important in working with and developing interventions that seek to increase sexual well-being amongst young Africans.

Utilization of Shamansitic Services For the General Ailments In The Eastern Region Of Nepal

Medicine, to the western mind, is based on the notion that science, with its methodology of research and experimentation, is potentially capable of combating any sickness and curing any disease. (Blustain, Harvey S, 1976)*

Objective: This study was designed to explore the practices of shamanistic services for the illness in the population and trace the plausible reasons for doing it.

Methods: A cross-sectional study was designed where total of 10432 total population. The population surveyed was rural area in the six districts of Eastern Nepal.

Results: Substantial families were found to be utilizing the services of faith healers especially for the indigenously defined diseases which are attributed to evil forces or god and goddess. Modern health service utilizers gave the reason of service satisfaction, traditional healers gave the reason of tradition and beliefs and risky service utilizers gave the reason of affordibility and accessibility for utilization of the services. Diseases defined indigenously were found to be
cured effectively that disease having somatic origin among the illnesses treated by shamans.

Conclusion: Despite of various efforts by government in delivering the basic health care in the community, large proportion of people in the rural area are still utilizing the services of faith healers and believed firmly that some indigenously defined illnesses are cured effectively. A Multidimensional study on these people and their healing practices can explore the rationale behind utilization and relevancies of their services in modern health care which will ultimately help to combat the evil of health life in the Eastern region.

Gender Discrimination:Female Feticide,Infanticide and Leisurly Attitude Towards P.N.D.T Act

Gender discrimination: Female feticide, Infanticide and leisurely attitude towards P.N.D.T Act

Women consisting half of the human population have been treated as weaker sex in all the societies of India. They are victims of feudalistic institutional, traditional practices, cultural prejudices and religious extremism. The gender inequality is of grave concern to the issue of human development. According to the historic Convention on the Elimination of all forms of discrimination against women (CEDAW) was followed by fourth world conference in Beijing in 1995. It enables women to gain improved access to resources. Social equity can enhance equality of participation and control are the necessary pre-requisites towards gender equality. There are many special challenges still faced by the women, but progress has been made when gender equality is viewed over the longer term. Much more can be accomplished, however, when women’s contributions are valued by society as a whole, when they have a more prominent role in decision making, and when women and men work in partnership to achieve these aims. In this context, the paper attempts to highlight the gender inequalities and identify the recent trends in women’s social and economic development in India. The paper will be based on secondary sources of data.

Psycho-Social Experiences of Scheduled Caste Students at Higher Education Level in India

Education in the Indian tradition has not been open to all the downtrodden sections like scheduled castes. Even today, they are the victims of isolation, untouchability, social stigmas, and the trap of the poverty in the society. With the protective discrimination policy in place, few of them are getting education and very few of them do have access to higher education. Most of the scheduled caste students are suffering from the problems, like discrimination, humiliation, deprivation, sub-ordination and domination at different levels of education. On the way of exploring the psycho-social experiences, this study intends to look at the patterns of discrimination relating to humiliation, ill-treatment, stress and mental block experienced by the scheduled caste students at higher education level in the State of Odisha. This study is based on exploratory research; data triangulation is the method for the data collection. Thematic analysis and descriptive statistics are the data analysis procedures for this study. The bit-psycho-social experiences have a devastating effect on the academic achievements and performances of scheduled caste students at higher education level in the state of Odisha (India).

BHOSLE, SMRITI* (Ashok, smriti06@hotmail.com)

Gender Inequality and Changing Perceptions about Women in India

The mandate for equal rights for men and women is embodied in India’s Constitution. Gender equality is a constituent of development as well an instrument of development. It is a constituent of development as no country can be deemed developed if half its population is severely disadvantaged in terms of basic needs, livelihood options, knowledge access, and political voice. It is an instrument of development because without gender equality other goals of development like poverty alleviation, economic growth and environmental sustainability will not be achieved.

Gender inequalities hinder development. Ignoring gender disparities comes at great cost to people’s well-being and to the country’s abilities to grow in a sustainable manner, to govern effectively. Social hierarchies are embedded in social institutions which are designed to perpetuate them through control over the environment and the socio-economic resources. The gender inequality is manifested by the unequal power relations between women and men. Equality of control enables women to gain improved access to resources. Social equity can enhance livelihood security, productivity and sustainability of all members in building their capacity for their own development.

Equality of participation and control are the necessary pre-requisites towards gender equality. There are many special challenges still faced by the women, but progress has been made when gender equality is viewed over the longer term. Much more can be accomplished, however, when women’s contributions are valued by society as a whole, when they have a more prominent role in decision making, and when women and men work in partnership to achieve these aims. In this context, the paper attempts to highlight the gender inequalities and identify the recent trends in women’s social and economic development in India. The paper will be based on secondary sources of data.

BIEBER, INA ELISABETH* (Institute of Sociology, bieber@soz.uni-frankfurt.de)

It’s the Party, Stupid! Why the Success of Female Politicians Depends on the Intra-Party Democracy

It’s nothing new that women in politics throughout the entire world are underrepresented. In addition to numerous other factors, this phenomenon is often explained by micro-structural factors such as party affiliation. A central theme in regard to the effect of parties on the representation rate of women is that the odds of women in political parties on the left side of the spectrum are particularly high. Furthermore, the effectiveness of the proportion of women in politics is discussed. It is also necessary to realize that, in the studies, particularly female politicians are observed and the nomination perspective is spared. But the nomination perspective is very important; on this level especially, women must overcome the barriers placed within certain parties, which are often higher than in others. That’s why focus on the nomination perspective can explain the underrepresentation of women in various parties. The aim of this paper is therefore to examine this question in an analysis of the nomination processes and electoral successes of women in 15 countries at 18 national elections with data from the Comparative Candidate Survey (CCS). The analysis shows that party affiliation provides a key contribution to explaining the underrepresentation of women in politics. However, it is also clear that the electoral system in particular, or the question whether the candidates compete on a constituency or on a party list, provides another key contribution to this explanation.

Exploitation and Resistance: A Comparative Analysis Of The Chinese Cheap Labour Electronics and High-Value Added IT Sectors

China is frequently considered to be an example of successful developmental catch-up. And yet, the country's impressive growth rates are to a large extent based on the super-exploitation of its workforce. In recent years, Chinese workers have started to resist these exploitative conditions. The purpose of this paper is to analyse the dynamics of resistance within the wider structural conditions of the global political economy.

Empirically, this paper will provide a comparative analysis of the electronics sector based around Shenzhen with the IT sector in the area of Shanghai. While the former is predominantly based on cheap labour, assembling electronic goods for export – see, for example, Foxconn and the assembling of Apple products – the latter relies on a more skilled workforce manufacturing high-value added goods. To what extent and in what way condition these rather different locations within the global political economy the form and contents of resistance in these two sectors?

Conceptually, this paper will be based on a historical materialist, neo-Grams
cian analysis, which starts through an analysis of the social relations of production and the different ways of how these two sectors are integrated into the global political economy. In turn, this will then allow us to identify key social class forces and provide the structural background within which these forces struggle against exploitation at the work place, the form of state and world order levels of activity.

Selling Places: The Right to the City in an Age of Market Oriented Urban Management and Planning

Since the beginning of the so-called cities financial crisis, market oriented poli
cies have been adopted by local administrations in order to deal with the con-

straint based crisis. Moreover, this strategy has been taken in different places as the only way to face the complexity and also the increasing problems linked to the ongoing process of world urbanization. This paper discusses such process in Brazil, taking as case study Rio de Janeiro metropolitan area, specifically the case of the “Operação Urbana Consorciada” (which can be freely translated as “Urban Consortium Operation”) of Niterói city – former capital of Rio de Janeiro

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
state - a huge urban project that intends to privatize the management of its central business district. The paper gives an overview of how such project has been presented and discussed with local dwellers, highlighting the strategies and struggles that have emerged from the process. It shows how the adoption of strong market oriented strategies to face financial crisis has brought huge constraints to those groups who have been struggling to the right of city, spoiling of democratic decision-making processes. The paper has three parts. The first one gives a broad view about the present Brazilian urban process, focusing the discussion on Rio de Janeiro city, mainly in its docklands area seen as a model to the cities located in its metropolitan region. The second part presents the case of the "Operação Urbana Consórciada" of Niterói city. Finally, as preliminary conclusions, it shows how urban democracy has been considerably spoiled, considering the market oriented urban policies.

Validating Segregated Observers: Mapping West Bank Settlements From Without and Within

In this paper, I argue that segregation affects the process of collecting empirical data, and therefore shapes the content of scientific and technological knowledge. Through a comparison of the maps of Israeli settlements made by two premier non-governmental organizations (NGOs) in the West Bank, one Palestinian and one Israeli, I demonstrate how segregated landscapes not only separate populations, but they also serve to reproduce disjunct observations among cartographers who map areas, and use technologies, that ostensibly are the same.

Since 1967, Israel has occupied the Palestinian Territories and hundreds of thousands of Israeli settlers have moved into segregated communities in the West Bank. However, it is difficult to produce reliable statistics for the expansion of these settlements, because this requires the ability to make observations on the ground—which is often as segregated as the region that cartographers seek to map. Israeli efforts benefit from the infrastructure the state provides, and take place largely within Israeli settlements, thereby depicting Palestinian areas from without. In contrast, Palestinians work within Palestinian communities, but must map Israeli settlements from without, including recording the locations of buildings which they may only be able to view from a distance. In theory, such segregation should not affect the data collected, but in practice it has a profound effect on the resulting maps.

This research contributes to work which analyzes the role of international forms of information in Israeli occupation. In addition, to Science and Technology Studies (STS) and the sociology of scientific literatures, I provide a conception of the ways that empirical knowledge is geographically produced, as well as socially constructed. Overall, I aim for a better understanding of how the materialities of knowledge interact with imbalances of power, with the goal of enabling landscapes that are more epistemologically diverse.

The Role of Religion in Economy: A Theoretical Analysis

The analysis of the role of religion in welfare, often directs our attention to the study of the relationship between religion and economy, and its various aspects in particular. Sociologists, seeking for more complete analysis, often refer to the models of economic theory and applied economics incorporating the element of religion in their analyses. However, insufficient understanding of the nature and structure of theoretical economic models, frequently leads to the development of an approach that omits or misrepresents many important elements, such as the nature of human action, the implications of the religious adherence for the action, etc. In our work we present some results of our research on the relationship between economic activity and religious participation. In addition, to Science and Technology Studies (STS) and the sociology of religion, we provide a theoretical framework for understanding the role of religion in the economy of welfare.

Designing "Community": The Significance Of Place and Urban Design In Public Housing Renewal

In the US, UK and Australia public and social housing providers are embarking on large-scale estate redevelopment projects. These projects are often presented as an urban panacea - intended to solve a large and multi-faceted urban ‘problem’ – namely the tenant and asset management challenges that have left many estates as ‘homes of last resort’ in recent decades. In Australia, these ‘renewal’ projects are achieved by using mechanisms within the planning system to increase dwelling density on-site. By changing the tenure profiles to increase the ‘social mix’, the state hopes to attract private investment through the introduction of
of private market housing into formerly public housing estates. These policy objectives will see public to private housing profile changes, with the introduction of up to 70% private dwellings in some projects (Housing NSW, 2011). The built form of these states is undergoing massive change, with new construction replacing existing dwellings. Previous research has sought to understand the impact of social mixing policies (Anthusen, 2002; Briggs, 2008; Goetz, 2000; Imbroscio, 2008) or have championed a heavily materialistic understanding of urban design and renewal (Jacobs, 1961; Newman, 1972; Duany and Plater-Zyberk, 1994).

This research seeks to uncover the significance of ‘place’ and ‘urban design’ for residents in the form of government professionals in estate redevelopments by approaching these concepts from three directions: experience, discourse and spatial form. This ‘trialectic’ (following Lefebvre, 1991) draws on three distinct research traditions: phenomenology; discourse analysis; and spatial analysis. This approach is being taken in an effort to induce the multiplicity of place and present the lived experience of residents through the public housing renewal process.

**Welfare State or Participation Society: 40 Years of Monitoring the Social State of the Netherlands**

Since 1973 we monitor the life situation and trends in quality of life (QoL) of citizens in the Netherlands. Using and combining a broad set of social indicators, this gives a good overview of the trends in the social state of the country. In this 40 years period the welfare state in the Netherlands has changed continuously and profoundly. The social and economic crisis of the late 20th century is just one in a row of global crises in this period. It may be argued that not only financial constraints and risks caused by the crisis forced to reconsider the welfare state. Fundamental shifts in societal views on the role of the state in protecting the vulnerable and on citizens’ own responsibilities too were drivers for renovating the welfare state. In 2013 the Dutch government introduced the term ‘participation society’ that should replace the welfare state. Citizens should be more active to take responsibility and to support their fellow citizens when they are in need. In this presentation we analyse recent changes in social (in)equality and social policies in the Netherlands since the seventies and we discuss whether the welfare state is at danger.

**The Meaning of Home and Practices of Home-Making: An Example of Turkish Migrants Living in Germany**

Drawing on twenty qualitative interviews and five participant observations at home settings with migrants from Turkey in Germany, this paper will illustrate the meanings attributed to the idea of home. For most individuals the idea of home ‘often remains as the uninterrogated anchor’ (Morley, 2000:2) and indicates stability and is attached in location, whereas mobility challenges all these ideas about home. If home is conceptualized as both a physical space as well as a symbolic perception of belonging, it is obvious that international migration experience alters individuals’ ideas of home which this paper discusses.

The preliminary results suggest that respondents perceive home as a ‘shelter’, a ‘place where they can be themselves’. In addition, how they decorate the home space will be elaborated. For instance, the living room is considered to be ‘the most important room’ because although it is a private space, it is the ‘public’ space of the home.

**Who Cares the Elderly? Migrant Women at the Crossroads Between Family and Welfare State**

Drawing on qualitative interviews in ten households in southern Turkey, Antalya with employers of live-in migrants who care the elderly in the family, as well as the migrant caretakers, this paper examines the dynamic relationship between migrant caretakers and the elderly with an intersectional perspective taking into account of age, gender, class, and ethnicity. Given the country’s changing migratory patterns from being an emigration country to an immigration and transit country, Turkey attracts migrants from its neighboring countries at a steadily increasing rate, which makes it an interesting case.

Elderly care is closely interlinked with a country’s formal welfare provisions and informal protective schemes. Turkey is usually described as having Southern welfare model, characterized by low level state penetration into the social sphere as well as lack of social assistance provisions. However, with the introduction of recent healthcare reforms, this perspective needs further elaboration not only on the formal regulations level but also at the access and use of such regulations of the individuals. Therefore, family and welfare policies in the area of domestic work and care will be elaborated. Despite novel social assistance schemes, the existing cultural system in Turkey still favors caring the elderly at home particularly by women, who are usually daughters, daughter-in-laws and recently migrant women to some extent. Migrant women are usually from former Soviet Union such as Armenia, Georgia, Moldova, the Central Asian Republics and to a lesser extent Russia and Ukraine, who often work undocumented in tourism and household sectors.

**Deployments of Intersectionality in Masculinity Studies: A Power/ Knowledge Analysis**

Intersectionality is increasingly used as an analytical tool to complexify the categories of men and masculinities, to shed light on the processes producing marginalized, racialized and deviant masculinities. The paper examines the deployments of intersectionality in masculinity studies and its effects to attend to three problems that are encountered in the current state of feminist scholarship on intersectionality: 1. the increasing delegitimizing of intersectionality through its conflation with identity politics and/or the framing of intersectionality as endorsing essentialist identity categories; 2. the whitening of intersectionality in which the critical race analytics becomes optional; 3. the depoliticizing of intersectionality through its disciplinarization and institutionalization. Based on an extensive analysis of the ways in which intersectionality is used in masculinity scholarship, the paper asks whether these problematic tendencies are also observed in this field of knowledge. If so, what are their specific configurations and their specific effects? Does the current engagement of masculinity studies with intersectionality help to consolidate or to confront these problematic tendencies?

**Social Mobility and Fertility: Parity Transitions in Sweden**

This study explores the relationship between social mobility, both intergenerational and intragenerational, and fertility in Sweden over the last decades. Scholars have developed a rich set of theories and mechanisms through which mobility plausibly influences family size. The original focus was on upward mobility and the relationship was expected to be inverse. After three decades of research in the mid-20th century, literature that focused on trying to disentangle these mechanisms yielded surprisingly few consistent results, which was argued to be due to unaccounted variation in the institutional settings, theoretical ambiguity as well as significant limitations in the methods and data at the time. This project aims to revive the debate using better equipped data and methods as well expanding the theoretical discussion to include the important work from the last decades on gender, work and family.

In prior mobility and fertility research, scholars analyzed the total number of children alongside the occupational class of adults and their parents at selected moments in childhood and adulthood. The timing of these measures reflected data availability rather than theoretically relevant moments in the life course, which meant researchers could not observe the order of events. This very important, since data provide information on the timing and order of these childbearing and mobility events.

Specifically, the Swedish Level-of-Living survey (LNU) data (2000, 2010) provide the opportunity to study both inter and intragenerational mobility and fertility, which has scarcely been studied in Sweden. This study will be based on the biographies of the 1950-1985 birth cohorts, which means childbearing will be observed roughly from 1970-2010. Both men and women will be analyzed separately.

**The Transition Generation’s Entrance to Parenthood: Patterns Across 27 Post - Socialist Countries**

The age at which men and women enter parenthood has increasingly become of interest as we witness the postponement of parenthood across a variety of contexts. A large literature has developed on factors related to the age at first birth, both in terms of variation over time within a population and between subgroups of a population. Fewer studies have tried to explain variation across countries in the average age at entering parenthood, despite large and persistent differences in countries sharing contextual similarities and differences. We aim to fill this gap.
and learn more about how social, cultural and economic forces influence when adults experience one of the most significant life course events. We use micro-data and contextual indicators to explore differences in the timing of parenthood over a wide range of post-socialist countries. We focus on men and women who entered adulthood during the transition from communism to post-communist countries representing six diverse geo-cultural regions. Using multi-level hazard models, we observe the differences between countries in the average timing of parenthood and how much can be explained by compositional factors, values and attitudes. We also observe the influence of economic context on first conception risks. Our results indicate that later entrance to parenthood in Eastern and Southeastern Europe compared to Russia, Belarus, Moldova and Ukraine is related to positive economic developments. Earlier entrance to parenthood in Central Asian Republics is related to religious affiliation. We find no significant differences in the timing of parenthood for the Caucasus, whereas no measures account for the earlier entrance to parenthood in Baltic States.

**Migrant Women and Their Families in Italian Urban Contexts: Substantive Citizenship, Gender Regimes, Meanings of Social Spaces**

The global crisis concerns the socio-economic, institutional and symbolic structure of European citizenship. It reopens crucial questions about the stratification of native Europeans, already mixed by the migratory flows from South to North. In contrast, the strategies practiced by the migrants reveal them as European citizens, even if embodied in not-coordinated, differentiated and fragmented forms of citizenship. The dynamics of urban life transculturation have produced practices and meanings for the recognition of rights and differences that constitute new forms of substantive citizenship. The city is organized memory. The every-day life of migrant women and men with their families – that embed their work and caring relations, their transit and spaces of aggregation and their use of the institutions – has contributed to redefine the sense of the places of everyone, from “the feeling of home” to the territories recognized as physical and symbolic homeland or as land of exile. In this context, meanings, practices, social hierarchies related with gender relations, class distinctions, and cultural-linguistic stratifications have been also redefined. The Gender Order reveals a multiplicity of arrangements that challenge the universalism of the European Human Rights System and the permanence of stable identities. The paper – based upon qualitative research conducted in medium-small Italian cities characterized by high migratory density – concerns the ambivalences and tensions within the citizenship practices of migrant women and their families. The strategies adopted by the migrants to cope with the crisis contribute to redefine their way to remain in Italy as well as their transnational networks. “To feel at home” and “to feel at homeland” are invested with a multiplicity of contemporary meanings, some of which indicate forms of resistance to the critical circumstances.

**BIMBI, FRANCA** (University of Padua, franca.bimbi@unipd.it)

**Symbolic Violence within Different “Gender Regimes” in the Europe of Globalized Migrations**

This paper discusses Bourdieu’s approach to the reproduction of symbolic violence towards women within different “regimes” of women’s freedom considering different pattern of accessibility to women’s body. We are especially concerned with the risk of racialisation of gender-based violence through emphasis on “our” rights, in the mainstreaming European discourse. How is symbolic violence towards women reproduced in the Europe of globalised migrations, in which regimes of women’s freedom confront supposed forms of traditional patriarchy? However, in various groups of women, the meanings applied to “violence” may diverge according to normative and cultural perspectives, and in particular as regards family control over women’s bodies and gender display. Migrant women are exposed to a double challenge of loyalty: to their communities of origin, as regards family control over women’s bodies and gender display. Migrant women with their families – that embed their work and caring relations, their transit and spaces of aggregation and their use of the institutions – has contributed to redefine the sense of the places of everyone, from “the feeling of home” to the territories recognized as physical and symbolic homeland or as land of exile. In this context, meanings, practices, social hierarchies related with gender relations, class distinctions, and cultural-linguistic stratifications have been also redefined. The Gender Order reveals a multiplicity of arrangements that challenge the universalism of the European Human Rights System and the permanence of stable identities. The paper – based upon qualitative research conducted in medium-small Italian cities characterized by high migratory density – concerns the ambivalences and tensions within the citizenship practices of migrant women and their families. The strategies adopted by the migrants to cope with the crisis contribute to redefine their way to remain in Italy as well as their transnational networks. “To feel at home” and “to feel at homeland” are invested with a multiplicity of contemporary meanings, some of which indicate forms of resistance to the critical circumstances.

**Twitter As a New Battelfield: AK Party Vs #Occupygezi**

Twitter was introduced in 2007, the Justice and Development Party (AK Party) is a political group that has created extensive impact on the political scene in Turkey by manufacturing a new type of hegemony. Since 2002, AK Party has increased its vote share in all three general elections and earned political power for “establishing government”, “governing” as well as “restructing political-social-economic and cultural institutions”. For this purpose, AK Party also facilitates ICT for the reconstruction of the society, politics and economy and embeds the technological change and transformation to its self-transformatory politics. In May-June 2013 there was an “occupy” movement first in Istanbul, then Ankara. This movement labelled as “Occupygezi”, “#direngezei”, and flourished in whole social media. This social media movement can be considered as the other “(i.e. activists, NGOs, opposition party, authors, artists, academicians) transmitted in a new environment, in this case Twitter. In this paper we will briefly summarize both the political positions taken among Gezi Movement and the ideological stand point (such as conservative democracy) of AK Party. In order to clarify and analyse this hegemonic struggle, the Twitter usage modalities of Erdogan and some members of the government will be examined by discourse analysis both during and after Gezi movement.
came a hotly debated topic among social philosophers. The philosophical use of the term “intentionality” refers not only to the intention to act, but also to the content of mental acts such as believing, desiring or feeling. Drawing on the recent philosophical debates, I would like to analyze the concept of collective intentionality and discuss its ontological and methodological consequences. Starting from the extreme positions in the discourse on collective intentionality—which can be labeled “reductionism” and “holism”—I will primarily discuss John Searle’s and Margaret Gilbert’s accounts on collective beliefs and actions. Searle offers a strong reading of collective intentionality that claims to be compatible with methodological individualism. Gilbert stresses the importance of mutual commitments for the constitution of “plural subjects” which highlights the inherent normativity of collective intentionality. The arguments of both authors can be brought together in a sociological conception of collective intentionality that has strong similarities to the Durkheimian homo duplex. Collective states and actions always entail a normative component. Collective intentions and beliefs are not only shared, but one feels an obligation to share them. Though ontologically anchored in individual bodies, “collective intentionality” turns out to be a fundamental sociological term, underpinning such concepts as cooperation, norm and communication.

Success or Failure?: Competing Concepts of Heritage Value in Lijiang Old Town
It has now been six years since the Old Town of Lijiang, in Yunnan Province, UNESCO World Cultural Heritage Site since 1997, received a negative review from the World Heritage Committee’s reactive monitoring team, citing the overuse of tourism and the exodus of members of the local Naxi ethnic group as having seriously detracted from the value of the Old Town as a World Heritage Site. Since that time, in heritage circles Lijiang has become a case example of World Heritage management gone wrong. However, within China both officially and popularly, Lijiang is considered one of Southwest China’s greatest successes in bringing development to an impoverished minority area in the far reaches of China’s borders. In this paper, I will review the different discourses present in the Old Town of Lijiang regarding the value of cultural heritage to demonstrate why UNESCO’s failure has likewise been Yunnan Province’s success. This includes elaborating the value of cultural heritage from the viewpoints of the World Heritage Committee, the Chinese State, and the tourism industry itself. Finally, I will describe what this has meant for the Naxi people of Lijiang, and how the intersection of these varying values have come to be interpreted by Lijiang Naxi and their relations with others.

Collective Memory of Operating Experience
The nuclear power industry has been in existence for over fifty years. Despite the mishap at Three Mile Island, the accident in Chernobyl, and the catastrophe at Fukushima, this industry with its self-regulating model has operated more safely and productively than most fossil fuel industries. The nuclear power industry is aware that its survival depends on its ability to share operating experience to prevent recurrence of past errors. This begs the question How does the nuclear power industry use operating experience? Capturing and disseminating operating experience constitutes an organization’s collective memory. Problems at one nuclear plant are documented and stored to be shared with other nuclear power plants. Lessons learned from Three Mile Island, Chernobyl, and Fukushima provide impetus for actions at all nuclear power plants as each plant analyzes its vulnerabilities. Identifying and sharing with the industry, a plant’s potential for mishap and taking action to mitigate disaster becomes part of the nuclear power industry’s collective memory. The nuclear power industry’s collective memory exists in its operating experience database, and becomes a living entity through the training function. Using case study methodology and extensive interviews with training instructors, this study examined how significant industry mishaps are remembered in the training function of one nuclear power station, and how remembering past operating experience informs a current nuclear power industry workforce.

RC23-414.3
BISHOP, JOHANNA* (Wilmington University, johanna.p.bishop@wilmu.edu)
Managing Tolerable Risk: How Are Significant Organizational Mishaps Remembered in the Training Function of the Nuclear Power Industry?
Retaining lessons learned from organizational mishaps is important to organizations that use high risk technologies. High risk technology organizations, such as the nuclear power electricity generation industry, rely on their collective organizational memory of mishaps to prevent future mishaps and protect the safety of the public. The 1979 accident at Three Mile Island (TMI) nuclear power plant was a defining moment in the nuclear power industry in the United States. Since TMI, the nuclear power industry has emphasized using operating experience to remind workers potential mishaps. The 1986 explosion of the Chernobyl nuclear reactor developed an awareness for the need for international collaboration in establishing uniform operating standards for nuclear power plants so as to ensure nuclear safety. The nuclear catastrophe at Fukushima in 2012 reminded the world once again about the risk of nuclear technology. Using the theoretical lens of collective memory and commemoration, this study explored how workers in the training department of the nuclear power industry retain memory of significant organizational mishaps by focusing on what workers pay attention to, what stories they tell about organizational mishaps, as well as how mishaps are categorized and commemorated, and the role management plays in helping to retain operating experience of significant events. This case study combined interviews and document analysis, as well as ethnographic observations of training conducted at a nuclear power plant site to learn how significant industry mishaps were remembered.

Leisure, Tourism-Development and Environment Interface: Uttarakhand Tourism in India- Reflections

Uttarakhand with an area of 53484 Sq. Km., is the ninth Himalayan state of India. Located on the fringe of two international boundaries, the state of Uttarakhand is known for its innumerable tourism destinations including various hill stations, wild life centuries, national parks, adventurous sports and pilgrimage tourism centers. The mission of the state government is to develop Uttarakhand as a tourist hub and the ‘tourism’ as the core- sector for employment generation. In this very context the main objective of this paper is to analyze, ‘leisure, tourism- development and the environment interface’ and its pervasive environmental, economic and social impacts on the stakeholders, the tourists and the people dwelling in the place of tourist destinations.

The study goes with this hypothetical proposition that, the sustainable tourism strategy can only serve the mission of tourism development along with its triple principles (the environmental, economic and the social) and also satiate the need and purpose of tourist. The study concludes that; the leisure, tourism-development and environment are interrelated phenomena. It is the leisure that paves the way for tourism, and correspondingly the tourism accentuates development and also accelerates the pace of infrastructural development to cater the need and objectives of the tourists as well as of the man power engaged with tourism practices. The consequential impacts of the whole of the tourism practices are viewed on; (i) the over all environment of the place of tourist destinations (ii) the economy of the stakeholder and (iii) the tourism market of the society and culture of the place of tourist destination, and (iv) the tourists. The ground realities exhibit that, despite incomparable prospects in tourism sector the target of sustainable tourism development is unachieved rather hampered in the state of Uttarakhand due to nonobservance of the universally accepted principles of sustainable tourism.

Experiencing Obesity in an Unequal World: The Muted, Desiring Body Under Neo-Liberalism

There is a well-documented social gradient in obesity, seen clearly amongst socio-economically disadvantaged women and children, but also amongst men. The prevailing discourse from contemporary health policy, views obesity (and also the gradient) as an outcome of an individual's failure to exercise control over appetite and desire, irrespective of social position. Whilst this is challenged from political economy perspectives where the gradient is seen as a product of living in an obesogenic environment, there are few qualitative studies which locate the experiences of living with obesity in the context of social inequality.

This paper addresses this, drawing on data from biographical interviews with obese adults living in socio-economically disadvantaged parts of northern England. We found that participants sought to position themselves as responsible, autonomous agents when accounting for their weight and we describe the often painful biographical work undertaken where food practices and life histories were positioned in opposition to mainstream discourses of personal failure. We suggest these accounts can be viewed as weak forms of protective resistance, against ‘hostile’ and obesity discourses. We also describe two additional themes. Firstly, we report on participants sometimes visceral but muted accounts of the enjoyment and desire associated with consuming food. It’s not unusual for Cristiano Ronaldo to hear Messi’s spontaneous calling when he goes to play away. But bringing up Messi’s name to tease him has indeed happened in his own backyard. Just recently, while preparing to play an international game for Portugal in the northern town of Guimarães, a Portuguese fan annoyed him maliciously again giggling and crying softly for Messi. Cristiano Ronaldo, wisely, just walked away, skipping any kind of confrontation. Why is this so? What, concerning common thoughts, separates both players? Why do fans feast on Ronaldo’s celebrity figureation while leaving Messi to enjoy impressive widespread praise and cult?

The reason for this, we shall argue, has to do less with the icons they personify, or, in other words, the desire to see the sport by entertainment coding, where “delay of gratification” is unwelcome, that shapes sports social worlds nowadays, or even a frantic dispute gathering diverse social categories about who’s the best football player in the present day, than with a sharp opposition that divides the field of sporting (possible) grandeur. We refer to the antagonism between professionalism and amateurism, measured or assessed both through the sense of competence versus (self-)interest and by the sense of talent and vocation versus effortless hard work and training outcome. We’ll be doing a sociology of football’s recognition that shapes itself in a sociology of football’s values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome.

“Messi, Messi, Messi”, Why Does Cristiano Ronaldo Hear What He’d Rather Not?

It’s not unusual for Cristiano Ronaldo to hear Messi’s spontaneous calling when he goes to play away. But bringing up Messi’s name to tease him has indeed happened in his own backyard. Just recently, while preparing to play an international game for Portugal in the northern town of Guimarães, a Portuguese fan annoyed him maliciously again giggling and crying softly for Messi. Cristiano Ronaldo, wisely, just walked away, skipping any kind of confrontation. Why is this so? What, concerning common thoughts, separates both players? Why do fans feast on Ronaldo’s celebrity figureation while leaving Messi to enjoy impressive widespread praise and cult?

The reason for this, we shall argue, has to do less with the icons they personify, or, in other words, the desire to see the sport by entertainment coding, where “delay of gratification” is unwelcome, that shapes sports social worlds nowadays, or even a frantic dispute gathering diverse social categories about who’s the best football player in the present day, than with a sharp opposition that divides the field of sporting (possible) grandeur. We refer to the antagonism between professionalism and amateurism, measured or assessed both through the sense of competence versus (self-)interest and by the sense of talent and vocation versus effortless hard work and training outcome. We’ll be doing a sociology of football’s recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome. We’ll be doing a sociology of footballers’ recognition that shapes itself in a sociology of footballers’ values and categorization versus offstage hard work and training outcome.
developing countries, focusing on both profit maximizing, and economic growth and poverty reduction in developing countries. When Nordfund gets involved in land-related issues, such as palm oil production, is done on the basis of close considerations related to economic growth and business opportunities in that area. This paper looks closer at some of the paradoxes that surfaces when large investors are aiming at both ecologic and social responsibility and maximizing profits at the same time. We will also describe and discuss some of the existing mechanisms for influencing investment behavior of these large global players, both domestically through the government controlled bodies, and internationally through conventions such as the OECD ethical guidelines.

BJORN, HVINDEN* (NOVA Norwegian Social Research, bjorn.hvinden@nova.hioa.no)

The Capability Approach and the Agency / Structure Discussion in Sociology How to Understand Efforts to Combat Social Exclusion?

This paper argues that the Capability Approach of the Amartya Sen and Marta Nussbaum can enrich sociology by linking human agency and structure. Finding ways to capture the linkages between agency and structure (or alternatively: between micro and macro) remains a never ending story in sociology, despite efforts by some of the sharpest minds in the discipline. Proposed ways of capturing the linkages often turn out to be biased towards agency or structure, leaving the contours of the other vague and indeterminate. Alternatively, the proposed solutions are in practice blending or fusing structure and agency into one. The Capability Approach is frequently perceived as being individualistic, i.e. only concerned for an individual’s effective freedom to live the life he or she has reasons to value and desiring to live. Sen do, however, emphasise that people’s possibilities to convert given opportunities or resources into desired functionings do not lonely depend on individual characteristics (e.g. having a physical or mental impairment) but also on the structures (e.g. of a physical, social or attitudinal nature) that people face or within which they find themselves. The paper clarifies how the Capability Approach can contribute to a better understanding of factors hampering or facilitating human agency – both individual and collective – and the processes reproducing or transforming the structures people face. As case the paper discusses the efforts of persons with disabilities to combat exclusion and achieve full participation in society on an equal basis with others.

BLACK, GRANT* (University of Tsukuba, grant.black@yahoo.com)

Student Self-Concept and the College-to-Work Transition in Japan

Although the youth employment rate for Japan compares favourably with other OECD-member nations, job seeking has been following a trend of increased risk. Changes in the labour market and hiring practices have meant the wearing away of Japan’s traditional life-long employment system. For university graduates the process of securing employment has become more complex and is now fraught with greater uncertainties. Along with a decline in Japan’s position in the global economy, students in tertiary education have been recording declining interest in the international arena. To counter these trends, the government has sought to develop closer ties between business and industry. The Ministry of Education, Culture, Sports, Science and Technology (MEXT) believes it can improve Japan’s competitiveness by supporting the development of new graduates with skills ready for global business. Through competitive large-scale programmes such as Global 30 and the Project for Promotion of Global Human Resource Development, MEXT has made significant public investment in promoting internationalisation at selected elite Japanese universities. This presentation will report on initial results from a survey investigating identity, individualisation and internationalisation for Japanese students in tertiary education at a large national university in Japan. The study explores student perceptions of internationalisation and global skills for their transition to the workforce. The study is important toward greater transparency for tertiary education in Japan on performance, internationalisation and employment outcomes. A 40-question survey was developed in part based on questions from the UK Understanding Society study and recent global human resources surveys from Manpower and McKinsey. These were rendered into Japanese and added to a Japanese-language core of established biographical data questions. The principal research themes are: a) Student self-concept of employability skills/ future employment; b) The role of the university for future employment; c) Internationalisation; d) Gender and national culture in the Japanese labour market.

The Cold-War As a Mode of Subjection: Power / Knowledge Dynamics in the Age of Empire

Hardt and Negri (2000, 2009) argue that modern forms of Empire provoke power struggles among sovereign states for global hegemony as well as resistance from the individuals. Actors who resist Empire are ritually defined as “terrorists” by the agents of the US power elite who are tasked with the management of contemporary Empire (Domhoff 2010). Blain (2009, 2012) argues two modes of power and subjection come into play in these power struggles. The first type is victimization ritual rhetoric designed to motivate masses to support warfare to destroy “the enemies of empire.” The second type of discourse is associated with the social and psychological sciences and the bio-political practices of national security “experts.”

A main finding was the role a small number of “terror” journals in the discourse formation “terrorism.” They published many influential texts prior to the 9/11 attacks and WOT. They continue to exercise a disproportionate influence. Table 1 Percent Influential Journal Articles (> 5) by Type of Journal Pre-9/11 (1960-2001) and WOT (2002-2012) in Sociology Abstracts

In conclusion, two dangers are discussed. First, the WOT has reduced the problem of political violence to “terrorism” and the ritual victimization of Islamic subjects. A second danger is the way the dynamics of Empire tends to reduce knowledge to its auxiliary function in the project to produce powerful regimes of governmentality, intensifying surveillance and the detention of the “suspicous.” On the other hand, there are grounds for hope. A huge amount of critical research is going on in response to the WOT.

Racial/Ethnic Variations in Adolescent Aspirations: The Relative Influence of Parental Involvement

Previous research on the occupational and educational aspirations of adolescents have noted that teenagers’ desires in regard to their future statuses are often influenced significantly by family and parental characteristics. In this study, we examine the relative effect of parental involvement upon adolescent aspirations. This involvement comes in a variety of forms, including direct involvement (such as helping their child with their homework) and indirect involvement (such as participating in parent-teacher organizations). Using data from the High School Longitudinal Study, the relationship between parental involvement and adolescents’ aspirations is examined, with particular emphasis upon racial and ethnic-group differences. The results demonstrate that significant differences exist in the aspirations of adolescents, across the various groups, and that the social and cultural capital of parents vary substantially, as well. Asian and White adolescents are shown to have higher aspirations for educational attainment, and for working in a professional career, as compared to their African-American and Latino counterparts. Across all of the groups, significant gender differences are also shown, with female adolescents expressing higher educational and occupational aspirations than males. While structural characteristics such as household income and parental educational attainment are positively associated with adolescents’ aspirations, parental involvement is shown to also be significantly associated, suggesting that the direct forms of social capital are, indeed, influential in the development of adolescent aspirations. Distinct racial/ethnic patterns are revealed in the findings, with cultural capital traits (e.g., language used in the family, recent immigrant status) being significant related to both levels of parental involvement and adolescent aspirations. Overall, the relationship between parental involvement and adolescent aspirations is shown to vary considerably across racial and ethnic groups. The results are discussed within a social capital paradigm, and the potential long-term implications for adolescent aspirations and eventual status attainment are addressed.

Secularity, laicity and the quest for equality and justice in unequal societies

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The reform has gained support among public opinion, powerful economic groups and the media. The latter, in particular, tends to present teachers and teachers’ Union (SNTE, for National Union of Educational Workers) as corporatist, unefeective and even lazy; workers who enjoy undeserved privileges and do not hesitate in endangering children’s education to keep them. This view has spread among the population.

Nowadays, the reform faces considerable opposition and mistrust from many teachers. Some fractions of the SNTE have taken the conflict to the streets of Mexico City. They organize impressive meetings, block main avenues and routes, and elaborate radical discourses, thus enabling mass media to reproduce prejudices against teachers and ask for harsh repression. One of the results of this conflict is the deterioration of social trust between citizens and teachers.

In this paper, I intend to analyze and identify the main views around this conflict in the mass media, and the different images of teachers that are so constructed. I would also like to describe the ways teachers react against dominant discourses and build a narrative of their own. Finally, I will explore if this confrontation reaches the local level and affects the relationship between families and teachers in specific schools.

For this, I will perform analysis of the main written media in Mexico City, as well as interviews with intentionally selected teachers from the primary and secondary levels.

RC36-620.3
BLASKO, ANDREW* (Uppsala University, Andrew.Blasko@gamalatorget.uu.se)
Disrespect, Self-Deception, and Knowledge

The general issue to be discussed is whether media can shape interaction, especially within systems of cognition. The particular medium that will be examined in this respect is power. The specific question to be addressed is: Why do people believe that they know purely objective things, and that the world in which they live consists of things and people—whose natures are more or less unchanging, even if individual things themselves are not? The focus will be upon whether and how the exercise of power can potentiate the process of interaction such that particular types of interaction tend to occur rather than others. It will be argued that the addition of the subjection to power can act as a formative force upon the operations of meaning being constituted in interaction that may facilitate the functioning and propagation of a seemingly alien power over us.

People believe they know objective things with stable natures because they have forgotten that they live in a world of meaning that they have created themselves—and it is the state of existing social relations that causes them to forget this fact. When human relations and human creativity become ossified into products of human activity that appear to exist independently of their creators, people do not attain the awareness that all we perceive and know is transitory precisely because we have created it as it exists for us. Heidegger has written about the forgetfulness of being. We are instead concerned with a type of imposed forgetfulness that has led us to misunderstand our own creative and productive powers as the objective power of an external and seemingly eternal world that is beyond our control.

RC36-629.3
BLASKO, ANDREW* (Uppsala University, Andrew.Blasko@gamalatorget.uu.se)
Integration, Manipulation, Alienation

The general issue addressed in the present discussion concerns the ways in which interaction within systems can be determined by forces, processes, and media apparently beyond the voluntary control of individuals. The particular focus in this regard is the medium of power. We will ask whether and how the exercise of power, especially subjection to power, can potentiate interaction such that particular types of interaction tend to occur with a significantly higher degree of probability than others. We will argue that the addition of the subjection to power as a potential to interaction can lead to specific types of meaning being constituted in interaction that may facilitate the functioning and propagation of power.

In addition, we will also question whether and how the exercise of power in the form of the submission to power can act as a formative force upon the operations of the imagination, perception, and cognition by making the constitution of certain types of meaning significantly more likely than others. This restricts not only the types of meaning that can emerge in what seems to be the objective world, but also types of self-reference or self-awareness as well as possibilities for future action on the part of individuals so affected. This results in social life operating with a determining causality to the degree that social integration constitutes subjection to power, the restriction or reduction of alternative ways of thought and action, and the perpetuation and expansion of alienation in both subjective and objective forms.

BLANCO, EMILIO* (El Colegio de México, eblanco@colmex.mx)
Mexican Teachers and the Educational Reform: Scapegoats of the Neo-Liberal Discourse?

Since 2012, Mexico is undergoing an unprecedented process of educational reform. The newly elected government has managed to reform the Constitution and pass a series of laws aiming to reform the education system. The main objective of this reform intends to regulate the teaching career through high-stakes exams, which will be used to make decisions on hiring, promotion, and eventually firing.
The Need For Land Tenure Rights For Indigenous Populations In Tropical Rainforests

For centuries tropical rainforests have been inhabited by indigenous and other forest dwellers who have depended on the forest for their home, livelihoods and culture. As a result they are better equipped to manage these areas than other members of the community. The reality however is that regardless of this long standing relationship formal land tenure rights have rarely been granted to these people and ownership mainly vests in the state. As these forests are being destroyed at an unsustainable level it is necessary that developing countries provide indigenous people with land tenure rights so that these forests can be effectively managed and protected.

Against the “People Power Church”? Contemporary Forms of Organized Nonreligion and the Debate on Reproductive Health in the Philippines

After being heavily debated for more than 10 years in- and outside congress, current president of the Philippines, Benigno Aquino III, signed the so-called “Reproductive Health Bill” (RH Bill) in December 2012. However, firmly opposed by the Roman Catholic Church (RCC) and its public organ, the Catholic Bishop Conference of the Philippines (CBCP), the new called RH Law is still waiting for its implementation. The RCC’s/CBCP’s influence as a “moral compass” (Bautista 2010) or “public religion” (Casanova 1994) in this Christian dominated nation is grounded in its prominent role during crucial historical events and political transformations, e.g. the “People Power Revolution” in 1986. Such events and their interpretations led to a “religious-nationalism”, a discursive “process of co-construction between Catholic identity and national identity” (Natividad 2012), which enables the RCC/ CBCP to shape public and political debates. Such debates like the conflict over reproductive health issues, in which various social actors articulate their own notions of morality, nation, and modernity, provide an ideal framework to analyze church-state relations and the local intersections and complex dynamics of religion and modernity in the Philippines from a social scientific perspective.

In my paper I will focus on nonreligious groups like atheists, humanists, and freethinkers which have emerged in the Philippines within recent years. Although constituting different forms of organized nonreligion with different agendas, they find common ground, for example, in their fight for secularism, LGBT rights, and their engagement in the debate on the RH Bill/RH Law. By looking at their criticism of the RCC/CBCP’s position on reproductive health policies through ethnographic fieldwork and a relational approach to nonreligion (Quack 2014), I show how they try to delegitimize the Church’s strong public role by breaking up the aforementioned “relgio-nationalism” and by offering an alternative, modernist-scientific moral/social framework.

Assembling Urban Riskscapes: Climate Adaptation, Scales Of Change, And The Politics Of Expertise In Surat, India

The risks of climate change become tangible and urgent in cities – and accordingly, climate adaptation has risen on urban political agendas worldwide, including in vulnerable coastal cities of East and South Asia. Drawing on ethnographic fieldwork and interviews on ‘assemblage urbanism’ (Fariñas, McFarlane), this paper analyses the contested politics of expertise by way of which Surat, in the Indian state of Gujurat, has been reshaped over the past few years into a regional model of climate change ‘resilience’, within local-global networks of urban design, planning, and power. Mediated through unequally structured transnational policy mobilities, the work of resilience-building is shown to revolve around local economic-political elites, who deploy consultancy knowledge to render particular urban riskscapes invisible, in ways conducive to specific forms and scales of middle-class ‘development’ in the city. In turn, the paper shows how this local elite-driven climate politics is contested by two alternative socio-technical coalitions and assemblages: on the one hand, groups of globalized engineering professionals look to embed Surat as a ‘test-case’ of low-carbon transition in the global South; on the other, groups of city-based activists and critical professionals seek recognition and redress of more ‘proximate’ hazards (pollution, poverty, lack of infrastructure). In analyzing how competing urban riskscapes come to be assembled through heterogeneous knowledge practices, the paper highlights the different visions and commitments to ‘scales of change’ (jiménes) thereby enabled and furthered. By thus allowing us to grasp the situated tools and knowledge through which ‘large-scale’ processes of socio-political change – development, low-carbon transition, justice – are shaped and contested around specific urban places and spaces, the paper suggests that assemblage urbanism contributes valuable to new critical explorations of technical politics and sustainability in the city.

The Politics of Urban Climate Risks: Theoretical and Empirical Lessons from Methodological Cosmopolitanism?

In the face of global climate risks, world cities are increasingly being positioned, in academic and policy discourse, as strategic spaces for orchestrating the expertise and governance capacity needed to steer societies towards more sustainable and low-carbon futures. This paper reviews existing theoretical and methodological approaches to the study of urban climate politics, by way of asking what contribution Ulrich Beck’s theory of world risk society – and principles of methodological cosmopolitanism – make to such epochoval conversations? Three existing analytical frameworks are singled out for their importance: low-carbon transitions literature highlight generic socio-technical dynamics of ‘greening’ urban infrastructures; urban policy mobility approaches document growing inter-city networks around climate and sustainability; and actor-network theory (ANT) work on architectural controversies engage the localized politics of specific urban riskscapes. While each framework point to local-global interdependencies manifest in urban climate politics, this paper suggests that all of them remain under-theorized from the point of view of their specific dynamics of ‘cosmopolitisation’. To counter this deficiency, the paper draws on Beck in outlining the contours of new ‘cosmopolitan urban risk communities’, seeking to define their main analytical constituents and point to emerging empirical realities. To this effect, on-going studies into major European and Asian port cities – positioned as ‘ambitious’ spaces of political experimentation on climate risks – is used to illustrate how a shared transnational risk imaginary (e.g. of future sea-level rises) may help shape the politics of trans-boundary solidarity, while reworking existing patterns of urban competition and inequality. Reflecting on such research practices, the paper points to the need for reworking methods of multi-sited ethnography and comparison as central parts of a ‘cosmopolitan’ approach to urban climate risks.

About Efficiency of Prevention Campaigns to Fight Cancer

My paper is based on statistical data concerning mortality rates caused by cancer. In France, focusing on smoking habits, I show that the effects of public health measures have not been as efficient as anticipated. In particular, the decline in smoking rates has been much lower than expected. Consequently, there is a need for improvement in the effectiveness of public health campaigns to combat cancer.
cerc Plans, since 2003. In order to reach the entire population, innovative campaigns were not only broadcast on television through advertisements but also on the packaging of food, tobacco and alcoholic products. Perception of these new health messages were positive, however, risk behaviors have not decreased. Regrettably it has been shown that this type of campaign approach has been ineffective since the tobacco usage has increased from 2005 to 2010.

According to the results of many investigations, members of the lower social classes and the elderly are more affected by cancer, yet these people have been found to be less concerned with these prevention campaigns. Impression may be they “choose not to hear” the guidelines proposed by public authorities. That shows the importance of social classes, age and sex determination (Bourdieu 1979, Bihr and Pfefferkorn 2008). The few changes in risk behaviors are less the product of individual choice, but rather the result of constraints such as health problems, obesity, etc.

One might then think of new types of “prevention campaigns” with egalitarian goals, which would not be limited only to simple quotes such as “stop smoking” or “eat fruit and vegetables”, but whose purpose could be to promote “self-care” and to develop agency of people. This means to act on both economic and cultural dimensions of the concerned groups.

RIGAL, LAURENT (CESP Inserm U1018)

New Values, New Morality, Attitudes, and New Dilemmas? the Metamorphoses of Professional Ethics Among French General Practitioners in a Renewed Primary Care Governance Context

French private GPs’ values have been historically structured by the ideological frame of the so-called “médecine libérale”. Although they have consented to collective conventions and regulatory fees, their individual consciousness is supposed to support professional ethics in the service of the patient. Public regulation has been suspected in damaging their professional commitment. This traditional settlement has been destabilized by new governance principles introduced to regulate (more from above than from inside) the professional autonomy through new professionalism criteria. We would like to examine how different types of reforms raise different ethical issues.

Some reforms have sought to give more content and opposability to classical professional ethics by introducing new moral values (continuous training, accountability, independence from the firms, respect for patients’ rights, fee moderation or acceptance of poor patients). Other ones have been presented in the name of rationalization or public health, but have equivocal moral implications on the way GPs treat their patients. For instance patient lists have been introduced for each doctor, and more prevention is required, both should lead GPs to develop a more collective perspective on the population they are in charge of and use systematic procedures: does it affect their consideration of patients’ personal complaints? does it make them aware of social inequalities in the care they dispense? A third kind of reform has introduced financial incentives and have been the target of nurses and patients’ trust motivations by treating GPs as common self-interested economic agents.

How do GPs deal with the moral implications of these inflections of their mandate, which intersect with concomitant changes in their own inclinations? Do they reaffirm classical professional ethics or adapt it? Does it lead to coherent changes in shared, to new individual dilemmas, or to “moral fragmentation” between different medical sub-cultures? Our analysis will be empirically based on 100 interviews focused on preventive care.

BLUMBERG, RAÉ* (University of Virginia, rblumberg@virginia.edu)

The Tortoise or the Hare? Long-Term Continuity vs. Rapid Shifts in Gender Equality

Undoubtedly, women’s relative position has been improving almost globally in recent decades. But how can we predict fast vs. slow shifts in most places or the possibility of a dizzying descent into inequality in a few others? Examining recent changes in historical patterns through the lens of my theories of gender stratification and gender and development, I suggest that we examine structural variables, the bedrock of gender stratification: women’s relative economic power (defined as control of income/other assets – my theories’ key variable) and the political economic system. Historically, women have done best where their control over income and the kinship system is bilateral or matri-oriented (so that women inherit and marital residence often is with/near the bride’s female kin). This pattern prevails in most of Southeast Asia and – largely so even in Indonesia despite ~700 years of Islam. Regionally, women’s economic autonomy and overall position long have outshone most of Europe and proved better than in almost all world areas where inheritance goes wholly/disproportionately to men and the bridal couple lives with/near the groom’s male relatives. This includes 75% of sub-Saharan ethnic groups, almost all the Middle East/North Africa, and most of South Asia (Kerala State, India is the strongest exception). A common phenomenon in these patri-oriented countries is that women lack effective land rights, even if laws have been passed giving them theoretical rights (e.g., India). A sudden burst to full gender equality seems unlikely even in Scandinavia but a steep ideological-propelled slide could happen in conflict countries where women lack economic power and the kin-property system is highly unfavorable, e.g., a repeat of what happened in Afghanistan under the Taliban. Overall, however, women’s rising economic power should prove more consequential in driving gender equality than changing social norms and growing proportions of females in parliaments and schools.

JS-18.2

BOATCA, MANUELA* (Freie Universitaet Berlin, mboatca@zedat.fu-berlin.de)

Title: Commodification of Citizenship and Racialization Processes

The widening of the worldwide inequality gap is paralleled by an increase in the commodification of citizenship. The emergence of official economic citizenship programmes (aka “citizenship by investment”) as well as the illegal trade in EU passports (“buy a EU citizenship” schemes) are similar strategies of eluding the ascription of citizenship through recourse to the market. As the – real or perceived risk – of more people gaining access to citizenship of wealthy countries increases, so does the racial criminalization of migrants to core regions – most prominently, the European Union and the United States, regardless of the citizenship regime of the country of arrival. Thus, the ethnic profiling of Moldovans in the European Union is directed against immigrants suspected of having abused the right of blood in order to acquire citizenship, by trying to prove Romanian ancestry in order to acquire a EU passport. On the other hand, the ethnic and racial profiling of immigrants who come to the US to give birth targets pregnant women accused of having abused the right of soil to the same purpose. The scandalization of “forged descent” in one case and of what could analogously be called “ethnic descent” in the other is simultaneously a statement about the immutability of the ascription of citizenship through both bloodline and birthplace for the wider population, and ultimately a denial of equal opportunities for upward social mobility at the global level.

BOAVIDA, NUNO* (Universidade Nova de Lisboa (Cesnovo/ IET), nunoboavida@gmail.com)

The Proliferation of Composite Indexes

This paper aims to reflect on the impact of the hipper-proliferation of composite indexes in society. First, although methodological problems have been amply identified decades ago (MacRae 1985; Porter 1995), most composite indexes are increasingly being constructed to support decision making without caveats. The impacts of their use are largely unknown, although by now they are expected to be found all across society (Boavida et al. 2013a; Boavida et al. 2013b). Sec- ond, just at the macro and sectoral level, but also at the individual level (Boavida 2011). One of the main problems with the composite indexes is their launching without proper guidelines for their use. This is particularly visible in the public sphere, where debates abound with abusive citations of indexes and ranking positions of countries, regions, sectors and even politicians’ acceptance rates. Although less visible, there appears to be a underlying attitude to compare personal decisions with existing rankings uncritically of the measures being involved (Booyen 2002; Feller-länzlinger et al. 2010; Dahler-Larsen 2013). Therefore, we will understand the “forged ascent” in the other is simultaneously a statement about the immutability of the ascription of citizenship through both bloodline and birthplace for the wider population, and ultimately a denial of equal opportunities for upward social mobility at the global level.

BOAZ, ANNETTE* (St George’s Medical School, A.Boaz@sgul.kingston.ac.uk)

MORGAN, MYFANNY (King’s College London)

Working to Establish ‘Normality’ Post-Transplant

Objectives: To explore patients’ perceptions and experiences of ‘normality’ and the influences on this at three time points post-transplant.

Methods: In-depth interviews with 25 patients at three months, one year and more than three years following kidney transplant. Patients’ accounts were compared with Sanderson et al.’s typology of types of normality in rheumatoid arthri- tis patients.
My paper aims to theoretically revisit the everyday negotiation of profession- 
al, emotional and ethnic boundaries between dependent elderly and immigrant 
care workers. It builds on my own research on home care in Italy – a country 
where home(s). International migration is a promising topic for inquiring “where home 
is”, and why this matters. The constructions of home and of its absence – as a 
place, a relational configuration or a way of feeling – are central to the migrant life 
experience. Extended physical detachment from what used to be home, and the 
search for a ‘new home’, are both constitutive of it. Unsurprisingly, the notion of home resonates widely, and with mixed emotional tones, in 
immigrants’ biographical accounts. However, the ways in which home is re-constructed, 
(re)placed or projected into the future are extremely diverse and case-specific. 
While some literature has increasingly highlighted the immaterial bases of mi- 
grants’ feeling-at-home, most studies point to their persistent need to enable home 
in distinctive geographical locations and material (domestic) arrangements. 

Generally speaking, the housing solutions encountered by migrants abroad 
may be little conducive to a sense of domesticity. The critical point, though, is how 
their sense of home is reconstructed and turned into real social practices over time, 
and how this ‘homing’ interacts with their relational conditions and socio-economic achievements abroad. Myriad case studies, but few comparative 
alyses are available on these issues. The same holds for the persisting signifi- 
cance of the homeland as an elictor of home feelings, particularly for first-gen- 
eration migrants. The search for the ‘old country’ in the home is ‘organized’ heterogeneity of references (e.g. managerial standards or templates 
acting). The analysis suggests that there are various responses to this ‘organized’ heterogeneity of references (e.g. managerial standards or templates 
channeling decisions) throughout the field under study; however, most are about 
processing ambiguity by provisional and peace-meal action through which these 
references and the underlying institutional logics become fuzzy themselves. 
Hence the disorganization of organizational fields goes alongside the blurring of 
homecare. From Unknown to Known Objects- Cultural Knowledge in Action 

BODE, INGO* (University of Kassel, ibode@uni-kassel.de) 
Organized Heterogeneity in Disorganized Fields: The Case of Child 
Protection Services in Germany 

Much of what has been developed in organizational field theory has long been 

to well-organized sector obeying to a clear-cut set of logics that cohabit 
peacefully after all (e.g. bureaucracy and professionalism). Many of these fields 
have a public service background. For a while now, however, multiplicity has 
given way to the notion of complexity here in the sense that logics inhabiting such fields come to 
(over)involve the players of a given field with either-or constellations. Drawing on a research 
project conducted between 2010 and 2013 that has investigated developments in the sector of child protection services in Germany, this paper presents patterns of what has been referred to recently as institutional work, with an eye on two sorts 
of organizations: public hub agencies with an administrative remit and nonprofits 
entrusted with service provision. The material consists of an interview-based, 
in-depth investigation of selected settings, embracing the entire set of agencies 
relevant to child protection in a given area, with a hermeneutic approach inform- 
ning its exploitation. The analysis suggests that there are various responses to this ‘organized’ heterogeneity of references (e.g. managerial standards or templates 
channeling decisions) throughout the field under study; however, most are about 
processing ambiguity by provisional and peace-meal action through which these 
references and the underlying institutional logics become fuzzy themselves. 
Hence the disorganization of organizational fields goes alongside the blurring of 
those cognitive foundations on which they are built.
To provoke an irritation of the routines of meaning construction of objects I gave unknown objects to small groups of students and asked them to find out the use of these things. I used video analysis methods to keep the details and to be able to recognise situational procedures of handling the uncertainty in the material world. The results show that the meaning of the unknown objects emerged in a communicative construction which strongly bases on different forms of cultural knowledge in action. Interesting examples are the search for contexts of use which are in a pragmatic manner connected with imagined or real experiences and body knowledge as a way to test and create ideas for the “right” use.

How to Measure Quality of Life? an Integrated Approach in the Netherlands

How to measure quality of life? An integrated approach in the Netherlands

The Netherlands Institute for Social Research uses a composite index to describe and monitor developments in the quality of life of the Dutch population. The SCP Life-situation Index (SLI) is used to measure objective aspects of individual quality of life. In constructing the index, we depart from the view that quality of life is a multi-dimensional concept. SLI is composed of indicators from eight domains: health, housing, social participation, cultural leisure activity, consumer durables, sports activity, vacation, and mobility. Education, income, paid employment and some sufficiency are considered as “resources”. They can be used by citizens to improve their life situation.

We use non linear canonical correlation analysis to combine the indicators into the index. SLI is based on micro-data, stemming from survey research. With these survey data we are able to give a summarizing insight in the different domains of the life situation at the individual level. We can also break down the life situation for different social groups (enabling us to compare income groups, educational levels and household types). In our view quality of life has an objective and a subjective part. Using micro-data also provides the opportunity to explore the relationship between objective wellbeing (as measured by the index) and subjective wellbeing (happiness and satisfactions).

The paper focuses on two of the major issues we come across:

1. How to measure quality of life? Why did we choose not to include subjective indicators? Does it change the results if we did?
2. How to combine the indicators? The life situation index is constructed statistically, using nonlinear canonical correlation analysis to get the weights. But there are other ways to do so. Does using alternatives lead to different results?

BOELHOUWER, JEROEN* (Netherlands Inst Social Research, j.boelhouwer@scp.nl)

Measuring Wellbeing Across Countries – Can it be Done?

There are no widely adopted definitions for the concepts of wellbeing and quality of life. First, I discuss the correspondences and differences between measures of wellbeing and quality of life, like the Gross National Happiness of Bhutan, the Happy Planet Index of the New Economics Foundation, the Better Life Index of the OECD and the Human Development Index of the UNDP. I also compare these measures with the SCP Life-situation Index which is used in the Netherlands. When describing the quality of life of the Dutch with this index, a conceptual model is used, which is centered around the index. In this conceptual model the view is taken that quality of life has an objective and a subjective part. The conceptual model of the SCP Life-situation Index can be used to describe how objective and subjective wellbeing are related. In this model a causal relation is proposed between capabilities (or resources, like education, income and paid work) and objective quality of life (as measured by the SCP Life-situation index, which combines indicators on health, housing, social participation, etc). Next, a causal relation is proposed between this objective wellbeing and subjective wellbeing (happiness). This model is tested for the Netherlands and the results show that the model works.

In the paper I will use the European Social Survey to look at whether the model can also be used for other European countries. Though the model can be used, there are differences between countries, for example in the weights of the indicators.

Visualizing Society: Immigrant Integration Expertise As a Sphere of Calculability

This paper regards the field of immigrant integration expertise in Western Europe as a sphere of calculability (Mitchell, 2002) in which projections of future conditions of society are visualized in images such as tables, graphs and designs. The expert images produced by monitoring institutions and social scientific networks can be understood as crucial sites where (future) differences of national populations crystallize and gain plausibility.

In social scientific studies and reports of immigrant integration, produced both on national and European level, the future condition of national societies in Western Europe is problematized and discussed by the growing presence of the ‘non-western’ or ‘immigrant’ population. For example, a Eurostat working paper of 2010 on the foreign-born population in EU countries states that “the share of foreign-born is likely to more than double by 2061”, which emphasizes a stable trend in the “immigrant” presence in national societies. The images in the report demonstrate socially constructed differences and a careful maintenance of these differences, expressed through standardized categories of alterity (Castoriadis) vis-à-vis a homogenous ‘native’ population in national societies. As such, the contested (future) condition of society is stabilized.

This paper seeks insight in how future projections of ‘non-western’ presence in West-European societies come about and how the field of immigrant integration expertise can be perceived as what Timothy Mitchell has called a “sphere of calculability” i.e. framing, drawing limits, measuring and visualizing (Mitchell, 2002). By doing ethnographic research at the “centres of calculation” (Latour, 1987) in combination with document analysis this paper aims to show how immigrant integration is made into a field of challenges, strategies, demand and importance, subsequently effectuating particular logics of visualizing national societies.

BOGNER, ARTUR* (University of Bayreuth, artur.bogner@web.de)

Analysing Real Conflict Scenarios Empirically – Experiences from Ghana and Uganda

Armed conflicts are phases or processes of armed escalation within much longer (and often large-scale) social processes, parts of much wider synchronic and diachronic contexts that may be composed of “dynamic systems”, “figurations” or “self-organizing” processes – including long-term as well as shorter-term processes. Their analysis is essentially identical to the investigation of socio-cultural structures under specific perspectives, especially regarding the chances of armed conflicts and fluid and multipolar balances of power (between diverse centres of social power and various makers and executors of conflict management or violence management respectively). This paper by a figural sociologist will discuss the methodology of investigating and forecasting real conflict scenarios empirically with a focus on practical research practice and with regard to the relaciones ethnographic research at the “centres of calculation” (Latour, 1987) in combination with document analysis this paper aims to show how immigrant integration is made into a field of challenges, strategies, demand and importance, subsequently effectuating particular logics of visualizing national societies.

BOGNER, ARTUR* (University of Bayreuth, artur.bogner@web.de)

Eisenstadt and Elias: Static and Dynamic, Competing and Complementary Accounts of the Social World in the Modern Age

The complicated interrelationships between particularity and generality, the abstract and the concrete, or atomistic and holistic conceptions of causation, ‘history’ and society continue to affict the socio-cultural sciences. This also applies to the relations between ‘modern culture’ and its diverse ‘actualizations’ as well as relations between competing conceptions of the social world without and within history. Elias’s and Eisenstadt’s works belong to the sustained and coherent efforts among sociologists to explain the defining qualities of the world in the modern age and their genesis. Some understand their theories as retreats of the post-WWII modernization discourse. Although there is some truth in this perspective, it should not deflect from the fact that Eisenstadt’s and Elias’s works are perhaps the most elaborated attempt at revising the essential constitutents of this discourse.
whereas Elias's theory represents a radical alternative (of pre-Parsonian and pre-war provenance) to it, in terms of basic terminology and basic vision of the social world as well as its methodology – in a manner reminiscent of the polarity between Kantian and Hegelian epistemologies or concepts respectively. Whereas Eisenstadt refined and differentiated the concept of modernity, Elias generally abstained from using the term and suggesting a total break between the modern and the preceding periods and emphasized long-term continuities and patterns in European and human history, while anticipating some central ideas of the recent discourse on globalization. Whereas Eisenstadt focused on the implementation of "cultural and political programmes", Elias emphasized the unanticipated consequences of actions and the unplanned nature of collective processes and phenomena. The paper will analyse how far insights and concepts of two eminent scholars of historical sociology are mutually compatible or complementary as well as explicate their methodological, conceptual and material differences.

**Effects of the Visual Presentation of Don't Know Options in Rating Scales on Responses. Comparing Results of a Papi and an Online Panel Experiment**

Several studies show that in self-administered settings respondents use both, verbal information as well as nonverbal, visual features of rating scales within the question response process. Nonverbal, visual scale features (VSF) are for example font, size, color, or graphical display of the rating scale. However, the findings of the existing studies are not consistent and thus, there is still much to learn about the specifics of personal and situational settings that make respondents susceptible for VSF. This research examines attitude strength and demographic characteristics as potential moderators of the effects of VSF. Two randomized experiments were conducted varying the visual layout of a five-point-agreement disagreement rating scale. Three different visual layouts were tested in each experiment: a) the don't know option is separated from the other scale categories by a clearly visible vertical divider line, b) the don't know option is simply added to the right hand side of the scale, and c) no don't know option is offered. The first experiment included 307 German students using PAPI mode; the second experiment included 450 respondents and the ESI online access server.

The assumption is that respondents are influenced in their selection of the middle, extreme and don't know response category by the VSF. By means of multilevel analysis, the likelihood of selecting these categories are estimated for both studies separately. For the paper-and-pencil experiment significant effects of the VSF on the likelihood of response category selection was found; attitude strength shows to be a strong moderator of the VSF effects. However, in the online setting these findings could not be replicated; demographic variables have no or just little moderating effects.

**The Cuisine Culture from a Polish Perspective. How Popular TV Programmes Use Cooking to Create a Modern Lifestyle and Present the New Middle Class**

In the aftermath of the events of 1989, Polish society faced many changes. One of them was an invasion of global cuisine culture. I would like to research how did the typical Polish city change under the influence of the culinary culture and TV cooking programmes? I am interested in how the culinary culture is currently used to promote the values of the consumerist society, such as competition, rivalry, pleasure, and entertainment.

I would like to present the examples of the popular TV series “The Cooked” and “The Kitchen Revolutions”. Both of them play a very important role in changing Polish attitudes to cuisine and its meaning in social life. The programme “The Cooked” presents young representatives of the new middle class from big and global cities which are the beneficiaries of the Polish transformation in 1989. They treat the cuisine culture as a very instrumental way to present their social status and proof of their place in the global community.

The second example is a TV series called “The Kitchen Revolutions”. The main character is a famous Polish chef who visits different restaurants in Poland and helps the owners change not only material aspects of their restaurants, but also the owners’ general attitude towards the cuisine culture. The process of changing the material and aesthetic vision of restaurants also creates opportunities to compare global imagination about cuisine culture with the local tradition of nutrition.

Both popular TV programmes create possibilities to define attitudes towards inequality and the differences between the global cities and other parts of the country. The cuisine culture and its popularity can be treated as an instrument to understand the process of changing the rules of lifestyles and construction of the new middle class in the new democracies.

way in which social relations, identities and institutions are structured. The role of countries and borders between States become diffuse, porous and permeable and global connections are intensified by virtue of the fact that they are shared with great velocity in multiple places.

Amid these trends, migration became a source of social transformation. Contemporary migration encompasses steady as well as repeated and circular, bi-local and multi-local movements. Expanded mobility, multiple relocations, sustained interactions enhance exchanges of economic and social resources, cultural narratives, practices and symbols between communities and societies. Migration has widened the spectrum of encounters between individuals and groups carrying distinct communal organizing principles, historical trajectories, models and logics of the collective. It thus poses equally new challenges to Multiculturals, Aiming to account for singularity (as differing from exceptionalism) we claim the need to focus on the collective dimension and on the institutional underpinnings of modernization and its structural effects in order to account for the past and present cases of re-diasporization and explore the transition from ethno-national diasporas to ethno-transnational ones.

Ethnic Inequality in the Labour Market: The Transferability of Skills and Degrees

Migrants are less successful in the labor market than natives, relative disadvantages that are often referred to as “ethnic penalties.” Previous research estimated these penalties using education as a proxy for skills. However, highly educated individuals are not only rewarded by employers for their skill levels, but also for the signaling value of their degree. Although most studies that estimate ethnic penalties usually acknowledge the existence of these two mechanisms, empirical work that incorporates this is extremely scarce. In this study, we include a measure of both cognitive (numeracy, literacy) and non-cognitive (motivation) skills, which allows us to separate mechanisms that explain the educational payoff of migrants. This increases our knowledge of how the transferability of skills and degrees affects ethnic inequality in the labor market. We analyze both unemployment risk and income.

The paper furthermore contributes to the literature on ethnic inequality in the labor market by explaining variation in ethnic penalties across countries with varying institutional contexts. Studies that structurally analyze variation in penalties across countries are scarce, and there is no comparative work that analyses varying institutional contexts. Studies that structurally analyze variation in penal-

Meditation and the Art of Hermeneutics. Approaching the Notion of Subject and Object in Research on Non Subject-Object Phenomena

Even though in the last 20 years an increasing interest of academics in the spread of Buddhism in ‘the West’ can be observed and enough has been said about this process to establish Western Buddhist Studies as a new academic discipline, there is still a limited knowledge about the meaning of Tantric Tibetan Buddhism meditation practices, especially as performed by the ‘Western’ buddhist disciples.

Leaving the common misunderstanding of Tantra as ‘esoteric teachings blot-
ed with shame’ behind (as suggested by Herbert V. Guenther 1974: 12), the paper is aiming to relate to the practice of the Tantric Tibetan Buddhist meditation, in particular to the so-called Meditation on the Nature of Mind (Mahamudra and Maha Ati), and comprehend it as an advanced scientific and synaestetic (cf. Plessner, Helmuth 1923: Die Einheit der Sinne. Grundlinien einer Ästhesiologie des Geistes, Bonn.

Framing a Moral Protest in a Secular Country, the Civil Society Mobilization Against Homosexual Marriages in France

The introduction of same-sex marriages has recently occupied the political agenda of many countries. The public debate on the question has illustrated the enduring impact of religious values in the political sphere and the greater mobilization of religious civil society groups in contrasting the legalization of homosexual unions. This paper will investigate the socio-political discourse of civil society actors involved in the protests against the introduction of homosexual marriages in France. The activism of groups with a religious background was one of the most salient political phenomena in the French political life in the last few years. The broadness of the protest was so vast to be described as a fundamental experience for an entire generation. The study of the French mobilization offers the opportunity to come across some intriguing sociological issues. Why the social protests in defence of a family model upheld by the Catholic Church were so strong in one of the most secularized countries in the world? Why Catholic values had a prominent role in a public policy debate in a country where the separation between politics and morality is a paradigm of the political life? Why the traditionally weak French civil society demonstrated such a strong activism?

This paper will investigate the framing process of the discourse of the social actors involved in the French protests against homosexual marriages. Then it will discuss the intellectual and political reasons that contributed to give an ample resonance to their ethical and religious values. Finally it will compare the discourse of the French mobilization with other social protests against the legalization of same-sex unions in other Western countries.

The Financialization of Welfare States. The Case of Complementary Social Insurances

The process of financialization of capitalist economies has recently interested many welfare states. The reforms of the social protection introduced in the last two decades have given greater importance to the role of the financial sector as a welfare provider. An increasing number of families rely on the revenues of their financial investments to get those social services previously provided by state authorities. A paradigmatic example is given by the several complementary insurance schemes increasingly diffused in several Western and developing countries. Their introduction was generally supported by governments and labour unions that believe the financial sector may provide workers those economic resources that current welfare states find difficult to guarantee. However the process of financialization of welfare states could enlarge the already existing income inequalities, strengthen the increasing social stratification, and intensify the process of dualization of the social protection that is interesting many welfare states.

This paper will present a comparative investigation of the diffusion of private complementary social insurance schemes in France, Sweden, and the UK after the onset of the latest economic crisis. It will discuss the political debate about their introduction. Then it will evaluate their likely impact on the process of segmentation of the social protection. Finally it will broadcast the conclusions drawn from the case studies previously considered to other developed and developing countries.

From Art to Urban Politics – and the Other Way Round. the Art Festival “Paratissima” and Its Complex Relationship with Processes of Urban Regeneration in Turin, Italy

Art can be a mean of claim, empowerment, participation, protest. But what happens if such forms of art are then adopted as tools of urban regeneration? This paper focuses on the relationship between art, civic participation and urban regeneration processes analysing the social impacts and political appropriation of an alternative, non-institutional yearly art event in the city of Turin, Italy.

In order to move away from its fordist past, the city of Turin has betted on Culture, creativity and entertainment as core elements of a new path of development. In this frame the City launched a contemporary art fair for international galleries, “Aristissima”, taking place every year in the first week of November. Against its institutional, elitist approach, a group of young artists founded in 2005 “Paratissima”, an alternative, parallel open art exhibition, affirming the freedom and the social value of art. In 2008 Paratissima moved to San Salvario, a multicultural, mixed neighbourhood looking forward to emancipating from its problematic past. The event took place into empty stores, shops, internal yards and streets, making Art and everyday-life in unconventional spaces, tackling local social issues and involving inhabitants, shopkeepers and social associations. Occurring there ever since, it has contributed to re-shape the neighbourhood and to attract new flows of people and investments in the area.

Relying on interviews and ethnographic fieldwork, the paper analyzes the ambivalent relationships between Paratissima, other forms of civic participation and the neighbourhood social and cultural fabric, highlighting benefits and criticisms of short and mid-term influences over the neighbourhood's transformation. Moreover, it examines the processes that have brought both the local authorities and civil society organisations to consider this format as a successful and replicable model of urban re-development, and it problematizes the path towards institutionalization that this event, born as critical and alternative, seems to have taken.

Whose Street Is This? Commercial Gentrification, Symbolic Ownership and Legitimate Uses of Public Spaces in a Changing Neighbourhood of Turin, Italy

This paper aims at investigating the interactions between commercial landscape, symbolic ownership and everyday practices in upgrading neighbourhoods. Focusing on the neighbourhood of San Salvario (Turin, Italy), it argues that commercial transformations have a major role in challenging established uses and representations, and in framing claims, visions and actions of different sets of actors over the same urban space.

Despite a long tradition of studies on gentrification and neighbourhood's transformations, only in recent times the role and the socio-cultural impacts of changes of commercial and recreational landscape have been taken under careful examination. Processes of commercial upgrading should not be read only as markers but as active agents of change. New stores, cafés, clubs and night spots embody a powerful discourse that legitimizes some uses, images and users while excluding others. In this frame, the street becomes a crucial space of friction, contestation and negotiation where broader dynamics constantly interact with everyday practices.

Right next to the city centre and the central railway station, San Salvario's neighbourhood has recently turned from a multicultural, mixed, problematic area into the new core of leisure and consumption of Turin. The opening of new cafés, clubs and night spots has challenged the identity of the neighbourhood and the established uses of public spaces. In this setting, relying on almost two years of ethnographic research, the observation of via Berchetto allows us to examine everyday dynamics and everyday practices of contestation, claims and negotiation over the legitimate uses and representations of public spaces. The analysis highlights the relevance of both space and time dimensions and it unveils the constant interactions between complex sets of actors, such as the established users of the street (mainly foreigners), the new users (mainly university students and young urban middle class), the residents, the commercial entrepreneurs and the local authorities.

BONELLI, MARIA DA GLORIA* (Sao Carlos Federal University, gbonelli@uol.com.br)

Street Level Brokers: Shrinking the Occupation of Despachantes in an Era of Global Managerialism

The paper focuses on the occupation of despachantes documentalistas (document clearing agent) in São Paulo, Brazil, which was first regulated in 1854, by the Brazilian Emperor, differentiating these services from the work of customs agents, an occupation that were established by the Portuguese Crown in 1809. The despachantes were in charge of collecting taxes, and forwarding legal documents for real estate, business and vehicles. Since then, their selection and work have been under state control. In 2002, the National Council of Despachantes Documentalistas was organized as a collective project to professionalization.

They used to think about themselves as supportive of the government, acting as brokers for their clients to the public officials. Nowadays, they share a negative public image associated with payment of bribes and illicit practices. This traditional way of providing document clearing services have undergone transformation. As a result of deregulation policies and privatization of public services, the forwarding of identification documents are now provided by large enterprise firms that manage the Poupatempo posts and bank agencies, which receive the payments of taxes, fines and duties.

Transnational Lives of Pinays on the Canadian Prairies

Filipino women or Pinays are, undeniably, the most visible mobile group of temporary foreign workers in Canada and elsewhere today. They are also the most highly socially integrated group of women from Asia due to intermarriages and a western colonial legacy. Over three hundred years of Spanish rule and fifty years of American tutelage have made the Filipinos the “little brown Americans” whose use of the English language, practice of liberal-democratic politics, and ad- herence to Catholicism shape their trajectories as “citizens of the world”. Filipinos have become one of the most desired group of non-white workers and immi- grants for their ability to integrate in western societies, to be “at home in the world”. The plight of Filipino women has indeed attracted much attention from scholars, practitioners, and policymakers. But a nuanced approach to how racialized Filipino women negotiate the limiting social structures of inclusion facilitates a broader appreciation of the meaning of migration in their lives.

This paper employs the migration, identity, and community of Pinay in the prairie provinces of Alberta, Manitoba, and Saskatchewan. While Filipino women have become the mainstay group for case studies on the Live-in Care- giver Program (LCP) in Canada and its consequent phenotypical constructs of the “nanny,” “caregiver” and “domestic worker”, I extend the prevailing dominant in previous research.

promise as an important bridge to achieve justice, equity and equality in societies around the world.

The International Comparative Education Project asks, “How well are universi- ties in South Africa, England and the US preparing students to work and live with increasing racial-ethnic diversity? We compare student experiences across inter- national higher educational contexts to determine whether and how universities; (1) build bridges across diverse social groups,(2) provide student learning opportu- nities to interact with diverse communities, and (3) facilitate growth in students' cognitive, social, civil, and democratic skills and value-orientations. While national studies examine how universities prepare students for an increasingly global so- ciety, little research studies these issues cross-nationally.

Seeking to address this gap, we asked students at the University of Cape Town (N=98), Oxford University (N=74), Occidental College (N=122) and UCLA (N=1,135) to complete online surveys about experiences and outcomes related to campus diversity. The goal was to assess inter-group and intra group relations as relat- ed to diversity and point to the experiences and interactions most effective in preparing students for meaningful participation in diverse, global, free market economies. Data was analyzed using SPSS. Measures used have been validated in previous research.

Les Transformations Du Travail Professionnel : Origines, Fondements Et Enjeux

Les universités font l’objet depuis au moins deux bonnes décennies d’une transformation majeure de leur mission, de la foule de la mise en place de ce que plusieurs ont considéré comme étant une société néolibérale (Freitag, 1995). On parle de plus en plus de performance, d’efficacité, de compétitivité, de productivité, etc., pour spécifier les valeurs autour desquelles on voudrait réorganiser le travail professionnel. Or ces valeurs, qui prévalent dans le secteur privé, amor- nent avec elles de nouvelles contraintes qui ont des impacts directs sur le sens même du travail des professeurs d’université (entre autres chez les jeunes professeurs). Comme l’indique Lebuis, « les nouvelles professeures et les nouveaux professeurs sont projetés dans une culture organisationnelle et dans des pratiques gestionnaires qui prônent pas celles qu’ont connues leurs collègues à leur entrée à l’université, que celle-ci remonte à plus de trente ans ou même à seulement une dizaine d’années”. En demande beaucoup et de plus en plus aux professeurs d’uni- versité. Ainsi observe-t-on une tendance à l’augmentation des problèmes liés au stress et à l’anxiété en milieu de travail. Dans son dernier rapport, l’Association canadienne des professeurs et professeures d’université (ACPPU) en arrive aux conclusions que le niveau de stress et d’anxiété chez les professeurs d’université est très élevé et tend à augmenter de manière croissante. Dans le cadre de cette conférence, nous allons présenter les témoignages que nous avons recueillis à la suite d’une collecte de données conduite auprès de professeurs d’université en 2012. Nous avons effectué 17 entrevues auprès des membres du corps profes- soral d’une université canadienne (Canada). Nous allons mettre en lumière, à la lumière des témoignages recueillis, la nature des contraintes et des pressions qui pèsent sur les professeurs dans leur quotidien en mettant au cœur de l’analyse les transformations globales de l’université.

Les discours faisant état du fait que les TIC sont censés « libérer » le travail- leur de toutes contraintes temporelles et spatiales sont largement répandus. Pourtant, de nombreux travaux scientifiques (en sociologie ou en communica- tion) viennent montrer que les TIC tendent plutôt à contraindre les travailleurs avec comme résultat une augmentation de leur niveau de stress. Force est de constater, sans toutefois tomber dans le piège du déterminisme, que les TIC in- duisent un ensemble de pressions supplémentaires sur les travailleurs. Les travailleurs du secteur de la santé n’y font pas exception. Sur le plan micro- sociologique, on observe de manière caricaturale des individus qui sont pressés, sur la marche et conséquemment mode “multi-tâches”. Il y a certes des « gagnants » (les “chronos-contreurs”), mais il y aussi des “perdants” (qui implosent). Ce qui conduit à voir dans le rapport que chaque travailleur entre- tien avec son quotidien une inégalité entre ceux qui “s’en sortent” et ceux qui “s’engouffrent”, entre autres entre ceux qui “se connectent” et ceux qui ne “se déconnectent pas”... À donc, faire attention que les infirmières et infirmiers « hyper-débordées » au cours de l’automne 2011 dans un hôpital de l’Est de l’On- tario (Canada), nous allons nous intéresser, aux différentes stratégies que ces infirmières ont mises individuellement et/ou collectivement en place pour se soustraire occasionnellement aux allées du travail quotidien de manière à “sortir la tête de l’eau”. Un regard spécifique sera porté au “bricolage quotidien,
aux « micro-formes » de contournement des règles et à la « créativité » des informateurs pour « survivre » dans un environnement hyper-stressant.

Globalising Patterns of Professionalisation and New Groups in South Africa

Transformations at the level of societies, cultures and economies affect professions in different parts of the world in different ways. In some senses these transformations reflect the interactions between the macro (global developments) and the micro (country developments). Key to the transformations witnessed in the South African sociocapital society is the post-apartheid project of transformation and thus a lesser extent gendered transformation. A primary purpose of this paper is to consider how this transformation project is affecting South African professionals and the organisations that employ South African professionals. Thus the paper will examine recent developments in professions in South Africa. Four key developments have been identified. Firstly, the state led project of the professionalisation of the public sector as a strategy to raise standards of service delivery. Secondly, the fall in unionisation levels of traditional manufacturing sector workers and the subsequent rise in unionisation levels of teachers and other professionals. Thirdly the emergence of professionalisation of new groups (for example, security guards) as a strategy for organising workers. And, fourthly the strategies developed by the state, professional bodies and educational/training institutions to effect racial transformation in the composition of traditional professions.

BONOLI, GIULIANO* (University of Lausanne, giuliano.bonoli@idheap.unil.ch)

Social Investment Policies in Times of Permanent Austerity

The objective of this paper is to identify the political conditions that are most likely to be conducive to the development of social investment policies. It starts from the view that the prevailing model of welfare retraction that in the current context of permanent austerity, policy is likely to be dominated by retraction and implemented in a way that allows governments to minimise the risk of electoral punishment (blame avoidance). It is argued that this view is inconsistent with developments observed in several European countries, were some welfare state expansion has taken place mostly in the fields of childcare and active labour market policy. An alternative model is put forward, that emphasises the notion of "affordable credit claiming". It is argued that even under strong budgetary pressures, governments maintain a preference for policies that allow them to claim credit in the decision-making processes, i.e. to express their viewpoints, wishes, expectations, etc. but also the information and knowledge they have about the issue under scrutiny, and to make them count. In other words, democratization should permit all people (agency) to be part of the construction of the social fabric (structure), thus contributing to a more reflexive relationship between agency and structure. The paper focuses on the potential of such a perspective for developing a sociology of democracy; it both discusses its normative foundations, and suggests analytical tools for its implementation in the empirical enquiry. At normative level, Sen's fascination for democracy has raised sharp criticisms: real democracy does not match Sen's ideal at all; only active deliberators are allowed to enjoy the full benefits of democracy (cf. Cohen's objection of athleteism, etc). In the idea of Justice (2009), Sen strives to answer these criticisms: he develops a notion of democracy as public reasoning, emphasizes the relevance of issues such as the informational role of democracy, the incapable plurality of principles and the needed focus on tolerant values. The paper assesses to what extent these developments take up the normative challenges raised by the criticisms. At empirical level, the concept of "capability for voice" as a basis for the sociological use of the capability approach is presented, and the factors facilitating (or impeding) its effective implementation are identified, thus providing an analytical grid for the sociological enquiry of democracy and participation.

BONVIN, JEAN-MICHEL* (Haute école travail social et santé, jmbonvin@eess.ch)

The Potential of the Capability Approach for Developing a Sociology of Democracy

The capability approach emphasizes the tight connection between democratization and social justice, thus providing an essential clue in the "agency vs. structure" debate. In Development as Freedom (1999), Sen insists on the constructive value of democracy that, ideally, should allow all people to effectively take part in collective decision-making processes, i.e. to express their viewpoints, wishes, expectations, etc. but also the information and knowledge they have about the issue under scrutiny, and to make them count. In other words, democratization should permit all people (agency) to be part of the construction of the social fabric (structure), thus contributing to a more reflexive relationship between agency and structure. The paper focuses on the potential of such a perspective for developing a sociology of democracy, it both discusses its normative foundations, and suggests analytical tools for its implementation in the empirical enquiry. At normative level, Sen's fascination for democracy has raised sharp criticisms: real democracy does not match Sen's ideal at all; only active deliberators are allowed to enjoy the full benefits of democracy (cf. Cohen's objection of athleteism, etc). In the idea of Justice (2009), Sen strives to answer these criticisms: he develops a notion of democracy as public reasoning, emphasizes the relevance of issues such as the informational role of democracy, the incapable plurality of principles and the needed focus on tolerant values. The paper assesses to what extent these developments take up the normative challenges raised by the criticisms. At empirical level, the concept of "capability for voice" as a basis for the sociological use of the capability approach is presented, and the factors facilitating (or impeding) its effective implementation are identified, thus providing an analytical grid for the sociological enquiry of democracy and participation.

VAN KEMPEN, HETTY (Bureau for Research and Statistics)
SLOT, JEROEN (Head Research of Bureau for Research and Statistics, city of Amsterdam)

Amsterdam: How Just Is the Social Housing Sector?

The role of the social housing sector in the Netherlands is changing, it becomes smaller and more exclusively targeted to lower income groups. In Amsterdam, where half of the housing stock is owned by housing associations, the effect of these changes will have a great impact on the city. Susan Faiststein argues in ‘The Just City’ that the social housing system is a key element that makes Amsterdam a just city. But how just is the social housing sector in Amsterdam? And what impact will these changes have on the chances to move in the city and the spatial division of the city?

The distribution system of social housing in Amsterdam is based on waiting time. The longer the waiting time, the higher chances are to find a new dwelling. The waiting list is long, the mean waiting time is 15 years. Previous research indicate that in general younger households, households with a higher income and non-immigrant groups tend to have higher chances to move. Our first findings indicate that this is also the case within the social housing sector. Although waiting time is the basis of the distribution system, our findings show that waiting time is not a relevant factor in explaining the chances for households to move.

In Amsterdam the segregation levels are rising. The social housing sector does not seem to contribute directly to the income-segregation, but our first findings indicate that it does influence the ethnic segregation in the city.

The analyses are based on the biennial survey ‘living in Amsterdam’ (17.000 respondents) combined with the actual moving behavior of the respondents. To reflect on the outcomes of these analyses we look at the actual spatial distribution of housing and households based on register data.

Imagination of Nation in Multi-Ethnic Situation: Understanding Ideological Conflicts and Ethnic Exclusions in the Imagination of ‘bharat Mata’

Imagination of Nation in Multi-Ethnic Situation: Understanding Ideological Conflicts and Ethnic Exclusions in the Imagination of ‘bharat Mata’

The idea of nation has traversed a long path of contradictory conceptualization based on the perspective adopted and the context where it is done. Debate on the precedence of nation and state is continued along the basic question of the idea of nation itself. Historical specificity lead to precedence of nation before state in Europe, but state formation followed by attempt to create a corresponding nation is more visible in the case of post colonial countries of Asia and Africa, although exceptions are also visible. The post colonial state formed mainly with the formulation of the colonial masters, which are many times not suits the ground realities thereby opens the scope for ethnic assertions among multiple groups. This lead to two important questions: the validity of state formation in the multi-ethnic situation and what leads to the formation of the nation? Although both questions need special attentions but addressing the second question can also lead to some clues to the first question.

We see that the imagination of bharat mata in the Indian context as separate nation is totally different from the western idea of imagination of a nation. Rather than simple imagination, it is more to do with darshan which has more to do with seeing beyond the eternal reality. Such philosophical underpinnings of the imagination of the Indian nation lead to emergence of distinct nature of Indian imagination which has more to do with dominant Hindu ideology, and thus excluding all others who don’t come in its fold. This inherent exclusion that takes place in the imagination of bharat mata is manifested as routine part of life thereby became tragic.

**Differential Subalterns in a New Social Movement to Prevent Bauxite Extraction on the Niyamgiri Mountain in Eastern India**

The Niyamgiri movement in Eastern India witnessed the participation of several kinds of actors, ranging from indigenous villagers to European governments. This paper will examine how these threats were influenced by environmental risks, such as inhabitants of the region around the mining project against which the movement was launched, responded through symbolic action, legal mobilization, ‘pure politics’, media activism and contingent alliances with political parties. Across these strategies, the trope of indigeneity as symbiosis with Nature can be traced as a theme counteracting the philosophy of industrialized development of which the proposed mining project at Niyamgiri was to be an example, as well as a tool encouraging/facilitating state and trans-national sympathy for the protest movement. The operationalization of this theme by non-indigenous inhabitants of the region around Niyamgiri, the legacy of the presence of this theme in Indian culture, and official state reception of it in legal, legislative and discursive terms, will constitute the paper’s first layer of analysis. The second layer of analysis will focus on why non-indigenous actors who had valid reasons of their own for opposing the mining project, chose to rally around this theme, and project the cause of the indigenous villagers who were threatened with the loss of their land, to the forefront of the movement. This analysis will be undertaken with the help of subaltern theory and new social movement theory. The non-indigenous villagers will be analysed as differential subalterns and the Niyamgiri movement as a new social movement. Indigeneity as lying in the space of tension between exclusion and freedom, will be explored as a potentially useful concept for the provocation of public debate on the validity of mainstream industrialized development – the paper will analyse whether indigeneity then remains a legal/strategic instrumentalization or goes beyond to become a call to broad-based cultural critique/renewal?

**European Environmental Cosmopolitanism As a Call to Indian Gandhian-Style Democracy: The New Environmental Nation-State As Soft Power?**

Zygmunt Bauman offers a persuasive argument of the importance of Europe’s post-imperial cosmopolitan role in world politics. Part of a legacy that traces itself to Immanuel Kant, this stance can be argued to be a form of soft power – a way to consolidate legitimacy in the global moral economy. This paper will argue that in the Indian context, and with pertinence to a particular case, it has been received as a call to a similar response. The case concerns the struggle of what was highlighted as an indigenous community protesting against the acquisition of their sacred mountain by a UK-based mining company. The Norwegian government and the Church of England among others, disinvested in the company and also tried to apply diplomatic pressure on the Indian government to ban the company’s mining project – to which the Indian government responded amenable and with an official acknowledgement of the role of the Norwegian government in influencing its decision. However, in further developments related to the case, the Indian Supreme Court issued a landmark judgment that was perhaps as much diplomacy as soft power – it asked for an environmental referendum at the level of the village councils of the indigenous community, which would decide the fate of the mining project. In data collected in relation to this case, many informants emphasized that the government’s stance was more influenced by the management of its image in the international public sphere than it was by domestic imperatives. The paper will argue that the government’s actions were in fact a way to go beyond the European cosmopolitanism to which it responded, and showcase support for a Gandhian-style grassroots-level environmental democracy – thereby enhancing its own stock of diplomatic soft power.

**Knowledge Challenges for Responsible Supply Chain Management of Chemicals in Textiles**

A great number of chemicals are used along the complex supply chains of textiles. Since many of these substances are hazardous to human health and the environment, dealing with knowledge-related challenges plays a central role for achieving a responsible governance of textile supply chains. Although previous research enables identification of general organisational commitments and capabilities facilitating aspirations of responsible supply chain management (RSCM), the challenges in various contextual settings need more detailed scrutiny. In this study, we investigate which knowledge requirements and knowledge strategies textile procuring organisations experience and apply when striving to satisfy expectations from external stakeholders as well as from internal pressure. We describe these challenges regarding chemical risks in the supply chain and analyse how the efforts potentially relate to expressed commitments as well as perceived capabilities for responsible supply chain management (RSCM). We lean on literature on Supply Chain Management and Sustainable Supply Chain Management in order to analyse the knowledge process. Empirically, the paper builds on a qualitative study of medium-sized Swedish textile procuring organizations. Participatory observations and a series of semi-structured interviews were conducted with staff responsible for environment, procurement, and CSR, as well as with other actors that in various ways engage in developing policies, instruments, and knowledge of relevance for RSCG. The empirical results show that several textile procuring organisations express serious commitments towards achieving RSCM. However, most organisations feel they lack capabilities in rising to the challenge. There seems to be a poor state of knowledge on many substances and inherent difficulties in both gaining knowledge on chemical risks as well as facilitating a responsible management upstream complex supply chains.

**CAN Cultural Festivals Create Sustainable Tourism ? A Study Based on Festivals in North East India**

Festivals are integral to culture. Culture formats festivals, reflecting traditions, belief and faith of the communities in its celebration. Festivals brand communities, display culture in all forms, preserve ethnicity and identity that create potential for tourism markets. Tourism is gaining momentum across the globe owing to growing assets of tourism. Festivals, events and cultural tourism is a marketing mix and economic phenomenon, that creates innovative tourist avenues for developing nations. In India, Assam tourism policy banks upon the festivals and cultural heritage of the state as tourism product promotion. The deviation is from simple celebration to commercialization. In this context this study is a research on festivals that showcase culture in art, dance forms, traditional handlooms and handicrafts, jewellery, etc that is hypothesized to impact on creation of tourism.

Method: The centre of the study is the touristic and commercial hub of Guwahati city, a major destination for all North East States in India and gateway to South East Asian countries that forms India’s Look East Policy. Guwahati holds several cultural festivals that attracts tourists. Therefore the primary database study have selected tourists to understand their perception of sustainability and the issues that interest them to visit a particular cultural festival at repeated intervals and those that fail to create such an interest. Convenience sampling is used to distribute the structured questionnaires to tourists. The questionnaire comprising of both open and close ended questions is developed specifically to gather information regarding knowledge of sites, accessibility, location, transportation, traditions, gastronomy, publicity, expectations and motivations of such visits. The study is expected to reveal inspiring factors and deterrents of tourist attendance. The research will create value addition that is expected to innovate in products, processes and marketing associated with festivals that can raise intellectual capital of community members.

**“Maternity Capital Program” in Russia and Its Outcomes: Gender Perspective**

This paper (based on the collective project) examines the implementation of the Maternal Capital Program (MCP) in Russia (2006 - 2016). MCP - the most prominent feature of Russian family policy in recent years - is the monetary benefit aimed at support of the family with two and more children. It is targeted basically on mothers and has to be spent on purposes predefined by the policymakers. MCP is gendered and has gender consequences. We show that instead of promoting work-family balance for working mothers and gender equality, MCP is primarily aimed at encouraging the traditional role of the woman as the mother.
and the main subject of care. Interestingly enough such policy takes place in the context of economic growth in Russia. The empirical data are the documents of MCP and 36 interviews with mothers who are eligible for MCP. The questions are: how the social policies are perceived by families, how MCP is used. The researchers control biographic situations as household structure, material conditions, housing situation, health status of children and parents, education and employment of parents, support from the older generation, availability of childcare institutions. The analysis is based on the feminist approach aiming to investigate if the political measures empower women and help to achieve gender equality. The structure of the paper is as following: The first part presents the discourse analysis of MCP. The second part focuses on the practices of implementation of MCP. In the third part, a broader perspective is reconstructed on the basis of interview data which represents the citizens’ attitude towards the conducted social policy and its gender consequences.

“Building a-Where-Ness: Housing Access Strategies of Internationally Protected Individuals”

“Building a-where-ness: housing access strategies of internationally protected individuals”

Alongside citizenship there is an increasing number of legal statuses that are temporarily limited among which refugees, asylum seekers and internationally protected individuals. These categories share the same territoriality with citizens, although they have limited rights. Most importantly, they have different access possibilities to such rights.

Despite the creation of a common European asylum system, issues regarding reception and integration of refugees and internationally protected people are still heavily relying on nation state decisions and their policies. This happens within a context of restructuring of welfare and decentralization of competences from the central level to regional and local levels that addresses not only the territorial dimension of policies but also the actors involved in their implementation, leading to a subsidiarization of social policies (Kazepov, 2010).

Temporary protected individuals are caught in a mechanism of bureaucratic and juridical obstacles that displays itself as multi-layered according to different territorial levels: interestingly the fact that the rights of these categories are anchored at the national and even the supra-national level (EU Regulations, Conventions) does not necessarily imply a correspondence at the local level.

Through the findings of a multi-stited research in two local societies in Europe, Turin (Italy) and Berlin (Germany), this contribution means to offer an insight on how boundaries are produced within both cities, and what practices are enacted by internationally protected people in the process of access to housing policies. It is going to point out how the interplay of normative settings on different scales hinders the access of internationally protected people to public services at the local level.

BORVORNOMPONG, PAIRUCH* (Sirnakharinwiro University, deepairuch@yahoo.com)
“Vanz” Phenomenon

Vanz behavior or behavior of male teenagers who like to increase speed of their illegally modified motorcycles in order to make a loud noise “Vanz” and illegally race on public roads at night is a social phenomenon in Thailand. This phenomenon is an attenuation of human rights, social order and laws because it interrupts and harms to other people and property.

This problem is seriously being solved by law enforcement; however, it cannot be solved by law enforcement only because it is social pathology which needs an understanding of problem system, cause and social impact.

The research result suggests that Vanz is a social combination of teenagers to form their social identity and social space. This behavior can reflect myth or false consciousness of teenagers by creating social recognition and identity, for example, trying to be outstanding person in order to get female teenagers’ attention, without paying taking responsibility to society.

While the above problem is continuing, Vanz gangs have their own self concept that their behavior is not a problem or an inflection. Moreover, there are several kinds of Vanz behavior, such as showing illegally modified motorcycles, riding for social combination, illegally racing for attention and racing for betting. Therefore, an overall understanding of this phenomenon is needed in order to know and categorize teenagers into problem group and risk group. Also, the problem is multi-faceted which cannot be solved by only one solution.

Therefore, the problem should be clearly understood and target groups of problem solving should be clearly categorized. Guidelines to solve the problem should be various strategies which are designed by participation of concerned organizations and their awareness. Traffic regulations must be strict and be the same standard. The concerned organizations should collaborate to prevent, support, enhance and suppress the problem.

BOSCHKEN, HERMAN L.* (San Jose State University, herman.boschken@sjsu.edu)
Scale, The Silo Effect and Intergovernmental Cooperation:
Institutional Analysis Of Global-City Development and Ecological Sustainability

American global cities include only 25 percent of the U.S. urban population, but are at the nexus of U.S. and world economies and culture. While recognized as compelling world stages and mighty seats of power, they also contain the ingredients of a “full-spectrum problem” for public policymaking. They exist in huge scale, overwhelming complexity, and in paradox regarding globalization’s forces behind urban development and the limits of ecological carrying capacity. Furthermore, their urban governmental jurisdictions are often mismatched with the problem’s central elements, and policy outcomes frequently reflect difficulty achieving cooperative intergovernmental behavior. This paper examines the ability of multinucleated urban government in dealing effectively with issues of scale, complexity and paradox, and to identify criteria necessary to improve policymaking for global cities.

As previous research suggests (Boschken, 2013, 2008), global cities are a special case in the American urban experience. Due to the skewed configuration and momentum imparted by contemporary globalization, they have evolved along a different path than America’s other metropolitan areas. This path is characterized by their centrality in a corporate global economy and by the enrichment of other conditions regarding political culture, lifestyle and consumption. But, most importantly, American global cities have enormous footprints extending beyond their regional confines, enabling globalization’s developmental requisites to influence a nation’s entire socioeconomic and ecological condition.

Although atypical in these respects, global cities are similar to other cities in their polycentric governmental structure, consisting of general-function city and county governments, special districts, and regional planning, development and regulatory agencies. Although superior to a unitary bureaucracy in dealing with complexity and systemic interdependencies, multinucleated government nevertheless raises concerns about collaborative, integrated, evidence-based policymaking. This paper examines intergovernmental impediments to collective policymaking and poses structural-design reforms that could improve policy response to the problems of scale, complexity and the sustainability paradox.

BOSHOFF, NELIUS* (Stellenbosch University, scb@sun.ac.za)
Mapping the Categories and Overlapping Roles of Publics/Stakeholders in University Research in Nigeria and South Africa

University researchers are increasingly faced with the challenge of multiple demands from both the publics and stakeholders of their research, and often these two groupings overlap. Publics are interpreted as the receivers of a research message, i.e. the target audience or intended beneficiaries. Publics are not necessarily passive receivers because they may also be involved in the production, tailoring, communication and transfer of the research message as well as in the actual research that generated the data/information for the message. Publics are also stakeholders to the extent that they may have a direct stake in the creation, dissemination or uptake of the message, and/or in the creation of the research behind the message. The aim of the current study is to map the different categories of publics/stakeholders in Nigerian and South African research published between 2010 and 2012, and to demonstrate their overlapping roles. The first focus of the paper is a bibliometric analysis of research articles by universities in the two countries, extracted from the Web of Science, and highlighting the role of funders and collaborators in the research. The second focus is more specific, as it investigates the co-occurrences of publics/stakeholders at different stages of research (creation, transmission and uptake) and how these relate to other factors of research production, such as research field and the nature of the research (curiosity-driven research; research addressing grand challenges; and research contributing to economic growth, job creation and innovation). The methodology for the second focus involves an electronic survey of the corresponding authors of the published research articles.

Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The importance of documenting data on the inclusion and participation of women and girls in a society's science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa's reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender machinery has been put into place and operates in all the realms of government. A lack of funding, human resources' constraints and insufficient co-ordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematic subjects at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women's participa- tion in the STI system in South Africa. South Africa has an aging, predominantly white male, scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country.

BOSISIO, ROBERTA* (University of Turin, roberta.bosisio@unito.it)

Different, Marginal or Discriminated? Representation of the Family and Practices of Parental Responsibility in the Opinion of Same-Sex Parents and Their Children

In the variety of family configurations that characterizes contemporary pluralistic societies, homo-parental families stand out as a “social laboratory”, as they are confronted with new, complex psychological and social problems. Moreover, in Italy they construct parenting in a condition of anomie, owing to the lack of social and legal institutionalization.

In the paper, after giving an overview on the orientations expressed by sociological and legal culture on the concept of parental responsibility, we present some findings from a pilot study conducted with Italian same-sex parents and children born or grown up in homoparental families. The aim was to investigate parents’ and children’s social representations of their family and practices of parental responsibility. Adults and children were in depth interviewed and involved in focus groups. More specifically, we interviewed 4 couples of gay fathers and 6 couples of lesbian mothers, we involved 7 children – aged 9-12 – in two focus groups and finally we individually interviewed 2 girls over 18.

Adults and children were asked to talk about their daily life in order to identify the practices of parenting and the representations with regard to the dynamics governing the roles and practices of different parental figures. We detected norms, values, upbringing style, child care, and disciplinary practices, and their experience with respect to agencies of socialization, especially school.

Opinions and Representations of Rights in Children with Visual Impairment. Findings from a Research Conducted in Italy

Young disabled people are subjected to a dual risk of social marginalization because of their age and disability. This risk is closely related to the conception we have of children and of disability. Current approach in childhood and disability studies considers children and disabled people as active members of society, subjects with rights, capable to express their opinions, identify their needs and abilities to develop transnational and sustained environmental activism. We discuss the role of (dis)trust (institutional vs. family-based trust), political culture and historical legacies to analyze these remarkably different conditions for resource mobilization.

The Economic Impact of Cultural Events: Girona’s Flower Festival "Girona Temps De Flors"

Cultural events have taken on a growing role in territorial and tourist marketing of cities and destinations. In addition to its role in stimulating creativity, showing
the cultural heritage to the visitors or even being a learning tool, a cultural event can serve as a stimulus for local economic activity because as an attraction draws visitors who spend in a community.

At the same time, economic impact analysis is a frequently discussed topic in academic papers and journals to assess the relevance of the culture in the local economies. In many cases, positive economic effects described in these publications are used to justify a further development of tourism and cultural events.

The data presented here demonstrates the direct economic impact of the culture activities, such as organization expenditures and the wider economic benefits for the local tourism stakeholders. This thesis takes a deep approach and estimates the economic effects of one specific event: Girona Temps de Flors, by obtaining the data throughout a questionnaire used to assess the spending behavior of the visitors and its consumer profile during two editions; 2012 and 2013.

The economic impact model used was the input-output one, using the methodology provided by two impact studies in two stages: first, through estimated spending generated by the event’s cultural tourism; and second, by calculating the overall economic impact. Not only the common methodology was used, but also some innovations have been introduced as for example the way how the mobile population was calculated, making comparisons in between two different editions and evaluating the economic sustainability of the event.

How the Mundane Challenges the Neoliberal Death of Public Space: The Unexpectedly Complex Social Lives of Los Angeles Private-Open Spaces

In recent decades, Los Angeles has been a poster child for the neoliberal management of public spaces, choosing privatization, surveillance and uniform design over locally oriented, spontaneous and inclusionary practices. It is believed that this has decreased the number of public spaces in the city, but it has also reduced their quality by limiting access to certain well-behaved socio-economic groups and their activities. When looking back at their history, public spaces have been tools for expressing power in the city and as such, they have been marked by day-to-day negotiations for their representation and appropriation. This suggests that public spaces have never been totally opened, and that their social dimension is an important part of what defines them, in addition to their design and management. Recent research into five public spaces in Downtown L.A. studied mundane sociability through the observation of users, their interactions, and their strategies to control the space within formal surveillance. The results revealed that everyday use by a variety of visitors weaves a complex and dynamic fabric that defines each space. This paper focuses on two privately-owned-publicly-opened spaces, namely Grand Hope Park and the California Plaza, to show how their daily social lives are dynamic and differ one from another. Their social fabrics unfold at dissimilar rhythms, and present a set of unique informal rules negotiated within what resembles a similar context of formal surveillance. This research challenges the claim of the recent death of public space but also the more recent affirmations regarding a re-appropriation of public space. Daily dynamic uses and interactions have continued to contribute to the development of a complex identity that is unique to each space and that calls for an end to the oversimplification of the definition of “dead” or “lively”, “private” or “public” public spaces.

Montée Des « Risques Psychosociaux » Et Redéploiement De La Critique Du Travail : Opportunité Ou Piège ?

C’est dans une conjoncture d’aflaissement et de professionnalisation des syndicats que s’élargissent les formes de l’exploitation, qui se traduisent par des atteintes plus fréquentes à la santé mentale des travailleurs. Ces atteintes sont désormais catégorisées comme « Risques Psychosociaux ». Cette notion l’a emporté sur la « souffrance », ou le « stress » - parce que les professionnels de la santé au travail et de sa négociation collective ont réussi à l’intégrer dans la problématique pré-existante des « risques professionnels ».

La montée en puissance de cette catégorie est à la fois une opportunité et un piège. Elle ouvre la possibilité d’interroger les facteurs collectifs de risque, à la source des effets psychologiques et individualisés des salariés. Mais elle peut refermer le débat sur les sources organisationnelles de ces difficultés en mettant l’accent sur la nécessité de « protéger » de ces risques les travailleurs vus comme opérateurs passifs, confrontés à un environnement hostile. Et donc d’ouvrir la voie à un nouvel hygiénisme. L’opportunité offerte de mettre en place des espaces collectifs de controverse sur les enjeux d’organisation, de quelle sorte d’efficacité de l’activité n’est pas saisie. Les « RPS » fonctionnent alors comme un piège, tenant éloignés syndicalistes et représentants du personnel des salariés et de leur expertise que ces derniers détiennent sur le travail et les sources organisationnelles de leurs difficultés.

There are only few, if any, studies of inequality in the long run even though it is widely acknowledged that intergenerational mobility fluctuates a lot. At the same time, few studies explore the way different kinds of capital are transmitted between generations. We take advantage of a large genealogical sample (we have detailed data on wealth at death, education, occupation, and mortality for fathers and their children over a century and half) to study the transmission of different form of assets in France in the long run. The period under study is characterized by major changes of industrialization, expansion of wage labor, self-growing professional women—as well as by economic and political shocks. All these changes have deep and lasting effects on wealth structure, on the return of various kinds of wealth and portfolios, and on the relative importance of different types of capital.

We will address the question of the effect on individuals of a given generation of receiving capital from the previous generation. First, we will consider the transmission of material wealth, studying those who get any wealth versus those who get nothing before looking at the amount of inherited wealth. Second, we will take into account the composition of the inherited wealth (real estate, financial assets or working material for instance). In particular, we aim at differentiating the effect of transmission as a whole—or transmission of any type of wealth—from the transmission of particular goods (for instance any kind of land versus the one the individual has worked on with his father since his youth). Third, we will consider non-material inheritance—mainly education and occupation—and its interactions with wealth. We will investigate if other types of capital compensate the absence, or the scarcity, of wealth or if, conversely, inequalities are cumulative.

The Environmental Health Impacts of Technologies, a New Way to Contest Science?

The rapid development of technologies, such as biotechnologies, nanotechnologies and radiofrequencies (namely mobile phones, Wifi, relay masts, etc.) available on the market coupled with the insufficient risk assessment of their potential negative impacts on health result in a growing public concern and distrust in the general benefits of science and technology. Uncertainties and scientific controversies related to the consequences on human health and biodiversity of these emerging environmental and bio-physical hazards (such as the presence of GMOs and nanomaterials in food or manufactured products or the increase in electromagnetic fields) are rising. They question scientific “technocratic” expertise and more largely the gap between science and society. Various groups (NGOs) contest the use of these technologies and traditional risk governance. They demand a better transparency in the decision-making process as to technological choices and a more democratic governance of public policies in the field of environmental health. Several participatory initiatives of upstream engagement of these NGOs have been conducted such as public debates, dialogues committees, etc. to try to regain trust in the institutions and in the process of health risk assessment. This communication will present and analyze the processes set up within the French Agency for Food, Environmental and Occupational Health & Safety to foster dialogue with civil society in this field.

BOURQUI, RÉGINE* (Université Dauphine, Regine.Bourquais@anses.fr)

The Mobilization of Collective Actors Around the Stake of Environmental Health

Various sanitary crises (such as asbestos, contaminated blood, madcow disease, BSE, etc.), industrial accidents (Chernobyl, Seveso, Bhopal, etc.) and the rapid development of new technologies (biotechnologies, nanotechnologies, electromagnetic fields...) induced a growing public concern on the links between environment and health. This global environmental and biophysical change resulting from the transboundary proliferation of pollutants and the subsequent contamination of air, soils, water or food with disseminated toxic substances is suspected to cause a significant increase in the prevalence of environmental diseases: such as cancers, neurodegenerative and cardiovascular diseases, allergies, endocrine disruption, loss of fertility, obesity, antibiotic resistance, etc. Individual and collective action around these issues are growing in France to promote public awareness and debate on environmental health issues. Through the recent creation of a number of dedicated NGOs (doctors, women, students) and the reconfiguration of traditional movements (environmentalists, consumers, patients, families) by

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
setting up a network, these actors endeavour to influence policy-makers and gain the attention of the public. The case study of this emerging social movement for the sake of environmental health will focus on the strategies of these new actors, their interactions, and the new repertoires of action they develop, showing their social and technical innovative capacities, to resist a model of society with endangers human's health.

Statistical Representations and Stereotypes of Youth Labour Market Participation. Insights from Australia

Statistical data can have important explanatory power, and with the rise of ‘evidence-based’ policy such forms of knowledge have become more influential. As Boehm and her co-authors (2012:216) observe: ‘Knowledge generation is not neutral, but it is influenced by social and political relationships that enact and generate knowledge’. Using youth labour market data as a case study, this paper will explore how statistical categories create and reinforce normative understandings of life stages, in this case, the period between 15-24 years of age. For example, the Australian Bureau of Statistics uses the category ‘fully engaged’ to describe those who are in ‘full-time employment, full-time education or training at or above Certificate III, both part-time employment and part-time education/training, or both full-time employment and full-time/training’. The number of people in this group is subtracted from the population of young people within certain age groupings – such as 15-24 or 18-24 – to calculate those who are ‘not fully engaged’. In government and other reports, this group is often referred to as ‘disengaged’ or ‘inactive’. In everyday usage, these terms have negative connotations. This paper will examine how the use of statistical categories such as ‘fully engaged’, ‘disengaged’ and ‘inactive’ in policy discourse in Australia - and elsewhere - reinforces negative stereotypes about young people and obscures the processes that shape young people's lives.

The New Organising Model in Political Advocacy; Australia's Experience

This paper considers some initial findings from a qualitative study examining the ways in which the new, techno-social organisng model in progressive advocacy groups has changed the nature of political participation in Australia. Specifically, the paper draws on the findings of an ongoing participatory case study of GetUp – a campaigning organisation which describes itself as ‘...an independent, grass-roots community advocacy organisation which aims to build a more progressive Australia by giving everyday Australians the opportunity to get involved’. GetUp was established in 2013 and by 2014 had grown to a membership of 60,000. In 2015, GetUp launched a new membership engagement model aimed at attracting and retaining new members, and building a more engaged and active community. This paper will draw on data collected through interviews with GetUp members and with elite professional campaigners, and through analysis of membership survey responses. Early findings suggest that members are drawn to GetUp because they do not feel that their voices are ‘heard’ by their political representatives or by mainstream political processes. GetUp appears to address this by offering a sense of community and shared values. Furthermore, this paper will examine how this model of community and shared values is translated into action, and what implications this has for the future of progressive advocacy organisations.

“Victims” and “Survivors” of Crime: The Effects of Labeling Unwanted Sexual Experiences on Mental Health

Despite a high level of general interest in stigmatized identities, sociologists have given little attention to victimization as a stigmatized identity. How adoption of this identity influences one’s self-sentiments, behaviors, and mental health has become increasingly important. This paper extends previous analyses of Asian capitalisms by giving everyday Australians the opportunity to get involved in the rainforestation site. Working in the village forests is more compatible with the environmental objectives of the project. This project promotes an alternative model of natural resource management that respects the needs of the local community while providing economic benefits.

The Gender Dimension in Mitigating Climate Change in Mt. Malindang Rainforestation Project {Phase III}, Southern Philippines

The socioeconomic dimension for Phase III of the Rainforestation Project was carried out on April 20-24, 2012 employing survey, key informant interviews, observation, and secondary data. This phase focused on the local community's role in the Mt. Malindang Range Natural Park in Oroqueta, Southern Philippines. This phase followed up on the employment and income effects and looked into improvements in the living condition, access to social services, attitudinal changes pertaining to the environment, and the role of IP women in the rainforestation project. It also investigated the social articulation effects to the beneficiary communities in two core and three buffer zones.

The establishment of village forests, vermiculture, goat raising, and the plant of indigenous species of trees on steep slopes and around old-growth forests to protect biodiversity are climate change adaptation projects that have helped to mitigate the pressure off the forest. Poverty reduction through food security and livelihood security of the people living in the communities increases climate change adaptation and makes people more resilient to disasters.

Findings of the study show strong women involvement in the nursery and in the rainforestation site. Working in the nursery is more compatible with the performance of the Subanen women's role in child rearing and doing household chores. Of the five team leaders in the project, two are women team leaders indicating the project management's thrust in women's capability to nurture the environment.

Cosmopolitanism has been mooted as a possible transcendence to the supposed divides of multicultural theorizing by some authors (Beck, 2007; Held, 2010). Others have argued that its Western origins and bias limits its usefulness as universalizing theory to promote global solidarity (Pensky, 2007), while in contrast some have suggested that it is best complemented by a creation of solidarity “from below” (Kurasawa, 2004) or by focus on “everyday” forms of non-elite cosmopolitanism (Nava, 2002).

In this paper, I focus on criticisms of a free-floating cosmopolitanism, emphasizing an anthropology of the everyday worldliness viewed as a political project. In other words, the elite form of cosmopolitanism’s chief weakness can be traced to its lack of a rootedness in the political struggles of working people in the face of economic and social injustice. These cannot be remade simply by foci of liberal multiculturalism’s tolerance and recognition but potentially only in a more radical projection of conviviality with otherwise that recognizes the other in oneself (Hage, 2012). This involves a conundrum that the newcomer “other” is already part of the community, not separate. Therefore the question is not of creating identifications that surpass nations or borders, but ones which facilitate understandings of the self in communities replete with multicultural differences of post-national migrant societies.

How to generalize such understanding across contexts is a key problem. One avenue suggested is that the construction of identities compatible with global and transnational phenomena (as opposed to substantive and more national-orientated identities) promotes the type of relationality conducive to acceptance of global humanism (Pries, 2013).

However, another problem ensues as transnational imagined communities can also harbor anti-Heinrichist attitudes and tendencies as illustrated both by exclusive conclaves (the super rich international elite, typified by Davos) or reactionary anti-immigrant populists, unified as political parties or in online groups.

Japanese Higher Education’s Fragility: Bureaucracy and Risk’s Dialectic

The scope of risks facing Japanese higher education institutions stems from both local conditions and global developments. Among the local factors are the steady decline of the 18-year-old population, difficulties in establishing nationally standardized programs to attract more foreign students, government disinclination to increase funding due to high deficits, strong linkages with vocational orientations and post-graduate employment guarantees, and underdeveloped graduate school education. Other more global risks include the growth in online education, for example MOOCs, administrative overload as a result of expanding academic and non-academic functions of universities, and challenges resulting from the triemma (Kariya, 2011) of costs, equality of opportunity, and quality assurance.

Strong central bureaucratic management by the Ministry of Education (MEXT) is a notable feature of Japanese higher education in the form of shido (guidance), so that, for example, universities must follow stringent guidelines to implement new programs and create new departments. In addition to this layer of administrative control from outside and above, many universities rotate management and control, which means that the person diagnosed and their partner/carer embark on a quest to minimize suffering, know the future and maintain independence. Interviews and focus groups are used to gather empirical data on these perspectives. Grounded Theory is then used to examine how each person constructs meaning within interrelated elements of biology, mind, self, symbolic interaction, society and social change.

The purpose of this study is to construct an interpretive schema that describes person-environment and social interactions. A pilot study has been completed and informs a larger study, which is due to commence in October 2013 and will be reported on at the Congress. This research forms part of a doctoral thesis that aims to add to knowledge on living with this chronic illness.

Understanding the Meaning of Living with Parkinson’s Disease in an Australian Community Setting from the Perspectives of the Person Diagnosed and Their Partner/Carer

Parkinson’s disease (PD) is classified as a neurodegenerative disorder characterized by non-motor and motor symptoms, which can include sleep disturbance, disordered alertness, cognitive impairment, as well as tremor, muscle rigidity and body slowness. Observable motor symptoms lead to a diagnosis; the majority of people diagnosed are over 65 years of age; and no two cases are considered to be the same. The cause and pathogenesis of PD is unknown and current medical treatments can only provide the person with temporary symptomatic relief.

In 2011 it was estimated that over 64,000 Australians were living with PD; this population is expected to grow at 4% p.a. over the next 20 years; and there is a lack of community awareness of PD. A literature review to date has found there are no sociological and qualitative studies that report on the social dimension of people who are ageing and living with PD in an Australian community setting.

Enmeshed with senescence, embodied PD is made knowable in the context of a disease-specific health care framework. Within their life course the person diagnosed and their partner/carer embark on a quest to minimize suffering, know the future and maintain independence. Interviews and focus groups are used to gather empirical data on these perspectives. Grounded Theory is then used to examine how each person constructs meaning within interrelated elements of biology, mind, self, symbolic interaction, society and social change.

The purpose of this study is to construct an interpretive schema that describes person-environment and social interactions. A pilot study has been completed and informs a larger study, which is due to commence in October 2013 and will be reported on at the Congress. This research forms part of a doctoral thesis that aims to add to knowledge on living with this chronic illness.

**Assessing the Impact of Social Network Sites’ Usage on Bonding and Bonding Social Capital**

When a computer network connects people, it can be referred to as a social network. Close relationships and social support are defined as social capital (SC) and are of prime interest for many sociology scholars. The recent widespread use of Social Network Sites (SNSs) may have SC implications. The concept of ‘virtual social capital’ suggests that there are off-line advantages that virtual community participants stand to gain from their online contacts. Putnam’s (2000) concepts of bridging and bonding SC provide a framework for measuring the outcomes of SNSs use: Bonding SC is exclusive and occurs when intimate friends and family members extend emotional support, whereas bridging SC is inclusive and occurs when individuals from different backgrounds make connections through social networks. SNSs use can vary in terms of number of sites and levels of intensity. Hargittai & Hsieh’s (2010) typology, which considers the number of different such sites respondents use and intensity of use, was applied in the current study. The objectives of the study were to investigate how users’ social practices on SNSs differ from offline social practices and whether different levels of online engagement have an effect on the quality and quantity of offline bridging and bonding SC. Analysis of a web-based survey completed by a diverse group of 127 adults (47 men and 80 women; ages 22-61) found that those who reported frequent use of several SNSs benefited the most in terms of bridging and bonding SC quantity. However, findings also indicated that male participants tended to benefit the most from using SNSs, due to the fact that a large portion of their online contacts involved people with whom they also had face to face relationships, which thus contributed to bonding SC. Limitations and implications of the study are discussed.

**Developing a Risk Inventory for the German K.I.D. 0-3 National Prevalence Study of Psychosocial Burdens in Early Childhood**

Early exposure to psychosocial burdens in families with young children has been identified in the psychological child development literature as an important predictor of children’s later development and a potential risk factor for child neglect and abuse. Its relevance, however, goes beyond the bounds of any particular discipline, not least because the concept is deeply embedded in the prevailing social and policy contexts of any given society. A federal action plan of ‘early intervention’ aimed at children from birth to 36 months of age has been in place in Germany for several years now and ongoing research activities are directed at improving both access to and help for parents in need of support. Nevertheless, it is believed that rather unreliable estimates exist of the prevalence of psychosocial burdens among the group explicitly and exclusively targeted by such initiatives: parents with children in the relevant age bracket. In order to improve the data basis for the federal action plan, a large-scale national prevalence study has been proposed for 2014. Two large pilot studies (n=1,500 and n>10,000), testing the application of a bespoke risk inventory in two different survey types, are under way as of late 2013. This presentation will introduce the conceptual development of said surveys and risk inventory, disseminate early results and reflect on the potential of the planned national prevalence study for improving service planning and risk screening at the local level and subsequently better aiming of early intervention services.

**Multi-Sited Approaches in Analysing Gender Constructions in the Migration Process: Based on the Example of Migration Between Cuba and Germany**

How to research the social construction of gender in transcultural research settings? The study of gender in transcultural research settings implies newly arising methodological challenges for interpretative research. In this paper I will present a biographical case study of Cuban migrants in Germany and their transnational ties to their family of origin conducted from 2006 to 2013, which indicates how gender identities and constructions are reworked and reformed during the migration process. Especially the transnational and translocal negotiation of gender and familial roles can be observed. Women of female headed families in Cuba for instance have to adapt to the nuclear family expectations in Germany while simultaneously continuously supporting their family of origin and performing the role of the main breadwinner in Cuba. Also the appropriation of external ethnic- and gender categorizations and ascriptions of a Cuban or “Latino” man in the host society Germany can be observed in another case. Hence, the study of the changing or persisting gender categories in transnational migration reveals the need for a multi-sited approach, researching the social construction of gender in the sending and in the receiving society and the mutual influences and exchanges between these two. Thus, in my paper I make a plea for a multi-sited perspective in the reconstructive analysis of biographical interviews focusing on both societal and cultural contexts, in which gender constructions are produced.

**The English Defense League and the Bloc Identitaire: Reflection on the Influence of State Policies in the Discourse of Extremist Street Movements and Their Future in England and in France**

The last decade has marked a significant change in the British political attitudes: along with the electoral breakthrough of right-wing extremist/populist parties such as the British National Party or the United Kingdom Independence Party, there has been a reemergence of the street extremist movement phenomenon with the creation of the English defense league (EDL) in 2009. While historically the English civil culture was a strong opponent against extremist ideologies, the events of the 2000s such as September 11th, the July 2005 London bombings, the financial crisis, the 2011 London riots and the rise of extremism/anti-immigration feelings in Europe have changed the mentalities. More recently, the scandal of Muslim grooming gangs and the murder of a British soldier in the street of Lon-don generated the largest rise in popular support in the EDL history. Focusing mainly in criticizing Islam, the EDL characterizes the neo-racist ideology by avoiding the old biological racist discourse and has black, gay, Sikh or Jewish members. Constantly using social media and defending the British values and the white working class, the EDL uses civilisationism to critic the Muslim culture and often refers to “white victimage” to warn against Islam. France also recently experienced a rise in its extremist group activity including the “Bloc Identitaire” which appears to be the most influent. Like the EDL it mainly targets Islam and describes Muslims as unintegrated subjects willing to take over the law and the original culture. Because both countries share different integration models but have al-
most the same demographics trends regarding their total population and Muslim population, it is very interesting to focus on how national policies on diversity, and especially Islam, influence extremist group discourses. Whether it focuses on the veil/burqa or construction of mosque, both states deal differently and undermine the way extremism reject multiculturalism.

BRAULT, JEAN-FRANÇOIS* (Paris 8 University, jfrbrault@live.fr)

Feminist Disagreements: The Post-Colonial Confrontation Between Femen and Muslim Women

Founded in 2008, Femen is a feminist Ukrainian protest group based in Kiev and in Paris, whose main political enemy is patriarchy. In their struggle for gender equality, Femen activists see religious institutions as a substantial tool of oppression against women; hence the current anticipleral position of the group. In Femen’s approach, nudity is the best means to break free from male dominance, and they deeply believe that being topless can be empowering. Femen’s mobilizations are always carried out in a spectacular way, in which they scream and shout provocative slogans that are also written on their naked bodies. In my paper, I will mainly focus on Femen slogans that are addressed to muslim – especially veiled – women, encouraging liberation from both religion and male domination: “muslim women, let’s get naked”, “nudity is freedom”, “bare breast against islamism”, “topless jihad”. Muslim women have answered Femen’s injunction to liberate through nudity by creating a series of networks, accompanied by virtual and physical mobilizations, in which muslim women from all over the world post photos featuring provocative slogans such as “Islam is my choice”, “nudity is not freedom”, “Femen stole our voice”, “there is more than one way to be free”. Indeed, one can clearly see how Femen’s mobilization has entailed a counter-mobilization led by muslim women, and under what circumstances the latter are questioning a hegemonic western idea of what a free body looks like. Far from being a current event, the current struggle between Femen and muslim women to define what “feminism is” and, by extension, what a free woman is, is not new. Rather, it alludes to a more deeply rooted antagonism that dates back to the colonial period.

Contrasting a Market-Led Tendency Towards Social and Functional Separation. Outcomes of a Comparative Research in Milan, Copenhagen and Hamburg

The redevelopment of inner city urban areas has been a main concern for European cities dealing with post-industrial restructuring in the last decades and large scale urban projects have been extensively and investigated by urban research. The raise of a complex interplay among different public and private actors as well as issues of social (in)justice have been analysed and discussed by critical research work with reference to the phases in which the projects and the master-plans have been conceived (see for example: Salet and Gualini, 2007; Fainstein, 2010).

While these large scale urban projects are now mostly implemented, it is worth investigating how spatial and social organization processes are developing in these new urban areas which tend to display a significant role in hosting a consistent number of inhabitants who “return to the city” in a phase of re-urbanisation. In this respect, driving research questions may be: under which conditions, and with which expectations, do people decide to settle in the central city? What sort of city-space has been produced? How and why are uses influencing urban qualities? Which are the elements that allow and support a mix of functions and social groups in the face of prevalent tendencies towards separation and segregation?

Along these questions, we have been analysing redevelopment projects that have been explicitly targeting a mix of different functions and social groups, openness and accessibility of open public spaces and when the ambiguity of new categories and uses has been challenging consolidated urban planning traditions and regulatory systems.

The paper presents the results of a comparative empirical research which has been developed in three European cities by an interdisciplinary research group (urban sociologists, urban planners, urban designers) investigating how newly produced urban spaces are functioning in three large redeveloped urban areas (Bicocca/Milan, Islands Brygge/Copenhagen, HafenCity/Hamburg).
The Marketization of Employment Services: Evidence from the UK, Germany, and Denmark

One trend across OECD countries since the late 1990s has been the marketization of employment services. Intense price-based competition is increasingly used to govern these services. Based on an in-depth three-country comparative project, this paper examines the extent and trajectory of marketization in Denmark, Germany, and the UK since the early 2000s. ART using these different welfare regimes is a result of various political, economic, and sociopolitical processes. The mechanisms of the welfare state regimes and the character of services. We draw on qualitative interviews with public-society purchasers of services and-for-profit and non-profit providers and a detailed analysis of publicly available statistics and documents.

Marketization has taken place in employment services in each country. However, the marketization trends and their effects vary across the three countries due to a wide range of labor market and welfare-state institutions. For example in the UK marketization of employment services seems to intensify since 2000, while in Denmark and Germany the effects are more moderate. However, the effects of marketization, especially on working conditions and the services delivered are taking other forms, making these effects more modest.

Articulating Sociology and Clinical Ethics in the Study of ART: The Example of Oocyte Cryopreservation in France

In France, bioethics laws strictly frame ART developments. Yet, medical research regularly challenges the adequacy of the law. In the case of oocyte cryopreservation, the 2011 bioethics law opened a door for the specific case of oocyte donation (donors – no longer required to have birthed children prior to gamete donation – have access to oocyte cryopreservation to preserve their own fertility); furthermore, the technique is also used for cancer patients, prior to infertility-inducing treatments. In December 2012, the French College of OBGYN stated that this technique should be made available to all women, arguing that the law is discriminatory. The underlying rationale is medical: this rising age average at which women have their first child is an important reproductive health problem.

One of the current challenges confronting bilingual education has to do with pupils’s reluctance to transfer their school-based L2 linguistic knowledge into their personal domain. Whilst it is clear that bilingualism in its multiple forms, can and does lead to successful outcomes (Baker 2006), the definition of success is often limited to the sociopolitical climate of the school, area or community and to the patterns of dominance relations between the two languages (Thomas and Roberts 2011). Nowadays, the successful bilingual education in Catalonia is complex. On one hand, knowledge of Catalan among young people has increased significantly. However, knowledge is not seen translated into an effective growth in the use of Catalan inside and outside the school. Some authors have attempted to explain this process by examining the transition from childhood to youth.

This paper investigates the change in language practices that take place during the transition from primary to secondary school. It focuses especially on: identifying the most relevant changes that are produced in the linguistic uses in three domains: home, school and peer-to-peer, and examining the influence of sociolinguistic environment in the transition and its sociolinguistic impact. The methodology for the study was based on a survey on language competence and use in Catalan and Castilian. The universe of the study is formed by 888 pupils aged between 11 and 13. The analysis of the results is a panel comparison of indicators. Results show that in the transition from primary to secondary school there is an increase in the use of Castilian in all domains, and Catalan among young people has increased significantly. However, knowledge is not seen translated into an effective growth in the use of Catalan inside and outside the school. Some authors have attempted to explain part of this process by examining the transition from childhood to youth.

Women's Health Trajectories: Between Self-Reliance and Organized Healthcare

A 2010 study conducted in Paris, France, revealed how women navigate within a highly organized – yet difficult to comprehend – healthcare system, both striving to transform public health messages into health-inducing acts, and relying on state-sponsored healthcare priorities specifically linked to gender (perinatal care, breast cancer screening).

The women interviewed strongly relied on themselves to create global health trajectories, and not simply healthcare trajectories, encompassing past family habits when they considered them useful to their health, but also discarding family histories of ill-treatment to save themselves through the consolidation of their health. Health trajectories thus appear as a vector of self-discovery and subjectivity.

However, health is also a relationship to healthcare professionals and health-care structures. This is the second key aspect of this study: women demand a personalized relationship with physicians, which goes beyond protocolized treatment schemes. As Pilnick and Dingwall (2011) have shown, though, women don’t challenge the asymmetrical nature of patient-physician interaction. The physician’s expert knowledge is sought and valued as such, but women concurrently ask that their profane, personal, body-anchored, knowledge of their health or ill-health be taken into account by their physicians.

We will thus show that women are forceful actors in the determination of their health patterns, relying on their own resources, while tapping into a highly sophisticated biomedical system into which they strive – on an individual level – to promote a more personalized patient-physician relationship attuned to the experiences of their own, singular, bodies.

Local Alliances and Metropolitan Planning Issues. How Do Local Elected Officials Negotiate Their Position?

This paper addresses what it means to be a mayor in a metropolitan planning context. Specifically, by looking at the implementation of a metropolitan urban plan concentrating on transit oriented developments, we wish to highlight the interactions at play between local mayors. While pursuing goals related to sustainable development such as increased residential densities, mixed-use development, greater use of public transport, and the preservation of rural land and natural areas, mayors in the North American context also seek growth in the municipalities they represent. Given the contradictions at work, how do local elected officials collaborate to take part in the development of a metropolitan scene including issues of environmental protection? By trying to differentiate their cities, mayors endorse planning innovations. Our goal here is to highlight the alliances and oppositions between local elected officials in order to better understand the sociopolitical processes at work at the metropolitan level by looking at the Mon-
treal Metropolitan Community, an entity that has adopted a metropolitan development plan in 2012. We also aim at providing a portrait of mayor's specific role in a context where major institutional reforms and increased citizen participation have forced new strategies of regional collaboration.

BREWER, ROSE* (University of Minnesota-Twin Cities, brewe001@umn.edu)

Decolonizing Knowledge(s) in 21st Century Political Struggles

The paper is a call for a deeper interrogation of how knowledge is produced and whose theory and practice are guide-posts for 21st century revolutionary change. In international knowledge production spaces such as the ISA, we need to put the issue of decolonizing on the table. Regarding political change, too often the same colonial assumptions are folded into social movements as the very knowledge systems that originally colonized. It is a call for traditionally marginalized voices to be heard, but also a call for interrogating the hierarchies reproduced in social movement spaces. What is clear regarding knowledge for whom, we must think more intersectionally, decentering the traditional ways of articulating social change. We must interrogate continued practices of hetero-patriarchy, colonialisms: neo, settler and internal, in the context of neoliberal global capitalism.

BREWER, ROSE* (University of Minnesota-Twin Cities, brewe001@umn.edu)

Interrogating Racism and Class in the Capitalist World System: Historical Formations and Contemporary Realities

Racism and other 'isms' are deeply embroiled in a global, technologically-driven capitalist world order where the weight and resources of the globe are held by a small elite of multinational firms and their comprador allies. These are historical formations with tentacles into the contemporary period. Moreover, there is an ideological structure of racial formations intertwined with global capital. At the core of this analysis is an articulation of how racism has engendered underdevelopment in peripheries of the world consistently since 1789 through core-dominated techniques of enrolling the periphery in the world capitalist system according to the interests of the core (Wallerstein 1974). This is a historic process. Extending this analysis contemporarily, this paper explores the changing social wage through destruction of social welfare, attacks on public education, the increasing incarceration and imprisonment of Black men (and women), and the structural consequences of wealth concentration in the hands of a tiny elite are part and parcel of the global politics of accumulation. Through austerity and uneven development the process unfolds internally within the U.S. Most recently this entails the bankruptcy and dismantling of an American city. A brief analysis of Detroit, Michigan is illustrative and examined in this paper.

BRIENCE, HENRI* (University of Saint Etienne, henri.brience@hotmail.fr)

Sélectionner, Attirer, Sacrifier : La Gestion Du Logement Et De L'espace Urbain à Detroit (Etats-Unis) Et Saint-Etienne (France)

Cette communication a pour objectif d'étudier l'impact des défis posés par les villes en déclin urbain sur le logement en tant que tel ainsi que le territoire urbain dans son ensemble dans deux shrinking cities (Detroit, Etats-Unis et Saint-Etienne, France). Cette comparaison permet de révéler des tendances et des stratégies différentes quant à la question du logement et la gestion du territoire municipal en crise.

A Detroit, le rétrécissement urbain (right sizing) est devenu l'une des priorités sous le mandat de Dave Bing à travers le plan à long terme baptisé Detroit Works Project. La crise sans précédent qui frappe la ville (le taux de vacance a bondi de 120% en 10 ans) n'oblige pas à déployer un plan massif de démolition et de requalification de l'espace urbain. La ville étant composée à 85% de maisons et la très faible densité urbaine ont conduit le pouvoir local à cibler les énigmes du pouvoir local restant persuadé que la ville a le potentiel pour retrouver une dynamique de croissance. Ville assez dense et en majorité composée d'immeubles, Saint-Etienne planifie de promouvoir la valorisation de quartiers championnés situé au cœur de la ville et axés autour d'une offre de logements et d'équipements culturels de haut standing. Néanmoins, l'inadéquation de l'offre avec les caractéristiques socio-économiques des habitants conduit aujourd'hui à un échec de la revitalisation urbaine.

The Shifting Terrain of Grassroots Mobilization and the Future of Education Reform in the United States

Public education has been a pillar of American society since the 19th century, but since the 1990s an education reform movement has promoted school competition and accountability metrics for students and teachers as critical to turning around the so-called "failing" American public school system. In practice, this education reform agenda has resulted in the proliferation of non-unionized charter schools, shuttering of urban public schools, and the narrowing of curricula in response to increased use of standardized tests. This paper is part of a broader project exploring grassroots resistance to this reform agenda.

To date, the education reform agenda has been driven by well-funded foundations that are displacing the political influence of traditional education actors (e.g., elected school boards, teachers' unions, and parent-teacher associations). As the results of the reform efforts become more concrete, however, a grassroots resistance effort of educators, parents, students, bloggers, and some elected officials has emerged to demand that well resourced, democratically governed schools remain a pillar of every American community. The future of education policy in the US will largely depend on how the balance of political influence shifts between the “reformers” and the growing grassroots resistance.

Drawing on data from fieldwork in Michigan, Illinois, and Wisconsin, where the grassroots resistance to the reform agenda has taken different forms and had different levels of success, this paper explores the factors that allow these grassroots efforts to successfully promote their vision of democratic public education. Specifically, the paper argues that four factors are critical: 1) shifting the "failing schools" narrative; 2) strengthening the relationships between union leadership, rank-and-file teachers, and the broader community; 3) finding a common frame that unifies the diverse demands of actors within the grassroots movement; and 4) building on the current social media presence while working to influence mainstream media.

BRIENCE, CASEY* (City University London, casey.brienza.1@city.ac.uk)

Born in Japan, Raised in America: Yuri and the Transnational Formation of a Genre of Lesbian Comics

In 2007, Wired magazine published an article by Jason Thompson about how Japanese comics called manga had "conquered America." In 2012, Takashi Murakami, in an interview for the Asahi Shimbum, disagreed with this assessment, arguing that manga is “only being accepted by a small group of fanatics” outside of Japan. Whether conceived of as a torrent or a trickle, however, both Murakami and Thompson assume that the movement of contemporary Japanese popular culture is unidirectional, something produced in Japan which then arrives, already fully constituted, onto a distant shore. My research complicates this model of transnational flow. In this paper, I show how the current usage in Japan of the genre term yuri, for lesbian manga, originates from a history of transnational co-option and theoretical underpinning of "racial Japan," and providing a concise account of the Japanese cultural policies in this vein. Then, drawing upon...
participant-observation and seventy in-depth, semi-structured interviews from informants in and around the American manga publishing industry, I discuss in detail what is actually involved in publishing Japanese comic books in the United States post-2007. Arguing that what they do is first and foremost to make manga American, I conclude by discussing the implications of these findings for the likely fortunes of "Cool Japan" and any other cultural policy premised upon exporting popular culture.

BRIGHENTI, ANDREA MUBI* (University of Trento, andrea.brighenti@unitn.it)

The Ambiguous Multiplicities. Crowds over, Across and within Individuals
Crowds are not mere collections of people but a veritable ‘state of the social’. But, how precisely to theorize crowd states? To tackle this question, I begin by reconceptualizing various ways in which, particularly at the end of the 19th century, crowds have been investigated, appraised and, ça va sans dire, feared. I seek to highlight which were the major political and ideological stakes of such attempts at apprehending crowds as social multiplicities. In particular, the Italian Positivist School (Lombroso, Sergi, Ferri, Sighele) and the French School of Criminal Anthropology (Lacassagne, Fourrial, Bernheim) are examined.

However, a similar exploration cannot content itself with cultural history, as it inherently triggers a deeper examination of some fundamental puzzles in social epistemology. In a sense, I propose to reverse the question about crowds and other social multiplicities into the question of that is an individual and how can the boundaries of the individual be drawn. Association, I argue, can be regarded as process of territorialization which institutes the individual by drawing boundaries which are made of a wide array of counter-balancing forces. The very difference between objects and environments depends upon such territorial acts.

Notably, such transversal vectors which determine the stand-off point between the individual and the crowd can never be found in a state of equilibrium. Rather, they show a kind of meta-stability; in other words, they form a fluctuating threshold of visibility. The constitution of social collectives, I submit as a provisional conclusion, can be best appreciated through a layered model whereby the individual is integrally reconstructed as a region located somewhere inside these thriving states.

Latin American Social Movements: Research Agendas and Regional Constructions

Unlike the debate in United States and Europe, the study of social movements in Latin America has never had a well-defined field of study in the social sciences to enable systematic discussion on notions, categories and controversies. However, social movements have been treated in a transversal way within a wide range of topics, approaches, discussions and disciplines, which, in turn, allowed a rather comprehensive and plural perspective. This paper seeks, firstly, to contextualize the sociological production on social movements in Latin America. In particular, we focus on the particularities of Latin American societies; the social and political regional thought; the diversity of contexts of action and the spatial and historical orientations; the socio-political and ideological matrices; and, finally, the practices, imaginaries and transnational networks that allow the establishment of a common collective action and the generation of a global frame. In doing so, we discuss some research possibilities for the study of social movements in the Global South who are looking to construct regional research agendas that go beyond Western theories of social movements.

BRINK-DANAN, MARCY* (Hebrew University, Marcy.bd@mail.huji.ac.il)

If You’re Not Religious, for God’s sake SAY so! Agonism in Secularist Activism

When secularists talk about God, how does it sound? What do they hope to achieve? Grounded in fieldwork among British and American activists, this paper suggests that Anglo-American secularists talk to the pious to “constitute adversariness worthy of agonistic respect” (Connolly 2008) and not in search of consensus. I offer key ethnographic examples of agonistic interactions between secularists and their pious audiences, examining how ideas about language and communication – rather than ideas about God – drive discussions about faith, doubt and social cooperation.

New Atheism increasingly demands public recognition: The British Humanist Association’s 2011 census campaign cheekily encouraged Britons to tick “no religion”: “If you're not religious, for God’s sake say so!” Another campaign responded to Christian adverts threatening sinners with eternal damnation by posting a counter-message on UK busses: “There’s probably no God. Now stop worrying and live!” Protesters in Jesus costumes at the 2012 Reason Rally in Washington D.C. carried placards reading “Atheists do it better!” Comparing secularism in the UK and the US, Richard Dawkins opened the rally by critiquing the way we talk, not what we believe: “Don’t fall for the convention that we’re all too polite to talk about religion. Religion makes specific claims about the universe which need to be substantiated and need to be challenged and, if necessary, need to be ridiculed with contempt.”

Following Cannell’s call for more evidence-based studies of secularist practices (2010), my sociolinguistic and ethnographic analysis chronicles the polysemy (Taylor 2009) of the term “secularist,” recording its use and meaning among Anglo-American activists (atheists, humanists, brights, skeptics and universalists). Focusing on one small part of the project’s overall findings about communication across faith and non-faith groups, this paper presents ethnographic evidence pointing to the heavy value secularists place on agonism in public discussions about religion.

To Market We Go, but Where Are We Going? Investigating the Negotiation of Social Impact and Market Forces in Food Hubs

Food hubs, a new form of values based food aggregation enterprise, are often positioned by their advocates as a solution to the concurrent problems of the loss of family farms, an urgent need to develop a sustainable food system, and the perplexing problem of persisting food insecurity in the global north. Noting a "skyrocketing consumer demand" for local food, United States Secretary of Agriculture Tom Vilsack has identified food hubs as offering “critical” services to farmers, and stated that the success of food hubs "comes from ... sound business sense and a desire for social impact" (May 2013). However, goals of sound business sense and social impact are not known for their easy affinity. With this in mind, this paper asks: How do the goals of promoting environmental sustainability, and enhancing food security support or detract from the goal of supporting family sized farms within both the philosophy and praxis of food hubs? This paper also provides preliminary investigation into the variable role of market forces, and the necessity of developing a financially viable enterprise, in shaping the political goals, policies, and practices of food hubs. Towards this end I will present preliminary research that draws from interviews with national food hub experts and leadership, and case study research with leadership and participating farmers of two food hubs. Findings will highlight the specific ways in which goals of social impacts (environmental, economic, social) are both achieved and inhibited when implemented in a market based programmatic context. I will conclude by suggesting needed next steps in food hub (e.g. values based supply chain) research.

Circulation of Social Sciences Between the West and Asia: A Contemporary Assessment

The paper aims to introduce some of the findings of the Interco-SSH survey on the international circulation of Social and Human Sciences (a European Union project under the supervision of Gisèle Sapir – EHESS Paris). Albeit this survey

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
has primarily dealt with intra-European knowledge exchanges, an additional grant has allowed to broaden the focus and to take Asian-European relations into account (mostly from Japanese, Chinese and Korean case-studies). Two sets of empirical/theoretical questions will be tackled. The first one deals with the patterns of intellectual and scholarly exchanges: taking an historical approach, the paper analyzes both what authors, theories, books or concepts have been circulating between Asia and Europe, as well as what kind of students/scholars migrations have taken place. Given the asymmetrical nature of the scientific relations between the West and Asia in the recent decades, the paper’s primary focus is on the European authors and texts that have been translated into Asia and have impinged on the various scientific fields. Yet, in a second moment, the paper also deals with the consequences of the contemporary political and economic rise of Asia in terms of scientific shifts. This new balance of power has already resulted in the growing influence of Asian universities as well as in significant changes in terms of academic migration. What is needed for new theories and notions to emerge? What credit, in other words, should be given to counter-hegemonic attempts at creating social sciences in Asia that bypass their European origins? Due to the broadness of the scope, both in terms of historical approach and inter-national comparisons, the paper will engage with only a limited number of case studies, which accurately illustrates the main theoretical problems at stake.

Water Governance and Climate Change: Perspectives for Reduction of Urban Water Supply and Sanitation Vulnerability in Rio de Janeiro Metropolitan Area

This paper presents part of a collaborative research, which integrates Brazilian and French universities, in sustainable water management in urban areas. Our study is located within the interface of the so-called water resources management, that refers to the activities of use, conservation, protection and recuperation of crude waters, in quantity and quality, and water and sanitation services management (water supply, wastewater sewage, rainwater sewage). Thus, we start from the hypothesis that water governance in Rio de Janeiro metropolitan area faces two impasses: the preservation of water resources and the universalization of access to water and sanitation for all urban dwellers. Climate change adds a new challenge: adaptation and adaptive process in relation to water governance.

Even if there are still doubts about the incorporation of climate change scenarios into engineering projects for future water supply and sewage systems, due to uncertainties, this issue is becoming more and more important for planners. Different studies discuss the impacts of climate change in water supply systems and in sanitation systems shows that Rio de Janeiro Metropolitan Area systems present a series of social, environmental and institutional characteristics that render them particularly vulnerable to the impacts of climate variability and change. On this basis, this paper first aims to investigate policies that are being introduced, by River Basin’s Committees and by state and municipal agencies that are responsible for water resources and water services planning and governance, questioning if they are able to tackle climate change and to make urban water management more sustainable. This research is still in progress, utilizing, above all, resources of a qualitative nature: bibliographic reviews, elaboration of specific studies, conducting interviews and questionnaires among the key actors.

BRITON, DEE* (State University of New York, Dee.Britton@esc.edu)

Picturing Dark Tourism: Mostar

The words tourism and disaster seem to be intrinsically paradoxical, yet visits to sites of disaster and death have grown exponentially during the past four decades. Lennon and Foley note that “dark tourism” packages disaster into an economic product that provides interpretation of the event as well as potential economic value to the community. The community of Mostar, Herzegovina is a postmodern disaster tourism site. Once a symbol of Yugoslav multiculturalism, Mostar became a battleground in the Bosnian wars of the 1990s. Stari Most, a sixteenth-century bridge that was the largest single span masonry arch bridge in the world, crashed into the Neretva River on November 9, 1993 after being shelled by local Croatian forces. A collaboration of nations, NGOs, and transnational groups rebuilt the bridge; the Stari Most is again an iconic image of the city. Twenty years later, ‘Old Town’ is surrounded by former business districts that are filled with bombed buildings and signs warning of unexploded ordinance. These buildings add another element of the photographic Mostar tourist experience. This paper examines the construction and use of photographic image in the dark tourist experience.

Comparative and Global

The project on Comparing Climate Change Policy Networks (Compon) investigates the reasons for cross-societal variation in the direction of emissions levels of carbon dioxide since 1990. The project consists of research teams in 19 cases (countries or the region of Taiwan) plus a coordinating and integrating team that has been collecting data on this question since the project started in 2007. The teams use identical research methods to allow for the most precise empirical comparisons. Phase One consists of the content analysis of how the three major newspapers in a society cover and frame the issue of climate change. Phase Two consists of a network survey conducted with the representatives of (50 to 100) organizations in state and society engaged with the climate change mitigation issue. This paper and its associated case reports present findings from Phase One, the content analysis. The cross-case analysis shows that between 1997 and 2010 the average global intensity of coverage of climate change rose steadily, while average coverage of reports by the Intergovernmental Panel on Climate Change rose and fell episodically with the reports. The 17 individual cases varied around their global average trend line due to a number of factors. Focusing on the years 2007–8, the cases showed dramatic variation in how they framed climate change, for example whether as an economic, scientific or other type of problem, and also in their major stances on how to respond to climate change. Their response stances formed clusters that revealed the major fissures in global field of climate change discourse.

BROOKE, ELIZABETH* (Swinburne University, lbrooke@swin.edu.au)

Older Women’s Worklife Transitions: Competing Regimes

Background. Age discrimination legislation in Australia has proscribed compulsory retirement, additionally pension eligibility has been deferred to 67. Despite this legislation, embedded age-gender discourses interrelated with organisational processes continue to impede extended working live. Organisational discourses are classified along a dimension from the ideal of age-free and gender-free to expressed attributions. These discourses interacted with organisational policy dimensions ranging from age-gender inequality to active age-gender equality practices. The paper asks how these discourses interact through organisational equality practices and discrimination.

Methods. These data were collected in an Australian Research Council research project, Retiring Women (2010-13). Structured key informant interviews were undertaken with a purposefully selected sample of 95 stakeholders including HR directors, professional organisations and unions in three sectors: academia, state services and finance. Interviews were held with older women retirees in these sectors. Comparisons were undertaken between organisational perspectives and retirees’ reconstructions of their retirement transitions.

Findings. In the finance sector overt idealisation of gendered life course, passivity and unexpressed resistance by managers negotiating fractional trajectories coexisted with competing age-gender free discourses. In academia discourses privileged individualised late career flexibilities and normalised retirement transitions. State public sector discourses overtly supported age-graded workforce development, gendered caring responsibilities and inequitable age and gendered hierarchies despite diversity training.

Women retirees’ accounts reconstructed retirement decisions as voluntary. Working life limitations included work intensity, self-deﬁnitions of retirement age, declining career opportunities and impaired health. Organisational practices did not contest or rearrange age and gendered hierarchies and structurally underpinned age-inequality practices.

Conclusion: Competing discourses were identiﬁed, with passivity and unexpressed management resistance predominant, reproducing age- and gender-in-equality practices. Traditional age and gendered paths to exit were conﬁrmed despite emerging age-free discourse. Anti-discrimination government policy should identify and contest unexpressed latent discourses underlying organisational practices to structurally counter age and gender-inequality regimes.

BROWN, DAVID* (Law Faculty University of NSW, d.brown@unsw.edu.au)

Justice Reinvestment and Inequality in Criminal Justice

Justice Reinvestment is a relatively new concept which has gained political traction in a range of jurisdictions, particularly the USA, but also the UK, Australia and New Zealand. The basic aim is to redirect resources from imprisonment and reinvest them in high imprisonment neighbourhoods to build community infrastructure and programs that reduce crime and recidivism and to reduce imprisonment...
rates. The concept emerged out of progressivist think tanks and has since been taken up by a range of political actors including Republican state governors and leading figures in the Christian right in the USA. Its origins lie in an attempt to combat the extreme racial disparity in imprisonment rates, captured in the notion of ‘mass imprisonment’, where imprisonment is so widespread it disproportionately affects whole (usually racial) communities. Recent critiques from some of its leading proponents suggest that this aim of Justice Reinvestment to redress the effects of mass imprisonment has been lost in the emphasis on recidivism and post sentence supervision.

Using the example of over representation of Aboriginals in Australian prisons, this paper will explore the extent to which Justice Reinvestment as a concept and as a practice and program, is capable of redressing historical and contemporary inequalities and discrimination in criminal justice outcomes.

Exploring Chains of Trust and Mistrust Across Mental Health Services: Towards an Understanding of Virtuous and Vicious Circles of Trust within Organisations

Levels of trust bear decisively upon the nature of healthcare practice. Trust relations between professionals and patients, as well amongst professionals and managers, create certain dynamics which can be supportive or obstructive for ethical care provision. Existing research denotes the mutual influence of different trust relationships across healthcare organisations, although the interdependencies between these different relations have not been explored in significant depth. This paper begins to fill this gap through analysis of trust relations in the context of mental health services within the English National Health Service. Developing from an initial conceptual framework, qualitative data from interviews with service-users, professionals and managers involved with three services providing care for people experiencing psychosis are analysed. The analysis points to interwoven chains of trust-building or trust-eroding dynamics across the different relations: managerial-professional relations, inter-professional relations, and professional-user relations. Overarching policy frameworks were especially active in shaping experiences of management vulnerability and corresponding working demands at the local-organisational level, in turn influencing professional relations with other professionals and moreover with service-users. Changing dynamics within one form of relationship often relieved or intensified experiences of vulnerability and uncertainty amongst involved actors. These shifting vulnerabilities and uncertainties resulted in modified practices which impacted upon other relationships in terms of trust. Considerations of time and communication, as both necessary for, and products of, trust, were also vital to virtuous or vicious circular dynamics within trust relations within the organisations. The erosion of time, communication and therefore trust has important implications for ethical practice within mental healthcare contexts.

RC36-627.2

BROWN, CRAIG* (University of Sydney, craig.browne@sydney.edu.au)

Contemporary Replication and Second Order Abstractions

My paper proposes that contemporary forms of replication are increasingly conditioned by second order abstractions. The distinction between first and second order abstractions is initially analytical; because many of the same mechanisms are involved in the latter’s constitution. However, second order abstractions involve a peculiar kind of reflexivity or doubling. The mechanisms of abstraction are increasingly becoming the objects as well as the means of abstraction; for example, global trade in currencies objectifies monetary exchange. Yet, this objectifying alters aspects of the experience of replication, since the first order processes of abstraction come to operate with reference to these second order developments. Further, second order abstractions do not just affect the relationships that subjects have to their own practices and those of other subjects, they generate new modes of replication in mediating institutions, like that of the state. One result of second order abstractions is greater distortion of the value system of first order commodity exchange. This distortion conditions the contemporary belief that action in relation to major effects of capitalism, like the ecological crisis and the politics of race, is likely to have unpredictable outcomes and cascading consequences, which may contradict the intentions of agency. My analysis suggests that the implications of the major contemporary conflicts of capitalism should be understood in terms of second order abstractions and this will be demonstrated in relation to recent instances of contestation, like anti-austerity protests and riots. Although my conception of second order abstraction has significant continuities with the major theories of reification, the sense in which it is necessary to revise other conceptions of replication, like those of Lukacs, Habermas and Honneth, will be explored.

RC16-279.2

BROWNE, CRAIG* (University of Sydney, craig.browne@sydney.edu.au)

Modernist Visions and Contemporary Modernities

My paper argues that the nexus between history and the subject is central to modernity. I suggest that the modern vision is one of the autonomous constituting of society and that this social imaginary informs modern oppositions to heteronomous social relations. It is with reference to this social imaginary that sociological theory has, in my opinion, sought to comprehend processes of social reflexivity and the possibilities for society to act upon itself. In particular, the modernist vision involves an extension of the idea of autonomy beyond the institutional domain of the political order and an appreciation of its social grounding. Significantly, modern perceptions of the limits to autonomy are based on the assumption that society derives from the action of subjects and that social relations of domination are amenable to change. However, as Castoriadis contends, modernity has been shaped by another imaginary, that of the rational domination and control of nature and society. The presumption that these two modern social imaginaries are interrelated and reinforcing has tended to be undermined by processes of social modernization. Jürgen Habermas once described comparable processes as resulting in modernity being ‘at variance with itself’. I suggest that modernity remains a critical diagnostic category concerned with disclosing the immanent potentials of the present development of society and the distortion of these potentials. My analysis seeks to demonstrate this through an analysis of the changes in theoretical conceptions of the tensions and contradictions that pervade modernity and its dominant institutions, focusing especially on depictions of contemporary conflicts and dynamics of transformation. It concludes that influential perspectives, like those of multiple modernities and successive modernities, can be demarcated in terms of their interpretations of notions of collective self-determination and that this reveals differences in their conceptions of the relationship between history and the subject.

The ‘10-Excess’ Phenomenon In Responses To Survey Questions On Happiness

Happiness in nations is typically measured in surveys using a single question. A common question is ‘All things considered, how satisfied or dissatisfied are you with your life as-a-whole these days?’ on a scale from 0 to 10. The distribution of responses typically follows a uni-modal distribution with highest frequencies typically between 5 and 8. Yet in some nations, and especially in Latin America, the percentage of 10 responses stands out and is higher than the percentage of 9 responses. This paper explores the prevalence of this ‘10-excess’ pattern and checks some possible explanations.

The Invisibility Indians In Rio Grande Do Sul, Brazil: An Ethnography Of Roundness Narratives Between Myth, Law and Education

The issue of indigenous invisibility in Rio Grande do Sul is based on a set of elements that permeate the story of the Guarani, and kaingang Plow different ways. Among these stand out narratives produced by non-indians and have recurring visions and idealized whose elements relating gauchó folklore. One example is the set of representations produced on the Indian missionary Tiaraju Sepe, from the late eighteenth century to the present. Throughout this text we wish to reflect on the interplay between myth, law and education through an analysis of the impact caused by the presence of indigenous students in Higher Education Institutions (made possible by the policies of racial quotas since 2007 UFSC), a context stretched by the relationships established between the invisibility of indigenous narrated in different ways, the plurality of cultural dynamics of the groups mentioned above and individual memories of some Indian students involved in this process forward to the new scenario we consider also invisibilizador Federal Law No. 12,711, 29/08 / 2012 and Decree No. 7,824, of October 11, 2012, governing the policy of social and racial quotas in Brazil.

Local Environment, Innovation and SMEs in the Spanish Vocational Training System

This paper presents the results from the FPIInnova project, ‘Vocational training and innovation system: the role of intermediate workers in industrial SMEs’ innovation processes’ (CSE2011-29410-C03-01), funded by the Spanish Ministry of Science and Innovation. The aim of this research is to analyze the relationship between the training system and the regional innovation system of six Spanish industrialized regions. In the current context of economic crisis the study of the processes about the institutional and social construction of the economic model becomes necessary. Education and innovation are part of the answer to the current challenges.

This research wonders how are the relationships between the training system and the regional innovation system, and what aspects could be improved.

Particularly, we want to study the relationship between the vocational training system and industrial enterprises of intermediate and high technology sectors in Spain, with special attention to its influence on innovation processes companies.

Methodologically, we have studied six Spanish regions with the combined use of qualitative and quantitative techniques. We have put the focus on VET centres and their relations with local SMEs. This approach, linked to the Regional Innovation System perspective, allow us to study the relationships between these actors and how these relationships shape the local environment. Here is an analysis of these relationships for two of these regions studied.

Movilización Social y Populismo En América Latina. Una Aproximación Tipológica a Través De Casos Paradigmáticos: Chile, Argentina, Bolivia y Venezuela

La comunicación explora el tipo de relación que se viene estableciendo en los países de América Latina en la última década entre los tipos de reconstitución del poder político/estatal y la movilización popular. De acuerdo al análisis de la literatura especializada, existen tres modelos tipológicos de vinculación entre Estado/sociedad que son dominantes en diferentes países de la región: el neoliberal, el neo-desarrollista y una variante más radicalizada, con diversas denominaciones que asume un discurso ligado a la reactualización latinoamericana liberal, el neo-desarrollista y una variante más radicalizada, con diversas denominaciones que asume un discurso ligado a la reactualización latinoamericana liberal, el neo-desarrollista y una variante más radicalizada, con diversas denominaciones que asume un discurso ligado a la reactualización latinoamericana liberal, el neo-desarrollista y una variante más radicalizada, con diversas denominaciones que asume un discurso ligado a la reactualización latinoamericana.

Financial Oppression in the Context of Parental Separation

Financial oppression in the context of parental separation is a well-known phenomenon among professionals who work in the violence against women domain and among women's shelter organizations. In research, however, the issue is to a large extent unexplored. Concepts such as 'financial abuse,' 'economic violence' and 'economics that are abusive towards partner and children. These actions are nevertheless seldom in forefront of the analysis. How do victimized mothers and children cope with financially (and often in other ways) abusive fathers? Which parts of the separation process seems to open up for financial oppression from one parent towards the other and children? Further, how is this kind of abuse interpreted and handled by the court in disputed family law cases? In this paper, I present and comment on empirical examples from my ongoing dissertation project. The dissertation deals with professional and ideological discourses and practices around children who are exposed and/or subjected to violence in the context of parental separation and family law proceedings in the Swedish welfare state. The empirical base for the preliminary analysis consists of interviews with ten mothers who have experienced financial oppression in the context of separation and of a review of all court orders in disputes on contact, custody, residence and maintenance, from three districts courts in Sweden during 2010 and 2011. Theoretically, I draw foremost from feminist and intersectional perspectives on domestic violence and from childhood studies.

Kinship in Intersectional Analysis

Kinship is an established and extensively used concept in anthropology. In sociology including intersectional analysis, however, the term is nearly absent, despite its obvious connection to various dimensions of inequality. Previous sociological research on adoptions and on implementation of family law in disputed custody, contact and resident cases suggests that two disparate discourses on kinship compete; one that emphasizes biological kinship and another that draw from a constructionist perspective (Andersson 2010, Eriksson 2003, Ottosen 2006). Using the criterion at dispute, and attending to the potential contribution to the development of the capability approach.

This paper briefly surveys how the capability approach originally conceived by Sen has been adapted and applied by different disciplinary perspectives for a range of purposes. Then, using data from the workplace setting of kinship, the paper explores how a sociological viewpoint might contribute to the operationalization of the capability approach.

Definitions of what it means to be a ‘good’ father are changing. In the mid-twentieth century fatherhood was defined in economic terms and emphasised men’s responsibilities as ‘providers’. More recently, greater weight is placed on men’s involvement in day-to-day family matters and their hands-on roles in mentoring and providing physical and emotional care to their children. Despite this, evidence still shows that many men continue to take the primary responsibility for childcare, in particular when children are young. Previous research has found that key life-course events, such as the birth of a child, a marriage or divorce or completing education, may change an individual’s gender-role attitudes. Understanding how attitudes towards the role of a father change with life course transitions, in particular the birth of a first child, is integral to gaining better insights into what motivates fathers to increase their participation in childcare, as well as understanding the stability of attitudes within individuals over the life course. We examine how the birth of a first child influences attitudes towards fatherhood amongst men aged 17-65, using panel data from the Household Income and Labour Dynamics in Australia (HILDA) survey. Our results indicate that gender-role attitudes are not fixed over individuals’ life courses and thus provide support to intra cohort theo­ries of attitudinal change. In particular, we find that after experiencing a first birth women become less likely to agree that a father should be as heavily involved as in the care of his children as the mother, and men become more likely to question the capacity of a working father to have a good relationship with his children. We argue that these changes reflect the primary identities of men and women as ‘providers’ and ‘carers’ following a first birth.

The Influence of Gender on Pathways out of Secondary School: Evidence from Australia

The motivation for this research is twofold. First, women’s increased educa­tion in recent years, relative to that of men, is expected to give women greater access to favourable and good quality positions on the labour market. Second, the growth of the service sector (and the reduced importance of the production sector) in post-industrial societies have been predicted to increase women’s em­ployment opportunities (and decrease those of men). Despite these changes women’s disadvantage in the labour market is persistent. Second, we explore the characteristics of an individual’s first significant job and how this is influenced by gender, education and a range of background variables (such as socio-economic background, language spoken at home, academic achievements and school experiences) can play a substantial role in shaping the educational pathways and first significant job outcomes of young people in Australia. This research comprises the Australian country study for the second phase of the Education as a Lifelong Process – Comparing Educational Trajectories in Modern Societies (eduLIFE) project.

The Protestant Ethic In Poland: A Book That Failed To Make Sociology

There is hardly any debate as to Max Weber's status as a classic of sociology anywhere in the world, and the Protestant Ethic is probably his best-known work. Nevertheless, there are contexts in which the best known and the most referenced book may not play a role adequate to its apparent significance in the making of sociology. Weber's reception in Poland provided one of such contexts. The failure of Weberian inspiration may be succinctly summarized as follows: instead of providing historical, comparative and interdisciplinary insight for explaining the failure of Weberian imagery marked by a combination of a sense for history and culture failed and was replaced by a day-to-day reactive research, which did not make sociology, despite giving work to a large number of sociologists.

In my presentation, I will substantiate my contention that Weber's book did not make sociology in Poland despite its popularity as a reference source. Among the most important factors which determined the state of reception of The Protestant Ethic I will address the following: (1) presentism of reading, (2) narrow interpretation lacking the background of Weber's greater sociological project, and (3) over-estimating religious factor in Weberian model. I will discuss the development of sociology in Poland, including its historical, social and cultural aspects, in order to provide a tentative explanation why The Protestant Ethic failed to make sociology in Poland not only in the early 20th century or under communist rule until 1989, but also after the passage to democracy and free-market economy. In each of this periods, Weberian sociological imagery marked by a combination of a sense for history and culture failed and was replaced by a day-to-day reactive research, which did not make sociology, despite giving work to a large number of sociologists.

Household Wellbeing and Health in Two Types of Welfare Regimes: A Comparison of (Lower-) Middle Income Households Chile and Costa Rica

The aim of this paper is to elaborate to what extent the logics of the opportunities as shaped by welfare regimes (the interplay of markets, the state, communities and households) play out for wellbeing. Health is crucial for wellbeing. Different welfare regimes provide different opportunities to deal with health issues. Chile and Costa Rica’s organization of health care reflects the logics of their welfare regimes: liberal and social-democratic. We look at how households deal with health issues and what repercussions this has on their other life domains and wellbeing. We focus on households belonging to (lower) middle-income households. These are heterogeneous, as they belong to those having been heaved out of poverty over the past decades due to economic growth or to formerly middle-income households having experienced an increase in insecurity and downward mobility due to the changes in the model of Social Security linked to the change in economic model (abolishment of the Import Substitution Industrialization model). Such households struggle to maintain or improve their level of wellbeing and to avoid slipping downwards into even more precarious positions; they do not have such financial means to cushion unforeseen events and are generally not target of social policies. Recent research has highlighted the socio-economic volatility of these households, yet little is known what this means for their wellbeing. Our research looks into the everyday life of (lower) middle-income households by means of qualitative interviews with the same households in 2008/09 and 2013 in Temuco and San José. Results suggest that the households in Chile were constantly preoccupied with how to deal with health issues and the consequences. This furthered anxieties and worries in other life domains. In Costa Rica, the basic security provided by the national health system of sufficient quality limited the spillover of worries into other life domains.
young adults to fit into parental expectations. They are supported in this endeavor by the national educational system and its representatives. While doing so, adults refer to legitimations which they take to be given by “religion” or “ethnic tradition.”

Based on children's and young people's view of the demands of these generational orders, we can identify positive and negative implications of the generational asymmetry for children and young people. What is taken positive or negative is thereby depending on children's age, but not necessarily on gender although the burdens of the generational order normally weigh heavier on girls than boys.

We operate with a notion of “self”/”good life” in the interpretation of our results. While it may easily be objectified that such notion is culturally and historically contingent, we can clearly show that children and young people themselves refer astonishingly enough to such notion while judging about the various qualities of the generational demands and the opportunities they offer to them or while trying to organize their lines of actions. We conclude that the really “other” perspective is the one of the child and the young people. It is a methodological challenge to grasp this perspective and to make this “otherness” available for theorizing and practice. The paper will give empirical evidence for both countries supporting such conclusion.

Where Is The Child In Child Protection? Professional Proceedings Beyond Victims

The paper is based on the results of a project on professional interventions in cases of child maltreatment. More than hundred interviews with professionals (social workers, physicians, midwives) were carried out in five communities in Germany. In this way a data set consisting of 93 cases of suspected child maltreatment was collected.

Our results show that children are generally excluded from child protection proceedings and their voices are ignored. Therefore the rules and ways of this exclusion are analysed:

1. The exclusion of the child works via two main principles: (a) Child protection law addresses the restitution of parental competences and the conservation of the family. (b) The different professional programmes involved in child protection all eliminate children's point of view while focusing other perspectives. Social work is concerned with the relationship between professionals and parents. Physicians and midwives do only partially include the child, as they either take notice of the child's body as a ‘corpus delicti’ (as a bearer of traces for the physician's gaze) or as an object of parental care.

2. Against such background, traces of the children can only occasionally be found, as some social workers show empathy for the child's position. Institutions like kindergarten or day care serve as amplifiers of the child's need.

3. The information disclosed by children shows that they have a sense for the harm and disrespect as a person they are exposed to. All in all, the children articulate claims for a personal self being respected by others.

4. Furthermore, specific cases show how those occasional appearances of the child's agency are silenced by the professionals in the further proceedings. Children's agency was not only not repressible in cases, when they were able to raise their voice at places / institutions outside their homes or when their behaviour continuously disturbed.

Experiences Of Neighbourhood Exclusion and Inclusion Among Older Residents In Manchester, UK: Developing Age-Friendly Neighbourhoods

Developing environments responsive to the aspirations and needs of older people has become a major concern for social and public policy. This paper explores conceptual and empirical aspects of the age-friendly cities debate, with a particular focus on issues of place and space in urban settings. Exploratory findings are reported from an empirical study in a neighbourhood in Manchester, which sought to examine experiences of social exclusion and inclusion among people aged over 60. Drawing on a mixed-method approach consisting of questionnaire surveys, focus groups and interviews, the paper identifies four issues in relation to the neighbourhood dimension of social exclusion/inclusion in later life: experiences of community change; feelings of security and safety; the management of urban space; and strategies of control. The article concludes by discussing conceptual and policy issues raised by the research, particularly in relation to the issue of developing age-friendly communities.

Experiences Of Place and Community Amongst First Generation Turkish Immigrants Living In Brussels, Belgium

This paper aims to explore experiences of everyday life among first generation Turkish immigrants who are ageing in later life. The data for the present research are derived from a qualitative study in inner-city neighbourhoods characterised by intense deprivation. Drawing on semi-structured interviews with 23 Turkish people aged 60 and over, the paper addresses experiences of ageing and quality of life in their neighbourhoods; the variety of ways in which a sense of continuity is achieved; the constraints and environmental pressures which may prevent people from developing a sense of home; and the meaning of transnational ties for the experience of place. The results suggest that neighbourhoods, and the attachments older Turkish immigrants maintain with (multiple) places, have a significant influence on shaping the experience of exclusion and inclusion in later life. The article concludes with a discussion of three key themes: first, the impact of place on the quality of older Turkish immigrants’ daily life; second, the idea of inclusiveness in everyday life among ageing immigrants living in disadvantaged communities; and third, the need for developing social policies that address the transnational interactions, the social needs and health care demands of a growing and increasingly diverse ageing population.

The Association Between Work Type/Status and Mental Health Care Use, before and during the Economic Recession in Europe

Studies have examined the relationship between socioeconomic determinants and mental health care use. However, to date, little research has investigated whether these relations have changed over time and vary across socioeconomic structures and gender.

Between 2005 and 2010, a global economic crisis changed Europe’s economic situation, with economic instability and rising unemployment rates as a result. Recent research has found that in several countries, the recession has increased the frequency of mental health problems particularly among families experiencing unemployment. The fear generated by the insecure status of employment, which may depend on type of job, is also associated with poor mental health. Despite the greater demand for mental health care, there is a risk that austerity may impact adversely on health care provision.

We have investigated the relation between unemployment, type of job and mental health and medical mental health care use in 2005 and 2010.

By using the repeated cross-sectional data of the Eurobarometer 248 (2005-2006) and 345 (2009-2010), we have performed gender differentiated multilevel logistic regression analyses.

Preliminary results suggest that compared to 2005, the average mental health status in Europe is worse in 2010 and the percentage that contacted a GP is higher, while in contrast, specialized care use is lower. Only unemployed women in 2005 have a higher general care use, irrespective of mental health. Contrastingly, in 2010 the unemployed men and women are more likely to contact a psychiatrist, also when we control for need for care. For men, this relation is stronger in countries with a lower unemployment rate. In addition, we found that male manual workers are in 2010 more likely to contact a psychiatrist than white collar and that the male self-employed have a lower general care use than the manual workers and white collars, both irrespective of mental health.

Faith-Based Organisations and Welfare Provision for Asylum Seekers in Australia

Religion operates in multiple ways as it shapes the experiences of forced migrants. It is often a causal factor in migration, and may either facilitate or impede integration in the country of settlement. Religious identity also plays a significant role in responses to asylum-seeking, with faith-based organisations, or FBOs, providing significant support to asylum-seekers in Western countries. FBOs are ideal service providers because of their strong local contacts, their public legitimacy, theological motivations for service and material resources. In Australia, the state has developed significant contractual relationships with FBOs to deliver welfare services, particularly to refugees and asylum seekers.

This paper examines the role of FBOs in welfare provision to asylum seekers using fieldwork conducted in Sydney, Melbourne and Brisbane. Within each city, interviews and participant observation were conducted with practitioners at FBOs.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
who provide services to asylum seekers. The study sought to understand the way that religion shapes the organisational structure, ethos and motivations of the FBO and its practitioners. It also explored the way in which FBOs use religious resources in the construction of settlement programs, how they addressed the cultural specificity of asylum-seekers in program delivery, and how they negotiated their role as ‘neutral’ state-contracted service-providers while maintaining religious identity. The results of the study find that religion is often an important and explicit motivator for practitioner action. Results indicate tensions between practitioners who understand the work in a “human rights” frame and those who may narrate or understand their work theologically. The study also revealed multiple understandings by practitioners of the importance of religious practice to asylum seekers. Finally, the results of this study point to tensions that increased government contractualisation poses for FBOs who deliver government services to asylum seekers, as FBOs have traditionally been strong critics of government policy on asylum seekers.

Parallel/Alternative Orthodoxy in Russia: Inside Church, out of Doctrine
Current Russian Orthodox Church situation is unprecedented: during soviet period church was constrained by the regime; at pre-soviet time official Church status did not conduce a free contention of theological ideas. Post-soviet time gives us unique situation: ultra-liberal and ultra-conservative factions took shape and play an important official (both church and state) pressure inside the Church. Both ultra-liberals and ultra-conservatives have formed and become allowable in orthodoxly theological latitude. Ultra-liberal fraction is not large, but ultra-conservatives are really numerous. So, authors focus concentrates on them. There is no ideological unity in this fraction, but we can notice a few common features. First, hierarchy neglecting – patriarch and bishops has no respect in this community, withal mind of “ancient” considered as an ultimate truth. Really, we has a situation of forming an alternative Holy Tradition. Second, wide spread of apocalyptic moods, expectation of alarming “properties” (some of this “properties” did not come true yet). Third, monarchy minds, often linked with “tsar-God heresies”, where the Christ place occupies the last Russian emperor, whom they call “redeemer” of Russia. And last, but not the least, new technologies, especially in information sphere, phobias. Objects of these phobias are bar codes, internet, mobile phones, credit cards and gadgets at all, electronic passports, individual tax number etc. Special sort of phobias – phobia of total state electronic control over the society establishing.
We can meet ultra-conservative in every region of Russia, in many parishes and monasteries. This phenomena uprisng caused by the few groups of reasons. Internal church reasons due to rapid growing of parish people number in 90s, when religious experience translation process was distorted. Social reasons were connected with post-soviet anomaly intensified by economic difficulties, that provoke alarmist eschatological moods. And last, reasons caused with actual discontinuation state regulation of religious sphere.

BULAN, WAHIDAH RUMONDANG* (University of Indonesia, wr_bulan@yahoo.com)
Power Relation, Participation, and Local Government Reform
This paper sourced from dissertation of presenter for doctoral studies in sociology in University of Indonesia (2013), which describes the Solo City mayor’s (during governance by Joko Widodo, 2005-2012) action facing structural challenges (rules and resources constraints) to create inclusive populist policies in cases of arrangement of street vendors and resettlement on the banks of the Bengawan Solo. The approach used qualitative case study strategy with the individual (actor) as a unit of analysis which also presents the institution. By using structuration theory (Giddens, 1984) and the Polity Models (Tilly, 1978), the results of this study shows, although the head of local state government open wide enough space for public to participation in management of power (resources) in local reform, not all CSO (Civil Society Organization) and CSA(Civil Society activist) give positive response. The factors that influence are ideology (radical democracy), mistrust with local state government because of past trauma, and doubt (skeptics) about the commitment of local state government. Additionally, the availability of alternative resources (money, networking, and people) is another important factor that affects. Finally, the right approach from the head of local state can reduce the resistance and rejection from CSO and CSA; and the most importantly, it’s because the head of local state can gives strong evidence that he does not have a personal vested interest in the management of power does (actually led to serve people).

The Quest for Global Environmental Justice, Healthy Communities and Human Rights
This paper utilizes an environmental justice lens to critically analyze the socio-historical connection between the global exploitation of land and the exploitation of people. The environmental justice movement has expanded beyond its initial challenges to environmental racism and advancing civil rights in the United States to become a global movement advancing human rights, sustainability, health equity, food sovereignty, equitable development, clean energy, and climate justice. Climate change is viewed as one of the single most important environmental issues of the 21st century. The majority of the people who contribute least to climate change will suffer the earliest and most damaging setbacks because of where they live, their limited income and economic means, and their lack of access to health care.
Increased globalization of the world’s economy has placed special strains on eco-systems in many marginalized communities in the global North and South. Globalization makes it easier for transnational corporations and capital to flee to areas with the least environmental regulations, best tax incentives, cheapest labor, and highest profit. Despite significant improvements in environmental protection over the past several decades, millions of people largely in developing countries still suffer from the “Big Three” environmental problems: contaminated drinking water, untreated human excrement, and air pollution.
Loopholes in international conventions and treaties still allow transboundary shipment, export, and trading of banned pesticides, hazardous wastes, questionable radioactive by-products, and “risky” technologies. Economic extortion extends to the exploitative work environment of migrant farm workers, garment districts sweatshops, building construction trade, dirty low-paying industrial jobs, and the micro-electronics industry. Workers who suffer under substandard occupational and safety conditions have few rights protected by government. Globalization, which has resulted from global trade agreements, and have elevated the environmental justice message to the international arena, including the United Nations, World Bank, World Trade Organization.

Difference and Belonging: Summer Camps Aid in Creating Nonreligious Identities in the United States
The United States of America is ostensibly a secular country. In a seemingly paradoxical way, religions and religious beliefs have thrived within this secular environment, with Americans being some of the most religious people in the world. This leads us to question the place of nonreligious Americans within this secular but overwhelmingly religious country. To begin answering this question, ethnographic work was carried out at a nonreligious summer camp called Camp Quest in the summer of 2011. Camp Quest is an explicitly nonreligious summer camp that welcomes children of all ages as well as their parents for a weeklong camping experience. The nonreligious people who attended Camp Quest Montana in 2011 are engaged in a complex process of identity formation where they seek to distance themselves from their religious neighbours while adopting discourses that create feelings of belonging in a religiously inhospitable world. Camp’s explicit nonreligious position provides a space for the open discussion about participants’ rejection of religious belief, while, in a seeming contradiction, Camp Quest Montana also encourages the participants to talk about nonreligious beliefs that are not dependent on religious beliefs as a frame of reference. The analysis of the data gained through ethnographic fieldwork at Camp Quest provides a clearer picture of the process of creating a nonreligious identity as well as the tension between these nonreligious Americans and the religious Americans who make up a majority of the population.

Local Meanings of Internationalization of Higher Education Under Economic Crisis: A Critical Case Study at a Swedish University
The paper is an analysis of local meanings academic employees confer to internationalization of higher education at their own work place in a context of economic crisis, cuts and institutional change. The argument is that internationalization of higher education is interpreted in this local context more as a controversial means to access resources rather than a meaningful translation of internationalization policy into practice. The fieldwork data gathered through participant observation at a social science department at a Swedish university indicate that the local meanings of internationalization are largely determined by two main aspects of the local context in which they are constituted: a) the local practices of decision-making, priority setting, and resource distribution at the university and departmental level; b) the increasing local participation of employees in forms of symbolic resistance to these decisions. The findings should be read in light of the author having had extensive collaboration with the department under study, a positioning that confers her the possibility to move away from the traditional role
of the researcher as a neutral observer toward a more participatory role that entails becoming critically engaged with the research field and moving the application of theory, methods and practice toward action and activism.

BUNESCU, IOANA* (Malmö University, i.oana.bunescu@mah.se)

The paradox of Roma people’s identifications varying from strong assertions of Roma identity to complete negations of it triggers this paper’s inquiry into the reasons why Roma identifications are so heterogeneous. The argument unfolds through the analysis of multi-sited ethnographic data is that the heterogeneity of Roma identifications is not random, but that it follows certain context-specific patterns. For example, at local level in a multi-ethnic locality in Transylvania, one could observe that within the same hetero-identified Roma group there is a tendency for differentiated and fragmented self-identifications; while at state level (e.g. in Romania) and at international level there is a tendency that blurs differentiations and that emphasizes a more homogenous collective identity of the Roma. This paper attempts to uncover the reasons for the large array of Roma identifications through the combined method of “thick description” (Geertz, 1973) and “multi-sited ethnography” (Marcus, 1995). The conjunction of these methods offers a contextual understanding of the complex dynamics of Roma collective identity formation at three analytical levels: the local, the state and the international.

The findings indicate that Roma identifications are contextual and more often than not they represent means in the struggle for resources available within different structural contexts. In such instances, Roma identifications become forms of agency in negotiating a better standing vis-à-vis other (often more powerful) actors encountered in the process of social interaction. The instrumentality of identifications and the recognition of the Roma does not entirely dismiss the possibility of a genuine feeling of belonging to certain categories of self-association in the moment of identification. Such feelings could suggest an internalization or solidification of some self-identification practices as habitus (Bourdieu, 1992) or structural content.

Governance of Ethnobotanical Resources in Siquijor, Philippines

The study focused on mobilizing the tambalans and mangangalaps (faith healers and herbal collectors respectively) to take the lead in formulating a Community Based Ethnobotany Resources Conservation Framework Plan. Hence, leading the conservation of medicinal trees and shrubs they have been utilizing. The methods included an organizational meeting, personal interviews, participatory field survey and identification, focus group discussion (FGD), and integrated consultation workshop with the tambalans, mangangalaps and other local stakeholders. The Siquior Herbalists Association (SHA) was organized. Most of the tambalans and mangangalaps in the two barangays thought that ethnobotany resources are important source of income. However, since there has been no conservation effort, they realized that the resources are getting scarce.

The project initiated the creation of a Community Based Ethnobotany Resources Management Committee that formulated and developed a conservation framework plan. As an initial intervention to conserve the subject resources as embodied in the said plan, they established a Barangay Ethnobotany Resources Nursery through a collaborative effort by the local DENR, SHA, and concerned LGUs. Additionally, a database of ethnobotany resources was established comprising a total of 63 species showing photographs, local and official common name, family name, scientific name, parts utilized, intended cure, and method of preparation to serve as source of information on ethnomedical practices in the island. Overall, the conservation framework plan formulation was a participative approach ensuring that needs, aspirations and culture of local communities, the concern of the LGUs and national government’s policy and technical framework are duly considered.
Figures of Knowledge Workers
Collective Practices and Appropriation of Knowledge By Three

Anthony Giddens argued that the ‘risk society’ presupposes the ‘evaporation of morality’, but like other aspects of the sociology of risk, this proposition has never been empirically substantiated. This paper will historically explore the inverse relationship between risk and morality, focusing on the language of policy debates in the UK on contentious social issues. The balance between arguments grounded in more straightforward ‘right’ and ‘wrong’ and those based in risk and harm reduction will be analysed, focusing on four particular periods: the late Victorian, the liberalising legislation of the 1960s, the risk politics begun during the Thatch-re, and significant effects of the 2008 financial crisis and the global financial crisis. The paper will attempt to reposition the ‘risk society’ as part of a wider debate in social, cultural, and political theory about the nature and frequency of the research paradigms used. The present reality is that the pace of reforms has outstripped the ability of researchers to stay abreast of these developments let alone to engage in sound, explanatory, theoretical development.

Researchers have been further hampered by the predominance of research paradigms and methodological approaches ill-suited to investigating the complexity of these developments and in particular the social systems involved.

Examples drawn from Iraq and Afghanistan will be used to demonstrate the limitations of existing research approaches to meet the current and future challenges associated with the ongoing nature of defence reforms and transformations. Emerging topics which are explored to justify a change in research approaches include the blurring of boundaries between military and civilian roles; the increased dependence on contractors to generate military capability in the battlespace; and the raft of unresolved moral and ethical dilemmas as well as the jurisdictional nightmare that has followed as a result. The overall aim of the paper is to demonstrate why different topics require different research approaches.

The inequality in Brazil remains huge. In 2012, the richest 10% concentrated 41.9% of total national income. Although improvements were made in recent years, the country’s Gini coefficient in 2012 was 0.498, which still situates the country as one of the most unequal in the world. Social policies of the federal government such as the Programa Bolsa Família, the minimum wage increase and the reduction of unemployment have been able to reduce poverty and extreme poverty in the country. However, to reduce inequality is necessary that local governments also formulate and implement public policies aiming to redistribute the benefits of these developments.

Examples drawn from Iraq and Afghanistan will be used to demonstrate the limitations of existing research approaches to meet the current and future challenges associated with the ongoing nature of defence reforms and transformations. Emerging topics which are explored to justify a change in research approaches include the blurring of boundaries between military and civilian roles; the increased dependence on contractors to generate military capability in the battlespace; and the raft of unresolved moral and ethical dilemmas as well as the jurisdictional nightmare that has followed as a result. The overall aim of the paper is to demonstrate why different topics require different research approaches.
With the upcoming of the two biggest sporting events in the world - the FIFA World Cup 2014 and the Rio de Janeiro Olympic Games in 2016 - Brazil is experiencing a unique moment and focusing on the discussions of sport infrastructure in the country and the necessity to build a national sports public policy committed not only in winning another world championship in football or guarantee a better classification in the medals table in the next Olympics, but also in a policy that ensures the practices of sports to all citizens. This paper analyses the mobility of labour forces between two European welfare states and its impact on earnings of residents-pensioners and mobile-pensioners. It examines the case of frontier workers in Luxembourg and Belgium. The results of the analysis show that structural differences in pension systems (e.g. retirement age, waiting period, benefit levels) affect mobile pensioners. The case of frontier workers in Luxembourg and Belgium illustrate that current legislation produces uneven effects on the earnings of former mobile workers. Labour mobility plays an increasing role in welfare policies and demands a new approach in national welfare states.

**BURGUM, SAMUEL*** (University of York, s.j.burgum@warwick.ac.uk)

**'Big Brother For People With Degrees': Interpassivity In Contemporary Activism**

Since 2011, there has been a resurgence of activism across the globe in an attempt to resist what has come to be seen as an unjust and unfair approach to the global economic recession. The growing trend of the largest ‘movement’ in the west has been to manage the spread across 951 cities and 81 countries in a matter of months following the initial call to camp at Zucotti Park, New York (near Wall Street). This paper is based on interviews that took place with Occupy: London in May 2012 (just before they were evicted).

Mark Fisher has suggested that, interpassivity – when ‘the object itself takes from me, deprives me of, my own passivity’ (Žižek 2006:24) – can be seen in examples of resistive culture (such as the film ‘Wall-e’ which ‘performs our anti-capitalism for us’) (Fisher 2009:12). In this way, the current paper suggests that we could apply this to some forms of activism to explain why some people feel like they are part of such movements without ‘properly’ joining them on the ground. Analysing some of the interview data, we find evidence that some people might be allowing the other to ‘relieve them of their passivity’ towards resistance and turning it into a kind of privatised rebellion rather than any real action against the system.

**Transnational Grandparenting By Minority Ethnic Groups Living in England and Wales**

**BACKGROUND:** This paper examines the transnational grandparenting activities of middle aged (40-54) and older people (55+) from six ethnic minority groups living in England and Wales (Black Caribbean, Black African, Indian, Pakistani, Bangladesh and Chinese). Within the sample of 1206 people, there were 1408 transnational relationships (dyads) with relatives overseas. Of the 1408 transnational relationships with relatives only 88 were between grandparents and grandchildren.

**METHOD:** Frequency and methods of contact (letter writing, telephone calls, ICT, visiting and receiving visitors, sending and receiving gifts, sending and receiving one of gifts of money, sending and receiving regular remittances) were used in exploratory latent profile analysis to identify transnational relationships types for all relative dyads. A four-class model was selected as the best fit to the data. The types of transnational relationships were characterised as: Inquent Telephone Communicators; Infrequent Telephone Communicators; Highly Connected Regular Benefactors and Occasional Bilateral-Bounteous-Visitors. Thereafter, we analyses focus on the 88 grandparental transnational relationships. We explore differences between ethnic groups and the gender of the grandparental dyad (e.g. grandmother-granddaughter; grandfather-grandson; grandfather-granddaughter; grandfather-grandson).

**RESULTS:** Although the numbers are small, trends are observed with regard to differences in grandparental transnational relationships between ethnic groups. A majority of transnational relationships between Black African grandparents and grandchildren were characterised as Inquent Telephone Communicators (85%); whereas a majority of relationships between Indian grandparents and grandchildren were characterised as Highly Connected Regular Benefactors. Pakistani and Bangladeshi grandparents were more likely than grandparents in other ethnic groups to be Occasional Bilateral-Bounteous-Visitors. With regard to gender dyads, all transnational relationships were with grandsons and there were no significant differences in relationship types between grandmothers and grandfathers.

**IMPLICATIONS:** The implications of the findings for intergenerational transmission of cultural values between grandparents and grandchildren is taking into account the location of the grandchild.

**O’DONOGHUE, CATHAL** (Teagasc)

**Mobility Of Labour and Pension Outcomes: An Analysis Of The European Cross-Border Social Security Coordination**

Pension systems were designed in a time characterized by stable labour markets and limited cross-border mobility. As the labour market becomes increasingly important, upcoming generations will be faced with challenges of differences in income taxation and social security systems, as these generate discrepancies in income. We argue that changes in life-cycle due to mobility of work to another country are happening and welfare state objectives need to address these changes.

Labour mobility plays an increasing role in welfare policies and demands a new approach in national welfare states. This paper analyses the impact of mobility of labour between the states, in the European context and questions whether the welfare state attains equally achieves its objectives on domestic and frontier workers. Despite accessibility of pension from different countries, due to differences in welfare objectives, the welfare of mobile pensioners can vary a lot. The results of the analysis show that structural differences in pension systems (e.g. retirement age, waiting period, benefit levels) affect the welfare of mobile pensioners. The case of frontier workers in Luxembourg and Belgium illustrate that despite legislation on coordinating the pension outcomes is in place, this produces uneven effects on the earnings of mobile pensioners and will in the future lead to more obstacles for the welfare of the upcoming mobile generation.

**Lean Production : An Erroneous Conception of Work ?**

In the 1990s, Lean production concerned automobile factories. Since it has spread to service facilities, hospitals and public services. French government has gone further by promoting and partially financing its implementation, especially in smaller firms in order to develop their competitiveness. However, it has progressively become a topic of public debate. Various experts and trade unions criticize its effects on working conditions, showing that the health of workers is progressively become a topic of public debate. Various experts and trade unions criticize its effects on working conditions, showing that the health of workers is sometimes more affected in context of Lean production than in traditional scientific organizations.

On the basis of about ten case studies, we point out a big diversity in forms adopted by firms that have resorted to Lean production. Its relevance depends on their own issues, the way changes were conducted or the characteristics of the initial organizational context. In consequence, it’s difficult to provide a very strong opinion. However, we put forward that, on the one hand, Lean production has ability to introduce two fundamental aspects which clearly goes over Taylorism: the value-added of the ground as a key factor of success in performance’s firms and the necessity to pay attention to workers by getting them involved in a continuous improvement of customer satisfaction. But, on the other hand, Lean production doesn’t work into account seriously enough. Work is always standardized and the participation of workers is limited to find a solution to problems in a
Sport As a Thread in the Life of the Destitute

A critical lens on the value and meaning of sport in the lives of what has become known as ‘high risk’ populations. Doing justice to a rightful understanding of the ways of lives of people in lived-realities of poverty.

In a study conducted over a five year period (2007-2011), tracing the impact of the GIZ/YDF sport-for-development programme in nine different African countries, 101 comprehensive case studies were compiled. Of these, 45 were selected based on the extensiveness of material available per case. The thematic analysis of life-integrated experiences three main themes was identified. These themes projected differential degrees of integration of sport-related experiences in the lives of participants and implementers (e.g. managers of NGOs, coaches, peer-educators and volunteers).

The first theme relates to sports-related experiences as “encounters” which could be interpreted as an initial phase in the socialisation process, where it stayed at a relatively superficial level of engagement. A second theme demonstrates an increased entanglement underpinned by experiences of relative success, acceptance and recognition. This type of engagement proliferated into a myriad of associations and various degrees of sport-role integration.

The third theme shows a deepening of commitment which happened by choice and/or socio-economic realities profiling the process as a viable option for survival. The differential depth and role-assignments are analysed to identify the mechanisms in sport and society.

BUSH, MELANIE E L* (Adelphi University, bush@adelphi.edu)

Stories of My America: Race and Nation in the Contemporary US

This paper will explore findings from research done to understand contemporary perspectives on belonging and nationalism in the United States. It will explore the meaning of “America,” what is unique about its character and possibilities, and its claims to being special in the history of nations on this planet. These intertwined issues are widely conceptualized in both lay and scholarly discourse as the spirit of American exceptionalism. Just more than one century after its creation, the nation-state expanded to become a global power, including a pattern of territorial expansion deemed by many to be imperial. By mid-twentieth century, the United States was the number one world power.

As the hegemonic power within the world-system, the U.S. was forced to reckon with contradictions within its own borders and how they reflected on its position as the world leader. Anti-colonial struggles that occurred throughout the globe were frequently viewed as aligned with movements for social change among marginalized populations within its borders. The nation struggled with the question of how it would be positioned and perceived in this new era of imperialism. How could the rhetoric of democracy be rationalized as interventions around the globe were intensified? The Reagan era provided narratives of benevolence and leadership that justified these actions in the eyes of many people in the U.S. By George W. Bush's Presidency, nationalism and patriotism were generally assumed virtues that trumped all else. Participant reflections are thoughtful, though often contrasting, with their words providing a window into deep internal struggles about how the ideological narratives that people ascribe to sometimes explain but more often disregard the challenges they face in everyday life. These "Stories of My America" provide insight into the everyday struggles engaged to reconcile the rhetoric, revered and realties embodied in the notion of an American Dream.
to achieve their project of migrating to Brazil to find job. We draw on fieldwork conducted in Peru where we followed Haitians going through to cross the Brazilian border—where Haitians are granted refugee status since 2012. We combine it with the analysis of the state policies, and the programs international organizations have set up to serve (or control) Haitian migration. In particular, we pay attention to the frames used by international organizations and states (e.g. “victims,” “refugees”) and how migrants themselves draw on them to achieve their migratory project. We want to highlight the mismatch (or decoupling) between how migrants are framed at the international level, and how their see their own migration. Focusing on the latter, we highlight that rather than passive actors, migrants navigate the frames to accomplish their goal that is finding a job in a new country.

The Legal-Illegal Nexus: Haitian Citizens in Their Transit Migration through Peru

The nexus legal-illegal is more fluid than migration literature indicates. Thus far, research on legality/illegality (Carling, Menjivar and Schmalzbauer 2012; Gómez-Roza 2012) has focused on the experiences of families with members with different migratory statuses and/or how migrants from the same country enjoy different migratory statuses depending on the country of destination (e.g. Somalia). There is little on how migrants of the same nationality experience moving back and forth between these categorizations in their trajectory to a destination. We analyze the case of Haitian migration to Brazil to shed light on migrants’ agency and the colonial constraints they face. We argue that migrants themselves do navigate successfully (mostly) the fluidity of the nexus legal-illegal due to their “migration capital.”

After the 2010 earthquake in Haiti, Haitian migrants to Brazil through Peru have called the attention of media, local populations, authorities and security forces. Ever since, changing approaches and ad hoc stipulations in the migration policies of Brazil, Peru and Ecuador regarding “administering the flow,” have created “legal-illegal” scenarios for Haitians. Concurrently, Peru requires visa for Haitians, and Brazil grants refugee status (1/12/2012). In this context, Haitians are both treated as migrant bodies (Chavez 2009) assuming almost passively the events caused by actors who take advantage, abuse them or profit on their needs (Peruvian Police, coyotes, others). Simultaneously, they “master the local legal logics” in order to avoid “restrictions to their projects” (Fonseca and Jardim 2010). We draw on a multi-method and multisite research conducted in 2013 to illustrate this case.

Rethinking Lowrider Artistic Representations: An Aesthetic Response to Social Exclusion

This paper examines ethnographically the construct of the lowrider vehicle as part of the barrio aesthetic. The central argument is that the display of lowriders can be better understood as an artistic response to institutional exclusion—an identity mechanism of resistance used to contest institutional oppression. The principles of the Borderlands theory provide exceptional insights into the analyses of aesthetic manifestations and social exclusion. We use this approach to theoretically frame lowriders’ artistic representations as mechanisms of resistance to social exclusion. This study employs a qualitative triangulation method that includes participant observations, photo documentation, and ten semi-structured interviews. Between winter 2006 and summer 2007 data were collected from two lowrider car shows in the state of Michigan. One site was in the city of Lansing and the other was in South Haven. This study found that lowrider art works as a source of stability and structure for Chicanas/o young adults who live on the margins of society. Isolated by the racial/ethnic larger order from mainstream space, the lowrider aesthetic represents an identity-building component introduced through family and friends—consciously or unconsciously—to question institutional exclusion.

BUTCHER, MELISSA* (The Open University, melissa.buchter@open.ac.uk)

Creative Disturbances in Urban Space

A role for politics in urban space is to make seen that which is invisible in the relationships and structures of the city; to offer alternative thoughts on the use of space as well as questioning topographies of power that underpin it. Creative disturbances have held a place in the form of politics yet recent debates in political and urban geographies have demarcated differences between political and cultural uses of public space, questioning claims of the utility of ‘small’ everyday creative interventions as opposed to Big P political acts.

This paper will argue that the efficacy of cultural politics can be theorised in terms of its contribution to a politics of presence, imagination and transformation. A politics of presence incorporates into creative interventions that which is not seen in the official discourse of the global city including ethnicity, age and gender. A politics of imagination centres on generative processes, that is, the invention of alternative conceptions and uses of urban space. This aspect of creative interventions is working within established fields of what is resistance and ‘who has the right to the city.’ Finally a politics of transformation is embedded in narratives of scale. A criticism of the effectiveness of creative interventions is that they are often unable to rise above the locality in which they are centred. This paper will argue through case studies of creative acts from Sydney (car culture among young men), Delhi (multi-media labs in marginalised communities) and London (graffiti knitting), that creative interventions can in fact generate a process of public pedagogy and reconfigure urban engagement that emphasises ‘community’, temporal alternatives, bodily engagement in production, and the aesthetics of public place-making.

Migration As the Process of Care Exclusion

In Poland, alike in other eastern and central European countries, caring functions are played by families and particularly by women. Women who work abroad exclude themselves from direct care of their children and elderly parents. Then their children and elderly parents are left on their own and tent to be excluded by their parents. In such a situation they look for strangers’ help. Cultural norms make both parties (migrants and their families) notice the discrepancy between the obligations and execution of care duties. The presentation quotes the results of quantitative research (N=400) in Polish women migrating to Norway. It shows examples of care deficits and attempts to solve the problem.

BÜCHELE, JULIA* (University of Basel, j.buechele@unibas.ch)

“Becoming Expatriate” Foreign Assignments and the Role of Accompanying Spouses in Kampala

Foreign assignments and expatriate lifestyles drew the attention mostly through publications coming from the field of Human Resources. Here the focus lies largely on the risks and costs of premature returns. It is claimed that expatriate assignments often fail and are in most cases caused by marital problems or family issues rather than work environment or poor performance of the employee. Therefore the foreign assignment apparatus of professionals and their families is not only tailor-made to support families but also creates perceptions about how to “live abroad” as expatriates. Spouses are seen as a crucial factor to guarantee the stability of family life and work performance abroad. Scholars have pointed to the influence and constructivist nature of preparation training and the importance of the ‘deploying organization’ in shaping expatriate identities (Hindman, 2007; Mense-Petermann 2013). By the same token, Fechter (2007) highlights the notion of privilege and specializations have long held a place in this form of politics yet recent debate in political and urban geographies have demarcated differences between political and cultural uses of public space, questioning claims of the utility of ‘small’ everyday creative interventions as opposed to Big P political acts.

This paper examines the role of accompanying spouses in the foreign assignment process and poses questions about how the relationship between the ‘deploying organization’ and spouse is conceptualized. In addition I will draw attention to the frame of reference that derives from (economic) theory that is based on the marital dependency created by the “single breadwinner” who is the contract holder. For this purpose I will utilise the findings of my PhD research on the European expat community in Kampala, Uganda.
This article uses intersectional analysis and critical race theory to investigate how race, age, and gender intersect in black, male youth in urban areas in the United States to create life outcomes that likely represent an existential challenge for people in this social location. The prosecution of the federal-based War on Drugs in the 1980s led to a moral panic that categorized black, male youth in urban areas as the new “folk devils.” The continuation of the War on Drugs has prolonged the “folk devil” status of black male youth over the course of the last two decades. This contributed to the tendency in this society for dominant forces to construct young black males as criminals. Their status as criminals has shaped their interactions with representatives of the state as well as with other individuals. It has made them targets, at a disproportionate rate, of laws intended to curb criminal behavior such as the New York State Stop and Frisk law being enforced by the New York Police Department (NYPD). This status also contributes to the racial profiling they experience from individuals, who deem them dangerous, particularly in non-black spaces and react to their presence with deadly force as in the case of Trayvon Martin. This paper examines significance of marginalization in these contexts to their future as members of that society.

**RC05-106.14**

**BYFIELD, NATALIE** (St. John’s University, byfieldn@stjohns.edu)

**Targets: The Existential Crisis of Black Male Youth in the U.S**

In this paper I reflect upon the analysis and interpretation of 377 photographs taken by research participants in my PhD study. Service users and staff in a mental health hospital were asked to use disposable cameras to show what they thought of their surroundings. The aim of the study was to explore the contribution of photography to understandings of the mental health hospital environment, in terms of both the research process and as visual data.

I began with a detailed methodological review of studies where research participants took photographs as part of the research process. This informed the iterative cycles of data collection which followed. Some participants took photographs on their own and did not take part in any form of interview (6). Others took part in follow up interviews where we talked about the photographs they had taken (7). Some participants took part in mobile photo-interviews where I accompanied them as they took their photographs, collecting interview data concurrently (4). In addition, two focus groups took place with people not connected to the hospital. The focus groups produced individual and group responses to a sample of images.

The focus of this paper is on the techniques of data analysis and the interpretation of visual images from different standpoints (e.g., researcher, photographer, third party). I found that certain images produced stronger reactions than others and I will use Roland Barthes’ concepts of ‘studium’ and ‘punctum’ in order to theorise this. I will also discuss the possibility that, by unpicking of the content of a large number of photographs, ‘thin’ yet ‘rich’ descriptions of the hospital environment can be produced.

**Analysing and Interpreting Participants’ Photographs of a Mental Health Hospital**

Energy systems around the world are in transition. The need for renewable energy sources and – in some cases – devastating experiences with dangerous technologies has triggered public debate in favor of changing the dominant sociotechnical regimes of energy supply. In question are existing technological, organizational and governmental paradigms. We can observe a lack of trust in technology (nuclear power), in organization (technocracy of experts), and in processes of liberalization, as well as in non-transparent relations between governmental actors and private stakeholders. All of this influences the overall confidence attributed toward the energy domain.

However, we cannot assume that the result of this transformational process yields trust and confidence in the “new” system. In case of the German “Energiewende”, a growing discomfort already leads to a lack of confidence in reliability and security and, partly, to doomsday scenarios of expected major breakdowns. People start to prepare for the worst case.

With reference to the visions and goals of system transformation we have to expect a qualitative change of the relationship between the general public and the energy system. Particularly in vogue are ideas of “smart” technologies (smart grid, smart markets, demand-side-management) in order to implement multiple alternative energy sources and to increase distribution efficiency. The transformation into smart grid energy systems now is likely to cause a shift of modes from confidence to (system) trust among consumers who are supposed to take a more active role as “prosumers” despite intransparent technologies and markets.
La comunicación es una contribución a conocimiento de social y ambiental intergeneracional relaciones, específicamente el rol de progenitores y grandchild in the acquisition and transmission of values, habits and ambiental attitudes.

En avanzada Western societies older people have regained some influence on the learning of their grandchildren. The lengthening of life expectancy, medical and health improvements and economic security guarantees due to the performance of the (increasingly reduced) welfare state, allow these groups to reach old age in good physical, economic and emotional. This allows them to devote their time to training activities, leisure and sports, but also help your children in all aspects, especially in raising their grandchildren, going with them a large number of hours per day due to long working double shifts and parents.

This common time they share grandparents and grandchildren can be used to transfer knowledge and new learning from each other. Much of today's grandparents have lived through times of scarcity and have learned to conserve and effectively manage scarce resources available, having generated habits generally keep still. Meanwhile Grandchildren were born in times of plenty and much of their education is based on consumption, comfort and opulence, but also have been influenced by their teachers and media in exercising habits that could called sustainable.

Our work, based on surveys and focus groups, aims to contribute to knowledge of how interact grandparents and grandchildren in the mutual transfer of environmental attitudes and habits; what kind of sustainable habits between generations reproduce. In short, try to know who learns from whom.

Para Qué Estudiar Un Posgrado? El Valor De La Educación Ante La Falta De Oportunidades

A los 25 años de edad las personas que han seguido una trayectoria escolar regular pueden inscribirse a estudios de posgrado, sin embargo esta posibilidad aumenta o disminuye de acuerdo con las condiciones socioeconómicas presentes y los valores atribuídos a la educación se corresponden con estas condiciones.

De acuerdo con indicadores de la OCDE (2011) México presenta una falla estructural en la educación pues en la primera década del siglo XXI, 29.9% de jóvenes se encuentra en el rango de 25 a 29 años de edad no estudian ni trabajan y el porcentaje aumenta a 47.3% si se considera sólo el caso de las mujeres. Esto significa que casi la mitad de las mujeres que se encuentran en este rango de edad no participan en procesos de formación ni cuenta con un trabajo u otra que puedan dedicarse y que significa para ellas acceder a un espacio educativo o laboral.

Chiapas es un estado de la República Mexicana que presenta los indicadores de desarrollo humano más bajos, entre ellos la educación. La oferta educativa a nivel secundario en Chiapas es reducida y sin embargo los programas educativos reconocidos por el Consejo Nacional de Ciencia y Tecnología (Conacyt) como “programas de calidad” motivó por el cual sus estudiantes pueden solicitar una beca económica, la participación de las mujeres es mayoritaria en comparación con la de los hombres.

En la ponencia se analiza por qué los estudiantes optan por inscribirse en alguno de los posgrados de la Universidad Autónoma de Chiapas. Se parte del supuesto que la decisión para estudiar en estos posgrados está mediada por la imposibilidad de encontrar trabajo u acceder a otro programa que, aunque les resulte de mayor interés, no pueden solventar económicamente.

Public and Private in Transition: Debating Choices in Health Care Reforms in the Post-Communist Czech Republic

The paper examines a public discussion on health policy reforms in the Czech Republic between 2006 and 2008. After the fall of communism, the first period of transformation focused mostly on basic market oriented reforms such as setting a pluralistic insurance model, decentralizing through privatization and setting a public/private mix for the provision of health care. Although health care changed significantly in the two following decades, the biggest reform plan was proposed after the parliamentary elections in 2006 when the right-wing government prepared several new proposals aiming both at the privatization of large hospitals and health insurance funds and the cost containment of health care provision.

The reform was presented both as a way to save public funds and as an important step toward a health care system based on diversity and choices. The plan corresponded with a general shift towards a neoliberal paradigm in healthcare
focusing on consumer-oriented services accessed via the market and patients as self-responsible and rational actors in Central and Eastern Europe. While similar processes have attracted some sociological attention in the context of Anglo-Saxon and Western Europe, little has been said about the post-communist countries.

Using a discourse analysis of parliamentary speeches, TV debates, and media articles the paper examines how health consumers and boundaries between private and public in health care provision were constructed and negotiated. The paper describes the contradictory rhetorics of both enhancing choices and steering choices in the proposed policy programs. In 2006 the Czech public perceived those rhetorics. Health care is strongly considered by the Czech public to be a public good, which should be covered by the state. According to public opinion surveys, the public does not sympathize with market liberalism in the area of health care, even though it has accepted these principles on housing and employment.

Religions In Indonesian Public Sphere: Its Role and Relation With The State

Indonesian public sphere has not ever been secular. It becomes a space of religion for actualizing itself. The debates among Indonesian founding fathers and mothers during State Constitution drafting had established such account. The Islamic faction supported Syariah law for the new independent state; on the other hand the secular or the nationalist groups preferred secular law. The compromise was achieved in the form of neither secular nor Islamic state. Under Suharto’s dictatorship, Islamic state supporters and also pro-democratic exponents were all suppressed. The 1998 Reformation opened a space for all groups and movements that had been silenced before, to sound their voices. Since then Islamic groups seems to have louder voices than than nationalist and non-Muslim groups.

The consecration, 1998, of a new government in Indonesia officially recognized Confucianism as official religions of the State together with Islam, Protestant, Catholic, Buddhism and Hinduism. Furthermore, in the same year, the Government and the House of Representative stipulated the Law that acknowledged local belief adherents in state administrative system. It shows that religion plays significant role in Indonesian public sphere. It influences legal and political deliberation. The paper will discuss the existence and the role of religion in Indonesian public sphere. The politics of legal identity, in which religion has been used as identifying category of individual in public sphere, will be elaborated in expounding this account. Because of such politics, public sphere has been a contestation arena between official religions and other religions such local religions. In such space, religion has been constructed by dominant power, defining the existing power relations.

Sex According To Law: Socio Legal Study On Local Regulation Proscribing Prostitution In Indonesia

In Indonesia, prostitution is explicitly only proscribed in Local Regulation (Peraturan Daerah) level. It is prohibited in local level. In national level it is implicitly regulated. The Local Regulation proscribing prostitution is only post-Reformation 1998 phenomenon. It appears together with the fever of Syariah Local Regulation stipulation by the local Government that obtains its autonomy after the Reformation. Motivation for proposing such Regulation is blurred with political interest, financial motive and popularity gaining endeavor. Syariah Law becomes promising project gathering people’s sympathy and money. In national level there are Penal Code and Law on the Eradication of Human Trafficking. However the Laws are implicitly proscribed the prostitution. Hence it is only several local regions and not all regions have regulations that make prostitution illegal. This paper offers qualitative examination of the prohibition of prostitution in Indonesia. The Local Regulation that prohibits prostitution in Bantul Regency, Yogyakarta Province will be chosen as a case study. Applying socio legal approach the paper will offer analysis on Local Regulation level up to National level concerning the prohibition of prostitution and its implementation.

A Modeler’s Choices for Missing Not at Random Scenario

Missing data are a common problem in longitudinal studies. For example, respondents may refuse to participate after the first wave of data collection was completed. It is well known that restricting analysis to complete cases may produce biased and less efficient estimates. Generally, there are three main approaches for accounting missing data in longitudinal studies which include, weighting, imputation, and likelihood.

As a modeler, the key concern is whether the estimated parameters using any of the three approaches are different from their true values. If the missing cases do not have strong effect on the estimation, then it can be ignored. If the missing cases are not at random; however, modeling the missing and the responses as a joint distribution must be considered. However, testing the ignobility of missing data is difficult and complex. Therefore, the choice between using a missing-at-random (MAR) model and a missing-not-at-random (MNAR) model should be based on the results of sensitivity analysis. Although over the last decade a variety of joint models and methods to test sensitivity have been proposed, applications of such models in social science research are still uncommon, partially due to the computational complexity and technical difficulties of implementation in regular commercial packages such as SAS, and STATA.

In this study, taking advantage of newly updated procedure PROC MCMC in SAS, we implement two MNAR models—the selection model and the shared-parameter model with various indicators for sensitivity analysis. In addition, we also extend the two above models to nonlinear outcomes, such as Binary, Poisson, and zero-inflated Poisson. To evaluate the performance of our model, simulation studies are conducted with various setups. We also reanalyze the result published by Guo et al. on delinquency. The example provides a comprehensive modeling strategy for dealing with missing in longitudinal studies.
Aging bodies are often reduced to a single identity and not a power relation. We conclude by discussing the intersection of age relations, an inequality often ignored by gerontologists despite their interest in old age. Second, we discuss relations of sexuality, an inequality often discussed in relation to social control institutions expanding the social significance of public sphere participation. To accomplish our purpose, we mapped the national system of ombudsman into a framework that integrates Public Administration. We aimed at establishing an interdisciplinary dialogue between sociology, law, and philosophy. For that purpose, we chose Max Weber, Niklas Luhmann and Jürgen Habermas to better understand the relationship between the ombudsman and the public sphere. In Weber, we analyzed bureaucracy and patrimonial domination. Niklas Luhmann provides the foundation for understanding the social system. Habermas, in turn, offers arguments about the relationship between public sphere and participatory citizenship. To accomplish our purpose, we mapped the national system of ombudsman in Brazil; analyze statistical indicators and visited some Ombudsmen of Justice. The data collected in the Ombudsman indicate that they can enable a kind of social control and participate in the creation of the public sphere. We therefore discuss the potential of video and social networks in this process.

**Porceirização Trabalhista: La Cooperación En El Sistema Judicial**

Las sociedades complejas producen alto grado de litigiosidad. El aumento significativo de la contingencia y del riesgo genera situaciones no normalizadas, para las cuales el intérprete necesita de parámetros innovadores para toma de decisiones. En este contexto, se analiza el proceso de acercamiento entre los jueces y procuradores que trabajan en lo que Enoque Ribeiro dos Santos llama porceirización jurisdiccional trabajhista. En este sentido, la comunicación entre dos sistemas parciales (Poder Judicial y Ministerio Público) tiene el potencial de reducir la complejidad y formular juicios socialmente comprometidos. La reconstrucción de la manera de observar y reducir la complejidad del sistema de trabajo sigue la tendencia mundial en la búsqueda de soluciones jurídicas innovadoras. El juez y el procurador trabajan en nivel horizontal con un fuerte apoyo institucional. Dotados de un gran poder de acción, pueden contribuir para creación de fórmulas jurídicas innovadoras en sintonía con el movimiento de producción de reglas jurídicas transnacionales, ya que las normas de protección de la persona humana están fundamentadas en el sistema de protección internacional (O.N.U, OEA, Comunidad Europea, etc.). Considerando que el sistema de protección de los derechos humanos y fundamentales posee fundamentación transnacional, podemos intuir que la aproximación entre jueces y procuradores puede marcar el comienzo de una nueva fase de interpretación y aplicación de la norma jurídica, basada en una hermenéutica abierta a la orden jurídica transnacional. Con estas reflexiones, los que realizan nuestro proyecto de doctorado, pretendemos contribuir al debate sobre las acciones de cooperación institucional en conformidad con el derecho internacional centrado en la protección de la persona humana como un bien cosmopolita.

CALLENS, MARC* (Research Cntr of the Flemish Government, callensmarc@gmail.com)

**Long-Term Trends in Life Satisfaction in Europe Explained (1973-2012)**

In our earlier research based on Eurobarometer micro-data (1973-2012) for eight European countries/regions we have found that in Flanders net time trends are more important than life cycle or generation effects. The results for Flanders also seem to indicate (1) u-shaped life satisfaction levels in the long run and (2) short-term life satisfaction fluctuations being dependent on economic booms and busts. But these results are not representative for other regions/countries considered.

With each of the three temporal dimensions considered (trend, birth cohort and life cycle), one can associate different economical and/or sociological explanations. In this paper we focus on the explanation of long-term life satisfaction trends (Easterlin-paradox, absolute income hypothesis, social trust, ...). Across Europe.

We do so by enriching Eurobarometer micro-data (1973-2012) with appropriate macro-level time series such as unemployment rates, GDP, changes in survey methods, ... and applying Multilevel Hierarchical Age Period Cohort analysis techniques to explain the variances associated with the clustering of survey respondents by survey year and by region or country.

CALLEROS-RODRIGUEZ, HECTOR* (El Colegio de Tlaxcala, hcalleros.coltlax@gmail.com)

**Homo Sacer: The American Indian Experience in the United States of America**

This research aims to study the relationship between indigenous peoples and the State. By using the concept of homo sacer/ homines sacri (Giorgio Agamben 1998), the study interprets the relationship of the American Indians with the United States of America. Based on a revision of the literature on the American Indians, the study aims at highlighting how the struggles of indigenous peoples over territory and natural resources relate to rights recognized by the international human rights frameworks: the Inter-American Human Rights System and the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). In this way, the documented heritage of this study is that international human rights law upholds the rights of the American Indians. This argument is tested against three cases: the recognition and protection of indigenous land rights on the basis of traditional tenure (The Dann Sisters’ case before the Inter-American Commission on Human Rights), human rights violations (the case of Leonor Pelletier, activist of the American Indian Movement) and the issue of indigenous nationalism (the case of the Hawaiian sovereignty movement).
Swedish Retirement Migrants To Spain and Migrant Workers: Interlinked Migration Chains and Their Consequences To Work and Care In Ageing Europe

In Swedish public discourse, retirees born in the 1940s are considered a growing cohort of relatively wealthy consumers, with more cosmopolitan preferences and habits, and different demands compared to previous generations. Swedish retirees are part of a growing stream of Northern Europeans who migrate to Southern Europe to retire in the sun. This paper presents the preliminary results of an ongoing research project on the conditions of Swedish retiree migrants in Spain and of the workers who provide care and services for them.

We found that social networks, intermediaries and subcontractors are crucial to the organization of migration as well as for the provision of work and services in IRM destinations. In the private sector there are Spanish migrant workers, entrepreneurs and service providers offering the “trust” and “security” of a shared culture. In addition, there are Spanish workers hired by Swedish businesses as well as migrant workers from third countries. At the public and non-profit side, there are Spanish National Services, Town Council “foreign resident offices”, voluntary interpreters, NGOs and charities surrounding the Swedish IRMs. Thus, Swedish IRMs, with little knowledge of Spanish language and institutions, are strongly dependent on intermediaries.

Spaniards and third-country migrants that provide work and services for Swedish IRMs have little direct contact with Swedish IRMs, partly due to language issues, and partly due to not being hired directly by them. They normally occupy low skilled jobs that are not considered acceptable by Swedish workers and entrepreneurs in the area.

Exploring the relations between streams of migrants who meet in Spain, and their intermediaries, this project explores issues of mobility and the globalization of care/service, of crucial importance to welfare states and the future of work, elderly care and retirement conditions in Europe.

Reassembling The Cancer Clinic: Genomics, ‘Actionability’ and Emerging Diagnostic Configurations

In social studies of diagnosis, genomic approaches have often been conflated with risk-based genetic testing and discussed in the context of expectations about how they will transform healthy individuals into at-risk patients. The development of ‘high-throughput technologies’ in oncology, in particular of clinical sequencing programs, highlights a different side of genomic diagnosis in action, one that is focused on creating new plans of clinical action for cancer patients, rather than computing statistical risks for asymptomatic patients. The paper will analyze how genetic results in cancer diagnosis are made ‘actionable’, and in particular how they are satisfied with their job and labor activity? How do they feel about their family life? What about making their own decisions? and, more generally, How do they perceive their present and future life chances and life conditions?

The contribution is conceptually and methodologically guided by the notion of subjective well-being, which assumes that well-being depends not only on objective and material elements, but also on the assessment of them made by individuals over the base of their personal circumstances and experience. Accordingly, the interest topics will be analyzed and compared taking into account issues such as sex, age group, education, occupation, marital status and urban/rural residence. The data come from a survey applied in 2012 by the Mexican National Statistical Institute (INEGI) to a representative sample of individuals 18 years and over. In that survey, called Self-reported Welfare Module (BIARE) respondents were asked to evaluate by themselves different aspects of their own lives. For the purposes of this paper we focus on young aged 18-29 years.

CAMPBELL, IAIN* (RMIT University, iain.Campbell@rmit.edu.au)
Labour Regulation and Casual Work in Australia

This paper examines the history of ‘casual’ work in Australia from the nineteenth century to the present. It explores the way in which the consolidation of protective labour regulation in the twentieth century, structured around a norm of full-time ongoing work (SFR), still preserved space for a category of casual work.

This space has been enthusiastically colonised by employers in several industries, initially small employers in the low-wage service sector, but then more widely throughout the economy. This in turn functioned as a lever for broader demands for labour deregulation and increased labour flexibility. The result has been an expansion of precarious work in a diverse range of forms, within the framework of a markedly fragmented employment structure and a porous regulatory regime. The paper looks in particular at the implications of the expansion of casualised part-time work, based predominantly on the labour of students and married women in the retail sector. It examines employer labour-use practices and trade union responses, focusing on the period from the 1980s.
Inequality and Achievement in Higher Education

In Mexico, where poverty and inequality are characteristics, the equality is one of the most important problems speaking about results in higher education, even when has there been efforts in order to improving educational opportunities and equal access to school. Scholarships and the compulsory education from kindergarten to upper secondary education have been actions in order to remedy inequality access to higher education schools. However, personal effort, skills and abilities are considered like main factors as soon as the possibilities of access and retention in higher education compared with social and cultural background, because they are considered a more just form of selection by some people, in so far as they are as is based on examinations and tests that measure knowledge and personal skills. The idea of merit argues that the positions and social and economic rewards most are based on the qualities and individual qualifications, it’s mean that people with higher skills and abilities should get social positions of greater importance and prestige. Nonetheless, a school culture grounded in meritocracy contains a lot of problems, as has indicated by François Dubet.

The current Mexican government, like its predecessors, seems to be interested in implementing actions to move forward in equal opportunities of access to higher education, but the issue about of results is still pending. This paper asks about questions like: if should we opt for the quality or equity? Could they be compatible? Should we sacrifice quality for the sake of equity and the principle must apply the effort and merit although it reinforces inequality?

Class Differences in Graduation Rates in Selective and Non-Selective Universities in the UK

Rational choice scholars widely use Boudon’s (1974) distinction between primary and secondary effects to explain social class differences in educational attainment. Boudon (1998) posits that ‘secondary effects’ refer to the effect of social class on educational decisions, net of academic ability. On the other hand, scholars who study the impact of institutions on educational outcomes point out that institutional selectivity has a differential impact on students from different social-economic backgrounds. However, there is no clear consensus regarding the direction of these effects. Whereas some scholars predict lower 1st year dropping out of students from lower class backgrounds who attend highly selective institutions (Arkes 1999; Amo and Neathery 1999; Pell 2003; Deer 2005; Kieffer and Reimer 2008); others predict that the likelihood of graduating increases as the selectivity of the institution attended raises (Alon and Tienda 2005; Bowen and Box 1998). Using student-longitudinal data from the Higher Education Statistic Agency in the UK, I assess in this paper through multilevel and matching techniques, whether the likelihood of completing a degree for students from different institutional backgrounds increases as the selectivity of the institution rises. The findings reveal that students from lower class backgrounds who attend highly selective universities have higher chances of graduating than their counterparts who attend less selective universities. In addition, the results show the existence of class disparities among students of comparable academic ability at the most selective institutions. Among this group, we find those who support the mismatch hypothesis. These scholars claim that there is a mismatch between minority students’ academic preparation and the scholastic requirements of their institutions. Due to their lower academic credentials, students from minority groups have lower graduation rates than their counterparts with similar characteristics who attend less selective institutions.

Assessing Gender and Racial Bias in Sentencing in Rio De Janeiro

The paper will test the existence of racial and gender bias, and the possibility of an interaction between them, on criminal sentencing in Brazil, using a database of 19,176 prison sentences adjudicated in Rio de Janeiro between 1996 and 2006 for various types of crimes. The main dependent variable is sentence length and the effect of several individual and contextual variables will be controlled for. Among these, we can mention age of the offender at the time the crime was committed, number of previous prison sentences served, type of crime, whether or not the person was sentenced for a crime over the last 5 years (which determines the legal definition of reoffending in Brazilian legislation), educational attainment, marital status and whether or not the offender had a serious illness at the time of sentence. Another important factor to control for is whether or not the offender was caught in the act (in flagrante delicto), which is an important determinant of how the Brazilian criminal justice system proceeds.

In addition to that, we want to test whether severity of sentence varies across different courts and whether bias might be present in just some of them. In order to do that a crossed random effects model will be fitted to the data to allow for variation at both the court level and individual level.

Religion, Spirituality and Capital in Japan and Italy: The Pilgrimage To Ise and Crocifissa Di Bilic

Religion and spirituality are fully present in the modern world, existing side by side in different forms throughout the world. We could say that they constitute, in the words of the Sociologist – P. Bourdieu, a form of religious/cultural capital which gives a country and a community its identity.

This paper wishes to join in the debate as to what role religious/cultural capital can have in relation to inequality.

The authors, departing from the theoretical distinction between religion, religiosity and spirituality, wish to hypothesise that the religious pilgrimage is distinguished by its allowing social inequality within a community to be overcome by a serious analysis of the phenomenon.

This theme will be explored by reference to two empiric investigations carried out in Italy (the pilgrimage to the Crucifix of Belici in Sicily and to the Madonna of
Divine Love in Roma) and in Japan (the pilgrimage to Ise) which have been studied through comparative analysis.

The empirical data will be analysed and the two examples (Japanese and Italian), each totally different from the other, will be compared. The distance between them, geographically, is enormous – as are the social conditions: historical, cultural, religious, etc. However, notwithstanding these differences, the motivations, the states of mind and the spirituality (the religious capital), which drive the pilgrimages to set out on their journey, are essentially the same. Faith in itself is already reason enough to undertake this journey and to try to approach and to remain a sacred place.

Key-words: pilgrimage, inequality, religiosity/religion, capital

RC22-397.1

CANTA, Carmelina* (University Roma Tre Italy, canta@uniroma3.it)

Religion In Public Space: Laity and Religious Pluralism In Italy

The role of religion in the public sphere is growing in the last years (J. Habermas, J. Casanova, etc.). The face of religion in the public sphere (laity) in Italy is very complex. This paper wishes to analyse the conclusions of the research, carried out by C. Canta, which explored the various forms of Italian laity.

Laity in Italy is divided in different forms in relation to the migratory process, to the phenomenon of ‘de-secularisation’ and ‘post-secularisation’, the emergence of a new consciousness of citizenship, the phenomenon of democracy, the growth of cultural and religious pluralism and the construction of new ‘scenarios’ of cultural and religious pluralism in the social institutions.

The arguments about this theme in Italy are very lively and are connected to questions which are becoming ever more important in the public debate: every day there is a dialectic between believers and non-believers, between different churches and religious denominations and between science and faith. It continues between those who assign to the politician a role limited to dialogue and mediation and those who would want, instead, its presence in the ‘political sphere’, between those who are the spokesmen of the relational instance and those who, instead, propose a separatist and ‘ideological’ prospective.

The subjects of the research were the accredited representatives and protagonists of society: intellectual, politicians in the Italian Parliament, leaders of the religious communities in Italy and young people belonging to religious associations. Thus there are four social and different worlds which influence each other (not always directly and consciously) and which bring with them various instruments to form the common images of laity in its different concepts and in its many narrations.

Minimum Income Protection, Poverty Reduction and Social Security: Cracks in a Policy Paradigm

Poverty reduction rests on the mechanisms of horizontal and vertical solidarity and on prevention and repair of social risks. In this contribution, we argue that in contemporary welfare states the poverty-reducing capacity of existing social security systems perceives inherent limitations. Focusing on Belgium, we present and discuss empirical indications of a persistent (over a period of at least 30 years) decline in poverty reduction through social transfers, particularly among households who are highly dependent on such transfers. Firstly, we show that prevention and repair have failed to contribute to a reduction in the proportion of work-poor households who are highly dependent upon social security and face a high (rising even) poverty risk. Secondly, we find that the fragmentation of social rights – in terms of both ex-post poverty outcomes and ex-ante social stratification – horizontal redistributive mechanisms through risk pooling have become less obvious, especially in respect of unemployment. Thirdly, it appears that the mechanisms of vertical solidarity also face inherent limitations. In a final section we summarize some important research questions for the future and potentially worthwhile policy avenues to resolve the question of how social policymaking might succeed in the future where it has failed in the past.

The Rise Of Spiritual Nationalism Among Urban Elite Christians In Contemporary China

This paper explores the intersection of spiritual renewal and grassroots nationalism within contemporary Chinese Christianity through the case of Wenzhou “boss Christians”—an emerging group of Christian businessmen who have spearheaded the growth of independent churches in the coastal Wenzhou area.

Promoted by their success in the new entrepreneurial world, these elite male Christians strive to gain spiritual prestige and moral superiority in the Chinese church by employing a spiritual narrative of their post-Mao economic success and by articulating and spreading a new vision that they call “God’s China vision”. By elevating the status of Wenzhou city as a regional center of the world mission, they have started to fashion themselves as part of a new generation of charismatic urban church leaders. In active response to the Chinese state’s nationalist discourse of modernity, they are convinced that China will rise not only in the economic sphere but also in the spiritual realm. The paper highlights a grassroots project of spiritual nationalism and links it to a redemptive process in which elite Chinese Christians seek to address and overcome victimization and suffering afflicted by secular state modernity. It concludes that post-Mao Christian development has come to be closely connected to national memories and nationalist imagination, countering the Chinese Communist insistence on secular nationalism.

Latino or Native American?: New Trends in Migration and Identity Formation in Native Americans from South of the Border

This paper deals with a relatively recent phenomenon in American society: the immigration of indigenous peoples from South of the Border and their opting for a new identity in the receiving country. That is why the title of our paper is Latino or Native American? Those are two identity options that these new arrivals have and that we will be exploring. Moreover, this phenomenon is also affecting the traditional view of Native American identity in the US, since in the past decades these new arrivals from South America and the Caribbean have been central in the growth both in the numbers of the Native American category and in the broadening of ideological/cultural landscape. We will focus mostly on research done in New Bedford, MA on the Maya Kiche community, which began to arrive in the United States in the late 1980’s, at the height of a violent confrontation in Guatemala between an increasingly militarized state and predominantly Mayan guerrillas and civilians. But we will also touch briefly upon other groups that are arriving in the US from the south, such as Nahuahtls, Garífunas, Mixtecos, and Aimaras, among others.

Performance As Resistance: The Taino Show

This presentation will show footage and analyze a ceremony organized to report on the results of mitochondrial DNA analysis to determine Taino (original inhabitants of Puerto Rico) ancestry on the population of Vieques, Puerto Rico in June 2012. Using a set of different techniques, the organizers, participants and the public performed the ‘Taino Show’: a game-show-like ceremony that served to resist imposed notions of identity, to re-imagine and invent traditions (Hobsbawm, 1983) and to assign a new racial hierarchy. The ‘Taino Show’ consisted of four different sections which will be analyzed and coded: (i) the selling of Taino artifacts; (ii) a lecture on Taino history; (iii) a game-like performance, with the use of suspense, audience interaction where contestants ‘competed’ for identity for and were assigned their new identities; (iv) a final prayer, bringing up issues of language reconstruction and the blending in of Christian tradition. Drawing from literature on the creation of performance as a political act of resistance (DeBord, 1959) and the invention of tradition (Hobsbawm, 1983), this paper will shed light on the new ways disenfranchised members of society attempt to contest and create new identities.

Mining and Protestation in Africa

Mining industries are wide spreading in Africa: South Africa but also in Mali, Burkina Faso, Guinea, Burundi, Democratic Republic of Congo. The governments, which rely more and more on these industries for public resources, largely support this mining economy. However, opinion at a grass roots level is quite different. Sub-Saharan Africa is becoming the stage of numerous contentious actions against mining industry. Markana is one of the most well known recent mining protest but it could be seen as a “tree hiding the forest”. For example, peasants are protesting in Burkina Faso because they have been expelled from their lands without any gratification to enable mining industries to prospect. Workers from Mali are protesting due to very bad work conditions they have to experiment in mines. Inhabitants in Zambia have set up a judicial action against an international company because of harsh pollution and polluted water.

The mining issue is of high relevance in Africa today. It is related to work, land issues, environment, neocolonialism, neoliberalism, transnational economy and strength of national state. This issue is producing new social movements, is fostering spontaneous collective actions and nourishing contentious politics and popular unrest of first interest. This paper intends to focus on mining and popular unrest in sub-Saharan Africa. Based on a field work in Burkina Faso it will also used broad screening of African unrest related to mining. This communication will test the possibility of a typology, but moreover it will analyze the nature of this unrest. What does it say on the path and ways undertaken by protestation throughout the continent today? Are we facing a new way to mobilise the “weapons of the weak” (J. Scott) or is it a mighty movement of contestation of a political and economic order?

Coexistence in Multicultural Japan: The Livelihoods and Trajectories of Africans in Tokyo

For citizens of the Tokyo metropolis, the past three decades have brought significant change to the economy and ethnic composition of their city. Initially attracted by Japan’s economic success, thousands of foreigners have since migrated to Japan and have made Tokyo their permanent home. Of these immensely diverse groups of foreigners, sub-Saharan Africans and their children, suiting to the Japanese economy and society have remained largely overlooked and unrecognized in most areas of discourse. Africans work in diverse areas, niches, and strata within the Japanese labor market and their presence is crucial for sustaining the existing infrastructure within the greater Tokyo area. This presentation will examine the social and economic roles of the African population in Tokyo and will explain how their presence has had significant ramifications for both the city of Tokyo and Japanese society as a whole. It will discuss the diverse range of livelihoods of Africans in Tokyo, the community’s demographic composition, struggles with equality and integration, and also the trajectories and future possibilities for this community and their role in the Tokyo labor market and overall cultural vitality of the city.

Health Care Access Inequalities Among Pregnant HIV Positive Women

The aim of this paper is to analyse the production of some health care inequalities and the capacity of the health system to mitigate them.

In order to do so, it focuses upon the unequal social relations that decrease the adherence of some pregnant HIV women to antiretroviral medication.

This paper reveals that, although the French social system allows all pregnant HIV positive women to get free antiretroviral medication, the adherence of many of these women is far from optimal, leading to a relatively high rate of infection among their new-borns. These women suffer indeed from a diversity of unequal relations that make it difficult for them to achieve an optimal adherence to medication. Most of these women are altogether:

- Immigrants without a residence permit: they are afraid of attending institutional health care centers because of the risk of permit control
- Struggling with harsh living conditions that make medication not a priority
- Concerned with the stigmatisation of their disease: they must hide infection, pills and hospital follow-up from sexual partners (from whom they are economically dependent) and people around (to avoid social isolation)
- Not familiar with biomedical conceptions of HIV infection and treatment: some misunderstand the principles of biomedical treatment

The paper presents health care professionals’ tips to help women with each of these difficulties and then improve their adherence. It suggests finally that professionals also enhance the self-dignity of the women when they offer them the possibility to give life and to actively preserve their child from prenatal infection (thanks to their adherence to medication).

How They Rule Latin America? Comparative Analysis of Corporate Interlock Networks in Several Latin American Countries

Research on corporate interlock networks around the world has revealed different network configurations across nations: cohesive networks in e.g., Italy and France, and dispersed networks in e.g., United Kingdom and Japan. Studies carried out showed that cohesive and dispersed networks are produced by different institutional contexts, which correspond to varieties of capitalism (Windolf 2002; van Veen and Kratzer 2011; Cárdenas 2012). However, this hypothesis seems not to fit in Latin America since institutional context (or capitalism) is similar (Phillips, 2004; Schneider, 2009), but corporate interlock networks differ between countries, e.g., cohesive network in Chile and dispersed in Argentina (Paredes 2011; Salva) and Uch (2012). The present research analyze, compare and explain the corporate interlock networks across Latin American economies in order to comprehend why corporate elites are interconnected by cohesive networks in some countries, and by dispersed networks in others. Research on corporate networks in Latin American has studied national economy and systemic cross-national analysis is lacking in Latin America. Results obtained are also compared to previous research on corporate networks in developed countries. This paper contributes to theoretical debates on: corporate elite cohesion and economic organization (or variety of capitalism) in Latin America. At the methodological level, project social network analysis to examine network configuration, and fuzzy set qualitative comparative analysis, QAP regression and structural equation models to analyze the factors that influence network configuration. Findings reveal the impact of family ownership, protectionist laws, revolving doors and business group structures on corporate networks.

Democracy, Social Justice and Education

There is general agreement that democracy is, or should be, an important component to the educational project. However, it is difficult to ascertain what democracy is, and how it should be understood, developed, cultivated and implemented. The research in the paper takes the posture that how educators experience democracy themselves, especially in and through education, may have a significant impact on how they actually do democracy in schools. Based on studies of teacher-education students in Canada (English- and French-language samples), the USA and Australia, the presenters highlight the potential for transformative, critical, democratic educational change. We argue that extending critical engagement toward thicker democracy is still a possibility, despite the strictures of neoliberalism, globalization and colonization, which are formidable obstacles. This paper: a) discusses the meaning of democracy in and through education; b) examines how teacher-education students experience democracy in education; c) interrogates the potential for democracy in and through education; d) develops models and analysis to highlight thicker forms of democracy that are informed by critically-engaged and epistemologically diverse concerns. The same instrument and methodology were employed by the researchers, seeking to understand how participants experienced democracy during their own educational experiences, how they understand democracy at present, and how they feel that democratic education should be cultivated within students and schools. The instrument includes open- and closed-ended questions, with the analysis having qualitative/narrative and quantitative components. The findings include an often extremely thin democratic educational experience for teacher-education students, and a relatively narrow definition of democracy as well as serious concerns related to social justice, addressing controversial issues, and the ability to align democratic educational work with educational reforms that seem to favour neoliberal objectives. The paper engages with sociological theory and concepts to further tease out the potential for education for (thicker and more critical) democracy.

“Du Bois’ the Souls Black Folk: A Retrospective Classic?”

Nowadays a sociological classic, W.E.B. Du Bois’ 1903 The Souls of Black Folk, was virtually absent from sociology reading lists, let alone theoretical debates, until very late into the twentieth century. By that time, however, cultural studies on race and ethnicity had already become a well-established domain, with its own theoretical approaches, and a wealth of empirical research.

Yet this situation was soon to suffer a dramatic change. Between 1990 and early 2000, The Souls earns its place in the canon, virtually all major race and ethnicity textbooks identifying it as one its founding texts. This paper is a first attempt at tackling this puzzle. Against prevailing theories of disciplinary canonization, which suggest books to inspire practitioners in a certain direction of research, the dissemination and subsequent canonization of The Souls occurs decades after the emergence and consolidation of cultural studies on race and ethnicity. Specifically, we ask: What does the history of this book tell us about the legitimizing role classical books perform in disciplines like sociology, even if retrospectively only? What do we gain from analyzing The Souls not only as a text with certain intrinsic qualities, but also as a book whose materiality includes the circumstances of its production and commercial edition in the turn of the century America, the geography of its circulation (namely, its translations and re-editions) and its material forms? Who were the social agents involved in this process—from commercial editors and professional translators to academic commentators? What motivated them? How is the reading of Du Bois by major contemporary race theorists, such as Patricia Collins or H. Winant, shaped by the history of this particular book? More generally, what are the implications of this genealogical exercise for the ways in which teaching and research are undertaken in the social sciences today?

Gendered Division of Labour and Perceived Fairness

Perceived fairness and the gendered division of labour

Research on perceived fairness about the gendered division of labour often showed that equity does not coincide with equality for most couples. Evaluations of justice depend indeed on various factors. According to social exchange theorists, perceived fairness arises when partners’ relative contributions to paid and unpaid labour balance each other, regardless who does what and how the balance is achieved. According to the social-psychological framework elaborated by Thompson and Major, the sense of fairness depends, among other factors, on comparison referents, i.e. the standards against which the division of labour is evaluated. Finally, gender ideology perspective emphasizes the role of gendered social norms in shaping ideas about what is to be considered as just in the division of labour.

In this communication we investigate three aspects of the relationship between perceived fairness and the gendered division of labour: 1) how paid work, unpaid work and money can be exchanged in order to have a just division of domestic labour; 2) who and at what conditions is entitled to ask for a re-negotiation of the division of domestic labour; 3) the effect of interpersonal comparisons in changing a division of domestic labour that is considered unjust by one of the partners.

Studying these topics with standard survey data is problematic because it is difficult to disentangle the effects of various factors that are usually strongly interconnected. Further, there is also a problem of reverse causality between judgments and behaviours. Therefore we adopted an experimental approach implementing a vignette treatment within an online survey of dual-earner couples with children. In depth interviews were conducted as well, in order to verify the adducted arguments.

Municipals Government and Participation in Cuba: A Critical Review

Ante la necesidad de molivizar dinámicas gradualmente participativas en los gobiernos municipales cubanos, sobre la base de una construcción permanente del Socialismo, este material tiene el objetivo de analizar cómo estos gobiernos se configuran de manera participativa, desde una perspectiva estructural, subjetiva y política.

De manera general, ofrecemos elementos que ayudan a comprender las lógicas que en materia de participación hacen parte de este estrato gubernamental en el país, contribuyendo a repensarlas con vistas a una transformación, por lo menos legislativa, que impulse las dinámicas antes mencionadas.

Este análisis, está basado en la aplicación de métodos cualitativos (estudio de caso único, análisis de contenido y entrevista en profundidad y observación no participante), mediante los cuales se pudo concluir que, estructuralmente, los gobiernos de los municipios cubanos se configuran a partir de un enfoque de participación esencialmente pasivo; lo cual, en el caso estudiado, coincide con la dimensión práctica de las formas de gestión gubernamental a nivel local, así como con los componentes subjetivos construidos por un gran número de actores en torno al funcionamiento de estas entidades.

South-South Cooperation Under Analysis: Toward a New Pattern of International Relations?

If till the mid 1990s, the North-South International Cooperation (NSIC) model, based on an idealized notion of progress and legitimized by the incontestable technical superiority of Central countries, remained hegemonic, after the end of the Cold War it would change. The increasing financial pressures over the traditional donors, their failure to assure the development of the underdeveloped countries associated to the consolidation of the New Economically Emerging Countries (NEEC), such as Brazil, India, Russia, China and South Africa, were factors that contributed to the consolidation of a South-South International Cooperation (SSIC) model. Characterized by: noninterference in internal affairs; respect for national sovereignty; absence of externally imposed conditionality on the country for receiving aid, as well as respect for its historical and cultural singularities; the SSIC modality, whose origins lies in the Bandung Conference (1955) and to the Buenos Aires Plan of Action (1978), is gaining space between the NEEC also as a foreign policy strategy to help them to gain political status in the international scene. But despite being presented as a “benefit”, contention persists regarding the symmetry in the relations between these new donors and those receiving aid.

The present article examines to which extent the implementation of a Technical Cooperation Agreement established between Brazil, an emerging economic power, and Cape Verde, deemed as a peripheral country, in order to set up a Masters Program of Public Administration, in this latter country, has met the theoretical guidelines assigned to the South-South modality of International Cooperation.

A Comparative Policy Analysis of Private Financing for Diagnostic Services in 8 OECD Countries Between 1990 and 2010

Objectives
1. Analyze the interplay between public and private health insurance regulations for financing diagnostic services across 8 OECD countries between 1990 and 2010.
2. Assess how varying roles and regulatory regimes for private health insurance (PHI) potentially affect health inequalities.

Methods
Policy data on the financing and provision of diagnostic services in Australia, Canada, England, Finland, France, Germany, Italy, and Portugal were extracted from the Health Insurance Access Database (HIAD), a dataset of policy indicators from 8 OECD countries. The HIAD data were collected through focused literature reviews of legislative and academic sources. Data quality was verified using a multi-stage content review procedure. Key policy indicators of the legality and regulation, a repertoire of alternative knowledge concomitantly with knowledge-based transformation. The eight modes are not sealed off from each other, but overlap and interpenetrate. Indeed, effective alt KPM typically means that a group combines various facets in a coherent counter-hegemonic project. The paper offers a comparison of the groups, highlighting the main modes of cognitive praxis each employs. Amid the diversity in KPM practices and projects, the comparison evidences traversings of a double dialectic in the cognitive praxis of alt policy groups: a dialectic of theory and practice, and one of dialogue. Land Rights and the Place of Social Housing in the City: The Experience of São Paulo, Brazil

In the 1980s, following the demands of social movements for urban reform in Brazilian cities, and within a context of a redemocratization of Brazilian Politics, a special land zoning law was implemented by a handful of municipalities as a strategy to reserve vacant urban areas for social housing production and to urbanize precarious settlements. These areas were called Special Social Interest Zones (ZEIS, in Portuguese). In 2001, the Federal Government recognized this social zoning as an official tool to be used by municipalities in their Master Plans and Land Use Acts, and it has since been practiced nationwide. With more than 890 thousand households living under subpar conditions, needing housing improvements or housing provision, the municipality of São Paulo started using this tool in its social housing and urban development policies in 2002, including it in its Master Plan. After a decade, years of housing boom, the issue has been continually criticized by real estate developers, landlords and conservative politicians, as well as used as a bargaining chip at the municipal Parliament. Meanwhile, it has become a rallying cry for social movements. Thus, the use of this tool has been subjected to a controversial debate around its effectiveness on adequate private or public social housing production. Examining the city of São Paulo, this paper will discuss how this land policy tool has an impact on social housing policy today, discussing the role of the State, of private housing developers and of social movements. The importance of housing finance mechanisms will also be discussed, as well as the limits of this strategy as a way to assure a place for social housing in city limits, to avoid the gentrification of urban areas, and to assure the right to adequate social housing and to the city for millions of citizens.

LAVAU, STEPHANIE (Plymouth University)

*I Don’t Watch the News Anymore and I Haven’t Died*: Ignorance As Strategic Dealing in Dealing with Zoonotic Disease Risks

In our research on the interface between animal health and public health, we have noted that lay people often strategically invoke notions of ignorance in positioning their own knowledge in relation to scientific, public health and media understandings of zoonotic disease risks. The period in which we conducted ten focus groups with UK citizens (2011-2012) was marked by a number of zoonotic disease events – past, present and future. These included: a recent swine flu epidemic, which prompted a large scale public health campaign; on-going concerns about future outbreaks of avian flu; a recent outbreak of E.coli amongst children visiting a petting zoo; and a number of incidents of foodborne diseases, the most notable being the E.coli contamination of beanshoots in Germany.

While referring to these events, respondents marshalled distinct discourses of ignorance and non-knowledge as an active choice and strategic resource, rather than a mere lack of understanding arising from passivity. In this paper we explore several forms of such expressions of ignorance, including: the intentional bracketing out of unknowns (e.g. as an ‘ignorance is bliss’ strategy for avoiding anxiety); awareness of lack of information that was considered unimportant (e.g. as a strategy for distributing attention to other concerns); and dynamic mindfulness that further knowledge may be dangerous (e.g. both because knowledge may make daily decision making impossible and as a strategy for living with the perceived inevitability of new, emergent diseases).
portance of gender identities and their intersection with social class and country of origin.

To do this, I adopt a three-fold approach, linking the materialist feminism to the life course perspective by using an intersectional approach. My hypothesis is that the configuration of social class and country of origin systems modifies pupils’ attachment to gender identities, and creates a new set of rules. These in turn define which teenagers may target gender-atypical professions.

I use data from a survey carried out in Switzerland among a sample of more than 3300 pupils between the ages of 13 and 15.

Social Positions, Inequality and the Relation with the Future in Lisbon (Portugal)

Social positions, inequality and the relation with the future in Lisbon (Portugal)

Despite the spread of the belief that man can control nature and its own life, and the development of rational action, many of our collective future was minimal for long time. Ecological movements and institutions, and the social and cultural struggle for sustainability changed this picture. Nevertheless, these trends remain fragile, lacking connection to the population in general – after all, the necessity for its maintenance. It’s, then, relevant to ask: are people worried about the future of life on earth and climate change, and attitudes towards the next generations.

In this paper we will present the first results of this survey.

Exploring the Construction of Moroccan Emigrants’ Cultural Identity through Their Social Interaction with LOCAL People in Spain

Moroccan emigrants in Spain can be considered as a stigmatized institutional category. From a social constructionist perspective, we assume that all social categories are constructed and negotiated in interaction. In this social context, the purpose of this study consists of exploring the cultural identity of Moroccan emigrants living in Spain. In particular, it aims to examine the content of their cultural identity as expressed by them in their interactions with local people of Spain, and also to analyse the social processes underlying the construction of their cultural identities.

To fulfil these aims we use the Social Identity Approach (Haslam, 2004), which has been traditionally applied to a broad array of topics that explore social categories and associated phenomena such as prejudice, stereotyping, negotiation and language use.

We in-depth interviewed 20 Moroccan emigrants living in Spain using purposeful sampling and trying to diversify at most our sample by gender, age, education and socio-economic status. Our qualitative analysis highlights a strong cultural identity in Moroccan emigrants and sense of belonging to their country and culture of origin. However, the characteristics that they most emphasise as main attributes of the social category “being Moroccan” are very heterogeneous. This heterogeneity is explained by their social interactions, in particular by their perceptions of “the other” Spanish local people that provoke the saline of certain attributes of their cultural identity rather than others. Some important theoretical and practical implications arise from these findings.

CASEY, CATHERINE* (University of Leicester, c.casey@leicester.ac.uk)

More Decent Work: Radical Participation In Organizational Life

he challenges facing workers in much of the world include new forms of uncertainty, heightened competitiveness, and spectres of austerity. These global challenges stimulate new analytical approaches, re-theorizations, and a search for innovative socio-cultural visions, and practices, for work and workers. The International Labour Organization (ILO) promotion since the turn of the 20th century of a core agenda of “Decent Work” gives international voice to aspirations for just economies and fair standards of work for all workers. Its pursuit of “decent and productive work, in conditions of freedom, equity, security and human dignity” have enduring relevance to virtually all dimensions of human productive endeavour and in diverse economic and national contexts. Yet advances toward the accomplishment of decent work continue to be slow, erratic and, moreover, frequently coercively opposed.

Amid readily visible economic concerns there arise further questions in regard to quality of work life and equitable work relations. Research reports deterioration of cultural qualities – of non-wage aspects of work in many sectors including professional occupations in developed countries. In response, many call for a renewal of business and organizational ethics and a revitalization of employee participation in organizational life and in substantive decision-making. This paper adds to discussions of substantive worker participation and organizational democracy. Crucially, it proposes that deep obstructions to the development of decent work and substantive, collaborative participation may lie in more than economic injustice and material inequalities. Drawing on Aristotelian, phenomenological and feminist philosophies it sketches a radical, extra-materialist, inter-subjective conception of quality of work and participation. That conception poses a substantive challenge to policy development and responsibilities for the qualitative organization and practices of work and workplace life.

Trade Union Interests In Corporate Governance In Anglo-American Firms

Abstract

The participation of labour in corporate governance is institutionalized in a small number of countries, especially in European Union states, and variably constrained or systematically precluded everywhere else. Notably, the dominant model of corporate governance in Anglo-American contexts in recent decades exhibits a high prioritization of shareholder interest maximization. Much Anglophone business, economics, corporate and labour law literatures traditionally as-
sume that workers do not have, or warrant, a voice in governance. Workers' voice, where acknowledged, is expected to be expressed at the level of workplace deci-
sions and employment relations, or through their shareholding interests. That assumed normative exclusion of workers' representation from high levels of firm decision-making has powerfully subordinated the valuation of workers' interests and their political expression. In Anglo-American contexts, finance capitalism has prevailed in corporate governance decision-making. However, since the financial crisis of 2008 and its aftermath the centrality of finance and shareholder sover-
ey is now called into new question. Corporate governance is being brought into a political economy agenda of interest and representation.

This paper addresses critical questions in regard to workers' and trade unions' interest in, and voice aspirations toward, corporate governance and high-order decision making in Anglophone contexts. The paper is part of a larger compara-
tive empirical study of corporate governance in four Anglophone countries (Unit-
ed Kingdom, United States of America, Australia and New Zealand) conducted 2012 - 2014. The paper specifically addresses Anglophone trade unions' interest in corporate governance. It discusses findings that indicate significant and various interests among national trade union bodies. It finds that lack of salience or lack of effectiveness of labour interest expression in corporate governance cannot be assumed as lack of interest in participation across Anglophone countries.

Strategic Models and the Response of Government Agencies to Extreme Emergencies

Government agencies that are tasked with responding to extreme emergen-
cies are constantly battling with the tensions and trade-offs of centralized control versus decentralized decision-making. Many of today's emergency management organizations are a product of World War II and as such they have a military legacy which continues to dominate day-to-day operations well after their migration to the civil sphere has been effected. Since the post-War years, these organizations have grown in size and adopted models which were developed in business schools for the needs of private industry. Driven by the growth of managerialism, these models attend to very different organizational realities from those of the military and of civil service. This is over and above the reduction of specificity within management and organizational theories that already characterizes them.

In this paper, we focus on strategy and address how military and strategic management models organize the response of government agencies to extreme emergencies whilst also failing to address their core organizational problems. We are interested in the relatively recent creation of centralized organizations like the US Federal Emergency Management Agency (FEMA) as well as the practical life of strategic organization in front-line emergency management. To address how strategic models lacking specificity take on specificity in a practical domain of organization other than the one for which they were developed, we look at changes made to emergency management in the Australian State of Victoria after the catastrophic 2009 'Black Saturday' bushfires. In the public inquiry into the di-
saster, centralization became an important antidote for previous shortcomings in 'command, control and coordination', eventually leading to the creation of a State Control Centre (SCC). Yet, the specificities of organizing during extreme emergen-
cies continue to demand decentralized decision-making.

Empowerment and the Role of Space in Homeless Activism in Contemporary Japan

Since the turn of the millennium authorities in Japan have conducted an in-
creasingly intensive campaign to evict homeless people from parks and riv-
erbanks. In response, activists and homeless people have demanded the right for the homeless to live in their encampments, ‘no evictions’, without fear of evi-
cion. Using the struggles over the encampments in the Shinjuku underground passages in Tokyo in the mid-90s, Osaka’s Nagai Park in 2007 and Tokyo’s Mi-
yashita Park in 2010 as examples, I argue that homeless activism offers important insights into how activists use space in the course of a political struggle and how this usage affects transformations in the notion of publicness. Paying atten-
tion to how activists use space helps us to see that activism is not always oriented to participation in the public sphere. To bring this out I focus on three notions of space towards which activists in the homeless movement have been oriented: of-
cial public space, counter-space and no-man’s-land. Officially recognized public space helps political challengers to project messages to a wider public but also imposes limits on the radicalness of demands and conduct. Counter-spaces are spaces for the provocative visualization of behaviour that is subject to sanctions in mainstream public areas. No-man’s-lands permit behaviour considered contrary to mainstream norms, but unlike counter-spaces they are not created in order to challenge these norms publicly; instead they thrive on official neglect. I argue that each of these conceptions of space are needed to understand the development and the dynamics of homeless activism. I also argue that each of them has polit-
ical import. In particular, access to alternative arenas such as counter-spaces or no-man’s-lands has been important in processes of empowerment – the strength-
ening of people’s self-confidence as political actors.

Researching Intersectional Identities and Belonging through a Geometric Approach

Researching the construction of skin colour declarations in Brazil, both skin colour and social class were apprehended during my data collection in 2006-2007. Several interviewees answered skin colour issues through social class, and several answered social class issues through skin colour too. My attempt to articulate both lead finally to offer a theoretical tool to approach intersectional identities in Brazil in terms of race/skin colour, socioeconomic position/social class, and sex/ gender. Each dimension is described through a triangle; their articulation lead to a pyramid. Intersectional identities are analysed inside this geometric figure, through this “geometric” approach. First, this geometric approach is described. Second, l critically discuss this theoretical tool in order to identify to which extent it could bring intersectional identities and belonging in general. To support this critical discussion, I use the example of the expression of identities and belonging in the specific context of sustainable housing.

Sociological Studies of Language When Language Escapes: Some Challenges?

This paper deals with inequalities regarding from whom discourses are consid-
ered and analysed. Notably, the aim of this paper is to critically discuss to which extent these inequalities might be methodological and theoretical challenges for sociological studies of language. The overall context is a research on sustainable housing, more specifically about how people define “sustainable housing”, and to put the collected meanings into perspective regarding the established institution-
al language. Regarding the challenges that came across, I moved the interviews forward to focus on these challenges themselves.

This paper is based on two specific contexts, where the challenges emerged. The first is related to adults who suffer from heavy epilepsy and mental disor-
ders, with an extended minority status. Discourses exist about them but less from them. I wonder how to collect their discourses, and then analyse them as a sociological material. I also wonder how to consider the boundary line between sociology of language, psychology, and speech therapy. The second context con-
sists of an organization that combats poverty, including homeless situations and inadequate housing. On one hand, the participants directly challenged the sociol-
gist regarding the use of their discourse as a sociological material. On the other hand, the participants clearly underlined that they want the sociologist to focus on the smallest common denominator they choose for their communication, i.e. without taking into account the individual variability of their discourses. I wonder how to deal with this mise en abyme of language under a sociological perspective.

CASTAÑEDA SABIDO, FERNANDO* (UNAM, sabido@unam.mx)

Is It Possible to Have a NON Modern Sociology?

IS IT POSSIBLE TO HAVE A NON MODERN SOCIOLOGY?

From its origin sociology has been well aware that it has a constitutive paradox. Its main object is modern society, but at the same time sociology is the product of modern society. There has been given many solutions to this problem, as many as sociological theories have been developed.

This paradox goes side by side with another paradox, modern rationality al-
ways implies its counterpart, irrationality. This idea is also and old argument as well, from romanticism to system theory.

Both paradoxes have had solutions in the way they interpret modern society. Although they are not very successful.

The developments of sociology in postcolonial societies, have made their in-
terpretation of this paradox trying to reinterpret this history.

But I dont think they have a solution. The paper is aim at reconstruct some of the arguments of these paradoxes and to analyse how is reinterpreted by postcolo-
nial sociology.
CASTAÑOS, FERNANDO* (Universidad Nacional Autónoma de México, zuno@unam.mx)

(De)Coupled Identities: Some Theoretical Reflections and a Few Empirical Observations on Exclusion and Inclusion Discourses

Upholding (or opposing) power relationships implied by event models used in a discourse and accepting (or rejecting) social categorizations employed in referential expressions therein are two potentially linked language games. Validating (or overcoming) the communicative roles presupposed by the discourse is a third one.

Although, in each game, player and move definitions can be set in the game's own terms, and thus form an autonomous system, they can also be construed as mappings of the other games' players and moves, and they are often so conceived. That is the art of the games, to redraw their own domains and to project their own range of action. For such reasons, coupled player dichotomies often function as subjection or exclusion mechanisms, and decoupling them can contribute to equalize conditions.

Analyses of moves that have coupled or decoupled gender or ethnic identity dichotomies with other categorizations in Mexico's recent history support the view outlined above, which draws upon findings from various fields, mainly cultural sociology and discourse science. The main corpus consists of public interventions by and about actors of cases that have made the country face contradictions between different laws, between law and tradition or between law and aspiration (such as the revoked and the effective elections of Eufrosina Cruz).

The moves include subsuming one of the coupled dichotomies (as a whole) under a new superordinate or subdividing one of its poles into new hyponyms, which make the dichotomy less relevant. They also comprise ironically denouncing the consequences of the opposition or simply deconstructing it by introducing co-hyponyms or clines.

Comments on the argumentative and rhetorical resources used to effect the moves lead to identification of key problems in current conceptions of discourse and context interaction.

CASTAÑOS, FERNANDO* (Universidad Nacional Autónoma de México, zuno@unam.mx)

(De)Dichotomizing Speech Situations, Semantic Fields and Power Relations: Some Theoretical Reflections and a Few Empirical Observations

Given that a discourse presents a configuration of the possible, the valid and the desirable, accepting or questioning the communicative roles it presupposes often becomes a terrain of dispute. Subscribing production and reception conditions and to one or the other role in the game of approving the discourse. The same is true of the semantic relations implied in labels of social agents the discourse refers to. Who is seen to do what is modeled and how they are categorized entail the aspiration (such as the revoked and the effective elections of Eufrosina Cruz).

The moves include subsuming one of the coupled dichotomies (as a whole) under a new superordinate or subdividing one of its poles into new hyponyms, which make the dichotomy less relevant. They also comprise ironically denouncing the consequences of the opposition or simply deconstructing it by introducing co-hyponyms or clines.

Comments on the argumentative and rhetorical resources used to effect the moves lead to identification of key problems in current conceptions of discourse and context interaction.

Transition Town Initiatives. Possible Pathways Towards Urban Sustainability?

Topic of this contribution is Transition Towns movement as an example of a possible top-down and bottom-up integration in creating sustainable development at the urban level.

Transition Towns initiatives are experiments in the re-location of resources on a micro scale. The goal of Transition Towns is to build resilient communities putting in place local practices aimed at environmental, food and energy sustainability, i.e. growing vegetables in urban context, self-production of energy and the use of complementary local currency. At the same time, the movement promotes a moral and cultural renewal of society, unfettered by promises of continued growth. Following the theories of Beck and Giddens, Transition Town movement sets up as a new sub-political actor (it was born between 2005 and 2007 in the UK and now has more than thousands of initiatives around the world), a risk society's offshoot that build its own identity and goals from two global alarms: climate change and peak oil. In this sense, the Transition Towns can be taken as
Los Significados De Consumo: Un Estudio Entre Los Grupos De Bajos Ingresos En La Región Metropolitana De São Paulo, Brasil

Parte superior do formulário

La Comunicación tiene como objetivo presentar una reflexión sobre el impacto del acceso al consumo sobre la sensibilidad de una nueva clase de consumidores, de reciente creación en Brasil. Suponiendo que el consumo popular asume diferentes significados, de búsqueda a menudo distante de distinción, este proyecto tiene como objetivo desentrañar ellos, centrándose en los grupos de bajos ingresos. La asociación entre el consumo y las clases inferiores no fue sino hasta hace muy poco tiempo, algo muy común en las ciencias sociales, ya que no se prevé la posibilidad de que los trabajadores de bajos ingresos a comprar otros productos, además de las llamadas necesidades. Dos cambios que contribuyen a esta situación la asociación para ser colocado en la agenda: un cambio en el debate sobre el consumo que se apartó de las explicaciones moralistas y trató de construir nuevas lecturas para la interpretación del fenómeno, libre de dualidad y polarización. (Appadurai, 2008; DOUGLAS y IRISHWOOD, 2004) y los cambios socioeconómicos derivados de las políticas de implementadas distribución del ingreso en el país, sin duda no implica el surgimiento de una “nueva clase media”, teniendo en cuenta que la clase no es una variable sólo es económica, ya que implica valores (etos) y prácticas (formas de utilización), pero un número de personas que llegaron a haber iluminado los bienes de consumo considerados “no esenciales”, que hasta entonces se encontraban excluidos de este mercado. A investigación tiene como objetivo contribuir a la cartografía y la comprensión de los diferentes significados que se dan en este nuevo consumo y con respecto a esta nueva clase consumidores. Por lo tanto, elegimos como residentes universo empírico en un barrio en el margen situado en Santo André, grande de São Paulo.

Doing Research on the Brazilian Military: The Experience of Social Scientists

During the 1970s and 1980s, a group of Brazilian social scientists dedicated themselves to studying the role of the military in Brazilian politics. The political importance of the military was obvious: starting with the military coup in 1964 until the transition to a civilian president in 1985, the military remained in the center of political power in the country. This group of researchers wrote scholarly works that would become fundamental references for the establishment of a field of military studies in Brazil. Furthermore, in the following decades, they also played an important role in the transition to democracy. But what was the impact of their work and what reception did it receive?

EU Responses to the Financial Crisis: Marginizing Gender Equality?

The European Union boasts a history of championing gender equality and a developed suite of policy commitments to gender mainstreaming (GM), embodied in multiple recent Treaties. These commitments to gender equality coexist awkwardly however with the economic and market-making imperatives which have formed the EU’s raison d’être - the EU has a long track record of subordinating or co-opting gender equality aspirations into the service of economic ones (Pollack and Hafner-Burton 2000, Rubery 2005), particularly in ‘technocratic’ areas of economic policy, such as competition, de-regulation and Broad Economic Policy Guidelines (Hoskyns 2008, Pollack and Hafner-Burton 2000). Research has documented how policy makers often use economic imperatives to argue either the irrelevance of gender (Caglar 2008, Cavaghan 2013) or to justify their ignorance of how gender might be relevant (Schmidt 2005).

Given the EU’s central importance as a champion of gender equality and the increased salience of economic policies after the financial crisis, this paper argues that feminist researchers must develop a fuller understanding of how the EU’s policy responses to the financial crisis, focusing on the methods of thinking and the gendered normative values and assumptions or ‘gender knowledge’ (Cavaghan 2012) which dominate amongst policy makers in these fields.

This kind of investigation enables an examination of the particular challenges which the increased dominance of economic and/nor liberal or logics present to gender inequality and the resulting reconfiguration of normative priorities within the EU.

Inequalities and the Material Civilization's Epistemology

Due to the growing gap of inequalities caused by the current material civilization and the ecological catastrophe that tends to prevent a long permanence of life on the planet, people all over the world have started thinking about a new kind of material civilization. To think and to build a non-competitive but complementary economy and to radically change our relationship with nature, not considering it an object but a subject, are the main axes of this transformation that implies, first of all, an epistemic dislocation.

I propose to examine this perspective taking some of the real experiences and their horizons and world visions, posing them the question of inequality and focusing the different kinds of inequalities they could be reproducing or solving.

Dual Futures: Double Integration? A Comparative Study of Filipino Mothers and Japanese-Filipino Children's Patterns of Transmigration and Social Integration

Keywords: Filipino mothers, Japanese-Filipino children, transnationalism, social integration, life projects

The present study is a transnational and intercultural families is a globalized phenomenon that ethically diversifies societies and raises profound questions on social integration and belonging of immigrants. Over time, the first generation of migrants has redefined their socio-economic positions through acquired and enacted social capital (Bourdieu 1986), which consequently generates a range of influence on the second generation’s life projects.

Filipino women represent one of the four largest groups of migrants in Japan whose intermarriage to Japanese men have produced children of both Japanese and Filipino dual ethno-cultural heritage called Japanese-Filipino children (JFC). Over the years, Filipino mothers have been reforming their image and widening their socio-economic participation in the mainstream society, although their minority status still curtails their visibility and political voice. JFC, on the other hand, are rather diverse groups of second-generation immigrant children in terms of socialization and economic experiences.

This exploratory study aims to compare and contrast Filipino mothers and their Japanese-Filipino children's pursuit of social integration by examining the linkage between their patterns of transnational migration and current and future socio-economic life trajectories. Using life vignettes obtained from in-depth interviews with (30) Filipino mothers and (30) JFC, this research analyzes the linkage between migration and parents and children's formulation of life goals and aspirations, considerations of the social, economic, and educational roles of Japan and the Philippines in their individual and family life, and levels of socio-economic participation in both societies.

The case of Filipino migrant mothers and JFC striving to build socio-economic futures both in Japan and the Philippines provides a micro-level context for examining how first generation and second-generation immigrants utilize transnationalism as a tool for (re)constructing life projects while dealing with uneven, ambivalent degree of social integration in both locations.
In the last two decades, the “pragmatic turn” in French sociology brought to a radical conclusion with the triad subject/object/representation to understanding action and knowledge. Bruno Latour’s contribution, by stressing the key-role played by materiality in accounting for individual and collective agency, was crucial to this move. In parallel, Pierre Bourdieu started to explore the relevance in social life of an infra-representational relation human beings develop with their material world. He reduced the practical sense to the non-rational dimension of pre-existing social structures through embodiment. In our contribution we discuss how the concept of familiar engagement with the environment is theorized by Laurent Thevenot provides a frame to investigate how the concept of catastrophe options can be seen as an empirical evidence of this complex form of knowledge – statistics and probability theory – in order to sell ignorance. Such knowledge, which can be absorbed in social systems through decisions. This implies the use of statistical tools and put to chi-square and C test. Major findings are organized by first presenting author’s last name.

In this paper I look only at one specific aspect of the movements’ failures: the movements’ internal characteristics. The movements brought together leaders and activists that came from different social milieus. This led to considerable tensions within the camps in a very short time and to the movements’ very rapid demise. Limited by the small number of the occupiers that had relevant organizational experience and knowledge, and by the very severe internal tensions that led to ill-advised strategic choices, the movements never truly managed to widen their appeal. The empirical investigation is based official documents, on newspaper coverage, in Le Progrès, Sud Ouest, and Le Monde (France) and in The Irish Times and The Irish Times (Ireland), and on in-depth interviews with French and Irish occupiers, organizers, civil society and alter-globalization activists, trade unionists, and political advisers.

In this paper we present an original approach taken by the Sustainable Modes of Arctic Resource-driven Transformation of Interdependence (SMARTI) project at the Institute for Advanced Sustainability Studies (IASS) as a strongly transdisciplinary attempt to deal with these complex issues in an holistic way. A wide range of stakeholders are being engaged in this process using a highly integrative approach across multiple disciplines. Our focus lies on the coupled social, political, and economic dimensions that define the governance processes and institutions needed for a more sustainable future in the mutually affected Arctic and non-Arctic regions.

Social Mobility Springboard: Occupational Prestige of Thai Labour Brokers

International labour migration is one of the major issues of our time. Nowa-
days around 200 million people work outside their country of birth. This rapidly
increasing phenomenon is examined in a large number of studies on migration.
However, most of these studies focus on experiences and practicalities of mi-
grants at the place of destination. In this study, we provide insight into the other
issue of the migration study by present occupational prestige for indicated social
mobility of Thai labour brokers who were return migrant from oversea working.
The data were collected via structural interview with 321 samples by systematic
sampling from all provinces in the Northeast of Thailand during year 2010 - 2011.
Data analysis for social mobility was made by occupational prestige. The result
indicated that occupational prestige of labour brokers was 0.1934. It was higher
than their old occupational prestige both agricultural occupation and industri-
al-service occupation. Moreover, we found that social mobility of labour brokers
was upper vertical mobility type and it was “Occupational Mobility”.

Images of Activism and Protest in Modern Art: Towards a Visual Criminology of Risk?

This paper examples images of protest in the work of graffiti street artists, such
as Banksy and Os Gemeos, as well as more traditionally documentary techniques
of photojournalism, in relation to examples of political activism and public pro-
test in different countries worldwide.

Against the background of consideration of the criminological study of neo-
liberal forms of government, social indicators and professional and media-driven
definitions of risk, the paper examines the value of visual and ar-
tistic documents for exploring the representation of everyday life and promoting
an ethnographic form of narrative criminology focused on the life stories of the
socially marginalized, excluded and disposed.

The paper explores how criminology as an academic discipline has yet to em-
brace a new historical and geographical awareness of risk. While it is arguable that the study of crime and
risk brings to the foreground the need to recognize the importance of answering
the perennial question of “whose side are we one?”. In concludes how in these
high/post-modern times of globalized risks – such as the financial crisis, terrorism,
health scares and global warming - focusing on “the visual” through the median
of modernity, contemporary art reinforces the need to develop a criminology of
risk and uncertainty which is both politically engaged and methodological nu-
anced and robust.

CHAMBERLAIN, JOHN MARTIN* (Loughborough University, j.m.chamberlain@lboro.ac.uk)
Medical Regulation in the United Kingdom: Challenging Old and New Orthodoxies

This paper explores recent developments in the governance of the medical
profession in the United Kingdom. In particular, it focuses on the introduction of
the performance and appraisal tool revalidation to monitor medical practitioners’ clinical practice, as well as made changes to the hearing of fitness
to practice cases by the GMC when a doctor is accused of medical malpractice.

The paper outlines how these changes have challenged several orthodoxies
surrounding medical governance pertaining to, firstly, the role of the public and
other health and social professions in the regulation of doctors, and second-
ly, how social scientists have traditionally conceptualised contemporary trends in
the relationship between the medical profession, the public and the state.

The paper argues that it is important for social scientists interested in the study
of medical regulation to remember that current developments in the governance
of doctors must be analysed within the broader socio-economic-political context.
For recent reforms in medical governance are to no small measure bound up with
a broader shift in how ‘good governance’ is conceptualised and operationalized
under neo-liberal mentalities of rule as the state seeks to promote ‘at a distance’ a
certain type of citizen-subject congruent with the enterprise form within the risk
saturated conditions associated with high modernity.

The paper concludes by arguing that we currently sit at the apex of far-reaching
changes in medical regulation, the full affects of which will not be known for
at least another generation, and it is therefore vitally important to investigate
contemporary reforms in medical governance while bearing in mind the need to
challenge current conceptual orthodoxies within both professional practice and
the academic literature.

CHAMBERS, DONNA* (University of Sunderland, donna.chambers186@gmail.com)
Tourism Studies and Epistemological Decolonization

In this presentation I seek to promote a decolonization of tourism studies. This
requires taking seriously the ‘epistemic perspective/cosmologies/insights of crit-
ical thinkers from the Global South thinking from and with subalternized racial/
ethnic/sexual spaces and bodies’ (Grosfoguel 2007:212). In other words, episte-
mal-logical decolonization requires that one take into account the ‘geo-political’
and ‘body-political’ location of the speaking subject (Grosfoguel, 2007) which has
thus far been largely ignored in tourism scholarship. This concept of decolona-
zation bears a strong family resemblance to postcolonialism which is more widely
utilised to understand tourism development in the Global South. However, deco-
lonial scholars have proffered strong critiques of postcolonial theory for its heavy
reliance on poststructuralist and postmodernist approaches which are consid-
ered to privilege European thinkers such as Foucault, Derrida and Gramsci, three
of the ‘four horses of the apocalypse’ (Grosfoguel 2007:211). This privileging of
Western thinkers has not advanced the goal of subaltern tourism and further
places eurocentrism at the fulcrum of critique. Decolonization is envisaged as a
more radical project that seeks to change both the terms and the content of
the conversation, to foster a different ‘epistemic grounding’ rather than seeking trans-
formation within the context of the existing dominant Eurocentric paradigms (Mi-
gare, 2007).

I argue that there is scarcely any evidence of this kind of decolonial critique
emanating from tourism scholars and practitioners in and from the Global
South. Rather, critiques of colonial/Eurocentric thinking emanate largely from
Western researchers, who write about tourism in the Global South, often with
little interaction with, and from indigenous peoples. I argue that tourism scholars
in and from the Global South need to reject Western epistemologies about tour-
ism as representing the ‘God -eye’ view thus enabling spaces to open up for
other way of thinking about, and doing tourism.

The (vanishing?) Role of Phronetic Professions Faced By New
Public Management in Dealing with Political Problems: Doctors,
Architects, Magistrates

This presentation will deal with a consequence of new public management and
more generally bureaucratization of professional work which has not been much
studied yet.

A former research shed light on the specificities of a kind of professions I
named phronetic or prudential professions, using Aristotle’s concept of Phronesis
(usually translated with “practical wisdom” or “prudence”). These professions deal
with singular and complex problems which put the work under an irreducible un-
certainty. Actually, any human activity can be fulfilled prudentially. But phronesis
explains some peculiar traits of “prudential professions”. The main one is a high
propensity of their members to get involved in debates or struggles to defend a
peculiar normative conception of their work (for instance liberal vs. more author-
itative educational patterns; palliative medicine vs. curative voluntarism; a justice
for teenagers focused either on their education or on the protection of society etc.)
This peculiar trait of some professions is a direct consequence of the large part
phronesis plays in their work. As a consequence, the concept of Phronesis
helps us to study further than usually the political commitments of professionals.
Identifying phronetic professions as a very specific sociological object makes new
issues obvious in the debate about professions, peculiarly concerning the conse-
quences of NPM. Professional work is or used to be an opportunity to
launch societal debates. An issue is therefore the capacity of a society to be reflec-
tive about the ways of curing and caring, building the city or educate new gener-
ations. The presentation aims at showing that the possibility for professionals to
commit in debates about their practice is jeopardized by NPM and more generally
speaking by the bureaucratization of their contexts of work. What was often (or
at least could be) a critical and ethic activity becomes more and more a technical
one.

Mismatch and Distrust: Institution, Interaction, and Increasing Doctor-Patient Tension in China

On March 23, 2012, a medical resident in Harbin, north China, was stabbed to death by an angry young patient. This was, unfortunately, not an isolated incident. The statistics released by the Ministry of Health in China indicates that violent incidents resulted from medical disputes increased by 70 percent from 2006 to 2010. A survey conducted among patients in 30 hospitals in east China in early 2013 reveals that only 10 percent of the respondents said they trusted doctors. How do we explain patients’ escalating dissatisfaction with doctors' services and the increasing tension between doctors and patients? In this paper, I argue that there are multiple factors that contribute to the poor doctor-patient relation, and among these factors, mismatch and distrust are the paramount factors. Mismatch refers to two levels of discrepancy. First, it refers to the discrepancy between what the public expects from “public hospitals” and what the public experiences in these hospitals. This discrepancy is constituted by state policies and institutional factors, particularly the financing issues of the healthcare system. Second, mismatch also refers to the discrepancy between doctors’ expectation and patients’ expectation. While doctors are longing for a dominance model of doctor-patient interaction as it is in Hong Kong, patients are expecting a bargaining model. Their discrepancy is produced by doctors’ increased exposure to the medical world in Hong Kong in conjunction with the general public’s increased awareness of their rights in a society with conspicuous social inequalities. The two levels of mismatch result in increasing distrust between doctors and patients that shapes their interaction. A vicious circle is produced by the mutual distrust between doctors and patients in their interaction. To mitigate the problem, I suggest that changes have to take place at the institutional level, in particular the first level of mismatch should be eradicated.

Reflecting on Social Movement Unionism in Hong Kong: A Case Study of Dock Workers’ Strike in 2013

Traditionally, the trade unions in Hong Kong were politically divisive between the pro-Chinese Communist Party (Hong Kong Federation of Trade Unions or HKFTU) and the pro-Nationalist Party camps (Hong Kong and Kowloon Trades Union Council or HKTUC). Following the British colonial government’s suppression of the riot organized by HKFTU in 1967, independent trade unions have been established since 1970s. However, the independent trade union federation, Hong Kong Confederation of Trade Union (HKCTU) was not formed until 1990. Hong Kong’s political transition to political democracy and social justice in Hong Kong and the Mainland China, was established by Hong Kong Christian Industrial Committee (“HKCIC”), a church-based NGO, and was supported by the international trade union movement. In the past two decades, HKCTU has spent huge effort to organize the marginal workers in the communities. This has given HKCTU and its affiliates the characteristics of social movement unionism. However, the social movement unionism spearheaded by HKCTU has not aroused much public attention until 500 sub-contracted workers in HIT, one of the biggest cargo terminal companies in the world, staged a 40 day long strike in 2013. This strike was organized by the HKCTU’s affiliate; it gained tremendous public support and the union’s strike fund raised more than HK$ 8 million (1.03 millions US dollars) from the public. This strike took place in the context of dropping strike rate in Hong Kong after most of its industries were relocated to the Mainland China. By studying this strike, this paper evaluates the effectiveness and limitations of social movement unionism in Hong Kong and its wider implications. The analysis of this paper was drawn from the author’s participant observation as a core member of an activist group that supported the strike and his previous experience as a transportation trade union organizer.
Cross-Border Labor Activism: Hong Kong-Based Students and Scholars Against Corporate Misbehavior (SACOM)

From “Looking for Mickey Mouse’s Conscience” (The Disney Campaign, 2005-pre-copy) to “Ending ‘Slavery’” (The Apple and Foxconn Campaign, 2010-present), SACOM is devoted to organizing cross-border campaigns to amplify workers’ calls for decent work in globalized China. In the summer of 2005, SACOM was born out of bi-weekly meetings of some 20 students from Hong Kong’s universities during which we discussed issues such as the rise of global capitalism, under the guidance of three professors. Over these past eight years, SACOM organizers, students (including graduate students from the mainland) and scholars have joined hands to publish first-hand investigative reports to hold Apple, Foxconn, HP, Dell, Disney, Walmart and other multinationals responsible for worker abuses in their supply chains. The “fingers eating machines” were eventually replaced at the toy factory, a labor rights training program was conducted at two large electronics plants, and a short video titled “The Truth behind Apple’s iPad” was shared among Foxconn workers and concerned global consumers through social media. International campaigning is needed to spread our message, while worker participation is indispensable if we are to creating a lasting impact at the workplace level. Challenges of capital and censorship by the Chinese state remain strong, putting direct pressures not only on workers but also our allies based in China.

Foxconn Worker Struggles in China

The Taiwanese multinational corporation Foxconn, which recently soared to number 30 in the Fortune Global 500, holds more than 50 percent of market share in global electronics manufacturing. Its 1.4 million employees at 30 factories across China far exceed its combined workforce in 27 other countries that comprise its global empire. This paper assesses the conditions of Foxconn’s predominantly rural migrant labor workforce, with particular attention to collective agency of workers and the changing character of the workforce. A new generation of Chinese workers is at the center of just-in-time mass production at Foxconn and other producers. Our research examines the working lives of Foxconn workers on the basis of the intertwined policies and practices of Foxconn, international brands (notably Apple) and the local state, and the diverse forms of collective actions workers deploy to defend their rights and interests. Within this approach workers’ structural power to disrupt production to demand higher pay and better conditions. While all of these struggles were short-lived and limited in scope to a single workshops or factory, protests exposed injustice of “Slavery”, garnering wide media attention and civil society support.

A distinctive feature of the labor force is a result of actions by local officials to mobilize 150,000 students as “Foxconn interns” through vocational schools. This helps fulfill corporate needs for short-term labor at times of peak demand, circumventing the law and dragging down social and labor standards. The industrial working class, now composed primarily of young rural migrants and teenage student interns, faces a formidable alliance of capital and the local state. In the “contentious authoritarian system”, notwithstanding the resilience of the state in the face of sustained popular unrest over the last two decades, we highlight that precarious labor in its hundreds of millions is unstable.

Changing Intergenerational-Caring Relations in East Asia

This paper is based on both international and comparative research on intergenerational caring relationships in which women simultaneously provide care for their frail elderly relatives as well as young children/grandchildren in East Asian societies. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all suggest that new types of intergenerational care relations may increasingly become common in developed countries. East Asian societies are not exceptions. More over such intergenerational caring relations may possibly be more prevalent in East Asia than other European counterparts as facing with acute demographic changes, different family values and carer regimes embedded in the societies. This paper presents a mixed methods analysis of data generated from mixed research methods (mainly semi-structured interviews and questionnaire surveys) in each society, this paper will investigate how these sandwich generations experience a double responsibility of care, by analysing resources available to them from local policy configurations and from their personal and kin networks. We will extend our analysis to the influence of changing family-centred welfare regimes in East Asia on generational caring relations and experiences of women therein.

Trust and Social Inclusion in Asian Societies - The Result of the First Wave SAsq Survey

Using data from surveys on “social quality survey questionnaires” carried out in Hong Kong, Taiwan, Thailand, and South Korea between 2005 and 2011, this study investigates the relationship between trust and social inclusion. The data analysis of 4,807 questionnaires reveals that trust (the general trust, the interpersonal trust and the institutional trust) are linked to the extent of social inclusion people evaluates. Specifically, people always trust others report higher social inclusion. Trust in informal organizations (NGOs, universities, etc.) and trust in democratic systems (government, judiciary, police, etc.) are more closely related to social inclusion than trust in media, strangers or intimate relations (family, friends, neighbors).

Hong Kong Police’s Image and its Representations in Crime-Fighting and Order-Maintenance Duties: A Content Analysis of Newspaper Accounts in Post-Handover Hong Kong

In Hong Kong, it is an open secret that the police officers always met public challenges and even suffer various humiliations in recent years. On the other hand, Hong Kong Police Force has recently won a credit of the Best Public Image Award. This paradoxical social phenomenon might be resolved by specifically dividing the representations of police image in undertaking crime-fighting duties versus order-maintenance duties. In doing so, this study asks: would it be that the representations of police image tend to be negative when the police perform their order-maintenance duties? Simultaneously, would it be that the representations of police image turn to be positive when the police assume their crime-fighting responsibilities? Against this background, this empirical project aims to investigate police image and its relation to the police’s specifically categorized duties in Hong Kong. The qualitative and quantitative content analysis of local newspaper accounts are used as the research methods.

Indian Youth, New Protest Movements and Social Media

Protest movements have a good track record in both colonial and independent India. Youth are one of the important actors in such protest movements. On scanning the history of protest movements of Indian youth we find Naxalbari Movement, JP Movement (against the emergency rule imposed by the Central Government in 1975), Anti Reservation Movement (also known as Anti-Mandal Commission), All Assam Student (ASSU) as most important movements of...
youth in India which have their impact on Indian Society. In the recent past, In-
dia has experienced Anti-Corruption Movement led by Anna Hazare in 2011 and
Movement against Sexual Abuse and Rape of Young women after the Delhi gang
rape case in 2012, in which young people have taken a lead. These movements
were not only led by Indian youth but have great influence on Indian youth as well.
Both the movements were different in nature from previous protest move-
ments as they have used information technology and modern digital devices for
various purposes. These two protest movements have used social media and mo-
bile phone to a greater extent to mobilize the youth. The present paper examines
the characteristics of these two protest movements and it tries to evaluate the dy-
namics of the movements and its methodology. The paper also explores the im-
pact of these movements on youth in particular and Indian society in general.

The present review article seeks to probe into gender considerations and
their implications for higher education in Indian context from cultural perspec-
tive. There appears to be fierce debate among the educationists and educational
planners about the persistence or otherwise of gender bias, discrimination and
the resultant gender inequalities in higher education in India. This article is an
attempt to analyse and substantiate both the arguments based on supporting
information available with various governmental and developmental agencies.
Having analysed the debate in the light of contemporary social reality pertaining
to the state and status of higher education and the major limitations and con-
straints in achieving the envisaged and aspired levels of expansion, excellence,
quality and access for its inclusivity, the article reveals diverse ways in which
gender considerations come to condition the statics and dynamics of higher ed-
cuation, including access, exclusion, distribution and composition and even the
governance of institutions of higher education and the centres of excellence. An
attention is made to ascertain how quantitative information talking to higher
education alone could be misleading and a misconception about the status
of women's education without a corresponding change in the qualitative aspects
such as relative importance and value of the courses in terms of opportunity
for employment, importance of the sector that the courses offered can open
women that, is the extent to which the higher education being accessed by wom-
en can empower them in true sense of the term.

The Role of Housing and the Neighborhood Environment on the Process of Social Exclusion/Inclusion: A Study with Reference to Sri Lankan Plantation Worker Community

When the British colonials started the tea and rubber plantations in Sri Lanka, the local peasantry did not show interest to work as wage laborers. This led to the forced migration of a large number of South Indians to the plantations. During the last 25 years, the economic, social and political status in plantations has changed drastically. The management of estates has changed hands from British companies to Sri Lankan government and then to local private companies. From the original position of stateless migrant laborers, the worker community has now achieved the citizenship of Sri Lanka.

However, the estate community remains alienated from the mainstream social, political, and economic life. The available quantitative data and the qualitative studies point out the strong socially excluded nature of the plantation community. Their production system, consumption patterns, educational attainments and other social development indicators confirm this status.

The community was originally provided with estate owned barrack type shelter called line rooms. Majority of the plantation workers still live in these compact and dilapidated housing units. The self help detached housing project implemented during the 1998-2004 period improved the living environment of around 35% of plantation worker families.

This empirical qualitative study carried out in a rubber estate located 40 km. to the south east of Colombo, investigates the role of housing condition on the social exclusion/inclusion process of the community. It explains that the social stigma associated with line room environments strongly contribute to the socially excluded nature of the line room dwellers.

The study points out that the social capital of the community has a crucial link with the housing conditions. The families with strong bridging social capital have entered into the detached housing construction programme. It also shows that line rooms develop bonding capital and encourage social detachment.

The Rise of Vernacular Capitalism: Neoliberalized Localities in Rural Japan

This paper analyzes the formations of a unique mode of capital accumulation, vernacular capitalism, in contemporary Japan. The vernacular capitalism thrived on the basis of the uneven geographical development that dispossessed local cultures and resources to accumulate capital. Based on comprehensive survey of the literature and governmental documents, I claim that chir(t) region or locality, as a crucial motif of Japan’s modernity, has been involved in the post-industrialization of Japanese society in which vernacular capitalism came into being. In the wake of neoliberal reforms, rural communities were forced to become entrepreneurs that creatively turn available cultural and natural resources into commodities to compete with each other in a cultural supermarket.

In this paper, I will first discuss the unique enthusiasm of consuming locality in contemporary Japan that implies a mode of accumulation through commodification of the local. To understand its political economic foundation, I will investigate the history of the Five Comprehensive National Development Plans (CNDPs) to reveal how the state envisaged and managed localities in the postwar period of high economic growth. The transformation of CNDPs shows how Japan’s strategy of rural governance has turned from “managerialism” to “entrepreneurialism” in the process of neoliberalization. That is, government collaborates with private capitals to form a “public-private partnership” for business ventures. Finally, I will delineate the strategies and struggles of rural communities under the neoliberal regime and how their efforts construct the substance of vernacular capitalism. In the conclusion, I will characterize vernacular capitalism with its four features: serendipity, entrepreneurial community, local branding, and the discursive complex of food, health, and environment. At the end, I argue that the inter-local competition brought by vernacular capitalism has become the major principle of rural governance in contemporary Japan. Although the competition pleased urban consumers, it caused new problems and challenges to rural communities.

Behavior Homophily and The Dynamic Network Distance In A Combination Of Friendship and Antipathy Networks

Studies have confirmed a strong tendency of behavior homophily in a social group. Prior research mainly focused on studying the association of a bunch of friendship network features and behaviors to confirm such tendency. However, interpersonal relationships are naturally managed in multiple ways, and social relationships change over time, same as individual’s behaviors. Positive, high intimate friendship can play a significant effect on promoting behavior homophily; on the contrary, negative, low intimate antipathy relationship might downplay it. Thus, in this study, we, methodologically, recognize the necessity of change and multiplexity of relationship and behaviors to redefine the tendency of behavior homophily. Thereby, we aggregate structural network effects and transform them into an index of network distance from two opposed social relationships (i.e., friendship network and antipathy networks) in a longitudinal data to redefine the association of dynamic network distance in relationship multiplexity and group members’ behavior homophily over time.

Analyzing Public Attitudes Towards Sexual Assaults in Taiwan

Analyzing Public Attitudes towards Sexual Assaults in Taiwan
Sexual Assault
Abstract
Several laws and regulations concerning sexual assault have been passed in the last couple of decades in Taiwan. The meaning of sexual assault in the legal system has changed from offense of social morality to violation of sexual autonomy, emphasizing the importance of the consent of the involved individuals. However, the success of enforcing the reform laws also depends on the awareness of the public about the law itself and meanings behind those stipulations. This paper utilized the data of Taiwan Social Change Survey conducted in 2011 to examine Taiwanese people’s attitude towards sexual assault and study the discrepancy between those reactions and the newly-passed laws. The statistical findings show that most respondents agree punishing husbands forcing wives to have sex and teenagers having sexual behaviors. In contrast, there are clear variations about punishments against adults involved in sexual behaviors in the nature of an ambiguous consent or power relations. Among socio-demographic variables, age stands out to have consistent effects on most attitudes. However subjective variables representing individual liberalism or protectionism are more important indicators than respondents’ socio-demographic backgrounds. Taiwanese seem to uphold the ideas of “individual’s consent” and “self-responsibility” more than the complexity of the power relationships and quid pro quo conditions embedded in sexual behaviors. These reactions differ from stipulations of the law. Thus it is difficult to conclude if feminism hinders or facilitates the progress of gender equality in Taiwan. We discuss the implications of the discrepancy between laws and attitudes of ordinary people in the last part of the paper.

Charity and Social Exclusion in Taiwanese Education System for Disabled Students

Under Special Education Act, no school is allowed to reject students with disabilities in Taiwan. Nevertheless, lack of accessible environment and assistants for disabled students are still common. To overcome the deficiency, Schools usually encourage parent, mostly mothers, to support their children’s care needs in...
Exploring the Role of Sport and Leisure in Lifestyle Migration Decision-Making: A Case Study of South Korean Migration to New Zealand

Little is known about the key lifestyle factors involved in migration decision-making. According to Benson and O’Reilly (2009) and Benson (2010), lifestyle considerations, including sport and leisure participation, may play an important role in migration decisions. Yet, there is little explicit research examining the nature and extent to which sport and leisure play in lifestyle migration. Thus, this paper explores how both macro level social structures and micro level individual choices influence lifestyle migration decisions of South Koreans moving to New Zealand. More specifically, the paper examines how South Korean migrants consider sport and leisure activities as factors within their lifestyle migration decision-making. The findings highlight a variety of risk factors in South Korea which influenced migration including: (1) excessive competition and inequality (2) conflicts between North and South Korea, (3) obsession with education and (4) conflicts between traditional and contemporary values. As a result, Koreans reflected on their lives with many realizing that: (1) they could not live the (slow and leisurely) life they wanted; (2) they could not spend adequate time with their family; and, (3) they could not distinguish themselves from fellow Koreans who had similar social status and ability. Under such circumstances, South Korean migrants to New Zealand revealed that they were looking for a newbetter/different lifestyle, and that sport and leisure activities played a role in the process of lifestyle migration decision-making.

Parentocracy and the Life and Death of Secondary Education for All in Taiwan

Since mid-1990s, the Taiwan government has implemented a populist educational policy, which was in fact initiated by the grassroots reform movement advocating for `a universal system of upper-secondary and higher education.” After twenty years, the quasi-compulsory high school system is widely argued to have failed in carrying out its promise of equalizing educational opportunity among social classes.

While the “third wave” of Western educational development in late 20th century was characterized by an ideology of parentocracy promoted from top down, the current educational expansion in Taiwan has adopted, in contrast, an ideology of parentocracy formulated bottom up, i.e. from the leftist citizens. Therefore, this paper provides a different point of view from that of Richard Pring’s, according to whom secondary education for all is doomed to death due to a rigorous system of testing.” Specifically, it presents, first of all, a dialectic relationship between nationalism and individualism, and then, a corresponding relationship between the state’s educational production mechanisms and the class-based parenting practices. Along these theoretical considerations, this paper analyzes how a civil ideology of educational parentocracy gave birth to the state policy of universalization of senior high school education (and college education as well), and how the former might lead the latter to such a dead end that marketization, accountability, and competition are all left in education. The author instantiates empirical research findings from Taiwan to support the arguments formed in this paper.

Ethnic Identity and Gender Differences Among Indigenous Youths in Two Single-Sex High Schools in Taiwan

Many quantitative studies in Taiwan showed that indigenous youths owned high ethnic identity, but the relationship between ethnic identity and gender differences was not clear. Ethnic identity is constituted in every individual’s living context, so it is necessary to explore the above findings in the individual context. In the article, the authors adopted ethnographic approach in two elite single-sex schools from 2010 to 2012, and tried to explore the relationship between ethnic identity and gender differences, and to answer if gender differences existed and why they had differences through students’ daily experiences.

The research found the boys outnumbered girls in strong indigenous identity, and there were more girls who were assimilated. The reasons were due to both of the cultural and school contexts. In the cultural context, boys belonged to the traditional age-set system in the community, and many cultural activities were still strongly relative to the age-sets. Therefore, boys had more opportunities or even obligations to participate in cultural affairs, and developed their ethnic identity through participation. Girls lacked formal social organizations traditionally, so girls expressed they felt they were like outsiders or visitors in the cultural activities. In the school context, a few indigenous teachers devoted themselves to indigenous education in the boys’ school. Boys could share their cultural experiences in the formal or informal school activities, and they had more chances to get acquainted with other indigenous fellows. However, there were no indigenous teachers in the girls’ school. There also were stricter rules in girls’ behaviors, and girls’ school life was usually restricted to their classes and academic studies. The results showed that the gender differences in ethnic identity were constituted by gender stereotypes and gender segregation in the patriarchy society.

Confinucianism and Discontents: The Repertoire of Disobeying in Recent Taiwan’s Protests

Confucianism is like a buzzword for the discussion of East Asia cultures. And yet people disagree on whether Confucianism is just a kind of state ideology, promoted by elites, or actual civil culture prevails in ordinary life. The paper thinks that the two layers of Confucianism can co-exist intertwinedly. In one level, where elite intellectuals are prominent, Confucianism exists as a body of systematic knowledge, ideology, moral standard, and philosophical state. In the civil level, it exists as the underlying logic of people’s daily practices, with an emphasis on folk wisdom and practical rationale, helping people manage their interactions and actions in daily life.

This paper will look at the relation between Confucianism, as state ideology and as civil belief, and the repertoire of protests. By repertoire, follow Charles Tilly’s definition, an ensemble of contentious performances. This paper will study two particular kind of repertoires that have public’s attention in recent social movements in Taiwan. One repertoire is Guibai or Kwotou, meaning to kneel down with one’s forehead touching on the ground, and the other is throwing objects, like
Repressive Coverage in an Authoritarian Context: Threat, Weakness and Legitimacy in South Korea's Democracy Movement

While most studies on the repression-mobilization relationship have focused on the impact of the former on the latter, recent work has shown that characteristics of protest can influence state repression strategies. This article corroborates recent work on the repression of social movements and shows that both weak and threatening attributes of protest events contribute to the “repressive coverage” - the likelihood and severity of repression - of social movements in an authoritarian context. In addition, results from logistic regressions show that authoritarian states not only respond to weak status actors and situational threats but act strategically to repress social movements that challenge their political legitimacy. This article extends the scope of the repression-mobilization literature by differentiating the role of threat in eliciting repression in a non-Western democratic setting and showing the strategic dimension to the repressive behavior of authoritarian states.

Global Environmental Change, Fishing Community Development, and Inequality: The Case of Jeju Island

The paper aims at addressing unequal development of fishing community in Jeju Island, South Korea. For this aim the paper studies three fishing community associations in the island. The island's fishing community is a traditional livelihood system consisting of fishers and women divers. The community forms along the coastal line of the island, which is about 200 kilometers long. It is organized with 100 fishing community associations (called ezhangoe in Korean language), which are demarcated by regional, administrative boundaries. While the associations were traditionally drawing upon fishing and relatively closed to fishing by fishery law in 1962, the island’s membership includes 12,994 individuals as of December 2011. The unequal development of the fishing community in terms of economic output is conditioned by fishing ground difference. It is reported that fishing ground for each fishing community association differs in terms of geological characters and diversity in marine resources. Negative marine ecosystem change is an emerging factor that is likely to structure further development of the fishing community. The change has been visible particularly with stones along the coastal line having turned into white and unlivable for marine plants to grow on. The stones under the seawater are reported to exhibit the same problem. With plants being unable to grow, sea goods such as seashells and sea urchins which live upon the stones are reported to exhibit the same problem. With plants being unable to grow, sea goods such as seashells and sea urchins which live upon the plants and women divers collect for their livelihood have significantly decreased. Fish has also disappeared with lack of sea plants they diet. While fishing activities by the community are getting challenged with negative marine environmental change, the activities are now increasingly turning into the objects of public gaze and experiences. However the touristic development has not equally taken place across the associations. By looking into three fishing community associations, the paper clarifies unequal patterns in fishing community development in the global environmental change era.

The enrollment rate of higher education in Taiwan has approached 70%, which is one of the highest countries in the world. Did the harsh expansion of colleges improve class mobility of students? The findings show that though higher educational expansion generally provides more educational opportunities, the differentiation within the same educational level also appears; students from higher class have more opportunities to attend selective, cheap and prestigious public colleges, while lower class students only can enter higher-tuition and lower-rank private colleges. Besides, the enrollment rate of postgraduate schools has approached 26%, but the class inequality of students’ background remains. The policy of higher educational expansion in Taiwan has not lessened the given class inequality, and even obscurely maintained the inequality. Engaging the literature on educational inequality and using data from the 1997-2012 waves of the Taiwan Social Change Survey, we posit Mixed-Effects Maintained Inequality hypothesis (M-EMI) and argue that both MMI and EMI hypotheses are supported during the process of higher educational expansion.
transformed. In the heart of this trend. Supported by ethnographic data gathered in the UK between the year 2006-2010, I want to argue that this newly mass of Thai marriage migrants are pushed partly by their gendered-class experiences as rural Thai women of lower class. These experiences attribute to their migration understood from their point-of-view as an escape from class disrespect, isolation and relative deprivation. This structured experience also explains as to why their transnational attachment to Thailand is restricted to the women relatives in their hometown, whilst cultural attachment to their home country in general, displayed, for example, through nostalgia or the sense of belonging for the distant home; are missing.

**CHARTON, LAURENCE** (Inst National Recherche Scientifique, laurence.charton@uocs.inrs.ca)

**Contraceptive Sterilization: A Rational Choice?**

The rapid spread of medical contraception and new reproductive technologies in Western countries complete the process of separation between sexuality and procreation started in the early 20th century. It also contributes to strengthen the body sex medicalization, conceptualized by Foucault in terms of Biopower. Contraceptive sterilization is one of the links in this process, affording the opportunites sexual:individuals and couples to live sexuality without any risk of pregnancy and contraceptive contingency. The use of voluntary suppression of its reproductive potential is also involved in a rationalization of the reproductive and family life and recognition of a non-reproductive sexuality. In the context of this communication, we will question the notion of rational choice associated to the use contraceptive sterilization in comparing Canada (Quebec) and France, two countries with very different contraceptive practices. If in Canada, the use of sterilization is the preferred method of those who no longer wish an additional child, in France, this kind of contraceptive choice remains marginal. So we will first analyze the motivations that led men and women in Canada and France to choose sterilization as a contraceptive method. Then we will look at the impact of this intervention on the representations and sexual behavior of sterilized people. These comparative analyzes will focus on interviews in Canada and France, between 2005 and 2007, with thirty-five women and men sterilized. While showing the influence of socio-cultural contexts in the decision to use sterilization, they should allow accumulating materials that will build this concept while proving its theoretical fertility.
The world Revolution Of 20xx: Kicking Off and Changing The System

This paper describes the long-term process by which social movements and world revolutions have restructured global governance institutions over the past several centuries. It also studies the nature and causes of the rebellions and counter-hegemonic regimes that have emerged since the 1990s in order to make comparisons with earlier world revolutions and to assess the prospects for the emergence of a more egalitarian and sustainable world society within the next five decades.

Big Data in Indian Social Context: A Case Study of Aadhar

In the history of Indian society, the era of big data has commenced. The data is not from secondary sources but the source is the 1.2 billion citizens themselves in face to face situation. Collection and analysis of biometric identification of each and every one is creating a repository. This Big data is an attempt to convert Indian society into a system under constant observation of the government; which would have future use for the state, the non-government, the corporate, the media, political parties and the academic researchers. India is a highly diverse society where more than 70% people are living in villages, more illiterate than literate, the majority of urban population is in unorganized occupations and rural communities are engaged in agriculture and artisanship. This paper attempts to explain the process and the problems of the big data through a case study of Aadhar. The project at the moment is generating massive amounts of data popularly called the Unique Identity Card or ‘Aadhar’ literally meaning ‘the base’.

Through an analysis of secondary data, mostly from media, regarding Aadhar, the paper explores the future of this unprecedented social statistical exercise. Given the massiveness, even with pitfalls that are inbuilt into collecting, recording and distributing the social data in a society like India, the paper concludes that the identity of Indians so brought online in government records would impact the future of the democratic functioning. The marginal and traditionally deprived sections including women would hopefully be participating in their life activities and life stakes consciously with a defined identity. But a question is raised that continuing with this process and using this data for the development of individual citizens is not the purpose of big data which in turn impacts the political context of the development projects.

Impact of Leisure on Quality of Life and Social Development: Reflection on Urban India

Quality of life has been vital for social development of a community. Earlier it was economic development, now it is a social development with better quality of life. Today, quality of life include safe existence, healthy life, non exploitative free thinking and good education with awareness and of course good and quality leisure. The creative utilization of leisure has been crucial to social development. Urban India has been accustomed with leisure in various manners. Traditionally people took pleasure in performing rituals, meeting kin and relatives or going for a pilgrimage. Of late things have changed. People have started combining leisure with pilgrimage, kinship with pilgrimage and so on. The present paper analyses a few cases taken in this regard in the City of Lucknow. It is clearly pointing out to the fact that in urban India the affluent section have more opportunity for creative utilization of leisure but in practice they do not avail it, whereas, the lower strata neither have avenues nor have financial support for creative utilization of leisure because they lack an average quality of life.

Capabilities Approach for Educating Women --- a Flyover ‘Mooch’

Capabilities Approach for Educating Women --- A Flyover ‘MOOC’ Enabling of women is a concern and challenge in many cultures because of the gross inadequacy or lack of education - education in class rooms (training of skills and knowledge) onsite has traditionally and currently been monopoly of men because of the lags structured by the gender construct in underdeveloped and developing societies. Several experiments by government and non-government agencies including pedagogy of capability building have been tried and despite genuineness, failed. On site education in the West (USA and UK included) is becoming exceedingly costly beyond the reach of the middle classes. Student loan is critical; the institutions departing higher education have raised their fee. Media reports indicate that the phenomenon of deserted campus is a matter of time. To overcome this enrollment crisis the regular institutions are opening up for MOOC. This paper is an attempt to find out the possibility and description of a fly over through which the migration of education through MOOC can be targeted to the women in hinterland, to underdeveloped and developing regions and contribute inculcating capabilities among them. Such capabilities will have their usefulness being global and to mainstreaming the women population and finally making them self dependent. This should not be left alone to busy colleges and universities as there is no reason for them to do capability building among the needy. A fly over the busy paths of education is required which a two pronged sponsorship with the government and women organization as co-participants in MOOC to combine ‘functioning’ with social policy with emphasis on local change and deconstructing the gender inequality through educating women such content which would help make them capable and dignified.

*Work, Family and Agricultural Economy: Changing Gender Relations in Northwest India*

In rural India, the percentage of women who depend on agriculture for their livelihood is as high as 84 percent. Women make up about 33 percent of cultivators and about 47 percent of agricultural labourers. Their work in agricultural economy in Northwest region of India has been indispensable. However, since a long period of time it was treated as insignificant, invisible and unrecognized as it was regarded as a mere extension of women's domestic work comprising of subsistence economy. It was the effort of women's organizations and other agencies in the 1980s and 1990s that women's subsistence work in agricultural economy began to be ‘quantified’ and ‘counted’. This also led to the increase in women’s work participation rate substantially. Beyond this, it was realized that though women contributed significantly to agricultural economy, their control over resources remained marginal. Critical resources such as land were also unevenly distributed by gender. Women seldom enjoyed property ownership rights directly in their names. Given this scenario, their participation in agricultural work of various kinds affected gender relations within the family and kin groups. In the present times significant changes are witnessed due to globalization as this part of Northwest India is rich in world famous basmati rice. Many migrants, including women also come to this area during peak season. This paper examines the impact of agricultural work on gender relations within the family and the changes in them due to globalization in Jammu region of Northwest India. The intersectionality of caste and class is also taken into account as most of these women belong to lower castes and poorer families.

*Professionalization of Medicine in India: Competing Systems in the Era of Globalization*

The paper attempts to examine the nature and development of the process of professionalization of medicine in India in the era of globalization. It also assesses the people's response to various forms of competing medical systems. The paper is divided into the following sections: (i) the professionalization of medicine in India: an historical perspective; (ii) re-emergence of earlier existing systems and the case for alternative medicines; (iv) people's selective and careful response to different systems of medicine; and (v) conclusion. The professionalization of medicine especially the allopathic medicine started during the British rule in India, challenging the then existing systems of medicine like Ayurveda and Unani. But Allopathy succeeded in establishing its supremacy over all the other existing systems making inroads in urban as well as in rural areas. The setting up of the AIIMS at New Delhi and decades later at a few other places like Bhopal have been a significant development to protect the people of India from some chronic diseases.

On the other hand the hitherto under-represented systems of medicine like the Ayurvedic, Homeopathy and Unani have also made a comeback, of course with the support of the government, under the umbrella term called AYUSH. India has seen a trend of re-emergence of these alternative systems of medicine with the support of various governments and thus acquiring legitimacy in the process. The patients have given a careful and selective response while going for their treatment under these competing systems of medicine for various diseases. The patients have skillfully combined and tried more than one system of medicine for the treatment of the same diseases.

*The Use of Internet and Youth Behaviour (With Special Reference to India)*

The use of Internet and Youth Behaviour (With Special Reference to India)

The paper aims to understand and examine the relationship between the use of internet and youth behaviour. The paper is divided into six parts like the following: (i) introduction; (ii) the use of internet and the theory of gratification; (iii) and the use of internet and the widening world; (iv) the use of internet and other systems of communication; (v) internet and youth behaviour in India-an analysis; and (vi) conclusions. In the globalizing world today the social scientists have found gratification as one of the important reasons for the use of internet. The conceptual and theoretical relevance of the notion of gratification has been found as different in the Indian society in comparison to the western societies. Some of the important conclusions have also been discussed towards the end of the paper, these are like the following: (i) the use of internet has had its impact on the cultural behaviour of the youth preferring the new relationship than kinship relations; (ii) in India instead of seeking gratification the youth has found internet as useful for their study and; (iii) the use of internet has developed a sense of freedom among the youth; (iv) the youth has been able to combine the use of internet with their mobile phones and (v) it has been found as useful for purchasing books, laptops, different softwares and seeking admissions to different universities in India and the world.

*A Globalization of Extremes: The Middle Classes Facing the Return of Pareto Distributions and Power-Laws*

We are primarily taught that Quetelet’s normal distribution is the key of social knowledge. This could be true for the middle classes but in the sociology of the top of the economic distribution, this is entirely wrong: wherever the concentration of socioeconomic power is observed, the Gauss distribution gives no appropriate representation and the Gibrat’s log-normal as well. This is more than statistical law but the fact sociology of extreme classes where extreme variables are outrageously overrepresented. CEO’s compensation, wealth accumulation, position in the hierarchy of internet and fame, scientific quotations follow extreme distribution shapes. This is the realm of the Extreme value theory related also to advantage that go with the “Matthew effect” (the rich get richer and the poor get poorer) typical of hoarding processes on scarce resources. These processes going with the Pareto curve mean that the logarithm of the gains is inversely proportional to the logarithm of the rank in the hierarchy.

In the sociology of extreme classes, the Pareto law and power tail distributions are vital for representation of functioning of elite categories, of wealth concentration and accumulation and transmission. In the old industrial world, where old money (i.e. family wealth) is a central source of power, the normal distributions fail in the explanation of family structures functioning, assertive mating, homogamy, and economic power transmission. Here, the Extreme value theory reveals new realities, in the micro level of extreme distribution of wealth, ab-normal social behavior, including over-homogamy, or massive participation in the political sphere.

Today, the global emergence of an extreme class means the destabilization of the Quetelet based “Golden Age middle class” and of the “wage earner middle class based society” and the expansion of the Pareto based wealthy-power-elite as a global re-emergence of the model of the European Belle Epoque capitalism.

*Static and Dynamic Inequalities in Europe: Intergenerational Mobility and Income Inequalities*

Although static inequalities and dynamic inequality have long-standing tradition in economics and social sciences, only few studies are devoted to the analysis of both dimensions simultaneously, especially in a comparative perspective. McCall and Percheski concluded recently that “the precise social and economic mechanisms underlying the relationship between income inequality and intergenerational mobility […] are not well understood, and the differences over the period of rising income inequality have been difficult to estimate precisely” (2010: 339). This paper aims at contributing to this gap by testing if the so-called Great Gatsby curve from recent economic literature (Corak 2013) - displaying the macro relation of (a) income inequality for different countries by the Gini coefficient on the x axis and (b) the generational earnings elasticity, i.e. the degree to which (dis)advantages are “inherited” over generations, on the y axis - can also be applied to sociological conceptualisations of intergenerational mobility, i.e. occupational mobility. We believe moreover that mobility patterns differ for the bottom and the top of the parental income range and examine these thus separately.

Our empirical contribution lies in the comparative analysis of 20 European countries based on the most recent 2011 module on intergenerational transmission of disadvantages of the EU Survey on Income and Living Conditions (EU-SILC). In this way, we are able to construct indicators of dynamic inequality and analysing static inequalities at the same time (shares of incomes, percentile ratios and summary statistics of inequality). Whereas the first shows the fluidity of a society reflecting the mobility over generations (intergenerational mobility), the latter shows the socio-economic inequality at a particular point of time (hierarchy). We
investigate different dimensions of intergenerational mobility: the transmission of education, of occupational status/social class and of (simulated) income (ranks).

Carnal Framings: Race, Class and Crisis in a Multi-Ethnic Labor Group

This paper uses in-depth ethnography to investigate the internal emotional effects of frame shift within a multi-ethnic labor-rights organization in the United States. The brief historical window opened by the 2006 national movement of coordinated mass street protests for immigration reform generated a sudden change in the day-labor opportunity structure facing the group in this study, a Chicago-based worker center organizing day laborers. Whereas the group had previously made the “day labor worker” its central mobilizing figure, it was now enrolling day laborers of multiple backgrounds into the pressing fight for migrant rights. The shift was exacerbated by a political trip to Washington where the group almost exploded along ethnico-racial lines. As the giant migrant marches had generated huge hopes among many activists and organizers concerned with reinvigorating progressive movements, a new immigrant-centered discourse threatened to dispose black members of their implicit but traditional centrality within the organization. For which immigration had not previously been a theme of choice. That frame shift rather than job competition, ethnoracial animosity or organizational diversity, primarily accounted for the suddenly exacerbated cleavages within the group. Based on extensive participant observation both in day-labor agencies and in the workplace, this paper illustrates the discursive conditions under which emotions can travel from the sphere of employment to that of protest. It emphasizes the multi-layered material, symbolic, linguistic, emotional and bodily contexts that give frames and frame shifts their political potency and intimate significance for the actors involved. It calls for further reconnaissance of the carnality and multiple embeddedness of collective action frames, which matter to social movements not only for their external performance, but also for their internal cohesion.

Moral discourses in medical travel

Recent works that highlight the embodied aspect of medical travel have drawn on the conceptual frameworks of affect and authenticity. This paper will contribute to this line of works by drawing on interviews with medical travellers for cardiac procedures (to treat potentially life threatening conditions) and orthopaedic surgeries (for chronic and disabling but not life threatening conditions) in two Malaysian hospitals. I will focus on the discourse of moralities of these international patients in their experience of what is ‘good’ or ‘bad’ (and why it may be so) in their medical travel experiences. As juxtaposition, I will also draw from interviews with international travel intermediaries as well as hospital staff who have direct interactions with patients. The different discourses will be examined in order to tease out the tensions and collusions between (possibly) different sets of moralities, and to uncover the unspoken ‘rules and regulations’ that govern practices in medical travel.

Historical Formation Of Social and Economic Inequalities In South Africa – A Marxist Perspective

Twenty years after South Africa achieved a democratic dispensation, it is still one of the most unequal societies in the world. Twenty-first century South Africa is still characterised by high levels of poverty, crime, HIV/AIDS, social and cultural racial polarisation, large volumes of economic wealth and land in the hands of the few, rampant corruption in both the private and public sector and high unemployment levels. August 2012 witnessed the black government of South Africa shoot and kill 34 striking miners in the township of Marikana. Whilst the relatively new democratic dispensation has delivered many new freedoms for the people of South Africa, the legacy of colonialism and apartheid is still evident in many spheres of South African life. For many decades South Africa’s gigantic problems have been largely attributed to racial intolerance and antagonism. Whilst race has been a major factor in deciding the haves and the have nots of South African society, this paper argues that a Marxist analysis of South Africa is the most appropriate conceptual framework in which to truly understand the unequal nature of South Africa and more importantly to chart a way forward for a more equal and just South Africa.

CHEN, BOWEI* (Nanhu University, chenpowei6967@gmail.com)

This study examines Taiwanese gay male masseurs and their labor practices in (paid) service industry. Specifically, it unpacks the intersection between body, work and un-controllable (male gay) desire embodied in the labor practice. Drawing upon in-depth interviews with 15 gay male masseurs, this paper focuses on the following three facets. First, it explores variation in the performance of intimate labor caused by the intersection of the sexualized service work with the racialized and classed specific service expectations of diverse customers. Through clients/masseurs interactions, we identify how social inequalities intersect with each other and how their interaction changes what they are. Second, the body/work relationship in massage parlors will be examined, paying particular attention to the “shadow-work” of employees and forms of aesthetic labor they embodied. By understanding how aesthetic labors are differently performed, we examine the extent to which gay male masseurs’ constructions of work identities are (not) regulated by homo/heteronormativity. Third, this paper examines how labor practice in erotic service is complicated by the production of desiring labor, showing how gay male masseurs construct and/or distanciate their sexualities from servicing the bodies of others. Through desire/work relationship experienced by masseurs we sketch out how the boundaries between intimacy and the commerce of sex and between public and private life are redrawn. This study hopes to provide insight into not only the importance of embodiment for current understandings of work but also the centrality of (gay) desire for the study of intimate and sexualized high-touch serving work.

Women's (no) Naming Right Under the Shadow of Patronymy: A Study of Law and Social Change in Taiwan

Patronymy is part of the cultural, social and legal mechanism of male supremacy, and a denial of women's equal right to name the child. In Taiwan, patronymy is a long-lasting tradition reflected in and constituted by the law, as the old children's surname law mandated that, with limited exceptions, all children shall assume their fathers' surname. The law was revised in 2007, which stipulates that children's surname shall be decided through parental agreement. This legislation is considered a hard-win success for women's equal rights, but the practices it turned out to be a disappointment. Since the law came into effect, approximately only 1.54% of all newborns were given the mother's surname through parental agreement. Does this fact suggest that people's attitude toward surnaming remain unchanged irrespective of the change of law? Can legal reform promote women's naming right, or does it mostly function to reinforce patronymy? We use data from the 2002 and 2012 Taiwan Social Change Survey to answer these questions. Our study find that significant changes have occurred in people's attitudes toward children's surnaming. The change in people's attitudes, however, does not translate into the change of actions. We have identified double gaps – gap between people's attitude in general and behavior intention, and gap between behavior intention and actual action. We also note gender, marital and parental status, and gender equality consciousness differences in people's attitude, and identify the profile of people who might benefit from the new children's surname law. Our study leads to the conclusion that a liberal children's surname law might be accompanied by a positive change in people's attitude toward children's surnaming, but cannot actively promote women's equal right to name the child.

A Study Showing Research Has Been Valued over Teaching in Higher Education Based on the Theories of Neoliberalism and Academic Capitalism

Research has been valued and given priority over teaching for a long time in academia. In recent decades, the Taiwanese Ministry of Education has pursued objective and quantitative research criteria and has encouraged higher education institutions to ask teachers to publish papers in SSCI or SCI journals as part of the criteria for promotion and evaluation. This policy strengthens the concept that research has priority over teaching because teachers must devote more time to research than to teaching in order to be promoted and evaluated.
The purpose of this study is to explore the influences that cause teachers to value research over teaching. To achieve this purpose, the study will apply document analysis and questionnaire inquiry as research methodology. First of all, the study will collect and analyze the documents for teacher promotion and evaluation of ten different universities. In order to collect the differing requirements of the reward system in different areas, these ten universities’ areas of specialty include general studies, education, medicine, vocational studies, and arts. Then, the study will use questionnaires to collect teachers’ opinions of task priority and the time involved on research and teaching duties. The data collected from the above two methods will be analyzed and discussed based on the theory of Neo-liberalism and the regime of Academic Capitalism. Some suggestions will be proposed according to the results.

Buddhism in Taiwan Under Globalization: Diversity and Hybridity

Taiwan’s Buddhism has undergone significant transformations since late 1980s. Globalization has played an important role on the new constellation of Buddhism in Taiwan. In addition to the mainstream and local Chinese Buddhism, other traditions of Buddhism from the Tibet, Southeast Asian countries, and Japan have also established numerous centers and attracted many Taiwanese followers. Globalization has thus brought diversity and hybridity to Taiwan’s Buddhism. In my paper, I will explore this phenomenon of Buddhism in contemporary Taiwan. I will adopt Nattier’s classification of religious cross-country transmission as the analytical framework to identify how foreign traditions of Buddhism have been transported to and practiced in Taiwan. Then, I will investigate how these foreign traditions of Buddhism have influenced the landscape of Taiwan’s Buddhism. Finally, I will inspect how Taiwanese monks and nuns respond to these newly converted Buddhism, which shares some common teachings and practices with the local tradition but differ from one another in certain teachings and practices. In sum, Taiwan’s recent transformations of Buddhism provide an interesting case for understanding the interactions among different traditions of Buddhism and its effects on the behavior of local tradition as well as local believers in the age of globalization.

Justice and Claims in Popular Protests in China

This paper studies the conceptions of justice in growing social protests in China. It examines claims made in popular protests, relying on a news database the author collected and constructed, with more than 3,000 mass protest events in 2000-13. It first describes the trend and characteristics of popular protests in contemporary China, and explains the patterns of claims in popular protests. Specifically, this study finds in urban China the biggest category of protest claims focused on income-related issues, accounting for about half of all protest claims. The other major protest claims included administration issues (e.g., government misconduct, specific government policy or regulation, rights issues), forced evictions, environmental issues, and student rights), and incidental events. In the rural areas the most important issue that emerged in the early 2000s and accelerated after the mid-2000s was linked to land seizures in suburban villages where local cadres underpaid or embezzled compensations due to peasants for the seizure of their lands. The second confrontation rural issue related to local government misconduct and cadres’ corruption, followed by rights issues such as forced eviction, pollution and environmental protection, and so on. Then this study shows which factors were related to different protest claims in urban cities and rural villages, and discuss how protesters’ notions of justice have affected their claiming choices and protest tactics.

Gendered Differences on the Attitudes and Solutions Toward Extramarital Sex in Taiwan

Although it is commonly claimed that women’s status are greatly improved and women’s rights are well-protected in Taiwan, extramarital sex (EMS) is criminalized in Taiwan. Taiwan indeed is one of the few countries in the world that still keep adultery in its criminal law. Moreover, the campaign on decriminalization of extramarital affairs launched by Awakening Foundation is facing tremendous challenges from some other women’s organizations and ordinary women in general. The debate to some extent is considered as ‘women’s war’ (i.e. the war between the first wife and the ‘other woman’), and men who engage in EMS are hardly problematized. Using the data drawn from the 2002 and 2012 Gender Module of the Taiwan Social Change Survey (TSCS), this research intends to elaborate the gender differences on the attitudes and solutions toward extramarital sexual permissiveness in Taiwan. The following questions will be thoroughly investigated: (1) Do men and women differ in the tolerance of EMS in Taiwan? (2) Do gender differences in social-demographic characteristics and views toward gender equality explain some of the gender differences in the attitudes toward EMS? (3) Do men and women adopt different solving approach (such as compromise, consultation, or confrontation) when he or she found out that a marital partner was having an extramarital affair with someone else? (4) Whether the EMS-related attitudes and patterns change over the past decade in Taiwan. With the scrutiny of these questions, this research is not only able to establish the extensive understandings of EMS-related patterns but also able to examine whether the ‘revealing intimacy’ argued by Giddens (1992) exists in current Taiwan.

JS-44.24
CHEN, MEI-HUA* (National Sun Yat-sen University, mc153@mail.nsysu.edu.tw)
Gendered Sexual Migration Across Taiwan Straits

Globalization and the uneven development of global economy accelerated both transnational commercial sex and global sex tourism. Since late 1987 when Taiwan lifted marital law (1949-1987), every year there have been thousands of Chinese women coming to Taiwan either as marital migrants or undocumented workers, to seek a better life in a relatively richer and freer Taiwan. On the other hand, rising economic power in East Asia, Taiwan, once a destination of sex tourism, now gradually appears as a sending country of sex tourists. Geographical closeness and cultural intimacy in terms of language and Han-ethnicity have served to turn China into a hot sex tourism destination for Taiwanese men.

Based on six years’ empirical research on (undocumented) Chinese migrant sex workers in Taiwan and Taiwanese men’s sex tourism in China, the paper aims to conceptualize transnational commercial sex and sex tourism as sexual migration to challenge the mainstream discourses regarding migrant sex workers and male sex tourists; i.e. the former as poor ‘trafficked sexual victims’ and the latter as sexual subjects who exploit local women. I would argue that the framework of ‘anti-trafficking’ not only implies a strong sense of criminality and thus stigmatizes (undocumented) Chinese migrant sex workers, but also fails to recognize migrant sex workers as sexual subjects who are either struggling for a better life or simply for better business. Moreover, the global sexual migration is complicatedly shaped by gender, ethnicity and regional economic hierarchy. It is Taiwanese men travel to China to buy sex, and Chinese women to Taiwan for selling sex. I therefore would draw on an intersectional approach to carefully examine the ways in which...
the gendered sexual migration is embedded in the cultural, socio-economic and political context between Taiwan and China.

**CHEN, ROGER S.** (Chinese Culture University, csr@faculty.pccu.edu.tw)

**Legislative Behavior in the Aftermath of Disaster: Estimating the Effects of Cosponsorship Networks and Adaptation Cognition**

Legislation is one of the core components of policy constellation for realizing adaptation strategies and disaster management. However, compared to policy content analysis, studies examining how legislators respond and take actions in national law-making arena are limited. The present paper focuses on legislative behavior in the aftermath of Morakot Disaster of 2009 that was the deadliest typhoon to impact Taiwan in recorded history and has since stimulated nationwide debates about adaptation measures for moderating the impacts of climate change. According to conventional wisdom, positions of legislators are divided and grouped in terms of ideological proximity, party affiliation, and local interests. However, risk perception awakened by natural disaster may transcend such segmentations and forge a viable consensus in legislative chamber. It is assumed that bill sponsorship and cosponsorship networks of Taiwanese Legislature Yuan had formed a web of supports leading to more successful environmental legislations in the aftermath of the Morakot Disaster. Based on these networks, the study applies network analysis to clarify the linkage between the network configurations of cosponsorship and the effects of adaptation cognition of legislators, in comparison with personal attributes effects. The expected contributions of the study are two-fold. It methodologically applies network analysis to gain deeper understanding about legislative behavior in relation to disaster, and theoretically verifies the degree to which adaptation cognition upholds successful legislative acts.

**The Changing Patterns in Living Arrangements and Their Impacts on Intergenerational Transfers of Older Chinese**

Recent studies have claimed that coresidence with children in China has declined over time. It raises the concern that whether or not changes in such living arrangements will undermine traditional support mechanisms for older adults. Literature suggests that China does not have a clear cut answer. This study is based on current understanding of living arrangement dynamics among older Chinese people by exploring the Follow-up Sampling Survey of the Aged Population in Urban/Rural China, a nationally representative data conducted by the China Research Centre on Aging in 2006. This study examined the associations between living arrangement preferences as well as the multilevel models, and found that as Chinese aged, they received monetary intergenerational transfers from children. In contrast, the bivariant analysis suggests that coresiding or not – used in previous analyses, this study introduces a trichotomous variable (live in the same household, live in the same city, live in the same province) to measure potential effects of children's living distance from their parents on intergenerational transfers. In the first part of the multivariate analysis, I investigated the determinants of older adults' living arrangements. The results suggest that older adults who were desired to coreside and with more instrumental needs were more likely to live with children. In the second part of analysis, I found evidence that urban old parents living close by children are more likely to receive net transfers and to receive a larger amount of net transfers from children. However, the effects of living arrangements for rural residents were not significant. The analyses suggest that, living close by adult children is becoming the primary living arrangement for future older Chinese people. Moreover, living close by children, rather than co- residing with them, does not necessarily weaken the intergenerational transfers and has become an important way of providing support in old age.

**Developing Indicators for Biocapital in an Era of Bioeconomy**

This paper aims to explore the frontier of developing indicators of biocapital, an emerging health-related notion with the rise of bio-technoscience. Different from other forms of capital, biocapital corresponds to a bioeconomy, in which biotechnology contributes to a large portion of economy. According to policy agenda proposed by OECD, elements of the bioeconomy include biotechnological knowledge, renewable biomass, and integration across applications, which are regarded as basic dimensions of the biocapital. As a concept tout neuf, biocapital is still ambiguous to spread wide in the sociological community. However, it has been a trend for many countries to include the bioeconomy in their policy agenda, blueprints or visions for the coming decades. Like other forms of capitals, such as social, cultural, human, and symbolic capital, biocapital is useful for sociologists to observe resource distribution in a society. To cope with potential problems associated with its even distribution, it is necessary to make the biocapital measurable. Several obstacles prevent it being measured. First, it is a multi-levelled concept ranging from individual, organizational, societal to national level. Second, it requires networks of heterogeneous actors, in response to biotechnoscience in the society. Third, it is a concept beyond borders, crossing state borders, market borders and disciplinary boundaries. The paper suggests several possible approaches for overcoming the obstacles. First, experiences of developing intellectual capital are inspiring, as the biocapital consists of the bio-technoscience. Second, also known as external control of organizations, a resource-dependant perspective of organizational study is heuristic for developing indicators associated with hetero-network such as firm size, number, networking configuration, etc. Third, the perspective of innovation system is useful for understanding holistic situation of bioeconomy. Fourth, other potential approaches such as that of cultural capital utilized by Bourdieu, as well as those utilized for indexing social capital.

**The Venus-Mars Difference and Its Discontents: The Contextual Effects Of Gender-Ideology Gender Gaps On Life Satisfaction**

This study introduces a new way of exploring gender and subjective well-being transitionally. We argue that it is not the level of egalitarianism in a society that enhances life satisfaction of women globally. Rather, what matters is the relative distance between women's gender values and men's. This gap, a contextualized gender ideology, requires a life satisfaction score that combines both men and women in their gender attitudes, the higher the level of women's life satisfaction. In contrast, women's overall egalitarian tendency has the opposite effects. When the two effects are taken together, the larger the Venus-Mars differences at the country level, the lower the subjective well-being of women in that country, regardless of whether the male is more or less egalitarian. Results show that men who are liberal in gender attitudes, however, may have a negative effect on men's perception of their own well-being, as well. This negative effect of gender discrepancy is even stronger for older men. Although existing literature has shown a universal up-trend in gender egalitarianism, men's persistent reluctance of catching up in gender egalitarianism would significantly limit improvements in both men's and women's subjective well-being.

**The New Poverty and the Masstige Fad–How Fluid Class Identities Influence Fashion Consumption**

The macro-societal changes such as the economic recession in recent years are moving many people in the younger generation from the middle class to the working poor or the new poor class, which echoes the worldwide scholarly discussions of the “dwindling middle class” or the “M-shaped society.” Taking a culture consumer theory (CCT) approach, this paper first investigates the consumption tendency of the new poor class consumers since they may retain their consumption tendency of the new poor class consumers since they may retain their class identities and their income levels. By conducting in-depth interviews among self-defined “new poor” consumers in Taiwan, we explore the new poverty milieu in Asia, and also indirectly answers the question that in terms of consumption, is it shaped more by people's incomes or by their taste and identity?

Second, this paper argues that the inconsistency between consumers' purchasing power and class identities may provide an ideal market for the masstige (short for mass prestige) products which come with affordable prices and high-end images. By conducting a broadly-defined textual analysis of the communication techniques ranging from the advertising texts to store layouts adopted by the masstige fashion brands such as ZARA, UNIQLO, and H&M, we examine how the myth of “democratizing luxuries” is constructed and see if consumers perceive the brand image in the ways that the merchandisers intend.

By bringing in both industrial practices and consumers' perspectives, we better understand the role of mobile class identity in the field of consumer behavior, and uncover how the brands may leverage the ambivalent consumers' mindsets to tap into an emerging market.
Research on the Potential Age Discrimination to the Senior Citizens in China

Background: The “Law of the People’s Republic of China on Protection of the Rights and Interests of the Elderly” has forbidden the discrimination and insults to the senior citizens in China. However, in daily lives, the elderly still have to confront various forms of discriminations.

Method: This is a qualitative research, using intensive interview research method. 28 senior citizens were interviewed in Beijing and Wuhan City.

Result:
(1) There are three different types of age discrimination: Positive, negative and “side-effect” discrimination. The positive discrimination is a behavior that directly insults the elderly such as scolding the elderly. The negative discrimination is the ignoring of the appeal of the elderly. The “side-effect” is a byproduct when helping the elderly. For instance, the deaf elderly may be grounded due to safety reasons. The negative and “side-effect” discrimination make up of the potential age discrimination.

(2) The family, community, society and policy are all involved in the potential discrimination. On the aspect of the family, the excessive care given to the elderly is a form of discrimination to their self-care ability. On the aspect of the community, those living high in the apartments or disabled are often not invited to the community activities. On the aspect of the society, the media and press reinforce the frail stereotypes of the elderly. On the aspect of the policy, the existing defects contribute to the discrimination of the elderly.

(3) In order to solve the problems of the potential discrimination to the elderly, the policy, media and press need a relevant change. The effects of the social work should be emphasized, too. This will be a hard and long-lasting task.

Research on the System of Long-Term Family Support for the Disabled Elderly in China

Background: The long-term family support is widely used by the disabled elderly in China. As the group of the disabled elderly expands, the problems of long-term family support become obvious.

Method: Both quantitative and qualitative methods are used in this research. It combines the original data of Beijing of the “Second National Survey on the Disabled” with the records of indoor intensive interviews with 28 disabled senior citizens in Beijing and Wuhan city.

Result:
(1) Family support is of vital importance for the disabled elderly in China. There are five characteristics of the family support: family-orientation, structure of grade, complexity, concentration and long-term.

(2) The “family-orientation” depicts that most disabled senior citizens prefer family support due to the reason of income, filial piety, and the distrust of the non-family members. The “structure of grade” defines the relationship between the caregivers and the disabled elderly. The caregivers are mainly spouses, sons and daughters. The “complexity” means the family support is characterized by the core of “disability”. Thus, we have to take various patterns of the family support due to the complexity of the disability. The “concentration” depicts the contents of the family support for the disabled elderly, which can be summarized as the basic support, daily living support, mental support and so on. The “long-term” means the family support is a hard and long-lasting task.

(3) The defects of the family support are low-level quality, instability, negative influences on the children and so on. In order to solve these problems, we have to develop other forms of support, such as community and institution support.
Intergenerational Transmission of Family Formation: Socio-Economic Differentials in the Timing of Marriage and Childbearing Among Young Taiwanese Adults

Previous studies on marriage and family have consistently explored the familial and parental influences on the development of adolescent sexuality, mate selection, union formation, and eventual childbearing, either through family tradi-
tions, economic conditions, or a mix of factors. In recent decades, since demographic and economic trends have been increasing social class disparities in children's access to resources internally and externally, the pathways of transition to adulthood have become more diverse and less predictable in Taiwanese society. Besides, the prolonged education and employment processes have significantly delayed the timing of family formation among young Taiwanese adults. This paper aims to explore the implications of increasing social and economic inequality for young people's adoption of adult roles, with main focuses on two life events including the timing of first marriage and following childbirth. Data are taken from the Taiwan Youth Project, which is a longitudinal panel study of 2696 students in junior and senior high schools since the year 2000. Since part of respondents has been married, it is an adequate time to analyze their disparity on sexual attitudes and mate selection practices and major trends in the timing of entry into first marriage. We also compare the tendency for young adults to different social and economic backgrounds to choose partners of specific characteristics, and childbearing intentions and outcomes. Based on these results, we are able to examine the relative effect of perceived parental influence on their adult children's mate selection, union formation, and reproductive behavior in contemporary Taiwanese society.

A Study On The Educational Policies On After-School Programs and Educational Equity In Taiwan

Since the year of 1960, the educational policies started to focus on the issues of disadvantaged students and their schooling. How to disenchant the struggles that disadvantaged students face during their daily school lives become the priority that educators and administrators need to consider especially the issues related to the afterschool programs. Like the Title I of ESEA in the United States and EducationPriority Area (EPA) in the Philippine, the policies related to disadvantaged students and afterschool programs in Taiwan since 1995. In order to review the con and pro of the existed afterschool programs policies, the principal investigator collects the theories related to disadvantaged students and afterschool programs and conducts a survey on the questionnaires on disadvantaged students and afterschool programs. Furthermore, the researcher host three focus group discussions to provide useful reflections from the qualitative findings. As the results, the author provides conclusions and suggestions to the further discussions, research, and policy making.

Culture and Defensive Modernization in Thailand, 1855-1932

How can “Siam/Thailand” be brought, as a new non-western case, into the corpus of comparative-historical sociological cases without falling into the trap of methodo-
tical nationalism (which glorifies its own agency behind its ‘success story’ of indepen-
dence) and globalism (which sees its as a periphery within the capitalist world-system)? This paper traces the unfolding course of defensive modernization in Siam/Thailand through a critical (re)examination of four discourses and their accompanying sites of practice, i.e., the political economy, the discourse of civilization, the human-animal discourse, and the postcolonial discourse. Situated within the overlap-
ning spheres of the British and French imperial expansions and encroachments, Siam/Thailand (from 1855 to 1932) has been considered as one of the exemplary cases in which the modernization occurred as a direct response to the Western imperialism. Such form of modernization, nonetheless, still lacks a conceptual basis. In this paper, the author traces the Siam/Thailand’s modernization in the case of defensive modernization in Siam/Thailand by integrating relatively recent case studies by Thai revisionists about Siam/Thailand in this period and by providing a new theoretical angle to analyze those cases. The main argument of this paper centers on the constitutive role of culture in the construction and elaboration of the programs of defensive modernization by the Siamese/Thai ruling elite. The three contributions that this paper gives are: 1) bringing empire, imperialism, and colonialism into historical sociology; 2) providing a new non-western case to the comparative-historical studies of modernization (beyond the old-fashioned paradigm of the “modernization theory”) as well as state and imperial formations;

Culture, Childbearing and Family Formation: A Cross-national Comparative Analysis

This paper traces the unfolding course of defensive modernization in Siam/Thailand through a critical (re)examination of four discourses and their accompanying sites of practice, i.e., the political economy, the discourse of civilization, the human-animal discourse, and the postcolonial discourse. Situated within the overlap-
ning spheres of the British and French imperial expansions and encroachments, Siam/Thailand (from 1855 to 1932) has been considered as one of the exemplary cases in which the modernization occurred as a direct response to the Western imperialism. Such form of modernization, nonetheless, still lacks a conceptual basis. In this paper, the author traces the Siam/Thailand’s modernization in the case of defensive modernization in Siam/Thailand by integrating relatively recent case studies by Thai revisionists about Siam/Thailand in this period and by providing a new theoretical angle to analyze those cases. The main argument of this paper centers on the constitutive role of culture in the construction and elaboration of the programs of defensive modernization by the Siamese/Thai ruling elite. The three contributions that this paper gives are: 1) bringing empire, imperialism, and colonialism into historical sociology; 2) providing a new non-western case to the comparative-historical studies of modernization (beyond the old-fashioned paradigm of the “modernization theory”) as well as state and imperial formations;
In 2009 thousand young workers of industry (processing, hi-tech productions) at 13 regions of Russia were polled; in 2010 a part of them were interviewed. Accumulated educational resource (school education, professional training and training during work) has a direct influence on the demand for renewal of the type and size of salary. However, growth possibilities are limited by technological possibilities of production. It stimulates an exit of a part of youth from working profession. Among those who became workers having a large educational resource (full secondary school or secondary professional college) intensively accumulate a human capital and achieve higher qualifications; about one third of them are not stabilized in this status and aspire to leave working profession, this position is transit for them. But two thirds of such workers remain in production. However, the highest stability of working profession belongs to workers, having a small baggage of school education, preparation at technical college or at the courses - and to whom this base education prevents to move upwards on educational and qualification levels.

Typical trajectories “Horizontal” (57 % of a massive): low school education, training of working professions at technical college and at a working place leads to mass and low qualifications. Those not stimulated to professional advancement and study make the most stable personnel satisfied with a low salary work. Here stability is sooner forced – few alternative possibilities.

“Progressing” (27 %): large volume of school capital, intensive accumulation of educational-professional resources, achieving high qualifications. Partially “transit” workers are formed.

“Vertical” (16 %): base secondary education or secondary professional college, intensive improvement of qualification, most qualified personnel. Big educational ambitions are expressed in getting higher (or secondary professional college) education (by correspondence course) that leads to achieving positions of a technician or an engineer.

In Australia, where stocks of social housing are being gradually depleted, only those with the greatest need and most complex problems are eligible for public housing, with the remainder being forced to negotiate the private rental market. The effects of this are twofold: first, a growing concentration of social disadvantage within neighbourhoods containing social housing; and second, the movement of low-income and unemployed residents into peripheral urban areas where private rents are cheap. In both cases, this creates a perception among residents that their neighbourhood has become a ‘dumping ground’ for what Zygmunt Bauman in Wasted Lives (2004) sees as modernity’s ‘surplus, redundant, unemployed and functionally population’. In this paper, we illustrate how housing policies and processes inadvertently and deliberately contribute to the creation of these kinds of dumping grounds in two separate regions of south-east Queensland. The first – Logan City – is a low-income area with an historical concentration of social housing, unemployment and stigmatization that has recently been targeted for renewal in order to disperse disadvantage and create a socially mixed community. The second – Russell Island – is a popular retreat for retirees but its cheap land and low-cost rent has rendered it a last chance destination for those pushed out of other areas by the absence of affordable housing. While the history and circumstances of these two areas are very different, the dynamics of housing policies and processes means their trajectories are increasingly connected as attempts to reduce concentrated disadvantage in one area have flow-on effects for the other. Further, as we also demonstrate, the movement of populations is not necessarily accompanied by a commensurate flow of services, which compound existing forms of disadvantage through isolation, a lack of support and few options for moving on.

School-to-Work Transitions before, during and after the Global Financial Crisis in Australia

School-to-work transitions are becoming more complex as labour markets restructure due to technological innovations and closer economic integration between nations. Entry into the labour market is becoming increasingly contingent upon having appropriate educational credentials consequently, leaving some to complete secondary education in order to secure more marketable people experiencing prolonged periods of precarious employment. Although the Australian economy weathered the recent Global Financial Crisis (GFC) better than many other advanced economies, in August 2009 the combined unemployment and underemployment rate for young people was double the rate for the working age population. During economic recessions, young people tend to delay entry into the labour market preferring remain in school until the economy rebounds and jobs are easier to secure. The flexibility of the Australian education system coupled with the availability of welfare payments for full-time students allows young people to transition between education and employment multiple times and provides a refuge from harsh economic conditions. This paper presents the results of analyses of the first 12 waves of the Household Income and Labour Dynamics in Australia data tracking the fortunes of three cohorts of young Australians: those who completed school prior to the GFC, those who completed school during the crisis (2008-09) and those who completed school after the GFC to examine the effect of the crisis on school-to-work transitions.

Cross-National Income Disparity and Life Expectancy

This study examines cross-national relationship between income inequality and population health. It has long been speculated that income inequality is detrimental to population health due to material and psychosocial deprivation, given the robust relation found between income and individual health. Though test of this thesis initially corroborated a negative relation across counties and countries, whether the relation is causal in nature remains in question. During recent years, the thesis has brought under a more careful scrutiny with the use of more robust methodological tools due the increased availability of longitudinal data and prevalence of corresponding statistical models. Most of the longitudinal studies reported null finding. However, longitudinal studies are also plagued by lack of comparable data and hence many of them can only examine the relation across limited number of countries and/or time period. In this study, a more comprehensive dataset, Standardized World Income Inequality Database (SWIID) with wide range of countries and time period together with improved comparability is analyzed. Given previous findings concerning the thesis, three hypotheses are tested: (a) income inequality has detrimental effect on life expectancy, (b) income inequality has a more detrimental effect on life expectancy if household gross (pre-tax, pre-transfer) but not net income inequality is used, and (c) income inequality’s effect on life expectancy is not stable across different years. With the improvement of data coverage, fixed-effect analyses with Huber-White sandwich estimators are carried out to examine the thesis across about 150 countries and 3) creating an ongoing dialogue with the macro-social theories that choose to walk a tightrope between the methodological nationalism and globalism.

Social Justice in a Changing Society

The BRICS states have different recent histories. Some of them, like Brazil, have been developing as market-based economies and emergent societies. Others, like Russia or China, came to development from the incipient stage of state socialism. The supposed difference between them underlies the main hypothesis of the study of class justice: former socialist societies tend to embrace the idea of distributive justice, the market-based are habituated in a market environment and therefore are more tolerant towards meritocratic forms of inequality. The results of the survey based on an All-Russia sample show tend to put the above hypothesis in doubt. The Russian population tends to endorse the idea of equity as the primary principle of social justice rather than the idea of equal distribution. In later stage of their evolution the socialist societies stressed the idea of equity and procedure much more strongly than the idea of equality. The Russian society is inclined towards the logic of accepting the difference in income if it relates to education, skills, work input and entrepreneurial skills. Procedural justice is viewed as an important guarantee of the equity principle. The difference in income must be linked to the measurable criteria such as the level of education credits attained by education institutions, the quantified amount of work, or skills confirmed officially as the grades or other occupational standards.

The perception of justice varies according to class or other social conditions. While evaluating their income as just or unjust the Russians tend to rely on the standards of their community or their social group rather than on some general principles. The general principles of equity are more salient in the groups dependent on the macro-context such as pensioners or students.

Collaborative Authors without Rights: Creative Consumption, Intellectual Property and the Governance of Global Cultural-Commodity Chain of Japanese Animation, Manga and Subcultural Goods

While Japanese animation, manga and subcultures (for example, hatsune miku or niconico dōga) now become a widely discussed creative industry both within and outside Japan under the slogan of “Cool Japan,” current discussion focused mainly on its production or consumption side. Yet given the role of the auteurs derivatives creation movement (or nijisōsaku in general discussion within Japan), the division between production and consumption is no longer distinctive-ly clear. This new trend requires our re-conceptualization of the cultural industry. Taking an economic-sociological view, this paper will take the framework of “global cultural-commodity chain” that derives from discussion on “global commodity chain” and “global value chain.” Through interviewing with different players in the chain like mangas of copyrights in established publishing firm, amateur manga writers and managers, as well as other players in the commodity chain, the research pays attention to different steps within the long chain of production, distribution and consumption of Japanese animation, manga and subcultural goods, which were now produced with the help of the internet. By locating and identifying major players in the distribution sector, the paper wishes to develop a more sophisticated picture of the newly developed cultural-commodity chain of Japanese subcultural goods, in which creative consumption will gradually be re-incorporated back to the production side. In the case of Japan, the global idea of intellectual property remains ironically contested among producers and consumers. Players rather take a more cultural-specific model of consensus-making instead of taking the concept of intellectual property right legally in organizing collaborative creative works. It presents a framework to analyze especially the impact brought by consumers, who actively participate in the amateur creation and distribution of these amateur products, thus transforming the landscape of the cultural industry as well as concepts like originality, copyright and cultural commodities.

Educational Dream in a Postindustrial Reality: Expansion and Restructuration of Secondary Schools in Hong Kong

The paper examines and accounts for the main features of the expansion and restructuring of secondary school system in Hong Kong, amid the social background and theoretical discussion of post-industrial societies. Institutionalization of mass education and the rapid expansion of secondary school education emerged roughly at the same time of the rapid industrialization in the 1970s. The rapid transition to service economy in the late 1980s, in addition to the limited expansion of elite education in the tertiary sector in the 1990s, probably caused the rapid denegation of vocational schools and private schools. On the one hand, public and subsidized grammar schools remain as dominant or are even strengthened as high prestige which led to higher chance of securing a place in the limited but expanding tertiary education. On the other, elite class tends to send their children to international schools in H.K. first and then university overseas. The above arrangement seems to fit the global model of modern institution of education but is relatively unique, if we compare the case of H.K. to other post-industrial societies with similar developmental path like Japan, Taiwan and Singapore, in which the state encourages resources reallocation via the diversification of the types of schools to avoid inequality or class reproduction of poverty. Amid the background of the coming of the ideas of neo-liberal educational reform in the 2000s, this paper explains why Hong Kong mainstream society will follow the simple rule of transaction in the education system on the one hand, and how the privileged class tries to gain status advantages by either exit from the local game or by supporting the current reform of privatization of some former subsidized public secondary school system on the other.

Ritual and Religious Taste: Bodily Technique As the Key to Belief

Sociologically speaking, religion is primarily understood in three-fold: belief, ritual and religious organization. In the sociology of religion, the ritual is easily downplayed, whereas the belief is often overemphasized due to the influences of Western Christianity on this discipline. This paper, therefore, examines the role of ritual by analyzing the development of Taiwanese folk religion, paying particular attention to how traditional belief competes with, if not replaced by, religions in modern Taiwan. In response to the crisis of the religious legitimation, Taiwanese temples produce cultural capital by emphasizing the cultural value of their rituals. The "culturalized" ritualistic activities further create for the people a modern connection with folk religion. It is through ritualistic participation that the religious taste of folk religion is reproduced and maintained in the popular. This study will analyze why bodily technique is essential to the construction of religious taste, and how its practices contribute to the participants' traditional belief.

Structural Influential Factors on Taiwan Females Participation in Politics

This research is to explore the structural factors of Taiwanese women's participation in grassroots politics, especially to substantively present the complex local structure and context of female participation in the local grassroots elections in those cities and counties where Hakka ethnic groups clustered.

It presents stark difference with local features in Taiwan women's participation for different party (city) councilors elections. To analyze their participation in politics, neither can we ignore gender viewpoints, nor can we alienate ourselves from local situational context, especially those kinship, social clubs, networks, ethnic, local fictions, political families, association of farmers, fisherman and irri-gation and political parties of different areas. How to interact with different genders as to influence Taiwan women's local participation in politics, all of which is the key point this research is to explore.

In Taiwan, the key political tune set in major cities and counties where three Hakka ethnic groups clustered is first on geographical context, then kinship and the last political party. Lineal kins and tribes primarily inherited by men, what if women's political participation doesn't represent lineal kins and kiths, will it represent gender or ethnic group? or anything else? What specific social connotation with these women participating local election? This study is mainly to explore the positioning in women's political participation, which is used exactly to answer the questions listed above.

Sustaining The Women's Ghetto: Gendering, Masculinization and Feminization Of Newspaper Organizations

This paper aims to explore the reasons why women are still unable to escape from marginalized, belittling and disadvantaged positions at work. Previous studies on gender and women's employment have acknowledged that the gendered construction of labour has either excluded women from the labour market or restricted them to the middle or bottom of the power structure within work organizations.

Using NotT Daily as an example, I argue that, apart from using the 'gendering' process, the organization may at the same time be attempting to feminize some particular units to intensify the gender segregation. In so doing, the organization may still appear to be segregated by gender, but the nature of the horizontal gender segregation is different from what it was before. To explain the differences, we have to employ feminization as an explanatory tool. In other words, to understand the way in which organizations are gendered, we have to examine the processes of both 'masculinization' and 'feminization', in order to acknowledge more clearly the difficulties women are confronting in the labour market.

In this article, I suggest that the women's page was feminized by two means: isolation and normalization. The women's page was isolated spatially. It was also isolated in terms of professional practices. The isolation reified the unimportance of the women's page in the sense by the women's page was a neglected and dead-end sector. The organization then normalized the labour process of the women's page to render the working routine of the women's page compatible with most people's daily routines (particularly schoolchildren), thereby making the women's page a women's unit inevitably shunned by ambitious people. And it is feminization of the women's page that makes the women's page a women's ghetto.

Is Globalization The Essential Force To Generate Localization? A Constructive Analysis

While globalization has significantly extended its influence crossing the bound-ary between countries, many national states gradually lose their control over

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
society as witnessed by the fact that many countries voluntarily give up the control over the tax rate on the importing goods. This is mainly because they need to conform the rules of a global economic system, if they pursue a considerable amount of capitalist profit embedded in this system. This phenomenon indicates that globalization does not only generate a profound influence on economic sphere but also on political arena. It is argued that the combination between these two aspects is able to benefit advanced countries, particularly USA, for reinforcing their cultural hegemony. Consequently, such cultural exportation will erode the local cultures of imported countries that are the crucial element to define the identity of their citizens. It is argued that local culture is created to avoid this political crisis. However, such viewpoint may confine itself within a narrow view of top-down scope.

*How Different Are the Young Women with Forced First Premarital Sex in Their Romantic Relationships? A Life-Course Perspective from the Taiwan Youth Project Surveys*

Studies have well established the negative relationship between forced first sex before marriage and a wide range of family, social, and well-being outcomes in non-Asian young women. However, due to the data inadequacy, surprisingly few studies have examined this relationship among Asian young women, and even less has been analyzed on the long-term consequences. Based on the life-course hypothesis, this study contends social norms prescribe the appropriate timing for important transitions and sanctions apply to non-followers which may produce long-term negative consequences. In East Asia, particularly in Chinese societies, collectivistic orientation has been proposed to be a salient social trait. Adolescents situated in this particular cultural context are exposed to strong normative influence. Conservative social norms expect Taiwanese youth to be well-behaved and not to practice non-standard behaviors in adolescence such as engaging in active sexual behaviors before marriage. Hence, forced sexual initiation in adolescent romantic relationships becomes a serious concern and it implies adverse public health and social consequences such as risky behaviors, psychological distress, and a higher probability of intimate violence or divorce after marriage.

Building upon Bronfenbrenner's ecological model (1979) and life-course theory, we use the longitudinal panel surveys of Taiwan Youth Project (2000-2011) and compare Taiwanese young women on a wide range of family, social, and well-being outcomes variables from early adolescence to young adulthood in whether or not they ever experienced forced first premarital sex in their romantic relationships. Findings of this study will advance our understanding of how forced sexual experiences are shaped by a set of complex dynamic factors in East Asian social contexts. Our study will also contribute to social and health policies and programs in the advancement of positive developmental outcomes of young women in Taiwan as well as in East Asia.

*Globalization and Nationalism at a Crossroads: The Identity Politics of Competing Imagined Economies Across the Taiwan Strait*

Even before the implementation of the Economic Cooperation Framework Agreement (ECFA) between China and Taiwan in 2011, the increasing rate of cross-Strait economic integration and the potential volatility of Taiwan's ambiguous international status has been the subject of intense political debate and academic research. The island's shift away from an imagined community of 'One China' to part of an 'imagined economy' inextricably linked to mainland China is not just a projection or re-grafting of national sovereignty onto the global scale, but rather an ongoing process of the re-imagining of space and scale, in which both concepts are mutually constitutive of one another. While the symbolic act of closer economic integration between two parts of a divided nation bring justification and legitimacy to a priori definitions of globalization as a project, at the same time, the process continues to stretch the traditional confines of national sovereignty. The aim here is to analyze how through the act of selection, specific historical periodizations have been reframed to form a dominant narrative of the relationship between national identity and the spatial limits of economic possibility for current contexts.

Specifically, this paper provides a discourse analytical perspective on the social forces and ideas that have sought to dominate the narrative of harnessing an externalized concept of globalization on the one hand, and harmonizing regional security and prosperity as a crucial cornerstone to national development on the other. Particular attention is made to the framing of post-2008 cross-Strait economic integration and the potential volatility of Taiwan's ambiguous international status as a project, at the same time, the process continues to stretch the traditional confines of national sovereignty. The aim here is to analyze how through the act of selection, specific historical periodizations have been reframed to form a dominant narrative of the relationship between national identity and the spatial limits of economic possibility for current contexts.
Following Chalmers Johnson (1982) seminal analysis, Japan is known and debated as prime example of a developmental state and state-led capitalism. However, a closer look to its historical development shows that Japan's industrialization is not a simple case of state-directed capitalism, but much more complex and marked by turning points. Already before its full reintegration into the world system of Western technology, Japan had experienced a proto-industrialization primarily driven by private entrepreneurs. During the late 19th century, this proto-industry was the economic foundation, which allowed Japan to embark on a modernization and industrialization path and to withstand colonization pressure by Western powers. This deindustrialization effort was embedded into the introduction of a nation state including modern administrative, educational, juristic and military institutions and was initiated by the state, but quite early key industries were privatized. Accordingly, the role of the state in economic development was surprisingly limited in Japan as a late-comer and up to the 1930s. The economic system followed a liberal model. This changed fundamentally during the years of war (1937-1945), which saw the introduction of an increasingly state-managed economic system oriented towards the war efforts. The developmental state not only survived the years of U.S.-occupation (1945-1952), but after fierce social conflicts in the early postwar era state-led developmentalism became from the 1960s onwards the central piece of Japan's new social contract. Since the collapse of the bubble economy in the early 1990s and the following decades of economic stagnation, the model of Japanese capitalism is increasingly questioned and submitted to structural reforms. Abenomics is just the latest attempt to lead Japan back to developmentalism. This paper will analyze the driving forces behind the turning points of Japanese capitalism(s) and discuss its consequences for our understanding of the variety of capitalism.

Making One Health Experts: The Formation, Reinforcement, and Transformation of Epistemic Communities

This paper explores how an international One Health epistemic community was gradually assembled and shaped through the interventions of international agencies. In response to H5N1 avian flu outbreaks, the international community has gradually developed a “One World, One Health” approach, which was endorsed by multiple international agencies. These international agencies include the World Health Organization (WHO), Food and Agriculture Organization of the United Nations (FAO), World Organization for Animal Health (OIE), and other agencies. For the purpose of deliberating and defining One Health strategies, the WHO, FAO and OIE mobilized experts from their reference laboratories and collaborating centers. International agencies consciously affected the international expert networks, and previous affiliation with policy organizations hence becoming crucial bases for expert power and influence. This paper argues that the emergence of the One Health community has been intentionally constructed by international agencies, instead of simply growing out of shared understandings and goals. The study therefore challenges and extends Haas (1990, 1992)’s theory of epistemic community by revealing how an epistemic community co-evolved with global policy formation. In addition, I illustrate that although international agencies have attempted to expand the networks, experts affiliated with their laboratory networks are still crucial participants to define and fulfill One Health.

CHINITZ, DAVID* (Hebrew University, chinitz@cc.huji.ac.il)

Health Professionals, Health Policy and Health Management Theory: The Big Disconnect

In tandem national health system reforms in Western countries, management theories seeking to adapt health organizations to policy directions have evolved. Unfortunately, policy directions and management theories appear distant from the socialization of health professionals, and, as a result, relatively little change has taken place in the organization of health care delivery. This paper will combine several sources of information to paint a picture of the disconnect between health professionals and health policy and management. The first source is a review of the literature on the knowledge and attitudes of health professionals, especially physicians, towards health reforms and managerial interventions such as quality measurement and health information technology in different countries including, but not limited to, the US, France and Israel. Second, the author will report on empirical research ongoing in Israel on two main subjects: 1. how physicians, nurses, managers and policy makers view efforts to measure the quality of health care and report the results to the public, and 2. the process of introducing e-health and m-health into the Israeli health system and how this process is viewed by physicians, managers, policy makers and citizens/users. Third, the author will report on a bibliographic study of articles on health policy and management appearing in major medical journals such as JAMA and NEMJ using citation analysis to show that such articles are not, by and large, read by clinicians. While the overall hypothesis of this complex of research projects is that health professionals have been disconnected from the design and implementation of health policy and management innovations, the study will also test the hypothesis that countries with strong traditions of physicians and other providers working within the framework of National Health Services or large managed care organizations will be characterized by relatively greater health provider understanding, acceptance and implementation of managerial innovations linked to national health reforms.

**A Global Look at Mixed Marriage**

Mapping attitudes toward intermarriage—who is and who is NOT an acceptable mate—offers an incisive means through which imaginations of belonging—race, ethnicity, nationhood, citizenship and culture—can be critically evaluated. In particular, social constructions of race and difference involve discussions of purity, race identity and taboos against intersexual and same-sex marriage. Drawing from qualitative interviews and ethnographic research in six countries on attitudes toward intermarriage, this paper explores these issues of intermarriage in a global context. Through a comparison of qualitative data I collected in Australia, Brazil, Ecuador, Portugal, South Africa and the United States, I offer a theoretical framework and provide an empirical basis, to understand the concept of intermarriage and what it tells us about racial boundaries in a global context. For example, in the United States, the issue of intermarriage is discussed as intersexual with less attention paid to inter-religious or inter-ethnic, to the point that those concepts are rarely used. Similarly in South Africa, despite the end of apartheid decades ago, marriage and taboos against intersexual and same-sex marriage remain a tension point for many. Hence, globally there is less consensus of what constitutes intermarriage—sometimes intercultural, interethnic, or any number of words with localized meanings.

**Irrelevant or Interconnected?—the Environmental and Labour Movements Against Electronic Industry in Taiwan**

Since the early 1980s, the development of Taiwan’s Science Parks where the electronic industries cluster has been seen as a model of the developmental state’s capacity to hatch a strategic national industry through a process of upgrading and modernisation. The leading industries in Science Park, computer and peripherals, semiconductors and optoelectronics, have been successfully promoted by the government and the corporations as a clean high-tech industry, which is ideal to replace the high pollution one. The industry has been depicted as golden-hen of the national economy because of its economic success and hence Taiwanese society witness a significant expansion of electronic industry and the model of high-tech Science Park. However, the negative environmental impacts, hazardous consequences and social injustice, and the repression of labour right in the industry have gradually emerged since the late 1990s. As a result, the environmental movement activists, community neighbourhoods, farmers and fishermen in farmers’ right campaigners have collaboratively worked in the movement against electronic hazards and the expansion of Science Park since 2005 and the campaigns for electronic employees’ working rights have gradually emerged during 2008 economic crisis. Despite of relating to electronic industry, the two movements have seem remained irrelevant in the beginning, but the green movement has emerged in the intensive relationship of the intergenerational relationship in Japan and still focuses on the determinants of coresidence. Not much scholarly attention is paid on the geographical distance between parents and adult children who live separately. It is important to study the intergenerational distance since past research consistently indicate that intergenerational support transfers are influenced by the distance between the two.

Using the Fourth National Survey on Family in Japan conducted by the National Institute of Population and Social Security Research in 2008, I examine the distance between adult married daughters and their parents (if possible, also their parents-in-law), and what factors determine the distance. I take the effects of adult daughter’s demographic and socioeconomic characteristics such as education, a number of siblings, sibling composition (birth order and gender), as well as regional effects into consideration. In particular, I focus on support needs of both daughters and parents. If possible, I will also use the previous surveys to see whether the geographical distribution between the generation has changed in the given time period, how the determinants of intergenerational distance between the two have changed over time. The study aims to address how the intergenerational distance is shaped by the needs of family members who do not cohere.
CHIU, WEI-CHENG* (Louisiana State University, pcebeeric@gmail.com)

Social Capital, Mobilized Information Networks, and Risky Investment

This study reviews several Taiwanese researches that relate to the behavior of participating in risky investment from the view of social capital to the view of sociology of knowledge, and attempts to bring extant quantitative data into conversation with extant qualitative research. After comparing the former studies, I construct a model that emphasizes on typology of mobilized information networks to explain the behavior of participating in risky investment. Since this paper focuses on how investors get information, I use the data of Taiwan Social Change Survey period 5th time 3rd (2007) and classify sixteen types of investors by distinguishing mobilized information networks into sixteen types. These types of mobilized information networks indicate each of the sixteen groups of investors has different “information-knowledge” social ability, by which investors recognize the reality of financial market. Without knowledge foundation, investors can just understand very limited information; without special information channels, investors cannot form complete information-knowledge. I argue that mobilized information networks can explain risky investment behavior better than general social capital capacity.

This paper controls several important social and economic status variables, and controls risk acceptance degree of investors as well, and then run following models separately: (1) use social capital variable as independent variable on risky investment behavior, (2) use social capital variable as independent variable on sixteen types of mobilized information networks separately, (3) let social capital variable be controlled also, and use mobilized information networks as independent variable on risky investment behavior. After comparatively analyzing the result, I prove the argument of mobilized information networks can explain risky investment behavior better than general social capital capacity.

Taiwan's Labour Resistance and Organising in the New Millennium

The research aims to explore the recent development of organised labour in Taiwan where has shown astonishing degradation of wages and working conditions in the new millennium. The independent labour movement has emerged from the democratic transition in the second half of 1980s. However, unlike the stories in South Korea and Hong Kong, since the late 1990s Taiwanese society has witnessed a continuous decline of union density and union influence at workplace as well as national politics. The crisis is clear: the independent union movement is losing its strength in traditional manufacturing sector and failing to represent workers in emerging industries such as electronic and service industries where in particular the irregular employment is prevailing. Several students of labour studies have identified the specific institutional and cultural constraints on Taiwan's union movement. However, the recent development of labour movement, regarding to how the movement breaks through the predicaments, is worthy to take a closer look. The author will first illustrate the efforts and crisis of the labour movement in the hostile institutional and political environment. Second, without a strong and solid national union federation, the role of local federation, industrial federation, and labour NGO will be discussed. Finally, the amendment of Trade Union Law in 2010 removed several rigid regulations on union formation and has encouraged a plenty of organising campaigns in largely unorganised industries. In final part the author will focus on these new organising strategies and evaluate their effect and possibilities.

A Value Organization With The Sports - As a Candidate That Face Up With The Nation States and The Corporations Under The Global World-

IOCl claims that IOC is not a sport organization but a value organization with the sports. Although it is a fascinating idea, not well supported by the people out of the sports stakeholders. This idea is investigated from the organizational sociology approach. Religious community and Regional community were well recognized as the value organization in the history. Both of them could invent tradition and were the main bodies of the imagined communities. They still claim themselves as a value organization, however, the power and influence to the public are keep decreasing under the globalization world. The global world prefers a value that set over the boundaries and not by God. Hence, the necessity of a value that can pick off an extreme nationalism and capitalism is well recognized and discussed as the quest for ideal value system, but not as an ideal organization that embody the value. Firstly, currently existing major organizations and groups based on Family, Ethnicity, Religion, Army, Party, Union, Kingdom, Nation State, Corporation, NPO and Sports organization are compared for their nature and character by Purpose, Economical situation, Membership principle, Internal rule and governance, Invention and Share of a value and several other points. Secondary, by comparing the organizations that put God, Region or Sports as the core value, the necessary conditions to be a value organization under the global world is discussed. This investigation discovered that the organization with the sports as the core value has the similar nature and character with that of Religion and Regional community. Besides, an organization with the sports is more adaptive for a free membership and value diversity. Such nature and character are summarized as “Sports rationality” against “Economic rationality”. The sports rationalism will naturalize the nationalism and capitalism, and then bring better harmony into the society.

CHOI, JONGRYUL* (Keimyung University, jchoi@kmu.ac.kr)

2012 Naggomsu-bikini Event' as a Social Performance

This paper aims to approach '2012 Naggomsu-bikini event' not from an existing perspective of social movement but as a social performance proposed by Jeffrey C. Alexander. When a problematic situation occurs, members of society try to resolve it through a social performance. Analytically, a social performance consists...
of systems of collective representation (background symbols and foreground script), actors, observers/audience, means of symbolic production, mise-en-scène, and social power. This paper demonstrates how the fusion and defusion of these components of social performance characterize the ‘2012 Naggomsu-bikini event’. The data demonstrates that the foreground scripts for ‘2012 Naggomsu-bikini event’ were constructed from Korean traditional cultural structures and ‘2012 Naggomsu-bikini event’ as a social performance evolved through five stages along with the fusion and de-fusion of all components of social performance. The methodological merit of this paper lies in the fact that it shows how cultural structures guide social actions in concrete historical events instead of remaining in the textual analysis of cultural structures.

CHOI, KIMBURLEY* (City University of Hong Kong, smkim@cityu.edu.hk)

Hong Kong Family Play, Childhood Culture, and Social Reproduction

Scholars have established that ethnography of family consumption practices is a fruitful way of analyzing parental beliefs and practices, meanings of buying to children, the commodification of parent-child intimacy and peer connections, and the reproduction of social class and gender differences and hierarchy. Post-developmental early childhood education scholars argue that the ethnography of children’s play shows differences in children’s capacity and involvement of play due to social and cultural differences. Power, as consumption practices, is integral to play. There is a convergence that scholars from different disciplines study consumption and play in context. Nevertheless, no one to date has used visual ethnography to examine the relationship of family play, social reproduction and market, although play is increasingly commodified in recent years.

In Hong Kong, people generally regard family as the most important component of human life, and children’s status has changed from economically worthless to emotionally priceless. Emphasizing on academic achievements, scholars argue that Hong Kong parents are instrumental to children’s play. Parents worry may divert children’s attention to study, but they increasingly ask children to consume commercial eduplay and enrichment activities for alleviating parental anxiety and serving parents’ hopes and aspirations for class mobility and maintenance. Children and parents use various play commodities and activities to claim their power and status, to express distinction and to perform identity.

The research uses a visual-ethnographic perspective (analysis of family video diaries, video- and photo-elicitation interview, in-depth semi-structured interview and field study) to help fill the research gap by studying Hong Kong family (with children aged 3-8) play and out-of-school activities. In turn, the study aims to expand its analysis to larger social sentiments, relations and contexts: Hong Kong parenting culture, childhood play culture, market, intramural dynamics, social belongings, social differences and reproduction in a context of social and economic uncertainty.

Experience of Migrant Agricultural Workers in the Republic of Korea

This paper examines the labour market experiences of migrant agricultural workers in the Republic of Korea. In 2003, the Korean government institutionalized a flexible foreign labour importation system, labelled the Employment Permit System (EPS), to address labour shortages in certain sectors of the economy, such as manufacturing, construction, agriculture and livestock and fisheries. The EPS serves as the framework for the admission of foreigners into low-paid jobs shunned by local job seekers. For this reason, the EPS intends to tie migrant workers with their employers. In principle, an EPS worker is required to work at the workplace s/he was initially placed. Mobility in the labour market is highly restricted. The Korean government regulates the supply of EPS workers in each sector, and mobility between sectors is prohibited. However, EPS workers employed in the agricultural sector choose to become undocumented to seek better-paying jobs in the manufacturing sector. While the EPS is designed to use foreign labour to maximize economic benefits, it has created tension between EPS workers and other farmers. The EPS also resort to the principle of rotation; EPS workers must leave the country after the completion of their contract. While this paper draws attention to the precarious status of migrant agricultural workers in South Korea, it also highlights resistance strategies employed by these migrant agricultural workers. Both qualitative and quantitative methods are used to analyse the experiences of migrant agricultural workers in Korea. Questionnaires and surveys are currently being conducted among both migrant agricultural workers and their employers across the country.

Age Differences or Socioeconomic Disadvantages? Factors Shaping Negative Marital Outcomes in Cross-Border Marriages

Cross-border marriages, sometimes referred to as international marriages, between women from less developed countries and older men from more developed countries have increased rapidly in the last two decades. Women from Mainland China have joined the trend and married out to places such as Hong Kong, Taiwan, South Korea and Japan. Being one of the most popular destinations for marriage migrants from China, this type of marriages have now constituted nearly 35% of newly registered marriages in Hong Kong in 2011. The marital quality of cross-border marriages have started to attract scholarly attention because age and cultural differences between the marital partners seem to be built into their union formation (the difference thesis). Furthermore, the mechanism of self-selection often means that men from lower socio-economic backgrounds are more likely to have a foreign wife because their economic disadvantage inhibits them to find a partner locally. Marrying a husband with a disadvantaged background also means that foreign wives may experience more financial stress compared with other women (the disadvantage thesis). Using couple data collected in Hong Kong, this paper compared the negative marital outcomes, measured by marital conflict and psychological aggression, of local and cross-border couples and tests the difference and disadvantage theses. Our analysis showed that foreign wives’ financial stress, husband’s traditional gender role attitude, and a 6-9 year old age gap between husband and wife significantly increased the risk of marital conflict and psychological aggression in cross-border marriages, thus providing some preliminary support to both the disadvantage and difference theses. We, however, did not find significant differences between local and cross-border couples in terms of factors that shaped their marital outcomes, hence providing some evidence that a large age difference and socioeconomic disadvantages may affect the marital outcomes of local and cross-border marriages in similar ways.

How to Historize the Invisible and Inaudible Women’s Experiences?: Thesaurus Construction of Women’s Oral History and Gender Politics

Women’s oral history has a distinctive nature in that these are based on the daily experience and women’s life history. Generally women have tendency to narrate their life histories focusing on birth, marriage, childbirth, illness and death of family members. Researchers also have paid attention to interpret and analyze women’s subjective experience and the character of women’s narratives. So we are developing thesaurus of women’s oral history in the light of the attribute of women’s oral discourses. This will shed light on exclusion and marginalities of women’s experience considering the implication of gender and sexuality, family and labor in women’s life history.

This thesaurus will not only contribute to more specific date search for women’s oral history researchers, but confront with existing classification and category in which it prescribe what is important and significant in history. The thesaurus construction of women’s oral history in the feminist perspective will critically reflect on patriarchal prejudice, male-dominant norms, and the ideology of normative nuclear family embedded in classification and categorization itself.

Uncomfortable Compromise Between Developmentalism and Welfarism?: Politics of Social Investment in South Korea

While South Korea (hereafter Korea) has been experiencing unprecedented social risks together with the weakening stability of family and the labour market, a comprehensive set of social protection schemes has been introduced and expanded during the last two decades. In the process of building the welfare state, one of the noticeable aspects is the emphasis on social investment policies and social services, less favorable to cash-providing schemes such as pensions. Free childcare services, a range of active labour market programs, and the long-term care insurance are the significant outputs of the policy trend. The recent development of the Korean welfare state, however, leaves many interesting research
questions in comparative perspectives. The questions that this paper pays attention to are about the politics of social investment policies and also whether these policy developments are functional outputs against increasing social risks or political outputs in the course of emerging welfare politics. The Korean welfare state has revealed the vulnerability of its income maintenance schemes against ‘old social risks’ such as the highest old-age poverty rate among OECD countries. Comparing to other ‘developmental’ welfare states in East Asian region, one could easily notice that social investment policies and politics have been much more visible and stronger in Korea than any other countries. This paper will trace the origin and the development of social investment discourse in Korea and discuss why and how these social development policies and politics have been possible. In so doing, it will explain ‘developmentalism’, the important legacy of the Korean welfare state, and discuss how this legacy has been transformed in the waves of socio-economic-political changes. It will argue that it is crucial to analyze social investment politics to understand the dynamics and the identity of the Korean welfare state.

CHOITHANI, CHETAN* (The University of Sydney, chetan.choithani@sydney.edu.au)

Livelihoods On The Move: Understanding The Linkages Between Migration and Household Food Security In India

Using the Sustainable Livelihood approach, this paper aims to highlight the role of migration as a livelihood strategy in influencing the food security outcomes among rural households in India. Food security is a key global challenge and India accounts for nearly a quarter of the world’s 870 million undernourished people. A large majority of India’s food insecure population resides in rural areas that is either landless or own small agricultural holdings and thus, excessively depends on wage labour to meet their income and food needs. However, the undeveloped rural labour markets imply that they have to seek the wage income in the distant labour markets. The traditional importance of migration in the livelihood systems of rural poor notwithstanding, recent years have witnessed an unprecedented surge in rural outmugment in India. It is important to note that the most dominant pattern of rural outmigration involves migration by relatively younger males while the other household members stay behind. From the perspective of food security, this pattern of migration implies that through channels such as remittances and changes in gender roles, migration can have a potential bearing on household food security outcomes. Drawing from the primary survey of 400 rural households in the eastern Indian state of Bihar, this paper attempts to highlight these linkages. The findings suggest that despite the distressed-induced nature of rural migration from Bihar, remittances contribute positively to household food security and food diversity outcomes. Not only migration income helps improve the ability of household to buy food from the market, it also provides additional resources to invest in agriculture which in turn, improves the own-production food entitlements of migrant households. The findings warrant policy attention to remove the barriers to mobility which could foster the food security outcomes of rural households in India.

A Sociological Study of Nursing Profession: A Case Study of Baroda City of Gujarat State in India

The role of sociology in the field of nursing profession continues to cast new light on many aspects of health and illness in society. Over the last 20 years, nursing profession has seen sociological knowledge as a valuable clinical tool, both in the diagnosis of a wide range of illnesses and long-term conditions. The study of health and illness and of the professionals and other organizations devoted to health care is one the most fascinating fields. Health is an important factor in assessing the quality of a society’s life. Medicine and other health care professionals are not only dependent on the biological sciences, but also on health service organizations, medical profession, and social organizations. By social organization, it is meant the interdependence of parts. Interdependent parts consist of some of the following tasks, roles and activities which are being undertaken by individuals in hospitals. Adopting a sociological approach, this paper tries to bring to light the role of nurses with others in role set in hospital as an organization. Paper also tries to examine the socio-cultural and economic background of the nurses from where they come and what factors motivate them to join this profession. The paper also focuses on aspects of role performance and interpersonal relationship among the para-medical staff. The paper also delves into the professional problems of nurses. The present study is based upon the primary data collected from 100 nurses working in the public and private hospitals of Baroda city in Gujarat state of India.

Is This Our 9/11 Moment? Young Men and Gender Violence in India

The December gang rape in Delhi has become India’s 9/11 moment. It galvanised the nation around the country to come together in mammoth vigils. In Delhi, street protests so completely unnerved the police and the administration that roads to the iconic India Gate, where protestors of all hues had gathered in the heart of the city, were blocked. For once, people said, gender violence became a central concern. Despite the compelling magnitude of the rallies around this specific instance of violence, we need to dig out the deeper history of outrage and we need to ask if, like 9/11, the 2012 event of the gang rape stigmatised a group.

‘Reform the boys’ has become a battle cry. We also need to step back and ask if collective protest has unfortunately resulted in a form of colonial regulation of young working class men as ‘objects’ of reform emanating from above. The particular instance of the December gang rape is the terrain for discussing issues of larger concern – mainly the way hegemonic and subaltern masculinities are produced. Popular responses to awaken state responsibility across the globe are linked with the production of regulation and control of young men. It is immig...
The local government accommodates the actors of the hidden structure into the restructuring process. The consistency of local government has reconstructed successfully the integration of hidden structure and opposition norms into the structure of state formal policies. The direct impact of such policy is the social inclusion of small scale urban economic actors who are also the urban poor groups. The pro-poor policy becomes a contrasting policy amidst the neo-liberal economic policy that tends to benefit the large scale capital. The study applies qualitative method by interviewing the economic actors and the policy makers. It is also supported by the secondary data collected from the Indonesia printed news media.

The context of the study is Tanah Abang Market as one of the largest Southeast Asian Traditional Market.

**CHOW, SUNG MING** (Hong Kong Polytechnic University, chowsungming@hotmail.com)

Reenergizing Fair Trade through CSA: A Sharing Economy Perspective

Sharing, obviously, is an indispensable component of human history. But as the market economy became dominating over the past 200 years, production and consumption became highly atomized. People seemed to lose instincts of sharing and habitually adapted to “either public or private”—a dichotomized view of goods, which is apparently an ideological myth. In real life situations, there are a large number of quasi public goods like club goods or common pool resources (Ostrom, 2010). The recent revitalization of the sharing economy is gaining popular attentions (The Economist, 2013). It is largely a result of the IT revolution but currently further going offline, promoting various experiments in daily lives. The defining characteristic of the sharing economy lies in ownership transformation. Comparatively, the existing social economy, including fair trade, is still private property based, aiming at the internalization of social costs and benefits. For instance, the stress on environmental and labor standards, in the language of economics, is to achieve a comprehensive accounting of external costs, and reflect the “genuine prices” of commodities. Under the current study potentials of reenergizing the fair trade movement through its integration with community supported agriculture, an alternative economic activity that not only moves from “fair” to “cooperation”, from “trade” to “co-production”, but also carries a greater touch of the sharing economy, will be explored.

Girl Child, Leisure and Outdoor Sports in Kolkata: An Intersectional Enquiry

The social institution of sport reflects a society that presupposes the values, mores, norms, and standards of the majority and subsequently determines who can participate in sport and who can be identified as an athlete. Sport Sociologists consider sports as an important leisure activity which facilitates intellectual, physical and moral development of the young generation, especially children. Consequently, Leisure and Physical activity were specifically recognized as a ‘Human Right’ in 1978 by UNESCO, supported by The Convention on The Rights of the Child in 1989, to provide equal opportunity for young individuals irrespective of their gender, religion and class to freely participate in any sporting activities. The present paper addresses through intersectional paradigm how involvement in sports as an active leisure activity among girl children is predominantly proscribed in modern India based on their gender, social class and religion. India has failed to recognize the necessity and significance of ‘active leisure’ for majority young girls in the form of outdoor sports, hence incarcerating them within the domestic sphere of household duties and responsibilities as caregiver. The embedded patriarchal ideology considers girls incompatible to any sporting activities due to their physiological attributes, thus denying them access to pursue sports as a ‘active leisure activity’ compared to their male counterparts. Furthermore, the intersecionality of gender, social class and religious background intensify such stereotyping and discrimination of young girls, who are further marginalized and prevented from engaging in active leisure activities i.e. outdoor sports. Against this backdrop, with the help of ‘narrative’ analysis of 50 young girls in Kolkata belonging to the age group of 10-14 years, the present paper attempts to reflect how mutually the possibility of gender, class and religion intersects unequal prospects among girl children, accentuating deprivation and silhouette their identity and lived experiences.

Women Athletes in India: A Tale of Intersectional Inequalities

The present study aims to examine the relevance of analysing the multidimensional experiences of women athletes in India based on their gender, class and sexuality from an intersectional perspective. Intersectional paradigm during the last three decades emerged as a primary analytical tool among feminist scholarship, which explicitly acknowledged differences among women and how diverse social identities of women i.e. class, ethnicity, sexuality from an intersectional perspective.

The present study aims to examine the relevance of analysing the multidimensional experiences of women athletes in India based on their gender, class and sexuality from an intersectional perspective. Intersectional paradigm during the last three decades emerged as a primary analytical tool among feminist scholarship, which explicitly acknowledged differences among women and how diverse social identities of women i.e. class, ethnicity, sexuality, language and gender intensify their subordinate experiences within varied spheres of social institution including sports. Susan Birrell advocates that ‘sports’ should be conceived as a critical arena for divulging multifaceted nature of disadvantaged female athletes, influenced not by gender alone but also by their multiple social identities which are inextricably linked. In fact, a new proliferation of researches in North American and European societies adopting intersectional approach within sports sociology has brought to the fore on the ‘multiple oppression’ of women athletes. Conversely in India, the interrelationship of sports and gender and more specifically of sports and other social variables has remains an uncharted territory for sociological analysis. The ‘secondary’ or ‘inferior’ status of Indian women athletes which centres on the overriding importance of femininity is furthered by the complex union of class and sexuality. Thus, with the embedded patriarchal ideology as a devoted partner, Indian sociological discourses has legitimized its abortive outlook by failing to document the intersecting experiences of women athletes within the domain of sports. This paper, thus illustrates, drawing significant examples from Indian context like, the case of Baby Ghosh, Nisha Rani Dutta, under 14 girls football team and many more, how identities of gender, class and sexuality intersect to accentuate discrimination, reproduce disparate relations, which in turn shape the reality of lives and experiences for Indian women athletes.

**CHRISTIANSEN-RUFFMAN, LINDA** (Saint Mary’s University, lindacruffman@yahoo.ca)

This retrospective feminist analysis focuses on a series of thinking circles, action research and feminist networks that trace their roots back for over several decades. It could be argued that an initiating group was a network of women from the Economics of Women in the World Network. The first European conference, “Women, the Environment and Development Network” took place in Wales, UK in 1994, and was explicitly inspired by the WEDO’s initiative to produce an alternative vision of social and eco-justice, and the need to think about the role of women in these processes. The results of the conference were circulated to feminist circles in Europe and at the 1994 World Conference on Women, the meeting of the Global Women’s Fund and WEDO led to the creation of the Women’s Environment and Development Network or WEDO. The Women’s Environment and Development Network or WEDO also took such an approach. We started in Rio in 1992, and this reflection will focus specifically on the World Summit for Social Development. Its alternative thinking, such as the idea of conceiving of economics as “an enabling environment,” came from our participation at its “PrepComs” and surrounding meetings of the 1995 Summits. The paper describes the action research such as Nova Scotia Women’s FishNet and different types of thinking circles operating at local, national and global levels. These include on-going networking networks such as Internationals Feminists for a Gift Economy and the Matriarchal Studies Network and focused thinking workshops such as the Wise Women’s Workshop and one that produced the Pictou Statement, the “Feminist Statement on Guaranteed Living Income.” The paper reflects on organizational models, process and content of these alternatives and explores the types of relationships within and between these and other networks.

Creatives As “Urban Pioneers” – Towards the Empowerment of Socially Disadvantaged Neighbourhoods

By the example of socially disadvantaged neighbourhoods in Berlin and Hamburg suffering from manifold social problems and from persistent negative images, I will report from a research project investigating initiatives which are mobilised by “urban pioneers”. These activists are creative people from arts and culture that are interested in places providing opportunities to try out ideas. They are fascinated by the employment of creative mindsets and practice, in order to actively contribute to shaping them. Even if at the outset they often follow their own approaches to life, they are highly aware of the social problems in the neighbourhoods and aim at achieving more quality of life and social inclusion for the locals. Thus, the activists do not intend to promote their individual interests, rather they strive to include inhabitants in order to achieve joint action. They aim at helping residents “to find their feet within this system”, as one urban pioneer put it. Hence, empowerment is an integral goal of these pioneers. Some of the initiatives are short-lived, the most of them, however, are long lasting and well-organised.

While it is clear that the actors are unable to solve complex (social) problems in the short or medium term, their projects—such as the organization of innovative...
art and cultural events, the founding of a cultural association, the organization of multi-cultural neighbourhood festivals, or the re-shaping of a public park—help to advance social, organisational and infrastructural transformation processes. Most notably, they challenge negative interpretations of place, renegotiating them, and help to promote collective processes of identity formation. If their activities are made a topic of public discourses, they may even influence external perceptions of the neighbourhoods.

It will be reported how the activists try to organize change together with other actors and partly against others.

CHRISTMANN, GABRIELA* (Regional Develop & Structural Planning, christmann@irs-net.de)
Local Perceptions of Vulnerabilities in Times of Climate Change. How the German Cities of Luebeck and Rostock Construct Potential Threats

The paper reports from a research project studying coastal cities of the southern North Sea and Baltic Sea pursuing the research question of how local societies construct climate change. The results will show that local interpretations of climate change impacts may differ significantly irrespective of similarities in natural conditions. In the German city of Lübeck challenges of flooding and the vulnerability of the old city are recurrent topics in the local discourse. At the same time, Lübeck is portrayed as a city that has always defied the biggest challenges in its long Hanseatic history and that is traditionally well-equipped to cope with the climate change-induced threats to come. In the Hanseatic city of Rostock – only 100 km away from Lübeck and confronted with the same disaster scenarios – surprisingly, such a mode of interpretation does not play any role in the perception of change. The East German city perceives its city centre much more as an opportunity. Long periods of warmth might help to make the region more attractive to tourists which will have a positive effect on the job market and will make the city resilient compared to its precarious economic situation.

Against this background, it will be argued that the concepts of “vulnerability” and “resilience” which have been strongly influenced by ecology and natural hazards research need to be widened. A theoretical concept will be suggested that is enriched by cultural dimensions and particularly by the aspect of the social construction of reality implying that actors may develop different perceptions of potential threats as well as of precautionary measures – even though from the perspective of scientific scenarios the endangerment seems clear and proven. This does not mean, however, that materiality should be neglected which is why considerations from actor-network theory will be taken into account.

Social and Labor Market Integration Processes of Young People during a Continuous Economic and Financial Crisis

The proposed presentation research intends to focus on Greek Youth social and labour integration process, based on analysis of two important factors, namely, social and cultural capital on one hand, youth agency on the other. Strong social bonds constitute an important integrative factor for youth, in conjunction with prevailing traditional social and cultural values. Public education (secondary and higher), as well as employment in the public sector, constitute, in this context, a privileged social mobility strategy, which is mainly financed by midedial class family income and sustained by the Greek public education system. However, given the current global economic crisis, and more particularly the Greek one, there is enormous liability to state finances, provoked by the accumulation of a staggering public debt and an increasing budget deficit. This has caused not only an imbalance but also a radical transformation of the current social setting. Rising unemployment, drastic decline in state employment, as well as social and employment risks push for an emergency rearrangement of both individual and family strategies. Youth's social capital is undergoing a deep transformation, characterized by an expansion of social networks on one hand, and a proliferation of loose social ties on the other, resulting in a boost for professional and geographical mobility. On the other hand, we observe groups of young people that tend to adopt social disobedience practices, as well as an active oppositional stance against the established social and political order, in the framework of their reaction to social risk and economic hardship. The former is a consequence of new forms of improved communication capabilities and, at the same time, has offered new opportunities for spontaneous mobilization of anti-government protesters.

Japanese Colonial Food Regime from 1895 to 1945: The Historical Origin of Japan-Led East Asian Developmentalist Statecraft

This essay examines Japanese colonial food regime, which primarily locates in Taiwan and Korea but geographically contains Manchuria and Southeast Asia, to propose an historical necessity of maintaining a stable food supply and the dilemma of rising attention to important differences by job sector within each country. In the US, networks are perceived to be more important in the public sector than in the private sector. In China, networks are perceived to be equally important in both public and private sectors. I explain these differences invoking such concepts as institutional variations and the perceived importance of networks for status attainment in US and China

Using data from the World Values Survey (2005-2006), I show that perceived levels of the importance of networks for status attainment are higher in the US than in China. I argue that the different modes of interpretation of the East German city perceives its city centre much more as an opportunity. Long periods of warmth might help to make the region more attractive to tourists which will have a positive effect on the job market and will make the city resilient compared to its precarious economic situation.

Against this background, it will be argued that the concepts of “vulnerability” and “resilience” which have been strongly influenced by ecology and natural hazards research need to be widened. A theoretical concept will be suggested that is enriched by cultural dimensions and particularly by the aspect of the social construction of reality implying that actors may develop different perceptions of potential threats as well as of precautionary measures – even though from the perspective of scientific scenarios the endangerment seems clear and proven. This does not mean, however, that materiality should be neglected which is why considerations from actor-network theory will be taken into account.

Social Justice on Sale in the Globalized Education Supermarket

This paper is aimed at enquiring into the very demanding idea of social justice against the impacts of marketization and globalization on education. In order to do so the consequences of injustices resulting from the effects of global capitalism and the influences of education markets will be briefly firstly. Then the mission and myth of social justice relating to education reform will be detailed. Since the achievement of justice in a certain society often entails an injustice done to other societies especially in the era of globalization, the barriers and borders of social justice should not be neglected.

As regards globalization, the competition and cooperation of both domestic and international senses represented in higher education have shown relation-ship with the market principle. Educational systems, especially universities, facing the era of global economy characterized as “knowledge-based” have been re-quired “to produce a workforce more adequately prepared to meet the challeng-es of globalization” (Rizvi and Engel, 2009). Under these circumstances, education policies for social justice will be challenged against their societal borders, not to say their practical barriers from within.

In this paper the idea of “global democracy” proposed by some authors such as D. Archibugi (1998), I. M. Young (2000, 2007), N. Fraser(2009), D. Held (2008, 2010) shall be borrowed and reconceptualized to help go beyond social justice.

Keywords: social justice, global democracy, education markets, globalization

CHUGG, ROCK* (Freelance, rockchugg@hotmail.com)

‘Racist Friend: Consequences of Privatization Creep in Australia’

In this paper, the privatization of Australian Federal, State and Local utilities is juxtaposed to the classics of aboriginal literature (Pritchard’s Coonardoo, Gere’s Fringe Dwellers, and Mudrooroo’s Wild Cat Falling), and an evolving sociological canon (Goldmann’s Sociology of the Novel, Green’s Literary Methods and Sociological Theory, and Bourdieu’s Rules of Art). For instance, local participation in political decision-making has dried up like the well in Coonardoo, since the Council amalgamations of Australia’s three tiered government paradigm. An abolition of Federal run Job Networks generates the dual labour market of Fringe Dwellers. And lastly, the State suburban Rail grid sell-off imposes a Northern Ireland style paramilitary regime upon an anonymous consumer population, like the protagonist of Wild Cat Falling. In contrast to official views of friendly Reconciliation during the age of indigenous Land Rights, Mabo, and a Stolen Generation apology, in an opposition that includes the UN some see the Northern Territory Intervention as the low point of a newly established Apartheid system in Australia. I argue that the plight of aboriginal peoples is becoming a model for wider repression of Australian citizens in general, exemplified in these three case studies of privatized essential public services. While a sociology of literature can point to the fetisistic (Goldmann), semiotic (Green), and capital (Bourdieu) factors in a theoretical discussion, in practice this new White Australia Policy, just as covert and unjustly inserted as the 20th Century original, suggests an increasing return of institutional racism.

Situating the Multipositionality and Cultural Circuity of James Clifford

The recent book by James Clifford, Returns, claims to be the third of a trilogy that began with The Predicament of Culture (1987) and continued with Routes (1998). The first volume marked a certain postmodern intervention into anthropological writing by invoking multivocality and authorial imagination. The second volume probed the changing transnational context of culture by emphasizing fluidity of borders, cultural spaces and identities in the ongoing process of becoming. The third volume explores, in the author’s own words, “homecomings—the ways people recover and renew their roots.” In essence, it represents an attempt to bridge roots and routes, or the local in the global, in ongoing negotiations of traditional futures. The proposed paper will be an adaptation of a larger review essay on Clifford’s trilogy, to appear in the journal boundary 2.

Protest Repertoires As Expressive Cultures: Reconceptualizing the Struggles of Informally-Employed Workers in South Korea

Dramatic acts of resistance and solidarity are a mainstay in South Korea’s public landscape, especially among the many precariously- and informally-employed workers in the country. Whether opposing the labour repression of authoritarian industrialization between the 1960s and 1980s or the market-driven policies of neoliberal democratic regimes during the 1990s and 2000s, workers and their advocates have relied on an array of protest acts to challenge the legitimacy of ruling authorities — from workplace strikes and occupations to hunger strikes and worker suicides. While many labour and social movement scholars have examined the instrumental, organizational and structural factors that promote strategic forms of worker collective action, much less attention has been paid to the expressive, embodied and aesthetic dimensions of workers’ protests. This paper focuses on the characteristics of a new pattern of popular contention in Korean workers’ already radical repertoire of collective action: the prolonged embodiment of emotional, physical, and financial hardship. In particular, we seek to better understand why workers and their advocates choose to express their collective opposition through corporeal resistance and bodily sacrifice, and explore what such protest performances reveal about the expectations and aspirations of dissenting political subjects.

Lenin and Wine: The Birth of “Civil” Movement Sector As a Institution

This paper investigates the birth of the field of “civil movements” in South Korea, focusing on the rise of the Citizens’ Coalition for Economic Justice that established its own niche in the movement field that used to be overwhelmed by revolutionary “Minjung” movements. Drawing on the perspective of the New Institutionalism, this paper examines the role of entrepreneur of the movement organization in creating the field of “civil movements” as a new institution. The success of the Citizens’ Coalition is due to its two-stage strategy in the movement development. In the inception stage, the Citizens’ Coalition chose a reserved strategy by presenting itself as non-political and oriented to the public good. Once the organization became stabilized, it launched hegemonic struggles against the Minjung movements shifting instant classification of democracy/anti-democracy to that of safe movements/dangerous movements, us/them, people/citizen, liberalism, social democracy/ radical leftist. This study has implication to the reestablishment of the relationship between the state and civil society in South Korea after the democratization in 1987.

Development of Social Research in Japan from 1945 to the 1970’s

This study examines the originality of social research in Japan from 1945 to the 1970’s. During this period, Japanese sociologists initiated social research adopting the framework of American sociology. This research was conducted in order to understand the sociologist’s approach to research, which was necessary for the reconstruction of sociology subsequent to World War II. We will take a historical approach to this issue by considering the development of Japanese sociology.

Most studies deal with this era of social research mainly in the context of American sociology being adopted in Japan. However, this study refers to not only American sociology but also German theory of ideology because the development of social research in Japan was closely linked to Japan academia prior to 1945. This approach may also contribute to understanding the history of the sociology of culture in Japan.

This study first discusses the development of social research in relation to American sociology. It explains that the process of social research development partly depended on the course of quantitative research based on positivism. This study then analyzes the investigations of collective mentality, including the results of working-class studies and mass communication studies. This analysis reveals that some Japanese sociologists adopted the American sociological approach critically; furthermore, the results suggest that they introduced the German theory of ideology, from a historical perspective, to their work. As some Japanese sociologists applied both American sociology and the German theory of ideology to Japanese sociology, this study concludes that Japanese social research developed during this era had some originality.

The Taste and Politics of Rice: Understanding the Construction Process of Quality Food in Taiwan

Concern about the meaning of rice in Taiwan has been increasing in the recent decade. Meanwhile rice has become a product that satisfies more than the subsistence demand. The question of what constitutes demand involves the food choice of people; that is to say, by which criterion people decide to consume what food? This paper analyses the processes of constructing the quality of rice in order to understand both, the coding mechanisms and the struggles around the shaping of taste.

Through the concept of “qualification” the interaction between consumer and product can be understood; therefore, we can examine the active and passive actions of consumers in the process of constructing quality, and the formation of taste. Accordingly, we adopt the cultural economy approach to examine the transformation of the consumption of rice in Taiwan, especially the experiences and the recognition of rice in the sphere of exchange, in which the stable appreciation system has been shaped.

This paper suggests that the quality of rice has changed in history. The state and scientists have dominated the “qualification” of rice for a long time. During the recent decade this influence was bypassed. The change, including the “qualification” state, has moved from the sphere of production to the sphere of marketing, including the more influential process of aestheticization and ethnicization. There were different actors in different periods dominating the legitimacy of constructing “good” food, which people took for granted and kept consuming. Further, the tastes were shaped in the internalization process in which the consumer, the producer, the state, and scientists were in struggle. Our exploration suggests that the modernization and colonisation of the “exotic” otherness of those languages has been valued positively, as in cultural relativism, as well as negatively, as in the discussions regarding the correlations between linguistic structure and cognitive competence, culture as well as the construction of social reality. The analysis will cover the local references to these accounts in academic research contexts throughout the last four centuries, and consequently they will be accounted for in terms of the historically changing conceptual and theoretical frames of reference.

Changes in the Social Understanding of Quality of Life As a Result of the Economic Situation

This presentation aims at describing some selected trends of changes in the social understanding of quality of life. The trends were identified in a program for monitoring the quality of life in one of the Polish cities. The program “Indicators of the Quality of Life in Poznań” was initiated in 2001, as one of the projects aimed at streamlining the work of the Town Council, maintaining contact between the authorities and the residents of the city and building up the image of the city.

The program is based on the idea of measurement of the most important domains of the quality of life, such as life situation of residents, communal infrastructure, health condition of residents, social exclusion, standard of living, social security, public security and crime rates, natural environment, leisure, work and income, education and population processes. The essence of the project is the simultaneous investigation of the actual situation by means of objective statistical data as well as the level of satisfaction with particular aspects of life.

The ten-year program allowed us to identify changes in the social understanding of quality of life. The most fundamental changes include:

1. changes in the significance of particular domains of quality of life for the general perception of quality of life
2. changes in the criteria of quality of life in particular domains of quality of life.

The presentation involves two major aims. It intends to show the changes in the perception of significance of particular domains of quality of life in opinions of respondents. It also aims at demonstrating the evolution of the significance criteria of particular domains, depending on the perception of changes in the economic situation, particularly with respect to the recent economic crisis.

Toxic Leisure: The Future Expansion Of Leisure and Environmental Sustainability In The BRIC Economies

In the half century since the end of the Second World War standards of living rose in the western world and most citizens became “middle class” living a lifestyle characterized by high levels of disposable income and a culture of consumption. One feature of consumer culture is the expansion of leisure activities accompanying the growth of an increasingly predatory form of capitalism in the industrialized economies of the West. One of the major effects of this predatory model has been global exploitation of the environment and an exponential rise in carbon emissions which in turn are having a major impact on global climate. At the present time we are on the brink of another major social revolution with the expansion of the middle classes in the “emerging economies” of the developing world. The significance of this social revolution in the BRIC economies, especially in India and China, is that the potential size of their middle classes could be larger than half the world population. While the environmental impacts of industrialization and urbanization in these countries attracts a lot of attention, the environmental effects of the expansion of leisure and the globalization of western leisure pursuits are often overlooked. All such activities have large ecological footprints: the consumption of new technologies, driving of automobiles, the expansion of golf and tourism. This paper is a series of case studies of the impact of these particular leisure activities in the BRIC economies.

Social and Religious Differentiation

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Every form of society contains several types of stratification, of a political and economic, artistic and cultural, professional and religious nature. Therefore, religious phenomenology too is subject to these socio-experiential factors. Differentiation of functions, roles, aims and modes of action is also produced, directly and through example, inside the constellation of movements and the composite religious experiences that characterize the vast panorama of Christian and other religions. Were we to limit ourselves to the socio-territorial context of Italy alone we would soon discover that the Muslim like the Sikh, Buddhist and Hindu and the various other religions practiced here, all contain within their folds a variety of structures, rituals, customs, rules and beliefs and that Christianity, the country’s numerically prevalent religion with its Catholic, Protestant and Orthodox congregations, is certainly no exception to the rule and that it too also contains a truly broad spectrum of forms.

Origins of Italian Sociology

How come Italian sociology, which contributed to the development of the very first studies of social sciences in Europe, lost ground and did fall behind other national European sociologies? Can a sufficient explanation be that the fascist movement was in power from 1922 to 1945? Or other reasons are at the origin of the impossible continuation of such a scientific approach? Are there subtle links between a quite promising starting phase of studies and the new steps which occurred by the middle of the twentieth century, after the slow down during the period between the two world wars, in the 1920s, ’30s and ’40s? Or shall we say that there was an interruption, a hiatus which separates the first moment, far off now, and a second moment, relatively more recent? Probably the past dynamics and those acting now are much more complex than might apparently seem without a deep investigation.

Natural Disasters Discourse As a Profit-Making Mechanism of the Turkish State: A Case Study in the Karapinar Regeneration Project in Eskişehir

Serious worldwide natural catastrophes lead scientists, governments, and civil society to intensify the research on prevention of disaster risks and provision of disaster reliefs. On the other hand, in the era of neoliberalism, natural catastrophes might provide political authorities to create a discourse on their forthcoming “fatal” risks in order to push profitable urban strategies which result in state expropriation of the population of local populations, and apply large scale urban projects. In the last years in Turkey there has been a broad and fashionable campaign to regenerate 40% of the Turkish cities against the destructive effects of natural disasters. Especially after the Van earthquakes, killing 644 people in 2011, the government and its supporters found the justification for urban regeneration activities which they present as the “salvation” of the country, whereas, the lack of government’s earthquake relief supplies and recent hunger strike of the earthquake victims, who were forced to leave their container houses, created large public debates.

Similarly, the Karapinar regeneration project in Eskişehir, which is applied by the public-private partnerships under the same campaign, is claimed to be the “remedy” for poor housing qualities of the quarter that is located under the “zone of risk”. Yet, my ethnographic research reveals the enormous economic profits of the partners which they gain through the construction of luxury villas, a five star hotel, conference and shopping centers, while forcing locals to move in new 10-15 storey buildings which will be given in return of monthly payments depending on the size and legality of their previous houses. However, the locals are already worried about the payments and the new living conditions in the multi-storey buildings next to rich newcomers while some have already decided to move elsewhere at the outskirts of the city.

The Refugee Body: Reconstructing the Body in the Context of Extreme Social Change

The sociology of the body has tended to look at the “glamorized body”, whether in sport, fashion or popular cultural activities such as body building. Missing from these studies is a concern with the suffering body in the context of drastic and unchosen social change and displacement, and how individuals who experience such traumatic changes re-imagine and re-create their body images. This paper looks at such a case: the refugee body. Two principle issues are raised. On the one hand the experience of the body in situations of deprivation, crowding, forced contact with strangers, mixing of religions, boredom, and often hunger and physical insecurity. On the other, strategies of reconstruction of the body image in these conditions and/or when undergoing resettlement, being “stuck” indefinitely in camps, or when photographic monitoring and the polling of the sociological samples reveal a significant scale effect on both objectified and perceived use. This communication focuses on the interests and limits of the photographic monitoring as in interdisciplinary tool. The methodological implementation of the monitoring as well as its deontological implications will be discussed.
institutions, make bonds and friendships, and treat others with respect, courtesy and self; (2) wherein members appreciate and admire the talents and strengths of others and concerts and events transpire. Most conflicts and problems arising are resolved online group administrators, collaborative activities such as music productions, and event managers. Group interactions are a mix of online encounters based key-informant interviews and participant observation of online and physical actions and cooperation, information and communication, and social cohesion as proposed by Dudwick, et al (2006), namely, trust and solidarity, collective action and cooperation, communication and cooperation, and social cohesion and inclusion. The study makes use of various qualitative data obtained from key-informant interviews and participant observation of online and physical encounters, analyzed using the case study approach. SoundCloud Philippines has over a thousand members is composed of Filipino singers, instrumentalists, composers, arrangers, producers, multimedia artists and event managers. Group interactions are a mix of online encounters based on Facebook and SoundCloud and physical encounters through meet-ups and events. Benefits reaped from the community are informational, technical, instrumental, motivational, and social support. Under the guidance of online group administrators, collaborative activities such as music productions, concerts and events transpire. Most conflicts and problems arising are resolved peacefully.

Social capital in SoundCloud Philippines is mobilized through (1) Recognition, wherein members appreciate and admire the talents and strengths of others and self; (2) Respect, wherein members maintain a harmonious flow of communications, make bonds and friendships, and treat others with respect, courtesy and with positive regard, and; (3) Reciprocity, wherein members offer their assistance and skills as much as they seek support from others, engage themselves in activities and collaborations and involve themselves in collective actions within the group.

Inequality in Social Support: A Comparative Look at Compartmentalization in Close Networks

Social support helps households manage everyday necessities, take advantage of opportunities, and ensure survival in times of crisis. Previous research finds that the majority of informal social support comes from close friends and family, and these networks are compartmentalized, with different kinds of ties providing different kinds of support (Wellman 1992, Small 2009). However, recent ethnographic work suggests that in low resource networks, certain relational expectations break down, leading to a wider search for assistance (Desmond 2012, Menjivar 2000, Smith 2007). In light of this, we seek to go beyond in depth case studies to compare relational effects across social groups. Our research asks 1) how types of relations impact social support and 2) how the effects of relational types vary by social position. Here we distinguish between the characteristics of relationships and the characteristics of individuals. In doing so, our research considers not only how one's social structural position may influence the availability of resources within networks, but also how one's position may actually alter relational expectations surrounding social support.

We gain comparative leverage by using the Portraits of American Life Study, a nationally representative longitudinal survey with oversamples of racial/ethnic minorities in the United States (Emerson and Sikkink 2006). The survey provides ego-centric network data on up to four people the respondent feels closest to, excluding those in the same household. Using hierarchical models, we analyze 8,103 dyads nested in 2,185 personal networks to test hypotheses on how close the relationship is, whether the relationship is an ego-centric network or an alter-centric network, and racial/ethnic group membership differentially shape social support. We then look at how the effects of these ties on support vary across economic groups, racial/ethnic groups, and across the life course. In general, we find that compartmentalization is more likely in high status networks, while disadvantaged groups must activate any and all potentially supportive ties.

Coping with Uncertainty in the Field of Health in Arakan (Burma)

Based on fieldworks conducted in Arakan (Burma), in a Theravada Buddhist context, my paper describes the approaches used by Arakanese people to cope with uncertainty in the field of health. According to the local conception a person's state of health stems from a complexity of factors such as the person's karma, his mind, the relationship he has with the community and the spiritual world, the climate, the food and the planetary influence. Because of the instability nature of these factors and the complex relationships uniting them, people never know for certain whether they are well protected against diseases or not and thus live in a permanent state of uncertainty. The effort to maintain the harmony at all levels and be protected by dangers is a matter of the daily ritual through prayers, offerings, good deeds, etc. Moreover, there are occasions where the risk of danger is higher and more concrete, whether because has been predicted by an astrologer or because the person or the community lives temporarily in a vulnerable state (during childhood and pregnancy or when the karmic and planetary situations change). In these cases, people resort to short-time protections focused on the vulnerable factors: they wear amulets, avoid specific foods, etc. Despite these precautions it happens that they face diseases and thus try to restore a certain state of well-being by acting on all the factors they consider involved: they buy medicines, consult an astrologer to positively orient the planetary influence, consult a sorcerer to change the karmic influence, etc. Although these recourse are intended to cope with uncertainty they also involve a part of uncertainty. The choice among different practices and healers and the relationship people have with them is always imprinted with a complex interplay between trust and mistrust, risk and hope.
ing and to have freedom – personal and collective – from others’ control. And young people see their own subjective action, rather than government action, as the solution to their demands and problems. By constructing their own action as utopia, not as a goal to work towards but rather as an inspirational starting point from which to act practically in the present, young people challenge longstanding notions of an ideal future society that have historically sustained political action in the region.

Drawing upon our own empirical studies as well as a systematic review of secondary literature, our presentation/paper will explore how young people in Latin America understand horizontality and autonomy in their political action, where these understandings come from and what the consequences of these are.

The Economic Empowerment of Portuguese Women at the Crossroads: An Accomplishment Facing the Tourniquet of the Crisis

The gradual integration of Portuguese women in the labor market has enabled remarkable levels of economic autonomy, producing profound transformations in their economic and social roles. In the 1960s, Portuguese women still shared the backward position of Southern European women. The evolution observed since then has brought Portuguese women closer to the status of their Scandinavian counterparts, while Italy, Spain and Greece have evolved at various and disparate rhythms (Maruani, 2000, pp.25, Travail et Emploi des Femmes, Paris, La Découverte).

The economic crisis is threatening the sustainability of that process. On the one hand, new generations of graduated women are facing more and more difficulties in entering the labor market, particularly in sectors more favourable to female employment, such as the public sector, including the education sector, which is also being severely affected by the sharp decrease in birth rates. On the other hand, the failure of many SME’s in traditional manufacturing and services sectors is generating high levels of unemployment and inactivity for many middle aged and low skilled women.

Moreover, the government priority given to the elimination of state budget deficits in a short period of time is causing abrupt wage and benefit cuts and a general decline in public services with a very detrimental impact on the middle classes. The reduction of women’s purchasing power is, in turn, damaging numerous domestic jobs traditionally performed by less educated women (housework, catering, care for children and other dependents, etc.).

In this communication we intend to characterize and discuss the on-going multidimensional processes that are threatening Portuguese women’s achievements in terms of economic autonomy and empowerment.

Towards an Embodied Sociology of Youth and Identity

The body has become a key sociological theme of academic study. However, while the body has emerged as a central focus of much theoretical work, in youth studies the physicality and materiality of the body is more often than not taken for granted, or is an ‘absent presence’. This paper contends that questions of identity and subjectivity, fundamental to youth studies, are connected to understanding bodies as sites of experience through which young people embody and actively respond to their socio-cultural and historical context. As such, young people’s bodies are a contested site particularly regarding where the ‘naturalness’ of the body ends and the ‘sociality’ of the body begins. Nevertheless, the body often remains implicit, or as a site upon which societal inequalities play out, rather than an active force. Where the body is directly addressed in the study of youth, it is frequently identified as the locus of social or cultural ‘problems’, more often than not reflecting the concerns of Western culture, such as in the alarm surrounding childhood obesity and poor body image. This paper places young bodies at the forefront of sociological analysis. It highlights the active relations between bodies and the social world and focuses on bodies issues and how they shape identities for young people. It also corrects previous approaches in which the body is invisible or referred to in a binary logic, or in the body vs. soul logic. Theorising the body has implications for youth identity research as all major structural inequalities such as gender, class, race, sexuality, disability, and place are necessarily embodied. A focus on the body and embodiment can provide a way of exploring the threading and mediating relations between youth, identities and society and the complexities of human experience.

This paper is submitted for: ‘Theme VI - Other Methodological and Theoretical Advances’.

How Global City Labor Markets Are Undermining Low-Carbon Policymaking

Climate thinkers from across the political spectrum have long argued that cities are uniquely suited to tackling climate change. But now, scholars are pausing to consider what Harriet Bulkeley calls a gap between rhetoric and reality in cities’ low-carbon policy. I offer a new explanation for this gap by focusing on the way that polarizing labor markets in global cities subtly shape the urban politics of climate change so as to undermine potential alliances between middle and working-class constituencies, alliances necessary for any government to push through far-reaching reforms. Based on 18 months of fieldwork, including over 100 interviews, in New York and São Paulo, and on secondary data on labor markets, wage levels, and consumption, I argue that well-meaning environmentalists have often ignored working class demands for collective consumption—including housing, and transit—while foregrounding those of middle- and upper-middle-class city residents. This despite the fact that working class political projects frequently make similar demands for liveable, compact cities—albeit in a different language. I argue that evolving labor markets associated with Saskia Sassen’s global city insecure urbanists advocate requires radical changes to housing, transit, and land-use policy. I study not just urban climate policy entrepreneurs (the norm in urban climate studies), but also conflictual housing and transit movements that rarely (if ever) speak of climate change, but who advocate a similar transformation of the city (this group is much larger than the relatively small environmental justice community). Based on 18 months of fieldwork in New York and São Paulo, including over 100 semi-structured interviews with green policy entrepreneurs, housing movement activists, and state actors (both political appointees and career bureaucrats), I argue that prevailing accounts of urban climate governance have left out the most successful grassroots movement fighting, substantively, for a compact city; I explain why the policy-centric focus of urban climate policy entrepreneurs has blinded them to potential, poor people’s allies; I demonstrate that it may be possible to build a rapprochement between working and middle class urban political projects on the basis of resisting the growing inequalities fostered by global city strategies.

COHEN, DANIEL ALDANA* (New York University, aldano@nyu.edu)

The Hidden Protagonists of the Low-Carbon City: A Social Backcast Approach to Urban Climate Governance

How can we understand where contemporary urban politics are going in a warming world in order to find the best path forward? More specifically, why are cities struggling to slash carbon emissions despite widespread consensus that there are ample co-benefits to be had in doing so (Bulkeley 2011)? Increasing, social scientists interested in how thinking futures can influence the present are using the backcasting method first pioneered by Robinson (1982) and now discussed extensively in journals like Futures and Technological Forecasting and Social Change. To grapple with contemporary climate politics, I revise the policy-centric backcast and develop a social backcast approach. Since we know that the compact city low-carbon urbanists advocate requires radical changes to housing, transit, and land-use policy, I study not just urban climate policy entrepreneurs (the norm in urban climate studies), but also conflictual housing and transit movements that rarely (if ever) speak of climate change, but who advocate a similar transformation of the city (this group is much larger than the relatively small environmental justice community). Based on 18 months of fieldwork in New York and São Paulo, including over 100 semi-structured interviews with green policy entrepreneurs, housing movement activists, and state actors (both political appointees and career bureaucrats), I argue that prevailing accounts of urban climate governance have left out the most successful grassroots movement fighting, substantively, for a compact city; I explain why the policy-centric focus of urban climate policy entrepreneurs has blinded them to potential, poor people’s allies; I demonstrate that absent a rapprochement between middle-class environmental and lower-class social justice activists, eco-apolthiad is the most likely outcome of contemporary green politics; and I point to emerging examples of collaboration in both cities that warrant much closer attention.

The Social Construction of Body in an Urbanization Context in Senegal

The Senegalese lifestyle mutation by an urbanization process associated with the combined effects of demographic, nutritional and epidemiologic transitions (Popkin, 1997), has consequences on body conceptions: evolution of body size standards, new perceptions of sickness-death, food and sexuality (Thomas, 1990)
and emergence of a more demanding bodily appearance (Cohen, 2012), which need to be clarified.

To do this, we employed a cross analysis of qualitative and quantitative data (40 semi-structured interviews and two Factorial Correspendence Analysis – FCA 1 and 2 – on 593 subjects) by a comparative study implemented in a representative sample of 387 mothers from Dakar and a village from the Kaolack region.

The qualitative study shows that sickness-death is less associated with persecutory from supernatural entities, widely questioned by more pregnant Islamic and modern values (Fassin, 1992). The food gradually loses its status as scarce resource, associated with fertility (sexuality/aesthetics), and with dysfunction, idleness and sexual undesirability (Fischler, 2001).

**The Late Nineteenth Century As Critical Juncture: A Comparison of Russia and Japan**

Around 1850, Russia and Japan were economically undeveloped countries with quasi-feudal political institutions. In subsequent decades, both states undertook programs for economic development and military buildup in order to compete with the capitalist powers of the west. This paper will compare the trajectories of these parallel state-led projects. While pre-existing domestic institutions and geo-economic relations had some influence, the outcome in each case was substantially determined by domestic political processes. In Russia, top-down reforms adjusted but fundamentally reproduced an essentially pre-capitalist structure of agrarian relations, generating political and economic pressures that would explode in the revolutions of 1905 and 1917. In Japan, the interaction of strategies of state officials, rural elites, and peasants generated a fundamental transformation in its agrarian economy—to an extent that political accounts of the Meiji state often do not do justice to. Comparing Japan’s trajectory with that of Russia, instead of with an idealized conception of western European development, leads to the conclusion that state elites in Japan were able to secure a stable domestic base for their ambition to extend Japan’s military power into northeast Asia (although this is not because agrarian social relations remained “semi-feudal” but instead because they became basically capitalist. The paper will thus discuss the late nineteenth century as a critical juncture in which political actions and struggles had long-term consequences for the historical trajectories of not just Russia and Japan but also East Asia as a whole, because of the long shadows cast by both the Bolshevik Revolution and Japanese imperialism.

**Emigration from Israel, 1980-2010: Has the “Brain Drain” Intensified?**

The paper focuses on changes in the selectivity of immigrants from Israel to the US over time. Rising inequality (a proxy for returns to skills) in the US since the 1980s imply that the incentives for high-skilled Israelis to emigrate to the US have increased, thereby intensifying the brain drain from Israel. To test this brain drain hypothesis, we analyze both Israeli and US data. The Israeli data, Labor Force Surveys from 1980-2010 tell us the characteristics of the population from which the immigrants were drawn. The U.S. data, 5% PUMS Census data for 1980-2000 and 1% ACS data for 2006-2010, are informative of the size and characteristics of immigrants from Israel to the US. Using data from “recent” immigrants, namely, those arriving to the US in the 5-year period preceding the census year (namely 1976-80, 1986-90, 1996-2000, and 2006-2010) we focus on “recent” immigrants, namely, those arriving to the US in the 5-year period preceding the census year (namely 1976-80, 1986-90, 1996-2000, and 2006-2010).

The education and income of recent immigrants are indicative of the skills with which they have arrived in the US, before any meaningful economic assimilation has occurred. Comparing the gaps between the education of the immigrants and the population of the destination country, we find no major changes in the educational selectivity of Israeli immigrants over time. By contrast, cross sectional quintile regressions estimating the incomes of recent cohorts of Israeli immigrants in the US provide some support for the brain drain hypothesis, but only until 2000: they show that the income advantage of recent immigrants over demographically comparable US natives has increased over time among those at the top 25% of the distribution, but not among immigrants located at lower percentiles of the income distribution. This suggests that the unobserved, productivity-enhancing traits of the most skilled Israeli immigrants to the US have increased between 1980 and 2000.

**Development, Globalization and The Gendered Division Of The Work World: How The Logic Of Employers Shaped The Demand For Female Labor From Victorian Britain To The Contemporary Global South**

A persistent weakness in the Sociology of Development has been its under attention to gender dynamics. However, there is a parallel weakness in the Sociology of Gender and Development of under-attention to the capitalist logic that motivates the decision to employ either men or women for particular jobs. The much-needed drive to restore women’s agency to narratives of development has had the ironic effect of producing insufficient attention to capitalist agency and the discretionary choices involved in opening up economic opportunities to women.

This paper presents a demand side theory of occupational sex-typing. Male employers are conflicted between the dual imperatives of seeking the cheapest possible labor, which generally involves hiring women, and maintaining patriarchal preserves of male privilege, which implies reserving jobs for men. The structural forces which shape this decision have changed profoundly over time due to the dual (and conflicting) dynamics of development and globalization.

The author begins with a case study of two large Victorian British white collar employers to lay out a theoretical model of how cost structure and buffering from labor competition economically facilitates or hinders the introduction of women to traditionally male occupations. The findings from Victorian Britain are then contrasted with those from the twentieth century United States, and from the cases of Japan and Israel on female employment in the Global South. The differential distribution of global wage competition and protection from such competition, the rise of commodity chains, the rise of education and its complex effects on the availability of adolescent labor, differential pressures to conform with either traditional gender systems or Western gender systems, and the increased importance of male-controlled female employment. Focus on household enterprises that combine economic and patriarchal utilities – have led to a profound transformation of the occupational sex-typing process beyond what was observable in nineteenth century Britain.

**Late Victorian and Early Twentieth Century Economic Forwards-Leaps and Collapses – How a Select Small Population of Nations Escaped Their Destinies for Better or for Worse**

Recent scholarship by Salvatore Babones and James Mahoney provides strong evidence that the relative ranking of nations in terms of economic development and standards of living remained relatively fixed over periods of time. Nations that were rich in 1600 tend to be still rich in 1800 and 2010. The same holds for nations that were poor. The advantages that pertained to rich nations in the era of the Reformation have reproduced themselves up through the present day despite changes in modes of production and dominant technologies. There are a handful of exceptions, but they are just that – exceptions.

That said, these exceptions are of fundamental analytical importance, because they identify the key to what was essential to obtaining or maintaining core status in the various eras of capitalism. This paper identifies nations that had disproportionately high or disproportionately low economic growth from 1870-1950 – disproportionate given their level of development in 1870. Autocorrelation levels are high – and only a small set of nations show non-trivial differences in ranking from their 1870 position. Most of these tend to be nations that do NOT receive a lot of attention in traditional “grand macrosociological” histories of the evolution of the world system. England, France, Germany and Japan – traditional centerpieces of historical comparative sociological discussions make no appearance. Venezuela, Switzerland, Finland, Egypt and India all have stories to tell.

What seem to be the common themes? The rise of petroleum was extremely disproportionate. Not all nations were able to make use of this resource – but those who did saw dramatic forward leaps. Debt crises were devastating. Some nations never recovered from the international debt crisis of the 1870s. The addi-

Employment Success and Long-Term Aspirations of the First and Second Generation of Recent Refugee Arrivals: Evidence from Australia

This paper focuses on the employment and social inclusion of humanitarian arrivals in Australia (for brevity, ‘refugees’ in further text). Previous research shows that refugees, in the context of a sharply skilled-focused Australian immigration program, face worse employment outcomes of all immigrant categories. They suffer from higher unemployment, as well as under-employment and under-utilisation of their formal qualifications. The employment woes are not always due to a lack of human capital (skills and language proficiency) but often to employment discrimination and channelling of refugees into undesirable ‘employment niches’ where labour shortages continually exist. The paper is based on an initial analysis of a survey of 500 refugees from South Sudan, Somalia, Congo, Iraq, and Burma, currently settling in Brisbane. The survey asked about current employment experiences and long-term occupational aspirations of recent (with a minimum of one year residence in Australia) refugees arrivals in Australia. In this context, we also collect data on the ways in which parents communicate employment aspirations to their children. This collaborative project, funded by the Australian Research Council, started from the premise that appropriate employment is a key to successful settlement and social inclusion of immigrants, and that refugees, in most cases visibly different minorities in the Australian context, are especially vulnerable to social exclusion. As experiences of main Western immigration countries show, this is especially critical in the second immigrant generation. We therefore also explore the intergenerational communication in the refugee family and how it is affected by migration and acculturation in Australia and how this, in turn, may affect the educational and occupational chances of the second generation.

Financialization in the Backyard: Shrinking, Welfare State Restructuring and New Housing Investments

The paper discusses the interplay of local planning policies, welfare restructuring and global financial markets in the “making” of social segregation. It builds on an empirical study in Halle-Neustadt, a shrinking New Town in East-Germany and uses a mix of survey data, interviews and document analysis and as well as fieldwork. In Halle-Neustadt, the paper argues, different developments come together: First, Neustadt has experienced dramatic population losses, which stimulated large scale demolition programmes as well as planning policies which aim to transform parts of the neighbourhood to a green space. Second, Neustadt has experienced two waves of privatization in the last two decades, leading to a complete change of ownership structures. Thereby, municipal and cooperative owners have been largely displaced by national and international financial investors which hold their stock as an asset and aim on short-term gains, rather than long-term development. Third, welfare cuts have put more pressure on welfare-recipients to accommodate in cheapest housing available on the local market which led to a “business-model” profiting on low, but state-subsidized, rents in peripheral estates. The paper discusses how these developments work together to produce new concentrations of poverty households in a prototypical shrinking city. With this, we expand on the already fairly developed debate on the financialization of urban development and provide new insights on (a) financialization in shrinking, low-demand markets, and (b) the relation between planning, state-restructuring and financialization in a German context. We demonstrate that the political economy of housing follows different dynamics here which are owed to both the weak-market situation and the path-specific restructuring of the German planning and welfare system. We conclude that research should put the state more into the centre of explanations and take different paths of state restructuring as well as different socio-economic contexts more seriously.

COLINI, LAURA* (ENEC Sorbonne Paris IV, laura.colini@gmail.com)

Financing European Sustainable Urban Development: (un) Intended Policy Breakdowns?

The paper critically discusses the financialization of sustainable urban development projects with Jessica instrument introduced by the European Investment Bank during the Cohesion Policy 2007-2013. We argue that the normativity of the concept of sustainability, as used in Jessica, is instrumental to entrepreneurial market behavior and that we have little or nothing to say in terms of finance in cities. Using quantitative and qualitative data from a recent Study (Ramsden, Colini, 2013), the paper focuses on two cases London Green Fund and Poznan urban regeneration in which Jessica has currently invested for the creation of funding holes.

The main criteria for Jessica financial investment, is that it must be applied in European cities in relation to integrated plans for urban regeneration in which public participation is strongly encouraged. The analysis of these two cases in the paper highlight three main potential policies breakdowns. First, the creation of highly complex financial mechanisms (which ostensibly have high transaction costs, lack of transparency, legitimacy and accountability) serves the purpose of excluding civil society, and undermining public debate around public moneys. Second, the accessibility to these financial investments imposes new forms of multi-level governance whose criteria of sustainability shape planning decisions at local level. Third, that new entanglement between state, civil society and the private sectors are created under the conceptualization of sustainability, but whose sole scope for relation is mostly driven by strategies for accessing public funding.

Building on current debate around financialization of the urban, the paper concludes that the neoliberalization of sustainability principles must be studied as multi-level phenomenon; with this the ultimate scope of the paper is to unveil the intrinsic tensions and contradictions of sustainable urban development by stressing its financial mechanisms as main drivers of the reproduction of inequalities.

It’s Not Just (Her) Personality: Structural and Cultural Foundations of Impostorism

The sense that one is an impostor—undeserving of one’s successes or accolades—is a pervasive problem among high-achieving individuals from traditionally lower-status groups (e.g., women, first-generation college students, and members of many historically disadvantaged racial and ethnic groups). Described as the manifestation of “intellectual paranoia” or “false self-doubt” among high-achieving, lower-status individuals, “impostor phenomenon”—have difficulty attributing their successes to their own ability or hard work. Rather, such individuals are convinced that they have reached their position in life by luck or by unintentionally misleading people to regard them as more capable than they actually are. Despite continued successes, these “impostors” fear that their true incompetence will, at some point, be uncovered. Although this fear is almost always unfounded, it has tangible adverse effects including vulnerability to both psychological distress and job burnout and may lead to the relatively limited academic or professional career aspirations, influencing occupational sex segregation.

There is relatively little agreement on the origin of impostorism or why it is more pervasive in particular social groups. Because, to date, impostorism has been studied almost exclusively in psychology, research tends to treat it as a person-level construct and focus almost exclusively on antecedents related to family background (e.g., family dynamics, childhood environment) and fixed personality characteristics (e.g., neuroticism, perfectionism). However, the fact that there are high rates of impostorism among high-achieving, lower-status individuals suggests structural factors may play a role. This paper draws on work on sociological social psychology (e.g., status striving, social comparison, and status mobilization) to posit a more sociological explanation to account for increased incidence among particular groups and to suggest a research program to test structural and culture accounts for impostorism.

“They’re Doing Their Own Things”: Identity Processes in Fatherhood

In this paper we explore the disconnect between “culture” and “conduct of fathers”. We are specifically interested in why changing ideas about fatherhood have had such a minimal influence on men’s actual parenting. Our explanation lies in theories of self and identity. We argue that key to this disconnect is the unique way that fathers’ performances are evaluated because the definition of fatherhood is in flux. There is no ideal standard to live up to. The lack of a widely-accepted and realized standard of a “good father” influences behavior in two distinct ways. First, it gives men little specific role direction or guidance in how to be a good father. Second, it allows fathers flexibility in choosing their reference group. Furthermore, when something keeps fathers from living up to their idealized vision, there is forgiveness and accommodation because fatherhood is about ultimately about articulating commitment and intentionality, even if they are unable to carry out those intentions.

We draw on social psychological theories to demonstrate the different effects of conditional versus clear definitions of fatherhood for both men’s contributions to the household and their sense of self. Using data from in-depth interviews, collected as part of the Time, Love, and Cash in Couples with Children (TLC3) study, we find that the more vague a conception about what makes a good father is,
the more difficult it is—for either the fathers themselves or their partners—to evaluate a father's performance. By contrasting fathers who have abstract or conditional definitions of fatherhood with fathers who have clear, specific definitions, we demonstrate the negative effects of vague definitions and the importance of identity standards for caretaking behavior, relationships, and positive self-conceptions.

COLLIEN, ISABEL* (PhD student, isabel.collen@hcu-hamburg.de)

(De)Racializing Identity Work in the Context of Diversity Policies

Since the 2000s diversity policies have increasingly aimed at reducing ethnic inequalities in Germany. While several sociopolitical drivers for a deinstitutionalization of inequalities exist, the implementation of the policies strongly varies. The paper focuses on how racism influences the implementation of diversity policies and accompanying forms of identity work. Postcolonial and critical whiteness studies are merged with institutional work, a concept routed in organization theory, to theorize upon how (de)racializing identity work reproduces or disrupts racism as a societal institution.

The paper builds upon a case study conducted in the public administration of a German city that implemented a diversity policy called "Intercultural Opening". Thirteen semi-structured interviews were conducted with employees and line managers throughout the administration. First, the interviewees' perceptions of Intercultural Opening were categorized. Second, the interviewees' positions towards racism were categorized according to three dimensions: (de)thematization of racism, perception of culture and self-positioning. Third, forms of identity work were mirrored against the background of postcolonial and critical whiteness studies.

The findings show that the interviewees' perceptions and implementation of Intercultural Opening strongly correlate with their position towards racism in Germany: a critical stance towards racism goes along with a broad perception. The concrete implementation and the accompanying forms of (de)racializing identity work seem to be strongly shaped by the interviewees' perception of culture and their self-positioning. Ethnic minority employees constantly have to negotiate role expectations in their identity work. Some proudly claim for themselves the role of an ethnic minority representative, while others only strategically apply it. Dominant ethnics are mainly busy masking their white identity. In some cases the identity work of dominant ethnics and ethnic minorities coincides.

The analysis of the documents but also on some in depth interviews—before will provide insights into whether the program is influencing the boundaries not only in terms of the look specific performances but also in the content priorities and, therefore, in the message. Hence this paper focuses on the actual controversy about public theatres and their audiences, relating the programme structures with theatre communication strategies.

Social Media As a Key Element for Cultural Global Events

Events have become an important channel for the exchange of cultural symbols at global level, with sporting events such as the Olympic Games, cultural events such as the European Capital of Culture and business forums such as the Cannes Film Festival helping to generate and circulate symbolic value. In doing so, many of these events help to configure the fields and the consumption in which they operate, either at global, regional or national level.

Actually most events, as well as cultural events, are taking place on several places around the globe transforming the uniqueness of one events developed on a certain time on a certain place, to be global events.

Social media, is a clear element used by these kind of events, but are this media used in the same way? This research is focused on the analysis of social media use by one of the most global music festival in Spain, The Barcelona International Advanced Music and Multimedia Art Festival, Sónar. Some previous results underline the importance of these media to be connected not just with audiences then with collaborators, partners, artists and other stakeholders.

Who Is a (good) Citizen? Who Is Italian? Rhetoric Of Inclusion, Exclusion and Belonging Among Young People In Italy

The paper aims to explore the mapping of belonging and identification representations among both autochthonous children and those of immigrants in their later years of secondary education in Italy. It aims to analyse how specific articulations of ethnicity and nationhood contribute to define the social boundaries between ‘Us’ and ‘Them’.

The analysis is based on qualitative data (narrative interviews) gathered among 118 young men (18-22 years old) attending Italian higher secondary school in Milan (Italy). While 74 of them have Italian parents, the other 44 are children of immigrants.

Discussing the criteria for obtaining citizenship, emphasis is placed on the participative dimension rather than on the dimension of attributed belonging. Citizenship remains an important formal question but requires an active attitude in order to be deserved. The ‘honest life’ then becomes the main criterion for granting citizenship. Citizenship has to be deserved, showing ourselves as respectable, economical-independent, observer of the law citizens. Differently from Marshall and his classical analysis, it is possible to note a marked shift of emphasis from rights to duties, undermining the inclusive and universal meaning attributed to citizenship. In fact, despite the apparently universalistic character of duty rhetoric, specific interections of ethnicity, race, class and gender are important to fix the quantity of duties necessary for being recognized as ‘good’ or ‘appropriate’ citizens. In this way, “Italanness” is represented as a ‘natural’ characteristic
of the dominant group and ethnic and racial issues remain crucial when identifi-
cation is the main contend.

Institutional elements – first of all a citizenship law strictly based on jus sangu-
inis, that considers children of migrants born and grown up in Italy as foreigners
and migrants, refusing them full citizenship – contribute to transform ethnic or-
igin, kinship and cultural features into tools for differentiation and division be-
tween ‘us and them’.

Livelhood Survival Strategies: The Commodification of Cultural
Objects During Disasters

This study examines the commodification of culture as an adaptive strategy
among local street vendors. As migration from rural to urban zones occurs as a
result of disasters, competition in market areas increases. These forces produce
constraints on the market’s ability to absorb new vendors, but also create new
opportunities. Vendors are forced to alter their offerings in order to compete.
One adaptation has been to commercialize aspects of traditional culture to pro-
duce items specifically for the tourist trade. In parts of Ethiopia, this has includ-
ed specializing in making traditional toothbrushes. While some are marketed to
recent émigrés, others are carved more elaborately and marketed to tourists in the
region. Some vendors have focused on creating new niches within traditional
tourist items. In Mozambique, wood carvers have adapted a traditional tourist
item, the three monkeys or “starving men” representing “hear no evil, see no evil,
speak no evil,” to include a fourth: “do no evil.” This represents the impact of HIV/
AIDS in local communities. These markets developed in areas heavily frequented
by missionaries and NGO activity. This study tracks the trend of expansion and
adaptation of marketed items and provides vendor impressions of adaptation to
disaster conditions.

Sexual Vulnerability Among Internally Displaced Woman in
Northern Mozambique: Livelihood Options and Intervention
Opportunities to Break the HIV/AIDS Chain

This talk examines the prevalence of sexual harassment of and predation upon
female street food vendors and other internally displaced women in Northern
Mozambique. As a result of economic marginalization, women engaged in the
informal sector of the economy are subject to additional risks and hazards then
some of those engaged in the wage labor system, including sexual predation and
HIV infection. This talk examines the social construction of working zones, the eco-
nomic forces, and cultural practices that put these women at greater risk. Issues
such as migration status, length of time in the area, and the need to engage in
resource scavenging contribute to women’s vulnerability. Findings demonstrate
that internally displaced women’s vulnerability is amenable to policy intervention
that could reduce risks associated with street food vending and reduce the need to
for women to engage in more risky livelihood options, such as prostitution or
engaging “patrocinadores” (“sugar daddies”). This talk provides suggestions for
policy makers.

Global-Local Internet Activism in Brazil: Campaigns, Online
Petitions and Action Organization As a Borderline Movement

This paper examines the relation between the local, national and global sphere
relations within the communication process occurring within Avaaz, a global plat-
form for mobilization of petitions, with respect to Amazon deforestation and public
policy definition in Brazil, such as Forest code, among others trend environmental top-
ics. Avaaz (meaning “voice” in several European, Middle Eastern and Asian lan-
guages) is a website platform started in 2007 with the purpose to operate globally
from its office located in the US and it’s 16 language platform content customi-
sation, it has acquired millions of members spread in 194 countries, even if it do
not have local formal representations in them. From its launch to nowadays the
online platform has been able to implement a series of actions from campaigns
and alerts to online petitions and organization of protests and events around the
world, in their words, it is “a global web movement to bring interconnected poli-
tics to decision-making everywhere”. By examining this case, we intend to discuss
this new form of appropriation of the political and collective action and its impli-
cations for the communication and awareness of the Convention on Biological
Diversity and the mobilization of topics related to the environmental agenda are
confronted with the theoretical perspective of the globalization critics developed
by the Latin American authors such as Escobar, Quijano, Mignolo, that propose a
kind of politics of place that could be regarded as a sociotechnics frontier move-
ment, in which local movements are linked to continental or global movements,
composing transnational networks movements (meshworks) for democracy.

CONLEY, HAZEL* (Queen Mary University of London, hazel.conley@qmul.ac.uk)
Valourising Equality: Politics and Equality Legislation in Crisis

Can the cost of implementing equality legislation in organisations be calculat-
ed? Does the cost of NOT implementing the legislation need to appear some-
where in such a hypothetical equation? Is there a limit to the amount of equality
that can be usefully achieved in organisations? Should organisations that seek to
go beyond ‘marginally productive’ equality be discouraged or even legally pre-
vented from doing so? To a sociologist these questions seem incongruous but
they stem from a neo-liberal view of equality reflected in recent political discourse
on equality legislation in Great Britain. The new discourse signals changing social
policy on equality legitimised by the hegemonic view that austerity is the only re-
response to economic crisis and premised by an underlying assumption that equal-
ity is profligate. Business case arguments for equality, which are underpinned
by a concept of ‘value-added’, have dominated managerial discourse for some
time but up until now they have had virtually no impact on equality legislation.
Indeed, in policy terms, the ‘monetisation’ of equality stands in stark contrast to a
proactive, ‘reflective’ approach to equality legislation that was beginning to mate-
rialise in the years leading up to the economic crisis. Interestingly, powers to de-
velop some aspects of equality legislation in Great Britain to Scotland and Wales
have highlighted the rift in these approaches. The effects of austerity measures
on the intersections of gender, class, ethnicity and disability are becoming widely
documented but little has been reported on the ability of equality legislation de-
veloped prior to the crisis to protect women from its disproportionate impact.
In a period when it is argued that little separates the main political parties in the
UK, this paper examines two quite different forms of policy approaches to equality
legislation separated by only a brief time period but intersected by the economic
crisis and a general election.

How Mainstream Sociology Can Now Change in a World Context

Starting from the Japanese Sociological Society’s welcome initiative, this paper
will reflect on how mainstream sociology can now change in a world context. Sim-
plicity, decentralizing the dominant social-scientific models has produced distortedso-
icologies around the world, as those frameworks grow out of the unique social
experience of the global centres of power in Europe and North America. Different
social theories, research methods, and agendas for research are all generated
from the social experience of colonization, cultural domination and neoliberal glo-
balization, which in turn differ across the global South. For bodies like ISA, the
problem is how to bring different intellectual projects into dialogue with each oth-
er, in a context marked by global inequality and with US and European hegemony
currently being restored though new forms of hierarchy and competition in the
neoliberal university. Some recent examples of creative social-scientific work out
of the South will be mentioned, including indigenous methodology, postcolonial
gender theory, and research on neoliberalism.

CONNELL, RAEWYN* (University of Sydney, raewyn.connell@sydney.edu.au)
Rethinking Gender Theory in World Perspective

Abstract
Rich and sophisticated analyses of gender have been produced around the
postcolonial world. But the theory in this work gets little recognition in the cur-
rent mainstream economy of knowledge. Feminist sociology has put forward
that critical global issues adequately so it, and now it is time for their economy to
produce an adequate politics to accommodate the criticality of gender, seeing the
gender dy-
amic in imperialism and the significance of global processes for the meaning
of gender itself. The agenda, concepts, methods and epistemology of gender
theory can now be re-thought, as seen in conceptual texts already written about
language, interpretation, social movements and other issues. An alternative
ecology of knowledge is emerging that can re-shape the global terrain of theory
and its connections with practice.

Conceptualising Privacy, Securing Identity: An Information Solution

Data collection has long been a tool of nation state, ensuring accountability and informing public policy. and for the common citizen this has been crucial to the smooth running of day-to-day life. However, developments in international information politics driven by public safety, policing and national security interests have served to legitimise creeping advances in surveillance practice and the collection of personal data by those in power.

This paper confronts the problems associated with the collection and storage of personal information, the manipulation of stored identities and the socio-political impact of information and its control. Drawing empirical evidence from a selection of national cases including Ireland, it seeks to reconcile the tensions that arise, finding a new generation of understanding of the value of privacy, the nature of modern identity and the instruments we use to protect it.

The perspective draws on the liberal paradigm of privacy protection, aligning to the assumptions that privacy, and to some extent control of our private information, is important to our personal autonomy and identity (Westin, 1967).

Identity formation is closely linked to individuality, implying the existence of private space, in which one's attitudes and actions can define one's self (Clarke, 1994). Identity is also social and cultural and engrained in our membership and commitment to groups. As governments serve to individuate through imposed categorisation and classification, we lose hold over these freedoms. Identification processes deindividualise and the common man is increasingly vulnerable to social control and exclusion.

This paper investigates how the impact of ubiquitous surveillance practice on individual privacy and identity makes vulnerable objects of common citizens.

The paper presents recommendations for best practice for the protection of personal information, from a socio-political and cultural perspective, followed by a set of case-specific recommendations for Ireland.

The European Citizens’ Initiative: Promoting Active Citizenship in Transnational Discursive Spheres?

European Union citizenship was introduced in the Maastricht Treaty as a form of activating citizenship. It has been seen in light of the EU’s democratic and community deficits, considering its double purpose of activating its citizens to engage in EU politics and creating a sense of awareness of European political community.

Twenty years later, EU politics is still characterized by a fundamental gap between citizens and the EU institutions. The introduction of the European Citizens’ Initiative (ECI) in the Lisbon Treaty raises relevant questions as regards both the democratic and the community deficit. From the outset, the ECI has been hailed as an innovation with reference to a line of thought which bridges the gap between European citizens and the EU institutions. Such hopes are often connected to a deliberate understanding of politics where processes of communicative power formation in the public sphere are seen as a fundamental precondition for the legitimacy of the EU.

The ambition of this paper is to assess the potential of the ECI as a bridge between citizens and institutions. We consider this bridge as, made of transnational discourses produced by knowledge exchange and transformation. Therefore we analyze how the ECI activates EU citizens by inducing them to (a) identify transnationally shared concerns, (b) set up transnational organizational structures, (c) contribute to the emergence of transnational discursive spheres, which (d) produce new forms of citizenship.

Theoretically, our contribution draws on a concept of publics as transnational networks of discourse by linking a sociology of knowledge to the Habermasian notion of the public sphere as a site of communicative power formation. Empirically, the argument of the paper is illustrated with reference to a limited number of examples of ECIs that have completed their signature collection by the time of the submission of this paper.

CONSOLIM, MARCIA* (Universidade Federal de São Paulo, mconsolim@terra.com.br)

Georges Dumas: From the Psychology in the French Academic Field to the Intellectual Movement Between France and Latin America (1890-1930)

This research aims to investigate Georges Dumas’s trajectory (1866-1946), a man who was a professor, prestigious psychologist and French “cultural ambassador” in Latin America. The study of his trajectory allows determining, in a privileged way, the social and intellectual conditions of the institutionalization of “scientific psychology” in France and the relations between an academic group and the Republican government. One of the main goals is to identify, through the social and intellectual dispositions of Dumas and the circle of scientific psychologists, how it happened that a professional ethos was produced - based on the identity of a “scientist-philosopher”.

I intend to show that this ethos is the result of a cultural and scientific background, in general ended with Ph.D. titles in Medicine and Arts. Theses dispositions, created in the intersection of a literary culture and a scientific one, can be seen, in the social field, as a result of a slight differentiation of an academic elite regarding to the other ones. In the scientific field, the result was a moderate integration of the disciplinary to control the production process, looking forward to maintaining some continuity between natural sciences and social sciences; between sciences and philosophy. In the international field, these dispositions produced a coexistence of scientific practices focused on pairs and cultural practices focused on a larger public. Looking from the progressive differentiation between medical careers and literary or metaphysic philosophy, these positions can be taken as an expression of a distinguishing life style.

Governing Agriculture Sustainability: Multi-Stakeholder Initiatives, Sustainable Intensification and Systematic Change

Efforts to increase sustainability are increasingly being promulgated using non-state forms of governance. In the United States, there are currently multiple initiatives developing sustainability standards and metrics for agriculture. These include: LEO-4000, Field to Market, the Stewardship Index for Specialty Crops, the Sustainability Consortium, and the National Initiative for Sustainable Agriculture.

Each of these initiatives is a multi-stakeholder initiative in that it includes a variety of stakeholders and uses democratic procedures. Using the sustainable agriculture initiatives as case studies, this paper examines whether multi-stakeholder governance is producing ecological modernization of agriculture in the United States. To do this, the ways that each initiative is framing sustainable agriculture is reviewed. Second, using Paul Thompson tripartite sustainability framework, the implications of the different proposed sustainability standards and metrics for United States agriculture is assessed. In concluding, we argue that the current sustainability initiatives are advancing a program of sustainable intensification, and do not have the capacity to generate systematic change.

Poultry Grabs, Venture Capital, and Debt Bondage: Contracting Access to the Means of Production

The paper applies a sociology of agrifood conceptual framework combined with a commodity systems analysis methodology to investigate the case of poultry grabs to inform discussion on the globalization of economy and society based on neoliberal restructuring. The topic of land grabs is a central discussion in the literature on agrifood globalization. The vertically-integrated “poultry commoditization” system has been advanced as the model of agrifood globalization based on flexible accumulation in production and processing. The contract model of production most common in the poultry industry is a form of sharecropping that allows the integrating firm to control the production process without incurring the fixed costs of land and buildings, as well avoiding the responsibility and liability for labor and production externalities. The processes of vertical integration plus horizontal integration has resulted in a system of monopolistic opportunism whereby the poultry corporations discipline the growers through debt bondage. Corporations such as Tyson Foods, Inc. of the US, JBS of Brazil, and Charoen Pokphand of Thailand are diffusing this model into developing countries. Proceeding from a financialization of agrifood regimes framework, we investigate two cases of venture capital poultry grabs, one by Goldman Sachs in China and the other by TPG Capital in Australia, to illuminate the particular characteristics of the venture capital poultry grabs.

CONSTANTOPoulos, CHRISTIANA* (Panteion University, christiana.constantopoulos@panteion.gr)
 Médias Et Pouvoir : Les inégalités Contemporaines

La « médiation de la vie politique » est liée indissociablement à la transformation du cadre politique des sociétés modernes stiguant progressivement la question des médias et de la démocratie. La relation entre médias et vie politique constitue de nos jours, un facteur important de la compréhension des enjeux liés aux pouvoirs en vigueur, un domaine idéal pour l’analyse socio-anthropologique du « politique » contemporain. Les grands orateurs ont partiellement disparu, remplacés par des techniciens de la parole où la campagne électorale se présente comme une succession privilégiée de construction de la réalité politique et signifie surtout l’imposition des symboles, images et de discours c’est à dire les constituants d’une mythologie politique contemporaine (où la logique de la communication semble l’emporter sur la « l’équation politique »); cette consturation importante du politique contemporain et qui consiste à la « gestion »(formelle) des exigences des pouvoirs économiques. Cette transformation se trouve au cœur de l’approche du sens du pouvoir dans la société « mondialisée ». Le politique est ainsi « vicié » de son sens étymologique. Les inégalités contemporaines, ne s’expriment plus dans le jeu politique et les pratiques politiques, elles tribuent au nom de l’accès à l’information. On essaiera de voir les dimensions de cette consturation, en se basant sur l’analyse de la « rubrique politique » dans la diffusion médiatique en Grèce lors des « shows » d’arrestation des dirigeants de l’extrême droite ; cette analyse montre que les inégalités contemporaines, n’ont pas de « discours » pour les exprimer et pour leur permettre de « lutter » contre.

Violence Domestique Et Crise : Récits Filmiques

Un des sujets préférés des séries télévisées les plus regardées (parce qu’elles reflètent des questionnements « courants » sur la vie quotidienne), a toujours été la description de la vie familiale et surtout de la violence conjugale dans toutes ses formes (ex. dans la série « Desperate Housewives »).

Les résultats des recherches confirment que, depuis le début de la crise économique, on assiste à une augmentation des demandes d’aide de personnes aux prises avec la violence conjugale. La « crise » est ainsi racontée aussi par les histoires de vie (raies ou fictives).

Le facteur multiplicateur (qui est selon les statistiques la crise économique) est-il déjà entré dans les familles et surtout dans des séries les plus regardées par le public international? Nous avons choisi de voir dans cette recherche, non pas les séries qui traitent spécialement ce sujet (comme par exemple la série « Fred et Marie » - censée sensibiliser les publics sur la question) mais de voir au contraire comment ce sujet est (ou n’est pas) représenté dans des séries qui s’occupent principalement d’autres questions, par exemple le crime ou les relations intimes des gens contemporains; dans le but de découvrir si ce facteur est davantage présent et recensé; plus particulièrement, on s’efforce à dépister la « part de l’influence de la crise sur la violence conjugale récrite par la fiction télévisuelle » ou elle insinue le niveau de prise en conscience de ce facteur par les représentations contemporaines. Dans ce sens nous procédons à des analyses de contenu des séries très regardées par tous les publics; il s’agit surtout de séries à grande audience (abstraction faite des séries comiques) telles que : NCIS, Plus belle la vie etc.

CONTI, ULIANO* (La Sapienza University of Rome, uliano.conti@uniroma1.it)

Youth Micro-Groups Between Offline and Online: Fulfilment Of Neo-Tribal Metaphor?

The paper proposes a photographic field research (offline and online) about some youth micro-groups: traceurs, emopunks, a crew of street artists and dancehall queens. In the contribution I make some considerations about the research technique, I give a brief description of each group, using the photographs and an online inquiry on web pages, myspace, etc. of the considered subjects. Some items allow to articulate a discourse on how the components of these groups relate to the characteristics of participatory cultures (Jenks): young people - thanks to the « forms of individual mass-production » and the « structures for intermediation and distribution of contents », both allowed by CMS (Castells) - realize practices of « media belonging », « media expressiveness », « problem solving » and « flow/sharing ». The theoretical contribution considers the link between these groups and the Maffesoli’s theory, can they be considered as realizations of the neotribal metaphor developed for « a contemporary paradox » or « the constant “go and come back process” » established between the increasing massification and the development of micro-groups, called “tribes” ? Micro-groups are like « many punctuated moments of the show of contemporary megalopolis » . These are part of a discourse that interprets the social bond as tribal, which is expressed in a special way as a « succession of ambiances, feelings, emotions ». The visual techniques show that: each micro-group has a privileged place of meeting, both online and offline, where the body has a particular role in terms of physical competition and aesthetics. The “furnit – gegenieinander” is important, instead of “having a goal to be achieved, an economic, political, and social project to be realized” (Maffesoli).

The Impact of the Global Economic Crisis on Homelessness in Spain. the Experience of Madrid

With more than three million inhabitants, Madrid is one of the largest European cities. Like in other major industrialized cities, Madrid has a significant number of homeless people. There are an estimated 2,000 homeless people in Madrid, among them roofless people without a shelter of any kind (homeless people in the strict sense of the ETHOS classification), and those people living in shelters specifically aimed at this population. This contribution analyzes the recent evolution of homelessness in the city of Madrid, paying particular attention to the impact of the global economic crisis since 2008. Data are drawn from the Survey Night of the Homeless in the City of Madrid between 2006 and 2012. In addition, the analysis presents the evolution of the profiles of the homeless people from before the crisis until now. This paper discusses the emerging trends regarding homelessness on the streets of Madrid in recent years and whether there has been a real change in the magnitude and the modes of homelessness. Given the persistence of the economic crisis in Spain, it can be expected that homelessness will remain an urgent social issue to be dealt with by the city of Madrid.

COOK, CRAIG* (Universitas Pelita Harapan, crgcook@gmail.com)

Constructing Bodies through Basketball: American and Philippine Interactions

This paper addresses basketball and how it was introduced and promoted by the American government, during its occupation of the Philippines early in the 20th century, to construct body cultures through various discursive practices. Basketball was introduced into the girls’ physical education curriculum in 1910, but soon after, the sport became a male preserve. The body served as a site of both assertions and contestations under the American regime. The American government through its school system was engineering the Filipino body. In this case, the body politic, as evidenced in the American colonial government, was producing corporeal subjects. What were the processes at work in socially constructing the body? From a sociological and historical perspective, this paper seeks to address the varied transformations that have occurred on the body, through an analysis of American discourse on the body and questions regarding how the colonial regime imposed corporeal discipline on its colonized subjects. What were the notions of bodily normativity as introduced by the Americans? How was the corporeal body contoured by the body politic in the interest of shaping the nation-state? This work reveals several key themes regarding basketball and the body in the Philippines. Among them, first, is the conception that the body, the corporeal, is culturally formed. How one operates within one’s body, whatever one’s gender, is heavily influenced by culture. Additionally, the body was at the center of forces approaching it, both globally and locally. The body came to be seen as a site for the contestation of normative ideals.

Success Stories from Youth Suicide Prevention in Australia: The Youth Work Contribution

Australia’s suicide prevention initiative (NSPP) was an holistic approach which included youth work and also other services, and was pivotal to some changes in youth work delivery, to cross-government policy development and to changes in social attitudes.

During the period of implementation of the initiative there has been an increase in employment of youth workers in schools and the extension of school based youth work programs, changes in the delivery of adolescent mental health services and the development of on-line virtual youth services that provide youth-friendly, positive mental health support, including peer support. As a result of the training element in the package, schools developed more stringent anti-bullying policies, and took a stand against homophobia in school, because
of the identified research link between homophobia and suicide prevention. This also flowed on to youth work funding for youth support groups.

The NSPP coincided with gun control (although it did not directly inform the policy, which was a response to a specific mass shooting). Since tighter gun controls were introduced in the late 1990s, there has been a reduction in suicides (including youth suicides using firearms, and no increase in the use of other lethal means). The main lethal means of suicide for young people in Australia is hanging, followed by poisoning. There is still some work to go, especially in rural and remote communities, where social attitudes are more entrenched and particularly young indigenous young people are more marginalised. The programs need further development and maintenance to address these specific inequalities.

**CORBETT, MICHAEL** *(Acadia University, michael.corbett@acadiau.ca)*

**The Ambivalence Of Community: A Critical Analysis Of Rural Education’s Oldest Trope**

The concept of community has been central to the discourse of rural education for generations. At the same time, community has been, and continues to be, a deeply problematic concept. This paper will interrogate the idea of community and look at the way it has been used historically in rural education. In fact, rurality and community ties configured rural imagery. Place attachment is often held up as an example of the kind of solidarity that once existed before the advent of modernity and ubiquitous strangerhood described in the writings of many contemporary social theorists. Community is, in rural education discourse, a well-worn trope that connects pedagogical, curricular and political arguments. Drayyan popularization and the idea that a proper education begins with experience. What has followed is generations of rural education in defense of community, in resistance to urban-generated standardization, and support for local forms of educational practice which connect to and hopefully enrich local lifeways.

I argue that this rather simplistic place-based thinking tends to lend only partial support to cultural, social and economic development in rural areas for many reasons, but particularly because it is typically somewhat ignorant of wider global connections and contemporary theorizations of rural social space. I will argue that effective rural educational leadership needs to problematize the idea of community and develop it in ways that avoid playing into nostalgic and retrogressive notions of the rural. This argument is based on a conception of place that keeps in focus multiple and complex understandings of emerging postproductivist globalized rural spaces.

**CORCORAN, MARY** *(National University of Ireland, mary.corcoran@nuim.ie)*

Compelling evidence over the last twenty years documents a retreat from the public especially in those societies that wholeheartedly adapted a neo-liberal agenda and promoted the economization of everyday life. In Ireland and other European countries such as Spain and Portugal, massive speculation in the housing sector brought about near financial ruin in 2008. The ensuing imposition of austerity has forced these countries to come to terms with the stark social costs of the profligacy of the past. This paper suggests that one unintended (and indirect) consequence of economic retraction and austerity has been the growth of interest in urban agriculture. As the property market deflated, incomes dwindled, jobs were lost and those in jobs had to work harder than before, a ‘grow it yourself’ movement began to take off in Dublin and other urban centres around Ireland. Similar initiatives are also underway in countries across Europe, and in particular, in Spain and Portugal. Drawing on a case study of the city of Dublin, Ireland set against the European context, this paper argues that the re-emergence of urban allotment gardens in and around the city after a long period in abeyance represents a reassertion of the public realm, although this reassertion is not without its internal contradictions. Allotments are perhaps best viewed as *liminal spaces* or *middle landscapes* that are mutually constituted through public and private practices which are held in tension with each other.

The author draws on Urban Agriculture Europe made available through COST ACTION TD1106 of which the author is a member. More than twenty European countries are linked through the ACTION focusing on a range of issues from governance to public policies to spatial relations in the landscape.

**Theoretical Reflections from Hallowbws’ Perspective: The Religious Collective Memory and Its Political Uses**

The French sociologist Maurice Halbwachs was in the 1920s the founder of the Sociology of Memory and was responsible to introduce a subject that has not been considered yet. Their formulations, roughly try to demonstrate how the memory does not refer to static set of past events, but rather to systematic reconfigurations shaped from the present condition. Assuming such formulations and inspired by the reflections from the chapter La mémoire collective des groupes religieux contained in inaugural book *Les Cadres Sociaux de la Mémoire*, this paper aims to develop an explanatory theory about the required relationship that religions (which are intended to be universal) have with their own religious memory in order to prevail their own interests and judgments over other collective memories related to others social groups - understanding social group as the halbwachssian concept that represents an intermediate category between the individual and society. The central idea is that although the religious memory wishes to be timeless valid -due to its construction of moral truth about human life- it is constructed from the pressures from the social and political interests of the present. Namely, the religious memory, in order to satisfy their political interests to maintain its position within a society, would be concerned with demands arising from others social and political groups. By assimilating, occasionally, these external interests and values, religion reconstructs its own past, incorporating them to their own religious system of values. Nevertheless, religion assumes that this new set of values is linked to the religious historical origin, thus omitting part of its historical past. To exemplify the idea that religious memory is a product of constant total reconstructions that are presented as non historical, we use some historical cases concerning to the Catholic Church.

**Standardisation, Literacy and School Leadership: The Differential Effects of Policy**

One of the key goals of education policy reform in recent decades has been to improve literacy achievement and use standardised, high-stakes literacy assessments as a key lever. Despite the rhetoric of these reforms, however, there is little evidence that the achievement gap according to social class, is being addressed in any sustained ways. Furthermore, there is evidence of ‘collateral damage’ in terms of narrowing the curricular and reducing teacher autonomy, especially in schools serving students who most struggle with achievement in standardised curricula.

Beyond these broad effects, little is known about how the discourse of standardisation plays out in different contexts—Which daily/nightly practices are constituted through the implementation of standards policies, with what effects? In this paper we explore this problem from the perspective of two school principals serving contrasting school communities.

This institutional ethnography shows that leaders working in different places, geographically, institutional—have different resources and discourses to draw on, and face different choices in their everyday work. The texts and practices of standardised assessment frame schools according to a constrained set of ideals which bracket out the important work that educators must do to address educational disadvantage.

We conclude that standardising policy practices may well be producing very different outcomes than they purport to address. Rather than producing an innovative educational market place, these policies are driving a context-less and narrow curriculum that further disadvantages those who most rely on schools for the development of social capital.

**The Sustainable Tourism Discourse - a Critical Discourse Analysis**

Despite the fact that the sometimes emotive debate on sustainable tourism in tourism studies continues (McDonald, 2009) sustainable tourism will almost certainly become the mainstream within a decade (UNESCO, 2013): two powerful organizations in the world of travel and tourism that already intensely promote sustainability in tourism development are UNWTO and WTTC. UNWTO defines itself as the leading organization in the field of tourism and is the agency of the UN which is responsible for the promotion of responsible, sustainable and universally accessible tourism. WTTC is the forum for the hundred true business leaders in the travel and tourism industry. Both organizations contribute to the maximization of the socio-economic contribution of growth and prosperity through sustainable tourism development, while minimizing its possible negative impacts on people, planet and profit.

McCool and Moisey (2011) raise many questions concerning the current definition of sustainable tourism in theory and in practice. Moreover, Mowforth and Munt (2009) state, among others, that sustainable tourism is not more than just a new concept of Western-defined pleasure, which does not truly change former
détiments de ces personnes. Mis en place pour protéger ces personnes ? The Role of National Member States and the EU in Fighting Violence Against Women in 10 European Countries

Domestic violence is an important source of premature mortality for women worldwide, with an estimated one in three female homicides committed by an intimate partner. Among women in high income countries it can be even higher, with up to 1 in 2 female homicides being perpetrated by an intimate partner. The aim of this paper is to discuss the role of the National Members States and the EU in advocating, promoting and monitoring policies against gender violence; the paper will also present existing quantitative data on violence against women in ten high income European countries (Finland, France, Germany, Italy, Netherlands, Portugal, Slovenia, Spain, Sweden and UK).

In the first part, we will analyze similarities and diversities in policies to combat violence against women, and the extent to which the different Member States, as well as the European Commission and Parliament have been players in policy-making, items such as the National Welfare pattern, government funding, non-governmental actions and community responses will be considered. Is there a European Welfare pattern in this context? Or, rather, are policies against gender violence strongly influenced by national societies and local activist movements?

The second part of the paper will compare domestic violence rates between Northern and Southern European countries. Based on an updated review of existing literature from a survey of official statistics, the paper will examine in-depth the latest available national or provincial prevalence figures in these ten countries. Where data allows, it will be examined which sub-populations, e.g. younger or older women, or regions have a higher risk of femicide.

CORRAL-REGOURD, MARTINE* (Université Toulouse Capitole, martine.corral@ut-capitole.fr)

Enjeux Des Productions Artistiques Des Personnes En Situation De Handicap Mental

Cette proposition de communication a pour objet les enjeux relatifs aux productions artistiques – dans le champ des arts plastiques - des personnes en situation d’handicap mental. Les productions d’Art-thérapie se présentent comme des modalités de mise en œuvre du concept foucauldien d’Empowerment de la santé, permettant à chacun de devenir acteur de sa propre vie, en vue de rendre la qualification d’handicap définitivement absoute.

L’exposition publique et la conservation de ces productions permettent effectivement une inclusion dans le champ social. Mais elles suscitent des interrogations de deux ordres.

D’une part, interrogation relative au lieu d’exposition et de conservation : où exposer, comment conserver ? Dans un local périphérique à l’établissement de soins, dans un espace autonome, a fortiori dans un musée, relèvent de solutions différentes voire opposées. Les productions peuvent apparaître soit comme un témoignage de la médiation thérapeutique, une production co-écrite avec le personnage soignant, soit en s’institutionnalisant partager le statut des œuvres d’art.

D’autre part, il convient d’analyser les modalités selon lesquelles les œuvres sont exposées - ou vendues - à l’issue de la production - ou son représentant légal - est seul titulaire du droit de divulgation. Pour certaines pathologies, le droit commun s’applique sans difficulté. En revanche pour des troubles rendant la personne particulièrement fragile et isolée, comment concevoir les protocoles mis en place pour protéger ces personnes ? En s’insérant dans le marché de l’art, le risque est dialectiquement de générer un processus de marchandisation au détriment de ces personnes.

Cette communication se fondera sur un panel d’entretiens conduit auprès de soignants dans des établissements français (Hôpital Sainte Anne, Hôpital Maison Blanche, à Paris, CHU de Toulouse), auprès des représentants d’associations (société française de psychopathologie de l’expression et Art-Thérapie), des directeurs de musées d’art brut à Lille, à Lausanne, sur l’analyse des protocoles en cause.

The Divisionalized Professional Bureaucracy Model in Hospital Organizations: Challenging the Role of Professionalism and Managerialism

Following up on previous reflections (Correia, 2012), this presentation seeks new insights into the mechanisms and processes that can affect the adaptation of hospital organizations in the context of globalized managerialism, notably the implication for its design and functioning while a professional bureaucracy and for the interplay between managerialism and professionalism.

The presentation reports to a qualitative research whose fieldwork was conducted in a general public hospital during the process it adopted a corporatized model now dominant in Portugal. Direct observations were systematically made over a year and half from 2008 to 2010, followed by 26 in-depth, semi-structured interviews with all managers on the hospital’s board of directors, doctors from internal medicine and from surgery.

Evidence shows a new, unpredicted organizational structure in Mintzberg’s theory – the divisionalized professional bureaucracy – that combines professionalism and balkanization as prime coordinating mechanisms. Divisionalized professional structures are created within hospitals standing medicine and management together. Implications are discussed in the light of two fields of debate. One is health professions, as professionalism seems to be reinforced through the control of both managerial and self-regulated clinical tools. The other is management studies, as it is significant to find professionalism and balkanization coupled though they are conceived as barely articulable in theory. Therefore, the reflection allows to illustrate empirically how these organizational successful adopt by following processes assumed not only as impossible but also as responsible for disintegrating large bureaucracies.

Retelling Ones Life Story - Using Narratives to Improve Quality of Life

During the last years research in the field of narrative based medicine showed the efficiency of using illness narratives to stimulate coping processes. Following this we examined the utilization of the narrative approach in persons with aphasia, a neurological language disorder. We developed an interdisciplinary approach of biographic-narrative work to improve Quality of Life (QoL). Many persons with aphasia experience reduced social participation and a loss of QoL. Although life story work can support processes of sense-making, only a few studies use a biographic-narrative approach in aphasic patients because of the impaired language abilities (Shadden, 2005). In our approach we target identity renegotiation and social participation through an adapted biographic-narrative intervention.

The study was set in a pre- and post-test design with a follow-up assessment three months after the intervention. Five face-to-face biographic-narrative interviews and seven group sessions were conducted over ten weeks with a sample of 17 participants with chronic but different types of aphasia.

In accordance with our hypotheses, we found a significant and stable improvement in health-related QoL. Also self-reported states of mood as e.g. “happiness” grew significantly. The results show the efficiency of working with narratives as a supplementary method for improving QoL. The transferability of this intervention to other patients is an open question for discussion and further research.

The current work is supported by a grant of the German Federal Ministry of Education and Research (BMBF, FKZ 17S10X11)

Cooperation and Reputation in Dynamic Networks: An Experiment

We study the effects of 1) network embeddedness and 2) partner choice on the emergence of cooperation. Previous research suggests that, separately, both mechanisms can influence cooperation. Network embeddedness can promote cooperation through reputation effects, while partner choice allows ostracizing non-cooperative partners. In many social situations, however, both mechanisms are present. Such situations can be characterized as dynamic social networks. It is not clear how the coordination of these mechanisms affects cooperation; both mutual reinforcement and mutual impediment can be argued. We address this puzzle by running laboratory experiments in which opportunities for partner choice and network embeddedness are systematically varied, such that the effect of partner choice and reputation can be compared, both in isolation and...
combined. Results indicate that the evidence for reputation effects is limited, but that partner choice has a negative impact on cooperation.

Brazilian National Councils of Health and of Social Assistance and the Restructuring of Political Inequalities

Fora with societal participation - such as participatory budgeting and public policy councils and assemblies - have been set up in Brazil throughout the last 20 years in nearly all governmental areas. Among these, stand out the public policy councils for being significantly spread across the country. They are present in municipalities and federation states; there are also 32 councils and two national commissions operating at the federal level of management. These fora are supposed to promote the democratization of the State and democratic governance at the different levels of government. The paper presents the results of a research aiming to verify to what extent this assumption can be confirmed, regarding the National Councils of Health and of Social Assistance. It presents an analysis of the workings of these councils, in 2010, using mostly data from the detailed minutes of their plenary meetings. It also examines councils’ legal and administrative documentation and interviews with councilors. The study concludes that institutional history and pervasive patterns of political inequalities, in each policy area, limit the scope of democratization they foster. Public policy councils change some aspects of the sectoral structure of political inequalities, but in doing so they help to shape new ones.

CORTES GAGO, PAUOL* (Federal University at Juiz de Fora, Brazil, pcgago@uol.com.br)
Co-Constructing Legal Formulations in Family Mediation

We focus on the mediator’s profession in family justice in Brazil, with a specific attention to the practice of formulation. It was originally described by Garfinkel & Sacks (1970:171) as the practice of “saying-in-so-many-words what we are doing (...)”. In the ethnomethodological tradition it is a method used by participants in interaction to create intelligibility and solve problems of indexicality in the here and now of encounters.

In professional discourse, however, we can associate it with regular performances of participants, i.e., with their roles in an institution. We have selected moments when legal issues pop up in interaction via formulations. Based on a corpus of real interactional data of three mediation cases, amounting to a total of 6 pre-mediation interviews and 12 mediation sessions (approximately 14 hours of talk), we undertook a qualitative interpretative study, within the theoretical framework of Interaction Analysis. During the first phase of data analysis we counted on a collaborative work of the mediator in joint data analysis.

The study reveals that legal formulations occur when the mediator explains her own position to participants, trying to make them adhere to the ongoing work when she furnishes legal official explanations regarding rights and duties of parents, in a consultative mode, among other uses. Particularly, one type of sequence allows comparing a) the effect of the two enumeration procedures and b) the likelihood of same-sex couples of getting married.

Using 2011 census microdata, we first analyze the socio-demographic profile of same-sex partners and spouses (age and education of the spouses; homogamy, same-sex marriage). Second, the article explores the differences between unmarried and married same-sex couples. Third, we focus on the household composition in order to obtain information on same-sex parenting patterns. Preliminary results for Canada indicate that the proportion of married same-sex couples has increased importantly in this country in the last decade and currently reaches nearly one-third of all same-sex couples living together. They also show that the presence of children and educational homogamy have a strong positive effect on the probability of being married instead of cohabiting for same-sex couples.

The Brazilian Neo-Developmentism in the Canons of the Post-Industrial Era

The purpose of this communication is to demonstrate the fundamental features of the Brazilian model called neo-developmentism over the last 10 years, supported by a neo-Keynesianism. This model enabled a considerable increase in the formalization of labor in Brazil which reached record levels, although is strongly supported by the general increase in precarious employment relationships through the growth of the service sector and outsourcing of work, having as component intensifying the use of new information technologies (TICs) in the execution of the work and its consequent financialisation. Finally, this model predicts the complementarily of economic and political relations between state and the market still has industrialization as a factor structuring the economy. The wounds created by this option societal development are strategically attenuated through the adoption of redistributive policies that aim to mitigate social conflict and ensure greater social justice and reducing social inequalities. The relative

Income Inequalities in Brazil: Changes in the First Decade of the Twenty-First Century

Income inequalities in Brazil: changes in the first decade of the Twenty-First Century

Unequal income distribution in Brazil, a country that is still one of the most unequal in the world, hasn’t been news for some time now, as a number of different authors have registered. The unequal distribution rates affect families’ living conditions, especially amongst the poor. That is why it is so important to continually evaluate the impact of income inequality on current Brazilian social conditions. The aim of this study is to analyze the general determining factors implied in the changes observed in domestic per capita income or just plain domestic income in the last decade. We have taken into analysis the period between 2001 and 2011, giving special emphasis to: 1) evolution and change in domestic per capita incomes in Brazil in national and international structural characteristics; 2) domestic income inequalities as characterized by sex; 3) regional aspects of domestic per capita income inequality; 4) social stratification and domestic per capita income in Brazil; and 5) the impact of socio-economic factors on domestic income. The analysis was undertaken using the results of the National Domiciliary Research by Sample – IBGE’s micro-data (PNAD). Methodologically, the study aggregates two kinds of analysis. The first kind is a description of average domestic income variables; average per capita domestic income, sex, and occupation. The second is a linear regression used to test the effects of each independent variable (sex, age, race, educational experience, International Socio-economic Index of Occupational Status (ISEI), social protection, region and rural/urban, on the dependent factor, namely domestic income.

Youth As a Complex Issue: Notes on Brazilian Socio-Demographic Characteristics

Youth as a category is tied to a complex network of relationships as occurs in any given society. According to Sposito (2000), youth may not be categorized with any sort of precision, but this impression is exactly what makes defining youth relevant. The concept of youth is wrapped up in a complex representation thus it is understood in different ways and varies between different regions and/or countries. With this in mind, certain definitions will be taken into consideration so as to define the group that we consider as young in our study. Youth is a category that encompasses multiple social issues and brings may challenges for any society in terms of the kind of attention given to this socially defined segment. This concern links the study of youth with debates about major social and economic problems, since society still projects its future on youth, as part of a development ideal. In this paper we aim to analyze the general characteristics of the young population in Brazilian rural and urban areas, showing the differences among them by sex, education, working conditions, as well as the rates of violence and crime that draw a specific scenario for Brazil. The National Household Sample Surveys of 1989 and 2011 provide the principal data used in our study.

Reputation Building, Gatekeeping and Cultural Audiences: Some Conclusions from a Survey to Lisbon's Municipal Cultural Offer

The paper draws on some empirical results of a broader research project studying the audiences of cultural facilities and events of Lisbon's Municipal Cultural Agency (EGEAC). In the scope of this project, an extensive survey was applied, within one year to nine of the main cultural facilities in Lisbon city and to a set of specific events managed by City Council's cultural firm, providing data from around 6000 individuals that give us a comprehensive picture of the audiences of these diverse institutions (museums, theatres, monuments, event venues).

The aim of this paper is to understand the importance of reputation building mechanisms and gatekeeping processes in these specific facilities, and to comprehend their importance in the respective art worlds, departing from the answers provided to this survey.

Gatekeeping mechanisms and reputation building processes are well documented in the sociological and economic literature as fundamental to influence both cultural provision and cultural consumption. Through the analysis of the motivations expressed by the audiences, the image they associate to each venue and the cross-analysis of their declared cultural habits, we build a framework for the analysis of reputation building mechanisms that is the empirically tested with this data.

After introductory and conceptual sections, where the ambiguousness of public sphere is explored and conceptualized, a methodological section centers on research-action methodologies and its potential. The three artistic interventions are then fully analysed, inquiring their purposes, results and impacts. Main findings and principles for urban planning are summed up on conclusion.

Gaucho Tradicionalism, Identity and Culture in Paraná, Brazil

According to both scholars and movement leaders, the Gaucho Traditional Movement that emerged in mid-20th century Brazil is today one of the largest movements of popular culture in the world. Thus, the research we present here – based on the study of current ideals of work and leisure within the specific context of a Centro de Tradicoes Gauchas (hereafter CTG) in the state of Paraná, and the various events sponsored by this organization, such as rodeos, handcrafts, art and dance festivals, equestrian sports, among others, presents not only a rich case study of how people build identities through a non-profit civil society organization that seeks to foster and uphold traditions and customs identified as "truly emerging from a "gaucho past" but also engages with key contemporary sociological debates. We look at the importance that CTG participation takes on in peoples' lives in and of itself and in relation to other social institutions (eg work, family, school). Our field work has shown that participants' strong commitment to and engagement in recreating and living "gaucho tradition" often goes beyond common definitions of leisure and provides a comprehensive arena for sociability and agency, where particular understandings of rural and urban, modernity and traditionalism (among others) are constructed. Yet CTGs and their members are also a part of modern Brazilian culture and social life, where enormous changes – in such key areas such as gender relations, or societal discussions on poverty, inequality and political democracy – are underway. Thus, any simple "agency vs. alienation" dichotomy becomes impossible for us to sustain, as researchers and scholars who attempt a challenging analysis of the impact that MTG and CTG participation has not only on its members but on broader social and cultural trends.

Naturalized Genocide. Study of Homicide in Brazil: Analysis of Historical Series and Correlations Ethnic, Cultural and Political

The taxes of homicides in Brazil are raised between the most of the world: about fifty thousand annual deaths. In some States a significant fall in the annual number occurred in the recent years (São Paulo; Rio de Janeiro e Pernambuco) in others the number increased annually providing in the nation-wide a stabilization in raised platform, annually superior to the wars as of the 20th century. However, the number of homicides occurred in the States that had increased the number of prisoners. This work examines the behavior of the historical series of the homicides and the imprisonments searching to identify the existence of some possible correlation. The partial results suggest two strong general correlations and other relevant informations. A direct correlation, of same direction, with the investments of the National Program of Public Security with Citizenship of the Ministry of Justice (PRONASCI) and another inverse one, of contrary direction, in absolute numbers, enters the taxes of homicides and taxes of imprisonments. It is observed that the jail population and of victims have similar direction, with the investments of the National Program of Public Security.

Entrepreneurial Processes in Academia

Entrepreneurial Processes in Academia Young Academics in a New Public Management Regime and Gender Implications

Ilse Costas, Stephanie Michalczuk Céline Camus

Management techniques are increasingly used in public sectors like administration and education. In higher education managerial thinking, rationalization and commodification have transformed working conditions and the incorporate behaviour of young academics.

The implementation of New Public Management (NPM) in universities has deteriorated the situation of young academics. Reforms which should enhance efficiency as well as competitiveness of universities increase precarious work since then. Not only scientific management skills are relevant to a career, but “self-management” for a good performance according to new rules of scientific output regimes signify new challenges for young scientists. Quantitative performance indicators gain momentum and determine competitiveness. Market-related processes and control instruments were imported to academia, intensifying competition for higher positions. This could be detrimental to efforts to obtain gender equality in higher education and research.

Flexibility and self-management are essential criteria of a career in academia. The requirements of high flexibility and strong competition could let women become losers of this game - a tendency that foils efforts to increase female rates in academic careers. The typical “manager” is connoted with masculine properties and stereotypes, such as leadership, assertiveness, aggressiveness, competitive behavior elements as well as risk taking. Internalizing these gendered stereotypes, discouraging impacts on female academics’ self-perception and self-image are supposed to be the result – not to mention gendered ascriptions of decision-makers and gatekeepers (Beaufays 2003).

Considering the fact that women are underrepresented in academia, such NPM effects are getting increasingly relevant for the gender issue. Therefore we analyze concepts of NPM regimes in academia in France and Germany under a gender perspective. As a theoretical basis we refer to Foucault’s approach of governmentality (Foucault 1991) including the perspective of gendered power relations.

Embodied Protest in Occupy London: Between Homo Sacer and the Biopolitical Body

In this paper we discuss the relation of embodied protest and public space in Occupy London. We draw on Agamben’s notion of the homo sacer – the excluded individual embodied by the figure of the homeless, refugee and so forth – to analyze how in protest camps embodied protest relates to resistance against sovereign power. Drawing on primary data gathered through participation observation of and interviews with participants in Occupy London, we investigate the extent to which the camp constituted an inscriptive space of excluded inclusion as protesters sought to position themselves as homines sacri – “bare life” challenging sovereign power. Yet, we also show how protesters struggled to navigate tensions between representing such “bare life” of the homo sacer and the biopolitical body. This lead not only to various difficulties in building protest community but also to the interactions with the general public and media. Particularly, tensions became manifest as the homines sacri of the homeless people joined the camp. We discuss the implications of Agamben’s biopolitical insights for the relation of resistance, public space and community building in protest movements.

The Proletarianized University Graduate: A Paradox of Knowledge Economies

The results of studies in many countries suggest that the time investment necessary to earn an undergraduate degree has declined over the past few decades to the point where full-time university students need only to treat their studies as a part-time commitment and they can still obtain high grades and graduate. At the same time, other studies find that great proportions of these graduates are seriously underemployed. These trends present a paradox in societies officially deemed “knowledge economies” by their governments, which also promote their mass universities as the drivers in the creation and management of new knowledge and thus economic growth. This phenomenon is not explainable by conventional liberal or conservative sociological theories. However, it is argued that a political economy perspective, in which mass-university graduates are seen to become losers of this game - a tendency that foils efforts to increase female rates in academic careers. The implications of this paradox are discussed in terms of the economic utility of the prolongation of youth for Capital.
First Nations Theatre in Postcolonial Context: Interpreting the Fusion of Premodern and Postmodern Cultural Forms in the Americas

The last four or five decades witnessed a remarkable renaissance of First Nations theatre across all the Americas. This hemispheric artistic renaissance is grounded in a postcolonial context that challenges the modern definitions of national cultures that had mostly ignored, eliminated and silenced the traditional and premodern forms of expressions of the pre-Columbian cultural traditions on the continent. Yet the renaissance of First Nations theatre shows not only that such traditions can be revived and transformed, but that the conditions under which they are performed blend easily with the most innovative experiments of avant-garde theatre developed in the 20th century. The legacy of Antonin Artaud, Bertolt Brecht and Gertrude Stein can then be seen in the dramaturgical contributions of playwrights like Drew Hayden Taylor, Yves Sioui Durand and Monica Mojica, and theatre groups like Onindemok and De-Ba-Jeh-Mu-Jig. The performative dimension of such a theatrical artistic renovation is also in touch with the political and legal transformations that accompany the wider cultural movement found in the contemporary postcolonial context of the Americas, and signals the presence of the transnational and transcultural processes at work in them. Using the conceptual tools of cultural pragmatics and hermeneutic theory, this presentation will focus on how the premodern and postmodern cultural forms converge and fuse in creating a hybridized theatre that reflects the transformation of the cultural hemispheric scene of the Americas.

COTE, JEAN-FRANCOIS* (University of Quebec in Montreal, cote.jean-francois@uqam.ca)

Phylogenetic and Ontogenetic Processes in Mead: A New Sociological Understanding of Self in Society

The legacy of G.H. Mead largely rests today on his conception of the self, on which most of the interpretations given to his social psychology have focussed; however, strangely enough, his conception of society has remained in the meantime almost entirely ignored, or left unexplored in its fundamental determinations. In this paper, I want to argue that the concept of society has to be considered as the essential presupposition of Mead’s theoretical presentation of the self. By drawing attention to the concept of society at work in Mead’s evolutionary thought, I propose that the ontogenetic process of the formation of the self (in self-consciousness) relies on the phylogenetic process of the formation and transformation of society. These processes have then to be considered in their interrelation if we want to get a cogent sociological understanding of the self in society. As this interrelation between these two processes stands at the very core of Mead’s theoretical enterprise, it is also at stake in his reformist political vision of the (trans)formation of society by self-conscious individuals. Using schematic representations of these processes, I also insist in this presentation on both less known published and unpublished papers by Mead that establish the connexion between phylogenesis and ontogenesis in his thought.

COTESTA, VITTORIO* (Università degli Studi Roma Tre, vittorio.cotesta@uniroma3.it)

Human Rights and Civilisations

In the last 30 years the Theory of Human Rights received many criticisms. The most important is the critique proposed from a civilizational point of view. This critique is advanced by many theorists from China, India and, generally, Asian countries. They said that a universalistic Theory of Human Rights is impossible without Asian Values. To demand or propose a Confucian or Neo-Confucian Theory of Human Rights.

The same critique is advanced from an Islamic point of view. The critique of a Western vision of Human Rights here is not only a theoretical question but a practical one. The Islamic world had emulated the “Islamic” and the “Arab” Declaration of Human Rights.

Another criticism is proposed from the so called African Renaissance. In African culture (f. e. in Ubuntu culture) and civilisation there is a conception of Human Rights. As this interrelation between these two processes stands at the very core of Mead’s theoretical enterprise, it is also at stake in his reformist political vision of the (trans)formation of society by self-conscious individuals. Using schematic representations of these processes, I also insist in this presentation on both less known published and unpublished papers by Mead that establish the connexion between phylogenesis and ontogenesis in his thought.

Disparities in Homeless People’s Health Care in France

The French healthcare system is reputed to be one of the best in the world. In theory, it guarantees free access to medical care to everyone by offering specific medical security scheme for each social group. However, this nationalised system has increased disparities across social groups and classes. This paper will try to understand the reasons why normal patients and homeless people are treated differently. Analysing the interactions between homeless people and healthcare workers displays how different their respective logics of action are. Plus, their perceptions of health, illness and body image much differ, which can cause misunderstandings and result in homeless people facing great health inequalities.
and practices of community actors in the context of Montréal. The paper is based on the findings of a qualitative study that used semi-structured interviews with various community actors in the Rosemont neighbourhood of Montréal. Our objective is to understand how community actors in this neighbourhood are fostering the implementation of sustainable urban development at the local level. Our hypothesis is that these actors use the concept in a way that allows for a re-framing of the issues towards the implementation of sustainable urban development with a broader social scope by incorporating notions of justice, equity and democracy into it. In doing so, they are positioning themselves in opposition to a neoliberal vision of sustainability, where the environment and social inequalities are seen as externalities of development.

**The Use of Heritage in the Age of Austerity**

This paper uses evidence from research across the University of Leicester into the use of the ‘Heritage Paradigm’ to capture cultural value at local and regional levels. Traditionally, heritage has related to the management of historical assets regarded as central to the British national story. However, in light of the Localism Act 2011 and a restructuring of the executive governance of heritage assets, the UK now views heritage as central to a) place branding, and b) community empowerment. These developments present a way for regions to redefine their populations, economic relevance, and its legacies to the ends of ‘inspiring’ future economic prosperity. On a theoretical level, the pursuit of ‘heritage value’ has opened up democratic spaces to include a greater diversity than hitherto represented in official heritage discourse. On a practical level, the paper argues that the ‘networked governance’ approach, which includes heritage organisations, local communities, local authorities, universities, and private businesses, demonstrates an entrepreneurial approach to realise cultural value. Consequently, the heritage paradigm is less about securing the past, but about capturing cultural value as an over-arching economic rationale emergent from austerity economics. However, this approach is not without criticism, and the paper uses evidence to illustrate that conflicting relationships between public and private interests often limit its successful implementation. These points will question the extent to which it realistically generates entrepreneurialism more broadly through examples that highlight the divergent rationales of public and private interests. To conclude, the paper argues, using evidence from Leicester City’s ‘City of Culture’ bid that an entrepreneurial approach to realise cultural value offers a legitimate means to promote cultural diversity, cultural creativity, and civic pride; but without a choreographed approach to working with the private sector these schemes can offer little to longer-term economic development.

**Globalizing Forms of Elite Sociability: How Social and Service Clubs Foster Varied International Experiences**

Drawing from 50 interviews conducted in Paris and Milan, our research examines the expatriation practices, as well as the cultivation of transnational connections, cosmopolitanism and global class consciousness among members of elite social and service clubs: the Jockey, the Nouveau Cercle, The Travellers, the Automobile and the Interallié in France; the Clubino, the Unione and the Giardini in Italy; and the Rotary, as the main and most selective “service club”, in both countries.

Following two recent articles (2010, 2012) analyzing the multiple ways these institutions manage social capital as individual and collective resources for their members, this paper focuses more specifically on international ties. We compare how – according to their respective characteristics – various elite social clubs promote different kinds of bourgeois cosmopolitanism and connectivities through a whole from the more recent internationalism of upper-middle class service clubs such as the Rotary. Indeed, such institutional differences have a strong impact on the individual experiences of their members traveling or living abroad. Each club’s peculiar ethos, practice and representations are related to the features of the networks through relations of mutual symbolic distinction; for example, some clubs emphasize the ‘utility’ of links while others prefer to stress their ‘genuineness.’ The varied forms of cosmopolitanism promoted by clubs partly replicate these logics of distinction, eliciting struggles over the authenticity or inauthenticity of transnational connections. Yet clubs also oppose each other according to the unequal emphasis they lay on international ties per se, potentially introducing a competing axiology within the symbolic economy of social capital accumulation.

These oppositions show that while the globalization of the upper class implies an increasing transnational mobility and the international deployment of social networks, these are not strategized homogeneously among the European economic elite, and participate in the drawing of symbolic boundaries between its fractions.

**PAUGAM, SERGE** (CNRS & EHESS, paugam@ehess.fr)

How do the inhabitants of the most privileged neighborhoods of big metropolises see the poor? How do they distance themselves (both physically and symbolically) from them? Can their representations of the urban poor be analyzed as part of traditional or neoliberal repertoires of action and justification? To answer these questions, our paper will be drawing on 240 in-depth interviews conducted in 2012 and 2013 with upper-class and upper-middle-class residents of the most socially selective areas (both in the inner-cities and in the suburbs) of Paris, São Paulo and New Delhi.

The history of the forms of domination, the structure of the elites, and the characteristics of welfare policies are indeed tightly linked to the ways the upper-classes produce, perceive and justify a city’s social-spatial order. Their representations of the poor – through frames, symbolic boundaries, logics of distinction and evaluation, narratives, etc. – are strongly influenced by the specificities of their country and of the metropolis they live in.

Therefore, on the basis of an international and inter-local comparative approach, we will present the differences between the cases studied. For each of them, we will also describe the particular articulation between five themes, whose possible mobilization as subjective reasons for self-segregation has been systematically tested in the interviews. These topics are: (1) insecurity and crime-exposure, (2) hygiene and the risks of contamination, (3) the attachment to a moral order that would need to be protected, (4) the naturalization (or racialization) of poverty, and (5) the various valuations of competition and merit vs. solidarity.

Our analysis shows how the rise of a neoliberal urban model, in Europe as well as in the Global South (in contexts characterized by the on-going displacement of the urban poor from the city centers), is also a matter of collective and individual meaning-making.

**COUSIN, OLIVIER** (Universite Bordeaux Segalen, cousin@ehess.fr)

**Discrimination and Work**

How do individuals perceive and experience discrimination at work? Based on a qualitative survey consisting of 200 interviews and 4 sociological interventions, we distinguish four registers showing that discrimination constitutes a trial that varies according to the social context. According to a person’s social trajectory and position, the experience of discrimination varies widely, thereby demonstrating the importance of access to equality. Indeed, whereas immigrants are objectively discriminated against, they do not feel this as discriminatory because they do not stake a claim to equality. In contrast, minorities experience the hurdles they face as being considerable sources of discrimination because they claim equal treatment. The same is true using the working class and the middle class. The feeling of discrimination does not necessarily correspond to the nature of the trial one undergoes because the more people identify with society and participate in it, the greater and more unfair seems the discrimination.

According to the type of labor market, people feel more or less exposed to discrimination. In open markets such as the audio-visual sector, merit and talent are normally the only criterion. In recent years, this market has become much more accessible to visible minorities (actors, directors etc) despite their feeling a strong sense of discrimination. For each failure can be interpreted as the result of discrimination since it concerns the qualities of the person without the criteria of the labor market. Our analysis shows how the rise of a neoliberal urban model, in Europe as well as in the Global South (in contexts characterized by the on-going displacement of the urban poor from the city centers), is also a matter of collective and individual meaning-making.
The city of Rio de janeiro will host two mega-events in the near future: part of the games of the soccer world cup in 2014 and the olympic games of 2016. As a result, the state and local governments of Rio de janeiro devised new urban policies for the favelas aimed at bringing public safety to the city. The most important is the program called Police Pacification Units (UPP), which was put in place since 2008 in several favelas under the control of the drug dealers. Other important programs, such as Morar Carioca (Carioca Housing) and the PAC (Program of Development Acceleration) complement the UPP, focusing on housing, infrastructure improvements, and mobility within favelas.

This paper intends to analyze the impact of these programs on the building up of resilience and adaptive capacity in some of the communities where the pacification program was put in place. The paper focuses on the dimensions of risk, vulnerability, inclusion, safety, and the construction of socio-environmental sustainability within the favelas and its surroundings. The study is based on empirical evidence from four favelas in Rio de Janeiro: Comunidade Dona Marta, Morro da Providencia, Morro Pavão-Pavãozinho and Complexo do Alemão. It also uses data and information from government and non-government sources and when available, from the plans and designs put forward in these communities.

The proposed analysis as well as its implicit comparative nature will point out the advances and setbacks of these programs, and will indicate possible strategies for improvement. It hopes to contribute to better planning practices and ultimately to diminish social and environmental vulnerability of less privileged communities.

The Relationship Between Intellectual Groups and National States in Latin America during the Nineteenth Century

This paper analyzes how the aesthetic, cultural, political and social perspectives of intellectual movements shaped the social imaginary about modernization and national development in Latin America, especially in Brazil, during the nineteenth century, contributing on the setting of a political culture that had great influence on the consolidation of the Latin American states. The main objective of this research is to analyze the formation of homologies between intellectuals and political-economic elites during those centuries.

In Latin America, this process of alliance between intellectuals and political elites has developed through various stages, but, historically, the nineteenth century was a turning point. Since this period, Latin American states began to constitute themselves as modern orders par excellence, holding administrative control and, above all, symbolic control of the territory and the peoples living there. It's precisely at this crucial moment that the intellectuals' movements, especially the literature and poetry, played a key role on the formation of a political culture that will give the theoretical and ideological foundations of the symbolic domination by state.

Those intellectuals made great efforts to incorporate the ideas that were being broadcast by the European avant-garde movements and rebuild it in favor of the development of a national art and a national culture. An art and a culture that should be the foundations of a national identity.

It was precisely by the activity of these intellectuals and the broadcast of ideas about the modernization and development of their countries, through the formation of an ideology about the means necessary for the constitution of a politically organized society (through a national identity based on art and culture), that the intellectual movements were incorporated by political elites on the process of strengthening of the Latin America states, exerting great influence on the formation of specific national "political cultures".

Youth Creating Disaster Recovery: A Participatory Action Research Project

Youth Creating Disaster Recovery (YCDR) is a participatory action research project designed to learn about disaster recovery from the perspectives of youth. Moreover, YCDR focuses on the potential of youth to act as powerful catalysts for change following disasters.

Funded by the Social Sciences and Humanities Research Council of Canada, the project has completed its first year of fieldwork in Joplin, Missouri and Slave Lake, Alberta. Both communities experienced recent exposure to catastrophic disasters. On May 16, 2011, one third of Slave Lake was destroyed by a wildfire. Less than a week later, on May 22, 2011, Joplin was devastated by a powerful EF-5 tornado.

With a collaboration of Royal Roads and Colorado State Universities, uses participatory and creative research methodologies to elicit and explore the perspectives of disaster affected youth in the focal communities. The goal is to contribute to and refine existing socio-ecological theories of disaster recovery and generate evidence-informed, inclusive, and youth-centered approaches to disaster recovery and risk reduction practices and policies. YCDR is committed to empowering disaster-affected youth through this research and the development of peer-to-peer networking opportunities and a North American interactive web-based gallery dedicated to their creative stories of disaster and recovery experiences.

In this presentation, we will provide an overview of the project and share some of the outputs (photo-stories, videos, songs, poems, etc.) created by the youth participants. We will highlight some of the early findings centered around four research questions: 1. What people and places helped youth to recover after disaster? 2. What activities/actions were important to youth after disaster? 3. How did youth contribute to their own and to others' recovery? 4. What delayed or hindered the recovery of youth and what could be done to overcome those barriers?

Grandparents Who Care for Children While Parents Work: Characteristics and Time Use Patterns

Grandparents have historically underpinned the functioning of families raising children, particularly through emotional support and guidance. Recently, maternal workforce participation has propelled modern grandparents into a more active role, with many regularly caring for children while parents work. This trend has important implications for female workforce participation, and for childcare, workplace and ageing policies.

To date there has been little examination of regular care provision from grandparents’ perspective. This paper addresses that knowledge gap, using the most recent Australian Bureau of Statistics (ABS) Time Use Survey (TUS) 2006 (N=4,000). It investigates whether grandparents who provide regular childcare (to children while parents work) differ demographically from other grandparents. It identifies which specific types of childcare activities regular grandparent carers undertake, and whether/how these compare with (a) non-regular caring grandparents; and (b) parents. It explores relationships between regular childcare provision and grandparents’ time in other activities (including leisure, personal care and paid work), subjective time pressure and satisfaction with the way time is spent. All analyses consider gender differences.

Gender is the strongest predictor of whether or not grandparents will provide regular care while parents are at work, but age, income, education status, being married (for men) and employment status are also salient. As for mothers, a high proportion of grandparents’ care is spent in physical, hands-on, care activities. Like fathers, more of grandparents’ care time is spent in play or minding. Being a regular carer doubles grandfathers’ time in spent in play or minding. Compared to regular carers, grandparents’ care composition changes most, to include a higher proportion of travel (to school or day care). Regular care provision impacts on both genders’ leisure, but only on grandparents’ housework, personal care and sleep. It doubles the likelihood grandparents will report being rushed or pressed for time.

Indigenous Pathways in Social Research: Addressing Inequities Part 2

Indigenous peoples are decolonizing research methodology so it serves their peoples' needs and aspirations. These needs are rooted in trauma created by colonial agendas that remove tribes from their land, break family bonds, and disrupt identity. Aspirations are about justice, the return of lands, and living as indigenous peoples. This panel of Indigenous researchers brings this agenda to life, describing how they are decolonizing research methodologies within their countries. Polly Walker is a Cherokee woman and Assistant Professor of Peace and Conflict Studies. Her presentation, 'Emplaced Research: Reducing Epistemic Violence toward Indigenous Peoples and their Knowledge Systems', explores research that engages in relationship with Indigenous people, the natural world, and the spirit of the place in which the research is carried out. Juanita Sherwood is an Aboriginal woman of Australia and Professor of Australian Indigenous Education. Her presentation, 'Complex trauma a conduit for inequity', examines pathways to prison for Aboriginal Australians that are often about mental health dis-ease as a result of unresolved grief, loss and untreated complex trauma. Hazel Phillips is a Māori woman from New Zealand and an independent researcher. Her presentation, 'Kāpo Māori counter narratives', will critically reflect on the implications of outsider research for Māori who are blind and vision impaired, and for an insider, kāpo Māori by kāpo Māori, approach to research. Sonja Miller is a Māori woman from New Zealand and post-doctoral fellow at Victoria University. Her presentation, 'Mā tātou: doing it for ourselves', will describe how an Indigenous tertiary education initiative is improving access for Māori to marine science. Simon Passingnan, an Indigenous researcher in Papua New Guinea, will present on building Indigenous researcher capability through apprenticeship-style training. Fiona Cram, an independent Māori researcher from New Zealand, will provide final commentary in her presentation entitled: 'Decolonizing and Transforming Through Research'.

Enforcing French Law and Imprisonment or Implementing Aboriginal Justice in French Polynesia?

This paper explores present day violence on women in French Polynesia and the current institutional mechanisms and responses to prevent and sanction criminal offences. Based on alarming statistics of Polynesians overrepresented in the prison of Papeete as well as recurrence of criminal activities such a sexual abuse, my paper will focus on establishing the correlation between local cultural practices, enforcement of «imported» penal institutions and the gap of resolving intrafamily violence in small polynesian communities. I will discuss what are the current discourses of gender-based violence in French Polynesia and consider if the cultural assimilation of French and Polynesians cultures can be filled/replaced through the introduction of aboriginal justice as it is experienced in New Zealand or Canada. While widespread aboriginal preference tends for 'peacemaker justice', can violence towards women be lowered thanks to following community healing based on traditional teachings? Can aboriginal justice help perpetrators to take and develop responsibility for their own lives?

CREESE, GILLIAN* (University of British Columbia, gillian.creese@ubc.ca)

"I Was The Only Black Child In My School": Hip-Hop and Gendered and Racialized Identities In Vancouver

This paper examines how second generation youth with parents from sub-Saharan Africa negotiate racialization processes and gendered identities in Metro Vancouver. The study is based on interviews with second generation African-Canadian men and women who grew up in metro Vancouver, and explores the gendered impact of growing up in neighbourhoods where they, and their siblings, were often the only African/Black children. Although Vancouver is a diverse multicultural metropolis, the African/Black population is both very small (about 1%) and hyper-visible. In this context, the second generation engages with representations of 'Blackness' widely circulated through American popular culture, and especially through hip hop. With a central element of North American youth culture, hip hop constitutes the dominant frame of reference for representations of Black masculinity and femininity among non-African peers, providing spaces of acceptance for African immigrant boys who can successfully perform hip-hop culture. In contrast, hip-hop culture provides few avenues of acceptance for African immigrant girls who must find other avenues of belonging.

CREMASCHI, MARCO* (University Roma Tre, marco.cremaschi@uniroma3.it)

Re-Working Cosmopolis in Post-Colonial Cities: The Cases of Kolkata and Buenos Aires

The paper questions how memories are re-signified through the making of space. However, we adopt a specular (yet not incompatible) approach to the usual concern with the construction of space through memories. The question concerns the process of the elaboration of the elaboration of collective memories; and how places came to be a relevant part of cosmopolitan memories (Barthel-Bouchier and Min Hui 2007). Nobody questions in fact the powerful contribution that symbolic place gives to the construction of collective memory since Hallblacks. However, the re-imaging of an urban space through global concerns, and the rise of a cosmopolitan, collective memory of place is another matter. Whether this is the case or not, is matter of a broad investigation. Citizens deal with their built environment, and national history in many different ways. There are times and opportunities when the elaboration process coalesces. The present paper offers an initial exploration of the face of the city, the drawing on different cities (Calcutta, former capital of the British Raj in India; and Buenos Aires in Argentina). The cities share a contested colonial past, that produced in both cases a peculiar modernist lay-out; and a troubled development in the last decades. These two cases were chosen because they have some features in common in the context of social and political changes brought about by globalization. The aim is to discuss a few general warnings about the hybrid nature of postcolonial cities (Harris 2008), which are inspirational cases for reconsidering hybridity among the general qualities of the present era (Canclini 1989). Asian and South American cities are often considered precisely because they do not fit into the role model of capital accumulation in the process of modernization, and even less so in neoliberal times.

CREMIN, COLIN* (University of Auckland, c.cremin@auckland.ac.nz)

The End of Employability: Occupying the Absent Centre of Labour in Precarious Times

The most succinct definition of the reversal constitutive of drive is the moment when, in our engagement in our purposeful activity (activity towards some goal), the way towards this goal, the gestures we make to achieve it, start to function as the goal in itself, as its own aim, as something that brings its own satisfaction. Žižek, S. (2000) The Ticklish Subject, London: Verso, p. 204.

It has been said that being exploited by capital is preferable to not being exploited at all. Utilising psychoanalytic concepts, the paper offers a theoretical account of the current dynamics of the labour market with regard to a subject increasingly ‘surplus’ to the needs of capital but compelled to ‘improve’ their employability. Describing employability as a master signifier, the paper argues that employability operates at the level of drive in that satisfaction lies in the aim (there is no object to attain) rather than the outcome (an actual job). Irrespective of whether we have a job, we cannot get rid of employability and we cannot get enough it; there is no end to employability because there is no job that can end the (there is no object to attain) rather than the outcome (an actual job). Irrespective of whether we have a job, we cannot get rid of employability and we cannot get enough it; there is no end to employability because there is no job that can end the
specific employer symbolised by the job vacancy can be filled, it is the void of Cap-
ital that necessitates constant adaptation and renewal in which drive is located. 
The paper considers the consequences of this for the individual and the possi-
bility of reframing the injunction for political purposes.

CRESPI, ISABELLA* (University of Macerata, isabella.crespi@unimc.it)

Gender Identities and Cultural Values in Multiethnic Families in Italy

Living in a multiethnic family is a challenge that implies that the couple, 
the families of origin and the broadest social context allow and facilitate the possi-
Bility of combining differences and negotiation as best as possible. These families 
are a micro example of what is the meaning of living in a multicultural society 
nowadays at the macro level. Differences and similarities are played everyday 
in the life-course of the couple and their families and requires the entire family 
group itself (including previous generations) redefines the overall arrangement 
of cultural equilibrium: it becomes necessary to rethink relational dynamics, but 
especially to reconsider the hierarchies of values, both individual and familial, due 
to the different cultural belonging of the partners. Negotiation, therefore, is also 
about compromise, recognition and respect of differences, openness to dialogue 
and communication. The family dynamics of mixed couples are based on a con-
tinuous negotiation of the partners’ historical and cultural differences. Identity is 
perceived as a set of “experiences of recognition, which allows each individual to 
recognise themselves over time and which no individual can disregard. They also 
require the creation of a new gender culture, able to turn difference into a valu-
able asset, which helps promote open minds and acceptance of the other. The 
paper shows the results of a research project which investigates 35 multiethnic 
families (with life stories collected for each partner 70 in total) living in the centre 
of Italy. In particular, the paper focuses on some specific questions: what con-
nections can be identified between negotiation and conflict of reciprocal identities in 
the family life of multiethnic couple? How do cultural and religious values affect 
family and personal identity? What is the relevance of cultural and familial belong-
ing of the multiethnic family? What is the meaning of living in a multicultural society 
for domestic matters with detriment to different ways of dwelling, which are more 
permeable to public space.

The Reappearance of Public Matters: Housing Experiences during the Post Earthquake Period

Since the early XIX century, both house and domestic space have gone through a 
series of technological, programmatic and typological transformations in accor-
dance with the changes in dwelling practices. These range from their progressive 
connection to utility networks (water, telephone, gas internet, etc.) to the change 
in number and proportion of places, in their relation with street space or the in-
tegration of new devices and technologies. One of the main consequences of this 
transformation has been the emphasis in private and intimate space as scenario 
for domestic matters with detriment to different ways of dwelling, which are more 
permutable to public space.

This presentation intends to understand how the nonuse of these spaces 
caused by the last earthquake that shook Chile on February 27th, 2010 ques-
tioned this compact, autonomous and multipurpose housing condition forcing 
its dwellers to (re)discover more spaces and practices that depend on the public 
scope. In the outbreak of public/private categories after the earthquake and de-
struction of entire zones in the city as in Concepcion or Talca, urban conducts and 
their related spaces also damaged and tumbled down causing a new and transi-
tory urban order where apparently contradictory situations cohabit. Because of 
the obvious enclosing of neighborhoods by residents, the fear for pillage and the 
privatization of streets, this presentation is focused on the counterpart of this situ-
ation that took place in the same place and nearly same geography. It is about the 
appearance of the idea of a “house” that is more permeable to the public sphere 
in a great extent, forced to shared uses, eradicating traditional boundaries 
established, in fact, by law) that divide citizens.

Assembling Place in a Chicago Neighbourhood

This paper approaches the area around Maxwell Street, Chicago as a rich ur-
ban place. The chapters utilizes 'place theory' and the approach of assemble theory developed by Manuel De Landa to explore how Maxwell Street has been 
brought together and torn apart through a focus on 'tax increment financing'. It 
focuses on three key dimensions of place as assemblage - materiality (a place is 
made of objects), meanings (place as represented and as representational) and 
practice (place as lived).

Who Finds out and Contributes to Energy Decisions in Switzerland after Fukushima?

Switzerland has a turbulent history with energy and nuclear energy in particu-
lar (i.e. many public demonstrations, popular initiatives on the subject, a ten-year 
more moratorium accepted in 1990, etc). After the Fukushima accident, the Swiss Fed-
eral Council opted for withdrawal from nuclear energy in the horizon 2035. The is-
sue of energy was intensively addressed in the media after the accident, following 
mainly four frames for science-related policy debates: the frame of governance 
and public accountability, of scientific and technical uncertainty, of alternative 
path, and, less frequently, of economic development (Cretzavon Roten, 2013). Surveys 
after the accident reported that public opinion were negative about nu-
clear energy. Is there a long-term effect of the accident on the population, or does 
the wider pattern of concerns (such as economic crisis, climate change) push into 
the background the energy issue?

This presentation aims to answer those questions by examining a survey re-
alled on energy in a big town of a French-speaking part of Switzerland in 2013.

The study focused, which occurred after little public consultation, accepted by 
the population two years after? Is what the public affective imagery of nuclear 
power? Does the population continue to inform and debate on the subject? Do we 
find that trust relationships towards various stakeholders have been modified?

The Persistence of Gender Inequalities in Australia Workplaces: An Analysis of Two Generations

Drawing on the two-decade Life Patterns longitudinal study that follows the 
lives of two generations of Australians (popularly known as Gen X and Gen Y), 

through their transitions from education into the workforce, this paper investigates the factors contributing to gender equality in workforce participation and in the labour market. Focusing on female participants in the Life Patterns study, we draw on qualitative and quantitative data to examine the macro and micro explanations that underpin this phenomenon. Firstly, we briefly analyse the impact of social and cultural values in the development of egalitarian attitudes towards the field of education that have contributed to the expansion of the participation of women in tertiary education and, subsequently, the workplace. Secondly, we focus on neoliberal sensibilities and values underpinned by the concept of choice to understand the egalitarian values that exist alongside persisting gender inequality. Finally, we argue that while institutional arrangements are needed to address persistent inequalities around women’s roles and participation at work, there is also a need to scrutinise social and cultural beliefs about work and gender to achieve greater equality.

**Constructing and Maintaining Campaign Boundaries: The Interaction of Organizational Identity and Image -- CANCELLED**

Recent studies of organizational formation have highlighted the centrality of organizational boundaries as manifest through dynamic interplay between internal and external forces. In this paper we draw directly on the work of Montgomery and Oliver (2007; 2005) and their theorization of the process of group formation, particularly the role of centrifugal and centripetal forces in shaping organizational boundaries. We seek to extend the insight offered by Montgomery and Oliver (2007) (drawing on organizational identity literature to explore interactions between social identity and image). Whereas Montgomery and Oliver (2007) link social identity theory and institutional theory to the development of group boundaries, we argue that ‘image’ is central to the effectiveness of an organization which relies upon a balance between how organizational ‘insiders’ view themselves and how ‘outsiders’ view the organization (Albert and Whetten, 1985). Our empirical case is that of informal organization as we study a network of campaign groups that formed to oppose the development of a high speed rail line (HS2) linking two major cities (London and Birmingham) in England. Drawing on qualitative approaches (e.g., macro and top-down) we explore the process of group formation with a focus on the campaign network against HS2, in particular the evolution of organizational image. In so doing, we contribute to our understanding of the effective management of multiple organizational identities and explore how tensions are mediated at the organizational level.

**CROMPTON, AMANDA*** (University of Nottingham, amanda.crompton@nottingham.ac.uk)

**Runaway Train: Public Participation and the Case of HS2 -- CANCELLED**

In recent years, public participation has increasingly featured in policy decision making. While top-down, or formal methods of participation are upheld as an endorsement of democratic decision making, there is limited understanding of public participation as an informal, or organic phenomenon. This paper contributes to debates about public participation by exploring the interplay between the top-down (formal) and bottom-up (informal) interactions between policy makers, planners and the public. In focusing on the motives and experiences of ordinary people as they seek to influence decisions around a prolific policy issue the paper engages with theories of deliberative democracy and public deliberation (see for example Bohman, 1997; Elster, 1998; Dryzek, 2000; Fishkin, 2009; Marsbridge et al., 2012). By exploring these interactions a more nuanced understanding of multidimensional public participation is developed, highlighting some of the challenges for policy makers when consulting about major policy developments and illustrating how the public might drive deliberations about a policy issue.

Our empirical case focuses on the informal participatory mechanisms that formed debates concerning the development of a high speed rail network in England (HS2). In particular we seek to understand 1) how social actors respond to formal consultation opportunities around high profile policy issues, 2) how social actors strive for public deliberation and 3) how ‘informal origins’ of participation emerge and develop.

**CRONIN, BRUCE*** (University of Greenwich, b.cronin@greenwich.ac.uk)

**The Influence of US Corporate Interlocks on the Pattern of Congressional Lobbying**

There is a long history of research into the relationship between US directorate interlocks and campaign contributions drawing PAC funding data, generally demonstrating the importance of such contributions to sectors reliant on government concessions in some form often associated with bipartisan hedging strategies, alongside some clusters of interlocks with deep-seated conservative funding patterns. But to which contributions amount to policy advocacy are largely circumstantial and the notion of a close link has been hotly contested by protagonists.

Since 1995, however, the lobbying of Congressional decision makers has been subject to extensive new requirements, including the formal registration of those engaged in lobbying activity and the publication of quarterly returns detailing clients and income from these, expenditure on lobbying, targets of lobbying and the issues of advocacy. This provides data on the actual domestic policy advocacy pursued by US corporates and thus a more rigorous basis for considering the relationship between directorate interlocks and corporate political activity than contribution data alone.

Building on earlier research on the central position of the large corporate director interlock structure in the pattern of lobbying of the UK government (Cronin 2012), this paper considers the position of the US interlocking director structure among the SP200 within the pattern of congressional lobbying in general. As in the UK, the US Corporate interlock structure proves to be remarkably central, albeit with strong House and issue delineations.

**Sustainable Social Development**

The question of Sustainable Development is still very contentious in the developing world. In South Africa, after Apartheid, political, economic, social and legislative redress were required aimed at eradicating inequality and discrimination, to create a broad participation base, and, in the process, enhance sustainability in the country. Currently, twenty years after democracy, these efforts have not yielded, by far, the positive results that were expected. This paper critically investigates this situation. Reasons for the gap - amongst others - include wrong approaches (e.g., macro and top-down) are still being implemented, a huge division between policy and practice, ‘inappropriate’ ties between government and other sectors and poor service delivery.

**A Social Licence to Operate within the Iron ORE Industries of South Africa and Sweden: A Clash of Corporate and Community Cultures**

When analysing the effectiveness of Corporate Social Responsibility (CSR) programmes, other developmental projects and Stakeholder Engagement (SE) in local communities adjacent to the operations of large multi-national corporations, the clash of ‘corporate culture’ and ‘local culture’ becomes increasingly evident. In this regard, the contentious issue of a Social Licence to Operate (SLO) strongly comes to the fore. A Social Licence to Operate (SLO) goes further than formal documentation and legislative requirements (e.g. a mining or a water licence or regulated labour practices), and focuses more on the real processes and practicalities regarding the acceptance of a specific company by the relevant community or communities.

This paper reports on the issue of a SLO within a comprehensive comparative study between the iron ore industries of SA and Sweden. Two main conceptual lenses guided the research: firstly, the processes followed from the side of the company in order to ‘receive’ a SLO, and – in the second instance - the capacity of and empowerment within the community to grant such a SLO. In terms of the communities, different approaches and models were scrutinised, e.g. top-down/bottom-up approaches, participation and communication, self reliance and resilience within communities.

Key findings of the research (from perspectives of both the company and the communities) will be presented in terms of similarities and differences between the industries of South Africa and Sweden. Recommendations are also being made in order to make the granting of a SLO a less cumbersome process and to ‘merge’ the two different cultures; in this regard, the role of different stakeholders (companies, communities, government and NGOs) have been highlighted by the research. Methodologically, a mainly qualitative approach (personal interviews with key informants of the companies and the communities, focus groups with community members and workers, as well as objective personal observations).
Measuring the Impact of Lay Observers in the Courtroom on Procedural and Cultural Practices

Our research examines the impact of citizen court monitoring on several courtroom variables including judicial process, courtroom actors’ behavior, victim and defendant experience and ultimately, case disposition and sentencing. The study contains two parts. First, we experimentally manipulate the visible presence of court monitors (marked by monitors’ use of red clipboards (an established identifier in the local context)) and assess the effect of the monitors on the indicators listed above. A second part of the paper presents an ongoing project from surveys on courts and from industry data but a particularly good source of information on the development of survey research is the metadata of surveys collected in data archives. This paper describes the overall development of survey research and data archives and then compares (especially Anglo-Saxon) countries in terms of the characteristics (subject-matter & methodological) of the surveys which have been archived. Information on use of surveys is also noted.

Comparative Research in Prostitution Studies: Challenges and Opportunities

This paper starts with a critical overview of comparative research in prostitution studies. More specifically, it outlines the scholarship that has looked at prostitution from a comparative perspective in social sciences, exploring methodological approaches used, scales of analysis adopted, and consideration (or lack of thereof) for the shifting meanings of concepts, prostitution-related practices and cultures across the units of analysis compared. The paper asks what lessons have been and can be learned from doing comparative analysis in this field, and whether more work needs to be done to refine this methodological approach in prostitution studies.

Percepción De Los Valores y ética Profesional Que Los Integrantes De Los Cuerpos Académicos Señalan Para Su Desarrollo En Los Estudiantes De La Universidad Autónoma De Campeche (México)

El trabajo de investigación en la Universidad Autónoma de Campeche (México) resalta el proyecto interuniversitario sobre ética profesional entre la UNAM y 14 universidades de la República Mexicana (Hirsch y López, 2008), actualmente plasmado en uno de los objetivos del proyecto de la Red temática de colaboración “Red de investigadores y cuerpos académicos en filosofía, teoría y campos de la educación” (REDICA) del Programa de Mejoramiento al Profesorado (PROMEP) del Secretaría de Educación Pública (México).

Social Justice in Education in a Neoliberal Age

This article’s objective is to discuss recent transformations in the periphery of Brazil’s largest cities, considering the expansion of real estate, strongly supported by the government housing programme “Minha Casa Minha Vida” (MCV). Using historical and theoretical analyses, we will demonstrate the shifting of the primary of the contradiction between capital and labour, dominated by industrial capital, to the primary of an urban contradiction, dominated by financial capital.

In this paper, we will collect and discuss the literary production which has problematized the formation of the periphery in the 1970’s, interpreted as the process that decreases the cost of labour power reproduction and characterized by self-built housing, in a scenario of strong industrialization and high immigration rates. In this sense, the periphery was consolidated as an important instrument to amplify industry gains and expressed through the intense inequalities in the Brazilian urbanization.

Considering the recent dynamics, we will investigate the changes in the peripheries, produced by the dissemination of large housing developments aimed at the lower income population. The role of the State, through a policy of access to financing and subsidies to achieve a target number of three million housing units, was determinant in the intense real estate appreciation in these territories. To better understand this dynamic, we also need to comprehend the process of financialization and capital centralization in real estate, marked by the dominance of large and expanding real estate developers.

Our hypothesis is that the appropriation of the periphery has consolidated into an essential strategy in the amplification of the gains and expansion of real estate. As a consequence of this strategy of appreciation, the access to property in the periphery tends to become a temporary condition and seems to be imposing new inequalities, which we will discuss using different case studies from Brazilian cities.
nature of the concept of social justice and its context-dependence, highlighting tensions between the different pressures in schools of neoliberal policy technolo-
gies, and its impact in the morale and work of school staff. Moreover, exploring the subjective element of social justice can make an important contribution to understanding how social injustices are experienced, tolerated and perpetuated in disadvantaged settings. It can also assist in outlining an agenda for change.

Stardom in the View of Media Power: Reproduction of Media Power in the Case of Li Yuchun

The purpose of this study is to examine the stardom of Li Yuchun, a star from Super Girls’ Voice (an American Idol-type show), which in 2005 was one of the most successful television entertainment programs in China, in the view of media power. Based on Coulby's (2000) framework of media power, which focus on the symbolic boundaries and norms within the media world, this study attempts to explore the way in which audiences construct the stardom of Li Yuchun. The difference between Li Yuchun and other stars made in traditional ways, and its implications for the Chinese entertainment industry and popular culture, will be discussed as well.

Lasting Effects of Marketization in Welfare State Policies - the Brazilian Case

Lasting effects of marketization in Welfare State policies - the Brazilian case

Brazilian social policies have undergone similar transformations suffered by policies of other countries during the 1990s. Despite the dismantling of the Welfare State in Brazil has taken place even before its consolidation, the idea that public intervention to solve problems of poverty and inequality should be guided by principles and practices from the market had strength in that period, organizing efforts and investments during the government of President Fernando Henrique Cardoso (1994-1998 and 1999-2002). For this reason, the opposition to discourses and policies identified them with what has been classified as the neoliberal bias of those years.

The election of President Luís Inácio Lula da Silva carried much of this criticism. Through his two successive terms (2003-2007 and 2008-2011), the government discourse and some new policies have been developed based on the assertion that their guidelines differed from those of his predecessor, by recovering the centrality of the State and by privileging the poorest. The decline in poverty rates eventually left the image of marketization of social policies even more distant. However, it would be marketization a process as ephemeral as a political-technical government program? Would be changing policies in the passage between governments enough to restore a background of social security policies, as advocated in a Welfare State scenario?

The paper aims to present the hypothesis of the research on which it is based. According to it the changes occurred in those 1990s have produced effects that have been limiting the later possibilities of social policies development. More than that, despite the advances of the government of President Lula, the conditions that underlie the process of marketization maintain their historical and social validity, simultaneously restraining more steady changes and creating new challenges to analysts.

Neoliberalism Beyond Economics

Neoliberalism beyond Economics

The 2008 economic crisis encouraged theses about post-neoliberalism. The idea of expiration of a period and beginning of another, in which hegemonic projects have succeeded, takes neoliberalism mainly as economic doctrine. Would not both diagnoses of few practical alternatives to neoliberalism and difficulty of understanding movement beyond its particular forms of manifestations be a sign that neoliberalism have been consolidated as more than a strictly economic set of measures, policies and practices?

The aim of the presentation is to put this hypothesis in debate, mobilizing three distinct – but potentially productive – approaches. The first and most comprehen-
sive is the understanding of the neoliberalism as a political rationality. The second reference is the idea of social neoliberalism, which designates a new function of state, made explicit in its response to demands for social equality and justice. The third one refers to neoliberalism as a shared mental model, ie, a cognitive model oriented to ideological and practical articulation of social groups.

Despite the particularities of each one, the common point among them is the wider view of the social setting in which neoliberal economic policies gained strength. It allows analyzing the conditions that permitted such preeminence as well as the required and perennials transformations regarding relations of power and domination, development of public policies and social relations.

These approaches do not discard diagnostics produced by scholars working on post-neoliberalism theses, but open new possibilities of considering them through another point of view. The gain, we believe, is the potential of observing the recent phenomena in historical and more comprehensive perspective.

Crowdsourcing and Democratic Deepening: A Critical Appraisal

The past three decades have witnessed a range of democratic innovations – from the much celebrated participatory budgeting in Porto Alegre to sit-ins to protect green spaces in İstanbul. Although the precise consequences of these innovations leave a mixed picture of success and failures, the importance of public participation and deliberation in political life has been generally considered important for democratic deepening.

Crowdsourcing legislation is one of the most recent additions to these innova-
tions. In Finland and potentially the Philippines, ordinary citizens are given the opportunity to draft and/or comment on bills subject to parliamentary consid-
eration through the use of technology. The lawmaking process is viewed to be more participatory, epistemically superior and responsive to citizens’ opinions by aggregating the “wisdom of crowds.”

While crowdsourcing legislation has the promise of creating more inclusive and direct forms of political engagement, my presentation aims to take stock of crowdsourcing’s normative and practical assumptions using a deliberative dem-
ocratric framework. It is argued – albeit tentatively – that while the crowdsourcing can be an innovative platform in collective problem-solving, it also creates and reinforces existing hierarchies in participation.

‘then the 25th (birthday) Arrived and at That Point I Wanted to Take a Decision about My Future’: Time, Rhythmicity and Waithood in Youth’s Uncertain Transitions

Youth transitions literature considers the investigation of procrastination and interruption of (what used to be) linear paths as a core theme. From the classic idea of Erikson’s moratorium (1968) onward, the notion that young people find themselves taking time before embarking on one path or another, or while doing so have been seen as a constitutive element of transition, whether in erratic forms or under institutionalised shapes – such as ‘gap years’ spent travelling. However, while the need for exploration brings along openness to the future, forms of ‘time taking’ such as ‘waithood’ are more slippery and often hide ambivalent ways of looking at the future.

Departing from the notion of waithood, this presentation reflects on the rhythm of imagined futures as emerged in the analysis of 300 essays written by 18 year-
old Italian students who were asked to imagine to be 90 and narrate their future lives (in the past). In this extremely rich material, two contrasting temporal narra-
tives emerge in relation to the work dimension: one where aspirations result unrealistic due to the understimation of time and efforts normally involved in developing those paths; another, where it is expected that a few years will be spent waiting for something to happen (a job to be offered, the ‘right’ mentor to be met etc).

Departing on youth transitions literature, but also on studies on the life course and temporality (as in Brannen and Nilsen, 2002), this paper ultimately relates these themes with the context where they emerged, in an effort to reconstruct the meanings that young people give to the phases and rhythmicity of their trans-
sitions to adulthood.

They Think I Am a Free Lunch. Why Everyday Interactions Between Emigrants and Sending Communities May Actually Discourage Return

The recent research on transnational fields has had the great merit of claiming attention to the important topic of the relations between Emigrants and the sending communities. Such research has documented how international migration is a factor of social change not only in receiving societies, the traditional focus of research, but also - and may be even more - in the places of origins of emigrants. The potentiality of such approach, however, have been unduly constrained by the widespread - and often implicit - tendency to assume that transnationalism is perceived as a challenge only in receiving states and societies. We will argue, on the contrary, that receiving communities show a deep ambivalence toward their emigrants. We will document how it is possible to identify in many sending communities a set of social mechanisms - operating at the kinship, interpersonal, communal and symbolic level - that severely constrain the maintenance and development of long-term transnational relationships. Such undersized mechanisms may actually weaken such transnational spaces and contribute to prevent return migration.

These arguments will be grounded in an analysis of the data collected in a long-term, ethnographic, multi-sited project on female migrations from some Eastern European countries to the household services sector of some Mediterranean countries. Researchers have carried out in coordinated way ethnographic observations of foreign caregivers both in the sending and receiving contexts over several years. A particular importance has been given to following some informants in their trips back home as well as carrying out ethnographic fieldwork in the place of origins while they were absent.

CZARNECKI, LUKASZ* (Universidad Nacional Autónoma de México, lukasz@comunidad.unam.mx)
The Implications Of Demographic Changes On Intergenerational Relations and Social Policies. The Case Of Mexico City

Demographic changes have been experienced by societies all over the world. Senior people experience social exclusion, poverty and cumulative disadvantages. Now, Mexican population is ageing rapidly and this situation is a challenge for the government at both the federal and local level. At the local level, in Mexico City, the capital of Mexico with a population over 9.5 million, there were registered changes in government policies in recent years. In Mexico City, the Party of the Democratic Revolution (PRD) came to power in 1997, implementing the social policy based on the principle of universality. In that context, two major programs of direct money transfers began, i.e. The Senior Subsidies Program (Programa de Adultos Mayores) and the PrepaSi Subsidy Program. Between 2001 and 2011, the number of beneficiaries of the Senior Subsidies Program has nearly doubled, from 250,000 in 2001 to 480,000 in 2011 and for 2013 the same limit, 480,000, remains. Theoretically, all Mexicans living in Mexico City aged 68 or more receive financial transfers, which is equivalent to 85USD. However, in Mexico there are at least 600,000 adults over 68 years, so 120,000 adults do not receive aid. The other program is the money transfer for public high school students in Mexico City, the PrepaSi Subsidy Program. Actually, a total of 210,000 teenagers receive money transfers that are equivalent to 30, 40 and 50USD depending on their school academic performance. In terms of ethnic relations, the Philippines - as other states in Asia-Pacific region - are characterized by extreme diversity. As many as over 168 ethno-linguistic groups are recognized there. To make situation even more complex, linguistic and religious divisions overlap each other.

Bangsamoro Challenge in the Philippines

Bangsamoro challenge in the Philippines

In terms of ethnic relations, the Philippines - as other states in Asia-Pacific region - are characterized by extreme diversity. As many as over 168 ethno-linguistic groups are recognized there. To make situation even more complex, linguistic and religious divisions overlap each other.

Despite enduring activities to establish one independent Bangsamoro state, new patterns of Muslim inter-ethnic relations have emerged recently. This year Moro National Liberation Front (where Tausugs dominates) was involved in several incidents (Sabah Ride in February of 2013 and Zamboanga atrocities in September 2013) aiming to postpone peace negotiations between the Government of the Philippines and Moro Islamic Liberation Front (organization dominated by Maguindanao). Even though both leading separatist organizations speak for Moro people, the tensions among Muslim ethnic groups seem to be more visible.

Professor Hannibal Bara at the official website of National Commission for Culture and the Arts claims that “The cohesiveness of the 11 Muslim groups under the spirit of Islamic brotherhood is a living reality of Bangsamoro nationalism”[1]. Nevertheless, the question of the future of Bangsamoro identity can be asked.

At my presentation I intend to discuss the ethno-religious nature of Bangsamoro identity in order to point out the emerging patterns of the complex ethnic relations in the South of the Philippines.

Public Religion, Collective Memory in a Multicultural and Global Society

The new times we live are characterized by the public role of religion (Casanova): not only the religion as an institution, but the real dimension of religions entering and pervading the public sphere: affecting the relationships between religion, family, cultures, public policies, welfare state, health problems: this phenomenon is not a return to medieval time where church and political systems tried to dominate one upon the other, but the neoliberal modernity, or post-traditional society conveys at the same time the autonomy of religious sphere respect to the political one, but at same time the partial exit of religion from the boundaries of the religions institution still influencing many aspects of social life.

Public religion or civil religion (R. Bellah) is closely related to a collective memory which is a social construction and representation of reality, but it is also a sedimentation of symbolic capital within a cultural system, in a given historical space and time. It is also a stratified reality almost an an archeological circle where the present, the past and the projection toward the future constitute a collective memory. The analysis of collective memory leads up to the discovery of the magma of popular religiosity, the families lineage, the mythological points, the grounding meanings (M. Weber) the collective unconscious (Freud, Jung, Neuman) the place of transcendence in the social life (R. Bellah) The analysis of collective memory can be analyzed in a small community in the South of Italy as I have done in my research on the Boucher and Symbolic Construction of Reality or at global level by analyzing the cultural bases and the collective memory in a process of development and globalization, as I have done in my work on the Grammar of Development.

D'ARRIPE, AGNÈS*

Mental : Un Projet Utopique ?

Les dernières années, la compréhension du phénomène du handicap a largement évolué. Nous sommes passés d'une compréhension du handicap comme déficience liée à une réalité personnelle, au handicap vu comme un construit social, résultat de la rencontre d'un individu avec un environnement incapacitant (Sen, 1999). Conformément à la conception plus récente, on peut dire que le handicap d'un individu est lié à un contexte plus large, tel que la société. De même, les chercheurs n'ont pas cessé de considérer le handicap comme un phénomène social, qui peut être modifié par des actions collectives et individuelles. Cela s'applique également aux personnes handicapées qui choisissent de faire partie de la société et qui ont le droit de participer aux activités de la vie sociale.

Ethnic Discrimination and the Collective National and Ethnic Identities of Turkish and Moroccan Minority Students in Flemish Secondary Schools

Many scholars focused on the negative consequences of racial/ethnic discrimination on different behavioral and psychological outcomes. However, there is a lack of large-scale quantitative studies giving insight in the experience of racial/ethnic discrimination by peers and teachers within a school-context, especially in a multilingual context. The aim of this study is to shed new light on the impact of perceived racial/ethnic discrimination on the anti-school attitudes of students of Turkish and Moroccan descent in Flanders (the northern part of Belgium). Furthermore, in the literature, racial/ethnic discrimination is seen as a risk factor that increases the probability of negative outcomes without directly causing them. As such, it is interesting to focus on factors that can buffer or compensate for the experience of racial/ethnic discrimination. Research in the US shows that identification with collective national and ethnic identities both compensate for and buffer against the impact of perceived discrimination. It is theoretically interesting to test this for Turkish and Moroccan minority students in Flanders. Hence, the second goal of this study is to explore whether Turkish and Moroccan minority students’ identifications with collective national and ethnic identities mediate and/or moderates the relationship between (perceived) racism and anti-school attitudes. On the one hand, we take identification with the dominant society into account (e.g., Flanders and Belgium), on the other hand we focus on different dimensions of the ethnic identity (centrality, private and public regard of the Turkish or Moroccan identity). To answer the research questions, we will analyze data from a large-scale study (N=767 students of Turkish and Moroccan descent, 47 schools) collected during the school year 2011-2012 and designed to study ethnic discrimination and racism in Flemish secondary schools.
Participation and Transnational Restructuring Agreements

The literature about the “Europeanization” and the “internationalization” of industrial relations has increasingly been dealing in recent years with transnational framework or company agreements and the European Commission database on transnational company agreements currently contains over 200 such texts. Do these new forms of transnational industrial relations at the company level also constitute a new form of regulation? What kind of employee participation do they entail? Have they changed with the crisis? First different levels and actors of transnational industrial relations will be identified, among which multinational firms, Global Union Federations, European Industry Federations, and/or European Works Councils. Then existing transnational forms of regulation will be analyzed with particular attention to restructuring and the crises. This communication is based on ongoing field work about transnational framework agreements with a focus on restructuring. The conclusion will reconsider the notion of “industrial democracy” and outline the evolution of the notion of “participation” as applied to the transnational level.

DA COSTA, ISABEL* (CNRS - IDHE, isabel.dp.costra@ens-cachan.fr)

Sustainable Urban Development for Poor

Cities in India today are drivers of economic growth. About 70% of GDP is accounted by urban areas. Today cities remain the home of an increasing numbers of urban poor living in the informal settlements, with large infrastructure backlog, poor service-delivery, extensive housing shortages, and weak urban management and governance systems. Hence, there is a strong reliance on improving informal settlements as a strategy to address urban poverty.

A recent report by the Committee on Slum Statistics/Census estimates that 93 million people currently live in slums in India, and this number is expected to increase to 104 million by the end of the 12th plan period in 2017.

Govt. of India launched The JNNURM in 2005 a flagship program aimed at creating economically productive, efficient, equitable, responsive and inclusive cities. The program is considered to have been more successful in its infrastructure investments than its urban reform agenda. To complement this The RAY program was launched in June, 2011 but after a research, it has been found that a new program needs to be introduced to incentivize and support selected states and cities towards the implementation of their slum-free city strategies through cost effective solutions i.e. in-situ upgrading of tenable slums, alternative approaches to new housing delivery such as sites and services, and support pilot integrated urban livelihoods activities. The major component of the program include financing of selected physical infrastructure investment, support to community mobilisation, project implementation and technical assistance to implementing agencies at city and state level.

It is expected to augment and complement the Rajiv Awas Yojana which focuses on primarily on the Housing for the slum dwellers. Thus improving the overall infrastructure & the life style of the people staying in the slum.

Step By Step Self Learning? the Quantification and Interpretation of Walking Activities

In recent years, the rise of sensors and tracking devices in the field of health and fitness has renewed the ways people track and represent their physical activities. Promising “self knowledge through numbers”, the Quantified Self movement has helped popularize the continuous wearing of electronic devices - wristband, watch, mobile phone, etc. is key to a better understanding of one’s body, mind and self. Nevertheless the many ways people start and/or stop using such tools, experience and experiment with them are not well documented, especially when it comes to spheres other than sports activities.

Drawing upon an empirical study of how individuals equip and experience -lastingly or not- footsteps tracking devices (Fitbit, Jawbone, etc.), we consider issues of appropriation, embodiment and interpretation these mobile technologies entail. We focus on the practices that allow one to: describe one’s own physical relations to the tool(s) and user interfaces; read into generated data and up coming application messages; and possibly share these and new data.

Our findings underline the role of meaning making and reflexivity in making pedometers and accelerometers technologies wearable and usable in everyday...
life's embodied experience, and ensuring that measurements, data sets and comparisons can be performed. When it comes to confrontation with traces of one's own -apparently trivial-walking activity, much encoding/decoding and multiple interpretations are at work. For some, the knowledge produced can be criticized for being inaccurate or even pointless, whereas others find motivational support and unexpected ways of relating to their physical activities, on their own or through the online sharing of data and experience. At some point, all users are confronted with the normative dimensions (excess weight, inactivity, illness, etc.) scripted and embedded in these devices and the advice they produce. This in turn questions the sociopolitical implications of these embodied technologies.

New Constitutional Framework, Persisting Authoritarian Practices: The Case of Morocco after the 2011 Constitutional Reform

Following one of the largest waves of protests that the country had experienced since its independence, Morocco witnessed the drafting and the adoption of a new and arguably less authoritarian constitution. The subsequent electoral success of the Islamist Parti de la Justice et du développement (PJD) and the formation of a PJD-led government were considered tokens of goodwill demonstrating the monarchy's commitment to the reforms. Nevertheless, the optimism faded away in the face of increasingly repressive responses from the state to the protests, the continuing inability (or unwillingness) of the PJD government to pursue its reformist electoral promises, the extremely slow pace of the drafting of organic laws pertaining to the enactment of various constitutional provisions, and the awkward responses of the government to scandals that elicited popular outrage and sporadic protests.

The overall picture emerging from a review of the political situation in Morocco in the years following the adoption of the new constitution is that of a political system unable or unwilling to follow through with the process of reforms in which it engaged itself. Thus, this paper argues that the Moroccan state seems unlikely to be able to move beyond the repressive modes of authoritarian governance that it has hitherto relied upon, given the deeply entrenched interests of its elites, a factionalized and divided opposition, and a population that mistrusts institutionalized politics and is wary of the risks associated with revolutionary changes. It also analyzes the uncomfortable position of the PJD, caught between its inability to deliver on its electoral promises, the continuing inability (or unwillingness) of the PJD government to pursue its reformist electoral promises, the extremely slow pace of the drafting of organic laws pertaining to the enactment of various constitutional provisions, and the awkward responses of the government to scandals that elicited popular outrage and sporadic protests.

The paper aims at examining the underlying reasons of migrants' descendants protests relating to social inclusion, as unexpected and unwanted consequences of migration, and looking at these associations/movements as one of the possible agents of legislative/institutional as well as cultural change. The speech will also be articulated referring to empirical data collected on the ground.

New Economic Policy and Its Impact on Marginal Segments in India

The essay deals with the impact of New Economic Policy (NEP) on poverty, employment, farmers’ suicide, displacement of peasants and adivasis (aborigines), slum dwellers, etc. Wage employment schemes under the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) of the Congress led United Progressive Alliance (UPA) government has helped alleviating poverty in rural India. In the current era, the own -apparent- benefit to the economy has come down, but it has increased in private sector with uncertainty of both income and job security.

The UPA government described its economic growth “inclusive.” The government saw inclusion in terms of social inclusion and financial inclusion. In social inclusion, the government devised: poverty alleviation, employment generation, health, education and social welfare, and in financial inclusion, subsidies, loans and social security benefits to be directly credited to the accounts of the beneficiaries. Since there are reports of corruption in the implementation of welfare schemes and social services such as education and health have become privatized/commercialised, marginal sections, viz., Scheduled Castes, Scheduled Tribes, Other Backward Classes and Muslims remained excluded from the benefits. Inclusive growth, therefore, is questioned. And, thus NEP has become a stumbling block to supporting the development of social sector in general.

Second-Generations Asking for Citizenship, the Italian G2 Network Against the Consequences of Migration

Migrants' descendants associations are now quite common in Italy. Their main claims are focused on the issue of citizenship, demanding a redefinition of the law that takes note of the changed conditions of the country after migration flows.

This is the case of Rete G2 that, along with other more or less formalized groups, have recently given birth to the media campaign on the rights of citizenship named “I am Italy, too” (L'Italia sono anch'io), and to a large number of petitions and claims.

A lack of recognition of equal opportunities in the labor market, but also the exclusion from active participation in the political and social life of the country to which they feel they belong are the main topics of their claims. Thus, the “right to difference”, often invoked by their parents, becomes a handicap for their full social integration: being different involves the risk of becoming “second-class citizens”.

Second-generation youth believe they have gained the same rights of mobility of their native peers, but they often remain anchored to the subordinate social position of their parents. They do not feel like foreigners even though they are placed as such, at least from a legal point of view. They live the complexity of migration without being migrants adding to the typical adolescent insecurity conflicts emerging from the inter-relationships between home country, parents and receiving society. In this context, the construction of a balanced definition of identity in a plural sense often becomes uncertain.

The paper aims at examining the underlying reasons of migrants' descendants protests relating to social inclusion, as unexpected and unwanted consequences of migration, and looking at these associations/movements as one of the possible agents of legislative/institutional as well as cultural change. The speech will also be articulated referring to empirical data collected on the ground.

Economic Crisis, Social Policy and Health Inequalities: A Systematic Review of the Research Literature

Purpose: The purpose of the systematic review is to collect and review research that has examined how economic crises have impacted on population health and health inequalities and to which degree the welfare state has played a modifying role. Based on the available evidence the ambition is further to develop testable theories and hypotheses for the empirical analyses to follow. The review is part of a larger project funded by the Norwegian Research Council which will use com-
parative data sets to study health-related consequences of the current downturn in Europe. Background and Research questions: We will draw from insights and findings from Brenner’s earlier studies of business cycles and mortality and Ruhm’s more recent studies. Also experience from countries that have undergone deep crisis or transformation like Russia and other Eastern European countries will be scrutinized. Further, the experience of recessions in the two Nordic countries during the early 1990s, Sweden and Finland, will be examined, in particular the hypothesis that the welfare state was able to buffer the detrimental consequences of the economic downturn. Studies of the current recession by e.g. Stuckler and collaborators will certainly prove valuable material. In the review, we will try to identify the following dimensions of crises that we suspect will have an impact on the outcomes: What kinds of crisis are we facing, (economic, political, fiscal, social), what is the speed with which it has evolved, how has the state responded to meet the crisis, and how are the changes in social and health policy? Methods: We will comply with guidelines issued for instance by the Campbell collaboration by developing clear inclusion/exclusion criteria, having an explicit search strategy, and a systematic coding and analysis of included studies.

Saying ‘I’ - Gender, Identity and Social Status In Japanese Pronouns

The question of ‘I’ and first-person pronouns is one that needles to say differs between and within cultures and contexts, and in this presentation I will focus on the case of Japan, and specifically on the first-person pronoun use of individuals who identify as x-jendaa. ‘X-jendaa’ (x-gender) is a term that emerged in Japan in the late 1990s, and simply put, refers to identifying as neither woman nor man, although the definition of the term and its specific usage depends on the person employing it. There are a number of first-person pronouns in Japanese, and a person is not limited to using just one fixed pronoun throughout their life-course, but rather shift pronouns depending on social context. The use of social pronoun depends on a number of different factors – social hierarchy (especially in a business or work context), geographical region, and significantly, gender. Although there do exist pronouns that can be considered gender-neutral, most first-person pronouns have a notable gender bias, and one would be expected to use a specific pronoun depending on how one appears and passes gender-wise. Based on interviews conducted with individuals with gender identity x-jendaa, in this presentation I will seek to examine how these individuals choose which pronouns to use in their daily lives, and at the same time explore the social ramifications of these pronouns in the future. It should also be noted that it is possible to communicate in Japanese without using first-person pronouns, which is a tactic that some of my informants also use. Through this presentation, I seek to bring forth the restrictions as well as possibilities that language brings forth, and how using or not using personal pronouns reflects as well as forge one’s social experiences.

the majority and English-speakers are the minority. The comparative study of the 2008 pan-Canadian francophone games and the 2010 Quebec games illustrates the complex relationship between nationalism and the politics of language at French-only large sporting festivals. The 2008 pan-Canadian Francophone Games funded by the federal government successfully served to foster Francophone identity and cultural minority Francophone community development. Organizers and youths proudly claim their Francophones and celebrate French language and culture throughout the weekend. Conversely, the Quebec Games focus on their sporting character rather than their nation-building purpose. This annual multisport competition financed through the Quebec leisure and sport policy is also meant to foster a distinct cultural identity among Quebeckers (Harvey, 1999), Quebec being the only province with French as its sole official language. While Quebec is formally recognized as a nation within Canada, the use of the provincial Games as a vehicle to promote the Quebeccois distinct language and culture depends on the government of the day as well as on local organizers. The 2010 event avoided any reference to the ‘national question’ celebrating youth and sporting performances in a taken-for-granted, but also unacknowledged, French environment. The comparative analysis outlines the distinct challenges of promoting a Francophone distinct majority vs. minority identity in today’s bilingual Canada.

Voter Demand and Politics Of Redistribution - Does Democracy Correct Market-Inequality?

Rising income inequality partly has been mitigated by public income redistribution in most highly developed countries during the past decades. However, a widening market income distribution not automatically creates government response. In a democracy, of course, citizens can address governments and demand an intervention into the distribution of market incomes. Disparities of market income can be hedged against by political majority. However, as the Median-Voter model and other explanations of redistribution from political sociology and economy pointed out, the poor need coalitions with the middle class to put through their demand for more equality. The poor resp. parties representing their interest in measures compensating the market income losses especially the poor had to endure in past are not powerful enough. So, the median voter should constitute political power within cross class coalitions of redistribution. Is this really so? Moreover, social scientists pointed to the fact that only political factors transfer voter demand into the political system. So class specific participation or the way how they present different political cleavages and their demand, are decisive steps constitution politics of redistribution.

The paper to be presented wants to confront the assumptions underlying the model with data on political behavior of the median and the poor voter, on party polarization and the ideological shift of left parties and on the institutional incentives for political participation. These questions will be discussed: Do middle class voters sympathize with politics for the poor or do they rather support coalitions with the affluent? Did left parties shift to the middle of the political left-right spectrum and did this make them successful in political competition? Is there congruence between voter demand and actual political programs? Data come from Luxembourg Income Study, the Comparative Manifesto Program and attitude surveys (ISSP, ESS).

Conspicuous Modesty in a Cosmopolitan Environment? a Study of Nordic Expatriates in Strasbourg

Within the framework of my comparative studies on social distinction, I have emphasised that in some societies (such as those of Nordic European countries), social differentiations are more often than not under-communicated while same- ness is over-communicated. What can often be observed is a relative avoidance of distinction from one’s peers.

The question arises, however, as to whether what I call ‘conspicuous modesty’ in those countries is a phenomenon that can also be observed among Scandinavians or Finns working abroad – and sometimes interacting with fairly conspicuous well-to-do people from other cultural areas. This paper summarises the results of a research about Nordic expatriates in the ‘Euro-city’ of Strasbourg along such lines.

« Le Rôle D’aïdant Familial Et La Vie Professionnelle En Période D’austérité. Articulations Et Points De Rupture. La Comparaison France/Japon »

Quelles sont les différentes figures d’ « aïdant » qui peuvent être dégagées ? Comment éclairent-elles à la fois les conceptions et pratiques d’aide à un proche en situation de « dépendance » et certaines dynamiques à l’œuvre sur le marché du travail ?

Si les caractéristiques de l’aïdant, le sexe et la place dans la famille par exemple, semblent jouer un rôle important dans les trajectoires, les politiques publiques autour de la prise en charge des situations de fragilité dans chaque pays ont également une influence qui doit être évaluée. Dans quelle mesure les modifications de ces politiques sous l’effet de l’austérité, variables selon le type de fragilité et le pays, modifient-elles les articulations entre rôle d’aïdant et vie professionnelle ?

National Answers to Global Challenges: An Example of Faculty Employment Regulation at Public Universities in Brazil and Germany

All advanced national higher education systems around the world are challenged by the increasing and strengthened global norm of efficiency, above all, in the management of universities, in teaching, and in research. Through the argument of global competitiveness this leads in many countries to a greater flexibility of working contracts and insecure career opportunities and paths for the academic faculty. Although this is a global trend, there are significant differences between distinct national states. While some national higher education policies

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
internalize the "new trends" in flexible management of their universities and the ideology of the market, others stick more to their own traditions and open up little to these new trends. One outstanding example of the first group is Germany, an example for the latter group is Brazil. Even though both countries are closely intertwined in the global market and challenged by global competitiveness in formation and knowledge production they follow distinct ways to meet such tasks. Through the example of employment regulation of faculty in public universities in Brazil and Germany, this paper seeks to analyze the influence of national traditions and state politics in dealing with the global challenges for the national higher education systems.

**Educational and Professional Ambitions of French Girls**

Educational and professional ambitions of French girls.

With the European research project GOETE (Governance of educational trajectories in Europe), we are able to deepen the educational and vocational guidance by taking the teenagers' point of view.

To explain and understand the construction of educational trajectories, GOETE associates a double quantitative and qualitative approach in 8 European countries.

Data was collected by questionnaire aimed at teenagers in the last year of lower secondary school and from questionnaires aimed at their parents, and also by interviews with teenagers, parents, and professionals (teachers, guidance counselors, supervisors, social workers, nurses, youth workers).

The first statistical results reveal that on average the girls' vision for their future includes a longer educational trajectory than the boys', with sometimes large gaps in their favor as in Slovenia for example. Contrary to this, in France, despite better success in schooling, young women remain less ambitious than young men.

Following a general panorama of the perspectives of these young European people, we will focus on French youth to understand this phenomenon. We will expose the objective and subjective barriers: how the French teenage girls cope with divergent advices from guidance counselors, teachers, parents and why they limit their educational trajectories - often marked by their gender and their social background.

**Teenage Girls and Leisure : The Social Construction of a Plural Culture**

Teenage girls and leisure: the social construction of a plural culture.

In an intersectional perspective, this paper aims to highlight inequalities in accessing leisure by focusing on teenagers in France.

Based on quantitative and qualitative data collected in three French regions in 2013, the focus of this paper is to shed light on the leisure activities of teenagers in terms of differentiated social practices according to gender, age, social class, physical and social morphology of the neighborhood, and relational and situational criteria. Their leisure is channeled by public policies as well as educational, family, and socio-educational care that structure their time and space. However, this paper also aims to highlight the subjective dimension. Gender, age and social network define living conditions and possible futures. More or less forgotten by the authorities (and by researchers), the teenage girls studied have different leisure activities from that of the boys. This paper seeks to point out that teenage girls in deprived neighbourhoods, in reaction to what they perceive as a social limitation, try to meet friends in other places and other networks, to experience new activities, situations and spaces.

Ultimately, the framework of their leisure experience brings these teenage girls, compared with the boys, to develop more heterogeneous leisure practices in terms of differentiated social practices according to gender, age, social class, physical and social morphology of the neighborhood, and relational and situational criteria.

**DANIEL FILHO, BRUNO JOSÉ** (Pontifícia Universidade Católica, bdaniel.filho@gmail.com)

DE SOUZA, ROGÉRIO CESAR (Pontifícia Universidade Católica de São Paulo)

**Inequalities in the Elementary Teaching System in São Paulo (Brazil)**

Inequalities in the Elementary Teaching system in São Paulo (Brazil)

In São Paulo, Brazil's most developed state, it was promoted a process of transferring Elementary Teaching's supply (ET) from the state level to municipal level in recent years: in 1995 were enrolled 5,263,112 students in the state net and 646,500 in the municipal nets. While in 2011 there were respectively 2,563,326 and 2,359,825 students.

Many believed that this would bring positive effects, such as best access conditions to the ET and a better students' performance, due to higher accountability in the municipal nets and greater management capacity as a consequence of the reduction of the state net's enormity.

The public system showing a better students' performance, would be possible to think that a growing percentage of different social classes members would prefer it, giving to students from variable familiar origins background to compete in an equal way for positions of quality either in subsequent stages of learning or in the labor market.

Viewed this way, the so-called decentralization of the ET may be understood as one of the adopted policies by state of São Paulo government to reduce the educational inequalities.

This article intends to observe, based on data produced by SAEB (the Brazilian Basic Evaluation System) for the years 1999, 2001, 2003, 2005, e 2011, what kind of audience is attending each network (state, municipal and private schools) in order to verify the evolution of the students' performance in each system.

Supported by these observations, it will be possible to identify if this process is contributing to the reduction of ET's inequalities or, on the contrary, if it's being built a public system of questionable results for underprivileged population and a private system of better results for privileged people, increasing educational inequalities across the region.

**DANILLOVA, ELENA** (Russian Academy of Sciences, endanilova@gmail.com)

**Changing Nature of Individualization in Post-Communist Countries**

In post-communist countries the process of individualization has been reinforced and accelerated during last two decades. Not denying similar globalizing factors, the extra pushing forces of individualization in these countries seem to be different from those in the western societies. Such forces are encapsulated in the consequences of the dramatic social transformation. The paper searches for explanation in the field of competing theories. Changing paradigm of social development in these societies and the fall of the safety of individuals rather led to the mobilization of traditional mechanisms of survival and self-preservation, with the consequent transfer into modern as well as patron-client relationships. The structural framework in which individuals and groups act is constantly reinterpreted and in this way the social setting acquires new shapes and agency.

**JS-90.2**

**DANILLOVA, ELENA** (Russian Academy of Sciences, endanilova@gmail.com)

**Inequality, Social Justice and Transformative Change in Russia and China: Who Feels Better in Big Cities?**

The paper raises a question of egalitarian demand in the transforming societies such as Russia and China. It involves unique comparative data from the surveys of adult population of two big cities (St.-Petersburg and Shanghai) and the research on the extra pushing forces of individualization in these countries, however produce the similar challenges. Increasing social inequality evokes public awareness of social justice and egalitarian thoughts in both Russia and China, but egalitarian demands differ in a number of aspects.

The study reveals that Russian citizens produce more radical egalitarian demand as they view the changes in distributional arrangements as unfair zero-sum game in which some high status groups and privileged citizens appropriate much of economic benefits, whereas in China the perception of distributional regime applies rather variable-sum principle and provokes functional egalitarianism with focus on introducing reformist measures for social inequality reduction.

The data shows that the model in which the most economically deprived and lower status groups feel more radical in terms of welfare distribution not exactly true for Russian and Chinese cases but in different ways. There is the evidence that in Shanghai those with higher status position express less radical but functional egalitarian demand. In St.-Petersburg the professionals with higher education feel deeper resentment in comparison with those in Shanghai and express more radical egalitarian views. The paper offers explanation of found similarities and differences by looking at the institutional changes and their adjustment to cultural contexts.
Who Should Move for Work, My Husband or I?

Since early of 2000, due to a high demand for their labor, Vietnamese women have dramatically joined and out-numbered men in spontaneous migration streams especially from rural areas to cities and industrialized zones (General Statistical Office 2005b, 2010b). Participating in the movements are not only single but also married women, many of whom had to leave their families behind. However, until now little is known about the group. This paper will contribute to the knowledge gap by exploring the plan for family reunion among mother-migrant/father-stay-at-home families in contemporary Vietnam. Based on in-depth interviews carried out in 2013 with married husbands-wife pairs in the receiving city and the sending villages, this paper counters the commonly-held view of internal migration that migrants moving for work once arrive in the city will try to remain and live there. This paper argues that wife-out-migration for work after getting family consensus does not lead to spousal abandonment. Family reunion certainly happens in the village of origin, this paper also stresses the need to provide more social supports for migrant mothers/wives and their left behinds in maintaining family ties while living apart and readapting into family and community once migrants return home.

Emotions and Movement Identity: Emotional Boundaries in Memories of the Global Justice Movements in Italy, Germany, and Poland

Collective memories play a crucial role in movement identity. Next to providing a sense of continuity, these narratives draw emotionally loaded boundaries that distinguish the movement from the outside as well as provide internal differentiations. This paper examines the emotions activists of the Global Justice Movements in Italy, Germany, and Poland attach to boundaries drawn in collective memories. Which emotions are attached to internal boundaries, which to external ones? How does this differ across different constellations of the movement with respect to actors, repertoires, and size? The analysis shows that a broad range of emotions are linked to boundaries across countries. In particular, it reveals that the relation between emotions attached to internal and external boundaries varies with the degree of movement cohesion. In constellations with a high degree of movement cohesion emotions attached to external boundaries clearly differ from those attached to internal boundaries: feelings such as mistrust and anger are linked to the first, while trust and sympathy predominate in the second. When cohesion is lacking, emotions linked to external and internal boundaries either converge or are reversed.

Changing Scenario of Bunt Women, a Study with Special Reference to South Kanara of Karnataka, India

The position of women has been different from society to society and from time to time. India is no exception to this. Women in India is essentially feminine and noted for feminine virtue, gentleness and tenderness. Indian women’s life encompasses various dimensions of personal, domestic and community life. Women in India understood as a body of literature that embodies the concerns for women, equality and development. It seeks to find explanations and the factors, the historical evolution and the present state of women’s social position. It strives to find remedies for unequal position of women and the methods to empower women.

Early research on woman in India were primarily done by social historians, indologists, anthropologist investigated the position of women, mainly of the high caste and elite sections of the society and to find the solutions to the social evils like child marriage, sati, the general oppression of widows, illiteracy, Indian society of institutions and practices which were believed to be deterrents to national resurgence and progress and which gone India a bad name in western world. Research on women is significant to generate new and organic knowledge through intensive fieldwork. This would help to generate the core data essential for understanding areas of academic analysis into higher to neglected sectors. The present paper looks in to the understanding and investigation of problems of Bunt Women and her status, problems in a closer way and also an attempt to highlight how Bunt Women have undergone a series of changes in her positions and roles and also to know how the Bunt women participate in decision making process of the family, political participation, economic and cultural spheres of life.

Investigating Financial Contagion Links in the U.S. and Eurozone Financial Crises upon Non-High Income Countries

In this paper we are investigating the relationship between high income countries on the one hand and middle and low income countries on the other hand. The paper analyses the effect of financial contagion of the U.S financial crisis of 2008, and later the Eurozone crisis on non-high income countries. The paper utilizes social network analysis combined with regression analysis. Several hypotheses will be tested: most notably, (1) financial markets (countries with developed financial markets have been affected worse than those who do not have developed markets), (2) trade links (export dependent countries affected more than those with little export), (3) international aid and remittances (countries dependent on aid were hit harder, if aid-flow decreased to these countries). This paper is part of a larger project on the effect of the economic crises (U.S. and EU) on child poverty in middle and low income countries, and therefore, special attention will be given to this matter (inequality, poverty, etc.).
decision-making power which is not an isolated situation as the comparison of 13 other CLE has shown.

In this communication we analyse the process of implementing the CLE to show that it was not a "bottom up" approach. Then we describe how we have given voice to users and local stakeholders to express their viewpoints about water issues in the context of national to provincial administration representatives. As result, the CLE has been stimulated, the users have pushed and built their own action plan, some of them envision now to ask for decisional positions in the new board.

Inequalities Faced By Women in IWRM Policies in Burkina Faso and Ghana

The aim of our communication is to show the inequalities still faced by women in the uses and the decisions related to water management despite their recognition as central to integrated Water Resources Management (IWRM). Since almost 20 years, IWRM is at the core of the water policy framework of more and more countries, specially in Africa. One of the Dublin principles of IWRM includes "participatory water resource management and inclusion of women" (Prakash, 2007, 293). The Action Plan for IWRM in Burkina Faso and the National Water Policy in Ghana insists on the involvement of women in water management. Notably because of their numerous activities in rural areas they are considered as one of the crucial components to alleviate poverty and increase food security. Nevertheless, studies we have conducted in the South West of Burkina Faso and in the Upper East Region of the Ghana show that women are still facing inequalities in terms of access to water and in decision making process about this resource. Several elements lead to this situation: a land tenure in customary and modern systems allow them to cultivate small and less fertile lands, at best; an inelegibility to obtain large loans to expand their farming and processing endeavors; a disconnection between that address women issues in the boards of IWRM institutions from local to national levels, where their integration is weak. We show that a participatory modelling approach, called Companion Modeling has been useful to give them more room to express their voice.

Global Economy Network, Leisure and New Urban Teenager Life Style in Jakarta. -- CANCELLED

This paper is the result of two undergraduate student thesis at undergraduate program of Sociology University of Indonesia, by using two different methods which are quantitative and qualitative. “Nongkrong” or hangout at Seven Eleven (Seve1) and using Behel (dental braces), Blackberry, and Belah tengah (even god hair style) called “3B” is urban teenager life style preference in Jakarta to spend their free time. Hanging out in some places has become urban teenager culture. 63% of them agreed to spend their free time at Seven Eleven (Seve1). Seven Eleven as one of global economy groceries network oversees the business opportunity in Indonesia. They are providing comfortable stools and benches and Wi-fi. It created a new lifestyle for urban teenager in Jakarta to spend their free time (60%). This lifestyle preference called “anak Seve1”. Interestingly, parents have become primary contributor of hanging out style, 95% agreed to hangout is malls or Seven Eleven. On the other hand, sociology study about dental brace (behel) found interesting findings. At the beginning, dental brace was used to re-align and straighten teeth. Nowadays, it has become a part of teenager lifestyle beside Blackberry mobile phone and even god hairstyle. Dental brace used as part of dental health became one of lifestyle accessories in particular social class. This teenager lifestyle is threatening social division in association perspective also from health point of view. Dental brace is sold as one of accessories which are below health quality standard. It expected can increase social status in urban teenager association. Both studies found, teenagers from particular social class want to proclaim their social class status higher than the others by using “3B” and being part of “anak Seve1”. This social symptom is becoming social prestige for urban teenager as indirect cause from global economy network.

The Dual Role of Christian Women, at Home and in the Workplace

Economic pressure is the main factors for women’s employment. Women also opt to work in order to face future crises or economic disaster. They are also engaged in earning extra money due to inflation and low income of husband. Low or class women work in order to fulfill the need to the family whereas middle class women work in order to raise the standards of living. But education sense of equality and consciousness of modernisms also inspired Christian women to opt for job. Christian working women are satisfied with their social and economic life. But they remain dissatisfied with insufficient care of their children. The present study was conducted in Varanasi and Allahabad district of Uttar Pradesh, India. 200 Christian working women were selected randomly for the study. 100 from Varanasi and 100 from Allahabad. 47.5 per cent Christian working women are between 31-40 year of age, 45.0 per cent Christian working women are intermediate, 28.0 per cent are graduate and 50.0 per cent Christian working women are teachers. 28.5 per cent are nurse. As far as the marital life of Christian working women is concerned 64.5 per cent women have high marital adjustment. As far as adjustment with work situation is concerned 54.5 percent working women said that they are satisfied with their salary. 60.5 percent women said that they have got this job by competition. 54.0 percent women have good relations with their higher authorities at the work place. Only 10.0 percent women have average relationship with higher au-

**Dances on Hooves: Embodiment and Interspecies Communication through Dressage to Music**

Horses and humans have a long shared history, spanning millennia and continents. Once vital to the development of human societies via agriculture, transport and warfare, the horse is now predominantly a leisure animal, partnering humans in sport and other forms of physical recreation. Following on from popular success in the 2012 Olympic Games, dressage to music (DTM) represents a contemporary manifestation of the horse-human relationship. DTM is a form of interspecies dance. Combining the quiet, controlled power of traditional dressage with original choreography and musical interpretation, DTM offers an opportunity to consider some of the complexities of embodiment in action.

The ultimate goal of equestrian sport is to achieve “a oneness with the horse, a kind of fluid inter-subjectivity” (Birke and Brandt, 2009: 196) and through DTM horse and rider try to achieve this mutual becoming as a form of dance. This paper draws on an ethnography of DTM, including participant observation, interviews and autoethnographic reflections, to consider how the horse-human dance is developed and performed.

If dance is a form of bodily education, then DTM is about training human and non-human bodies, and an attempt to decrease the boundaries between bodies and between species, albeit temporarily. In this paper I consider how DTM, as a form of interspecies dance, encourages human participants to focus both on their bodily movements and on their mental/emotional state, as they attempt to lead their equine partner through the complex dance routine. DTM is a form of competitive sport, which is judged for both technical and artistic merit, and the public performance of the interspecies dance offers an opportunity to consider how the musical interpretation of complex physical practices (dressage, in this case) is produced on and through bodies, human and non-human.

**How to Measure Religious Plurality and Mobility in Sub-Saharan Africa? Lessons from Research in Rural Mali**

The study of religious affiliation of individuals in sub-Saharan Africa faces distinct challenges to those encountered in Western countries. The strong influence of traditional religions, coupled with the recent implementation of universalistic religions, like Christianity, in West Africa, contributes to the adoption of non-exclusive religious practices (syncretism, religion changes). Even though debates on the plurality of religions and dynamics are present in sociology and anthropology, they are rarely based on statistical data, which would allow measuring the diversity of practices and resulting social differences. Conversely, quantitative studies, although they often collect information on the religion of peoples, ignore the diversity of religious practices and mobility. In this paper, we evaluate, based on a case study, the relevance and feasibility of a statistical approach to religious practices, taking into account the complexity and variability of practices in the individuals’ lives. Our data comes from a population followed over 25 years in Southeastern Mali, in bwa villages where traditional and Christian religions coexist. A particular strategy, balancing demographic and anthropological approaches, has been developed to capture the complexity of religious behavior. Thus, in the context of a comprehensive biographical survey (2 villages, 3165 biographies), a specific module has been dedicated to religious itineraries. It recorded for each individual the succession of religions over their lifespan, as well as information to approach the level of commitment to the Christian religion and the level of distance taking from the traditional religion. This study contributes thus to sociologists’ and anthropologists’ debates on religious mobility by proposing a formal quantitative perspective and other elements on the feasibility of a complex record of religion in quantitative surveys.

**Exploring Social Backgrounds of Domestic Violence in Japan: Findings from Japanese General Social Survey 2008**

This study aims to explore social backgrounds of domestic violence in adulthood toward female in Japan. Researches of domestic violence against female have pointed out that experiences of violence in their childhood are related to the occurrence of domestic violence in their adulthood. Based on this finding, this research will verify whether this phenomenon is observed as well as in Japan by national sample data, and analyze whether this is related to other factors such as social stratification of origin, home discipline types of father and so on. These analyses are based on the Japanese General Social Survey 2008 (N=2060). This data set includes three types of violence: punched or beaten experience in childhood, punched or beaten experience in adulthood, severely criticized or yelled experience in the past 5 years by their spouse or intimate partner. According to basic analyses, we found that female respondents experienced domestic violence much more than male. For example, 9.5% of female respondents reported that they experienced physical violence by intimate partner or spouse, while 0.5% of male respondents reported. Moreover, 11.8% of female and 3.6% of male reported that they had experience of verbal violence. We also found that people who were victimized by violence in childhood also tended to experience domestic violence in adulthood, both physically and verbally. In addition, the types of home discipline from father were slightly related to likelihood of domestic violence experiences. On the other hand, social stratification variables didn’t directly affect violence experience in adulthood. Overall the findings indicate that their status of origin is less significant when we predict the likelihood of domestic violence in adulthood. Other outcomes about the relationships between social stratification and disciplining will be discussed.

**Text and Contexts: A Pragmatic Approach to the Interpretation of Biographical Interviews**

According to the methodological concept of interpretive social research, analysing biographical narratives is conceptualised as a process of re-construction. Methodical writings usually concentrate on theoretical arguments for this approach (“why”) and present more or less idealised methodical steps for the procedure itself (“how”). Of course, they can hardly show exactly “how it works”. In my paper I will focus on the question what we are really doing by “re-construction” the meaning of a text. I will suggest a notion of “co-construction” which draws attention to the contexts that are made relevant by the interpreter when she or he produces an interpretation (or better: various ‘readings’) of a text, e.g. a transcript of a biographical narrative interview. I will introduce a model reflecting on some text-context relations which play an important role in the research practice and will exemplify them by using the case provided by the session organisers.

**The Born and Unborn Children of the 1989 Hungarian Transition: Analysing Childbearing Intentions on a Three Waves Family Panel Research**

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In 1989 the Sociological Institute initiated a longitudinal panel study among parents expecting their first child in 8 settlements in Hungary. In the first phase of the study 300 women in the last trimester of their pregnancy were asked to fill out standardized questionnaires. In the second phase, the families were revisited 3-13 months after giving birth. Then altogether 194 families (both mothers and fathers) for each of the 6 remaining 50 in-depth mother interviews were made.

From 2011 a 3 year research is funded to (re)continue the study of this special family panel data, to follow up the life history of the families taking part in the research 20 years ago. This data collection aims not only to find and ask the parents but to involve their children born then, and grown up adults by now. In the 3rd wave 110 families were interviewed.

Our presentation is a journey in time with an interesting account of the societal and demographic changes 20 years after the transition. We give a thorough and detailed picture of the childbearing intentions of both, the parents’ as well as the young adult’s generation. What are the characteristics of those components generation that realized their childbearing intention, and what are the reasons behind the postponement or abandonment of childbearing intentions of the young generation.

Transitional Justice and Collective Memory: Dealing With Japan's Occupation In South Korea

Abstract: This paper examines the effect of transitional justice, defined as measures that deal with historical wrongdoings, on perceptions about wrongdoers. According to major schools on collective memory, the perceptions may stem from the past, the present or the interplay of both. In order to assess these perspectives, we draw on Freedman's analysis of political ideologies and theorize that memories of wrongdoing have a morphology that resembles ideologies: wrongdoing forms “the core” of memory, transitional justice its “adjacent parts,” and denial its “periphery.” We hypothesize that transitional justice transforms perceptions about wrongdoers if its reparatory, restorative, and reconciliation components are all implemented. These components were operationalized as an experiment based on a 2x2x2 factorial design, which was embedded in a cross-sectional survey of 640 adults randomly selected from the Gallup Korea online panel. South Korea was selected as a research site owing to the unresolved legacy of Japan’s occupation in 1910-45. The non-linear distribution of the five-item perceptions scale and the significance of the third-order interaction term from a tabb analysis suggest patterns of memory. Perceptions about wrongdoers can be transformed by their abandonment of denial and the implementing of comprehensive transitional justice.

Key words: collective memory, morphology, transitional justice, South Korea

Surprise... An International Labor Center In China

Difficulties accompany the establishment of an International Labor Center in China - political restrictions, historical antagonisms, and logistic opacity. Yet such a Center is now in its flourishing infancy at Sun Yat-sen University in Guangzhou, having found a conceptual “space” in which to thrive. One opportunity for an academic center is to create a space where labor exploitation and resistance can be recognized and analyzed, while not transgressing on the official mandate of the All-China Federation of Trade Unions (ACFTU). Owing to the particular legacy of state socialism in China, workers facing the relentless coercion of capitalism may neither organize themselves nor be organized by a union; the space for this is “occupied” by the ACFTU, but remains largely empty. Similarly, the space for ideological development is occupied by formalistic views (“socialism with Chinese characteristics” in word; free-market fundamentalism in practice). Yet, increasingly, critical thinking is arising at universities, as students insist on finding a lucid explanation for the contradictions exploding in the middle of their own lives. A Labor Center should help ground this inquiry in the broader intellectual world. Seeking to meet these needs we established the International Center for Joint Labor Research, following several years of relationship building among academics and practitioners in the U.S., Germany and China. This Center now maintains a steady pace of research, analysis, inquiry, outreach, publication and development, and exchange. We help cross-fertilize ideas between some of the world’s leading labor scholars and the most anonymous, grass-roots level activists, between PhD candidates from remote Chinese villages and battle-scarred trade union officials from former Eastern European socialist states. In short, we provide a platform of mutually respectful engagement between the full spectrum of actors in the global labor family, in the milieu of the world’s rising capitalist hegemon.

DAVIDOV, ELDAV* (University of Zurich, davidov@soziologie.uzh.ch)

Testing the Equivalence of Values in Europe with the New PVQ-RR Scale

Investigating whether European societies share common values requires that the values in the first place comparable. Since its inception in 2002 the European Social Survey (ESS) has included a short version of 21 questions to measure ten basic human values (Schwartz 1992). This enabled studying European values across cultures and over time. Studies assessing whether and to what extent these values are comparable across European societies have led to partly disappointing results: Whereas it could be shown that associations between values and other theoretical constructs of interest may be meaningfully compared across countries, statistical tests of equivalence demonstrated that value means may not be comparable. Methodologists have suggested that this finding was a consequence of the efforts of the ESS to maintain value coverage while using nonhomogeneous items to measure each value. This might change now. In 2012 Schwartz and colleagues have proposed a refined value theory with 19 more finely distinguished values and a new instrument, PVQ-SX with 57 questions to measure these values. This scale has better reliability properties of the older ESS instrument and takes only 2-3 minutes longer to complete, and most importantly, first results suggest that it displays better equivalence properties across countries and may allow comparing means of at least some of the values across some European countries. The current study investigates the comparability of values in Europe with this new instrument, and enquires if sufficient levels of equivalence are achieved, to study the similarity, commonality or uniqueness of value priorities across European societies.

A Multicultural Perspective on Leisure in the 21st Century – Tradition and Modernity

The paper focuses on the perception of leisure in Israel in terms of time, activity, value, and self-realization. Our aim is to explore the changes in the perception of leisure in Israel over the 65 years of the states’ existence; identify the factors that shape the perception of leisure and styles of leisure in Israel, a young state that has fought for its existence for many years, and whose citizens also experience existential anxiety, and as a state whose cultural foundation combines tradition and modernity, a state whose social fabric includes longstanding new immigrants, minorities, religious and secular individuals. We will explore the leisure culture in Israel and the changes that have occurred in it. This paper may have practical implications for the educational challenge of leisure education that promotes understanding of others, tolerance, and may even pave the road to unity.

The Role of Food Safety Risks in Facilitating Agricultural Transitions: Alternative Beef Production in Alberta, Canada

Alternative beef production in the Province of Alberta, Canada is evaluated in the context of recent discussions of sustainability transitions. By combining the insights of Archer’s sociological Reflexivity/Morphogenesis Theory with Sustainability Transitions Theory, we analyze the findings of a qualitative case study comparing the interviews of conventional and alternative beef producers, treating alternative beef production as a niche operating within the dominant regime of global industrial agri-business. In particular, we highlight the role of food safety crisis events in niche dynamics. Among our key findings are that food safety crisis events—some of which emerge as a direct consequence of the socio-ecological contradictions embedded in industrial agriculture—represent opportunity windows for the further establishment of system niches with the potential for contributing to sustainability transition. Further, the anticipated common identity among niche producers was not borne out empirically; to the contrary, producers are motivated to support this niche on the basis of a wide diversity of histories and sentiments. Finally, our study raises the possibility that the long-term viability of alternative agriculture sectors may well depend upon their stabilization as niches, rather than their expansion.

Reconceptualising Family: Negotiating Sexuality in an Era of Neoliberalism

Based on qualitative research, this presentation examines the complex kinship relations involved in constructing queer families. We focus on the heterogeneity of queer families; the difficulties encountered in association with processes of recognition and how this is negotiated across different contexts within queer families, extended families, and bureaucracies; how sexual subjectivities are articulated within the context of family; and concerns raised by queer families in relation to children's early schooling. Of particular importance to this discussion is awareness that in a governmental climate of neoliberalism, there are contradictory and competing discourses about queer subjectivities, the child, and constructions of family. The queer subject is frequently and increasingly positioned as a targeted consumer and this consumption extends to accessing foster care, adoption, reproductive technologies, the healthcare system, and education. However, despite the invitation to queer families to be consumers in these contexts, the normative family is still viewed as heterosexual, with queer families continuing to be excluded and rendered invisible in representations of family. Early education should include knowledge about different kinds of kinship relations including queer families, non-biological formations of family, including fostering and adoption, and alternative reproductive practices and technologies through which many young children are now conceived. Currently, most early childhood education and primary school curricula in Australia do not reflect the reality of many young children. Educating all children, young and young, families and sexuality is critical to children becoming socially informed citizens and politically active members of their communities who can participate in creating alternative and more equitable futures.

Procedural Justice In Indonesia

This paper explores whether people in Indonesia would welcome a procedural justice model of policing. I take procedural justice to involve the quality of police decision-making, the quality of treatment extended by police to the public, and moral similarity between police and citizens. While a large volume of work has been published on procedural justice and policing since Tyler's model was developed in 1990, this work has been predominantly quantitative (and largely grounded in psychology), and almost exclusively based in the US, the UK, and Australia. In exploring the applicability of procedural justice to policing in Indonesia, this paper extends the geographic scope of the procedural justice model, and provides a richly contextualised and nuanced account of people's everyday experiences with police within a procedural justice framework. The article draws on data from nine months of ethnographic fieldwork on policing in Indonesia spread between 2011 and 2013. What this data suggests is that people in Indonesia would be receptive to a procedural justice model of policing.

Passion, Experience, and Biography: What Can Tango Dancers Tell Us?

Biographical researchers depend upon communication with their informants, usually in the form of a chronological story about their lives. However, not all experience can be put so easily into words, let alone into a linear narrative with a beginning and an end. Drawing upon my research with people who are passionate about Argentine Tango, this paper explores how they sense this passion – a passion which is highly embodied, attached to strongly-felt emotions, and often implicated in biographical transformations, yet difficult to capture in words. I will argue that their attempts to talk about their passion for dancing tango can help us as sociologists to expand our discursive approaches to the investigation of biographies in productive and provocative ways.

Promoting Gender Equality Using CEDAW: The Case of Zambia

In 1963, the UN began to prepare language for a single instrument describing the rights of women; this declaration was drafted to lay the foundation for a treaty that specifically addressed issues pertaining to women's rights. In 1979, the General Assembly adopted CEDAW and it entered into effect in 1981. The Republic of Zambia ratified the convention on June 12 1985. Zambia has submitted two reports in prudence of CEDAW's Article 18; the third and fourth reports that covered the period from 1964 to 1997 and the fifth and sixth report submitted in 2007. The Committee on the Elimination of Discrimination against Women has reviewed both these reports and published summary records of the proceedings. This paper presents an examination of the record of the proceedings and data from a study conducted in a peri-urban settlement in Lusaka, Zambia, which includes observations, secondary analysis of in-country newspapers, 60 in-depth qualitative interviews with and the administration of a survey instrument to 205 women in the study community. Findings suggest that...
since its ratification, various parties have deployed elements of CEDAW in an ef- fort to address gender inequality. This paper discuss the progress the country has made since it ratified the convention in 1985 and the ways it has negotiated customary laws and traditional practices, which are often in direct contradiction with the principle of CEDAW. The findings show how the settlement has adopted elements of the convention to improve gender equality, individually or otherwise. Changes in their community, and the convention can be further implemented to increase the rights of women in Zambia. This case offers important implications of how multiple agencies can effectively utilize CEDAW as leverage, and at times succeed, in changing negative gender ideologies.

Women's Capabilities and Empowerment in Lusaka Zambia

Sen (1985) states that resources and agency constitute capabilities, which are the potential that people have for living in the way they want to and of achieving valued ways of being and doing. Drawing on Sen (1985), Kabeer (1999) defines empowerment as the ability to exercise choice, and states that this ability is composed of three interrelated dimensions: resources, agency and achievement. The concept of empowerment has been defined in several ways, including de- cision-making capabilities, and is often proposed as a way to improve women's overall wellbeing. For example, due to women's increasing risk for HIV/STIs, sev- eral organizations have promoted interventions that empower women as a way to improve their health outcomes and reduce their sexual risk. This study focused on women's empowerment and its relationship to sexual risk and sought to deline- ate the roles of the family and social context in both empowerment and sexual risk. Data from the study, conducted peri-urban settlement in Lusaka, Zambia, includes observations, secondary analysis of in-country newspapers, 60 in-depth qualitative interviews with and the administration of a survey instrument to 205 women in the study community. Findings from this study highlight the complicat- ed nature of the concept of empowerment. Results indicate that the nature of a woman's relationship with her male partner is a crucial mediating variable in her sexual risk. A positive partner relationship was associated with lower levels of vi- olence and men's sexual risk behaviors. Further, joint decision making between a woman and her partner was associated with lower risk for HIV, whereas individual decision making by the woman or the man was associated with increased risk for HIV. This study lends support for empowerment interventions that take a holistic approach to risk reduction by not only involving women's male partners but also targeting changes in societal and cultural norms.

Bodily Aesthetic Affects in Trans Erotica: Towards a Wider 'Spectra of Desire.'

The sexualisation of trans people is a thorny issue due to the pathologizing undertones within sexological literature. After many years of being on the one hand, silenced about sexuality or on the other hyper-sexualized, for fear of be- ing pigeon-holed as unworthy recipients of medical interventions by the medical teams providing healthcare, transsexual and transgender people have started to explore and produce their "sexual bodies" and represent them in novel ways through prose, poetry and pornographic film. The political move to illustrate the wider 'spectra of desire' (Stryker, 2006) and experiences of trans-sexuality was announced to be politically important as a way of shifting stereotypical associa- tions surrounding trans embodiment and sexuality generally. These projects of sexual representation rely on transforming spaces and discourses within cultural mediums in which transpeople explore their sexuality. Pornography and erotica are two sites that offer personalized accounts of trans-sexuality that often speaks back to medicalization. I argue, in the words of Kate Bornstein (1994: 163), these erotic productions offer 'irreverence for the established order' and incorporate the ‘often dizzying use of paradox’ which underpins my analysis. Using trans erotic- ica texts, I will illustrate that ‘transsexualism’ and ‘transgenderism’ are not solely about gender, as a core characteristic, and suggest that sexuality is part of trans subjectivity too. I will suggest further that new representations of trans-sexual- ity within the erotic representations pose challenges to the medical policy and practices surrounding trans medicalization and the sedated ideas surrounding transpeople as either non-sexual or hyper-sexual. This focus on erotica allows for new analyses and conceptualizations of trans-sexuality that incorporate bodily aesthetic affects of the transitioned and transitioning body. Simultaneously, un- derstanding trans bodily aesthetic affects helps us move away from territorialized ideantarian markers, such as gay, lesbian and bi and explore a wider spectra of trans desire.

An Emerging Profession: Mechatronic Engineering In South Africa

The professions have perpetually arisen as a topic of contention within the so- ciology of professions. For the most part, these debates have centred on the defini- tion or term ‘profession.’ However, only a few have concerned themselves with the question of how new professions emerge and become established. Fewer have investigated this process contextually. The paper explores this question from the perspective of new, emerging professions in South Africa. It attempts to interrogate the question in two sections. The first sections draws on the literature within the sociology of professions and the relevance of traditional professions and models of professional development. It will also draw on theoretical mean- ings embedded in the emergence of a new profession. These include the concepts of qualification, cultural mandates and closure. Through this analysis, I will argue that a contextual or practical analysis into the emergence of professions is nec- essary.

In the second section, I draw on the practical example of the emerging profes- sion of mechatronic engineering in South Africa. This section, based on fieldwork, focuses on 3 issues. These include- what constitutes mechatronic engineering as new or emerging, how the concepts discussed in the first section interact or shape the emergence of mechatronic engineering, and finally, the challenges to the emergence of this profession in South Africa. The paper draws on current qual- itative research throughout the country using the snowball or referral method. This paper hopes to contribute South African voice to the literature on emerging professions and provide new insight into a novel profession.

Why Dead Ends May Remain Well-Trodden Paths: Epistemic Hopes and Obstacles in the History of the Delphi Technique

Quite in contrast to any conception of the scientific process as being determined by verification plus adoption versus falsification and dismissal, one interesting feature of ideas in the (social) sciences is the relative inertia that accompanies their identification as dead ends. Even if under relentless fire by a wide array of critics, proponents of a dead end idea can continue to believe in its quality and capacity and defend it against any kind of attack. This might, in some cases, be explained by reference to Leon Festinger's theory of cognitive dissonance, and the historian of science can analyze the ways in which proponents attempted to reduce the dissonance extant between their claims and reality. However, especially in the social sciences and humanities, a clear-cut event that causes the dissonance is missing. The paper proposes to use the concept of epistemic hopes for such cases. As an analytic category, epistemic hopes are the expectations towards capacity, productivity, efficiency, and impact of a scientific idea that guide the author(s) of this idea in its creation such as clenchment. Moreover, epistemic hopes can also be used as an explanatory category. They can draw attention away from the flaws of one's own idea and obstruct an objective assessment of its capacity, productivity, efficiency, and impact. In this, they are similar, but not identical to Gaston Bachelard's epistemic obstacles. Referring to the history of the Delphi technique, the paper discusses the concept of epistemic hopes and its relation to Bachelard's epistemic obstacles.

ARE Water Conflicts Changing The Modern State? Reflections On Informalization In Mexico City

In the past decades, the sociological literature on environmental issues and natural resources has attempted to characterize the demands, the actors, and the international channels used by environmental movements, and in environmental protests against the state. The paper is located in this literature, focusing primarily on water conflicts in a large city of the Global South.

More specifically, using a political ecology framework, the paper explores how the notion of informality can shed a new light on hydropolitics through a discussion of the modern state's relation to non-state actors. The paper compares traditional forms of informalization such as clientelism or electoral clientelism with emergent informal practices such as the multiplication of intermediaries and water provision through a network of water trucks ambiguously subsidized by public institutions.

Through an empirical analysis of the various means through which people face hydraulic stress in Mexico City, the paper offers a reflection on the transformation of the Mexican modern state.

The chronic insufficiencies of the modern state (or of governments with fragile legitimacies) articulated with clientelistic practices channelled through local intermediaries. The paper clearly how formalization and informalization processes work in a country where formalization was never complete, but where the modern state has a long tradition of authoritarianism. The aim is to better understand the institutionalization of the water crisis in current state restructuring processes, and its impacts on hydric precariousness.

River Doce: Water As an Environmental Perception Factor

The act of perceiving the environment where one is inserted awaken the notion for co-responsibility of the users, leading them to better understand the interrelationships between man and environment. Of those: cognition, perception and interpretation of levels and dimensions of river Doce's reality, its singularities and importance contribute to the understanding of visible and non-visible transformations, tangible or not, of the landscape, perceived and interpreted as heritage of the people, which must be passed on to future generations. The river Doce that bathes the city of Governador Valadares, Minas Gerais, Brazil, is the 10th most polluted river in the country, according to the Brazilian Institute of Geography and Statistics (IBGE). Currently, its water surface is extremely reduced, at serious risk of compromising the city supply. Having been raised by its margins, River Doce represents memory, identity, culture and history to Governador Valadares. This study presents the social perception of water manifested in a survey of high school students and teachers from public and private schools of Governador Valadares. Analysis of data collected through the questionnaire allowed the assessment of links between attitudes, values and social practices with regard to the Doce river, natural and cultural heritage of the community. Preliminary information identified in this exploratory study is relevant to the formulation of public and private policies that focus on the sustainable development of the Doce river basin.

The Senses in Scene

The senses in scene.

This article reflects part of the trajectory of the collective Theater of the Instant, associated with the research group Poetics of the Body, from the Department of Scenic Arts at the University of Brasilia. This group, since 2009, gathers researchers and artists around the processes of scenic creation, and exercises inter-disciplinarity through the interface of theater and other areas such as literature, music, aesthetic computing and new media. It also aims at experiencing processes of reception, with research dedicated to provoking the spectator's different senses, aiding other aspects of experimental dramaturgical treatments.

This group's creation presents itself as a unfolding of the research begun in my doctorate in anthropology, which is described in the book Being in Scene: Flower in the Wind. Engraving of Hybrid looks. The book took from training in traditional techniques such as the sati-ho, a bodily education of Japanese origin that aims at rescuing and maintaining the body's sensitivity and the yoga of voice, a technique that unites granting traditions of Indian, indigenous and African cultures. The contact with these outlooks offers an exercise in displacement, the construction of a gaze and a body that transform day-to-day life and the situations of aesthetic performance.

In this friction between traditional and contemporary knowledge there is a focus on experience, with an emphasis on perception and the relationship with the senses, both in those responsible for the performance and in those watching it. There is an exploration of new sensorial experiences and an intention of expanding the potentiality of interaction and communication with the other. A notion of body-memory is at work, looking to create a field of activating imagination so that the fragments of each other's life-stories emerge in the direction of a web of fictional dramaturgic constructions.

Keywords: experience, senses, body-memory, imagination.

A Pharmacist without Sweets. Bending Incentives to Enlarge the Scope of Practice of Pharmacists in Primary Care

To improve patient safety in primary care regulatory agencies aim to enlarge the scope of pharmacists in primary care in the Netherlands. We started a study to measure the effect upon patient safety of the employment of clinical pharmacists in practices of general practitioners (GPs). For this study, we had to define the exact position and role of the clinical pharmacist in GP practices. We set two conditions. The first condition was to align the incentives for patient safety with pharmaceutical care. The second condition was to create a stable jurisdiction for the clinical community pharmacist.

The particular position of the clinical pharmacist in primary care in the Netherlands is a perfect case to conceptualize incentives and interests as 'incenterests'. Financial incentives are important features of the position of pharmacists in the community pharmacy. In addition to financial incentives, an uncertain jurisdiction shapes the professional behavior and identity of pharmacists.

To conceptualize the 'incenterests' for medication safety, we conducted a literature study, analyzed policy documents and did a pilot study. In this pilot study, the first author acted as clinical pharmacist in GP practices. The data were analyzed with the agency theory in institutional economics and by sociological theory of new professionalism.

Based upon the analysis we came to the following intervention. From 2014 onwards, we will employ ten clinical pharmacists in GP practices. As the pharmacists have a fixed income, they have no incentives to dispense medication nor to stop medication. In addition, the clinical pharmacists will become part of the community of GPs as they share the offices and their case notes within the GP practice.

Domestic Violence and Rationality on Small Islands

Quality of Governance in Domestic Violence Policies in Small Island Development States (SIDS): A Case of the Dutch Caribbean

Small island development states and territories face special difficulties in taking care of domestic violence policies. Characteristics of governance need their own fine tuning in a context of fear, a sensitive subject, and small scale territories, where everybody knows each other, professionals, public servants, politicians, victims and perpetrators. From a rational choice perspective we look at how professional public servants in such a context deal with conflicting values, public service motivation, incidents and the public’s view. How do the values of politicians and street-level professionals relate and what care institutions and juridical institutions do matter? The qualitative research (40 interviews with professionals and public servants) took place in the three Dutch Caribbean islands (Bonaire, St. Eustatius en Saba) in the context of the intended ratification of the CAYHO/Treaty (European Treaty against Domestic Violence and Domestic Violence). From an external perspective the coping strategies found could suggest irrational elements, while they were rational from an insular cultural perspective. Conflicting modern and traditional value systems slow the quality of governance.

DE CABO, ANNELIE* (University of Gothenburg, Sweden, annelle.decabo@socwork.gu.se)

Prostitution Policy in Sweden

In 1999, Sweden became the first country in the world to adopt a law that criminalizes the client in prostitution – but not the person offering sexual services. Since then, Finland, Iceland and Norway have adopted similar legislation, making it illegal to purchase sexual services but not to sell them. The wording of the Swedish Sex Purchase Act is gender neutral. However, the law was politically motivated, derived from and gendered by gender equality perspectives. It took into account that women selling sex to men, and prostitution was constructed as a part of the patriarchal oppression of women. In contemporary time, the law is largely unquestioned and has been officially accepted across the political spectrum. However, questions regarding the effectiveness of the law remain somehow unanswered. In this paper, the “language of prostitution” in a Swedish context is put under scrutiny and is analysed in relation to gender, ethnicity and sexuality. Drawing on empirical data consisting of interviews with Swedish police officers and social workers, my analysis indicates that the implementation of the Sex Purchase Act differs from the expectations in the draft text. Firstly, practitioners do not seem to perceive the law as a mean to achieve gender equality. Instead, they cast the law as a strategy for border control. In relation to men buying sex from men, however, practitioners and about the consequences of the movement in general. It is thus necessary to discuss how the movement took over an increasingly large dimension. In addition to gender, ethnicity and sexuality, drawing on empirical data consisting of interviews with Swedish police officers and social workers, my analysis indicates that the implementation of the Sex Purchase Act differs from the expectations in the draft text. Firstly, practitioners do not seem to perceive the law as a mean to achieve gender equality. Instead, they cast the law as a strategy for border control. In relation to men buying sex from men, however, practitioners do not comprehend the law as applicable at all.

The Young Students of Th University of Brasilia: Professional Aspirations

This communication is supported by two central themes addressed by contemporary sociology: the changes in the transition to adulthood and the rise of the values of self-expression, from the perspective of post-materialist theory. This study examined how the young university students from the University of Brasilia, in the 1st half of 2012 (N=154), reveal their aspirations in the workplace. We use a quantitative data obtained by means of a framework of work values, similar to those that have been used in the World Values Survey research. We are mapping the main work values between this group. Inglehart’s thesis was observed in significant valuation question “interesting work”, however, in this group, there is still a predominance of aspiration “job security”. The data express a transversely this scale of values when analyzing the differences between the social origins, gender and scientific area of each course. Is important to note that this is an exploratory study, it is worth while track for future studies aiming to better understand the various dynamics experienced by university students, among them the aspirations in the sphere of work, as well as adjustments of these values throughout the process transition to adulthood.

Nudging Wage Earners into Accepting the Burden of the Financial Crisis: The Politics of Choice and the Individualisation of Retirement Risks

During the last two decades of the 20th century a shift in the finance of old age pensions, from a PAYG logic towards a funded strategy based on equity finance, appeared to be a miraculous solution to the problem of an ageing society. Countries with a tradition of social security engaged on a path of gradually replacing the second tier function of their public pensions by privately funded occupational pensions. Countries with a Beveridgean tradition removed the PAYG elements from their funded second-tier by reforming their funded DB schemes (tampering with the indexation to wages and inflation of pension accruals and benefits), or by altogether closing down DB schemes and replace them by DC systems (in an attempt to limit the back-servicing liabilities that form a PAYG element in funded DB schemes). During the final decade these changes seemed to come at no cost to future pensioners, as stock markets were booming. But following the dot.com crisis of the turn of the century the first dark clouds started to appear, and after the banking crisis the risk, uncertainties and transaction costs of individualised forms of funded retirement provision became apparent. One way that policy makers seem to have sought to make these new risks and burdens, that individuals increasingly are exposed to, acceptable to the population, was to masquerade them under the mantra of individual choice. The paper investigates how this individualisation has taken shape in a number of different kinds of welfare states: Germany, Australia, the Netherlands, Sweden and the United Kingdom. It not only looks at the attribution of various risks, but also at measures that attempt to counteract possible adverse effects of expanding individual choice, such as myopia, and bounded rationality of the pension plan participants, and the possible opportunism of private providers of pension products.
focused on (collaborative) politics in the making through socio-technical controversies. I will use these theoretical insights to analyse the quest for an alternate route design for the Schiphol Spierkerboor departure in 2009-2010. Redesigning this departure route became focal point of a major controversy between the concerned actors. The case will point out that decision-making processes should focus on the distribution of complexity, as a multiplicity of stakes and divergent perceptions arise, disagreements, ambiguities and uncertainties ensure that the decision-making process takes place in an undefined area somewhere between facts and values, where science and politics are mutually intertwined. By shifting the focus from “studying complexity” to “studying the disposition of complexity”, deadlocks can be understood in a different way, leading to new insights on how to break free from them.

Scale Effects in Workplace Innovation

Workplace innovation is defined as the implementation of new and combined interventions in work organisation, HRM and supportive technologies, and strategies to improve performance of organisations and quality of jobs. Previous research has pointed to the importance of workplace innovation and organisational performance. Through OLS regression we empirically tested whether firm size moderates the relationship between workplace innovation and organisational performance. We used a sample of 1,132 Dutch firms. Our database consists of variables from The Netherlands Employers Work Survey (NEWS; 2010) and balance sheet statistics for non-financial firms (NFO; 2010 and 2011) collected by Statistics Netherlands (CBS). Organisational performance is operationalized as the labour productivity growth, employment growth, and growth of return on capital. Firms are categorised into four size classes: micro firms (<9 employees), small firms (10-≤249 employees) and large firms (≥250 employees). Workplace innovation is measured with four sub-constructs: strategic orientation, flexible work, smart organising and product-market improvement. We find a combined effect of firm size and strategic orientation on labour productivity growth. In terms of labour productivity growth strategic orientation is significant more beneficial for small and medium sized firms compared to small and medium large firms. Additionally, the result show a combined effect of firm size and product-market improvement on labour productivity growth. For micro sized firms product-market improvement seems to have a negative effect on labour productivity growth, whereas it has a positive effect on labour productivity growth for small and medium and large firms. Furthermore, we find an interaction effect for firm size and product-market improvement on employment growth. For large firms product-market improvement has a negative effect on employment growth, however it has a positive effect on employment growth for micro and small and medium firms. This indicates scale effects exist and policy measures aimed at stimulating workplace innovation should differentiate between size classes.

Farmer Approaches to Animal Welfare: Understanding on-Farm Animal-Human Relations

In the last three decades, livestock production practices have risen to importance in scientific, political, and public debates on sustainable development. Topics of debate related to livestock farming’s environmental impact, food safety and security, and animal and human health have received considerable socio-logical attention. Animal welfare issues, and particularly the farm animal-human relations implicated in these, have only recently become a topic of sociological scrutiny and remain under-theorised – despite an increasing public and policy attention for animal welfare. This paper argues that farmers’ understandings of farmers’ involvement in animal welfare governance as economic rational actors or as rather passive recipients of governmental and market-based norms, the paper ends with a reflection on the scientific and policy implications of its more situated understanding of farmers’ animal welfare approaches.

The “Born Free Generation” in South Africa: Vulnerabilities and Aspirations -- CANCELLED

Almost twenty years after the end of apartheid, South Africa remains one of the world’s most unequal countries. Despite promises of a better life for all, racial and class inequalities continue to shape young people’s identities, life chances and dreams for the future. ‘Black’ and ‘Coloured’ youth are especially vulnerable, with high levels of school drop-out, unemployment and large numbers of ‘discouraged work seekers’. The situation has given rise to a new moral panic around the country’s exceptionally large youth cohort. Yet little is understood about how ordinary young South Africans experience their reality of un(der)employment in the context of transformation and promises about upward mobility. This paper draws on 18 months of ethnographic research with 6 young South Africans of the so-called “Born Free generation” in the Western Cape. The study provides rich insights into the participants’ current life trajectories and their families’ background. Detailed family histories enable us to unravel how differences in racial categories, geographical location, and class influenced the decisions people made at the time of the transition. Such decisions continue to affect the socio-economic position of many young people today. In-depth research also enables us to focus on individual trajectories, for example, in the search for employment. The paper describes detailed trajectories in search of work and the “saw tooth” patterns of youth transitions through employment stages. The discussion identifies gaps in our understanding of life with long term unemployment or constant short term employment, problematizing the ways in which employment or unemployment are generally measured and the category of young adults “Not in any kind of Employment, Education or Training”. The work notes severe psycho-social consequences for young adults in un(der)employment, and offers detailed insights that are relevant to policy discussions about a Basic Income Grant or Youth Wage Subsidy in South Africa.

Le Cas Oscar Pistorius, Analyse Des Débats Médiaïtiques & Propos De La Technologisation Du Corps Humain

Oscar Pistorius est un athlète Sud-Africain bi-amputé fémoral. Il court avec deux prothèses insérées sous les genoux. Ses performances le porte sur les plus hautes marches des podiums en sport adapté. En 2007, il demande l’autorisation de participer aux jeux Olympiques (donc avec les sportifs “valides”). Cela lui est...
interdit par la Fédération Internationale d’Athlétisme en janvier 2008. Il fait appel auprès du Tribunal Arbitral du Sport qui autorise sa participation en mai 2008. Depuis cette date, le “Cas Pistorius” alimente une controverse dans les médias autour de deux questions:
- Est-il légitime qu’il participe ou non aux Jeux Olympiques de Londres 2012?
- Est-il avantage ou désavantage un athlète handicapé au sein d’une équipe?

L’analyse des discours de cette controverse médiatique montre qu’Oscar Pistorius pose un problème de catégorisation anthropologique. En effet, tant qu’il court dans la catégorie “athlète adapté”, il ne suscite aucune réserve. Par ailleurs, la controverse ne porte pas sur le fait qu’il soit handicapé, car dans l’histoire plusieurs handicapés physiques ont participé à des Olympiades sans provoquer ni rejets, ni débats. Mais pour la première fois, un sportif produit ses performances grâce à un appareillage technologique rajouté au corps et celles-ci se rapprochent des performances des sportifs “valides”. Ce faisant, Pistorius remet en question les imaginaires sociaux définissant la place des personnes handicapées; elles sont « moins » que les personnes dites “valides”. Il oblige ainsi les sociétés à s’interroger sur la place des personnes qui, suite à un accident, une maladie, ou un choix personnel, vivrait avec un corps “augmenté” par une hybridation technologique.

**Demography in the Early 21st Century: An Insight from French Doctoral Theses in Population Studies**

French demographers have played a major role in the development of quantitative techniques in demography. More recently, population studies more opened to other social science disciplines and qualitative approaches have flourished in many countries. How does demography relate to population studies in recent doctoral studies in France? Which topics do these studies address? In which institutional context are they realized? To answer these questions, we draw on a database of doctoral theses defended in France during the last decade (2000-2012). This database has been built using the French Documentation University System and related indexing language. The topics are classified in 14 categories. Among 851 references, 746 theses have been selected and are analyzed using Excel, SAS and Iramuteq software. Analyses performed include principal component analysis and textual analysis.

Results show that the number of doctoral theses per year is relatively constant, with fluctuations due to institutional constraints. Doctoral students are mostly female (59%). Concerning the orientation of research, two main geographic poles reflect the structure of demography training. Demography is the main discipline (65%) followed by sociology, geography, political science and economy. Studies on mortality and health tend to involve more modeling and to be more associated with population structure whereas fertility is often analyzed in conjunction with family and sexuality and tends to more frequently adopt a gender perspective. By contrast, migration, which represents the most frequent topic, is more associated with culture, minorities, using qualitative approaches. It also addresses issues related to environment and territory. This analysis provides insights into population studies boundaries as well as the way disciplines complement each other. In the longer term, our database should be completed with theses prior to 2000. It may participate in the constitution of a comparative international database of doctoral theses in population science.

**The Membership in the Italian Democratic Party**

Several parties throughout the world are democratizing their internal life. The most recurrent tools to this aim are the primary elections to select candidates and party leaders. This process of democratization has accelerated the decline of the party members figures. For this reason, the new key actor has become the “selectorate”, in which the members seem to have lost power compared to the figure of supporters.

This paper tries to explain the role of the party members by using survey data relating to a web-survey carried out to the members of the Italian democratic party. We interviewed more than 13,000 members with regard to their relationship with the party (participation and activism), the use of information (including new communication technologies) and their role during the electoral campaign.

**Community and/or Versus Gemeinschaft? about the Emerging Problems By the Translation of a Concept from ‘Central’ to ‘Peripheral’ Cultural Spaces. the Case of the Sociological Work of Gino Gambera**

Community and Gemeinschaft certainly made a long and prolific way along the history of social sociological theory. They still remain key concepts, in the space of these theories and also in the broader political and cultural debate. These trajectories were not linear, and were marked by the deepest divergences between cultural fields as well as within them. Thus, Dewey, the authors of the Chicago School of Sociology and Parsons, in (North)American cultural field, and Tonnies, Weber, Plessner and König, in the German one (among many other names that could be mentioned here), overlapped different layers of meaning on a conceptual construct which invariably refers to ways of living together, usually (but not always) positively connoted.

For very complex and historical reasons, it is an indisputable fact that both cultural fields (German and North-American) were for a long time (and still are even today) “central” in relation to other cultural fields, as the Latin American, which were so located as “peripheral”. In ways that still could only be exploratory, this paper aims to analyze some of the problems of translation which necessarily emerge whenever Gemeinschaft and Gemeinschaft theory were reappropriated, and create a contrasted with new meanings by different American social theories, in also different historical contexts of problematization, since the 40s of last century to the present times. Special attention will be given to the work of the Italian-Argetinian sociologist Gino Gambera, who in the 50s of the last century gave a strong impetus to what was then called “scientific sociology”, in strong connection with "modernization theories".

**Collaborative Governance in Intersectoral Strategic Planning for the Development of Healthy Public Policies: A Case Study of the Ontario Food and Nutrition Strategic Alliance**

Society’s wicked problems are complex and intractable problems whose resolution depends on a whole-system approach that involves many actors from various policy sectors. The ability to undertake intersectoral policy action rests on the collaborative processes and structures of governance. The Ontario Food and Nutrition Strategic Alliance offers an excellent example of a system-wide initiative to tackle one of society’s most pressing wicked problems: failure of the food system to support healthy living and a vibrant regional economy. OBJECTIVE: To understand how, and to what extent, a multi-stakeholder strategic alliance is utilized to create and sustain collaboration, and to understand how this contributes to undertake intersectoral strategic planning at a system level, as viewed through the lens of collaborative governance. METHOD: Yin’s qualitative case-study method is used, entailing three data-collection techniques: a review of documents; direct observation; and semi-structured interviews. Dimensions of interest include (1) stakeholder engagement in terms of level of diversity of perspectives, extent of agreement on goals, and degree of articulation of operating terms; (2) shared motivation in terms of trust, mutual understanding, and commitment; (3) capacity for joint action in terms of leadership, resources and governance structures and procedures; and (4) other factors supporting collaborative-governance sustainably. EXPECTED RESULTS: This case study will yield insights as to the enablers, barriers and lessons learned regarding the further development of collaborative governance arrangements. This knowledge will highlight opportunities to move beyond silo-based administration towards viable means of intersectoral collaboration for effectively addressing society’s wicked problems, and in particular, for building a strong and diverse food system through which to promote healthy eating, help prevent chronic diseases, and ensure both economic and environmental sustainability.

DE MUNC, JEAN* (Université catholique de Louvain, jean.de.munck@uclouvain.be)

**Human Rights as Capabilities. From Political Philosophy to Sociology. CANCELLED**
In our global world, domination and critique use the same vocabulary: the “human rights discourse” has become a general framework of political conflicts. How can sociology deal with this new aspect of the “objective spirit” (as Robert Fine puts it) of our times? Sociology must overcome the traditional dismissal of human rights as an abstract universal masking Western imperialism. Nevertheless, the critique of formalism and hegemonic distortions are more than ever necessary. On the epistemological level, two discussions are to be connected: the discussion inside the political and legal philosophy on the idea of rights (Sen, Raz, Habermas...); the discussion of legal sociologists on the efficiency of legal institutions in a globalized world. The “Capability approach” to rights can be a fruitful approach if we supplement it with a “pragmatist, institutionalist and pluralist sociology. On the empirical level, we should use the Capability approach in order to overcome the legalistic approach of human rights. Implementation of rights is more than sheer application of a legal rule; social control of human rights implementation is more than the administration of policy. The legalistic approach is thus quite important. Whatever is produced as nonexistent is radically excluded because it lies beyond the realm of what the accepted conception of inclusion considers to be its other. What most fundamentally characterizes abyssal thinking is thus the impossibility of the co-presence of the two sides of the line. To the extent that it prevails, this side of the line only prevails by exhausting the field of relevant reality. Beyond it, there is only nonexistence, invisibility, non-dialectical absence. To decolonize the realm of what the accepted conception of inclusion considers to be its other.

Boaventura DE SOUSA SANTOS: Para descolonizar Occidente

Modern Western thinking is an abyssal thinking. It consists of a system of visible and invisible distinctions, the invisible ones being the foundation of the visible ones. The invisible distinctions are established through radical lines that divide social reality into two realms, the realm of “this side of the line” and the realm of “the other side of the line.” The division is such that “the other side of the line” vanishes as reality, becomes nonexistent, and is indeed produced as nonexistent. Nonexistence means not existing in any relevant or comprehensible way of being. Whatever is produced as nonexistent is radically excluded because it lies beyond the realm of what the accepted conception of inclusion considers to be its other. What most fundamentally characterizes abyssal thinking is thus the impossibility of the co-presence of the two sides of the line. To the extent that it prevails, this side of the line only prevails by exhausting the field of relevant reality. Beyond it, there is only nonexistence, invisibility, non-dialectical absence. To decolonize the West offers a fundamental theoretical synthesis to question and reinterpret the modern Western thinking.

Conceptions of Justice from Different Historical and Cultural Traditions

In my presentation I will address the following question: Considering that only a global revolution of indignation may generate an alternative to the current global civil war under way in a growing number of countries, how can we conceptualize such a revolution in a world so diverse in conceptions of dignity and liberation.

Syndicalisme Face à l’organisation: Un Paradoxe?

The trade unionism and the organization in the sense of all the decisions and the choices which structure the work maintain a critical and sometimes distant relationship. On one side, the trade unionism seems always late with regard to the organization. On the other hand, the employer holds the monopoly of choices and ways assigned to implement them, with the exception of the zones of dialogues planned with the labor union in the various committees, but we can summarize the labor-union intervention in his participation.

By leaving of cases pulled by our studies in the territorial public service, we clarify on one hand, one news forms of the trade unionism which we call “trade unionism of organization”; it is situated between the trade unionism of opposition and the trade unionism associated with the power and it differs from the trade unionism of control (Touraine, 1962). Supported by groups of exchanges and confrontations with union activists, we clarify on the other hand, in which and under which conditions the work of the union activist allows to act on the organizational causes of the organizational skids, of the degradation of the professional situations and the deterioration of the health.

The union activists are not against rules, but for working rules on the condition of participating in their training and negotiating them: on one hand, they react to the individual requests of the agents to analyze it as a fairness of the organization and on the other hand, act on the organizational deviations by trying to stand out as a normative power. The trade unionism tries to build controversies on choices and decisions taken by the managers and be recognized as competent to discuss these choices.

Brazil, Colombia, and Venezuela. Policies against Poverty and Inequality: A Comparative Analysis of Results 2000-2010

After the Lost Decade, Latin American countries started to explore innovative strategies aimed at reducing poverty and social inequality. Their search was conducted with a certain degree of independence from the dictates of multilateral organizations, which lead to two trends: (a) a renewed confidence in the state’s capacity to guide social planning; and (b) a rejection of the rigid fiscal austerity measures typical of structural adjustment plans. This study looks at three countries: Brazil, Colombia, and Venezuela and their attempts at improving the social conditions of the poor. Special attention is paid to key policies implemented by each government; Family Grant in Brazil, Families in Action in Colombia, and the Social Missions in Venezuela. Flagship policies in Brazil and Colombia are of the Conditional Cash Transfer type, whereas in Venezuela, most social spending is channeled into a direct-service model. Attention is also drawn to reforms in social security: the three countries have all procured important reforms in pension regimes aimed at allowing non-contributing citizens, such as the elderly at risk, to draw welfare benefits. The reforms also seek to incorporate informal sector workers into social security. Data for the period 2000 - 2010 reveal that each country has made advances against poverty and inequality: poverty rates have decreased and so have Gini coefficients. However, no key policies have been able to drive a substantial number of workers into the primary labor market, nor have they resulted in the expected vigorous participation by beneficiaries in the administration of policy at local levels. So far the policies’ effects have been mostly compensatory. Reforms in social security have aided some targeted populations though statistics regarding the inclusion of informal workers into social security are vague and inconclusive.

Socioeconomic Mobility and Household Welfare of Female-Headed Households in Eastwood, Pietermaritzburg (South Africa)

Drawing from life-histories of female heads of households (FHHs), this paper examines social mobility and household welfare of FHHs in the community of Eastwood, which is historically a working class community in Pietermaritzburg, South Africa. This paper broadly assesses the working and dynamics of social mobility regimes against, on the one hand, the milieu of South Africa’s increasing inequality and poverty, and, on the other, the context of increasing feminization of poverty and the workplace. As individuals squeezed by market forces and neglected by the state, I pay particular attention to the social networks and associations which female-headed households in the community of Eastwood belong to, invest in, and how they benefit from them. I also closely interrogate the kinds of exchange, sharing, reciprocity, trust and support systems that characterize these networks and associations that contribute to household welfare and socioeconomic mobility. Following Waite’s (2000:155) assertion that FHHs cannot be understood as non entities operating in a vacuum away from the broader social, economic mobility. Following Waite’s (2000:155) assertion that FHHs cannot be understood as non entities operating in a vacuum away from the broader social, economic mobility. Following Waite’s (2000:155) assertion that FHHs cannot be understood as non entities operating in a vacuum away from the broader social, economic mobility. Skills, Occupations, and Inequalities among the Europeans in Japan

In this paper, I consider the cases of skilled European migrants in Japan and attempt to deconstruct the image of highly skilled and privileged group often ascribed to them. The paper is based on empirical research of 56 migrants residing in Japan conducted between 2009 and 2012. Similarly to, for example, Shanghai (Farrer, 2010) the unwavering picture of the ‘privileged elite’ from the West is getting distorted through increasingly diverse migration flows as well as persistence of the nationalism. Whereas on the basis of their residency status or Japan’s standard occupation classification, the jobs many of my interviewees held are classified as professional or high-skilled, they often engaged in very specific jobs characterized by them. Many Europeans in the job market are seen primarily as authentic bearers of the foreign or ‘Western’ culture which is being commodified and consumed and, in a certain way, represents Japan’s modus

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
vivendi of engaging with the global world. On the other hand, access to other spheres of job market is constrained by strong expectations of the majority population seeing the foreigners as intrinsically ‘other’, temporary sojourners rather than possibly more permanent residents possessing also professional skills not related to their culture as well as particularities of the Japanese job market such as high importance of the school to work transition in the career formation.

Consequently, such a closure of the Japanese job market produces a new class of skilled migrants located in segregated job niches that are not exerting the skills for which they are praised in policies and public discourse. Their positions are less privileged and inequalities with the majority population as well as other, more typical high-skilled migrants such as expatriates are produced.

Continuity and Innovation in Higher Education. The Case Study of Sapienza University of Rome

The paper involves a secondary analysis of longitudinal data of administrative type for a description of the phenomena of student late performance and dropping out. It focuses on the batches of students enrolled in specific key moments before (from academic year 1991/1992 to 2000/2001) and after the DM 509/1999 - a drastic reform - (from academic year 2001/2002 to 2006/2007) at Sapienza University of Rome. Each of these batches (about 410,000 student enrolments) was monitored up to the official closing date of academic year 2006/2007.

The analysis takes into account ex novo enrolments, excluding both the re-registrations of students who were already enrolled at the previous year end. Longitudinal analyses (the generational approach) allow us to individually monitor students in a single generation for a number of years, reduce the risks associated with aggregate data.

The aim behind this research design is that the longitudinal perspective is able to provide an accurate frame of student curricula (that are monitored at intervals of six months) and to reconstruct the potentially relevant events to the outcomes of their university career. Longitudinal panel studies monitor the same generation of students (that is an aggregate of students enrolled during the same year) over several years; consequently these strategies are able to offer quite more accurate results because they reduce the risks related to the utilization of aggregate data.

From a practical point of view, we analyzed how the DM 509/1999 was introduced and implemented within and by the university organization (analyzing a wide variety of phenomena such as dropping out, delayed and decreasing graduations). From a methodological point of view, we came to the creation of longitudinal multidimensional models of the students’ careers, aiming at identifying the “mechanisms” through which from an initial state $t_0$ a subsequent state $t_1$ is generated.

Police Officers’ Conflict Management and Restorative Justice

Generally, citizens call the police when things happen that deviate from normality and (may) lead to all sorts of conflicts. In particular, interpersonal conflicts have to be solved by police officers. Consequently, police officers’ respective conflict resolution activities need to be sustainable and fair to prevent conflicts from new and repeated outbreaks. Restorative justice approaches refer to the idea of sustainable and fair conflict resolution, e.g., by defining principles of restorative justice. However, there is only scarce literature on police officers’ daily conflict resolution. Additionally, there is little literature on the link between conflict resolution by the police and restorative justice. We addressed this topic by conducting an interview study with 12 German police officers examining their view on conflict resolution and how they think about which strategies of conflict resolution were applied, and which obstacles occurred during conflict resolution. Interview data were analyzed using grounded theory methodology. The research shows that police officers use cooperative as well as dominating strategies of conflict resolution. Many obstacles are formal requirements and citizens’ role expectations of the “typical police officer”. Furthermore restorative principles like respectful communication were named as critical conditions for successful conflict resolution. This is the first study to investigate the interplay of police officers’ subjective theory of professional conflict resolution and restorative principles. Study findings can be used for police officers’ conflict management trainings.
to Sakuta, people feel shuchi (embarrassed) when they are alienated from both reference group (state) and membership group (intergroup) and lose their organisational support. As a result, these people seek solidarity that is not based on strong organisation.

Although Sakuta developed his inquiry into shuchi in line with post-war Japanese modernisation and mobilisation, in my presentation I reappropriate his sociology as an innovative theory of solidarity in the age of globalisation.

Critical Theory and its Development in Post-War Japanese Sociology

In my chapter, I examine the process of the adoption of Critical Theory and its unique development in post-war Japanese sociology from the perspective of the theoretical response to capitalist modernization. In Far Eastern Japan, nearly all theories of social sciences have originated overseas since the government opened the country to the West and capitalist modernization began with the Meiji Restoration in 1868. In general, the adoption of social theories and their unique development has natural biases resulting from the social-cultural structure and development peculiar to the adopting country. Japanese society has been characterized by a historical situation never observed in Western countries: too rapid capitalist modernization. In particular, the post-war rehabilitation and economic growth have been so swift that during the process of rapid modernization, pre-modern feudal elements co-existed with the late modern—or sometimes seemingly post-modern—circumstances of mass society. That is, the power of democratization, which was imported from the West with outside pressure after the Second World War, remained at a superficial level of society and did not reach the foundation of the social structure. Hence, Japanese critical sociologists continued to have a sense of criticism against superficial democracy, which did not establish itself firmly in post-war Japan; and it is those critical sociologists and their critical sociology that I examine in my chapter. ‘Critical sociologists’ refers to those in the field of sociology who have developed a critical social theory under the strong influence of German critical theorists such as M. Horkheimer, T. Adorno, E. Fromm, H. Marcuse, J. Habermas and A. Honneth. To explain the uniqueness of this Japanese version of critical sociology, I will introduce it in comparison with Habermas’s reconstructive approach, the concept of ‘dialectical constructivism’ or the ‘dialectical constructive approach’.

Neoliberalism, Social Christianity and the State in Singapore

This paper explores the complex interrelationship between Christian organizations and neoliberal policies in the context of the island-city-state of Singapore. It departs from an understanding of the rather than globally homogenizing, neoliberal ideas, practices and policies are embedded in specific socio-economic and politico-institutional settings and thus bring forth local variation and hybrid forms that are mutually constituted and evolving. In this regard, the Singaporean neoliberal model of governance can serve as an interesting case study as it manages to combine two seemingly opposing logics: high levels of state intervention and regulation on the one side and the strategy of pursuing economic growth at all costs through deregulation, liberalization and privatization on the other. What emerges is a type of hybrid state, in the form of the neoliberal-developmental state, where neoliberal logics of the free market and the ideal of national communism are deeply intertwined.

This form of governance has affected the relationship between Christian organizations and the state in considerable ways. On the one hand, the Singaporean government exercises strong bureaucratic and legal control over the functioning of all religious matters, therefore limiting the freedom of action for Christian organizations. Yet, on the other hand, Christianity is recognized and valued as a constructive social and stabilizing moral force within the multi-confessional and multi-ethnic Singaporean polity, which in turn has led to public-private partnerships between government agencies and Christian organizations. This paper argues that Christian organizations in Singapore have become to function as important non-state sites that do not negate neoliberal restructuring per se, but re-embed neoliberal logics by addressing social needs and providing certain social services that have gone unmet by the state. Empirical examples will be given from my ongoing Ph.D. project on Pentecostal organizations in Singapore.

Displaced Workers in the Great Recession and Not-so-Great Recovery: Gender, Race, and Class Inequalities in the U.S. Labor Market

Early in the recession (2008–2009), OECD data showed much greater unemployment among men than women in many industrialized economies, leading to a media narrative of a “mancession” whereby men were depicted as suffering much more than women. Kingle moms, non-college, and racial-ethnic minorities were due to the higher concentration of men in sectors experiencing greatest job loss such as mining, construction and manufacturing. By 2010, reports showed men doing better than women in the recovery. Looking beyond a quarterly or yearly snapshot of the recession-recovery period over time, I examine how gender inequality in the U.S. labor market increased, decreased, or remained unchanged.

The media narrative of the mancession missed complex and intersecting dynamics of gender with race and class based inequalities. Men who lost job were disproportionately non-college, blue-collar workers. As among men, certain groups of women, such as single mothers, Kingle moms, non-college, and racial-ethnic minorities, were much more likely to experience job loss and less likely to find new jobs than college educated white counterparts.

My research uses data from the 2010 and 2012 Displaced Worker Surveys (DWS), a supplement to the U.S. monthly Current Population Survey, in January of even numbered years. In this statistically representative U.S. national household surveys, individuals are asked if they lost or got a job in the previous 3 years (covering 2007–2011) due to: a plant or facility closing, a layoff, or the abolition of their position or shift. Data were collected on household and individual demographic and economic characteristics, on wages and other characteristics of the lost job, on re-employment including characteristics of the new job. I conduct multivariate statistical analyses to examine intersecting race, class, and gender effects on (a) incidence of job loss, (b) patterns of post-displacement employment, and (c) changes over time.

Mistreatment of Immigrant Workers in U.S. Workplaces: Are Discrimination Lawsuits Against Employers a Viable Remedy?

In many parts of the world, immigrant workers do not have access to the same legal protection against mistreatment by employers as citizens, and undocumented workers have less protection than “legal” migrants. Lack of access to legal protection is due in different contexts to varying combinations of shortcomings in the law itself, lack of enforcement, and to obstacles to making claims.

Currently, in the U.S., although it is illegal for undocumented immigrants to obtain employment, “illegal” workers are nonetheless protected (in principle) by U.S. anti-discrimination laws regardless of or immigrant immigration status. While there is no civil or human rights protection against discrimination based on immigrant status per se, immigrants are protected, to a degree, by laws banning discrimination based on race and national origin, as well as sex, religion, age, and disability. However, among many other obstacles, those who complain risk deportation. Additionally, immigrant workers are concentrated in low wage industry and occupational sectors where labor law and civil rights law violations are rampant.

Some scholars and human rights advocates find U.S. employment law, and the U.S. Equal Employment Opportunity Commission (EEOC) as the equal rights enforcement agency, inadequate to protect vulnerable immigrant workers. However, in recent years, the EEOC has filed and settled a growing number of employment discrimination lawsuits on behalf of immigrant workers, many of whom are undocumented. Most of these cases involve charges of sexual and/or national origin harassment. Harassment, in some of these cases includes threats or incidents of sexual and other physical assault as well as verbal and psychological abuse. The lawsuits have resulted in significant monetary awards, court-mandated workplace reforms, and protections against deportation. My research examines over 80 lawsuit settlements, asking whether and how Title VII lawsuits can or do address the legal vulnerabilities of undocumented immigrant workers.

Second Homes in Spain: Transnational Mobilities and Family Capitalization

Topic, hypotheses: Spain has a large proportion of second homes although it is not one of the wealthiest countries in Europe. There are two main scenes: the Mediterranean coast, devoted to international tourists and retirees, and the inland areas, with a much more complex dynamic. We try to show how second homes in Spain indicate family strategies of residence and mobility. These are related to consumption patterns as well as with reproductive conditions of households.

Methodology: Our research is focused on the relationship between second residences and trends of populations’ spatial distribution and mobility. A quantitative research has been conducted using data from population registers (Census
and migration flows from the Spanish Statistical Bureau). The analysis combines cross-section tests, focusing on 2001, and a longitudinal inquiry (focusing on the period between 1986 and 2008). Malaga illustrates the case of an international coastal destination developed by the real estate and the international tourism services sectors. We also examine the cases of two inland territories, Segovia (near Madrid) and Zamora, in order to contrast the role of second homes in two rural environments with different recent demographic trends. Results: In the case of the Mediterranean coast, the development of international tourism led to a real estate boom based on the purchase of second homes by foreign people. Many Spanish families also attract to buy a second home, what would be used as an asset and as a resource for family strategies (retirement of the elderly, emancipation of youth), contributing territorial restructuring processes. In the case of inland second homes, there is a great complexity based on the degree of tourism specialization and the strength of counterurban mobilities. Demographic dynamics make second homes to play either a residual function in a context of depopulation or a revitalising role for new developed areas.

Secondary Spanish Teachers: Advances of a Research on Educational and Professional Guidance

This paper constitutes a first approach to a research project submitted to the Ministry of Economy and Competitiveness, in the call for research grants within the State Program of Research, Development and Innovation for funding corresponding to the State Program for the Promotion of Scientific and Technical Research, I + D + I.

Our goal is to present the progress of an ongoing research whose purpose is to analyse the social and cultural representations that influence teachers in the role and practice of counselling students, both educationally and professionally. It means to examine these social and cultural representations in order to identify guidance models deployed and practiced by teachers, according to the characteristics and socioeconomic and cultural conditions of the environment. So, with job opportunities, aspects such as the location and characteristics of schools, the social origin of the school population, its cultural capital and ethnic background, or gender ideology, become relevant in this analysis, due to its impact on the interaction between students and teachers and, consequently, in the construction of the valuations that teachers offers about students.

In this first approach to the phenomenon, we have chosen four autonomous regions: Balearic islands, Basque Country, Andalusia, and Madrid to try to develop a typology of teachers' and curriculum models, considering the existing socio-economic sectors in the Spanish territory.

TATE, JANE (Homeworkers Worldwide)

**A Federation for Informal Workers: Networking Workers Across Global Labour and Global Production**

This paper positions the Federation of Homeworkers Worldwide (FHWW) as a new organisational form within the global labour movement. The FHWW collaborates with a range of union and NGO organisations to support new organizing amongst informal, low paid women homebased workers in a broad range of sectors and global regions, although a large extent of its work has been in the textile, garment and footwear industries.

The over-representation of women in informal and precarious work suggests that the gendered nature of global production remains an important site of investigation. This is further informed by the challenges to understand how workers may gain legitimacy or assert influence in the global production network (GNP). The purpose of this paper is to describe and analyse the role and activities of FHWW within the global labour movement, to understand how it supports women's networks to build new labour organizing for women. Through our examination of the efforts of FHWW in India, we illustrate some recent initiatives to establish and build organisation of Sumangali and camp labour textile workers in Tamil Nadu, India. Trade unions appear to have little presence in these mills and have been further marginalised by the employer strategies to keep unions out. NGOs in the Tirupur region have been actively campaigning on this issue since the early 2000s, but little progress has been made towards collective organisation.

The paper explores the question of why there is a need for a federation of informal workers and examines how it functions with minimal resources to work with informal worker groups, which in turn reveals important lessons for unions and human rights groups around the possibilities of organizing with few resources and employing participatory, grass-roots strategies as opposed to top-down approaches.

The Refusal of the Vegetables Consumption: A Resistance Act?

We shall present an analysis of an experimental action of supply in fresh vegetables and premises implementation, in France, by one of the actors of the food aid. This experiment is connected with the will of an appreciation of the food of the disadvantaged said social classes. The consumption of vegetables (the set of three: hunger / bad balances food / problems of health) allows to build the Other one, “poors”, as radically different from ourselves and seems to serve as measure and to « make border ». Considering the actors in presence: beneficiaries, volunteers, persons in charge of grocer’s shops, in their culinary practices and respective food representations, taking into account their routes and statuses; observing food retailings in social grocer’s shops of the Southwest and the Central France, the concrete organization and the means of the grocer’s shop, we question the idea of the lack of taste of the beneficiaries for vegetables; suspected, of having none of it, and thus of foiling the initiatives.

It is during these daily relations voluntary / responsible for grocer’s shops / beneficiaries and within the framework of the intrinsic relations of power in the food aid, as much as in routes and statuses of the profitable persons, that takes place the way the food practices build themselves.

Between the lines, we shall highlight how the border builds itself between the “good eaters” and the “bad eaters”. The representations of a “good food” revealing in hollow the “bonuses” or the “places” in the society that are for looking for those who get involved there, particularly, the volunteers and those who refuse it, to whom this action is supposed to benefit, the beneficiaries, these categories sometimes confirming itself.

Creative Parenting in Transnational Families and the Gender Diagonal

Having followed immigrant families (coming from North Africa), in France, in Belgium and in the Netherlands over long periods as ethnographic observer and biographical-narrative interviewer, I have recurrently been impressed by the centrality of the parents’ project for a better life: for themselves, for their kin at home, and especially for their children (boys and girls) whom they invest with the responsibility of carrying on further this project. This project drives all their courses of action under harsh life conditions. Deprived of “capital” such as money, education, or “useful connections” (all “objective” resources), they can only mobilize their “subjective” resources, that is to say: themselves, their energies, their reflexivity, their character and creativity. A lot of creative parenting takes place in their homes.

In patriarchal societies where these parents come from, gender contrasts are very sharp. They entail differences in the hopes and aspirations that are projected onto sons and daughters by father and mother. Initially, fathers will tend to project upon their sons their own frustrated upward mobility aspirations. They expect good grades at school. Some sons will live up to their father’s expectations, but others will not, while some of their sisters will do better. In such cases the father’s hopes will move over the years from his son to his daughter. It is this phenomenon that we have come to call “the diagonal of generations”, or “the gender diagonal”.

This comes on top of the household’s differential discrimination, which is stronger on boys. To avoid the damaging consequences of rivalries between brothers and sisters, and eventual splits, parents have to find ways to teach them to resist stigmatization (or “discredit”). We will show how family relationships are continuously shifting, under these dynamics, necessitating a continuous effort of creativity in parenting.

Analyzing Recurring Themes in a Life Story with Social Context in Mind

Every life story tells about the history of a person who has lived in a given social niche of a given society with a specific cultural model. Thus sociologists may learn a lot from it about this social niche and cultural model; especially if multiplying life stories lived in the same social context. In analyzing the life stories I have collected myself, I usually follow three main steps. First, as Bertaux (2007) indicates, I reconstruct the chronology of life events, which during the interview have usually been mentioned according to some semantic associations rather than strict chronology. Secondly, through thematic analysis I’ll look for recurring themes; their very recurrence usually signals crucial processes (e.g. discrimination, selection) out there, in the external social world. Thirdly I’ll look for hints, indices, clues about social processes out there; e.g. constraints, limits to action, social relations. In contrast, the strategies for initiating, progressing, or stopping action of Bertaux states that a life story should be read and re-read many times while focusing - and trying to imagine – patterns of social relations ‘out there’ that shaped it. I agree, but I also pay much more attention to childhood. Indeed I believe (with Wordsworth, Nietzsche, Freud …) that the child – i.e. childhood - is the father of the adult. A given childhood includes many keys which, if unraveled, will prove very helpful in deciphering the grown-up adult’s inner workings. Another issue is about turning points in the course of life. As Hareven and Masaoka have shown, far from happening out of nowhere through impact of some external event, turning points in life usually result from a slow maturation taking place in the inner space of psyche.

In France, many conflicts have marked the genesis of national parks enabled by the Law of 1960, right up to the blocking of their creation or had a lasting effect on their existence (Larrère 2009). In an attempt to overcome the local resistance that inevitably accompanies having a natural site classified as a national park, the French government passed a new Law (2006) which grants greater power to local elected representatives, explicitly recognizes the rights and knowledge of local users, and invites them to participate in actually defining the park project.

Our research into the creation of the new Calanques National Park, however, points up that the application of these new principles actually reinforces the environmental inequality that they were meant to reduce. How should we interpret this apparent paradox? The goal of this paper is to outline the interacting processes at work in the park's creation that exacerbated local environmental inequalities. We will look at both the weight of procedures and the more structural factors behind such inequality.

We will show how the consultation procedures adopted tend to reproduce the asymmetry of the public sphere (in the Habermasian sense) that developed throughout the 20th century around the protection of the Calanques. They as such helped institutionalize in the park project the dominant norms through whose lens certain uses seen as “worthy of a park”, whereas others are downgraded. In a related manner, the new National Park label has re-increased the environmental value of the surrounding neighbourhoods, further boosting their new appeal. This process has even affected the poorest areas and led to a relocation of “indigenous space” (Chirif, 2006) which seems both ever more urgent and highly implausible. Payments for ecosystem services (PES) expand as a paradigm for environmental management in the biome, REDD+ being one of its most ambitious experiments (Corbera 2012). PES schemes are contributing to change not only the local frameworks that relate access to natural resources but also the value of “natural” assets. These transformations lead to further changes in indigenous peoples’ recognition, legal rights and economic opportunities.

Indigenous peoples networks detect different praxis in order to protect themselves from dispossessionary processes (Li, 2010). Facing the national-state has always been hard for their movements. One of their main strategies to gain influence was to change the scale of their intervention (Pieck, 2006). In 2009 a proposal for “holistic management of forests”, that seeks to adapt REDD+ objectives to indigenous worldviews, is presented by their umbrella organization, the Coordinator of Indigenous Organizations of the Amazon River Basin (COICA).

States engagement in the climate regime can be seen as a ‘denationalized state agenda’ (Sassen 2006), as they actively participate in new kinds of trans-governmental partnerships and highly specialized convergence in regulatory issues. Tropical countries are adopting new institutional arrangements aspiring to recieve climate financing in the form of cooperation and new business opportunities. How do Amazonian States currently read indigenous peoples’ proposals regarding territorial management? What can we learn from indigenous movement’s practices facing green economy? Based on fieldwork both in the UNFCCC and in Peru and Bolivia, this paper seeks to contribute to a reflection on the role imagined for and attained by communities with diverse approaches to the biophysical environment.

Are National Parks Inherently Unequal? the Reform to Parks and Its First Application in Metropolitan France

In France, many conflicts have marked the genesis of national parks enabled by the Law of 1960, right up to the blocking of their creation or had a lasting effect on their existence (Larrère 2009). In an attempt to overcome the local resistance that inevitably accompanies having a natural site classified as a national park, the French government passed a new Law (2006) which grants greater power to local elected representatives, explicitly recognizes the rights and knowledge of local users, and invites them to participate in actually defining the park project.

Our research into the creation of the new Calanques National Park, however, points up that the application of these new principles actually reinforces the environmental inequality that they were meant to reduce. How should we interpret this apparent paradox? The goal of this paper is to outline the interacting processes at work in the park's creation that exacerbated local environmental inequalities. We will look at both the weight of procedures and the more structural factors behind such inequality.

We will show how the consultation procedures adopted tend to reproduce the asymmetry of the public sphere (in the Habermasian sense) that developed throughout the 20th century around the protection of the Calanques. They as such helped institutionalize in the park project the dominant norms through whose lens certain uses seen as “worthy of a park”, whereas others are downgraded. In a related manner, the new National Park label has re-increased the environmental value of the surrounding neighbourhoods, further boosting their new appeal. This process has even affected the poorest areas and led to a relocation of “indigenous space” (Chirif, 2006) which seems both ever more urgent and highly implausible. Payments for ecosystem services (PES) expand as a paradigm for environmental management in the biome, REDD+ being one of its most ambitious experiments (Corbera 2012). PES schemes are contributing to change not only the local frameworks that relate access to natural resources but also the value of “natural” assets. These transformations lead to further changes in indigenous peoples’ recognition, legal rights and economic opportunities.

Indigenous peoples networks detect different praxis in order to protect themselves from dispossessionary processes (Li, 2010). Facing the national-state has always been hard for their movements. One of their main strategies to gain influence was to change the scale of their intervention (Pieck, 2006). In 2009 a proposal for “holistic management of forests”, that seeks to adapt REDD+ objectives to indigenous worldviews, is presented by their umbrella organization, the Coordinator of Indigenous Organizations of the Amazon River Basin (COICA).

States engagement in the climate regime can be seen as a ‘denationalized state agenda’ (Sassen 2006), as they actively participate in new kinds of trans-governmental partnerships and highly specialized convergence in regulatory issues. Tropical countries are adopting new institutional arrangements aspiring to recieve climate financing in the form of cooperation and new business opportunities. How do Amazonian States currently read indigenous peoples’ proposals regarding territorial management? What can we learn from indigenous movement’s practices facing green economy? Based on fieldwork both in the UNFCCC and in Peru and Bolivia, this paper seeks to contribute to a reflection on the role imagined for and attained by communities with diverse approaches to the biophysical environment.

Indigenous Peoples Facing Climate Change Policies: The Struggle for Autonomy of « Forest Dependent » Communities

While globalization of both extractive capitalism and indigenous rights policies has deepened during the XXI century, contention over access and control of “environmental” and “natural” resources in indigenous territories is escalating around the world. How can we frame new beginnings for the struggle of these communities to receive climate financing in the form of cooperation and new business opportunities? How can we frame new beginnings for the struggle of these communities to receive climate financing in the form of cooperation and new business opportunities? How do Amazonian States currently read indigenous peoples’ proposals regarding territorial management? What can we learn from indigenous movement’s practices facing green economy? Based on fieldwork both in the UNFCCC and in Peru and Bolivia, this paper seeks to contribute to a reflection on the role imagined for and attained by communities with diverse approaches to the biophysical environment.

No/Place

This creative non-fiction essay, which is ethnographically-informed and located in critical geographic theory, contemplates remote and deeply overlooked places in Northern British Columbia (Canada) located along Highway 16, colloquially known as ‘The Highway of Tears’ because of the more than 30 (mostly) Indigenous women who have been murdered or gone missing along its paved shoulders in the past two decades. The photo-accompanied essay works in multiple textual registers, from poetry to research interviews, in order to consider and evoke a variety of emotional and material places making up the always colonially-impacted geography of Highway 16. These places include the homes of one particular family whose children are routinely removed by the provincial government, staff in women’s centres and police detachments tasked with organizing search parties for women’s bodies dumped in ditches, and vast regions of forest and watersheds routinely characterized by both industry executives and often urban dwelling nature-enthusiasts as unpopulated and open for development and discovery.

**South-South Statistical Cooperation**

This presentation proposes to examine on the current state of South-South cooperation in statistics in matters related to development. Based in part on the author’s fieldwork in Africa, Central America and South East Asia as well as a literature review, this presentation would like to reflect on some current and upcoming challenges in technical cooperation. Taking the stance of a political sociology of the state in so-called developing countries and of a critical study of the international system, this presentation will examine issues related to bilateral and multilateral cooperation between countries in the “South”.

Surveys and census are an area generally acknowledged to be still mainly dominated by “Northern expertise”. However, current research show that South-South cooperation in statistics is emerging in terms both of knowledge and technology transfer. The research presented here is part of a larger research project on the role of BRICs emerge as possible new poles of knowledge and technology sharing. Research shows that the BRICs, and in particular China and Brazil, are becoming increasingly active in the South-South cooperation in statistics and social sciences.

**Killing without Hatred? the Social Construction of the Consent to Kill in Modern Warfare**

Killing other people is not something trivial. Therefore, the military organizations spend a great deal of energy in order to prepare the soldiers to this prospect. As J. Butler recently put it, they do so by constructing “frames of war”, i.e. meaning structures that regulate the military “economy of compassion”. This paper aims at identifying the frames of war at work in the new Western way of war. The literature on this issue suggests that the Western modern frames of war are subject to two contradictory dynamic. On the one hand, modern warfare seems to be deeply enganged in the path of rationalization of violence and reification of the enemy. On the other hand, a discourse is reemerging which frames the Western wars as “humanitarian”. The paper tries to understand whether and how the latter affects the former. It does so by focusing on a particular case study: the frames of the French soldiers who participated to the war in Libya in 2011. The research relies on forty semi-structured interviews with military leaders and fighter plane pilots. The analysis reveals a dominant frame which shows great sympathy for some and total indifference for others. The paper argues, in other words, that the discourse on the humanitarian war displaces rather than enlarges the economy of compassion.

**Le « Clone » Dans Les Romans De Science-Fiction, Support De Méthodes Politiques**

Depuis que le génie génétique a initié l’exploitation scientifique et technologique du clonage, faisant passer un phénomène naturel dans le domaine de la technologie et de l’invention, le « clone » est un objet hybride et ambigu qui déplace les limites et les conventions politiques, déstabilisant les frontières animé/inanimé, humain/non-humain, mortel/immortel, objectivité/subjectivité. L’humain ou l’animal sensible semblent pouvoir s’incarner dans des artefacts. La représentation la plus populaire, dans le film Star Wars, met en scène des régions de « star-troopers », produits en masse, organisés, hiérarchisés au service d’un vaste projet impérial de domination des humains et de la nature.

On propose de s’intéresser à la situation diversifiée des clones dans les romans de science-fiction. Souvent exploités et stigmatisés, ils peuvent être les instruments passifs de systèmes imposés par domination, ou en revanche, dans quelques romans, acteurs, secondaires ou emblématiques, de luttes pour l’émancipation et l’égalité des droits.

Le clone est ainsi un outil fictionnel commode pour penser des rapports sociaux dans lesquels l’autre humain est d’abord un objet, par la faute des hommes, et doit conquérir son humanité. C’est une métaphore pour penser les rapports de domination: esclavage, colonialisme, exploitation sauvage, pour renouveler la thématique de l’accès à l’individualité par la socialisation, l’entraide et la communication et subvertir la répartition des rôles entre héros, masses et pouvoirs.

**Retournements Symboliques Autour Du Handicap Psychique: Les “Pairs Aidents”**

Le « handicap psychique » donne lieu actuellement en France, après des expériences similaires aux États Unis, au Québec, et en Hollande, à une expérimentation qui remet en cause bien des habitudes dans les services psychiatriques : il s’agit de la création de fonction de « médiateurs de santé pairs » en santé mentale, « pairs – aidant » professionnels, c’est-à-dire anciens malades, en cours de rétablissement, chargés de travailler au côté des soignants des hôpitaux ou des services psychiatriques ambulatoires pour aider les patients.

L’expérimentation est sans nulle doute portée par une utopie : déstigmatiser la maladie mentale, montrer l’utilité des savoirs et points de vue profanes dans le processus du soin, créer un nouveau métier sur la base de l’expérience de la maladie et du rétablissement. La reconnaissance et la mise en œuvre d’un type inédit de compétence remettent en cause nombre d’apriori symboliques et économiques de la relation de soin. L’évaluation de ce dispositif est en cours, mais on peut déjà analyser les difficultés idéologiques et pratiques qu’il révèle en s’y confrontant et parfois surmonte.

**Subverting Hegemonic Discourses in the Country of Origin Via Transnational Activities and Networks: The Case of Kurds**

Kurds have been present in Europe since the 1980s (see for example, Griffiths 2002; Wahlbeck 1999). They are now a sizable community, and a significant component of many vibrant neighborhoods of European cities. The movement of Kurds from Turkey has been fuelled by the suppression of their cultural and linguistic rights and their forceful displacement from Kurdish villages, as well as their facing multiple forms of deprivation and exclusion in Turkey. They now run transnational community organizations, businesses, and satellite channels; they are increasingly active and involved in the social, cultural and political life of Europe (Demir 2012). Indeed, as Hassanpour & Mojab (2004: 222) also state, ‘the Kurds of Turkey have maintained a hegemonic presence in [European] diaspora politics’. This is because Kurds in Europe have created an alternative diasporic space which has turned them into active transnational agents, enabling them to challenge and disrupt Turkey’s construction of the Kurdish problem, and tell an alternative story about Kurdishness. Gaining rights in Turkey and subverting the hegemonic discourses about Kurds in Turkey rests, partly, on how well the Kurdish diaspora can build transnational networks in Europe (and elsewhere) and thus mobilize to gain influence and revenue. Moreover, the translation of Kurdish culture, rebellion and struggle (both to Europeans and to their second and third generation) and the transnational battles of Kurds are closely interrelated. My paper will examine such processes by discussing the findings of my recent ethnographic research.

**Children As a New Witness of Disasters: Drawing the Experiences of Van Earthquake 2011 Turkey**

For a few decades the experiences of children have been gained more attention by social sciences scholars. From the social constructionist point of view, it is asserted that their everyday experiences shape their sense of self and their views of others, events around them and the society as a whole. However it must be added that the culture and region are also important factors that effect the world view and the other things listed above. In this presentation it is aimed to explore the children’s view of disaster by depending on both their drawings and expressions in the case of 2011 Van Earthquake in Turkey. This earthquake has some specific features in some senses. This City is located at the Eastern Anatolia and the density of Kurdish ethnic group is higher. Since then it can be assumed this earthquake contains some complex relations at political, social and economical levels in Turkey.

**The Politics of Religion in Turkey**
The Politics of Religion in Turkey

According to the World Values Survey, the percentage of Turkish citizens who consider religion to be important in their lives increased from 61 percent in 1990 to 81 percent in 2001. This data indicates that Turkish people have become more religious than they were 10 years ago. Although founders of sociology, including Emile Durkheim and Max Weber, have argued that religious beliefs and practices would decline because of modernization, why was this not the case? What happened during this period of time? In the face of rapid modernization, why did Turkish people become more religious?

The country of Turkey serves as a sociologically and culturally illuminating, theoretically inspiring, and historically timely case study for an analysis of the relationship between modernization and secularization. Turkey is a modern republic moving towards becoming member of the European Union. In addition to all these unique characteristics, Turkish history is a compelling test case for the relationship between the politics of religion and collective memories of religious and secular past as well. Late Ottoman Empire (1876-1912) tried to construct an Islamic identity. The Modern Turkish republic was immensely devoted to educational and social efforts to secularize Turkish society by creating a secular national identity from its foundation in 1923 until 1950. Although these efforts were reduced after 1950 because of democratic elections, they would keep continuing in a diminished capacity until 1980. After the political and social liberalization of the 1980s, Turkish Republic tried to construct a Turkish-Islamic synthesis emphasizing collective religious memories of Late Ottoman Empire. After 1980s, reactivating collective religious memories has provided an opportunity for religious movements to emerge in Turkey. My paper examines this emergence by analyzing the relationships between the politics of religion and collective religious memories.

Women's Lives behind a Migration Story

The main aim of this study is to understand how women's lives change in terms of authority, power and gender roles after their husbands' migration from Fatsa (Turkey) to Nagoya (Japan) since the beginning of 1990s. In this regard, the research question of this study is how women's lives change in terms of authority, daily life practices and gender roles after the migration of their husbands. Otherwise stated, this study inquires whether male migration empowers women's lives, especially their controls on the household, in terms of decision-making processes in the family issues and if yes to what extent it takes place. This research question also provides an opportunity to shed a light on a further point to grasp the meaning of the whole picture of women's lives. Although, male migration has similar impacts on women's lives in different parts of the world, how do women develop different strategies from the other cases to handle with the absence of men in Fatsa? In other words, what makes this study different from the others? How do women experience the process of migration from Fatsa to Japan? Perception of the migration process by the women is essential to focus on as it can be argued that this process is the point where everything starts to changes in women's lives. The process of taking the decision of migration to Japan, specifically the city of Nagoya, and women's strategies to handle with this decision and process will be discussed from the perspective around this point.

Access to the Labour Market for the Unemployed

There are no validated effect measures that include steps before actual entry to the labour market; steps in which the unemployed may come to feel healthier, happier, more confident etc. Therefore I develop and test a graduated measure of the access to the labour market. The measure explicitly factors in a complex set of barriers assumed hindering entrance to the labour market for unemployed individuals. The measure consists of internationally recognized measures of and questions on well-being, health, and happiness supplemented by questions on e.g. subjective feeling of readiness for work. Indeed, among the group in question, issues in these areas of life are widespread, and so focusing on these aspects may show other results regarding the effects of ALMPs than previous research.

I test the measure as an indicator of distance to the labour market in three ways: 1) analyze data from a panel survey on a sample of 4,400 unemployed from Copenhagen, Denmark, with waves in 2013 and 2014, 2) assess whether the measure is a good proxy for future employment using detailed data from administrative registers, and 3) compare the measure to findings from qualitative interviews with case workers and unemployed.

In developing the measure, I draw on marginalisation theories in viewing unemployment as degrees of marginalisation from, at the one end, social exclusion from the labour market and, at the other, social inclusion in the labour market, where health and related problems act as a barriers against inclusion.

Global Relational Dilemmas and Commercial Surrogacy

Commercial surrogacy continues to be illegal in a number of developed Western countries such as the UK and Australia due to concerns about the exploitation of women and children. At the same time, commercial ART clinics patronized largely by Western clients (many from Australia and the UK) have flourished in developing countries such as India and Thailand due to the more lenient regulatory frameworks and the lower costs of services for intended parents.

This transnational commercial use of reproductive technologies is generating a range of what I call ‘global relational dilemmas’. These include the creation of stateless and parentless children when mismatches occur in countries’ laws, implications for children born of these processes, and how do women develop knowledge of their genetic or gestational origins, and concerns about how to facilitate connections between intended parents, surrogates and gamete donors across considerable cultural and socio-economic divides.

In this paper, which builds on Viviana Zelizer’s notion of ‘relational work’, and Jennifer Mason’s concept of ‘tangible affinities’, I argue that the heavily defended distinction between commercial and altruistic surrogacy in some Western countries such as Australia hampers thinking through creative solutions to the global relational dilemmas generated by international surrogacy. Based on empirical socio-research into surrogacy use byAustralian gay men, along with analysis of internet-based sources such as surrogacy blogs and websites, I explore the relational and kinship work performed by clients, managers and clinicians in commercial surrogacy settings. This is with a view to thinking through what might constitute sustainable transnational practices in family formation through commercial surrogacy that respect the human dignity of the children born, surrogates, gamete donors and intended parents.
Empirical study of Canadian engineering students, while on the other hand, research has posited a number of explanations for continuing gender inequality in engineering, including the structural features of engineering programs, the lack of female role models within engineering, and the macho culture associated with engineering.

This paper draws on material from a multi-disciplinary study which uses a variety of methods to question both women and men-students, administrators and professors in faculties of engineering in three Canadian universities, in each of which a relatively high percent (about 30%) of the engineering undergraduates are women. Based on the Canadian empirical data, we explore various theoretical explanations, seeking answers to such questions as:

1. Is gender equity a priority in the engineering programs of these universities? And if so, how is this manifested?
2. Are some of the sub-disciplines in engineering more explicitly socially relevant than others and is social relevance more appealing to women than men (as has been suggested)?
3. Do considerations of gender equity influence women’s choice of university, their decision to study engineering, their choice of sub-discipline within engineering?
4. To what extent does a stereotyped macho culture persist in the classroom, in para-academic activities and in social activities within these engineering faculties?
5. What are the implications of the prevailing culture(s) in terms of gendered inclusions and exclusions?

Women Students in Canadian Engineering Faculties and their Sub-Disciplines: Gender Inequalities, Inclusions and Exclusions - Empirical and Theoretical Considerations

Women Students in Canadian Engineering Faculties and their Sub-Disciplines: Gender Inequalities, Inclusions and Exclusions - Empirical and Theoretical Considerations

Women Students in Canadian Engineering Faculties and their Sub-Disciplines: Gender Inequalities, Inclusions and Exclusions - Empirical and Theoretical Considerations
insecurity, especially when it impacts the community’s most precious resource – children. We find that community environments matter over and above characteristics of individual families and that family and neighborhood traits combine in ways consistent with the poverty paradox. Our next steps include gaining a better understanding of the mechanisms underlying our findings as it will aid in our understanding of how community resources in disadvantaged areas can be leveraged to alleviate food insecurity and thus improve the health and achievement of children.

Health Insights Across the Life Course of Oglala Lakota Elders: From Wellness to Illness

In my research with 25 Oglala Lakota Elders (22 women and 3 men between the ages of 55 and 98 years of age) living on the Pine Ridge Indian Reservation in South Dakota in the United States, I employed a qualitative Indigenous methodology called the Conversational Method. The recorded conversations ranged between 1.5 hours and 9 hours in length. Elders were directly approached and recruited from nine elder meal sites throughout the reservation, through snowball methods with friends and family members of the elders and from cultural community events. The narratives were analyzed using thematic analysis. These American Indian elders faced great adversity over their life course in terms of social conditions and weathering the federal assimilation strategies asserted on their communities throughout the 20th Century. The elders reveal the modes of food production and food gathering living in traditional ways resided on family homesteads where they raised farm animals and grew their own vegetables. This self-sufficiency gave way to federal food programs in their adult years leading to increased experiences of chronic diseases. Modern life on the reservation has moved away from communal living and caused a great deal of strain on health of the elders. Many of the elders lived alone and struggled to acquire adequate healthy foods, which negatively impact their physical health. Additionally, the elders had limited access to formal health care for much of their lives and they traced the early years of being nurtured by their grandmothers with traditional medicine to the shift to western medical care. The elders struggled to navigate western medicine and shared the confusion of living with chronic diseases in a resource poor environment. Tracking these changes across the life course reveals sites for intervention to positively impact the health of Lakota elders.

Medicine, Hybrids and Management in European Hospitals

Abstract

This paper examines the changing character of hospital doctors and management across Europe and explores the concept of professional 'hybrids'. The relationship between physicians and managers has undergone changes over recent decades, in the wake of the now well entrenched new public management reforms (Dent, Kirkpatrick and Neogy 2012). This development, however, is one that is variegated as between countries. In this paper we examine the cases of Denmark, Germany, France and England and explore some of the reasons for the similarities and differences. The paper draws largely on research collected within the European COST Medicine in Management (IS0903) network.

Rice-Fish Co-culture for Environmental, Economic, and Cultural Well-Being

Rice is one of the staple grains that feeds the modern world, and as such holds a very important place in agricultural systems internationally. Because rice is such an important dietary element, particularly in Asiatic countries, it has also become a foundational cultural component. As populations across the globe expand, however, the demand for rice has increased drastically, and while technology and modern farming methods have resulted in higher yields of rice, this comes at a severe environmental and sociocultural costs.

Rice paddies are a significant source of several environmental pollutants, including pesticides and fertilizers. Industrialized methods of growing rice have compounded this problem by pushing out more traditional, sustainable practices. Interestingly, some of these ‘old’ ways of growing rice can have similar yields to modern cropping systems while utilizing far fewer externally sourced inputs, resulting in less pollutants exiting the system and becoming problematic in the surrounding environment (Xie et. al, 2010). This could be extremely useful information given current environmental concerns, as well as providing an avenue for cultural retention of traditional systems.

Specifically, a form of time-honored rice cultivation known as ‘rice-fish co-culture’ has been studied as a way of reducing the environmental impact of rice paddy cultivation while maintaining high yields in order to provide economic security. Additionally, the reintroduction of rice-fish co-cultures offers the opportunity for cultural revival and diet diversification. For example, rice-fish co-culture was practised in China for thousands of years and was recently designated as a Globally Important Agricultural Heritage System (GIAHS) praised for its ecological, economic, and social functions. (Koohafkan, P. & dela Cruz, n.d). This system provides an excellent opportunity to combine traditional knowledge and practices in a way that will increase the sustainability and viability of small, rural rice paddy operations.

‘Aesthetic Labour’ in the Emerging Labour Market

‘Aesthetic Labour’ in the Emerging Labour Market: A case study on female labour migrants from North Eastern India to the metropolitan city of Chennai, India.

Since the onslaught of globalization, the emergence of new service industries have attracted ‘single women migrants’ towards sectors such as retail services, health care, nursing, cleaning, etc. These newly emerging service sectors have become one of the major employers of women that accelerate the process of single female migration to urban centers. Thus, globalisation has blurred out the stereotypical gender roles and reconstituting itself by inventing a new category called ‘aesthetic labour’ which is in fair demand in the labour market.

The aesthetic labour force in Indian cities is largely populated by the female migrants from the North Eastern regions of India, who now are creating a niche in certain labour markets in the metropolitan cities. Their nature of being flexible, fair skinned and the fact that they are ready to migrate from the economically poorer regions of India easily qualify them as an ideal workforce for services like retail selling and hospitality. A new dynamics of inequality is framed through this process of globalisation that prioritises soft skills (the attitude and appearance of employees) when it comes to selection and performance evaluation in their respective fields. The ‘Pan Asian’ physical appearance is a central character that often explores interactions with the members of host community and they are subjected to different kinds of social evaluations and treatments from the host.

This paper would examine the process of migration of single female migrants from the North Eastern states of India to the Chennai city to see how the aesthetic labour market functions these women migrants negotiate and reconstruct their gender roles and identities.

AUTOBIOGRAPHICAL NARRATION IN TURKISH WOMEN WEBLOGS

AutoBiographical Narration in Turkish Women Weblogs

Last decades have witnessed a shift in the textual genre of life narratives from conventional biography to autobiography. Both the feminist qualitative researches and the quantitative data on the profiles of weblog users reveal that this shift from biography to autobiography also led to a remarkable transition from a male domain towards the female one in life narratives. Moreover, in the era of digital media, new communication technologies also created significant changes in the form and content of “writing about oneself”. They have enriched the forms of expression through new textual and audio-visual supports. Besides, the intellectual and emotional mood of the autobiographic texts has also changed in a considerable way. Autobiographic texts of today, which are framing a new kind of “private publics”, are roughly being generated in the light of certain dichotomies such as the present versus the past, fictional versus factual/real, life versus death, whole versus partial, Erfahrung versus Erlebnis (in terms of Benjamin's conceptualization), and intimacy/subjectivity versus objective distance.

Moreover, today not only the celebrity/famous people but also ordinary people can share their autobiography through the internet. Hence, it is possible to speak about a kind of democratization through the new media also in terms of acting as autobiographical persons.

In this paper, following the main path determined and marked by this ongoing shift, I will attempt to analyse Turkish women weblogs in the context of “autobiographical narrative” and the “construction of the self and identity” with regard to the controversial discussions on empowerment through new media.

Food Supply Chains, Refrigeration and Performativity

This paper explores food supply chains through the lens of refrigeration technologies and systems and examines how they have influenced approaches to food. The revolution of the household refrigerator was introduced in the 1920’s. Refrigeration of food is now so pervasive that it influences what we eat and has shaped understandings of “fresh”. Callon’s notion of performativity (1998) is useful in making sense of how refrigeration has shaped our practices and understandings. The discourse around refrigeration and fresh food is both ‘outside of the reality that it describes’ and at the same time is a part of the ‘construction of the reality of an object by acting on it’ (Callon 2006). The increasing length of food chains and reliance on fossil fuelled systems of handling, storage and transport of food reinforces feelings of increasing time space compression (Harvey 1999) and peoples’ remoteness from their food supply. This separation from food also is also connected with increasing reliance on food packaging and pre-preparation techniques which are an inherent part of global food supply systems. The types of foods that are available and transported globally, have implications for greenhouse gas emissions; food waste; food security and nutrition and health among others. In a world where food availability and price is heavily determined by agro-industrial corporations, an examination of the social implications of further economic concentration in our food supply sector is needed.

Language Codes and Production of Meanings in Emergency Calls of Domestic Violence

Violence against women is a world spread phenomenon. Even in modern Western societies domestic violence is transversely present and affects not only lower classes, as it could be believed, but also women of upper-middle classes, different culture backgrounds and origins. The emergence call is a crucial mechanism to assist women when there is an aggression. For instance, these calls have been centralized in call centres (112) in Catalonia since 2007. Professionals of this service have structured violence situations into codes with institutional meaning. We are wondering how this service is implemented, the different actors involved, which are the procedures to decide that a woman is in danger. Structuring codes implies to produce meaning for the different agencies involved (police, health services, woman agencies…), i.e. how codes should be used to measure and the efficiency of the service, in terms of the response to the emergency and its quality. Even though Catalonia is one of the regions which has increased the most the number of denounces (Informe anual del observatorio estatal de violencia, 2007), there is still a debate among professionals about whether is better denounce or not. That is due to the fact that it implies a double victimization for the woman. Therefore, it is important to denounce in the following hours or day after the aggression, in which case this service has an important role in the process and achievement of the goal: the security of women.

Social Movements in Kenya: Navigating Between Individual Motivations, Visions of Social Movements Organizations and Targets of Collective Action

Are social movements’ necessarily political actors that exist for a certain period of time before they disperse or transform themselves in institutionalized organizations? How does the organizational structure changes, and how do different individual purposes and organizations visions correlate and shaping social movements’ claims?

Transformation processes as well as their trajectories will be described and analyzed in the paper proposed. In order to explain the relation between organization and movements it is important to consider the contradiction between individual behavior of activists, organizational missions and social movements claims as well as their specific historical and political context. We use empirical data to analyze the meaning and modality of student’s and women’s movements in Kenya. The movements transformed themselves over certain periods of time and due to their specific political, societal, cultural and historical settings.

In the case of student movements the students changed themselves from a de facto opposition to the one party system in the 1980s to a current organization which is influenced by and connected to national politics. Current student leaders in Nairobi, for instance, are sponsored by national politicians and are integrated in clientelistic structures of Kenyan politics. Individual purposes of students seem at least partly in contradiction to organizations aims.

The example of women’s movements in Kenya shows how activists negotiate social movement claims in a contradicting field of international norms of women’s rights, the guidelines of donors and individual targets. A reasonable chance of social movement’s success decides about the strategy of action and to what extent they seize upon an issue. (Abstract together with Anna Deutschmann, University of Vienna)

Student’s and Women’s Movements in Kenya Transforming the Political Landscape

Social movements are an important part of the political landscape in Kenya. For instance, social movements have been strong forces during the struggle against the authoritarian rule in the 1980s, while they remained co-opted before. Social movements transformed themselves over certain periods of time and due to their specific political, societal, cultural and historical settings. The particular historical relation between social movements and the state shapes the impact of the activism and limit their contribution to the democratization process.

In order to explain the state-society relations we draw attention to the political environment social movements and in particular social movement organizations (SMOs) face in Kenya: First, SMOs fill political gaps left open by the state, such as the provision of extensive social services in fields where the state is not sufficiently active. With support of international donors, SMOs provide social services based on their responsibility. Thereby, they de-legitimize the state and the ownership for development processes. Due to the fact that social movements highly depending on the support of the donor community, SMOs ensure accountability towards the donors rather than towards the state or the citizens. Furthermore, SMOs undertake the political recruitment for parties. SMOs are important vehicles in order to develop the profile of political aspirants and to gather political loyalties by adopting SMOs visions or using existing recruiting networks of social movements.

Based on field studies in Kenya, two case studies - the student’s and the women’s movements show the structure and impact of social movements in Kenya. In order to explain to what extent social movements shape the democratic processes we analyse the particular relation and interaction between social movements and the state.

Managing Communication Access in Health Care: Who’s In Charge?

Disability rights activists have made substantial progress in securing the rights of citizens with disabilities. In the United States, the landmark Americans with Disabilities Act, passed in 1990, stands as both a signal achievement of that movement and also the foundation for future efforts. As with any legislation, however, achievement of the intent of the ADA—full social inclusion for people with disabilities—will depend on the implementation of the legislation, a fundamentally social process. This paper focuses on deaf patients’ experiences of health care in the United States, and on the responses of health-care professionals and facilities to the ADA mandate to provide access. Drawing on interviews with professionals in different positions within the health-care hierarchy, I examine policies and practices. The results suggest that managers and front-line professionals must navigate a web of competing mandates as they confront communication differences, and that well-intentioned policies may sometimes give the appearance of access while significant problems remain.

Disaster Exercises and the Shape of Organisations

What is the relationship between disasters and organisations? Does it matter, whether a disaster preparedness organisations prepares for floods or for earthquakes? Does the organisation itself conceive itself in the light of particular disasters? Or did so-called all hazards approaches solve the problem of organisational diversity matched to particular disasters?

The problem we have to confront here is two-sided: From the viewpoint of disaster studies, the question is simply which organisations are best suited to tackle disasters. Yet from an organisational perspective, it is clear that from a comparative and historical viewpoint, disaster organisations evolve according to their own logic, tied as much to particular (local) organisational models. Moreover, particular organisations may have evolved for one type of disaster and may not generalise with others.

A particular problem here, which distinguishes disaster organisations from other organisations, is that most disaster organisations need to operate usually
in the absence of their main object, i.e. actual disasters. Most of the operations take place with stand ins for this object, as in exercises. The problem then becomes how enactments and representations of disasters in exercises shape organisations.

In our presentation we compare disaster preparedness organisations in the UK, Switzerland and India and analyse how their organisational structures reflect varying disasters through the lens of exercises. We report from ethnographic studies among state disaster organisations in these countries. We pay particular emphasis on how exercises are adapted to particular disasters and how these disasters structure organisational routines, but also how disasters are viewed through the lens of the feasibility of exercises.

**Young People, Youth Work and Inequality in Austerity Ireland**

At the outset of the 21st century Ireland experienced the unprecedented economic boom of the short-lived ‘Celtic Tiger’ followed by a precipitous collapse and a protracted period of austerity, disproportionately impacting young people. Meanwhile the youth population, unlike much of Europe, is projected to increase by more than one third in the coming decade. However, there is a return of net outward migration, the highest among the most qualified young people. For the least qualified, options of all kinds are severely limited and unemployment the highest in living memory. Rather than celebrating the country’s ‘demographic dividend’ media commentary and political discourse portrays the dangers of a ‘lost generation’.

We explore the circumstances of diverse young people in Ireland and how long-established inequalities are persisting while new ones are emerging. Case studies of youth work responses to class, gender, ‘race’ and ethnicity, disability and sexuality show contrasting levels of attention to, and action on, different forms of inequality. A focus on LGBT issues has increased greatly while gender rarely features prominently either in policy and practice fora. Despite examples of excellent work with ethnic minorities, a comprehensive intercultural strategy for youth has never been adopted at national level. Action relating to disability remains patchy and underdeveloped within generic youth work organisations; and class inequality continues to be addressed (if at all) primarily through the prism of ‘disadvantaged youth’. On the other hand, recent policy statements relating to youth place a greatly increased emphasis on human rights, equality and diversity as disadvantaged youth’.

On the other hand, recent policy statements relating to youth place a greatly increased emphasis on human rights, equality and diversity as disadvantaged youth’. On the other hand, recent policy statements relating to youth place a greatly increased emphasis on human rights, equality and diversity as disadvantaged youth’.

**Sociopsychological Map of Tunisian Bilingualism**

The Tunisian society uses two languages: Arabic its native/national language and French as its colonial language. Written and oral presence of these two languages in Tunisia create two types of bilingualism: 1- a bilingualism which does not blame the use of French instead of Arabic among Tunisians. This bilingualism is the most widespread. 2- a bilingualism that avoids the use of French between Tunisians. Only a very tiny group of Tunisians stands for this. The two bilingualisms are also associated with two forms of ‘Arabization’. Sociopsychological analysis shows that bilingualism 1 continuing prominence in Tunisia is the outcome of: a - the spread of French in Tunisian society during the French colonisation (1881-1956). b- Many Tunisians went to schools in Tunisia where French language and its culture were dominant. Furthermore, some Tunisians had attended French universities.

They have considered the Tunisian experience as an important test case for examining the role of the colonial language in the coloniser-colonized relationship. In this context, the study focuses on the strategic use of French and its culture in independent Tunisia. It is collected from Gharjat Stree Kelvani Mandal, a well known prestigious NGO of Ahmedabad.

**Gender Based Violence (A case study of Gujarat Stree Kelovani Mandal)**

Gender based violence is violence against women based on women’s subordinate status in society. Gender based violence includes physical, sexual and psychological violence. It occurs in both the public and private spheres.

This paper is divided into four parts. The first part shows aspects of gender based violence. The second part shows socio-economic profile of respondents. The third part shows the main causes of gender based violence and the role of Gujarat Stree Kelvani Mandal. The last part contains concluding remarks and recommendations.

**What Drives National Differences in Intensive Grandparental Childcare in Europe?**

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mainly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a mother is gainfully employed in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.

Vulnerable Workers in Action: Self-Organization and Unionism in the Work Fragmentation

In the last two decades, fragmentation, precariousness, casualization, flexibility, insecurity, individualization of the working life have become major problems for an increasing number of workers (Castel, Castells, Gallino, Sennett, Standing). In Italy, and in a large part of Europe, there is an increase in the use of temporary contracts, employment agencies, false self-employment, “poor workers” and “mini jobs”, as well as there is an increase in unemployment and dismissals due to the frequent downsizing and outsourcing processes. As result of these trends, a growing number of individuals is more and more “vulnerable”, while trade unions have many difficulties to represent a large part of workers in this changing world of work. Nevertheless, inside and outside the institutional trade union organizations, individuals try to create collective actions with the aim to affirm their workers’ rights and to improve their quality of work and life.

This paper analyzes the collective actions of “vulnerable” workers, considering individuals with a temporary job, without a job, or at risk to lose their job. We analyze the actions promoted by the unions as well as by the workers’ “self-organized networks”, with a focus on the Italian context and an analysis of the European perspective (20 interviews in Italy and 10 interviews at European level). Objectives of this paper are: a) understanding the meaning of action (Touraine) of the individuals involved in these social movements; b) understanding the relationships between “institutional” trade unions and “self-organized networks”; c) understanding the impact of these collective actions on the public sphere, especially considering the relationship between workers’ movements and democracy in the present age.

Fukushima’s Impact on India

The Nehruvian vision of development envisaged mega projects: Industrial estates, dams, highways and thermal power plants. These necessitated acquisition of natural resources, often the livelihood base and safety net of the poor. Economic growth was compelling enough to overshadow environmental and social consequences of population, economic reforms and opening up of markets led to more demand for power. This inexorably led to the nuclear energy option, despite opposition.

Fukushima has altered the terms of the debate over the choice of nuclear power and has challenged the traditional notions of ‘development’ and ‘public interest’. It has triggered a re-prioritizing of issues. Safety has become an overriding concern. Fukushima became a weapon in the hands of people’s movements and intellectuals. The disaster is being repeatedly cited as a warning to the proponents of nuclear power. As the people battle the state, it has become more defensive. It claims highest standards of safety. It also offers enhanced compensation. When its attempts to mollify people fail, it becomes repressive. Women, children and men were arrested and beaten up; NGOs wereوارded and in some cases their funds were frozen and false cases filed against them.

People’s movements, larger alliances and the search for energy alternatives offered by intellectuals and scientists are reasons for hope.

The Social Dimension of Coordinative Arrangements and Work Organization in the Export Chain of Grapes and Mangoes from the São Francisco Valley, Brazil to Europe

Since 1980’s the São Francisco Valley region in the Northeast of Brazil has been going through a period of accelerated shifts. The structural transformations based on public investments in large-scale irrigation infrastructure boosted with the singular results in exports. This way a semi-arid area earlier dominated by extensive live-stock ranching and small-scale river side agriculture and fishing was turned into a pocket of production of value-added agricultural commodities such as mangoes and table grapes. Phenomena related to these shifts include the migration of individuals from a variety of social backgrounds, levels of instruction and technical capabilities inserted in a complex array of productive functions from rural wage labor to sophisticated logistic systems. Drawn by their perspectives on local potentials these social actors are since then entangled in the region’s routes of development that cut across different levels and priorities accruing simultaneously from local and global determinants. Central for reflecting this context is the conceptualization of particular institutional arrangements found in global chains of fresh fruits. These arrangements are understood to constitute co-ordinative mechanisms organizing what, how, how much, when and the means of transport of given products. The aim is to investigate how social actors are involved in this export chain experience and tackle dilemmas of coordination with consequences for the configuration of production and labor. The research is based on the collection of qualitative data. Furthermore, the research work followed a methodological strategy informed by Grounded Theory’s core principles. Generated insights illuminate on an array of rationales of evaluation
Youth policy is a relatively new and challenging phenomenon studied under various contexts. In the context of EU studies, the youth policy is seen as system of the complex interactions between domestic, transnational, and supranational actors in the youth field. The young people require a new attitude, that means seeing youth policy across traditional sector boundaries and from youth perspectives. Currently, the main issue of youth policy implementation is the problem to organize an efficient interaction between different institutions and stakeholders across levels and sectors.

The important task of the paper is to present Estonian experience of the implementation cross sector integrated model of youth policy. The objectives of the paper:
- to explore how the main actors of youth policy identify cross sector integrated youth policy, their attitudes, views about it;
- to analyse how is youth policy playing out across vertical levels or horizontal levels of governance. If it is not working well and if so why? Consideration of and barriers to better implementation of integrated youth policy;
- to share good existing practices of cooperation between various stakeholders in the youth field and to introduce the key tools for good cooperation and participation in youth policy.

The main theoretical conceptions that are used in work:
- Simona Piattoni multilevel governance framework to study vertical and horizontal dimension of cooperation in Estonian youth policy.
- Howard Williamson theoretical approach “the five Cs” to characterize Estonian youth policy.

The analysis is based on the results of semi-structured interviews and 1 focus group with experts from youth field in Estonia. The survey examined the following issues:
• Knowledge about integrated youth policy across various stakeholders,
• Contribution of main stakeholders in developing Estonian youth policy
• Cooperation between stakeholders.

Youth as youth policy actors: options of youth participation in Estonian youth policy

The Challenges in a Fragmented World of Achieving a Holistic Approach to Urban Planning for a Sustainable Future

In our ‘complex, fragmented urban world (Stoker)’ global problems are generated at the local scale and should be solved there too’ (Condon). Yet, neither governance nor policy respond to these problems, while political systems focus on short-term rather than long term benefits. Held emphasises ‘the need for a strong public sector, and the requirement for multilateral governance’, while acknowledging ‘conflicts between economic development and the strengthening of civil society’. Mcintyre-Mills argues, ‘policy and practice need to consider social, economic and environmental implications for all life’. The field of urban planning exemplifies this. Key issues of democracy and participation in public policy making at local and regional level, the role of the private sector and the balance of markets, government and civil society, and a containerized approach by government, results in much urban planning failing to recognize future consequences of current choices.

Any approach to resolve this complex mess and balance the state, market and society requires, as Mcintyre-Mills says, ‘a democracy/governance cycle that spans conceptual, spatial and temporal boundaries’. At the same time democracy needs to change to meet the convergent social, economic and environmental challenges. Mcintyre-Mills recommends ‘both centralized controls to protect the global commons and decentralized engagement to test out our ideas’. Urban planning also needs success stories, and digital communication can potentially include more voices, like any engagement it works best when complementing other processes and built around the needs, goals, and concerns of the potentially engaged’ (Leighninger).

Sarkissian therefore argues that urban planning needs to take a holistic approach, ‘taking into account multiple layers and components of social systems’ and to be long term focused.

Creating Hackney As Home: Youth Perspectives on Gentrification in London

This paper focuses on how studies of and with young people contribute to our understanding of contemporary urban development and gentrification. Within urban centres, demands from competing stakeholders have led to juxtaposing expectations of space use and a concomitant potential for everyday conflict between residents, local authorities and developers. These processes of change are being documented through various approaches but there remains a need for more research into how young people experience this urban transformation and what this means for urban theory and practices of development.

The Creating Hackney as Home project, working with five peer researchers, has used participatory visual methods to document young people’s experience of gentrification in the London Borough of Hackney. This area has been marked by rapid transformation, given its location close to the financial centre of the city and the Olympic site. The project found that young people maintain an ambivalent relationship with this locality, recognising that changes can be beneficial but ‘not always for them’. Feelings of exclusion from planning processes and displacement from their neighbourhoods were matched by expressions of comfort in new public spaces and shops. Participants noted the uneasiness generated by changing demographics, such as the movement of creative industries and young urban professionals into the borough, as well as the skills necessary to adapt to these new circumstances. In conclusion, the paper highlights the complex, ambiguous processes of growing up in post-industrial cities.

Project information and the films can be found at: www.hackneyashome.co.uk

The London Borough of Hackney has become iconic of the intensity of change in contemporary cities, marked as it is by high levels of mobility, urban regeneration, cultural diversity and social inequalities (Mayhew et. al. 2011; Wills 2010). Within this context, young people are at the centre of debates on social inclusion, crime and media representations of the borough.

The Creating Hackney as Home project used a participatory approach to explore what young people expect of space and space use in Hackney, and in particular the formation of a ‘home’ in which they have a stake. The project centred on the production of films by five peer researchers who were later broadcast on the project website, linked to an online discussion forum as well as social media such as Facebook and Twitter. Moderated by the peer researchers, this online presence generated debate among young people locally, nationally and internationally.

This paper will focus on the methodological and ethical challenges that the project raised, particularly related to using social media and online technologies. The project used Hackney as Home platform brought new possibilities for participatory research but also its own set of challenges in terms of ethical practice, with social media at times blurring the line between public and private, confidentiality and anonymity. The paper will also address questions of power dynamics in university collaboration with third sector organisations and an analysis of the conditions under which participatory methods should or should not be used.

Project information and the films can be found at: www.hackneyashome.co.uk

Panchayats have been provided with the freedom to plan and execute works and is backed by substantial resources, which are at their own disposal. Ideally, the Act and the programme design reflect to bring about a radical change in the rural areas as far as employment generation and creation of sustainable assets for the villages is concerned. The MNREGA programme’s efficacy is based on the logic of using the productive capacity of rural people to build productive and non-productive capital, such as human and social capital, as assets, while simultaneously alleviating the problem of chronic unemployment and poverty. This paper is based on the study Eradication of Poverty and MNREGA conducted recently in Harda district of Madhya Pradesh. Madhya Pradesh accounts for 23 percent of the total tribal population in the country. In spite of favorable resource conditions, tribal regions perform poorly in terms of infrastructure, returns from agriculture and almost all human development indicators. As compared to other sections of the Indian society, the tribal population has the lowest Human Development Index (HDI). Among the social groups, scheduled tribes (STs) have the highest proportion of the poor (43 percent), followed by scheduled castes (SCs, 50 percent). So this structural examination of the implementation of MNREGA in Bori village of Harda district in terms of development. It will explore the impact of MNREGA on the lives of tribes in Bori village and also present the ground realities related to the MNREGA.

DILLI, SINIRIN* (University of Giresun, sirin.dilli@giresun.edu.tr)

Turkey Case Study: Occupy Gezi Public Protests

This presentation focuses on Istanbul's Occupy Gezi protests that started on May 28 2013 spread via Facebook, Twitter, Friendfeed etc. The purpose of this research is to find out how and to what extent social media activism is changing the role of social actors - online and offline -. Some of the research questions to be answered are:
- Are communities more active because of the opportunities offered by digital tools?
- Have community engagement and participation improved because of digital transformation?
- What cultural and media practices of communities affected by digital transformation?
- Who are leading on increasing the use of digital tools in communities?

The protest which started on May 28, 2103 in Istanbul was against the destruction of Gezi Park, the only big green park left in the centre of Istanbul, and construction of a shopping mall instead. Protesters spread the word by using social media tools, Facebook, Twitter and Friendfeed and using the following hashtags: #ayagakalk #geziparki #occupygezi. In short time the protest became an international news issue. Within hours their page was liked by hundreds of thousands of people and by the end of the day, Occupy Gezi Park became world news. Nevertheless, the coverage of the Taksim Square protests will not be remembered #ayagakalk #geziparki #occupygezi. In short time the protest became an international news issue. Within hours their page was liked by hundreds of thousands of people and by the end of the day, Occupy Gezi Park became world news. Nevertheless, the coverage of the Taksim Square protests will not be remembered - reassembled through devices, procedures, and mediums; crystallising around specific issues, or topoi. Highlighted are the processes of how publics are created, and the many small, mundane acts and things that support these. 'True' public space has therefore a performative and ephemeral quality, that only exists in an instance when a public space is temporarily supported, or even convened into being by a physical setting. In such a moment a public space turns into more than just a state-owne venue of accidental, amorphous sociability and begins to take on a broader collective, often political, relevance. This paper is interested in the transformative potential of such public spaces and examines the myriad of new commons in Tokyo, having recently sprung up in the form of collective houses, artists communities and others places. Here people are testing new modes of sharing time, goods, skills and spaces beyond state and market — prefiguring new models of post-consumerist society in privately owned settings. Although neither explicitly political, nor fully public, arrangements like these create new affordances, and social capital that may later become pertinent; transforming society in many small, quotidian, pragmatic steps.

DIMMER, CHRISTIAN* (The University of Tokyo, Chr.Dimmer@gmail.com)

Relational Place-Making, Actor-Networks and the Emergence of Tokyo’s Sub-Centre Shibuya

Much has been written about globalization and its effects in Tokyo. While some have identified a familiar neoliberal, entrepreneurial forms of governance as response to pressures of global competition, with big corporations playing a major role in urban restructuring, national government, cheer-leading and local governments increasingly marginalised (Sorensen 2003, Jacobs 2005, Waley 2007), others have emphasised Tokyo’s rootedness in local policy frameworks and a distinct development state that evade universalistic narratives (Saito 2003, Fuji 2011, Tsukamoto 2011). This paper seeks to contribute to these discourses. While existing studies tended to be macroscopic and quantitative, this research focuses on the making of one major place in Tokyo—the Shibuya Sub-centre—in the long durée. It traces systematically how contestation and collaboration between different actor-networks over history led to dominating rationalities, legitimising discourses, and established political territoriality. The paper maps the ongoing space and places beyond state and market — prefiguring new forms of counter hegemonic struggles within current processes of accumulation of capital from a non-Eu- rocentric perspective. In this paper, I anticipate a conversation between two approaches to resistance: Decolonial School and Open Marxism. By constructing the imaginary dialogue between these two perspectives I identify their theoretical strategies, limitations and mutual misrecognitions that prevent fruitful cross-fertilisation, in order to delineate a new direction in the study of counterhegemonic politics and social emancipation. To DS it is indispensable not only to recognise particular trajectories of experience of power, oppression and domination but also to overcome both Eurocentric and Third World “fundamentalism” (Gros 2008). Marxists and post-colonial theorists need to distinguish that movements in the South are struggling against. However, a DS fails to consider the material processes of emergence of counterhegemonic pluralisr resistance within and against new forms of accumulation of global capital. (Open) Marxists and radical political economists offer an adequate critique of global capital. They explain how current forms of ‘accumulation by dispossession’ (Harvey) and ‘crisis’ in capitalism have changed the experience of oppression, exploitation and resistance. Yet, are we aware of the epistemic distortion implied in the (North-centric) character of their critique of capital? I offer the term ‘Decolonial Marxism’ to designate a form of critique that bridges diverse forms of counter hegemonic resistance within current processes of accumulation of capital from a non-North-centric perspective. ‘Decolonial Marxism’ offers a new understanding of pluriversal forms of resistance against and beyond global. I also contend that Neozapatomism constitutes the practical and political embodiment of Decolonial Marxism for it bridges the struggles of indigenous, rural, urban counter hegemonic struggles, in the North and South, challenging in practice, the theoretical divide and allowing the incorporation of movements’ own theorising into the critique of capital.

Danish Exceptionalism: Explaining the Unique Increase in Social Trust over the Past 30 Years

Contrary to the general trend in most countries, social trust has been rising steadily in Denmark for the past three decades. The purpose of this paper is to understand this development. Our analyses show that the rise in trust can partly...
be attributed to generational differences, a rise in education, an improvement in the quality of state institutions, and the trust in these institutions among citizens. The analyses build on data from a number of Danish surveys, including both a cross-sectional and a panel survey.

**Ethnic Diversity and Social Trust: The Role of Exposure in the Micro-Context**

In this paper we argue that residential exposure to ethnic diversity reduces social trust. Previous within-country analyses of the relationship between contextual ethnic diversity and social trust have either been neglected or have focused at the level of aggregation, concealing substantial variation in actual exposure to ethnic diversity. In contrast, we analyze how ethnic diversity of the immediate micro-context – where interethnic exposure is inevitable – affects trust. We do this using Danish survey data linked with register-based data, which enables us to obtain precise measures of the ethnic diversity of each individual’s residential surroundings. We focus on contextual diversity within a radius of 80 meters of a given individual, but compare the effect in the micro-context to the impact of diversity in more aggregate contexts. The results show that ethnic diversity in the micro-context affects trust negatively, while the effect vanishes in larger contextual units. This supports the idea that interethnic exposure underlies the relationship.

**Mapping the Modern Chinese National Identity through Celebrity Body: The Rise and Fall of the Sporting Hero Liu Xiang**

In the globalization of modern sports, celebrity sports athletes have acquired a stardom equal to that of entertainment icons. Celebrity athletes serve the role of national representatives and shouldered the responsibility to win glory for the nation. This acquired identity has put elite athletes under the media limelight, and celebrity sports stars are constantly subjected to media scrutiny and framing, especially when they fail to live up to national expectations. Discourses of the elite sporting bodies are “characters within a set of narratives” (Laclau, 1997, quoted in Whannel, 1992: 121), and the formation of sporting celebrity is “intrinsically tied to the rise of the modern nation-state, yet both in reality the nation-state has only increasingly come under pressure as the dominant frame for the organization of political and sporting discourses alike”(Sandvoss, Real & Bernstein, 2012: 11-12).

This paper maps the media discourses surrounding Chinese 110m hurdler Liu Xiang (刘翔) from his record-breaking success in 2004 to his two-times withdrawal from both 2008 Beijing and 2012 London Olympics. Data were collected from two major Chinese newspapers: People's Daily and Titan Sports. Analysis also draws from data of semi- constructed interviews with 13 Chinese sports journalists regarding the myth surrounding Liu Xiang. Through in depth research, it provides 1) a comparative content analysis of the attributes to his body before and after his failed performance within the frenzy of Chinese Olympic success in Athens, Beijing and London; 2) an account of the production site for the media representation of Liu Xiang through journalists’ interviews; 3) a discussion of Chinese national identity projected through the discourse formation of Liu Xiang.

**A Duboisian Dogma Appropriate for Addressing Social Context and Global Health: The Case of Cardiovascular Disease**

W.E.B. Du Bois (1906) was the first sociologist to show “social context” was a major mechanism driving racial differences in morbidity and mortality. The problems identified in Du Bois’ empirical studies “The Philadelphia Negro” and “The Health and Physique of the Negro American” have continued relevance for understanding the underlying factors driving race/ethnic disparities in health presently. Using two of his seminal projects as frameworks, this paper uses empirical evidence from 3 secondary datasets to investigate the role of “social context” in cardiovascular disease, measured by hypertension prevalence, for race/ethnic groups in the United States, Canada and South Africa. Findings suggest African American hypertension rates remain higher than whites (OR=1.48; CI=1.47,1.48), that are explained by education, smoking, drinking, age, sex. For South Africa, colourures (OR=1.44; CI=1.44,1.44) and Asians (OR=1.43; CI=1.43,1.44) had higher hypertension rates compared to Whites, that were explained by heavy drinking and smoking. In Canada, “visual minority” groups had higher hypertension rates (OR=1.11; CI=1.02,1.21) compared to whites that were explained by education, health behaviors and age. This paper proves the factors implicated in high mortality rates for African Americans identified by Dubois, continue to be the same factors driving health disparities for Blacks, marginalized race groups and “visual minorities” presently. Conclusions challenge scholars, researchers and public health professionals to think critically about how to address race/ethnicity and racial subjugation in global health policy in order to move forward to improve population health in varying geographic spaces, particularly in countries with socialized medicine.

**Black and Executives in France : Straw Women?**

In France, the managers assume autonomy, high hierarchical constraints and progression within the organization (Flocco, 2006). Paradoxically they are both filled and devoid of these attributes. They have a power which is not real. They can act with a limited and confusing scope. Their initiatives remain uncertain. (Cousin, 2008). A current qualitative survey with Black women graduates in public and private French companies provides some answers to the following questions: Do they actually chose their own rules of action? Their potential autonomy is it effective and proven? What are the forms of objective and subjective requirements which they face? Are they the actresses of their own careers? (Flocco, 2006). In labor relations, the “ethnic imbalance”, issues of sex, class and race, lead some employees to refuse the authority of people that they perceive as dominated (De Rudder, 2000). Than, Black women graduates often occupy functional jobs with no command and / or financial responsibility, when they are not isolated from collective work and managerial. The French scientific knowledge production promotes distance vis-à-vis the object. Nevertheless, I highlight the heuristic value of the standpoint epistemology (Mathieu, 1991; Juteau, 1981, Haraway, 1988). My epistemic advantage (Hartsoc, 1998, Harding, 1990; 2003) and central and my work is likely to be returned to, as a sexualized and socio-political subversion, and excluded from academic recognition (Bourdieu, Morrison, 2000). This epistemology denies the rift between commitment and sociological knowledge (Gilli, 1981; 1992; Delphy, 1998; 2001) and raises the issue of race and gender diversity in academia (Essed, 1997, 1999). Considered “unscientific” by “the White North Western male bourgeoisie “, this approach questions both the producer of knowledge and his object. In French sociology, it is considered harmful (Boudon, 2001) and auto-theorization remains marginal. The issue is: How am I represented, and how do I self- represent myself outside the usual frameworks, based on a theory of personal experience (De Lauretis, 1987)? I aim to produce an acade- mically valued knowledge from practical knowledge, and in a process of translation of subjectivities. As an Afro-Caribbean researcher in “a sexualized and racialized world” (Morrison, Din, 1994). I use my epistemic advantage, in order to produce a counter- hegemonic knowledge of the social relations of gender, race, etc. inside the academy (hooks, 2000; Bill Collins, 1989) in France.

**The Role of Social Protection Policies in the Food Security of Farmers and Agricultural Labourers**

The role of social protection policies in the food security of farmers and agricultural labourers.

Jane Dixon, PhD
Senior Fellow, National Centre for Epidemiology and Population Health, Australian National University

Cheap fresh food provokes a conundrum: it can provide higher levels of nutrition than if the food was more expensive but it can also lead to inadequate and unsustainably low farmer livelihoods. What is good for consumer health, in terms of fresh food availability and affordability, is not necessarily good for agricultural sector worker incomes or health. Farmers now constitute a growing proportion of the world's poor. It is in this context that numerous international agencies argue that food security is first and foremost a matter of human security (including income/social protection and universal health coverage). This paper outlines arguments linking food and human security and social protection being made by the World Health Organisation and the Special Rapporteurs on the right to food and on extreme poverty and human rights. It also describes the wider applicability of The WorldFish Centre’s recommendation that poverty and food insecurity grow in fisheries sector prosperity to systems of racialized capitalism. This served as the basis for cross-class racial and national alliances to resist anticolonial and antiracist social movements in order to maintain group-based privileges. Over the past half-century, the increasing pace of globalization and the expansion of neoliberalism have placed dominant group working classes in an increasingly precarious social and economic position. This has included a rearticulation of the “racial contract” and the increasing alienation of dominant group working classes. In this paper, I analyze the nature of this new “racial contract,” the rise of reactionary social movements and the prospects for progressive social movements.

DOANE, ASHLEY* (University of Hartford, doane@hartford.edu)

Alienated Consciousness and Dominant Group Racial-Ethnic Identity

The evolution of dominant group racial-ethnic identities is a key factor in understanding domination and intolerance. The historical and cultural legacies of nationalism, racism and ethnocentrism was an important element of global capitalist development that was grounded in colonialism, enslavement, and other forms of domination. Ruling elites fostered what Charles Mills has called a “racial contract” in which dominant group working classes received limited social and economic privileges in fisheries sector prosperity in return for their acquiescence to systems of racialized capitalism. This role of neoliberalism has placed dominant group working classes in an increasingly precarious social and economic position. This has included a rearticulation of the “racial contract” and the increasing alienation of dominant group working classes. In this paper, I analyze the nature of this new “racial contract,” the rise of reactionary social movements and the prospects for progressive social movements.

Mentally Disordered Offenders’ Perspectives on Their Level of Risk to Others

Mentally disordered offenders subject to section 37/41 of the Mental Health Act 1983 (England and Wales) are subject to conditions and restrictions operated by the Ministry of Justice. The legal basis for such an order is that it is “necessary for the protection of the public from serious harm” and mental health services are tasked with identifying, monitoring and minimising mental health risks in order to maximise public safety. Relatively little has been written about the way in which this group of offenders understands and makes sense of their own level of risk. This paper draws on original research with mentally disordered offenders subject to this order and demonstrates the way in which they sought to dignify and explain behaviours that had been identified as risky by others. It is argued that offenders gave accounts relying heavily on notions of identity in order to justify their actions. I begin by examining those who explained their offending as having occurred as a consequence of being ill. I then turn to those who rejected illness explanations and examine techniques which they used to present themselves. Not all research participants fell neatly into groups of people accepting or rejecting notions of mental illness. A large proportion gave complex and sometimes contradictory accounts. Within these accounts, risk and safety were framed in a variety of ways in order to emphasise the moral aspects of service users’ understandings of their identities. Attention will be given to the wide range of strategies used to achieve this. I will explore differing ways in which participants described mental disorder, notions of risk as fate, hierarchies of risk and the use of jokes. Finally I draw a number of conclusions in relation to what this tells us about service users’ understanding of their identities.

Becoming Chinese in Indonesia: A Study on Ethnic & Nation Identities in Tangerang, Banten

Studies of ethnic Chinese in Indonesia tend to look at in an objective, general and static perspective. Imagining that all members have the same characteristics, they voluntarily acknowledge as a single community of Chinese people. The following study conducted over a number of people in South Tangerang, Banten, shows a different situation. There are many sub-groups in what collectively known as “Chinese people.” Each individual member has the freedom to identify her/himself as a member of the community. They initially refused to be known as “the Chinese,” preferred to identify themselves as “orang keturunan (descendants).” A term that draws her/him to the neighborhood of “orang pribumi (natives)”, i.e., Betawi and Sundanese. With the physical and socio-cultural characteristics more like Indonesian people in general, what they do are just convert themselves from Confucianism and or a Buddhist to a Muslim, automatically they are recognized like Indonesian people in general, what they do are just convert themselves from Confucianism and a Buddhist to a Muslim, automatically they are recognized by the surrounding community as full members. But in its development, along with their identity to Jakarta, Chinese migration from other parts of Indonesia and settled in their traditional settlement, as well as the change of Indonesian government policies that tend to be more pro-Chinese, they do the necessary efforts ranging from religious conversion (converted to Christianity), learning languages (Hokkien dialects and Mandarin), change the mentality (trying to be more diligent at work), changing profession (from peasants to traders), to improve their economic statuses (getting rich) and whiten skin color (from brown to be more diligent at work), changing profession (from peasants to traders), to learning languages (Hokkien dialects and Mandarin), change the mentality (trying to be more diligent at work), changing profession (from peasants to traders), to

WALDNER, LISA (University of St. Thomas)

Right-Wing Populist Rhetoric Among White Power Supporters In The United States

Populist rhetoric has characterized numerous movements in the United States as well as elsewhere. We draw on data collected mainly during the 1990s based on open-ended interviews and questionnaires from white power supporters. Our analysis focuses on the penetration of populist rhetoric among individual supporters rather than the framing of issues by white power leadership. Drawing especially on work of Kazin, Berlet and Lyons, and Caiani, della Porta and Wagemann, we focus on the elements of producerism, elitism, conspiracism, scapegoating, and demonization. Supporters tend to see their organizations as working class based and are critical of those at the top and at the bottom of society. The framing of the hard working white man unjustly being taken advantage of by the very rich and those on welfare may well appeal to a number of people in hard economic times. A small portion of interviewees mentioned support of the Populist Party (e.g., David Duke and Bo Gritz) and were much less likely to support upperclassmen in the movement. The penetration of populist rhetoric illustrates how more recent movements like the Tea Party are likely to be attractive to white power supporters and how the white power movement could be attractive to a certain segment of supporters of the Tea Party movement.

Japan’s Pre-War Jury Trials As Seen By the Journalists of Hōritsu Shinbun (Legal News)

In May 2009, the Act Concerning Participation of Lay Judges in Criminal Trials (“Lay Judges Act”) was enforced in Japan. This piece of legislation established a new mixed-circuit court (saiban’in) system where the verdict and sentencing in major crimes are decided by a panel comprising three professional judges and six laypersons.

The introduction of the saiban’in system is not the first experimentation with citizen participation in the criminal justice system in Japan. The two- or three-judge circuit court system functioned in early Showa Japan between 1928 and 1943.

Just like the first saiban’in trials in contemporary Japan, the first jury trials in the pre-war period attracted a significant amount of attention from the general public, academics, and journalists.

This paper describes and analyzes the journalistic accounts of the first cases tried by jury in pre-war Japan that appeared in the Hōritsu Shinbun (Legal News). The Hōritsu Shinbun articles not only contain the objective description of the jury trial proceedings and the strategies of the defense and prosecution, but also include a subjective element—the personal impressions of their authors. The observations of the authors of the articles provide readers with important insights into how the jury system was perceived by the general public at the time.

Highlighting these insights is the first objective of this paper. Outlining the features of Japan’s pre-war jury system is another. Placing the details of the functioning of the saiban’in system in contemporary Japan into a historical context is the third goal.

DOCENA, HERBERT* (University of California, Berkeley, herbertdocena@gmail.com)

A Climate for Change: The ‘Climate Justice Movement’ and the Rise of Green Capitalism

Since global warming first burst onto the global political agenda in the 1980s, a new global movement has also emerged: Environmentalists, indigenous peoples, women’s, labor, other social movements, working in uneasy, coalitions with governments of the South, have come to constitute a “global climate justice movement.”

Straddling and negotiating North-South, inter-state, and intra-state divisions, this movement has pushed for more radical globally-coordinated measures to address the ecological crises, pressed for far-reaching changes to how the international community is governed, and offered alternative visions for how the earth’s resources should be shared. They have demanded not only drastic greenhouse-gas emission reductions from Northern states, they have also called for more punitive measures, such as penalties and reparations, to counter the industrialized states’ and corporations’ insistence on more voluntary, incentives-guided market-based approaches to global environmental problems.

Critical theorists of nature-society relations which seek to explain the emergence of a neoliberal “green capitalism” over the last two decades, however, have largely ignored the human and environmental dimensions of this movement.

The paper focuses on the tenability of other forms of differentiation based on languages.

Division of Men in Uniform: Formal and Informal Bases

Police department is ideally assumed to represents a streamlined bureaucracy organized on the basis of rank, authority and responsibility, following strict principles of super ordination and subordination. Each rung in the hierarchy right from orderlies to the top brass is vertical differentiated while horizontally being homogeneous in status, powers and privileges. But such depiction of ideal hierarchy appears to be far from actually being in operation with different sections in police coming to be associated with differing tasks being in different trades. The paper focuses on the tenability of other forms of differentiation based on considerations other than mere rank and responsibilities in view of strong preferences for differentiation by sub-branches and trades within police force despite pay scales and other perks being the same across the police force for similar ranks. An investigation into preferences and their determinants or bases among police in the State of Karnataka through a structured interview of 435 men and officers of police force reveals that, horizontal inequalities operate on the lines of trades like, law and order, traffic, crime, investigation, special tasks and vigilance assignments in other Government departments. Despite similar pay and privileges across similar ranks, there are differential preferences on the grounds of importance, public authority, immunity, autonomy, visibility and the like. These considerations appear to have given rise to an informal hierarchy of branches and trades within police, based on a sense of superiority and inferiority, which in turn appear to be the bases of satisfactions, deprivations and inequalities.

Educational Expansion and Social Exclusion

Education is the most crucial component of Human Development Index evolved world over and has been viewed as a potent means, mechanism and strategy of equity and empowerment of weaker sections particularly in the context of developing economies. Despite being aware of this, educational equity has still been a major concern of all the societies. In India education has been accorded highest priority in Five Year Plans since independence and Right to Education Act has been passed recently. But realisation of educational equity for empowerment in terms of the text still appears to be a distant dream. Based on the analysis of data from Census, World Bank, UNDP, Government department reports, the paper seeks to identify the nature, extent and constraints of educational inequities with a view to provide empirical insights and inputs for future policy initiatives.

The paper further reveals that inequities in educational attainment vary significantly with religion, family occupation, parental education, residence and size of family and much against commonly held assumption, the role of gender and caste is on the decline owing to the massification of education. The analysis further reveals that expansion of education has had limited impact on inclusivity because there is still disparity in access to education that empowers which continues to be at the disposal of the advantaged sections resulting in perpetuation and in some sectors accentuation of inequalities. Equity in technical, professional and higher education appears to hold the key for inclusive development.
The effect of offline activity is inferred indirectly, by comparing structural changes in contacts) facilitating the creation of friendship ties between political opponents. Events (e.g., demonstrations) and “online brokers” (individuals with many online connections) draw upon changes in teachers’ manuals, educational handbooks, curricula, and newspaper reports, this paper examines the escalating notions of innocence and individualization attached to childhood in Ireland since the nineteenth century. The conceptual identity of, and emotional identification with, the child changes in ways that over time the classroom and curricular settings were opposed by the views of the nature of childhood and consequent practices of appropriate intervention. Broadly speaking, the earlier concern of building the character of children to serve the needs of the adult world and social expectations was overtaken by the adult responsibility to nurture and reveal the individual personality of each child and their achievement of their own self-esteem. This indicates, as Elias argues, the widening distance between adults and children in terms of the individualizing process; the standards of emotional self-control expected of adults and children widen. But in another respect the cultural distance between these categories diminishes among children and increasing rights to express themselves and exert agency. The prohibition on personal violence between adults is extended to relations between adults and children, especially in schools where corporal punishment is eventually banned in Ireland in 1982. These changing adult-child relations are connected to broader processes such as state formation in Ireland and when state and nation builders after the disintegration of the United Kingdom of Great Britain and Ireland looked to the collective past for sources of tradition and national distinction. This tilted the We-I balance towards the ‘we’. The increasing openness of Irish people towards global others from the 1950s encouraged a greater future-orientation. Increasing social differentiation and mobility meant children were not destined to follow in their parents’ footsteps and each child was increasingly expected to ‘choose’ a path in life.

**New Urban Movement As an Emerging Field in Poland**

Since 2008 we observe the intensification of grassroots-level activism in Polish cities along with popularization of the Lefebvrian idea of the “right to the city” among urban activists (Lefebvre 1968; Harvey 2012). With a number of international actors on global level promoting the idea of “placemaking”, Poland becomes a country where a dynamic neighborhood movement emerges, inspired by specific local problems fused with external influence (coming mostly from so-called “norm entrepreneurs”, Finnmore & Sikkink 1998). The main focus of this paper is to understand the dynamics of this emerging phenomenon and its development in Poland. We argue that the visibility of ideas and actors of this new movement is a result of growing severity of urban problems as well as raising awareness of cities’ inhabitants, willing to participate in the city governance and striving to become an important actor at the “urban scene”. Although very diverse in nature, we claim that this process and the involved actors can be described and explained using framework of field theory (Fligstein & McAdam 2012).

We use qualitative data from in-depth interviews with both local and international key urban activists as well as with experts in the field to examine the processes that shape the new urban movement and its development in Poland. We postulate that urban renewal can be viewed as a distinct field, as defined by Fligstein & McAdam (2012), in-between the tension of a number of earlier and more established fields and that in the particular case of Poland we can also observe the process of “field-maturing”, with already well established main actors pushing against, the layers of policy and institutional processes regulating their push against, the layers of policy and institutional processes regulating their behaviors. This paper will draw on an ethnographic study of five semi-structured interviews of teachers and students in three TAFE settings and two high school sites in towns experiencing high youth unemployment. Three to four weeks were spent observing the same core English and Maths classes for sixteen year olds in non-academic pathways in each site. The project was motivated by the wish to support teachers to work productively in such classrooms with such students, under the assumption that teachers orchestrate classroom interactions. However, it became clear events in these classrooms were forcibly shaped by relations and parties above and beyond the classroom, as much as by those present. Teachers and students were observed to both comply with, and push against, the layers of policy and institutional processes regulating their behaviors. This paper re-thinks the project through the gaze and resources of institutional ethnography, to reveal layers of policy texts, accountabilities and documentation practices that impacted on routine behaviours. By mapping the multi-nodal webs of ‘ruling relations’, it shows how both teachers and students could make trouble, and then be held accountable for this trouble.

**The Constraints Of Relevance On Curricular Knowledge**

Under the Council of Australian Government’s ‘Compact with Young Australians’ in 2009, all Australian states raised the minimum age for leaving school with the expectation that young people will be ‘earning or learning’ until age 17. Where upper secondary schooling selected students into limited academic opportunities, now the same institutions must accommodate different sorts of students. Alternatively, such students can attend pre-vocational programs offered in Technical and Further Education (TAFE) colleges which are more oriented towards industry, credentialing and employment. The policy change has effectively grafted classrooms of a different ilk into two institutional templates. The paper will draw on a project designed to explore what kind of moral order these two institutional settings invoke when it comes to managing such students. Originally designed as classroom ethnography, the project involved extended observations and ongoing semi-structured interviews of teachers and students in three TAFE settings and two high school sites in towns experiencing high youth unemployment. Three to four weeks were spent observing the same core English and Maths classes for sixteen year olds in non-academic pathways in each site. The project was motivated by the wish to support teachers to work productively in such classrooms with such students, under the assumption that teachers orchestrate classroom interactions. However, it became clear events in these classrooms were forcibly shaped by relations and parties above and beyond the classroom, as much as by those present. Teachers and students were observed to both comply with, and push against, the layers of policy and institutional processes regulating their behaviors. This paper re-thinks the project through the gaze and resources of institutional ethnography, to reveal layers of policy texts, accountabilities and documentation practices that impacted on routine behaviours. By mapping the multi-nodal webs of ‘ruling relations’, it shows how both teachers and students could make trouble, and then be held accountable for this trouble.

**Political Protest and Social Integration, the Role of Online Brokerage and Offline Activity in the Formation of Facebook Friendship Ties: The Case of Russia 2011**

Despite their different political agendas, recent protest movements in the Arab World, Europe as well as North and South America share a strong reliance on social media. The use of Facebook or Twitter for recruitment, information dissemination and coordination was common during the Russian parliamentary elections in 2011. A striking feature of these protests is that a large group of citizens from competing political camps endorsed the opposition’s general agenda. We suggest that political protest increased social integration among participants by fostering friendship ties between political opponents. We elaborate on the mechanisms of the link between political protest and the formation and stability of friendship ties: “offline activity” during protest events (e.g., demonstrations) and “online brokers” (individuals with many online contacts) facilitating the creation of friendship ties between political opponents. The effect of offline activity is inferred indirectly, by comparing structural changes in the online group during demonstration periods and demonstration free periods. The effect of online brokers is inferred directly as the tendency towards closing structural holes in the contact network. Longitudinal data extracted from one of the largest Russian protest groups on Facebook is used to test both hypotheses. The dataset consists of about 3000 participants and more than 35000 interactions (friends links, measured at four time points). Two types of data were collected. First, attribute data (e.g., gender, place of living) and friendship choices were drawn from Facebook pages. Second, political opinions (socialist, liberal) were determined based on content and discourse analysis of users’ pages. Stochastic actor-oriented modeling is applied for testing the hypotheses.

**The Individual Child, the Future, and the Duty to Protect: Individualization and Changing Standards of Care Towards Children in Ireland**

Following a figurational sociological theoretical framework, and empirically drawing upon changes in teachers’ manuals, educational handbooks, curricula, and newspaper reports, this paper examines the escalating notions of innocence and individualization attached to childhood in Ireland since the nineteenth century. The conceptual identity of, and emotional identification with, the child changes in ways that over time the classroom and curricular settings were opposed by the views of the nature of childhood and consequent practices of appropriate intervention. Broadly speaking, the earlier concern of building the character of children to serve the needs of the adult world and social expectations was overtaken by the adult responsibility to nurture and reveal the individual personality of each child and their achievement of their own self-esteem. This indicates, as Elias argues, the widening distance between adults and children in terms of the individualizing process; the standards of emotional self-control expected of adults and children widen. But in another respect the cultural distance between these categories diminishes among children and increasing rights to express themselves and exert agency. The prohibition on personal violence between adults is extended to relations between adults and children, especially in schools where corporal punishment is eventually banned in Ireland in 1982. These changing adult-child relations are connected to broader processes such as state formation in Ireland and when state and nation builders after the disintegration of the United Kingdom of Great Britain and Ireland looked to the collective past for sources of tradition and national distinction. This tilted the We-I balance towards the ‘we’. The increasing openness of Irish people towards global others from the 1950s encouraged a greater future-orientation. Increasing social differentiation and mobility meant children were not destined to follow in their parents’ footsteps and each child was increasingly expected to ‘choose’ a path in life.

This research focuses on associations to be quasi-public bodies to maintain and manage public lands in Japan. Public lands are generally maintained and managed by governments because the governments have owned them. However, the governments often lease their public lands which are used especially as community farming and growing to associations after they made lease agreements in the USA and the UK. In these cases, associations can show their ideas to maintain and manage the public lands. On the other hands, the governments had only maintained and managed the public lands in Japan. Therefore, associations had not had chances to show their idea to manage and maintain the public lands. However, the Office of Nerima Ward of Tokyo enacted the Ordinance for Liveable Development in 2002. The ordinance has the definition of the community engagement on the public lands. In the Nerima Ward, associations can suggest their idea to manage and maintain public lands to the ward office. Moreover, the ward office authorises the associations as the bodies to manage and maintain the public lands. There is one case authorized by the ward office at present. In this case, there is a finding that the associations are needed to get approval from neighbouring landlords and users to be authorised by the ward office. This is considered that the associations are not just “Not for Profit Organizations” but “quasi-public bodies”.

This research suggests a question why the ward office should authorise associations as the bodies to manage and maintain the public land in the Nerima Ward of Tokyo, though local governments make lease agreements with associations in the USA and the UK. Through to resolve this question, this research will clarify the meaning of the association which maintain and manage public lands and the public matter on the Japanese context.

Global Modernity: Levels Of Analysis and Conceptual Strategies

This paper tackles some methodological issues in sociological theory, in particular as a way to resume the discussion of modernity with a systematic intent. Descriptions and descriptive concepts are distinguished from middle-range analytical categories which are distinguished from general analytical categories. History and evolution are also included methodologically in the analysis. Trend-concepts, which imply the development of some features of modernity in the long run, are some of these concepts, which have not been adequately dealt with by sociology recently, though, their status therefore remaining undefined. They offer the focus of this article. This is discussed initially in general terms and the theme is then deepened with recourse to an analysis of secularization processes, with the concept of collective subjectivity drawn upon in order to take the discussion beyond deepened with recourse to an analysis of secularization processes, with the concept of collective subjectivity drawn upon in order to take the discussion beyond.

Comunidad Virtual

La comunicación en una comunidad se manifiesta como un evento independiente de las tecnologías de información, una tendencia que se ha mantenido durante siglos. Por otro lado, las tendencias de las redes sociales ha incrementado, y cada vez más personas alrededor del mundo se unen a estos grupos virtuales, esto dado, a que las barreras como la distancia y diferencias sociales no existen. La construcción de una comunidad virtual para un territorio supone un nuevo paradigma que representa una infraestructura tecnológica innovadora en la cual los habitantes de una comunidad podrían interactuar y colaborar en sucesos tan relevantes como eventos culturales, campañas de limpieza, pasando por asistir de manera remota a reuniones comunales donde se estén tomando decisiones trascendentales de la comunidad, hasta la oportunidad de detectar problemas sociales como la delincuencia y organizar viajes en el transporte público. Los puntos relevantes de este trabajo es identificar las necesidades básicas que expone la comunidad como requerimientos directos para generar comunicación y que puedan transmitirse en la comunidad virtual. El reto final es encontrar los componentes genéricos que permita proponer esta infraestructura a diferentes territorios y sistemas, y hacer estos recursos virtuales disponibles para todos como integrantes activos de una comunidad. El contexto base de este tema es el puente que hoy existe en las comunidades de un país y el uso de tecnologías de información, conocimiento y comunicación que permita el surgimiento de territorios inteligentes.

Associations As Quasi-Public Bodies in Japan: Cases of Maintenance and Management of Public Lands

La participación dentro de una comunidad es tan visible por el lugar donde impacta las decisiones que se toman, pero muchas veces esta expresión de los integrantes de una comunidad no se da en las cantidades que podrían beneficiar a la misma comunidad. Este fenómeno para para muchos pudiera ser “normal”. En realidad puede tener diferentes razones, desde un contexto personal, dado por diferencias entre los vecinos, hasta un contexto dado por las insuficiencias del monto de los recursos propositorios, o incluso los vecinos en los eventos que se suscitan. Entonces, estos contextos que por su naturaleza, presentan características, da la pauta que exigen un nuevo medio por el cual la participación presente su mayor cualidad: beneficiar a los vecinos y la comunidad. Todos los vecinos juegan un mismo papel como integrantes de la comunidad, y para generar la participación se necesitan alguien que emerja en un nivel que le dé un carácter como organizador, que establezca los principios que promueva la participación. Sin embargo, hoy en día, ya no se necesita un actor que solamente organice, sino que vaya más allá. El nuevo perfil debe entenderse como un conjunto de vecinos que si promuevan y organicen las participaciones, pero también, una herramienta que pueda cubrir las carencias de los medios de comunicación típicos de la comunidad y establezca las bases de una base sólida para generar conocimiento.

Family, Elder Care and Caregivers in India

Family is a traditional virtue espoused by religion and culture in India, places the responsibility of support and care for the elderly on the family. In addition to cultural values, lack of affordable formal and institutional care, and limited state support for the elderly means that the elderly have to rely on family support. The importance of the family is further underscored by recent legislation, Maintenance and Welfare of Parents and Senior Citizens Act, 2007, which provides redress for the elderly to seek maintenance from children and other family members.

This paper examines elder care from the viewpoint of the caregivers in the context of India where legal, social, cultural and economic values emphasize the role of family in elder care. While there is research on the situation of the elderly in India, literature on the type and magnitude of care provided by the family and the impact of such care on the well-being of the caregivers is very limited. Using data from the WHO Study on Global Ageing and Adult Health (SAGE) survey conducted in 2007, which interviewed about 11000 respondents in six states in India and has a section on impact of caregiving, I’ll examine following key questions. First, I’ll examine the characteristics of the caregivers (age, gender and relationship to the care receiver), and the type of care provided (physical, emotional, financial and health care) by them. Second, the analysis will examine the subjective and objective well-being, and quality of life of the caregivers. Especially the analysis will investigate the role of gender, education and relationship of the caregiver and receiver on the well-being of the caregivers. The findings will be situated within the broader family, social and cultural context of India.

Las Tecnologías De Información, Conocimiento y Comunicación: Una Nueva Infraestructura Para La Participación

Se requiere un nuevo medio para el que se susciten las participaciones, y lo que exige un nuevo medio en el cual la participación presente su mayor cualidad: beneficiar a los vecinos y la comunidad. Todos los vecinos juegan un mismo papel como integrantes de la comunidad, y para generar la participación se necesitan alguien que emerja en un nivel que le dé un carácter como organizador, que establezca los principios que promueva la participación. Sin embargo, hoy en día, ya no se necesita un actor que solamente organice, sino que vaya más allá. El nuevo perfil debe entenderse como un conjunto de vecinos que si promuevan y organicen las participaciones, pero también, una herramienta que pueda cubrir las carencias de los medios de comunicación típicos de la comunidad y establezca las bases de una base sólida para generar conocimiento.
The analyses will pay particular attention to differences by gender, education and ethnicity (all three have shown to have important influence on other demographic behaviours). The findings will be contextualized within the socio-economic and political changes in Kyrgyzstan such as the revival of Islam and “traditional” practises, ideational changes, lack of significant economic growth, ethnic tensions and migration. The changes and variations will also be interpreted by drawing on the rich social and demographic literature on marriage and divorce from developing countries.

Perceptions and Experiences of the Frail Elderly: Definitions of Family, Home and Independence

Projections anticipate that the frail elderly, individuals who are 85 years old and older, are the fastest growing sector in all developing nations and in particular in the United States. Majority of the elderly live in non-institutional settings; however, more than 15% of them require services and some accommodations to support their current lifestyle. The number of elderly of individuals requiring institutional support and or assistance with daily living is rising. The services available to this age group can include two types of support within the home: instrumental support for activities of daily living such as shopping and cleaning and personal care support with activities of daily living such as eating, dressing and moving within the home. Additional services are offered through institutions and may range from adult daycare services, graduated assisted living experiences, nursing home care and hospice care. Extended family and friends may provide some of the social and instrumental support needed as many of this age group are single and/or widowed. By this point in their lives, the frail elderly have often responded to life changes that have influenced family structure, the physical home and the perception of need and acceptance of assistance. Modifications in the community that have addressed access for individuals with disabilities are now benefitting those with difficulties due to age. This mixed methods study explored the experiences of the frail elderly in the mid-Atlantic region of the United States. Data collection included individual interviews with open ended questions and a short quantitative survey. Perceptions of independence, definitions of home and family, and knowledge and use of services and accommodations were explored. Implications for policy and service provision will be discussed.

Risk, Victimization and Vulnerability

In this paper, I intend to make a principal original contribution to the risk-based criminological literature by concentrating on risk in the context of victims. Although there now exists a significant body of scholarly work examining the impact and complexity of clinical and actuarial risk assessment methods on criminal justice decision making (e.g. Feeley and Simo 1992; 1994; Hudson 2004; Kemshall 1998; 2003; Hannah-Moffat 2005), efforts to construct a strategic knowledge of risk are yet to provide a coherent set of theoretical and conceptual tools that can be used to explain the dynamics of risk both in terms of the ‘risky’ individual, as well as the ‘at-risk’ victim. While the argument developed in this paper relates to empirical developments in England and Wales, the theorizing of victim-oriented approaches to risk management is both innovative and more generally applicable beyond the jurisdiction examined herein.

The theoretical contribution to the risk-based literature that is offered in this paper should be understood as both aligned to, but distinct from, O’Malley’s conceptualization of the potential and limits of risk. For O’Malley (2008; 2010), the promise of risk-based techniques often lies in discovering the disparate possibilities for experimentation, and identifying those sites of resistance that exist within the ‘culture of control’ (Garland 2001). While O’Malley’s account offers particularly interesting insight into how risk functions through proxies of experimentation and resistance, this paper instead focuses on the central importance of a risk-based paradigm in facilitating the ascendency of victims in constructing notions of victimhood, vulnerability, resilience and in contributing to the development of responses/outcomes and professional praxis.

Aged Care Challenges and Solutions In Australia

This paper will examine some of the issues relating to the provision of community aged care in Australia. It will outline the population trends and major issues that impact on the delivery of community aged care services. The second part of the paper will assess some of the challenges raised by the Productivity Commission report (2011) into Aged Care. Finally it will put forward some solutions that were not fully considered by the Productivity Commission report as a way forward to making the provision of community aged care more sustainable in Australia.

Community aged care services in Australia will undergo significant change in the next four years. In 2012 the Australian government took over the funding and administration of Aged Care services and programs from the State governments. It is anticipated that there will be major changes in the way that services are funded with an expected move to more consumer directed services and individual funding by July 2015.

Many community organisations that provide Community aged care services will need to adjust the way in which they provide services and how they market services to the older population. In the last 20 years attitudes to residential care have also changed. More older people are expected to choose to reside for longer within their own home and local community. Australian Governments have recognised and encouraged the trend to remain at home. Governments have supported it with increased funding for community based services and community aged care packages. However, there remain significant challenges facing the Australian aged care system.

Rough Sleeping In Tasmania: Homeless Not Helpless

This paper provides a brief outline of the activities, outcomes and partnerships involved in the Rough Sleepers project in Hobart, Tasmania. In 2011 The Salvation Army (Tasmania) agreed to work with Common Ground Tasmania and a number of other NGOs to implement a campaign to address rough sleeping, which they called the 50 Lives/50 Homes (aka 50/50 campaign).

The broad objective of the campaign was to generate business, community, and government support for rough sleepers to enable a coordinated response to homelessness in the Greater Hobart area. The aim of the Hobart campaign was to identify and respond to the needs of ‘rough sleepers’ in the Hobart area who were susceptible to dying prematurely due to the poor health outcomes caused by sleeping rough. The campaign involved three stages; the planning stage; the street survey (or count); and the follow up of rough sleepers by a homeless response group, which was comprised of non-government and government support, health and housing services.

Internalization of Israeli-Zionist Othering Processes? Doctoral Researcher Self-Critique -- CANCELLED

In this paper, based on examples taken from recent field work, I intend to self-critique my position as an Ashkenazi-Israeli doctoral student interviewing Palestinian and Mizrahi-Jews on one hand. I am concerned by understanding whether I ended up reproducing othering processes within these interviews. Therefore this paper will first present othering processes within Israeli-Zionist context. I will then present questions such as: Whether holding the interviews, with the Palestinians participants, in Hebrew, thus my mother tongue and the hegemonic dominant one, is at the end of the day my internalization of hegemonic othering processes. How then did this influence the interviews? What dynamics did it generate?

Social and political positioning are key factors in transformation processes to radical consciousness. Asking Israeli and Palestinian political actors to expose themselves and their consciousness transformation processes, I am thus concerned by my own ethnic/national and gendered position as a researcher. Born to South-African parents, I have experienced to this day socio-political positioning of an Ashkenazi-Jewish woman in context of armed conflict such as the Israeli case.

Mechanism of war and militarization create socialization processes which are often expressed in military concepts of superiority and power. In the Israeli-Zionist context othering processes were first applied to the Palestinians, by Israel. However, later with the construction of Israeli state, it was also applied to the Palestinians, by Israel. This view of the East as abhorrent, underdeveloped, and inferior, exists in order to constitute the Occidental self, thus Hegemonic I, as rational, modern, and superior. Israeli Ashkenazi-Jewish identity aims at constructing a western image of self, in order to distance oneself of the representation of the passive, oriental body that might have been their identity in Diasporic Europe and was now projected onto the native Palestinian population and Arab-Jewish migrants.

Inégalités Sociales Et Capital Numérique

Le développement des réseaux socionumériques a permis de renouveler les questionnements relatifs à la notion d’influence. Les recherches actuelles étudient ce phénomène selon deux directions : sous l’angle d’un processus relationnel (qui influence qui ?) et à partir de la problématique de sa mesure (quelles sont les variables qui traduisent le mieux la notion d’influence ?). En revanche, ces travaux ont délaissé une question centrale : comment devient-on influent sur Twitter ?

En s’interrogeant sur la manière dont se produit l’influence au sein de la twittosphère politique, cette communication s’intéresse aux mécanismes d’accumulation et de reproduction du capital numérique.

À partir de l’étude de plusieurs centaines de milliers de comptes, nous avons identifié deux logiques d’accumulation du capital numérique. La première repose sur une accumulation progressive de la part d’agents n’occupant pas de positions dominantes en dehors de l’espace numérique. Dans ce cas, il n’existe pas de conversion de capitaux du offline vers le online. À l’opposé, nous avons identifié un second mode d’accumulation reposant sur la conversion de capitaux de la part d’agents disposant d’importantes ressources offline. Pour ce second type d’agents, l’espace numérique prolonge et renforce des positions d’influence préexistantes.

À partir d’une sélection de tweets émis pendant la campagne présidentielle 2012, nous avons constitué un panel des 10 486 comptes Twitter les plus « influents » sur le plan politique. Ces comptes ont été systématiquement analysés et codés de manière à déterminer avec précision les positions sociales - offline et online - de leurs auteurs.

Nos résultats permettent d’établir que dans la majorité des cas l’influence numérique est déterminée par la possession préalable d’un important volume de capital offline. Néanmoins un certain nombre de comptes semblent échapper à cette logique. Avoir été un primo-arrivant sur Twitter peut permettre de pallier ce déficit de capital initial.

Panel Random and Digital Networks

The great majority of research studies on social digital networks focuses on interindividual relationships ("friendship" or "followers" networks) and represents them by graphs. On another hand, works about individual internet users’ attributes give a greater place to qualitative approaches on smaller corpus.

This communication shows that, to analyze social digital networks, more precisely Twitter, it’s possible to adopt a quantitative approach, taking account of individual accounts as a panel of « followers » networks and applied to the "twittosphère", let us to reconcile these two exigencies. Analyzing reasoned sample, panelisation allows to qualify Twitter accounts manually (sociodemographical attributes or audience data, etc.) and allows to explore message contents on the long way.

In these conditions, the question is: according to what logic can we sample Twitter? Is a panel randomly selected really representative of the network? Does Law of large Numbers apply to a socio digital network where every individual don’t have the same weight neither the same visibility? Actually, on Twitter, it’s possible to adopt a quantitative approach, taking account of these inequities?

We experiment two sampling logics. The first with a random sample: every account has the same weight, whatever its activity or its influence. From an exhautive list of the population, we randomly select a panel of 2000 accounts. The second logic takes account of the hierarchical structure of Twitter. The “influence panel” is computed from a list of accounts classified according an index of influence. We select the 10 000 first accounts of the list.

Governing Cities Facing Demographic Decline: Insights From The Case Of Saint-Etienne (France)

Studying the political capacity building process in cities with weak assets for governance represents a real scientific added-value: how to deliver collective actions when economic actors are less inclined to cooperate with public actors? Starting from fieldwork carried out on the policy-making in urban renewal in Saint-Etienne, a French city nearby Lyon which has faced a huge demographic and economic crisis for forty years, we propose to present three main research results concerning shrinkage and governing capacity.

Firstly, in contrast with scholars insisting on the State rescaling, we observe that a form of spatial Keynesianism is maintained. Budget and technical expertise are granted by the French central State for the urban regeneration of Saint-Etienne to limit uneven development within the Lyon’s metropolitan area. State appears as schizophrenic: mainstream urban policies are meant to position French (including shrinking) cities in the international territorial competition and contribute to the increasing of uneven development; but, other policies are implemented to fight against urban decline.

Secondly, if a grant coalition dominated by public actors has been stabilized in Saint-Etienne around the objective of increasing the residential attractiveness of the inner city, the mobilization of local private actors is really limited. Global investors are absent. Local land owners prefer renting flats at low prices but without making works than being actors of the urban regeneration with weak perspectives of financial profit.

Thirdly, while urban regeneration policies have a direct impact on the social profile of neighborhoods (social housing demolitions, development of housing for medium and upper average classes), local contention remains limited. It will be explained by the low share of the middle class in the social structure, by the closure of the local political arenas and by the neomanagerial French urban renewal policy orientation which limits local democratic process.
And what are the practical and theoretical implications of discarding or changing this concept?

**Organizational Planning for Future Droughts: The Instructive Case of the Edwards Aquifer Authority in Central Texas**

For over a decade we have been studying the construction and implementation of rules and regulations of the Edwards Aquifer Authority (EAA). The EAA was created to conserve the waters of the Edwards Aquifer. In 2011 a severe drought engulfed Texas. This prolonged drought represented the first major test of the rules passed by the Authority since it assumed responsibility for managing the aquifer in 1998. Our objective is to highlight the theoretical implications of the activities of the EAA. We ground our framework in the ongoing activities of the EAA; we are influenced by the works of Beck, Giddens, Firey, Ostrom, Mol and Spaargaren and Famiglietti — whom we take into new directions.

We outline some of the fundamental sociological issues that have emerged from our empirical investigations of water planning. We begin with the composition of the EAA Board. This elected board represents key sectors of the Aquifer. By design the largest stakeholder, San Antonio, has a dominant voice on the board but not an exclusive one. In order to enact strategic legislation San Antonio board members must forge alliances with members representing other jurisdictions. The Board has also shown flexibility in its governance. While the Board created rules for all groups who live in the region, due to aquifer variations, these rules cannot always be applied in a standardized manner.

We believe, in line with Ostrom’s notion of commons property to be central to planning for water and the future. We also focus on the growing importance of conservation planning beyond the aquifer itself as the aquifer is dependent on the recharge zone. As a karst aquifer, the Edwards is self-replenishing. However, to replenish takes rain - a resource in short supply in this part of Texas. This abstract highlights a few problems we consider in more detail in the paper.

**Societal Control of the Armed Forces - New Criteria for an Old Framework**

Although the primacy of the political has incontestable manifested itself in established democracies, the question of the control or oversight of the military by civilian actors proves to be as relevant as ever before. However, the executive power as point of reference in a mostly self-referential civil-military-debate is of limited explanatory value today. Holding not only national security structures, but also the “guardians of the guardians”, accountable is the task of an emancipated civilian side that encompasses a broader than usual understanding of civil-military relations. This submission seeks to deconstruct the limitations of prevailing civilian expertise. This paper addresses the need for a multi-level model of control of the military that widens the focus of inquiry by drawing on a cognitive-interpretative approach (exploiting data from problem-centred interviews with grassroots actors). The aim is to show how actors have changed or been integrated into the debate on security and defense in response to altering institutional frameworks.

**Between Promise and Risk. RFID, a Controversial Technology**

La protection de l'environnement et de la santé des personnes, la sécurité publique et des chaînes logistiques, la maîtrise de la demande d'électricité sont des nouvelles opportunités de développement pour l'identification par radio-fréquences (RFID). Des objets et des environnements communicants sont développés avec un objectif de traçabilité et de contrôle. Nous avons analysée quantitativement et qualitativement les risques et les controverses associés à certains usages de l'identification par radio-fréquences : risque de atteinte à la vie privée, risque sanitaire, risque écologique, risque socio-professionnel.

En nous fondant sur une analyse des controverses, nous essayerons de montrer les termes du débat sur la technologie RFID et de cartographier les risques que les acteurs concernés lui attribuent lorsqu'ils s'expriment publiquement.

La recherche dont nous faisons état dans cette communication a été réalisée à partir de trois terrains d'enquête : la presse écrite grand public et spécialisée, que nous avons analysée quantitativement et qualitativement ; les laboratoires de R&D en systèmes RFID, que nous avons approchés par des entretiens et par observation directe lors de manifestations publiques ; une expérience d'usage dans le domaine de la santé, que nous avons suivie par observation participante.

**The Quantified Self in the Energy Demand Management: A New Forme of (bottom-up) Regulation of Practices?**

Our presentation analyzes the development of “reflexive” socio-technical infrastructures in the field of environmental protection and energy demand management.

Such reflexive infrastructures aim at enabling and organizing the encounters between people and real-time dynamic visualizations of their own practices, in the hope that such encounters will give rise to new forms of individual conduct.

Such reflexive infrastructures are crucial to the development of a trace-based regulation of practices by offering “augmented” subjects ways of coming together and interacting in a kind of public space of traces.

Based on an experimental case study of smart metering for the residential electric consumption, we will try to understand how users are affected by such encounters, with traces of their own activity, and how such encounters constitute particular types of subjects and attachments, i.e. “quantified selves”.

But mostly, we will discuss the limits of these technological infrastructures of self-tracking. And we will show how several social devices, based on gamification and social interaction, are used to reinforce and make such attachments socially accountable, for instance by using the accountability requirements or reward for the effort that seem to promote virtuous practices in the field of environmental protection.
Preferring hegemony, critical theory has not problematized this mutation. Here, I want to stay a little longer with praxis itself as it takes shape in moments of encounters between global power and its opposite, when world order can still be problematized as if it was at stake.

In the first section, I look into three distinct episodes when ‘global crowds’ gathered: the so-called ‘bread riots’ in Egypt (January 1977); the general strike in Barcelona (March 2012), and the ‘V for vinegar’ protests in Brazil (June 2013). From a political point of view, global crowds are never more than mobs. Their myopic rebellions of the belly beg for a new prince to draw them out of themselves. Seen less conditionally, global crowds reveal common legitimizing notions: a moral (or sociological) economy at work. In contrast to the ‘steady-state’ morality of peasants, the moral economy of global crowds is more properly thought of as a morality of situation. It not about subjectivity placed and embodied, but, more radically, about the possibility of presence in the world.

In the second section of the text, I argue for the relative coherence of resistances as part of a ‘moral and ethical order’, against which capitalist world ordering, for all its hegemonic swagger, remains fragmented and reactive, still excluded from actually-existing social relations.

That we may still be in a time when it appears unnatural for power to be defined outside concrete, historical situations when presence is possible suggests that domination, not hegemony, should serve as our reference point for thinking about world order and resistance.

*The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?*

In a classic 1968 paper Merton described the “Matthew Effect” as the tendency among elite scientists to accumulate advantage. Alongside Merton’s analyses, Zuckerman documented the experiences of women scientists and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention around the world. Recently, the Council of the Canadian Academy of the Sciences’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academics.

In 2009, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research grants and publications), career advancement, and awards and honours. As well, we examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

*Construction and Constitution of Community – Epistemological and Cultural Comparative Reflections*

The community concept gives rise to cultural comparative reflections since diverse notions of community are represented when going back to the roots of the sociological discipline contrasting the AngloSaxon and the German tradition, opening up the comparison to the American, Asian and other contexts. Combining a social science with a phenomenological perspective, I will analyze the construction and constitution of the community phenomenon. On the one hand, from a social science viewpoint, it will be investigated in which expressions in diverse socio-historical conditions the idea of community was constructed. On the other hand and from a phenomenological perspective, it is highly significant that communities or communal relationships are constituted on the basis of general structures of experience in activities of consciousness. The phenomenological perspective allows describing the structures of the life-world as “mathesis universalis” which is seen as a priori of the social world. It opens up the ground for historical and cultural comparison of diverse ideas and empirical expressions of community, even though Ferdinand Tonnies considered it to be a general sociological concept. The ‘parallel action’ of phenomenology and social science allows reconstructing the specificity of the respective community concept within a particular cultural background. It permits e.g. to analyze the distinctiveness of Max Weber’s idea of the communal relationship, in which the orientation of social action is based on the subjective affectual and traditional feeling of the parties of belonging together.

*After the Meltdown: Energy Regime Crisis and Environmental Conflicts in Post-Fukushima Japan*

Since the Kyoto Protocols, Japanese environmentalism largely avoided a critique of the hazards of the nuclear industry with the energy demands of the country. Instead, small and marginal anti-nuclear movement organizations remained focused on this issue. Then, in 2011, the Fukushima nuclear disaster and humanitarian crisis caused by the Tohoku earthquake and tsunami called the entire nuclear industry into question. However, the silence among established environmental organizations continued. Based on an extensive study of Japanese environmental organizations, we investigate why the Japanese environmental movement was relatively silent on the largest environmental crisis in the country’s history. Why were environmental organizations not in the lead of the mass protests demanding an end to nuclear energy in earthquake and tsunami prone Japan? We address this question historically and quantitatively, incorporating survey data on the Japanese environmental movement as well as extensive network data. This research is the first to quantitatively operationalize power structures in Japan and test their impact on the behavior of a large sample of environmental organizations. Among other factors, the statistical analyses identify significant negative associations of government and corporate ties on environmental groups’ adoption of a reflexive and critical position on nuclear energy following the Fukushima meltdown.

*An Energy Industrial Complex in Post-Fukushima Japan: A Network Analysis of the Nuclear Power Industry, the State and the Media*

Despite suffering the force of a nuclear meltdown amid a natural disaster, national political leaders have re-committed Japan to a heavy reliance on nuclear energy. By examining the network connections between 400 energy corporations, government agencies, and other large corporations in post-Fukushima Japan, we...
argue that a nuclear Energy Industrial Complex (EIC) uprooted attempts to criticize nuclear power and helped re-establish nuclear energy as a major priority for the country's energy mix. The network analyses of our original data depict this EIC as an institutionalized power structure that empowers corporate policy preferences and shapes public opinion in order to secure long-term energy development agendas suited to their particular profitability interests. We also observe how environmental organizations are embedded in some of the same networks with the state energy regulatory boards, energy companies, lawmakers and advertising corporations. The density of network overlap between the EIC and environmental organizations is interpreted as a highly constructed political co-opting structure, limiting avenues for claims by environmental movement activists that strive to expose the risks of nuclear power. We conclude that national energy policy priorities are not determined by responses to disaster (human or environmental) but are instead propelled by the relative power of large scale corporate interests that foreground Energy Industrial Complexes with government leaders and agencies.
market economy, has emerged. This is best described by the term post-Fordism. The workforce is required to be multi-skilled and flexible in new economies. Further, the growing economic instability and rapidly changing technoscapes pose a big challenge for making smooth transition to work life. Post-Fordism brings an accentuated division between core and periphery workers. The workers in the core are relatively well paid and have secure jobs. But the workers in the periphery lack job security. It is further argued that career decision making are mainly about ‘opportunity structures’ which in turn is strongly influenced by social class and associated social and cultural resources of young people. This paper answers three research questions. Does core employment in current labour market is restricted to well-educated and trained youth? How the location of young people in hierarchical career structure of market economy is influenced by their cultural resources? What pathways are followed by young people belonging to different class position? The study reveals that both core and periphery workers in market economy needs high level of education with constant re-skilling to adapt themselves continually to new and more demanding work opportunities. The adaption of young people in workforce is in turn affected by the cultural resources at their dispositions. The young people in Lucknow are not a homogenous group; they belong to different class positions and hence face different challenges in their transition to work life. Career decision making of young people and their pathways of transition to work is largely determined by social structure and cultural resources and partly determined by ‘reflexivity of the self’. Rapid Social Change and New Religious Movements in Post-Independent India

The changing texture of religion is considered to be an important part of the structural change in post-independent India and one worthy of close analysis. As we know, theorist of modernity had written off religion in the 1950’s and 1960’s. It is now accepted, if a little late in the day, that religious identity rarely disappears with modernity. Rather, modernity refashions religious identities in various ways. It is manifested in the global religious resurgence of ‘New Religious Movements’ and in the rise of ‘New Age’. But the workers in the periphery work hard to adapt themselves to the new situations among the Sri Mataji Nirmala Devi primarily urban, educated ‘middle-class’ Indian devotees, the researcher provides crucial insights into new trends in popular Hinduism in a post-Independent and rapidly modernizing Indian setting. It attempts to locate the macro structural sources of New Religious Movements in post-Independent India; it highlights the micro structural availability of people in a particular New Religious Movement.

Analyse Des Processus D’Emergences D’une Politique Publique Au Croisement De La Santé Publique, De La Cohésion Sociale Et De L’agriculture

This communication is issue of a research interventionnelle ECOALES (Empowerment, Comportement Alimentaire et Economie Solidaire). Cette dernière, vise à évaluer l’intervention UNITERRES portée par l’A.N.D.E.S, un réseau d’associations sociales et solidaire. L’intervention UNITERRES repose sur le possible lien entre le développement de systèmes durables de production et de distribution de l’alimentation et une amélioration des comportements nutritionnels.

La Télésanté à l’Épreuve des Savoirs Profanes

Résumé de la proposition : Le principe d’une fracture numérique recèle très souvent un implicite, à savoir que l’évolution des sociétés humaines suivrait une seule voie. L’idée de ce que pourrait être une prémisse numérique ou un modèle numérique, serait le modèle. Mais ce que mettent en relief les inégalités d’accès ou d’usage à ces technologies est, d’une part, qu’il existe différents modes de communications dont certains sont rétiés à la numérisation (et si faudra s’interroger sur les savoirs alternatifs sur-jacent à ces ‘résistances’), d’autre part que l’existence de toutes les modalités de connaissance et de savoir suppose d’autres trajectoires technologiques que celles qui sont actuellement proposées ou imposées. Tout l’intérêt de l’examen de ces pratiques de braconnage ou de résistances consiste justement à mettre en lumière, et à réactualiser la pluralité des formes d’autonomie et de compatibilité dans des situations de numérisation.

Why Environmental Standards Do Not Guide Food Practices: The Role of Certified and Rewarding Dimensions of Standards in Understanding the Sustainable Consumption of French Households

Several researches have been emphasizing how much food practices are inert and not so easy to convert. Indeed, they are embedded in cognitive, symbolic and material devices that constrain them by producing routinized path of consumption. However, households are submitted to a variety of standards that they may refer to in different manners. In France, they have been exposed to several decades to implement the rules of a balanced meal; more recently, they have been regularly exposed to different public messages on how to consume eco-friendly food. However, environmental standards are often competing poorly with other kind of standards, especially nutritional standards. They may either be ignored or disqualified by individuals. Why environmental prescriptions are not more efficient in orienting food practices in France?

By relying on an in-depth ethnographic study conducted among 30 households in France, we identify the conditions of use of nutritional and environmental standards by households in their food practices (planning, shopping, cooking, eating). Our results are twofold. First, we state that individuals rely on standards they consider as stabilized knowledge, even though they may use it in a very idiosyncratic way. Since they may consider environmental standards as relying on negotiable belief rather than certified knowledge, they are less prone to implement them. Secondly, standards are not only guiding practices, individuals also use them to get rewarded. Considering the case of food practices, following proper nutritional standards for a mother is a way of receiving rewards from peers and family for being a good mother. This is not the case for the environmental standards, for which the peer group does not generally play this role, and, moreover could deny the existence of such a standard. These insights could be of help for understanding the unsustainable features of some food consumption practices.
Public Communication in the Processes of Transparency and Accountability in the Era of Open Data

Transparency and accountability in the public sector are currently at the center of the communication policies by public administrations in different institutional contexts. With the development of ICT and the prospective of open data and open government that invests in recent years the renewal of the public system in various countries and supranational realities (such as Europe), accountability seems to find new impulse. Public institutions tend to make available to the public information concerning the processes of administration, the manner of use of public goods and resources.

At the same time, in the Network Society (Castells 2008, Jenkins 2006) each institution is called upon to deal with the demand for transparency and participation of citizens, which use for this purpose increasingly the internet and social media (new forms of civic engagement) (Castells 2010 to 2012, Dahlgren 2010).

Observing the ways in which public authorities are transitioning towards open data (through the analysis of significant cases at the level of local and national governments) emerge strengths and weaknesses, including a problem of attribution of concepts and the production of data, at the macro level (institutions) and the micro level (individual and associated citizens).

Public communication plays a crucial role because it can accompany open government, through a contextualization and adequate communication of the data that goes beyond the mere publication.

This effort, associated with the ability of individual and associated citizens to practice a selection of data, is possible the emergence of the construction of sense that it favors the desired micro-macro link (Ardigò 1998, Mazzoli 2001, 2002). To practice a selection of data, it is possible the emergence of the construction of sense that it favors the desired micro-macro link (Ardigò 1998, Mazzoli 2001, 2002).

The objective of this paper is first to investigate the link between the era of Cold War and this resurrection of cosmopolitanism in the academy; second to provide an historical analysis of the re-emergence of this perspective and of its use; and third to study how this “cosmopolitization” of global social science and humanities addresses the issue of the “spatialization” of the world.

Performative Turn and Epistemological Reconfiguration of Social Knowledge

This report discusses the process of epistemological reconfiguration of social knowledge from representation to performativity, which can be observed in the context of performative turn in social sciences and outlines some features of performative epistemology.

For the last decades, sociological knowledge has changed but epistemologically, the concept of a social science is still based on representational idiom. Representational epistemology is the epistemology of observation. Social knowledge is estimated by the criteria of observation and other dimensions of social cognition are overlooked.

This is not a “social science without social science” but a sociology of work and particularly French activities’ analysis.

We demonstrate that those workers are bound to narrow they representation of firms they sell and buy. We argue that this mechanism of subjectivation derives from 3 main social processes and models: the set of images, frameworks, language and meanings which is shared by this group of workers. We examine it as a social construction which institutionalizes, to keep their job or to be promoted, workers have to think and act in line with a peculiar way of representing the firms they sell and buy. Hence, we investigate the set of images, frameworks, language and meanings which is shared by this group of workers. We examine it as a social construction which institutionalizes.
Trust and the Reflection on Social Media Related Risks

Several weeks ago newspapers were full of the Prism-scandal and still there are lots of discussions about it. Platforms like facebook presumably gave access to their user data. In a seminar I held last semester about internet-based exchange and cooperations some students discussed this problem where the spectrum of comments reached from “it doesn’t really matter, because my data isn’t relevant to them (NSA)” to “everybody is responsible for what data he or she offers to facebook” to arguing reactions with the announcement to leave the platform. I don’t know if these students really left facebook, but usually events like this irritate only for a short time the “habitual trust” people have in technology. To put it shortly people’s naïve confidence in technology is disturbed by short moments of reflection caused by the thematization of technology related problems respectively risks.

In contrast to the main assumption of the session organizers in our opinion not a loss of confidence but an unreflected attitude at least towards social media technology is common. We would like to discuss these contrary positions in regard to sociological approaches on trust. In sociology the phenomenon “trust” is mainly considered as a reflexive form of trust taking into account specific decision situations in social interactions. With this a mainly reflexive form of trust is addressed. Even approaches in which several types of trust are differentiated there is a tendency to regard i.e. “habitual trust” as a form which evolves from “reflexive trust”. Beyond this we would like to figure out the preconditions “reflexive” as well as “habitual trust” in relation to the phenomenon of distrust.

Epistemological Consequences of a Global Encounter: The International Institute for Applied Systems Analysis (IIASA)

The International Institute for Applied Systems Analysis (IIASA) in Laxenburg near Vienna is a remarkable example of a transnational scientific organization due to the political circumstances of its foundation during the Cold War, its institutional setting as a meeting place for scientists with different national and political backgrounds, and its research into some of the most pressing issues of global change.

First proposed by US-President Lyndon B. Johnson in 1966 as part of his ‘bridge building’ initiatives between the USSR and the USA, the institute’s rationale was both political, in hoping to foster rapprochement between the blocs by organizing cooperative research into common problems of the industrialized nations and scientific, in that solutions to large-scale global problems shall be facilitated which cannot be achieved by either of the sides alone.

The IIASA-Charter was eventually signed by representatives from twelve member countries from East and West in October 1972, establishing IIASA as a non-governmental research institute, where scientists from all member states worked together in applied research projects. Within the methodological framework of systems analysis, research problems included questions of the environmental dangers of the modernization process, population growth, urban planning, energy production and water resources, thus being inherently interdisciplinary and global in scope.

The paper builds upon a thick contextualization of IIASA to explain the methodological changes, systems analysis has seen as a consequence of its internationalization. These changes are marked by a gradual and in retrospect dramatic increase of ‘soft’ social science perspectives and an ever growing skepticism towards the formerly strong positivistic epistemology in systems analysis. Though primarily concerned with the case of IIASA, this effect of internationalization shall be underlined by drawing comparisons with earlier US-American versions of systems analysis as well as other international research contexts like that of area studies.
developed between actors (ii) trust between those actor increased due to changes in interests, identities and norms; (iii) this in turn implied a benefit for local populations and those actors due to the many different projects developed to increase life conditions of local actors (iv) it will be extract theoretical issues in the area of social constructivism and implications for others scenarios will be extracted.

Armies Cooperation in International Military Peace Operations

The current paper presents the results of an empirical research conducted for the Spanish Army in the context of an international project. We will discuss from a descriptive, analytical and theoretical framework the Spanish Army relations with other armies (Turkey, Philippines, Italy, Denmark, Bulgaria, South Korea, South Africa, Slovenia) in different Peace Operations and International missions (Lebanon, Afghanistan, Bosnia, Kosovo, Iraq...). The results will mainly highlight the following key issues: (i) the different positive and negative experiences maintained in the missions (ii) the cultural barriers found during the interaction between armies (iii) proposals for working in multicultural environments (iv) main theoretical implications that help us to propose lessons learned for other scenarios of international missions.

Involving People in the Mitigation of Electric Demand Peaks: Attitudes and Behaviours in a Peak Pricing and Load Shedding Experiment

As part of the current quest to reduce energy demand in buildings, people behaviors are increasingly seen as one of the main factors driving households consumption, making them potential levers for energy savings or peak shifting. Peak shifting is an increasing concern in a context where electricity demand grows while networks need massive investments and generation becomes less flexible in the process of its decentralisation. Among the different ways people can be driven to shift their electricity consumption from peak to off-peak time, we've studied load shedding remote signals and tariff incentives effects through a field trial. How do people perceive those interventions? How do they change their daily practices? What are the outcomes in terms of peak shifting and energy consumption? Our work relies on both qualitative and quantitative materials. In depth interviews and observations at home revealed the diversity of the changes and actions undertaken by people in reaction to the signal and/or incentive. A comprehensive analysis of the energy consumption main dimensions (usage, project, context) was carried out, from the motivations leading people to take part in the experiment to the underlying semantic fields and the antagonisms structuring them: individualism/community, comfort/moderation, transformation/preservation, efficiency/morality. Eventually those attitudes and behaviours could be related to the measured consumption shifts and load shedding acceptance, providing insights on how to enhance or mitigate existing dynamics in people practices impacting energy consumption.

The Vulnerable Organisation: Austerity and the Third Sector

The on-going economic recession in the UK has led to the introduction of austerity measures by the coalition government, which has been accompanied by feminist analyses of how the recession is disproportionately affecting women. Cuts in government budgets and public sector jobs have occurred alongside cuts in government support services, especially those set up to support women. At a time when these third sector, not-for-profit, organisations are most needed by women, financial support to this sector has either been reduced or simply withdrawn. Despite these measures, in 2010, the UK coalition government launched the ‘Big Society’ policy initiative, with an aim to empower local people. One of the stated priorities was to support charities and social enterprises. This paper will examine the extent to which three key, third sector organisations, set up to support women in the South West of England, have been affected by these austerity measures. Through qualitative research with key personnel, the extent and implications of the cuts will be examined. Ironically, demand for support services is increasing as more women are affected by the austerity measures, such as cuts in public sector jobs, a reduced level of pay in the private sector, a public sector pay freeze and changes in the benefits system. On the other hand, such individuals may find themselves turning to alternative third sector organisations, such as foodbanks, set up to help individuals and families who face such difficult financial situations.

To what extent have third sector organisations, set up specifically to help women, been affected by austerity measures? How vulnerable are these organisations? How sustainable is the concept of the big society? What does all of this mean for the future of gender equality?

A Matter of Rights: Social Inclusion Among Refugee Children in Canada and Sweden

In 2010, Canada accepted approximately 25,000 refugees. Of these, 25% were children under the age of 15. Refugee children often have experienced trauma, exploitation and human rights violations, which can make it difficult for them to become fully included in the society they are entering. The United Nations Convention on the Rights of the Child (CRC) obligates States to ensure the social inclusion of all children, including refugees. While in all but two countries have ratified the CRC, few have fully implemented it. In this paper, we explore the relationship between a country’s level of implementation of the CRC and its level of social inclusion of refugee children. We examined the policies of Canada, which has made relatively slow progress in implementing the CRC, to those of Sweden, which has extensively advanced CRC implementation by incorporating it into legislation. We focused on five policy areas particularly relevant to children’s social inclusion: 1) family reunification; 2) health care accessibility; 3) housing accessibility; 4) education accessibility; and 5) economic security. To measure CRC implementation in each policy area, we developed five CRC Implementation Scales based on criteria recommended in UNICEF’s Implementation Handbook. Each country was scored on whether the implementation criteria were met in each policy area. To measure refugee children’s social inclusion, we identified comparable indicators in each country of family reunification; accessibility of health care, housing, and education; and economic security. As expected, Sweden’s CRC implementation scores were higher than Canada’s in all five policy areas, and these differences were reflected in a higher level of social inclusion among refugee children in Sweden than in Canada in each of the five areas. The findings suggest that the well-being of refugee children reflects a country’s level of commitment to upholding their rights.

Leaders and Laggards: Banning Corporal Punishment of Children in Scandinavia and the Anglo Nations

This paper will explore the unfolding of a global phenomenon – the legal prohibition of corporal punishment of children. Until 35 years ago, this near-universal practice was considered appropriate, necessary and a parental right. But a paradigm shift in conceptions of childhood has led to a global movement to redefine it as violence and as a violation of children’s rights. Today, 33 countries have prohibited it in all settings, including the home. This remarkable shift reflects profound cultural changes in thinking about children and their development, parent-child relationships, and the role of the state in family life.

This movement began in Scandinavia, when Sweden became the first country to explicitly abolish all corporal punishment of children in 1979. Finland and Norway were the second and third countries to prohibit corporal punishment of children - in 1983 and 1987, respectively. Interestingly, but perhaps not surprisingly, progress in the Anglo nations has virtually stalled. New Zealand became the first country to explicitly abolish all corporal punishment of children in 1979. Finland and Norway were the second and third countries to prohibit corporal punishment of children - in 1983 and 1987, respectively. Interestingly, but perhaps not surprisingly, progress in the Anglo nations has virtually stalled. New Zealand became the first country to explicitly abolish all corporal punishment of children in 1979. Finland and Norway were the second and third countries to prohibit corporal punishment of children - in 1983 and 1987, respectively. Interestingly, but perhaps not surprisingly, progress in the Anglo nations has virtually stalled.

In this paper, we will address the following three questions: 1) Why did this particular law reform movement begin in Scandinavia in 1979? Finland and Norway were the second and third countries to prohibit corporal punishment of children in 1983 and 1987, respectively. Interestingly, but perhaps not surprisingly, progress in the Anglo nations has virtually stalled. New Zealand became the first country to explicitly abolish all corporal punishment of children in 1979. Finland and Norway were the second and third countries to prohibit corporal punishment of children in 1983 and 1987, respectively. Interestingly, but perhaps not surprisingly, progress in the Anglo nations has virtually stalled.

What accounts for Sweden, Finland and Norway being the first to reform their laws? To what extent have third sector organisations, set up specifically to help women, been affected by austerity measures? How vulnerable are these organisations? How sustainable is the concept of the big society? What does all of this mean for the future of gender equality?

Exploring Multidimensionality in Women’s Marginalization: The Intersection of Gender, Language and Social Class in 21st Century Kolkata

The present paper explores the interrelationship of gender, social class and language in India from an ‘intersectional perspective’. The introduction and application of ‘intersectionality’ in feminist sociological theorizing has burgeoned since late 1980s, when Kimberle Crenshaw (1989) coined the term and rejected ‘single-axis framework’ by embracing multiple dimensions. Moreover, the increasing worldwide affinity among feminist sociologists to adopt ‘intersectionality’ perspective has contributed significantly not only to the understanding of gender but as well to emphasize women’s lived experiences by underlining the hitherto uncultivated and subjugated areas of knowledge regarding everyday practices, including linguistic usages. However, language in general or more specifically in intersection with other social variables like gender, class, age, ethnicity and sexuality etc. have not adequately been dealt with by sociologists in India, in spite of its multilingual social reality. The substantive ‘second-grade existence’ of women as well as their marginalization has always been accentuated by the catalytic roles played primarily by their gender, followed by their language and social class. Even today, language is fundamental to gender inequality, where language used about women, and also used by women places them in a double bind between being appropriately feminine and being fully human. In addition, women’s social class positions based on their education, occupation, income and lifestyle patterns also further their domination giving rise to ‘multiple oppressions’. Therefore, with the help of ‘narrative’ analysis of 80 Bengali women in Kolkata, the present paper attempts to reflect how subjectivity is constituted by mutually reinforcing vectors of gender, language and class and thus to underscore the multidimensional intersectionality of these marginalized subjects (i.e. women) in Kolkata, a modern urban metropolis in 21st century.

Politics and Distributional Dynamics of Conditional Cash Transfer Program in Turkey

Conditional cash transfer programs were promoted by International Organizations as the most efficient policy instrument for poverty alleviation with its focus on human capital development of children addressing inter-generational transfer of poverty (Handa and Davis, 2006). The growing scholarly interest on the institutionalization of conditional cash transfer (CCT) programs (Anestis, 2013; Fiszbein and Schady, 2009) orients researchers to concentrate on the national stories of this adoption process to understand the variation in the program design across cases. By focusing on the institutionalization of conditional cash transfer programs in Turkey since 2004, this research investigates the politics of CCT social assistance program examining how its design and its institutionalization were shaped by the vote seeking practices of the Justice and Development Party government (Adalet ve Kalkınma Partisi-APK) (Aytaç, 2013; Yoruk, 2012). This research will aim to understand the “translation” (Campbell, 2004) or the “ver-nacularization” (Levitt and Merry, 2009) of ideas and policy instruments (Dobbin, Simmons and Garrett, 2007). There is an important role of domestic actors in the adaptation of policy ideas into domestic circumstances. Following the financial crisis in 2001, the CCT program was launched in Turkey within the scope of the Social Risk Mitigation Project initiated by the World Bank. Although the financial assistance provided by the World Bank has been exhausted in 2005, AKP government has institutionalized this social assistance instrument. How can we explain the institutionalization of the CCT by the AKP government as an anti-poverty scheme? What are the implications of the CCT for the welfare and citizenship regime in Turkey considering regional, ethnic and gender dimension of poverty in Turkey? This research suggests that CCT has been used to contain the Kurds in Southeastern regions of Turkey as well as to gather and increase votes in local elections by the AKP government.

XVIII ISA World Congress of Sociology

Book of Abstracts

Historically, science in Russia was concentrated at the academic and applied-research institutions. Nowadays, state science policy is aimed at the development of scientific researches in higher education institutions. As a result, some universities received the status of National Research University. Research universities become entrepreneurial, characterized by the managerial model similar to business. The consequence of such business-oriented strategies turned into unstable conditions of work for scientist, limitation of permanent contracts, public perception of scientist as ordinary worker.

The principles of research universities were imported into Russian educational system, which is included into particular socio-economic conditions: the state, not private sector, is a major customer in producing public goods. In this regard, it is important to understand the effectiveness of Research University in Russian reality.

This report will present the results of empirical study, conducted in 2013 at the laboratory under the supervision of leading scientists in St. Petersburg. These laboratories represent Biomedical and IT clusters. We have sent 50 questionnaires by e-mail to the young researchers. The questionnaire includes three parts: global situation in Russian science, situation at the university, own professional career. We obtained 9 interviews with leading scientists.

We have created rating scale with following items: the prospects of line of investigation, the potential for innovation, scientific productivity, efficiency of management, the training of young researchers and their academic advancement on the labor markets. The resulting survey data are being processed. Interviews revealed “trigger points” for the work of research laboratories. In spite of the high scientific productivity, there is a weak role of business in the financing of science, “bureaucratization”, uncertainty for laboratory at the end of the project, continuing “brain drain”. Thus, in Russian educational environment some universities may become “research”, not entrepreneurial.

Suffering and Capabilities in Chile

In Sen’s and Nussbaum’s capability theory, subjective wellbeing or suffering as usually measured is a functioning, i.e. a realization or state of being. This mental and emotional state is a result of different factors including the capabilities that each individual enjoyed to pursue her life projects. The chapter examines the factors associated with different indicators of suffering - negative affect, depressive symptoms, scale of suffering and life dissatisfaction - using a unique Chilean survey conducted by UNDP to evaluate subjective well being in Chile. These factors include different variables considered in the literature such as age, age, civil status, labor status, personality, recent negative or positive events, etc., as well as individual capabilities. By doing so, the paper provides a novel empirical assessment of the relationship between suffering and capability deprivation. The results suggest that some capabilities are more related to suffering than others.

Reconciling Work and Family Care for Women : What Different Impacts on Working Carers and Care Workers ?

Since the late1980s, French policies are intended to promote the development of household services, especially for children and elderly care, through social contribution exemptions or tax reductions. The consequences of such business-oriented strategies turned into unstable conditions of work for scientist, limitation of permanent contracts, public perception of scientist as ordinary worker.

This paper will examine the effects of these policies in terms of gender and social class: are the inequalities between men and women being diminished? and among women?

To answer these questions, we first use the results of researches conducted in the 2000s on the quality of employment in household services in France and secondly qualitative data obtained through the French part of european FLOWS of our team, we show how public policies have resulted in low quality of care jobs : care workers, who are almost only women, more often have part time jobs that provide them low wages and and are hardly reconcilable with their own family responsibilities. On the other hand, we also

Humanity and Institutional Categorization of the Unemployed Poor in the Context of Czech Welfare System

When welfare professionals in the Czech Republic speak about unemployed, they specify different kind of humanity of the unemployed and qualify them as ‘deserving’ or ‘undeserving’ poor. Similar processes of moral differentiation among the poor are ethnographically described by sociologists and anthropologists such as Howe, Haney, Dubos etc., who in their analysis focus on changes of welfare systems in Europe. They focus specifically on the process of creation of categories and thus also moral communities according to which the unemployed were meant to be regarded as ‘undeserving’. In other words, the process of evaluation is highly loaded with ethnicity - Gypsyism. Roma/Gypsy are the only visible ‘group’, that is publically assigned to the ‘undeserving’ category. The welfare professionals has to stand up to paradoxical situation: they mostly share the common-sense and understanding the Roma as ‘undeserving’, on the other hand they stress neutrality and standard criteria for distributing money to the poor and thus pretend the welfare system as not being ethnically loaded field. The paradox in their standpoint brings ambivalences also into everyday situations among professionals and claimants. These ambiguities open space for responses and for the negotiation of quality of humanity by professionals and by claimants themselves. In the paper (that comes up from participant observation at two Czech welfare offices that I did in 2012) I show, how this pretended neutral space is in Czech context morally loaded field that always come up from racial differentiation among different quality of humanity. In other words I show how these ambivalences are filled with specific meanings of humanity and how claimants stress their humanity in opposition to other claimants alongside the racial line.

Žaneta's Life: Whose Fault? “Patient” Unemployed and the Others in the Czech Welfare System

In the paper I would like to portray the life of one Roma woman Žaneta, who lives in Czech town Chomutov and whose life I could follow during fieldwork in 2012 and 2013. On her life experience I would like to illustrate how changes in Czech welfare politics produced new discourses about the poor (‘patient poor’ are ‘deserving’) and social work to de-socialize and to re-integrate her into the Czech context and also how through categorization of the unemployed welfare professionals exercise power and reproduce inequality among the poor. Žaneta was one of the unemployed who were “suspicious character” for her social worker also because she was sensitive to any kind of devaluation of her self-esteem and responded back in order to protect her identity. Later on she was found as ‘undeserving’, “cheating” the system and thus “abusing state money”. This categorization created new situation to her. It sentenced Žaneta to live without welfare money, limited her possibilities to responses and also refused her Czech citizenship. In sentenced her to living without support by the welfare office, later on without support by local NGO, and later on without support by the Czech and Slovak legal systems. Showing her different responses in different periods of her life I show, how her difficult life was more and more understood by different institutions as outcomes of her own faults, not being “patient” specifically.

Japan Redefining National Culture: Unintended Consequence of ‘Cool-Japan’

Since the word ‘Cool Japan’ was introduced by Douglas McGray in his article of Japan Gross National Cool in 2002, the word represents the global strong wave of Japan's pop and youth culture; and the academic debates on it also focuses on these various cultural products that can be classified as the ‘Cool Japan’, consumed by people outside of Japan or foreigners in Japan. Among abundant academic findings on the subject, though conducted from various approach, ranging from media to economic studies, very few academic studies put forward arguments on the impact of ‘Cool Japan’ to the Japan as a nation and a state in term of redefinition of national culture. This study will elaborate how the ‘Cool Japan’ wave has led Japan to position and re-position herself in the global world, and as the unintended consequence of the repositioning, how Japan attempts to redefine the National Culture. Through a qualitative approach that includes close study on the content of media coverage on the ‘Cool Japan’ and interviwes to key-person in the government and non-government institutions of Japan who are closely connected to the policy of ‘Cool Japan’ processes of moral differentiation among the other country's experience, this study attempts to understand the process of re-definition of national culture for Japan, as a nation and as a state.

Spatial Justice for Urban Informal Sector: The Case of Indonesia

Urbanization and urban development in Indonesian cities had resulted in co-existing formal and informal sectors. Despite the fact that restructuring of physical and economic activities had caused the core of the city to shift from a manufacturing center to a services and financial activities. Intensive and border-less flows of investment, goods, information and people contribute significantly to the co-existing formal and informal sector, creating spatial injustice. The condition of urban development had been enhanced by the Asian Economic Crisis at the end of 20th century, which for Indonesia was coupled by political crisis that led to the ending of the 33 years long centralized-regime. The commencement of 21st century in Indonesia – known in Indonesia as the era of reformation– was marked with the implementation of a new decentralization law in 2001, which should have given more opportunities to city government in their attempt at creating spatial justice for the citizen including the informal sector. This study will elaborate the positioning-contestation-repositioning of the informal sector in two local cities in Indonesia whose city governments had adopted contrasting standpoint on informal sector.

Feasibility Of Social Capital and Leprosy Patients in India: A Quantitative Study

Feasibility of Social Capital and Leprosy patients in India: A Quantitative Study

Leprosy still evokes social stigma and prejudices in the society and it exer-
cises constraints on the patients to live a socially excluded life. Low level of so-
cial capital is one of the manifestations of social stigma associated to leprosy. In the present study an attempt has been made to understand the observance of effect on social capital in case of patients suffering from leprosy. A total of 120 leprosy sufferers were selected randomly from ‘The Leprosy Mission (TLM)/ hospital of Allahabad district of Uttar Pradesh (India). Both deformed (N=60) and non-deformed (N=60) patients were selected in the sample. Data were collected through interview – schedule in two time context; i.e. before the onset of ailment and after the onset of ailment. Interaction patterns of leprosy sufferers with their family and community were also observed. In addition, a four point scale was also used to observe the intensity of social capital with the increased intensity of deformation. Analysis of data indicates that deformed leprosy patients have low social capital in terms of interpersonal trust, reciprocity, social support and social participation than non-deformed patients. ‘Sin of previous birth’, ‘punishment of God’, ‘fear of infection by germs’ and ‘visible signs of deformation’ lead to low social capital in case of leprosy patients. On the contrary ‘unawareness about the ailment’, ‘lack of physical deformation’, and ‘modern medical belief system’ are promoting their bonding with their family and community as much as before the onset of ailment. In that case patients have good stock of social capital.
not work for the welfare and learning of their students unless they are pressured to do so under the threat of draconian measures. Within Neoliberalism, the principal indicators of school effectiveness are scores on standardized tests. Low-performing schools face closure and the termination of staff. The current accountability systems adopted in several developed nations and increasingly considered in developing nations are thus based on hierarchy of distrust (Dworin and Tobe 2012). Especially in high-poverty schools teachers and school administrators do not trust that their students will perform adequately enough on high-stakes, standardized tests to ensure their own job security. This leads many to “game the system” by unethical techniques that give the appearance of fraudulent student gains when such gains are fraudulent. School teachers, administrators, and even government education agencies have been found to engage in such gaming, with the result that student learning deficiencies are not detected and students are deprived of the education they deserve. The systems of accountability and the need to game the system adversely affect the morale of school personnel.

In order to reduce the risks for the population, an integrated disaster risk reduction approach is needed. Apart from “green” infrastructural measures and relocation of the most vulnerable inhabitants, it is essential to implement “green” measures such as using ecosystem services to achieve a more feasible and cost-effective reduction of vulnerability.

An important precondition for the inclusion of all levels of society into risks reduction strategy is the assessment of social perception regarding options and constraints for actions. The focus of our study is the potential for the valorization of ecosystem services through the participation of the population via preservation and recuperation of nature.

The paper presents a case study in the municipality of Teresópolis where quantitative and qualitative data collection has been conducted in order to assess the perception of the local population of environmental risks and the potential for reducing vulnerability through the valorization of ecosystem services. This analysis is an essential basis for developing a sensitization strategy for ecosystem based measures for disaster risk reduction. Especially the poorer strata of the population perceive a lack of possibilities and empowerment. Sensitization measures have to be adapted to the special needs of the target group in order to ensure their contribution on community level.

Emerging Society and Sociological Discourse in Brazil

Sociological research in Brazil pays little attention to the dynamics of economic and cultural globalization, and especially not to that with the BRICS. This paper proposes a sociology of the BRics, based in symbolic interactionism and a classification which sees globalization as occurring in three relatively autonomous spheres: economic, social and cultural (Tikvah). Following upon Weber, I define the sociology of the BRICS as having at its centre the significant interactions that occur between citizens (and ‘objects’) that represent the BRICS countries. This research uses mixed methods, drawing upon observations, interviews and readings. A massive increase in Brazilian presence in China is observable over the past two decades, this has been accompanied by a rising number of strains between Brazilians and Chinese. The results of recent field research in Southern China, especially with Brazilians who serve as cultural intermediaries, will be analysed. Some consequences drawn from this study for Brazil-China relations are detailed and some future research initiatives suggested. My hypothesis is that the objects of sociological discourse will adjust to meet the emerging needs in the society.

Reducing Vulnerability through an Ecosystem Based Approach

Forests on river banks or flood parks play an important yet underestimated role in reducing vulnerability through the valorization of ecosystem services. This analysis is an essential basis for developing a sensitization strategy for ecosystem based measures for disaster risk reduction in times of climate change on community level.

Physicians’ Perceptions of Patient Autonomy in Do Not Resuscitate Decision-Making: A Comparison Between the US and UK

In both the United States, and increasingly in the United Kingdom, consumerization and deprofessionalization have resulted in increasing demands for patient autonomy in health care decisions (Hargreaves & Gough, 1973). Loss of physician authority and concerns over paternalistic practices shifted decision-making power towards patients at the expense of physician control over clinical decisions (Truog, 2012). Using the example of the Do Not Resuscitate (DNR) order at the end of life, I discuss how decisions made between physicians and patients reflects changing power dynamics, and how unlimited patient choice might threaten the physician’s ability to act in the best interest of their patient. In the US, DNR decisions are largely determined by patient choice whereas in the UK, physicians are permitted to make decisions unilaterally based on what they believe is in the patient’s best interest. Through semi-structured interviews in the US and UK, I explore how prioritization of choice and patient autonomy over clinical judgment result in-
flicts in DNR decision making and moral distress in American doctors in ways that do not occur in Britain.

Less experienced physicians in the US feel especially compelled to offer unlimited choice, as compared to more experienced physicians who feel more comfortable giving recommendations based on clinical judgment. Despite this, most American physicians acknowledge that patients often do not have sufficient information or the tools necessary to make informed decisions. Junior doctors tend to perceive recommendations as a violation of patient autonomy and are less willing to take on the burden of responsibility for clinical decision making due to lack of experience and confidence. These prioritizations of unrestricted choice force physicians to perform futile therapies that they believe are harmful to the patient and ethically unacceptable.

EASTWOOD, LAUREN* (State University of New York, leeastwood@msn.com)

Indigenous Peoples Organizations in Intergovernmental Policy: Conflicts and Strategies for Participation

This paper analyzes the ways in which Indigenous Peoples Organizations (IPOs) have negotiated their participation in intergovernmental policy that has been deliberated within the context of the United Nations Framework Convention on Climate Change (UNFCCC) and the United Nations Convention on Biological Diversity (CBD). In both bodies, Indigenous Peoples Organizations have been influential in shaping various aspects of the policy processes. The paper identifies some of the most salient issues that have arisen for Indigenous Peoples in the two policy processes, and analyzes some of the strategies that IPOs have used to influence the policy decisions. The broader legal framework of international law as it pertains to Indigenous Peoples has focused on self-determination and sovereignty. However, within the UN system, nation-states are given primacy, thus relegating IPOs to “non-governmental” status. The legacy of the nation-state system upon which the UN is predicated presents obstacles for IPOs who advocate for rights for people who are often marginalized or not recognized by UN-legitimized governments. However, competing processes, such as those taking place under the United Nations Permanent Forum on Indigenous Issues (IPFII), can serve to put pressure on parallel policy dialogues. Additionally, Indigenous Peoples’ participation has been institutionalized in both the CBD and the UNFCCC, with varying results for the efficacy of Indigenous participation. Informed by institutional ethnography, the primary data for this paper were collected through participant observation at UNFCCC, CBD, and IPFII meetings. Additionally, I have followed transformations in various policy texts as they have been influenced by IPO engagement with the policy processes.

The Dynamic Interface Between Bustos Alliance of Christian Churches and the Municipality of Bustos, Bulacan in the Good Governance and Transparency Advocacy

This paper explores the dynamic interface between Bustos Alliance of Christian Churches and the public servants of the municipality of Bustos as advocates of good governance and transparency. As a practitioner of community development, the mayor of Bustos, Bulacan has introduced participatory governance since he was elected in 2010. The partakers of this form of governance are representatives of various sectors such as the members of Bustos Alliance of Christian Churches who have been empowered to safeguard the budget and monitor the expenditures of the municipality. They actively participate in the planning, implementing, monitoring and evaluating the municipal development program. This alliance collaborates with the municipal government and in return, the latter allocates funds to their activities that address holistic development of the people of Bustos.

The researcher uses Pierre Bourdieu’s ‘practice theory’ and the concept of on-participatory governance as its framework in this research. It also utilizes in-depth interview of the key informants, participant-observation and triangulation. Key informants include the mayor, the municipal councilors, the secretary to the mayor, the municipal department heads and the officers and members of Bustos Alliance of Christian Churches. Participant-observation is done during the actual municipal planning, implementation, monitoring and evaluation. Triangulation is done to validate the data gathered. Findings are analyzed using specifically the theory on participatory governance of Dr. Oscar P. Ferrer of the University of the Philippines followed by the conclusion and recommendation derived from the result of the study.

Do Gender Differences in Vocational Choice Result from the Need for Social Approval?

Gender segregation among occupations which can be traced back to gender specific vocational choice leads to gender inequality in the labor market. According to Gottfredson’s (1981) theory of vocational choice and role identity theory (Strayer & Burke, 2000) gender differences in occupational choice appear because gender is a significant part of the self-concept. Since adolescents attempt to fulfill
social expectations regarding gender roles they choose occupations in which per-
sons of their own sex are predominant. By doing this, we assume, young persons try to receive social approval from significant others in order to develop and en-
hance their self-concept.

To test the hypothesis whereby gender specific vocational choice is driven by the fundamental human need for social approval we used data from a representa-
tive survey of 4.621 applicants for vocational training in Germany in 2010. With-
in this survey participants were asked to anticipate the reaction of their social en-
vironment if they would choose a specific occupation. The adolescents assessed 16 different occupations varying with regard to status and sex ratio. Furthermore the participants provided information about the occupations they had actually applied for.

Using regression models, we firstly demonstrated that young persons anticipate social approval from significant others more likely if the assessed occupation is appropriate to their sex. Secondly, we showed that the likelihood for applying for a job is influenced by the adolescents’ expectation about how their social environ-
ment will react upon their occupational choice.

The results indicate that adolescents use vocational choice as a tool to gain credit and avoid blame by showing gender appropriate behavior.

EBERT, NORBERT* (Macquarie University, norbert.ebert@mg.edu.au)

Global Financial Class and Precarious Work Societies

The purpose of this paper is to investigate whether the formation of a global fi-
nancial class is paralleled by the development of a global precarious work society. Taking global developments into account, the paper will trace differentiating and integrating aspects of global work relationships. While the formation of a global financial class could be described as a new integrating and collectivising element in the global economy, I argue that it comes with a shadow side. This shadow side I describe as a global precarious work society. Wherever we can observe the development of a global financial class, the development of a precarious layer of work relationships is not far behind. The paper will map out which industries, which population groups or economies play which role in the development of a global precarious work society. The formation of a global financial class and the development of a global precarious work society ultimately cannot be separated and need to be looked at as social consequences of financialisation as a differenti-
tating and integrating process.

EBNER, ALEXANDER* (Goethe University Frankfurt, a.ebner@soz.uni-frankfurt.de)

The Institutional Dynamics of Transnational Entrepreneurship: Theoretical Considerations and Empirical Evidence

The phenomenon of transnational entrepreneurship refers to the transna-
tional operations of the start-up enterprises of migrant entrepreneurs. It may be viewed as a complement to the networking dynamics of large transnational companies, thus resembling a ‘globalisation from below’ (Portes). Transnation-
al entrepreneurs combine resource mobilization in their countries of origin and destination, augmented by resources in third countries. The factor movements of labor, capital and knowledge are framed by network relationships that com-
bine local and transnational components in terms of a ‘multiple embeddedness’ (Kloosterman and Rath). Against this background, the question arises in what sense transnational entrepreneurship exhibits strategic qualities regarding the utilisation of socio-cultural resources. This would imply that transnational entre-
preneurship gains an institutional logic of its own. Empirical evidence regarding this matter has been gained from empirical research projects that have been carried out in Frankfurt/Rhine-Main during 2011 and 2012, primarily by making use of interviews with entrepreneurial actors. Frankfurt/Rhine-Main is the eco-
nomically and socially most internationalised region in Germany with a share of migrants in start-up enterprises that is set well above 40% since the mid-2000s. Corresponding transnational segments of business operations involve not only capabilities in mobility, multilingualism and intercultural interaction but increas-
ingly also human capital in terms of professional qualifications. In exploring the multiple dimensions of embeddedness the projects confirm the hypothesis that transnational entrepreneurship goes together with a strategic utilisation of so-
cio-cultural resources and identities.
port from the mothers, working life and family policies is needed. In addition to men’s own willingness to adjust their paternal behaviors, more sup-

tably promoted the narration of nurturing responsibilities among fathers, these

ferences remained significant and a notable gender gap in parental practices and

"hands-on" practices. The statistics also highlighted the increase in men’s share

planning to daily care practices, was emphasized as a matter of gender equality, in

narratives exhibited wide variation in what aspects of paternal care were stressed.

This presentation draws

itiess. Basing on the analysis of interview transcripts (91 interviews collected in
town in 2007-2008), the paper contributes to the study of new subjectivities in-
cludiing, but not limited to, class-based ones. The transformations of subjectivities are traced on the basis of the narra-
tives of “coming back to life” (life trajectories and their interpretations) after the
collapse of factories, which are told by former factory workers more than 10 years
after the collapse. The decision to focus on people working for the three factories is
based on a suggestion that the experience of living and working in shared en-
vironment, community building, and loss of both, constitutes a relational setting
which shapes the repertoire of events and justifications used for making sense of
common past, multiple present, and diverse visions of the future. “Narrative identity” is understood as a performing subjectivity creating and
maintaining an individual’s permanence in time and space. The research shows how the new “modes of permanence” emerge after the collapse of “factory-based”
ones, focussing on materialities and moralities as building bricks for new subjecti-
tivities and communities in town.

EDDINS, CRYSTAL* (MICHIGAN STATE UNIVERSITY, eddinscr@msu.edu)

Crystal Eddins’ paper is situated directly within sociologist Ruth Hamilton’s propositions about African Diaspora populations as subjects of their own real-

ity. She highlights ways in which 18th century Africans and African descendants

employed their organic social formations, specifically religious ones to organize

rebellious antecedents to the Haitian Revolution. Dr. Dodion will serve as Chair of

the panel and each presenter is aware of the proposed activities and has agreed
to participate.

EDDINS, CRYSTAL* (MICHIGAN STATE UNIVERSITY, eddinscr@msu.edu)

Organic Social Movement: Antecedents To The Haitian Revoultion

Crystal Eddins’ paper is situated directly within sociologist Ruth Hamilton’s propositions about African Diaspora populations as subjects of their own real-

ity. She highlights ways in which 18th century Africans and African descendants

employed their organic social formations, specifically religious ones to organize

rebellious antecedents to the Haitian Revolution.

EROLÄ, PETTERI* (University of jyväskylä, petteri.eerola@jyu.fi)

Responsible Fatherhood: A Narrative Analysis of Finnish First-Time Fathers

In Finland, a gender-balanced distribution of childcare is the goal of official

family policies, an issue promoted by family experts, and nowadays also a cul-
tural norm of parenting. Thus, in most families, fathers play an extensive role in

driving hands-on caregiving from the very onset of parenthood. This presentation draws

on the results of a recent study analyzing the narratives of early fatherhood pro-
duced by Finnish first-time fathers. The narratives were produced in 60 interviews

conducted with 44 fathers during the first three years of their fatherhood. In this

presentation, the men’s narratives are considered within the framework of recent
time-use and parental leave statistics.

The men’s narratives emphasized responsibility, especially in terms of nurture and
care, above issues of age and social class. Beneath the surface, however, the

narratives exhibited wide variation in what aspects of paternal care were stressed. For

example, whereas in some narratives equally shared parenting, from family

planning to daily care practices, was emphasized as a matter of gender equality, in

others, although the father was seen as competent in nurturing, the mother was

nevertheless more important in this respect. However, although breadwinning

was also emphasized in most of the narratives, it was generally subordinate to
"hands-on" practices. The statistics also highlighted the increase in men’s share

and engagement in childcare, but contrary to the narratives, socioeconomic dif-

dferences remained significant and a notable gender gap in parental practices and

parental leaves emerged.

As the situation stands, while the cultural ideal of shared parenting has prob-
ably promoted the narration of nurturing responsibilities among fathers, these

have not yet been fully realized in practice. To turn the narratives into reality, in

addition to men’s own willingness to adjust their paternal behaviors, more sup-
port from the mothers, working life and family policies is needed.

EGGER DE CAMPO, MARIANNE* (Berlin School of Economics and

and Law, marianne.egger@hwr-berlin.de)

How the Rhetoric of Reaction Justifies the Legalization of Migrant Care Labour in Austria

Austria legalized the 24/7 care for older adults provided mainly by migrant car-
ers from poorer Eastern European countries. The debate around this legalization
during the years 2006-2008 shows patterns similar to Albert Hirschman’s Rhetoric of

Reaction: The jeopardy thesis claims that a legalization according to established labour law standards of domestic care personnel would lead to skyrocketing costs jeopardizing the sustainability of the welfare state. The futility thesis denied that the existing legal system of elder care would be sufficient for severely care depen-
dent older adults, since home care is delivered in relatively short house calls and

hardly available on weekends or at night. The perversity thesis again imputed the

paradox effect of a veritable care crisis to the legalization, because migrant care

workers would fear retroactive punishment. The Rhetoric of reaction aims at diminishing social rights for people in need of

the welfare state. So the legalization subjected the mostly migrant care workers to much worse working conditions compared to domestic care personnel enjoying social security and the benefits of collective bargaining.

Law, marianne.egger@hwr-berlin.de)

Translations of Concepts over Time: What Criteria Decide about the Appropriateness of a Translation?

About children’s literature it has been amply discussed whether certain terms or plots of classics are to be changed in new editions in order to comply with a

notion of political correctness. To what extent is something similar taking place in

social science literature?

Translating Lewis Coser’s Greedy Institutions (1974) into the 21st century provides an example for the difficulties of relating a theory to contemporary phe-
nomena.

Between the 1950s and 1970s Coser discussed various forms of Greedy Institu-
tions with their total claim on the individual. Greedy Institutions demand undivid-
ed time and loyalty from the individual who will voluntarily devote himself or

herself for exclusive benefits granted to loyal followers only. Although the ancient authorities have vanished – princes with their court Jews, masters with their servants, or

religious and political missionaries – the concept is far from obsolete today. Man-
agement consultants, 24/7 old age carers from Eastern Europe and particularly

the hive mind of the New Social Media show that a revival of Coser’s theory can help understand power relations governing today’s individuals. Consequently this

justifies a German translation of Coser’s work, particularly since it has hardly been received in the German speaking world.

Whether shifting the context from Coser’s original examples of court Jews and

eunuchs in Byzantium is accepted within the scientific community as appropri-
ate, is not a question of mere plausibility. While e.g. the proposition that internet

based Social Media act similar to religious or political sects received wide approv-

al, depicting spin doctors or management consultants as present day equivalent of

the court Jews is seen critical.

Thus, translation also requires an effort of cultural sensitivity to the political
culture. This eventually determines how the scientific community is going to re-

ceive the translated work.

EGGS, JOHANNES* (Institute for Employment Research,

johannes.eggs@iab.de)

The German Welfare Reforms and Individual Health

In order to improve the competitiveness of its labour market, major welfare re-

forms were implemented in Germany in the last decade. Old schemes of welfare and

unemployment assistance were amalgated into a new type of welfare called

unemployment benefit II (UB II). UB II was supposed to be the new basic social

security scheme and as such supposed to provide the minimum resources nec-

essary for an individual to meet his or her basic needs. The central aim of UB II

was the reintegration of individuals back into the labour market, that had been
disenchanted by it. Eligible for UB II receipt are not only long-term unemployed

and people that received welfare prior to 2005, but also individuals, where other

forms of income are not enough to provide the sufficient resources to meet basic

needs.

The aim of this study is, whether UB-II-receipt has a singular effect on health. A negative effect could be caused by the stigma attached to the new welfare pro-

gram.
In order to analyze this possible association, longitudinal data from the panel study “Labour market and social security” is used. The sample consists out of 12000 respondents aged 18 to 65, who participated up to five years from 2006 to 2011. Subjective health measures are the outcomes of interest. Fixed Effect panel models are calculated to establish a possible association between subjective health, unemployment and UI-liability.

ABIMBOLA, OLUREMI (Covenant University)
SULEIMAN, BARNABAS (Covenant University, Ota, Nigeria.)

Ethnic/ Religious Insurgencies and Nation-Building in Nigeria

Over the last decade, the activities of ethnic/religious insurgencies have permeated the Nigerian nation, bringing into question the essence of survival of the Nigerian project. This range from the activities of the Movement for the Emancipation of the Niger Delta (MEND), the Niger Delta Volunteer Force, the indigenous/settler crisis in many states, and the Boko Haram saga in the North-East region. Several factors ranging from economic, political and cultural marginalization, widening social inequalities, lack of basic infrastructure and exclusion have been cited as reasons for these insurgencies in order to attract attention from the national government and the international world, it is the contention of this paper that employing tactics of violence and killings against innocent individuals, communities and armed conflict with the state creates more long-term devastating consequences than the short-term goal of attracting attention to whatever genuine demands any group may hold. The paper further argued that insurgency creates conditions where the most vulnerable particularly women and children are more at risk of hunger, malnutrition related illnesses and death. Furthermore, countries in conflict suffer disruptions in livelihoods, infrastructure, schools, markets, assets, nutrition, health and loss of resources required for food production and distribution. The end result is that instead of the nation building sustainable development, the perpetration of conflict and violence causes the country to suffer long-lasting losses, including losses to food production. The paper concludes with the recommendation that employing constructive non-violent dialogue and accommodation of differences among people as one of the tools in finding lasting solutions to any crises, preventing and reducing the number of people who are more at risk of hunger, malnutrition related illnesses and death.

EIDLIN, BARRY* (University of Wisconsin–Madison, eidl@ssc.wisc.edu)

Just Another “Special Interest”: Collective Identities and Union Strength in the U.S. and Canada in the Twentieth Century

Why are labor unions weaker in the U.S. than in Canada, despite the two countries’ many similarities? This was not always the case: unionization rates only diverged in the mid-1960s, with consequences for inequality and social policy. Standard explanations emphasizing long-standing differences in national characteristics, state policies, and education are inadequate. Rather, they resulted from different processes of political incorporation, which created different collective identities for labor in both countries. Labor was incorporated as an interest group in the U.S., and as a class representative in Canada. These collective identities enabled and constrained labor’s scope of action. U.S. labor’s interest group identity led it to focus on using inside influence and lobbying. As its influence within the Democratic Party weakened and employer attacks intensified in the 1970s, labor was unprepared to return to a more mobilizational strategy, its independent organizing capacity sapped by decades of behaving as a responsible interest group. By contrast, Canadian labor’s class representation identity allowed it to retain its independent organizational capacity. Labor fought for legislative reforms, while also mobilizing outside political pressure. This left Canadian labor better equipped to withstand increased employer and government attacks on labor beginning in the 1970s and 80s.

EGHAREVBA, MATTHEW* (Covenant University, Ota, Nigeria., matt_y_osa@yahoo.com)
AHMADU, FREDERICK (Covenant University, Ota, Nigeria.)
JEGEDE, AJIBADE (Covenant University, Ota, Nigeria.)

NEO-Liberal Reforms and Health Disparities in the Global South: The Case of Nigeria

For over two decades since Nigeria’s adoption of the neo-liberal policy, its impact on standards of living of the citizenry has not been rather satisfactory as manifested by the unequal income distribution gap between the rich and the poor over the years. Besides, the health conditions of the people has experienced a decline as revealed by the increasing rate of child/infant mortality and maternal morbidity which expresses the failure of government reform in adequately addressing goal 4, 5 and 6 of the United Nations Millennium Development Goals (MDGs) targets. Using secondary sources of data, and the elite and world system theoretical models, the paper argued that government implementation of the neoliberal policies of removal of subsidies on essential goods and services, reduction of capital expenditures in the provision of healthcare and educational services and infrastructure have contributed to growing inequality, poverty and unemployment which has adversely narrow opportunities for human development. Today, Nigeria’s position in the UNDP Human Development index (HDI) ranking over the past years have remained poor, reflecting a combination of intense poverty, low educational levels and limited life expectancy. The paper concludes with the position that what is required to address the challenge of human development in the global south is a strong government commitment in looking inward to fashion out people oriented policies that channel the nation’s economic resources into promoting healthcare, education, infrastructure, sanitation, nutrition and employment as well as incorporating safe and viable indigenous methods of treating health issues that are easily accessible and affordable.

EHLERT, MARTIN* (WZB Berlin Social Science Center, ehlert@wzb.eu)

Household Influences on Employment Insecurity over the Life Course

Previous research on employment instability mainly focused on labor market related factors. I argue however, that employment instability over the life course is also influenced by the household a person lives in. Building on literature about the “marriage premium” and the “men as providers” hypothesis, this study suggests that men in male breadwinner households may have a preference for stable jobs. Mothers in couple households on the other hand, who more often have to reconcile paid work and housework are constrained in their job searches and therefore may have to take up less stable jobs. Finally, especially among men, being married may be seen as a positive signal for productivity by employers and therefore they more often obtain stable jobs. Moreover, employers may displace married men and women with children less often because they are considered more productive and also have to support a family. In sum, these considerations suggest higher employment instability among single adult households, mothers and especially single mothers. I test these expectations by comparing the risk of involuntary job loss between different household types using the German Socio Economic Panel (GSOEP). To control for selection into households, I apply discrete-time event history models. Preliminary results indicate a higher risk of job loss among single parents. The paper further argued that insurgency creates conditions where the most vulnerable particularly women and children are more at risk of hunger, malnutrition related illnesses and death. Furthermore, countries in conflict suffer disruptions in livelihoods, infrastructure, schools, markets, assets, nutrition, health and loss of resources required for food production and distribution. The end result is that instead of the nation building sustainable development, the perpetration of conflict and violence causes the country to suffer long-lasting losses, including losses to food production. The paper concludes with the recommendation that employing constructive non-violent dialogue and accommodation of differences among people as one of the tools in finding lasting solutions to any crises, preventing and reducing the number of people who are more at risk of hunger, malnutrition related illnesses and death.
Teenagers’ Use Of Mobile Media As Practices Of Social Inequality

Mobile media have become a fundamental part of adolescents’ everyday lives. Serving as “permanent digital companions” and taken for granted by its users, mobile phones and internet capable smartphones are deeply embedded in peer interactions. Mobile media usage encompasses both mediated interactions and face-to-face-interactions related to media, creating different technosocial situations in which specific social rules and interaction orders are generated.

In the context of qualitative research (group discussions, interviews and media diaries), this study (participants aged 12-18) gave valuable insights about such situations, focusing on interactional routines and conflicts as well as social expectations towards media (related) interactions. When looking at new media sociologically it is firstly necessary to question the associated social norms being negotiated by users and its implications for interaction orders. Secondly, it is instructive to scrutinize to what extent media (related) practices produce and reproduce social inequalities.

Deriving from the respondents’ narratives, it is argued that mobile media on one hand facilitate new forms of pairing and bonding within peer groups, but on the other hand reveal and amplify processes of social exclusion. Finding them faced with certain constraints, expectations and obligations with regard to mobile media, it becomes apparent that the young actors handle certain situations in various ways which are highly specific to their social background and gender. This is remarkable as teenage peers are often seen as rather inclusive collectives in various ways which are highly specific to their social background and gender.

One hand facilitate new forms of pairing and bonding within peer groups, but on the other hand face certain constraints, expectations and obligations with regard to mobile media, creating different technosocial situations in which specific social rules and interaction orders are generated. Mobile media usage encompasses both mediated interactions and face-to-face-interactions related to media, creating different technosocial situations in which specific social rules and interaction orders are generated. Mobile media usage encompasses both mediated interactions and face-to-face-interactions related to media, creating different technosocial situations in which specific social rules and interaction orders are generated.
program are often perceived as dependants of their husbands and, therefore, not destined for gainful employment. The fact remains however, that economic challenges often confront the women's families as husbands/fathers' incomes do not adequately meet the needs of family members especially where children are involved. Mothers who cannot find gainful employment and who have limited access to welfare, often resort to setting up small-scale enterprises in the basements of their homes. Such enterprises generally involve hair-training, tailoring, and sale of ethnic food and products which yield some much needed income for meeting some of the needs of family members. This paper will highlight what establishing and running enterprises and the challenges faced by scale entrepreneurs confront in running their enterprises some of which are transnational in nature. The paper will also explore ways in which support can be generated for the growth of such enterprises in order to become major alternative means of employment for unemployed African immigrant women in Canada.

Visualizing Dispossession As a Mode of Reconciliation: An Australian Case Study

In the late twentieth century non-Indigenous Australians came face to face with the violent past of settler colonialism. During a decade of Reconciliation (1991-2000) they engaged (voluntarily or otherwise) with materials that informed them about the often ignored atrocities and everyday violence that had been directed at Indigenous peoples for the past two centuries. Thinking about a series of images of lands of mourning and the other addresses the question of violence and emotion. Using three different modes of the visualisation of violence directed towards Indigenous peoples – popular cultural (commercial television and film), documentary (public television), and government commissions (photography) - produced in the period of reconciliation or its aftermath, it asks the question what and who does it cost to (re)member a violent past. Analysis draws on Anthony Moran's (2002 1016) notion of non-Indigenous fantasies of Australia as empty space, which meant: settlers could build their own utopias without hindrances. Such discourses (represented) indigenous society... [as] not counting as historical societies with their own traditions and historically sedimented relationship with the land. Therefore, nothing stood in the way of the establishment of those new utopian societies. It is this clearing of space – the elimination of Indigenous peoples through massacre, removal to reserves or 'adoption' as a cheap source of labour - that has been a key site of disruption to the 'utopian' vision of peaceful Australia. The paper explores how the three modes of visualisation address different audiences, and how the subtext different logics that underpin each genre produce different affects for the intended non-Indigenous audiences, but also the Indigenous peoples who are the subject of the images. Making a distinction between a desire to right injustices and the needs for dominant groups to address their own problem, this paper considers the effects of remembering.
Weber, moreover, gains new relevance for problems of nation-building, especially among “late children of 1848” in the newly independent states East of the Elbe. Charisma is one concept which gets a second and prolonged life after the implosion of the Soviet Empire. Weber might be a part of cosmopolitan bourgeois but is basically a nationalist political economist and his problem agenda – renewal of forms of state, political sociology and political representation – has many parallels today.

It is high time for an inventory of Weber’s work from the vantage point of its relevance and utility in today’s world.

Using Arts to Generate Representations of Resistance to Hegemonic Understandings of ‘Deprived Communities’

This paper will explore how community representations produced through creative arts practices can be used to challenge and disrupt numerically based framings of health policy and practice. Policies for health improvement in the most deprived localities in the UK tend to focus either on the impact of poverty and deprivation – but with little historical or cultural differentiation of the meaning of deprivation – or, most commonly, on the prevalence of ‘unhealthy behaviours’, with limited attempts to connect these with meaningful ways of life under varying conditions of disadvantage. Whilst health inequalities continue to be a priority for the UK government, many of the policies designed to address ‘austerity’ have served further to stigmatise, blame and silence those who languish in the bottom population quintiles produced by standard indices of deprivation. This paper will draw on theoretical development and early data collected from a three year research project, working in five neighbourhoods in Wales, Scotland and England. In this project, academics from the social sciences and the arts and humanities together with creative artists and community members seek to use the arts to develop new modes of describing and representing who they are and where they live. This experiment starts from the conviction that the creative arts, along with modes of analysis and critique derived from the humanities, can play a transformative role in a process of improving communication, dialogue and knowledge exchange as well as providing the resources of hope for forms of collective social action and agitation. The paper will also discuss the implications for sociology of developing an epistemology that is nourished by the literary, visual, and performative arts, and how this might influence processes of knowledge exchange with policy makers.

Characteristics in the Personal Network and Mortality Risk in Older Adults

Research on aging has consistently demonstrated increased chance of survival for older adults who are integrated into rich networks of personal relationships. Theoretical explanations are that personal relationships offer direct behavioral and physiological pathways to longevity, as well as buffer stress and provide coping resources during critical life-events. These pathways often operate independently from age, sex, lifestyle, well-being, chronic diseases and functional limitations. Besides these insights, many studies fail to establish a strong link between social integration into personal networks and risk of mortality. We suggest that the life-prolonging effects may vary considerably across the different conceptualizations of integration into personal networks. Furthermore, research designs need to account for changes in the personal network during the aging process. The objective of this study is to model mortality risk depending on a variety of personal network characteristics, including for example network size, social support and diversity in relationships, e.g. with a variety of family members. We expect most protective effects for complex and multifunctional personal networks (e.g., diversity). Data are from the Longitudinal Aging Study Amsterdam (LASA) and include ~2,900 Dutch participants aged 54 to 85 at baseline in 1992 and six follow-ups covering a time span of twenty years. Preliminary findings suggest differential impacts of the personal network characteristics, e.g. there is a reduction in mortality risk for individuals integrated into diverse personal networks.

Even the Most Marginalised Can and Do Exercise Collective Agency!: Case Study Empowerment Programme for Caregivers of Children with Disabilities in a South African Township

This case study examines the medium-term outcomes on collective agency contributed to by a Community-based Rehabilitation (CBR) empowerment programme for caregivers of children with multiple disabilities in a peri-urban South African township. CBR is the World Health Organisation-endorsed approach to promoting human rights and improving quality of life for people with disabilities in developing settings. The newest conceptualisation of CBR includes an empowerment component that encourages interventions to mobilise communities of people with disabilities; promote self-advocacy and effective communication; and develop peer-led self-help groups. This paper adds to a small body of evidence-base for CBR using empowering, participatory qualitative methods to allow members of a CBR self-help group to participate as co-researchers in analyzing the outcomes of their participation in the programme. Concrete examples of their burgeoning civil engagement and collective agency illustrates how even the most marginalised in society can and do exercise agency.

Challenges for Farmers Field School in Sudan: Towards Participatory Synthesis of Traditional Practices and Modern Knowledge for Sustainable Farming and Livelihood

Farmers in Gadarif State, Sudan, are suffering from Striga, a parasitic weed also known as witchweed, which attacks sorghum, their staple food crop. Given the threat to food security, Farmers Field School (FFS) program, launched by Sudanese researchers with funding from Japan, works with local farmers to develop weed control techniques combining traditional practices with outcomes of modern research. This paper, based on interviews with the research team, examination of technical documents, and survey and interviews with farmers, presents our self-critical assessments of prospects and challenges of FFS striving to improve the food security and build sustainable livelihood. First, FFS attempts to revive, educate and disseminate traditional practices to control Striga, including crop rotation, deep plowing and soil flooding, which currently few farmers adopt. Assessing these methods with local farmers, FFS is expected to generate a feasible, effective, and hence sustainable weed control regime to improve the food security of the underprivileged farmers. Second, while the livelihood in rural Gadarif is likely to continue centering on agriculture, many farming household members now seek non-agricultural income opportunities, as informed by the livelihoods approach literature. The livelihood diversification may indicate that FFS’s scope should eventually be widen to respond to diverse needs of farmers, such as comprehensive farm household management, financial literacy education and entrepreneurship. FFS’s participatory approach therefore should dedicate its efforts to truly empowering the participants beyond the technical development. Third, despite its promising bid, FFS leaves an essential question unanswered as to why Striga has recently come to damage sorghum devastatingly. Answering this question may demand a scrutiny of changes in political-ecological conditions of the region. Whatever the true reason is behind the Striga epidemic, attention to wider social, political, economic and ecological conditions is vital to tackle the problem and build sustainable farming and livelihood in Gadarif.

Cought Between the State and the Subject: Studying Identity and Belonging within State-Based Classifications

Public research funding often requires researchers to frame their work in relation to the state-based classification schemes (e.g. ethnic and racial statistical categories) that guide government interests. Surveys and interviews built around these classifications set durable, a priori boundary markers between groups, and respondents must articulate an identity within those confines. They also elicit re-
sponsors that capture only one component of identity: a consciously articulated sense of one’s location within the available classification system that cannot capture the implicit, situational, and interactive component of identity. What strategies are available to researchers wishing to avoid the pitfalls of the ‘groupness’ that state-based classification schemes imply?

This paper explores one methodological solution to this dilemma, using the example of research conducted with an NGO in London, which was commissioned by the government to study the financial inclusion of ageing ‘Black and minority ethnic’ (BMEs). Our method draws on analytical techniques developed by German sociologists for operationalizing Mannheim’s notion of ‘documentary meaning’. Instead of asking subjects who they ‘were’ or ‘were not’ in relation to the official category that they were recruited to represent, we implicitly explored what it ‘meant’ to be an ageing BME by observing how subjects engaged in political communication at a deliberative assembly on matters central to being a member of a political community. At the core of this technique is an intersectional impulse wherein identity markers are seen as emergent through practices, relationships, and interactions and thereby deeply enmeshed with other identity markers: in this case, generation, citizenship and class. The deliberative context also created a critical distance between participants and researchers that enabled the former to challenge directly the empirical and analytical validity of state-based practices of classification, such as statistics.

**Diversity Ideology, Alienation and Social Exclusion in the Post U.S.-Civil Rights Era**

This paper explores alienation and social exclusion in major transnational corporations. Specifically, it is interested in the ways that inequality is embedded in the business world through both ideological and structural processes that help to exclude women and minorities while creating opportunities for the majority through “white male bonding.” The result in many corporate settings is a business climate that is hostile to women and minorities. Such a climate is socially isolating for the few women and minorities who work in middle management or higher positions. However, under the guise of diversity and inclusion, corporations are able to mask the inequities in the workplace while maintaining the status quo. Women and minorities in such extreme social situations find themselves not only having to maneuver an uphill battle to keep their jobs or get promoted, they have to do so often while socially, politically, racially, and gender isolated.

**Collective Action As an Instrument of Control? the Case of Employment-Focused Movements in Morocco**

Contentious action in coercive settings has been given different explanations. The level of repression, the stock of legitimacy of authorities and the prospects of legitimacy that help sustain the mobilization over time.

The PAH has managed to reframe the housing crisis in terms of fraud and deception in favor of the urban squatters’ movement (okupa) or the global justice movement. These home owners are middle-class and working-class people that benefited from easy access to housing credit in the 2000s during the real estate bubble. When the bubble burst and they lost their job, they became unable to pay their mortgage and faced eviction threats from the banks.

In order to explain the multiplication of mobilizations in favor of “dignified housing,” we focus on a particular organization created in 2009 in Barcelona and which has become the most visible and influential actor of this movement: the “Platform of people affected by mortgages” (Plataforma de los Afectados por la Hipoteca, PAH).

We argue that the growth of the PAH is not a mere side-effect of the crisis. Many other categories of people are affected by the crisis but do not mobilize at all. We claim that its relative success stems from two processes. First, the PAH managed to reframe the housing crisis in terms of fraud and deception rather than personal responsibility and as a systemic rather than individual issue. Second, the horizontal structure of the PAH is highly inclusive, allows for multiple types and degrees of involvement, and feeds the development of a sense of belonging that helps sustain the mobilization over time.

Our research is based on semi-structured interviews as well as participant and ethnographic observation in Barcelona in 2013.

**Gender-Based Violence in Disasters: An Action Research Agenda**

Does gender-based violence increase after disasters? While the question is still asked, international studies have documented this social fact while taking into account significant contextual differences and measurement challenges. This essential baseline research supports the new global planning resources now available in the “good practice” tool kit of contemporary humanitarian relief work. Some proactive training, preparedness, and mitigation steps are also apparent from service providers, feminist activists, and anti-violence advocates, generally in terms of specific disaster events.

Based on the author’s prior research and on critical review of English-language work in the field, this presentation will synthesize and challenge the main international lines of research, analysis, and action to date. Four specific issues will be considered, each grounded in the assumption that gender-based violence can and must be prevented in disaster contexts: (1) the distinguishing features of gender-based violence in disaster contexts; (2) persistent gaps in evidence and analysis; (3) research designs supportive of the most pressing research questions; and (4) prospects for using our expanding knowledge in this area to better protect fundamental human rights in disasters.

The presentation will also situate the Japanese experience in broader context, and potentially help launch a proposed international research collaborative for understanding and addressing gender-based violence in disasters.

**The Pyramid Model of Legal System Toward Responsive Law**

In Japan, the social system has been disturbing by abrupt and arbitrary criminal punishment in the field of political conduct, business behavior and medical treat-
ment. Apart from the natural and traditional crime, criminal sanction should not be used or should be limited to extremely heavy legal violation.

In order to develop the economical social system or to prevent the injury and restore the damage, preventive administrative system should be formulated, civil procedure should be strengthened and soft-law should be put to practical use in administrative organs, various parties and business groups.

In Japan, old criminal system has been carried out in every field. For example, here has been the heavy grappling without recording in the detention center for long term, and no complete criminal discovery system. “Beyond a reasonable doubt” principle has not been observed on the adjudication of the court. Criminal punishment to the politicians, enterprisers, doctors, accountants and lawyers gave the serious bad effect. On the other hand, Japanese police didn’t prevent abduction by North Korea and other heavy traditional crimes.

Japan should massively use the power for preventing the violent crimes, and depend on other new system for defending the technology, the freedom and the health.

Japanese should proceed to responsive legal society from repressive law or authoritarian law that I originally present by the 4 steps pyramid model of legal system as follows:
1. Criminal Penalty, final sanction to violent crime
2. Civil Trial Relief, compensation to damage, restoration to original state
3. Administrative Prevention, hard-law, soft-law
4. Self Governing, soft-law, self-rule

Depressive Love: A Contemporary Form of Self-Alienation

Both love and depression are central concepts in science, art and everyday life. They are frequently used to capture the fundamental needs of human beings: love is seen as the result of the recognition or satisfaction of those needs, whereas depression is seen as the result of the misrecognition or violation of those needs.

Love and depression are key elements in the cultural script of emotions or affectual life within contemporary Western society.

In this paper presentation the following surprising observation will be discussed as a form of self-alienation: Love and depression tend to be intertwined in the cultural script of emotions or affectual life in contemporary Western society to such an extent that it is informative to talk about depressive love as a sign of the time.

The surprising observation triggered questions by help of which a concept of depressive love as a contemporary form of self-alienation will be developed:

In what ways are depressive love expressed in contemporary Western society?

Is depressive love a new phenomenon? Is it possible to find expressions of depressive love in other epochs or time periods of Western society?

If so, what distinguishes the depressive love of contemporary Western society from the depressive love of other epochs or time periods of Western society?

What (dis)functions do depressive love have in contemporary Western Society?

ENGDALH, EMMAR* (Allborg University, emmar@soscii.aau.dk)
Embodiment in Consumer Society: The Case of Store Window Mannequins

In this paper presentation I will investigate the embodiment of ethos as part of self-development within modern consumer society. Modern consumer society has reinforced the focus on the body and invented new forms of desires that aim of self-development within modern consumer society. Modern consumer society plays in that process. Especially, George Herbert Mead’s theory of self-development will be considered, but also more contemporary ideas such as the no-formations to gender. Going beyond the obvious message of the store window’s sales argumentation, I will outline a theory that explains how ethos becomes embodied as part of the self. The theory will elaborate the concept of ethos by integrating it with theories of self-development and the part embodiment plays in that process. Especially, George Herbert Mead’s theory of self-development will be considered, but also more contemporary ideas such as the notion of postsocial relations (Knoor-Cetina and Breugger 2002) is taken into account. Second, I will trace the transformation of ethos as it appears in Swedish shopping windows from the beginning of the 20th century until today with special consideration to gender. Going beyond the obvious message of the store window’s sales argumentation, I will decode the different ethos that store window mannequins represent. My empirical material consists of over one thousand pictures of shopping window displays. The more recent material, 2000-2012, is from different shopping windows in downtown areas in different cities in Sweden, whereas the historical material from 1930-1970 belong to a large collection of pictures from MEA (Militär Ekiperings Aktiebolaget).

Systemic Gender Discrimination or Psychopathic Gangs? Media Representations of Femicide in Guatemala

The objective of this paper is to analyze the way that murders of women are represented in Guatemalan newspapers and how that representation has changed in response to women's organizations' efforts to bring a gendered analysis to the issue. For several decades women's organizations have argued that newspaper reports of murdered women use language that blames the victim, minimizes the problem, and deflects attention away from systemic gender violence within the family and other institutions by suggesting that the majority of murders are carried out by psychopathic youth gangs. In order to combat this representation of the problem they have conducted studies of violence against women, held press conferences reporting those results, worked on changing and introducing laws, and held workshops with the media in order to sensitize them about how they report these crimes.

For this analysis I use reports of murdered women, feature articles on gendered crimes, and articles reporting on the activities of women's organizations for the last five years from the two Guatemalan newspapers with the largest circulation. I analyze the way that victims and perpetrators are represented, theories of causation offered by different social actors, how feminist language is used by these different actors and by the journalists, and the overall "moral of the story" that is being presented to the Guatemalan public. I compare this to the points of view of women's organizations and human rights groups gleaned from their publications and interviews with key members. I argue that while there is more inclusion of feminist language and points of view in media reports, these are dwarfed by the daily barrage of murder reports that, with bare minimum descriptions and very little follow up, leave the Guatemalan public to fill in the blanks with their own interpretations of what is "really" going on.

ENGUIX, BEGONYA* (Universitat Oberta de Catalunya (UOC), enguix@uoc.edu)
New Practices, Old Debates : Ambivalence and Conflict in Identity Politics

Identity-based social movements face a well-studied and basic contradiction: using their difference to achieve equality reinforces their differentiation. Tensions between difference and equality have permeated activist discourses at least since the 60s shaping various activist positions that range from assimilationism to radicalism.

In the current Spanish LGBT movement the tension between assimilation and radicalism has produced an 'official' LGBT activism (hosted by the FELGTB and a group of radical social movements) and a 'counter' LGBT activism (hosted by the FELGTB and AEGAL). The progressive incorporation of entrepreneurship - LGBT or not- to such celebrations, the ambivalent position of public institutions deepen the split between these activist positions. Madrid will not hold the 2020 Olympics, but will hold the World Pride in 2017. Its candidacy was championed by AEGAL (LGBT business association) and the City Council with the support from the 'officialist' LGBT associations.

The importance of tourism as a source of income, identities as business, the spectacularization of the claims and the idea of consumption as the backbone of identities all mark the present and seem to mark the imaginable future of LGBT movements in our country. This is 'gaypitalista' (Shangay Lily) Pride is presented as opposed to 'authentic' conceptions of vindication.

In this scenario, it is urgent to overcome old antagonisms and find new ways to represent and visualize vindications, new 'practices' that aspire to the articulation of the 'inevitable' (reification, commodification and exposure of identities) with the defense of rights and claims.

We aim to analyze the strategies for the present and the future in this field through content analysis of in-depth interviews with businesswomen, politicians and activist leaders ('officialist' and critics) and various digital media (blogs, comments on news and websites).

U ( U) LGBT: Lesbian, gay, transsexual and bisexual. FELGTB: Federación Estatal de LGTB.
Beyond Empowerment or Consent: Labor Law, Legal Action NGOs and Workers’ Negative Capabilities

Since the mid 1990s, accompanying the development of legal frameworks that regulate the Chinese labor regime, there has been the usurpation of non-governmental organizations (NGOs) that pursue the protection and promotion of peasant-workers’ (nonmingong) rights. These labor-legal action NGOs play a multifaceted role: reproducing and maintaining capitalist arrangements and structures embedded in the labor laws; diffusing the legal discourse; and, providing a support structure for workers’ legal actions when experiencing an industrial dispute. The purpose of this paper is to examine the interplay between labor laws, legal action NGOs and workers’ actions. It illustrates how structural conditions reach workers through a double channel - the legal system and legal action NGOs. Unsurprisingly, the convention is that both the simple existence of labor laws and workers’ contact with NGOs has an empowering effect on workers as they have been endowed with rights they acquire legal knowledge, raise their rights awareness and are enabled to pursue legal action. The critique or counter-argument would sustain that this legal structure obtains workers’ consent to the capitalist labor regime and contains their actions within the borders of legality.

However, in line with Roberta Onger’s (2004) false necessity theory, there are subtle spaces for peasant-workers’ negative capabilities or self-empowerment and action both within and outside the structural constraints posed by the law and legal action NGOs. This paper will illustrate through ethnographic material gathered during fieldwork in three NGOs in China throughout 2012 and 2013 that it is in fact because of workers’ apprehension of these structural constraints and their contact with legal action NGOs that many of their negative capabilities are developed, stimulating their actions to go beyond the predetermined by law.

RC12-224.2

ENJUTO MARTINEZ, REGINA* (London School Economics & Political Science, R.Enjuto-Martinez@lse.ac.uk)

Framing Disputes: Labour Law and Legal Aid NGOs in China

In the year 2008 a significant legal reform was introduced into China’s labor regime with the enactment of new laws, the Labor Contract Law and the Labor Disputes Mediation and Arbitration Law amongst them. Since then, labor disputes brought to the legal channels—which had steadily grown throughout the 1990s and early 2000s—experienced an exponential rise: a 98% increase between 2007 and 2008.

Official statistics on labor legal disputes evidence a greater readiness to use the established legal channels to resolve conflict. Key in inducing this readiness has been the role of legal aid NGOs that provide legal services to peasant-workers (nonmingong), the bulk of Chinese labor force in industrial areas. These civil society actors - legal aid centers, labor NGOs and lawyers - provide free legal services, legal consultation, and legal training. On behalf of peasant-workers, they advocate for the protection of their legitimate rights, claiming for better enforcement and compliance of the laws, hence contributing to the development of the legal system. Moreover, they elicit the rise of workers’ rights consciousness and kindle their dispute behavior into legal action.

Through an analysis of the aforementioned labor laws and through qualitative material collected during ethnographic research in China during 2012-2013, this paper argues that the labor laws and the support structure of legal aid centers, NGOs and lawyers intends to relieve the increasing levels of industrial conflict in China by framing the nature of labor conflict and dispute behavior: the definition of what constitutes a legitimate dispute in labor relations and its procedures for resolution (including a specific idea of legal justice) is pre-determined by law. This way labor conflict is contained, and by avoiding its spread and radicalization, the government of the Chinese Communist Party maintains the necessary and desired social order for its economic development model.

Equality of Opportunity in Higher Education

Equality of Opportunity in Higher Education: The Contribution of an Open University

An issue that has concerned sociologists, who have studied the expansion of higher education, is the consequence of this process in terms of social stratification. Does the increase in the number of universities and colleges ensure growing access to education for disadvantaged social categories? This question remains to persist, because potential students from the more advantaged groups tend to utilize the growing opportunities better than those from lower social strata.

Previous studies that have examined the expansion of higher education and its effect on educational inequality have usually discussed the contribution of all educational frameworks taken as a whole and have not distinguished between various types of educational institutions. These studies which have been carried out in a large number of developed countries (see summary in Boliver, 2010) tend to agree in their conclusions: Expansion in higher education does not necessarily reduce inequality.

The present paper examines the contribution of a special type of educational framework, an open access distance teaching university – as exemplified by the Open University of Israel (OUI). Does this type of university provide a unique contribution to the increase of equality by eliminating several barriers that have previously prevented equality of opportunity in higher education?

Data relating to the OUI and characterizing its student body at two different points in time show that also in this educational framework, students from a higher status background tend to choose the more prestigious fields of studies, whereas students who hail from a lower status background are usually registered in less prestigious subject areas. This points in time show that also in the entire open admission both to the university as such and to its different departments. The general significance of this finding will be discussed.

The Japanese Way of Coping with Vulnerability: Divisions Among Lay-People after the Great East Japan Earthquake

In Japanese society, in the discourses on ecological risks and health risks, we are all included in the terms mankind, global citizens, the nation, and consumers, all of whom bear responsibility for the earth or body in the future. There are tacit agreements about the social and scientific rationality that we should obey. We are expected to be good citizens. However, there is also the risk that discourse will lead to divisions among lay-people. By clarifying how the Japanese judge risk and make decisions when facing their fears in everyday life, we can see the division of risk discourse brought about by those decisions. This study involved a qualitative investigation based on interviews with various groups such as mother activists who aim to protect their children from radioactivity, volunteers who evacuated people from Fukushima, people who collect and dispense scientific information through SNS, people who are disinterested, and so on. Risk was what primarily divided the respondents. For example, some people reported that they could not speak of their fears of things such as radioactivity because they wanted to maintain good relationships with others. Additionally, many people do not trust mass media reports and government announcement and thus they must decide for themselves what to do or whom to trust. For these respondents, preference was an important factor when they needed to judge which scientific discourse is correct. We can find many divisions related to many decisions and judgments, such as what or whom to trust, what media to use, what to eat, and where to live. By discussing why and how people are divided, and what drives people’s emotional connections to each other, I suggest ways to resolve these divisions.

ENSTEDT, DANIEL* (University of Gothenburg, daniel.enstedt@dlir.gu.se)

This paper will examine the impact religious memories have on collective and individual identity formation in the context of religious disaffiliation. Through a series of apostasy and deconversion narratives from former Muslims, I will examine how religion – in this case Islam – is remembered, and the influence of such religious memories, even when religion is abandoned. What impact has collective and individual religious memories in apostasy and deconversion processes, and what role plays religious memories for religious defectors?

This paper tackles questions about how Islam is understood and represented in apostasy and deconversion narratives by making use of contemporary theories about collective and cultural memory. From such a point of view, religious disaffiliation is not primarily about religious amnesia. It could rather be understood as about collective and cultural memory. From such a point of view, religious disaffiliation is not primarily about religious amnesia. It could rather be understood as
Attitudes on Gay Parenting Across Countries

In recent years, Lesbians, Gays, Bisexual and Transgender (LGBT) groups in the Philippines have been actively advocating for equal rights as citizens of the Philippines. These groups even formed their own political party list groups that joined the political race in 2010 and 2013 elections, but unfortunately did not win any Congressional seats because Filipinos were not yet ready for LGBT leaders. Therefore, it would not be surprising if attitudes towards gay parenting would not be so favorable.

Social Weather Stations (SWS), a non-stock, non-profit research institution, conducted the International Social Survey Programme (ISSP) module that asked about, among other things, attitudes towards marriage and alternative family norms – which includes gay parenting – in its 2012 November nationwide survey. The survey found that opinion is split towards the idea of a same sex female couple raising a child, with no differences in opinion among males and females. Plurality is not in favor of a same sex male couple raising a child, with this opinion being also true among females. This paper will also compare findings with 47 other ISSP member countries to see the level of acceptance of these alternative parenting setups.

Organization of a Networked Presidential Campaign in Social Media

Even though participation in traditional party politics is in decline, novel campaigning approaches can create momentous movements and mobilize people on an unprecedented scale. This paper will focus on findings of surveys done by Social Weather Stations and the Organization for a Networked Presidential Campaign in Social Media.

Mr. Haavisto comes from a small party with a lousy track record on previous presidential elections and a lackluster funding. Although Haavisto ultimately lost the election, the campaign is widely seen as a model for future efforts. The most effective parts of the campaign were based on completely autonomous campaigning groups with little or no oversight from the campaign office. These groups were self-organized around memes, which were also an effective tool in online campaigning. 80% of campaign funding was funded through a micro-funding tool.

The paper aims to describe in detail how the campaign used social media for communication and fundraising. It uses key person interviews and a collection of material from social media to create a rich profile of the campaign tactics. The paper analyzes, what the campaign looked like and what new conflicts emerged from the election, the set that included 1) the campaign office, 2) party headquarters and most importantly 3) hundreds of volunteers without direct oversight. The paper argues, that a move from a centralized traditional campaign office towards more agile and decentralized forms of networked campaigning especially regarding funding and communication can be made even inside party structure.

Mobile Citizenship: Gender, Ethnicity and European Privilege

Mobility rights within the Europe Union are a key feature of European citizenship. Yet there is little research on how this privileged form of mobility engenders new forms of belonging and identity. Drawing on empirical research with migrant women from Europe in London, the paper explores how they construct belonging for themselves and their children. European citizenship is an important social division between migrant mothers: European citizens are entitled to migrate to and work in the UK, whereas non-European citizens have to legitimate their presence with recourse to humanitarian reasons (refugees) or their ability to economically contribute. The project explores how a group of middle class, white mothers with privileged mobility rights in the EU experience and conceptualise cultural identity, outside traditional party membership. Finland, with its until recently stable party system, is no exception. Following the overseas examples of the campaigns of Howard Dean and Barack Obama, Pekka Haavisto (Green) pioneered usage of social media in an unprecedented scale during the Finnish presidential election of 2012. This paper explores how traditional party structures can use social media and campaigning tactics that are traditionally more suited to different types of social organizations.

The survey found that opinion is split towards the idea of a same sex female couple raising a child, with no differences in opinion among males and females. Plurality is not in favor of a same sex male couple raising a child, with this opinion being also true among females. This paper will also compare findings with 47 other ISSP member countries to see the level of acceptance of these alternative parenting setups.
Unlike many countries of the South, the land has newly become a commodity itself in Turkey.

The case of Kocaoba could be seen as one of the exceptional examples in this manner. The company of AGROBAY, has bought 150 hectares of land recently, with the purpose of establishing a large-scale greenhouse. Yet, the land occupied by the company has been traditionally used as a pasture by the peasants, whose livelihoods depended mainly on husbandry. However AGROBAY has started production and marketing to European countries successfully. The other companies have also started to come to the area.

In this study, the main socio-economic consequences of land grabbing as such would be investigated on local community level. Could the change of the ownership of the rights be counted as a beginning of a new phase in the process of commodification? If so, what would be the response given by the peasants, how do they deal with the new situation in their daily life? In the light of the discussion on dispossession/proletarianization of peasantry, the strategies of the villagers would be included to understand the main dynamics underlying the re-formation of the households. In this context, the ongoing field research will be extended on the village of Kocaoba; in-depth interviews and focus groups are planned to be conducted with the villagers.

ERGIN, MURAT* (Koç University, muergin@ku.edu.tr)

“Ottomania” and “Cool Japan” in Comparative Perspective

Japan and Turkey have comparable histories of modernization, with both countries experiencing the epiphenomen of their westernization in the nineteenth century, at the end of their imperial eras. Both produced modernities that are considered a mix of “eastern” and “western.” Over the last decades, both have had to face their histories of modernization, pondering the question of what comes after modernity, and how the various versions of contemporary modernity coexist and exportable modernity can be produced.

This presentation discusses two symptoms of this process. Ottomania refers to the increasing cultural consumption of Turkey’s imperial past in Turkey and neighboring countries. Cool Japan is a government-sponsored project, emphasizing popular culture and youth culture, and using modernization’s tropes in Japan. The collapse of traditional hierarchies in Japan and the erosion of the trope of modernity in Turkey have paved the way for the promotion and export of new identity claims rooted in imperial cool.

Internal and external representations of Ottomania and cool Japan differ: 1) Internally, Japanmania and Ottomania are fragmented. The meaning of cool is perishable in Japanese popular culture while different interpretations of Ottomania are a matter of debate in Turkey. 2) Externally, cool Japan and Ottomania are linked to international “soft power” through TV dramas and other cultural forms, and offer alternative and accessible forms of modernity to their former imperial hinterland—China and Korea for Japan, and the Middle East and the Balkans for Turkey. The main difference is that, Ottomania corresponds to declining government intervention in popular culture whereas “cool Japan” represents an explicit attempt to shape Japan’s image. After decades of pursuing aggressive modernization, Turkey and Japan seem to be claiming new cultural forms, and offer alternative and accessible forms of modernity to their former imperial hinterland—China and Korea for Japan, and the Middle East and the Balkans for Turkey. The main difference is that, Ottomania corresponds to declining government intervention in popular culture whereas “cool Japan” represents an explicit attempt to shape Japan’s image.

Disciplined Masculinity: Self-Concepts of Young Immigrant Boxers

The social inclusion of young male first or second generation migrants in Germany is often perceived as precarious. They are considered as a peculiar problematic group with a high risk of being excluded or marginalised in the education system and the labour market. Commonly the main reason for this precariousness is seen in their orientational dilemma between traditional family life on the one hand and aspirations to proficiency and individual fulfillment on the other hand. In this situation semantics of honor and respect can be held as guidelines. They are found in their peer groups and are considered to be something that should not be filled with practical substance due to the distance from mainstream society.

In our presentation we assume, that sports can provide a field to avert this precarious situation and enable social inclusion. We show how young males develop particular patterns of orientation and life conduct that are approved by the main stream society. Based on qualitative interviews we analyze how they train them during their practice and even borrow them for their daily life. Coach-es function as role models, give orientation and stress the acknowledged value of masculinity characterized by discipline.

The presentation refers to qualitative interviews that were conducted within the framework of a research project titled “Worldviews in precarious conditions of life”. They were evaluated by using the hermeneutic procedure of sequential analyses.

Policy and Practice of Dementia Care - Comparing Japan and Sweden/Norway

Background: The trend towards aging populations is worldwide. Japan has the oldest population in the world, the Nordic countries have almost the same figures. Increased rate of dementia goes along with expanded life span, and dementia diseases are predicted to be one of the most prominent future public health threats. In this session, results from an ongoing study on dementia care will be presented. Findings so far indicate for instance that dementia care in both countries is highly person-centered, but also with differences in emotional nearness between users and staff.

Aim: To compare policy and practice of dementia care in Japan and Sweden/Norway from macro/national and micro level perspectives, using mixed methods.

Method: Comparative study on macro/national level concerning: 1) Historical background, 2) Statistics on dementia prevalence and distribution, 3) Legislation, 4) Health and care organization, 5) Economics, 6) Ideological base (emphasizing medical vs social aspects), and 6) Methods of scrutinization/diagnosis. Official statistics and national documents will be analysed, the latter through comparative discourse analysis. In addition, personal interviews with experts and central politicians will complement and deepen the data material. Comparative studies on micro level will be designed as case-studies in 4 settings of dementia care: special housing, long-term hospitals, day care activities and group homes. PROMISE aspects of comparison will be: 1) physical conditions, 2) staff parameters, 3) content of daily activities, 4) relations between users and professional atmosphere. Data will be collected through interviews and observations, and analysed via comparative case study method and qualitative content analysis.

Results: The results will be presented as statistics, discourse analysis, descriptions and qualitative content analysis. Comparison between Japan and Sweden/Norway, and comparison of macro and micro level will be four integrated aspects of the result presentation.

Comparing Post-Stratification and Propensity Score Nonresponse Adjustment: Bias Correction and Precision Loss – A Case Study with the Swiss ESS 2012 Data

Nonresponse bias is a well-studied issue. Some techniques to reduce this source of errors are applied during data collection (e.g., targeted fieldwork) and some post-survey. Depending on the available paradata, nonresponse adjustment can be calculated to hopefully correct for bias. The problem, especially with low response rates, is the loss in precision that it causes. If adjustment weights vary highly, the confidence intervals become larger. The increase in standard errors can in some cases counter-balance the decrease in bias. Moreover, a good nonresponse adjustment is based on variables that highly correlate with the target variable. Such variables are rarely available. For this reason the choice of a nonresponse adjustment technique and variables used have to be thought of carefully.

We will study two nonresponse adjustments for the ESS 2012 survey in Switzerland. The first will be based on socio-demographical variables from the population with low response rates, as they are the only data available. But they are known to have low correlations with response propensities and with many key variables. In a second step, data from the nonresponse survey that was conducted shortly after the main ESS 2012 will also be used to construct post-survey adjustment. The nonresponse survey is designed to collect information that correlates highly with the propensity to answer and should lead to an efficient nonresponse adjustment. The expected decrease in bias could be considerably neutralized by the possibly substantial effect on precision of such a weighting scheme. A second shortcoming is that the core of the nonrespondents that did not participate to either survey cannot be corrected for. Our aim is to compare these two methods, assessing the effect on estimates, nonresponse bias and on the precision of these estimates by applying a bootstrapping.

Parental Unemployment, Socioeconomic Status and Economic Recession

We study the intergenerational impact of parental unemployment on the socioeconomic status of the children. We compare the Finnish children facing parental unemployment during the rapid economic growth of the late 1980s and the recession of the early 1990s at the age of 12-18, taking into account the length of parental unemployment spell. The recession was one of the worst in the OECD history and in Finland far more severe than the recession of the 1930s. The ISIE status of the children was observed when they were 30 years old in the mid-2000s, after a decade of growing economic prosperity.

We use propensity score matching to analyse high quality Finnish register data, including 15991 children. We match each individual experiencing parental unemployment in childhood to a pair with similar parental background according to matching variables and calculate the average treatment effect (ATE) to measure differences in ISIE. The matching variables include the occupational class status and educational background of both parents, whether the parents were divorced or separated and household income during the examined period.

The results indicate that parental unemployment has a statistically significant negative effect on the socioeconomic status of the children only during economic growth. Only when the spell is longer than three years the unemployment also has a negative effect during depression. In the further analyses we consider the gender differences and the unemployment of both or only one of the parents.

The results suggest that the negative effect of parental unemployment is largely related to non-economic factors, such as lost social capital or stronger negative stigmatization. They also indicate that the economic depression may level off the negative intergenerational effects otherwise associated with parental unemployment.

A Sociological Examination of Property Inheritance System in Esan LAND of Edo State Nigeria

This paper examined Property Inheritance system in Esan land which constitutes Central Senatorial District of Edo State, Nigeria. The study examined variants of inheritance system as they affect the womenfolk and the coping strategies adopted by the women in living with inheritance pattern. Qualitative research methodology was adopted. We discovered there is strong desire for male preference for the purpose of inheritance amongst the women folk. To sustain this hegemony of male preference for inheritance purposes, women were further manipulated consciously or unconsciously, through various socio-cultural constraints, to give credence and legitimacy to these variants of inheritance system. From the study population, a marriage without a male child was deemed not to be a successful one. Three major strategies were identified to have been employed by women to cope and live with the inheritance systems: The first involved those that resigned to fate and accepted the system. The second are those who have also accepted the inheritance system but devised a means of creating their own wealth; and thirdly, those who stressed the need for women empowerment and education of the girl child. However, there appears to be some windows of change opening up in relation to the issue of Property inheritance systems in Esan land. In order to squarely address the problem of Property Inheritance in Esan land some recommendations were suggested.

New Players, Old Game: The Chinese-Brazilian Relations

Spokesmen of countries in the global South frequently use the rhetoric of South-South cooperation. At the same time many of these countries integrate themselves all the more closely into the international free trade regime as it was installed during the height of Western hegemony. This paper analyzes the relations between China and Brazil as a case example of South-South cooperation that has intensified rapidly in recent years. Based on qualitative interviews with scholars and policy advisors realized in 2011/12 in both countries and backed by a review of secondary literature, it focuses on the question of whether developments in the South remain guided by thinking in Western categories and worldviews or whether they actually present new approaches to international cooperation.

Politicians from both countries often speak about equality, mutual benefit, and the rejection of hegemony. This implies a rejection of the disproportionately strong position of Western states in global economic affairs and a struggle for self-determined development. The argument of this paper is, however, that this does not necessarily imply a rejection of Western norms and values. Development models in the South – be they free market or state-led – first of all aim at growth and competitiveness. Both China and Brazil benefit from their mutual economic exchange within the liberalized global economy. They benefit, however, in terms of national economic growth, while connected problems like social inequality are considered as issues for national social policies. Accordingly, reform-proposals of the global economic order basically aim at changing the power balance between states rather than the underlying principles of cooperation. Therefore, the question needs to be addressed is whether the rise of and cooperation among the South represents an alternative globalization or whether it merely reproduces material and power imbalances and their epistemological justifications, not only between but also within these countries.

Designing Technology-Mediated Democracy: Case Citizen Participation in Urban Planning through Mobile Apps

How can technology improve local democracy? Governments around the world seek opportunities to engage citizens in matters of public policy through a variety of technology-mediated tools. The tools are intended to contribute to democratic ideals such as transparency and inclusiveness, but how these ideals can be met in practice is not clear. In this paper, I examine this question through the case of citizen participation in urban planning through smartphone apps, or mobile participation.

Smartphones are seen as tools to engage a broad audience in urban planning, in particular youth and young adults who do not participate in traditional public meetings. By reviewing a broad range of relevant literature in urban sociology, democracy theory, and interaction design, I examine the conditions, requirements and design principles that must be met for this objective to be achieved.

The findings of the review show that building technologies for participation requires taking into account a broad range of factors, such as social norms, trust and reputation, motivation, opportunity, feedback and dialogue. Participation on-the-go from a specific location also raises the question of who owns a tool with which to participate as well as issues of privacy in a public setting. I conclude that citizen participation needs to move past present shortcomings and become a sustainable process grounded in democratic principles.

ERTURK, ISMAIL* (University of Manchester, ismail.erturk@mbs.ac.uk)

Post-Crisis Technocratic Vigilantism: New Unconventional Roles of Central Bankers

Since the 2007 financial crisis central bankers in all major capitalist economies have introduced what they themselves call “unconventional monetary policies” to prevent a catastrophic collapse of financial markets and restore economic normality. Bernanke in the US, Darighi in the euro zone, King and then his successor Carney in the UK, and Kuroda in Japan have almost become household names through their heroic acts of quantitative easing that involved injection of trillions of dollars into the financial system and recently through their communicative prowess called “forward guidance”. Increasingly these unconventional monetary policies of central bankers attract public debate because there are concerns about their allocative and distributive implications as well as their democratic legitimacy.

In this paper I will develop a cultural economy framework based on the figure of superhero vigilant to discuss the transformation of central bankers from independent technocrats responsible for inflation targeting to public servants fighting against the economic forces that threaten the collapse of financialized capitalism. What we witness here is blurring of identity and role at sociologically and economically underexamined public servant whom the financial crisis empowered in a very ambiguous and contestable way.
The present study deploys a socio-genetic notion of hypothesis testing based on activity theory and Bernstein's theory of codes. It analyses hypothesis testing in different pedagogical settings, from grammar to communication courses at entry level in Japan. In light of the results, it is suggested that the hypothesis-testing processes carried out by students are specific activities closely linked to the pedagogical objectives set out in the curriculum and to other settings. In other words, in grammar tasks that have as object the learning of the formal system, students will see severely limited their capacity to test hypotheses in the field of pragmatics or explore the communicative potential of language. In contrast, during a communication class, students will see limited their capacity to explicitly test hypotheses concerned with formal aspects of language. The apparent integration of a programme does no ensure hypothesis testing (or L2 development). Instruction should be subsumed under developmental targets and not the other way around. It is concluded that structural instructional tasks represent a bridge between theory and practice and an opportunity for students to test their hypotheses, as they are given more control over instructional tasks.

Making Home in Helsinki: Indian Skilled Migrants and Housing

How have Indian skilled migrants settled in the Finnish built environment? This paper discusses the issue by analysing the housing experiences of Indian skilled migrants living in the Helsinki metropolitan area, Finland. The study’s background is in urban geography and housing studies, and it employs both structuralist and humanist views in order to tackle this multifaceted research problem. Immigration to Finland is a relatively new phenomenon. As a receiving country, Finland offers rather homogeneous housing alternatives. Furthermore, India and Finland differ greatly in climate and culture. What are the home-making practices of Indian migrants in this challenging environment? How do they choose their dwellings and what are the important aspects of housing for them? Do they feel at home in their neighbourhoods and in relation to native population? How do they construct their social life in the frame of the build environment?

The data consists of semi-structured interviews with Indian skilled migrants who have migrated to Finland to work. All of the interviewees were highly educated and worked in knowledge-intensive positions in research and business fields. The results of this study offer insight to the home-making practices of this migrant group and can be utilized in shaping the housing policy of the diversifying country.

An Assessment of Intervention Programmes Aimed at Addressing the High Failure RATE of Students at Universities in South Africa (SA)

Since the early 1990s, the failure rate among students and especially first year students enrolled at South African (SA) universities has been exceptionally high. In 2008, Higher Education South Africa(HESA), the vice-chancellors’ association representing the country’s 23 public universities reported that the student drop-out rate had grown alarmingly and had hit 35% at some universities, with the bulk of those leaving being first year students (Makonyi, 2008). Specific to the SA context is the political and moral imperative of access, equity and success – forces playing themselves out in a society undergoing massive and rapid transformation. Needlessly, this literature provides extensive explanations and reasons for this high failure rate ranging from poverty, lack of funding, poor student housing to academic under-preparedness. Most of the reasons are neither new nor specific to the SA context. Parallels can be drawn with universities in diverse and heterogeneous societies. Universities have responded in several ways through the implementation of programmes ranging from supplemental instruction to staff development programmes.

The aim of this paper is to provide an assessment of the type and nature of intervention programmes offered across all 23 universities in SA with a focus on its objectives, the intended outcomes and the sector it targets. The method used for gathering information is based mainly on documents and official publications of the institution which may be combined with a few interviews.

Contested Land, the Implicate Relation of Memories and Traumas of Israelis and Palestinians

Israel and Palestine, over the course of their historical conflict, have created a complex patchwork of narrative narratives dealing with different representations of the same landscape. The paper examines how the two peoples have elaborat-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
ed their narratives of national identity by practicing a pre-modern repertoire to shape a modern identity, and by knitting together their collective, multiple visions of the land. Israelis and Palestinians have used space as a temporal-spatial tool to practice the remembering of lost land and to elaborate an imaginative geography.

In an intractable conflict like the Israeli-Palestinian one, a culture of conflict and a psychological repertoire of conflict have developed. This repertoire includes ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict. My purpose is to focus attention on both narratives adopting Bar-Tal’s view: “Israeli society represents a mirror image of the Arab societies, particularly those in the Palestinian society […] both societies shared beliefs and mutually held social representations.” (Bar-Tal 1998). The case of the Israeli and Palestinian memories raises many questions; however, I wish to limit the discussion to the relationship between dreamt/imagined space in the Diasporas memories, and the entanglements related to loss and claims of return. The time line does not follow a unified, precise chronology. A temporal dialogue keeps memory alive, but the past is not simply ‘preserved’. The results of the 1948 war dramatically changed the relationship to the land. Political Zionism fulfills for “people without land the dreamed-of homeland.” The uprooting from the homeland is the focal point of Palestinian national identity, the trauma and the loss feeds their memory and nourish their narratives.

ESU, AIDE* (University of Cagliari, esu@unica.it)

Is Mobilization for a Better Life a Challenge to Change Society? Is mobilization for a better life a challenge to change society?

Contemporary social movements are in large extent linked by networked communication technologies, quickly developing a borderless public sphere in a mix of new cosmopolitan citizenship deep-rooted to local issues. The social movements of the internet age create online and offline communities to share views, practices, and strategies, creating a third space defined by Castells a space of autonomy to challenge the disciplinary power. In the paper, first we pay attention how the communication flows across the offline and the online communities are set up, how the local level is intertwined to borderless frame to enhance collective strategies, how they capitalized past social movements backgrounds, like campaigns, and networking platforms, how they appraised the repertoire of action and communication forms of past social movements. Secondly, we pay attention to Middle East social movements in the call to question the Western autonomy of their way to either include immigrants into the proceedings or to show their impartiality by completely ignoring the precarious situation of the appealing party.

Bridging the Silos: Curriculum Development As a Tool for Crossing Disciplines in the Arts, Sciences and Humanities

Investigators in the 21st century are finding that there are tools, information and points of view from other disciplines than their own that can answer the problem they are studying. However, higher education becomes more restrictive as a student moves from general education courses into graduate school, where a single department awards degree based on a usually narrow set of course requirements and a thesis or dissertation. Little is known about the kinds of cross-disciplinary courses that are currently being offered, the mechanisms that employed to offer them, their pedagogical effectiveness. A first necessary step is to research current cross-disciplinary offerings in higher education on an international basis in order to understand the modes of development of such curricula. We present an analysis of a compendium of arts-science-humanities cross-disciplinary courses created through several Calls for Contributions (2009 to 2013). A web site was created and submissions were posted at http://www.utdallas.edu/nrge/cdash/. Permissions and updates were received for over 100 courses, along with additional material. The data (from courses) was analyzed as to the nature of the cross-disciplines, level of offering (graduate vs. undergraduate), geographical location, level of collaboration (number of instructors) and department(s) offering the course. A comprehensive re-visioning of curricular structure to encourage collaborative and cooperative teaching of integrative courses and programs is needed. Suggested actions include specific ideas to enhance networking and visibility, asset mapping, sharing of syllabi and course materials, and a research effort to demonstrate the efficacy, pedagogical effectiveness of cross-disciplinary arts-humanities courses. This preliminary study points the way towards further efforts in curricular design and research that will be required for cross-disciplinary courses to be integrated into college curriculum.

This project was initiated for a SEAD white paper, developed in collaboration with the Leonardo Education and Art Forum (LEAF), and supported by the National Science Foundation under Grant No. 1142510.

Alternative Visions Of Work In a Neoliberal World: An Impossible Dream Or a Project Under Construction?

“We give people jobs” is the capitalists’ prime legitimation for monopolizing political and economic power. The reality behind this ideology is that the role of capitalists is to make sure that the supply of jobs is inadequate and to degrade those jobs that remain. Yet, the idea that supporting the dominance of capital is the only route that will enable people to exercise their productive capabilities and receive livelihoods in return remains one of the most powerful elements of neoliberal “commonsense.” Replacing this “commonsense” with an alternative vision for organizing social production that is credible and compelling in the context of the contemporary global political economy is a central challenge in the production of counter-hegemonic knowledge. The centuries old history of frustrated efforts to escape the imposition of inhuman and counterproductive modes of organizing work notwithstanding, it remains a project that must be resurrected anew in every era. This paper will combine an effort to systematize an analytical counter-narrative to the current paradigm together with an exploration of existing efforts to formulate alternative strategies for expanding productive livelihoods and implementing alternative organizational forms for securing those livelihoods in practice, within the hostile environment of global neoliberal capitalism.

National Terrains and Transnational Articulations: Global Labor’s Evolving Architecture Under Late Neoliberalism
The neoliberal era has undermined worker's rights and labor's power at the national level, but there have been some positive developments in the transnational articulation of national labor movements. The growth of global corporate empires has expanded opportunities to use connections among national labor movements for “reverse whipsawing” – applying labor's strength in one national terrain to increase the power of labor in another national context where it is weaker. Extreme adversity at the national level has pushed U.S. unions toward a new transnationalism. Brazil shows how the more important global economic role of major countries in the South, when combined with a strong national labor movement, can create fruitful opportunities for transnational alliances. The transformation of teacher education through teacher preparation and provide direction for educators who are establishing or refining clinical partnerships. The growth of Global Union Federations, which has outpaced the growth national unions, and the development of new governance instruments like Global Framework Agreements, have also created opportunities for articulating the efforts of national labor movements and strengthening labor's ability to mobilize globally. These developments balance against global labor's inability to find effective ways of supporting the ability of insurgent workers to become a political force in the world of the largest national working class and the likely future hegemon -- China. Assessing both recent advances in the architecture of the global labor movement and its future prospects as positions in international hierarchy of nations shift is an essential task for global labor studies.

Improving Teacher Quality: Outcomes of a Clinical Model for Teacher Preparation

Improving Teacher Quality: Outcomes of a Clinical Model for Teacher Preparation

Teacher quality, as it relates to the preparation of new teachers, has drawn widespread national attention in recent years. With problems such as teacher attrition, especially among early career teachers (Cochran-Smith, 2004; Darling-Hammond, 2003; Ingersoll, 2001), the need for a new model to educate teachers in the service of P-12 student learning is compelling. Guided by principles detailed in the Blue Ribbon Panel Report (NCATE, 2010), current reform in teacher education focuses on clinical preparation and partnerships between higher education and P-12 to prepare teachers for improved student learning. Using qualitative and quantitative data, this project examines the implementation of a clinical partnership for teacher preparation involving a college of education at a Midwestern research university and one large urban public middle school in the local district. The partnership builds on the previously established collaboration among educators in the district, the college, and the university, to offer a more authentic, comprehensive, and systemic approach to clinical teacher preparation. The project addresses two goals:

1. To determine the extent to which the clinical model in this middle school develops toward “integrated” on the Continuum of Partnership Development for Clinically Based Teacher Preparation (Howell, 2013; NCATE, 2010).
2. To document, assess, and track improvement of teacher candidate performance and related outcomes of a clinical partnership.

Project findings inform the development and implementation of model of teacher preparation and provide direction for educators who are establishing or refining clinical partnerships. The transformation of teacher education through clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing development of teachers who effectively enhance student learning in all contexts. The extent to which this is successful holds broader implications for replicating and sustaining the model at other middle schools with similar characteristics both locally and beyond.

Everything but the Funnel Cake: Art and the University of Puerto Rico Student Occupation of 2010

My dissertation, Everything but the Funnel Cake: Art and the University of Puerto Rico Student Occupation of 2010, explains the use of aesthetic performance and display in protest. In the summer of 2010, students occupied the University of Puerto Rico (UPR) in protest of austerity measures proposed by newly elected Governor Luis Fortuño. In retrospect, the occupation would be referred to as “The Creative Strike,” for its overwhelming aesthetic dimension. Drawing upon two years of ethnographic data, including both on-site and virtual observations, 31 in-depth interviews, and movement documentation, my research is situated at the nexus of sociological, cultural and social movements.

The use of artistic intervention in protest is not novel; however, contexts specific to the 21st century, including new media, paved the way for an emerging set of tactics in response to increasing privatization and economic austerity measures. The UPR protest resembles past actions like the Battle of Seattle in 1999 and an anticipates coming actions, such as the Occupy movement. These actions are notable for the heterogeneity of participants, stated commitment to non-hierarchical organization, and dynamic aesthetic atmosphere. This dissertation illuminates the elevated role of art as a means to manage movement pluralism, demonstrating how aesthetics are deployed to both unify and differentiate movement participants. It combines major theoretical perspectives from social movements, the sociology of culture, and political sociology, filling in subdisciplinary gaps in “local” culture and identity formation, and the challenge of political pluralism. In doing so, it illuminates both longstanding protest challenges and 21st century configurations.

Knowlede Transfer: From Identify Determinants of Poor Sleep in Nursing Homes to Developing and Implementing Solutions Supported By Technology

This paper presents the process of knowledge transfer from within a research project into the development of best practice recommendations. It will show how research findings inform practice development involving the use of technology and how this can improve night time care provision in nursing homes. Building on research conducted in England, best practice recommendations have been developed to improve sleep in nursing homes. An extensive study of 10 nursing homes in England aiming to identify the determinants of poor sleep incorporated a collection of quantitative and qualitative data from 183 residents aged 65-100 and 40 members of staff. One of the key findings from the study was related to sleep disruption caused by regular, physical checking of the bedclothes to establish if they needed changing. A recommendation from the study was to enhance person-centred care at night by the use of technology. Bed sensors in the mattress can for example indicate whether the bed is wet or dry and when the resident is more restless, implying that they are not in a deep sleep phase. Care supported by technology can be provided when it is needed and suits the individual sleep pattern of residents. Consequently restorative sleep can be achieved and dignity maintained. Thus the evidence based knowledge and understanding related to a determinant of poor sleep is transferred to the development of care giving procedures involving the use of technology. This process can be seen to improve care delivery and result in an outcome which acknowledges the individuality of nighttime sleep and improves the quality of life for residents.

The research was supported by the New Dynamics of Ageing initiative, a multidisciplinary research programme funded by AHRC, BBSRC, EPSRC, ESRC and MRC (RES-339-25-0009).

What Impact Do Various Sociomaterial Assemblages Have on Collective Thinking Activities?

The association “Pole Bio” has created a multi-tenant project called “Melbio” to support organic agriculture in the Massif Central region, France. Pole bio is intending to manage this project for a three years period (2011-2014) to improve knowledge sharing in the organic farming field. And this focus group is specifically interested in meadows composed of a variety of flora or forage crops. It brings together a group of heterogeneous actors: researchers in biology, computer scientists, farmers, agricultural experts, farmers’ associations. The project is funded by the region and aims to find new techniques to tackle the climate change.

The project has two main objectives: the first one consists in producing a decision-making model to assist seeding. This decision-making model will be embedded within an online platform to assist farmers to calculate the ideal mix for seeding flora in meadows. The ideal-type process is the following: farmers will have to enter local data into the software (such as location, soil type, weather conditions), and will get back advice for seeding recipes. The second objective is related to the creation of a wiki-based knowledge platform to articulate both expert and lay knowledge to improve the collective expertise of the organic farming community in that region. Given the complexity of the relationships between group members due to a number of factors such as personal interests, institutional interests, and geographic distance, we wish to focus our interest in the role played by sociomaterial assemblage for collective thinking activities. To do so, we suggest the adoption of a slightly different research paradigm compared to the classic sociomaterial apparatus (Leonardi and Barley, 2010; Orlikowski, 2007) based on a Cultural Historical Activity Theory (CHAT) framework, suggesting an original perspective to look at the role of material artefacts during thinking activities.

**Dutch-Japanese Encounters: Gendered Experiences Of The Japanese Occupation Of The Netherlands East Indies**

This paper examines the stories of women who transgressed national and racial boundaries by entering a relationship with the ‘enemy’ during the Pacific War: Indo-European women (with Dutch citizenship) who conceived a child with a Japanese man during the Japanese occupation of the Netherlands East Indies (1942–45). To date, their actions remain highly controversial in the Netherlands, as they apparently willingly engaged with an enemy that even now evokes strong emotions for subjecting large parts of the Dutch civilian population to three years of internment. Unlike Comfort Women, they have not received recognition for their wartime experience in form of pensions for war victims, as they were considered as collaborators, opportunists and prostitutes. The treatment they suffered by their own families and communities left deep scars in the lives of women and their children, and evokes memories that are often too painful to articulate even in private. The persistent silence surrounding the origins of their children constitutes an important starting point to investigate the political and social processes that have defined the ‘truth’ and memory of the war and women’s experiences of the occupation. Their stories reveal that their actions not only contradicted the wartime enemy image, but also the prevailing ideologies of women’s expected relationship to the nation and its men. Based on Japanese and Dutch archival documents, including interrogation reports and accounts of mothers themselves, and 21 life history interviews with children born of these unions, I reconstruct the wartime experiences of these mothers from the perspective of their children. Their stories not only shed light on women’s agency and their gendered experience of life and survival during the Japanese occupation, but also a family and community discourse, that continues to marginalize and silence women and children within the history and memory of the Japanese occupation.

**Sex and Witchcraft: Performing and Transforming the Gendered Body**

Eighty people dance naked around a large bonfire during an all night ritual at Faunalia, a Pagan festival in Australia. This paper examines how these ritual performances transform embodied forms of gender inequality for women and men. Women with poor body image find self confidence and pleasure in their somatic performance. Men discover new ways of relating to the feminine sides of themselves. Both men and women explore same-sex interactions, such as kissing someone of the same gender, and as a consequence become more comfortable with homoerotic desire. The paper argues that many forms of gender inequality are located in emotional and somatic self-understandings and that ritual performances allow these to be countered and transformed.

**The Museification of Military Coup and the Years of Dictatorship in Chile. the Construction of Post-Conflict Visual Imaginations at the Memory and Human Rights Museum of Santiago**

Through the example of the Memory and Human Rights Museum of Santiago (MMHR), this paper analyses the display of different images and objects associated with the military coup (September 11, 1973) and the years of dictatorship in Chile (1973-1989). Inaugurated in 2010 under the government of Michelle Bachelet (2006-2010), the MMHR constitutes a major architectural and curatorial project created in order to “never forget” the traumatic past of the country. Since the last five years, different forms of images of this past have been publicly reproduced and exposed, especially by television. This text explores the hypothesis that the emergence of the Memory and Human Rights Museum constitutes a powerful signal of re-definition of national memory that seems to “leave behind” all social conflicts and political divisions in Chilean society. Are the visual strategies of collective remembrance contributing to a process of consensus? What is the relationship between the museification of images and the redefinition of the national memory? These questions are explored by following the MMHR visitors in their interaction with architecture as well as by the analysis of the formation of collections and the display of museum images.

**Mediterranean Crossings : Postcoloniality and Migratory Practices from France to the Maghreb**

Despite shifts in perspective and theoretical renewal, socio-anthropology continues to neglect evermore significant North-South movements. Inversing the canonical distinction between countries of immigration and countries of emigration, this proposal problematizes the categories hitherto used to define these movements and presents the main results of a group research project on mobility from France to the Maghreb countries. At the crossroads of urban and migration studies, the proposed approach underscores the complexity of actors’ experiences, in addition to the ways in which they position themselves in relation to the spatial movement undertaken. The diversity of figures, trajectories and networks but also the imaginations and practices that emerge from mobility, giving rise to distinct social situations, will be discussed using a specific and historically salient case study: that of Algeria. Particular attention will be paid to the impacts of these social situations on local society and the logics of interaction produced.

**Edgework: A Modern Phenomenon Or a Discourse Symbolising An Innate Human Quest?**

The paper explores if edgework is rooted in a human quest for excitement and challenge and if contemporary edgework can be compared with historical exploratory expeditions, where humans and equipment endured extreme challenges. Hunter Thompson (1971, 1979) defined edgework as a voluntary risk activity requiring extraordinary knowledge, mental and physical skills, which is different from voluntary risk taking actions where no skills above everyday knowledge are required. More recently, Lyng (1990) explores the edgework discourse in analysing skydiving and Fletcher’s (2008) risky behaviour and practices within elite and professional sport. Activates based on a perception of having control of a situation, such as gambling, might also relate to edgework (Fabiansson 2010). The paper argues from Bourdieus’s (1978, 1984) habitus discourse the influence of the social and cultural environment on human action and perception of societal place, that contemporary edgework activities and historical expeditions have common grounds in symbolising an innate human quest to challenge the everyday, but differs in presentation of the achievements in the private and public spheres. Where historical expeditions are placed in the public sphere for the explorer to gain public acknowledgement, while modern edgework is practiced in the private sphere or within a close knit group of likeminded edgework followers.

Young People Feeling Valued and Safe in Mono- and Multi-Ethnic Australian Communities

The paper explores if young people growing up in mono-ethnic regional or in multi-ethnic urban communities present different experiences in feeling valued and safe in their community. The paper argues from Bourdieu's (1978, 1984) habitus discourse that the social and cultural environment influence the community setting and young people's feelings of being supported by friends, their social networks, and trust in people. The mono-ethnic young people live in regional communities dominated by generations of Anglo-Australian heritage and traditions. While the young people living in multi-ethnic communities live in ethnically diverse urban communities in Western and South Western Sydney with its intermix of young people from Arabic and Middle Eastern, Pacific Island and Asian heritage. The young people in the mono-and multi-ethnic communities are all aged between 13 and 21 years and live with their families. The research shows that the urban young people living in multi-ethnic communities feel more valued by friends and they have more positive experiences about community living. They feel more supported by friends, but also by their extended family, a contributing circumstance for them to feel more secure in the community, then what the mono-ethnic regional young people expressed.

Neo-Traditionalism, One or Many? Structure of Gender Roles at Individual and Country Levels

Transformation of gender roles is regarded as one of the key dimensions of modernization. Notions of gender, as hardly any other set of beliefs, possess universal relevance and pervade everyday life. Not surprisingly, the gender issue has become one of the key themes in rhetoric and sources of mass mobilization for neo-traditionalism. As a result of the polarization of positions in global public debate, most gender role expectations are easily recognized as belonging to either a liberal or a neo-traditionalist value set. What remains less clear, however, is the variability of modernization patterns for different gender norms. Do all role expectations form a one-dimensional factor, or are there several autonomous dimensions of notions about gender, each with its own liberal versus neo-traditionalist extremes? Can liberties feel more valued by friends and they have more positive experiences about community living. They feel more supported by friends, but also by their extended family, a contributing circumstance for them to feel more secure in the community, then what the mono-ethnic regional young people expressed.

Envisioning a Real Utopia in Iran

The Real Utopia scholarship is overwhelmingly focused on cases that take place in liberal democratic political systems. It remains unclear, however, how real utopias can be envisioned and realized in the absence of a vibrant public sphere. In this paper I present original research on a utopian project in Iran, an initiative called Sustainable Living which is a cooperative that embraces an alternative life-style and whose aim is to create Iran's first eco-village. Through an analysis of this initiative I elucidate how a real utopian vision becomes desired and acted upon in Iranian society. I demonstrate the channels through which utopian visions are circulated and are adapted to local context in Iran, and ultimately I seek to broaden our understanding of the realization of emancipatory social science. Hence, I not only show how utopias are envisioned in Iran but I examine the groundbreaking struggle of people to make them real in a restrictive political environment.

FAIRBROTHER, MALCOLM* (University of Bristol, ggmhf@bristol.ac.uk)

The Political Economy of Religiosity: Development and Inequality Reconsidered

Existing studies present economic development and income inequality as two key determinants of cross-national differences in religiosity, and of changes in religiosity over time. But the case for both explanatory variables remains uncertain. First, some studies claim that religiosity has not been declining over time; if so, rising incomes cannot have had any impact. Second, there is as much reason to think religiosity is a cause as a consequence of development and inequality. Third, the mechanisms linking inequality to religiosity remain unknown. Addressing each of these limitations, this paper tests more robustly whether and potential pathways of development and income inequality shaping religiosity. I find, first, that inequality, though not development, correlates with religiosity over time. Second, using an instrument to rule out reverse-causality, historically rooted differences in both inequality and development have powerfully shaped countries’ current levels of religiosity. Third, deference to authority correlates with both inequality and religiosity. Overall, the findings suggest that there is a complex set of mechanisms linking inequality to religiosity.
Does inequality discourage political engagement? Previous studies have noted that people are less politically engaged in societies with higher income inequality. This cross-sectional association has been taken as evidence of a causal relationship, with inequality discouraging engagement by leading all but the wealthiest people to conclude that politics is not about them or their concerns. If correct, this argument suggests that the increasing inequality seen in many countries in recent decades has been driving down engagement, with potentially serious implications for the quality of democracy. Yet the association could be spurious, or due to reverse-causality. The very reason scholars care about political engagement is that they believe it has consequences for democracy and distribution; rather than inequality discouraging engagement, disengagement could foster inequality. Using multilevel models fitted to two measures of engagement from all five waves of the World/ European Values Surveys, this paper re-assesses the thesis of a causal relationship running from inequality to disengagement, in two ways. First, I investigate whether the relationship holds not just cross-sectionally but also longitudinally. Second, I use an instrument for inequality to test whether the correlation between inequality and engagement holds even when ruling out reverse-causality. I find mixed evidence for a relationship over time, but a clear correlation when instrumenting for inequality. At least over the long run, then, it seems that unequal societies tend to develop less participatory politics.

Providing AIDS Nursing Care In Botswana:what Explains The Level Of Job Satisfaction

Despite the many strengths of its health services and economy, Botswana has experienced one of the world’s worst HIV/AIDS epidemics. HIV prevalence for most age groups doubled over the 1990s resulting in an adult infection rate of 38.6%, which was reported in the National Survey for 2001. HIV/AIDS infection became the greatest cause of hospital admissions as health services in all units of the healthcare system became strained and shortages of clinical personnel, especially nurses, appeared nationwide. As a result of many new & expanded government health services, the HIV infection rate and number of new cases has declined significantly. Recent data shows that 31.8% of women attending antenatal care clinics & 17.9% of pregnant women are infected with HIV-1. Yet, as with other countries of Southern Africa, Botswana continues to have a generalized epidemic that for the foreseeable future will present a challenge to its healthcare system. Nurses and other clinical service providers must constantly treat HIV symptoms and AIDS related illnesses while also giving other required care. The purpose of this analysis is to determine the level of job satisfaction and its predictors among a sample of 202 nurses involved in HIV/AIDS care in Botswana. A model is derived for explaining job satisfaction among these nurses which can be tested in other healthcare systems in Africa.
