

LUNDS
UNIVERSITET

AIML@LU Kick-off WS

29 MAY 2018

AIML@LU

- Already a lot of activity within AI and ML
 - Historically
 - at Lund University
 - within industry and society in the region.
 - As will be shown today
- What can a network help with?
 - Stronger network (for new **courses**, **research**, innovations)
 - Communication
 - ...
- How should we **develop the network**?

Agenda AM

10:15-12:00 **Introduction to AIML@LU, Round Table Presentations**

- **Introduction** – Sylvia Schwaag Serger, Kalle Åström
- **WASP** – Karl-Erik Årzén
- **LUCE** – Susanne Norrman
- **Centre for Mathematical Sciences** – Kalle Åström
- **Computer Science** – Jacek Malec
- **Automatic Control** – Bo Bernhardsson
- **Astronomy and Theoretical Physics**, – Mattias Ohlsson
- **Philosophy** – Christian Balkenius
- **Medicine** - Einar Heiberg
- **AI: On Fairness and Accountability** – Stefan Larsson
- **Social Sciences** – Maria Hedlund

»

Agenda PM

12:00-13:15 **Lunch sandwich in the foyer**

13:15-14:00 **Group discussions with the following themes (so far):**

- **Undergraduate education** (Mattias Ohlsson)
- **Commissioned education** (LUCE Susanne Norrman/Anders Dackehed)
- **Social Sciences, humanities and AI** (Robert Willim)
- **Development of the AIML network** (Jonas Wisbrant)
- **Machine learning for real-time analysis and decision making** (Caterina Doglioni)

Other suggestions for themes?

14:15-15:00 **Wrap-up – presentations from group discussions**

15.00 and onwards **Coffee and continued discussions in the foyer**

AIML@LU WS 29 May in space and time

12:00–13:00
Lunch

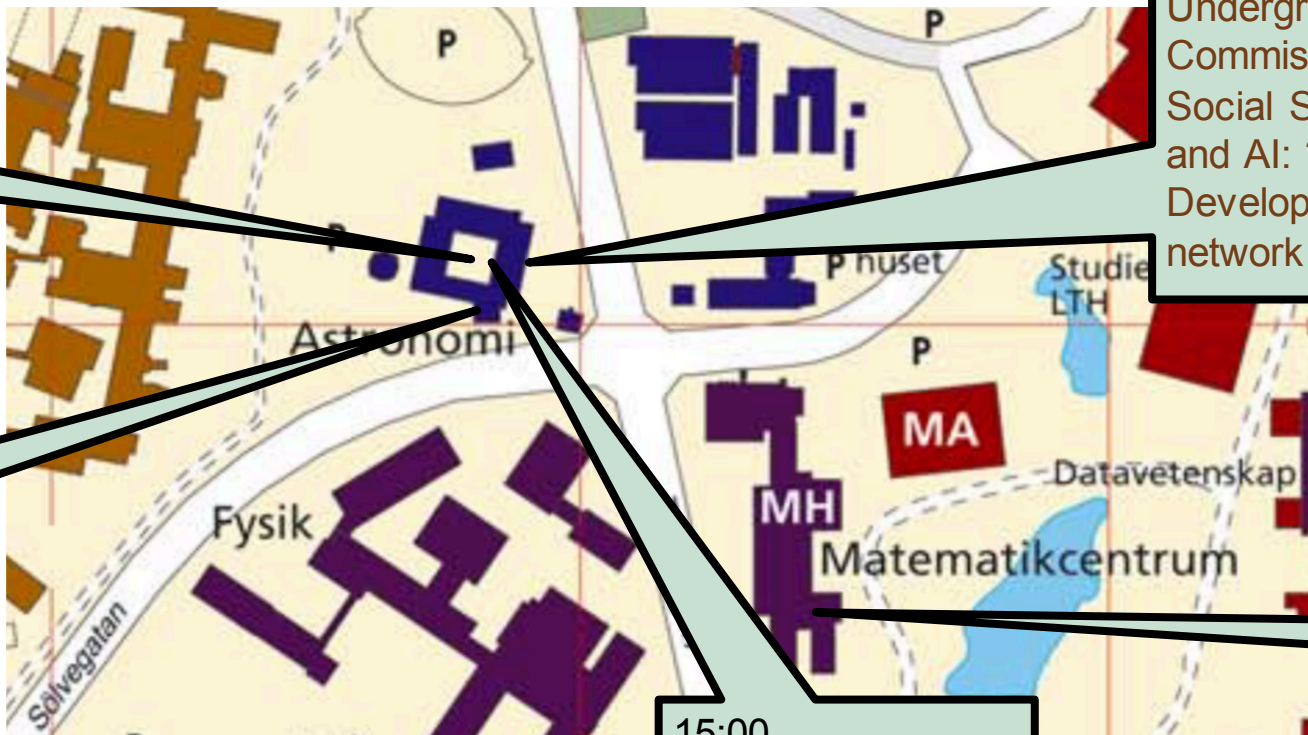

14:15–15:00
Wrap-up

13.15–14.00

Undergraduate education: ???
Commissioned education: ???
Social Sciences, humanities
and AI: ???
Development of the AIML
network: ???

Morning
session

15:00–
Afternoon coffe
and mingle

Preliminary upcoming AIML Events

26 september
10 – 15

AIML WS:
**Academia-society
collaboration:**

- Research?
- Education?
- Innovation?
- Master Thesis?

22 november
10 – 15

AIML WS:
**Inventory of
sustainable AI –
ethical, social,
legal**

First workshop within AIML@LU - Kick-Off Workshop 29 May 2018

The network for Artificial Intelligence and Machine Learning at Lund University (AIML@LU) is a faculty wide platform for research, education and innovation in the area.

A first (kick-off) workshop will be held on May 29 in Lundmarksalen at the department of Astronomy. The purpose of this first meeting is to get to know what research there is on AI within the different departments at Lund University. To register for the workshop click here. There is no registration fee.

AIML@LU
We are constructing a network for AI research in a broad sense at Lund University. A first informal workshop will be held on May 29 in Lundmarksalen at the department of Astronomy and Theoretical Physics, Solvegaten 27. The purpose of this first meeting is to get an overview of what activities there are within research, teaching and innovation within the area of AI and ML at the different departments of Lund University.

AIML@LU
Research on artificial intelligence and machine learning at Lund University is done at many departments at most faculties. The network for Artificial Intelligence and Machine Learning at Lund University (AIML@LU) is a faculty wide platform for research, education and innovation in the area.

Karl-Erik Årzén

Wallenberg Autonomous Systems and Software Program

2017, November 14:

1000 MSEK more for AI from KAW (plus in-kind from universities and industry)

2018, March:

295 MSEK more from KAW until 2026 with 150 MSEK for AI (plus in-kind from universities and industry)

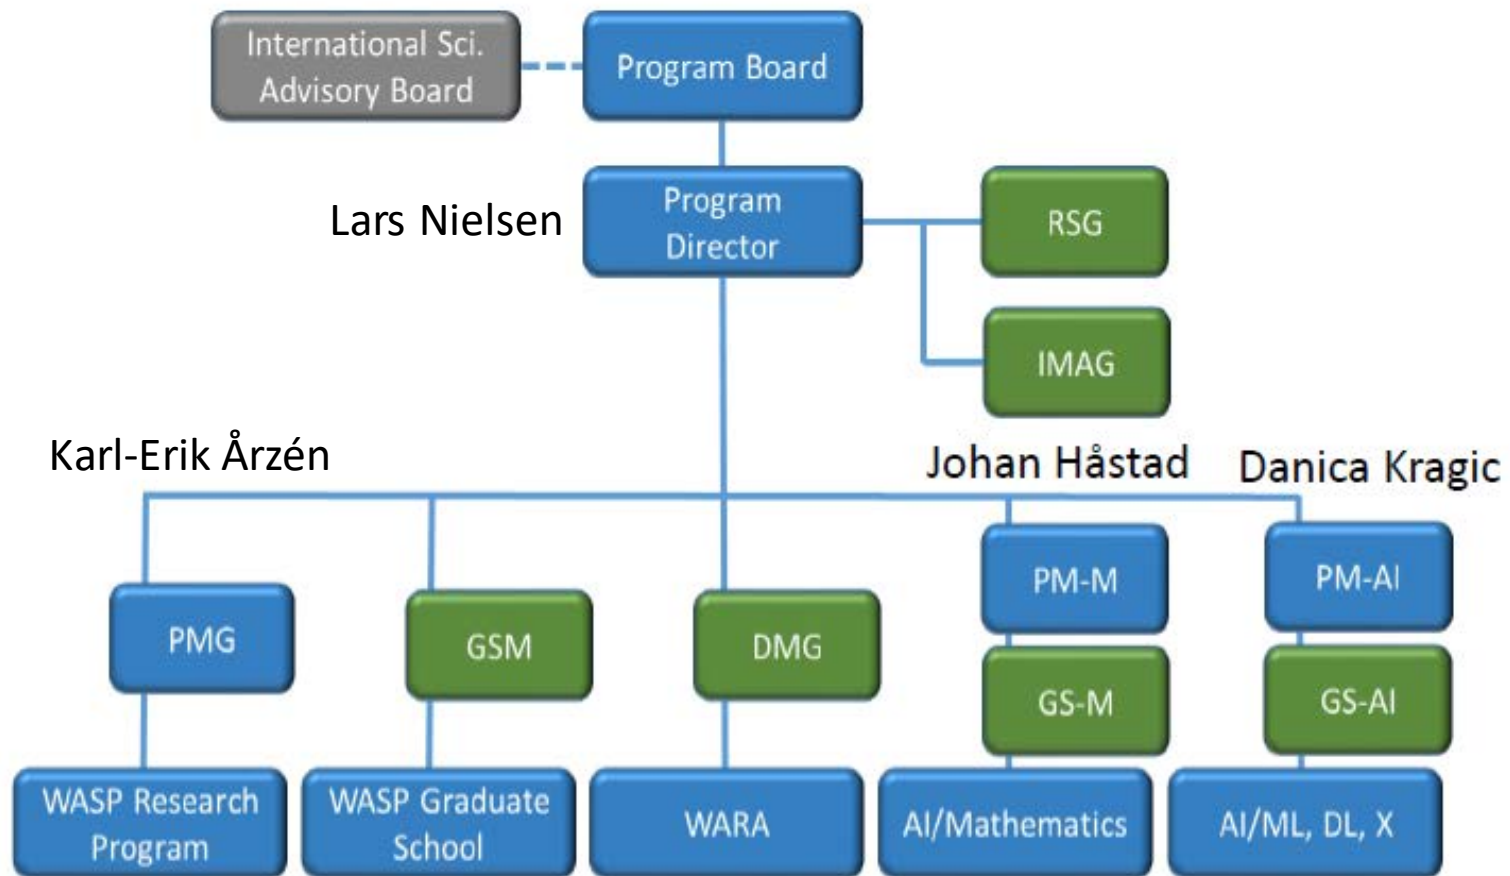

Total budget now 3.5 billion SEK (with 2.6 billion from KAW)

AI initiative

Two main focuses

- AI/ML,DL,X
 - ML: Machine Learning, DL: Deep Learning
 - X: X for other AI and for eXplainable AI (XAI)
 - Led by Danica Kragic
- AI/Mathematics
 - Theoretical basic questions of AI in the broadest sense
 - Led by Johan Håstad

WASP Organization

AI initiative - components

5 Wallenberg Professors in AI	Total 100 MSEK.
14 recruitment packages a 15 MSEK within AI/ML,DL,X.	Total 210 MSEK.
14 recruitment packages a 10 MSEK in AI/Mathematics.	Total 140 MSEK.
40 PhD students in AI/ML,DL,X.	Total 160 MSEK.
40 PhD students in AI/Mathematics.	Total 140 MSEK.
20 Industrial PhD students in WASP's current model.	Total 48 MSEK.
Reinforcement of calculation infrastructure.	Total 70 MSEK.
A career program 2021-2026.	Total 70 MSEK.
Overall collaboration.	Total 25 MSEK.
At the disposal of the Board 2023-2026.	Total 60 MSEK.
Operations, guests, management, and coordination.	Total 77 MSEK.
Post doc program	Total 50 MSEK.
WASP-AI (funding from KAW)	Total 1150 MSEK.

Current Calls

WASP-AI/MATH Recruitments

- Assistant Professor packages
- 6 out of 12 proposals granted in first round
- One to Lund - "*Numerical Optimization for Large-scale Machine Learning*"

WASP-AI/MATH University PhDs

- 18 proposals out of 84 selected to be advertised
- Two from Lund:
 - Carl Olsson, Mathematics
 - Tatyana Turova, Mathematics
- 15 out of the 18 will receive funding

Current Calls

WASP-AI Industry PhDs

- 59 proposals received
 - KTH - 26
 - Linköping - 12
 - Lund - 10 - (Sony*2, Saab, Mapillary, Arm, Acconear, Combitech, Dirax, nok9, ProgenicsPlasma)
 - Chalmers - 6
 - Umeå - 2
 - Uppsala and Örebro - 1 each
- 15 will be accepted in the first round

Current Calls

WASP-AI/MLX University PhD Projects

- Collaboration projects
- Machine Learning
- Two-three PIs and 2-6 PhDs
- Deadline first round: June 3

WASP-AS Expeditions

- Covers the entire WASP
- Two PIs and 2-4 Postdocs
- Deadline first round. August 10

Current Calls

WASP-AI/MLX Recruitments

- Seven in the first round
- Expression of Interest
- So far 12 received out of which one wants to go to Lund
 - Very few are interesting or eligible for funding
- Absolutely necessary that you search actively

WASP Wallenberg Chairs in AI

- Five full professor
- Bertil Andersson (formerly with NTU) hired as recruiter
- Will be very difficult to find

Lund University
Commissioned Education

Uppdragsutbildning – ett strategiskt verktyg

- en viktig, men idag underutnyttjad, kanal för att föra ut både generell kunskap och de senaste forskningsresultaten och därmed bidra till samhällsutvecklingen
- ska **fånga upp** omvärldens behov samt erfarenheter och föra tillbaka både undervisning och forskning, vilket bidrar till universitetets kvalitetsutveckling.
- är en **mötesplats** för forskare och kursdeltagare för utbyte av erfarenheter
- öppnar för annan **samverkan** samt forskningssamarbeten
- ett sätt att bidra till internationalisering
- mer flexibelt och anpassningsbart till omvärldens behov

Nyckeltal

130 kurser
och program

3100 deltagare

40 % internationella
deltagare

80/20
Nationella/Internationella
kunder

Ca 80 milj
omsättning

Stöd från LUCE

- *Avtal och fakturering*

I samarbete med institutionerna:

- Marknadsföring och uppsökande försäljning
- Rådgivning och konceptutveckling
- Stöd kring e-lärande
- Projektledning
- Deltagarhantering och utbildningsadministration
- Kvalitetssäkring

Våra områden

**Ledarskap, Organisation
& Arbetsmiljö**

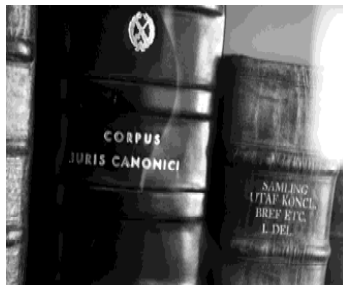

Digitalisering

**Teknik, Material
& Design**

**Hållbar utveckling
& Samhällsplanering**

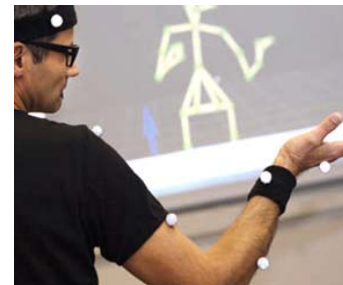

**Social hållbarhet, Juridik
& Samhällsutveckling**

Medicin & Hälsa

**Lärande &
Pedagogisk utveckling**

**Innovation &
Entreprenörskap**

Utmaningar för universiteten

- **tydligare utbud** för livslångt lärande
- göra utbudet **tillgängligt** och **flexibelt**.
- vara med och skapa **möjligheter för dialog** för att få intressenternas input till vilka utbildningar som behövs

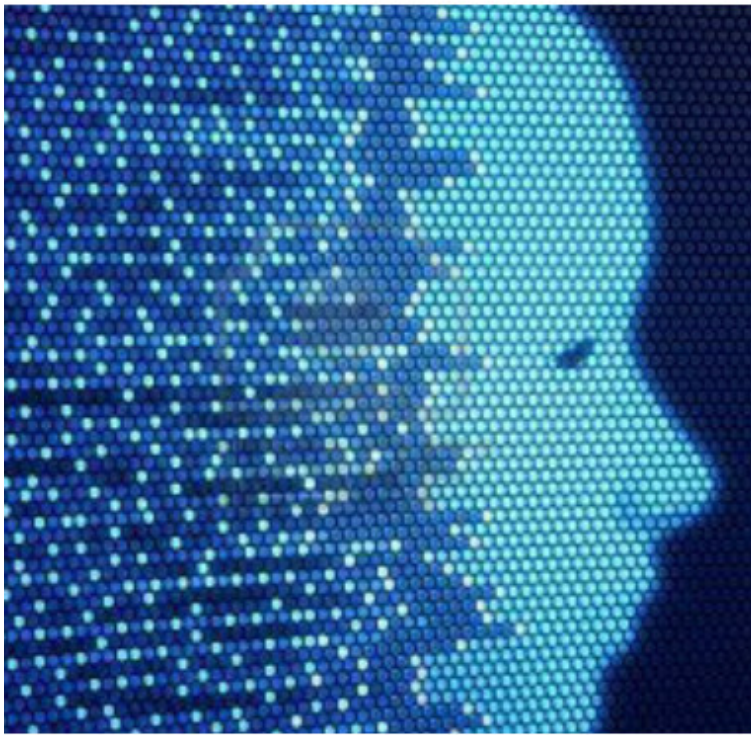

Arbetsmarknaden – vilka behov finns?

Arbetsmarknadens behov och förändring

- Ökad andel högutbildade
- Snabb teknikutveckling
- Krav på ökad innovationsförmåga och stärkt konkurrenskraft
- Spritt behov
- Långt arbetsliv
- Matchning

Artificiell Intelligens

Artificiell Intelligens

- Nationell satsning
- Vinnova-satsning
- Workshop i eftermiddag
 - Vilket kompetensbehov finns?
 - Vilken är målgruppen?
 - Vilken utbildning skulle LU kunna bidra med?

Artificial Intelligence and Machine Learning

Kalle Åström, Centre for Mathematical Sciences, Lund University

Centre for Mathematical Sciences Lund University

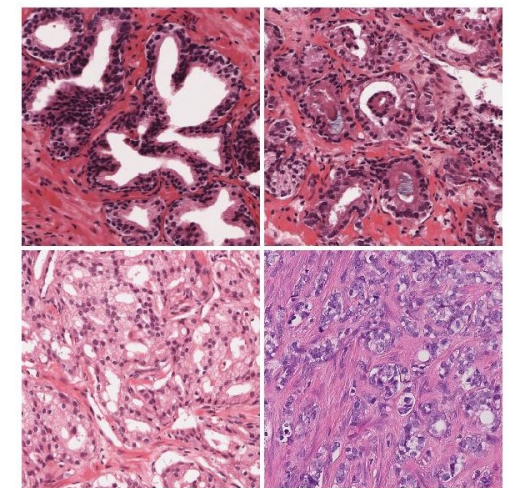

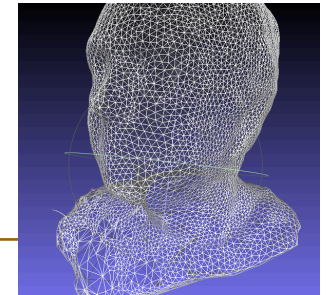

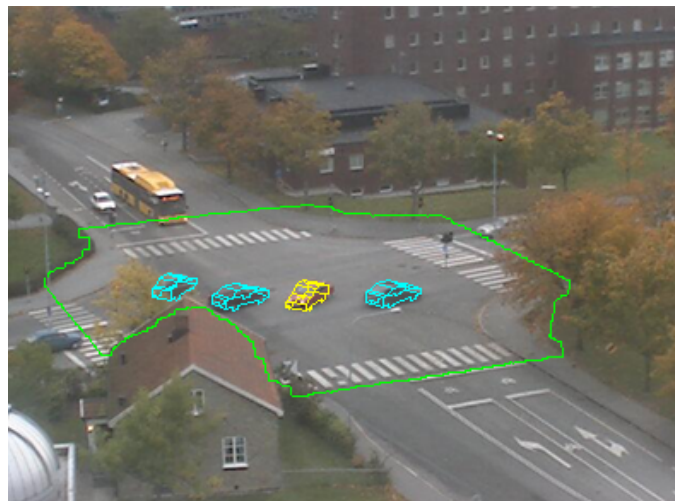

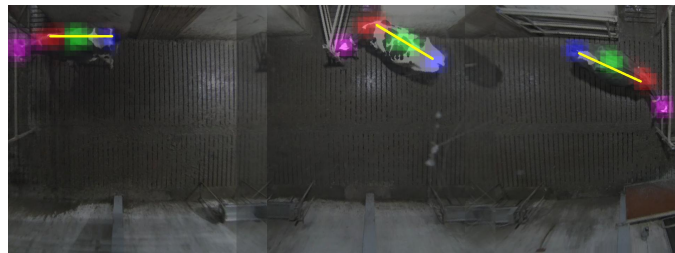

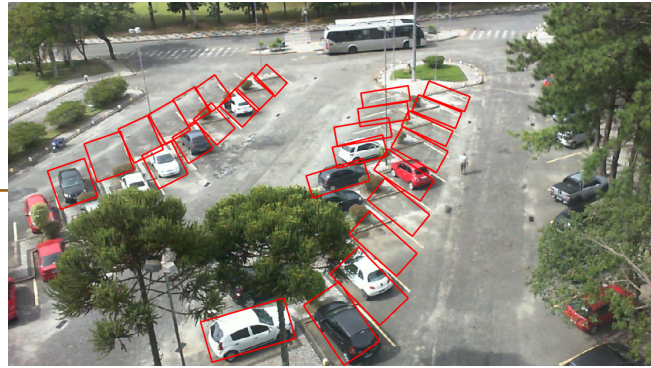

- Mathematics, Mathematical Statistics, Numerical Analysis
- Around 100 members of staff.
- World-class research in a number of areas, including **partial differential equations, computer vision, machine learning**, dynamical systems, numerical analysis
- Fields medal (Lars Hörmander, 1962)
- Gustafsson Prize (A Melin, A Meurman)
- Marr Prize (Fredrik Kahl, 2005)
- Clay Prize (Nils Dencker, 2006)
- Wallenberg Price (Erik Wahlén, 2016)
- PASCAL Challenges (C Sminchisescu, 2009-2012)

- Topics: Machine Learning, Deep Learning, Computer Vision, Medical Image Analysis, Statistical Signal Processing, Analysis of sound and radio, Applications, Probability theory, Optimization, Numerical Methods.

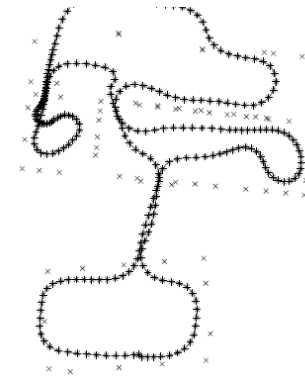

Research

Research Topics

- Geometry and 3D
- Decision support – e-health
- Traffic safety
- Precision Dairy Farming
- Precision Agriculture
- Smart Cities
- Genomics
- Detection of explosives (NQR)

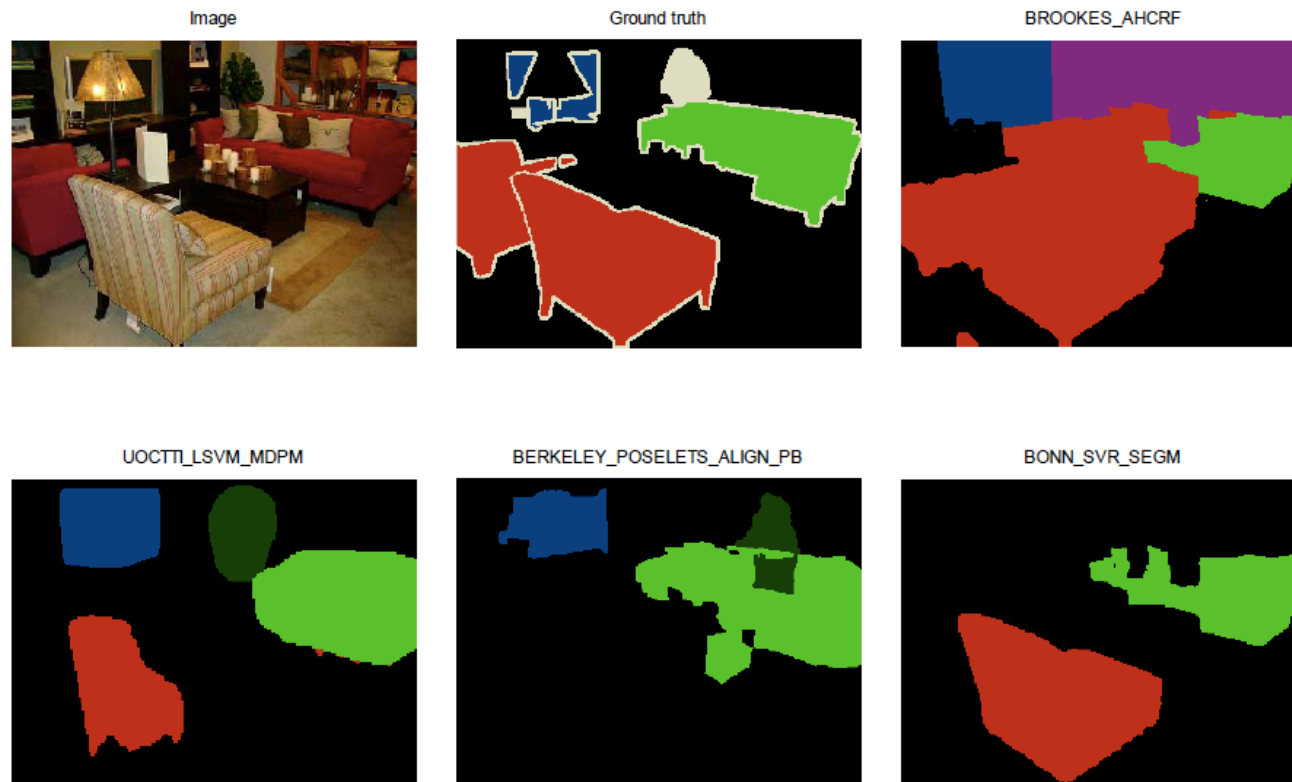

Computer Vision 3D understanding Mapping. Localization

- Internship 1990
- Master's thesis 1991
- Autonomous Systems
- Geometry
- Optimization
- Indoor and Outdoor positioning
- Kiruna-mine

Example Segmentations

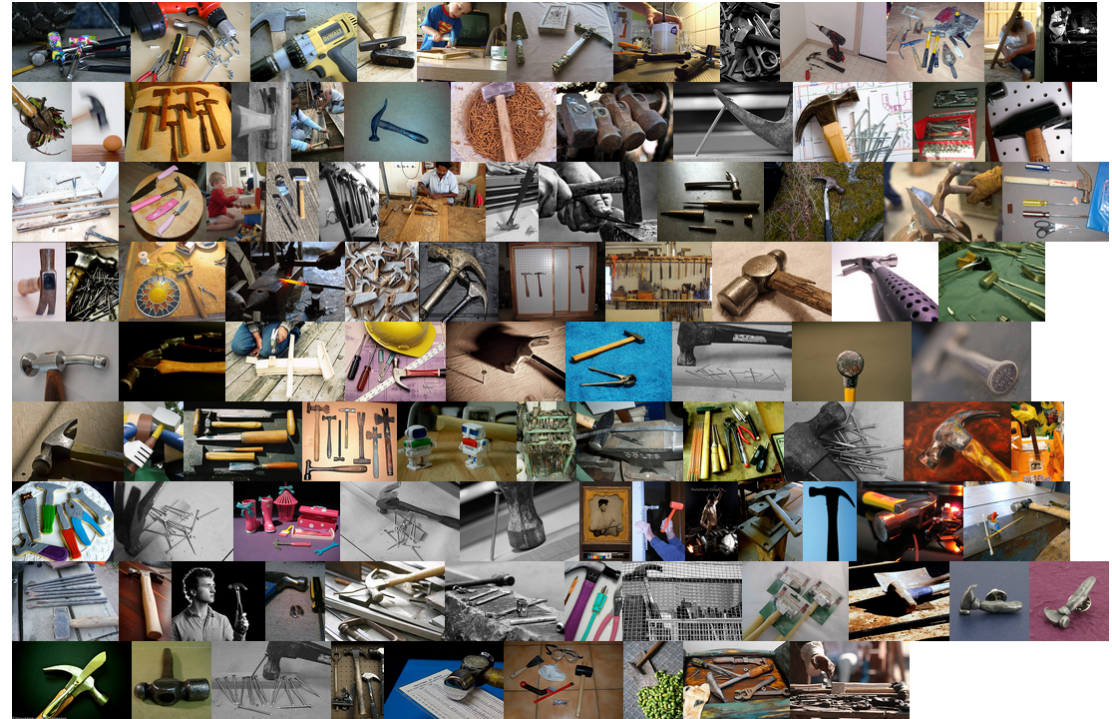

Sminchisescu.

Winner of PASCAL segmentation challenges 2009, 2010, 2011, 2012

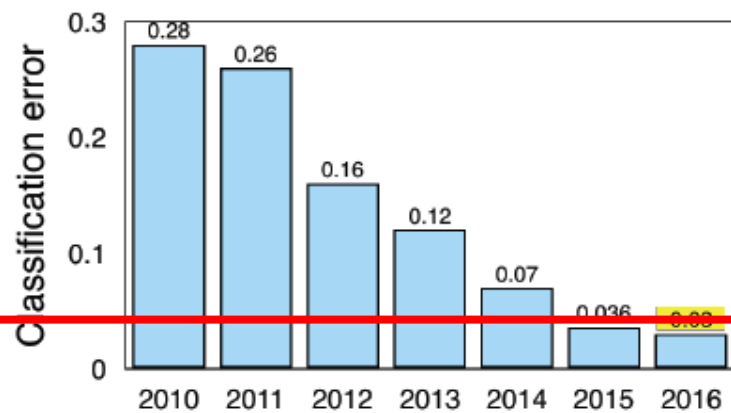

CVPR, ICCV, Challenges

Test images for "Hammer"

Classification

Human
performance

Teaching

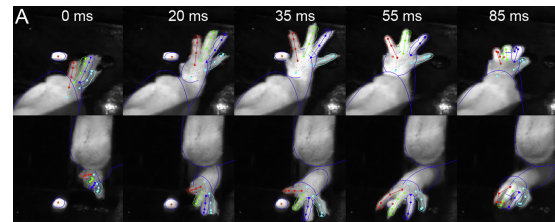

- Machine Learning
- Image Analysis
- Computer Vision
- Spatial statistics
- Linear and logistic regression
- Project course math/applied math
- Master's thesis
- Optimization
- Combinatorial Optimization
- Iterative Solution of Large Scale Systems in Scientific Computing
- Probability Theory
- Nonparametric inference
- Mathematical foundations of probability

Applications, Collaborations, Startups

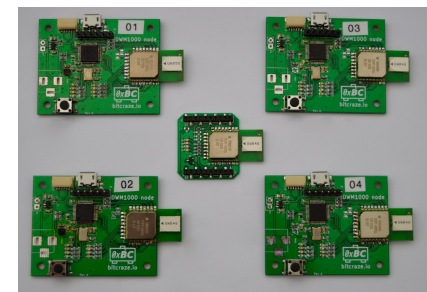

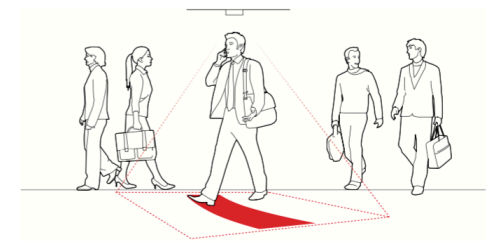

Collaborations

- Danaher Motion
- Hövding
- Sony
- Axis
- SLU
- Anoto
- Cellavision
- Combain
- Ericsson
- Flatfrog
- Precise Biometrics
- Katam
- Qlik
- Region Skåne

Startups from math@LU

- Mapillary
- Polar Rose
- Decuma
- Cognimatics
- Spiideo
- Ange Optimization
- Mometric
- Nocturnal Vision
- Ximantis
- Qlucore

RSS research interests: knowledge representation, robotics, human-robot interaction, robot cognition, natural language processing

- Useable programming methods and tools
- Interpreting human behaviour
- Knowledge-based robotic cognition
- Machine learning for skill generalisation

Errors!
Errors!
Errors!

Finding Interaction Patterns

Question was: Can we find re-occurring patterns in user behaviour that tell us about their communicative intentions, in case the utterance is ambiguous?

Yes, we can! We can find them using, e.g., Bayesian Classifiers

Natural Language Processing

creating prediction models
for heart transplantation

Semantic processing for large multilingual corpora

The goal is to structure knowledge in text as a graph:

1. Input text: *Shakespeare was born and brought up in Stratford-upon-Avon, Warwickshire,*

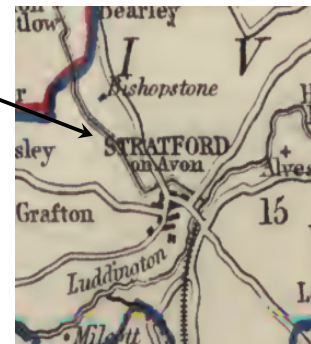

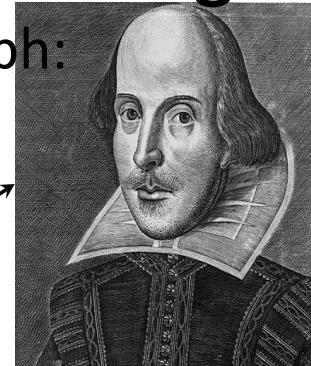

2. Extracted predicates:

born(Shakespeare,
Stratford-upon-Avon)

brought_up(Shakespeare,
Stratford-upon-Avon)

3. Resulting graph (coreference and entity linking):

William Shakespeare was born and brought
up in Stratford-upon-Avon

CoNLL 2008, semantic parsing, English, 1st

CoNLL 2009, semantic parsing, 7 langs, 2nd

CoNLL 2011, Coreference, English, 4th (2nd
with the corrected evaluation script)

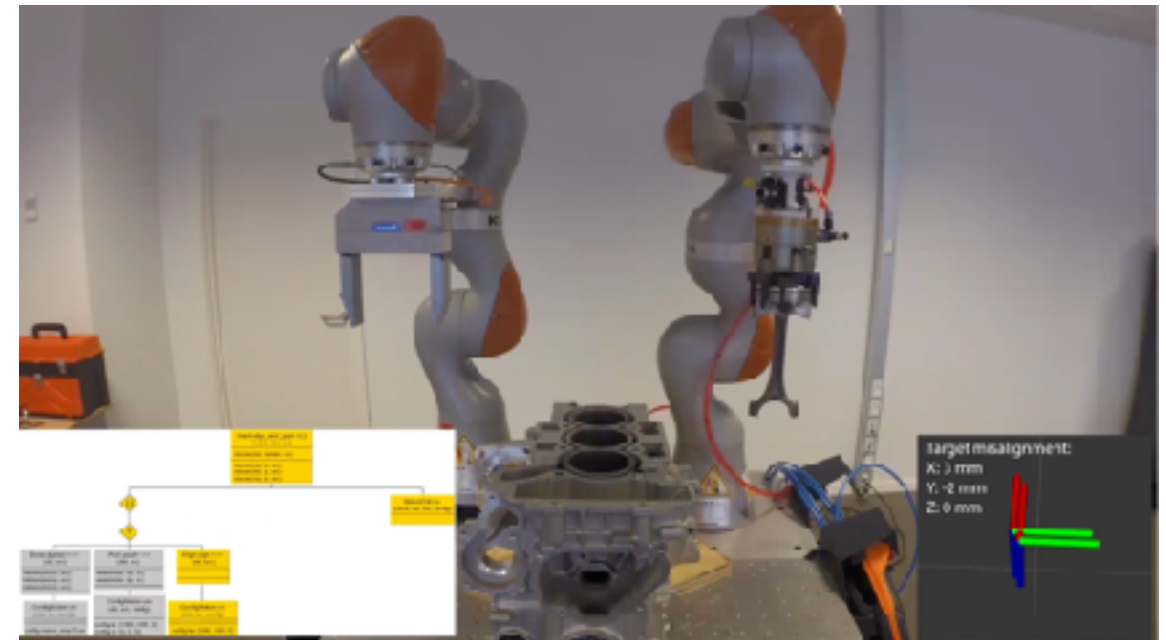

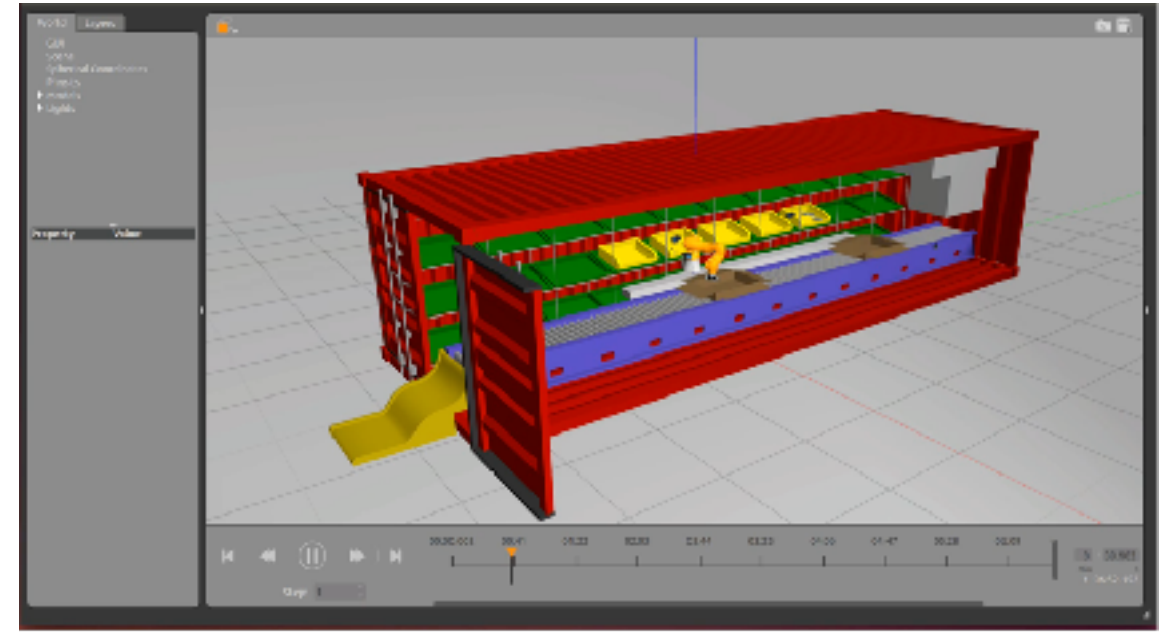

CoNLL 2012, Coreference, English,

Chinese, Arabic, 4th

recently: entity linking, English, Chinese,
Spanish

All our models use machine-learning techniques trained on annotated corpora and/or Wikipedia

- How can a robot learn to do a specific job?
 - Can the robot find strategies its own?
 - How can the human help?
 - Can the robot learn from other robots?
-
- Following ideas of AlphaGo Zero:
 - Use Deep Learning from Simulation (top)
 - Use Bayesian learning for physical exploration (bottom)

Make robots understand, that they do not understand!

- **true cooperation** of humans and robots in industrial settings
- representation of and reasoning about **cooperative skills**
- **awareness** of time flow and its consequences
- mutual understanding and **trust**
- **awareness** of misunderstandings and lack of knowledge
- **learning** cooperative skills
- **talking** to (or with) robots in English, Swedish, German, Polish, ...
- **learning** semantics of new robot skills, transforming it into **knowledge**
- robotic learning in the context of various industrial **applications**
- teaching a robot **responsibility**

This is the approach position. Open the right gripper.

Now we pick the button. Close the gripper.

Use force to guide the button into the hole like this.

Constraint Reasoning: AI since XX century

- JaCoP: a constraint solver with Java API (<http://www.jacop.org>)
- JaCoP-related ideas:
 - constraints or models for Bayesian networks
 - simple NN analysis using constraint programming
 - using CP for optimisation useful in NN construction
 - using constraint reasoning for generating explanations
- FSM inference using RNNs
- NNs for predictive maintenance and fault detection

AI/ML for SE

- Assist software engineering tasks with AI/ML
 - Automated bug assignment to teams
 - Automated selection/adaptation of features
- Future work:
 - Automated repair
 - Automated refactoring
 - Automated optimisation/configuration
 - Decision support for SE
 - Internet bots to support software developers
 - Automated testing

Empir Software Eng
DOI 10.1007/s10664-015-9401-9

Automated bug assignment: Ensemble-based machine learning in large scale industrial contexts

Leif Jonsson
Kristian Sa

**Automated Experiments in e-Commerce:
A Case Study**

SE for AI/ML

- Build reliable AI/ML system
- Same challenges as in 1968, but...

SOFTWARE ENGINEERING

Report on a conference sponsored by the
NATO SCIENCE COMMITTEE
Garmisch, Germany, 7th to 11th October 1968

...more complex:

- Verification and validation – behaviour not specified in advance and continuously changing
- Platforms – Trusted in new context with new data
- Data – Ownership, privacy, quality
- Integration – Programming languages for AI/ML
- Trustable AI – Ensure behaviour compliance
- Accessible AI – Guidance on algorithms, data etc.

- ABB ++
 - AutoTuner - ECA (>200kSystems)
 - Induce experiment to tune PID
 - NovaTune, Gunnar Bengtsson
- First Control,
 - Gunnar Bengtsson

Research – Expert System Boom - end 1980s

- Expert system, capture knowledge of experienced control engineers doing
 - PID auto-tuning (PhD by KE Årzén)
 - System identification (Lic by Larsson and Persson)
- Model-based AI techniques for system diagnosis
 - Multi-Level Flow Models (MFM)
 - PhD by Jan Eric Larsson → Goalart spinoff
- Symbolics Lisp Machine
 - KEE (Knowledge Engineering Environment)
- Multi-View Object-oriented Control System
 - Architectures based on G2 Real-Time Expert System (Gensym)

Research in recent years

- Theory and Applications

- Iterative Learning Control and Reinforcement Learning
- Control theoretic analysis of learning algorithms
- Statistical machine learning theory for adaptive control
 - ACC18 session co-organized with UC Berkeley group
- Next Generation Autotuners, PhD, Josefine Berner
- Virtual Sensors for Heavy Duty Engines, PhD Maria Henningsson
- Adaptive Control for Aerial Vehicles, Lic, Anders Pettersson, SAAB
- Machine Learning for EEG-based classification, MSc projects
- ...

+ Robotics

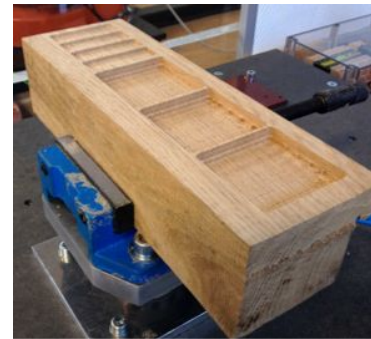

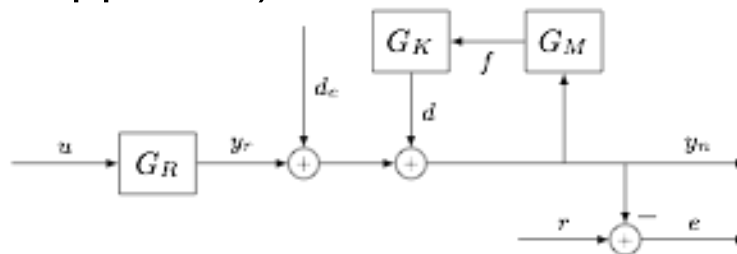

Research on Learning at Robotics Lab, LTH

- Research on learning and adaptation in several robot applications at Robotics Lab, LTH.
- EU/FP7 projects COMET and SMERobotics, targeting robotic machining. Also joint research with Univ. Jaen, Spain, on learning in machining.
- EU/H2020 SARAFun, learning in robotic assembly.
- Methods: Iterative learning control (ILC), online path / trajectory learning, artificial neural networks, and reinforcement learning.

Research on Learning at Robotics Lab, LTH (cont'd)

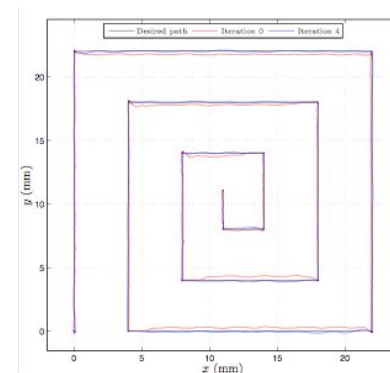

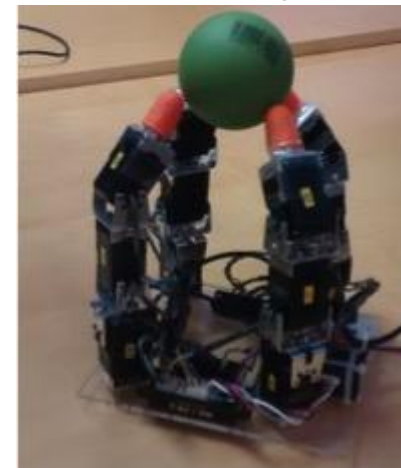

- Example application with robots milling in oak, where the optimal path is learned online based on wood properties with force sensing.
- Iterative learning control for robot machining in aluminium (including modeling and identification approach).

ILC for PKM

Reinforcement learning for in-hand-manipulation

- I. Dressler: Modeling and Control of Stiff Robots for Flexible Manufacturing, Ph.D. Thesis, 2012
- O. Sörnmo: Adaptation and Learning for Manipulators and Machining, Ph.D. Thesis, 2015
- B. Olofsson: Topics in Machining with Industrial Robot Manipulators and Optimal Motion Control, Ph.D. Thesis, 2015
- M. Ghazaei: On Trajectory Generation for Robots, Ph.D. Thesis, 2016

Teaching

- PhD course in Deep Learning (2016)
 - Study circle with students from several departments
- WASP Autonomous Systems Course (with KTH)
 - Includes some AI&ML components
- Master's Program (restart) proposed to LTH
 - Systems, Control and Learning

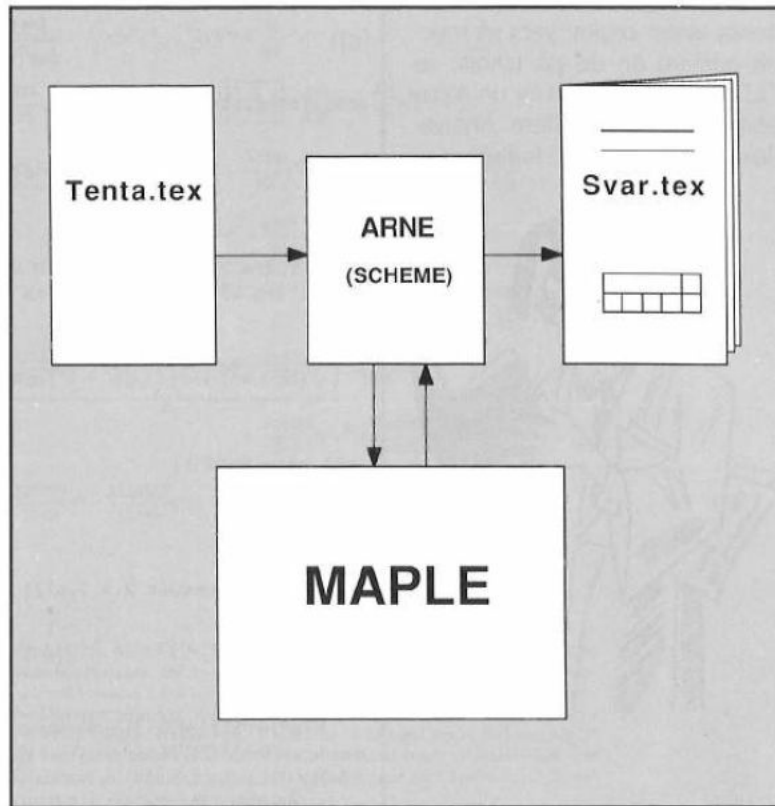

Bonus material

ARNE — AnalysRäkning Numera Elektroniskt

Av Bo Bernardsson, Inst för reglerteknik

ORDO 2/88

Teknologens dröm är nu uppfylld. Mata in skrivningen i Analys 2 till programmet ARNE och vänta tio minuter. Ut på laserskrivaren kommer lösningar färdiga att lämna in på tentamen. Programmets prestanda är jämförbar med medelteknologens.

Aim: Better match between
donor and recipient
Utilize more donated hearts

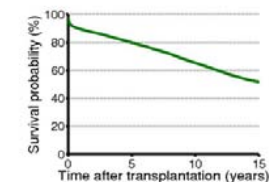

IHTSA

The International Heart Transplantation Survival Algorithm

Results

	1 year	5 years	10 years
Survival	91 %	81 %	67 %
Mortality	9 %	19 %	33 %

Median life expectancy 15.3 years

Recipient data

Diagnosis	Non-ischemic cardiomyopathy
Age (years)	51
Gender	Male
Height (cm)	174
Weight (kg)	78
Insulin treated diabetes	<input type="checkbox"/>
Hypertension†	<input type="checkbox"/>
Infection within two weeks‡	<input type="checkbox"/>
Antiarrhythmic drugs prior to transplant	<input type="checkbox"/>
Amiodarone prior to transplant	<input type="checkbox"/>
Recipient blood group	A
Previous blood transfusion	<input type="checkbox"/>
Previously transplanted*	<input type="checkbox"/>
Previous cardiac surgery	<input type="checkbox"/>
Medical condition at transplant	
Intensive care unit	<input type="checkbox"/>
Mechanical ventilation	<input type="checkbox"/>
ECMO	<input type="checkbox"/>
Ventricular assist device	<input type="checkbox"/>
Transplant era	2006
SPP (mmHG)	44
PVR (wood units)	2.6
Creatinine (μmol/l)	119
Serum bilirubin (μmol/l)	24
Use (mg/dl) instead of (μmol/l)	<input type="checkbox"/>
PRA > 10 %	<input type="checkbox"/>
HLA-DR 2 mismatch	<input type="checkbox"/>

Donor data

Age (years)	34
Gender	Male
Height (cm)	175
Weight (kg)	78
Duration of ischemia (min)	188
Donor blood group	A
Donor cause of death	Head trauma

Abbreviations

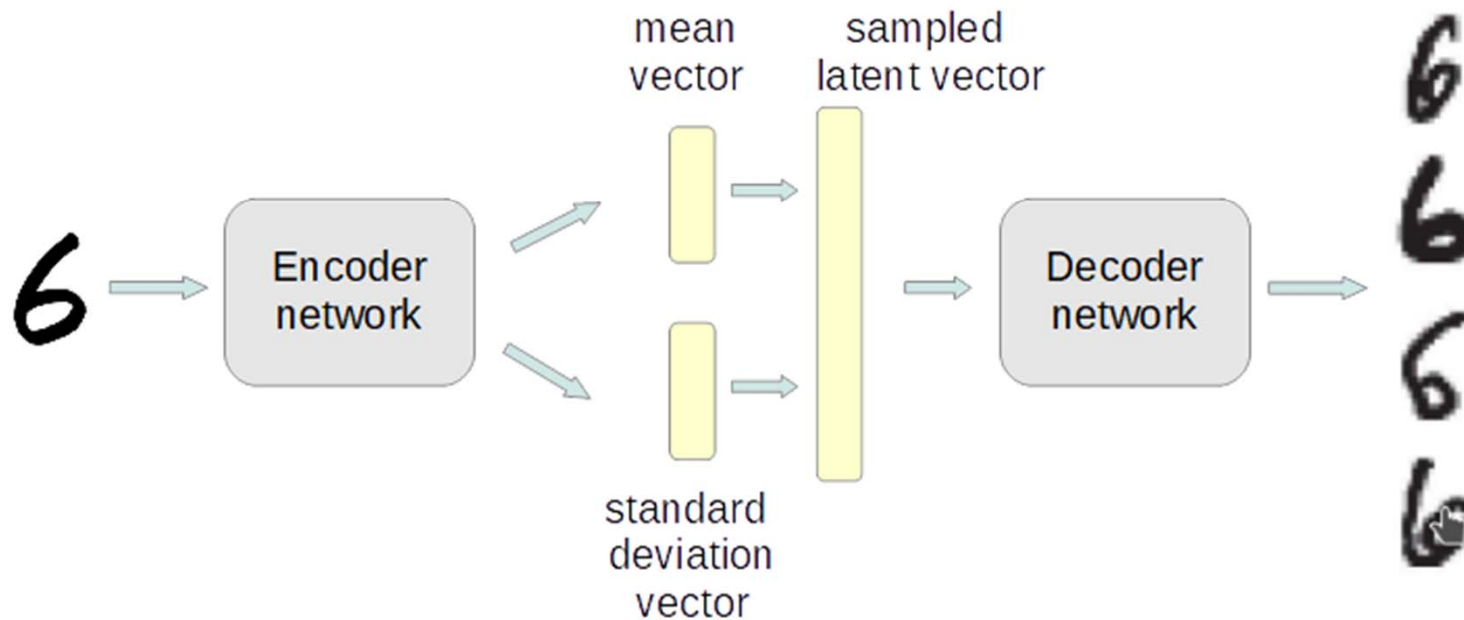

ECMO: extra-corporeal membrane oxygenation; PRA: panel-reactive antibodies; PVR: pulmonary vascular resistance; SPP: systolic pulmonary pressure

Definitions

†: drug treated systemic hypertension; ‡: Infection requiring intravenous antibiotic therapy within two weeks prior to transplant; *: previous kidney, liver, pancreas, pancreas islet cells, heart, lung, intestine and/or bone marrow transplant

Lund University and Skane University Hospital

Variational autoencoder for multiple imputation (generative model)

Future

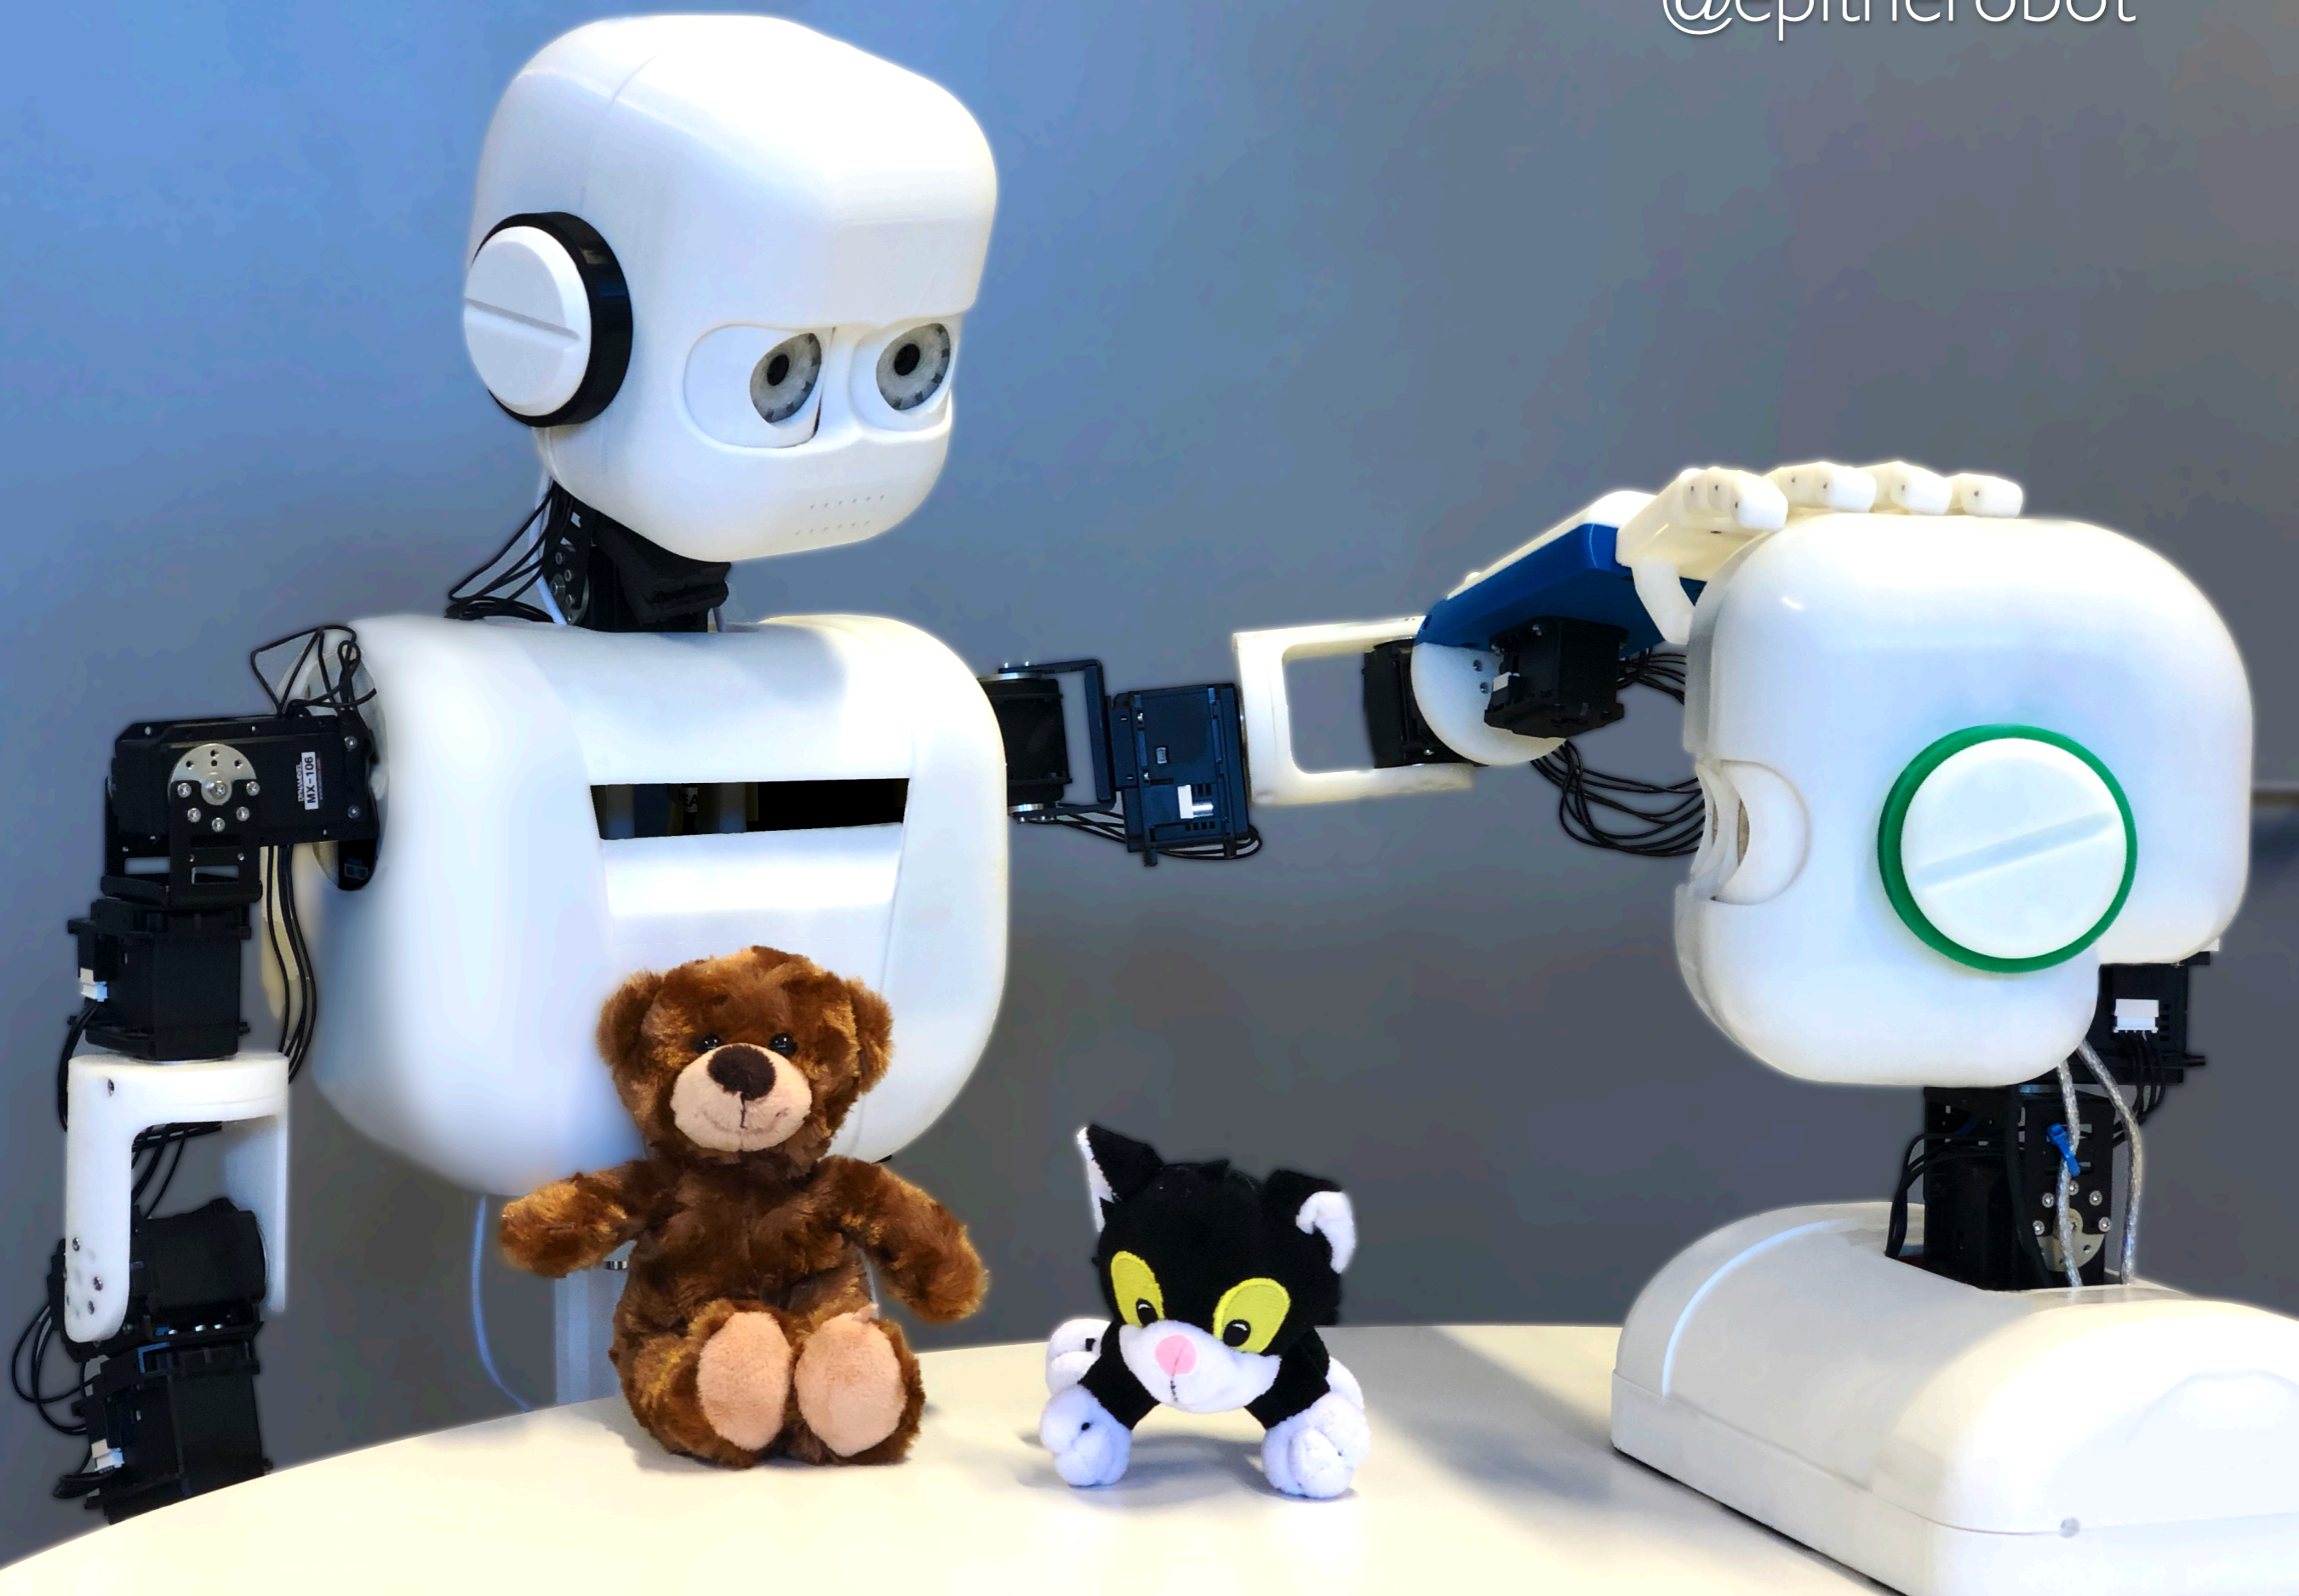

LUND
UNIVERSITY

DEPARTMENT OF PHILOSOPHY

PEOPLE & RESEARCH

- Christian Balkenius
- Ingar Brinck
- Peter Gärdenfors
- Birger Johansson
- Trond Arild Tjøstheim
- developmental/epigenetic robotics
- system-level brain models
- deep learning
- social interaction
- conceptual spaces

CURRENT COURSES

- Cognitive Science: Introduction (KOGM01)
- Neural models, cognitive robotics and agents (KOGP05/MANM10)
- Cognition, learning and advanced technology (KOGP10/MAMN15)

AI in medicine at Lund University

A rather incomplete survey

(overlapping, missing, incorrect,..)

Einar Heiberg

2018-05-29

Dept. Clinical Physiology <i>Elin Trägårdh</i> Eigenvision <i>Johannes Ulén</i>	New imaging biomarkers for PET/CT.
Dept. Clinical Physiology <i>Einar Heiberg</i> <i>Ellen Ostenfeld</i> Medviso AB <i>Helen Fransson</i>	AIDA project: Platform for efficient processing of large study cohorts. Status ongoing.
Emergency medicine <i>Ulf Ekelund</i>	Improved triage in patients with chest pain with decision support by integrating patient electronic records. Status grant application submitted.
Centrum för primärvårdsforskning <i>Artin Entezarjou</i> <i>Patrik Midlöv</i>	Digital Tools & Artificial Intelligence for Effective Primary Care. Project ongoing

Dept for psychology Worddiagnostics <i>Oskar Kjell</i> <i>Katarina Lundberg</i> <i>Sverker Sikström</i>	Tools for language analysis of mental illness. Price by Sparbanksstiftelsen.
Computational Biology and Biological Physics <i>Mattias Ohlsson</i>	Machine learning for medical decision support and analysis, including Breast and Prostate cancer, Alzheimer's disease, Cardiac surgery and transplantation, Machine learning for survival analysis
Centre for Mathematical Sciences <i>Anders Heyden</i> <i>Kalle Åström</i> ..	AIDA project: Decision Support for Classification of Microscopy Images in Digital Pathology Using Deep Learning Applied to Gleason Grading.
Dept of Medical Radiation Physics <i>Peter Mannfolk</i> <i>Olof</i> <i>Theo</i>	Alzheimer's disease using both MR and PET data. Supervised and unsupervised learning, with the intention to study if these methods better can classify patients and normal subjects. Currently using PET data and plan to use this to group MR data for further analysis.

<p>Dept of diagnostic radiology</p> <p><i>Sofia Zackrisson</i></p> <p>...</p>	<p>AI in breast cancer detection and prognosis.</p> <ul style="list-style-type: none"> • Ethical approval to build database with all breast screening images in Malmö from 2004 and onwards for annotation, cancer detection etc. Approximately 400.000 exams. • Database with 15.000 breast images from prospective study Malmö Breast Tomosynthesis Screening Trial • Application to AIDA to build infrastructure and a fellowship
<p>Dept of Thoracic Surgery</p>	<p>Improve matching between donor and recipient in heart transplants. Project Artificial Intelligence in CardioThoracic Sciences (AICTS).</p>
<p>Dept of Surgery</p> <p><i>Lisa Rydén</i></p> <p><i>Locket Dighe</i></p> <p><i>(Mattias Ohlsson)</i></p>	<p>Better prediction for lymph node diagnostics in conjunction with breast cancer</p>

Dept of Diabetes and endocrinology <i>Damon Tojjar</i> EasyDiabetes	Support system for type 2 diabetes. Received Medtech4Health Innovation award 2018
Dept Radiation Science <i>Petra Ambolt</i> <i>Lars E Olsson</i> Spectronic Medical Carl Sievers	Create synthetic CT images based on MR images for radiotherapy dose planning.
Cardiolund <i>Jacob Svensson</i> Coala Life, Zenikor	Automated ECG analysis for atrial fibrillation
Escan Academy <i>Lars Edenbrandt</i> <i>Eigenvision?</i>	Automated bone and organ segmentation in CT images. Bone metastasis detection.

Please help to continue the inventory

Societal perspectives on AI

MARIA HEDLUND
DEPARTMENT OF POLITICAL SCIENCE
LUND UNIVERSITY

Responsible AI through democratic processes?

- Who is responsible when AI becomes expert?
- How do we make sure superintelligent AI is friendly?
- Which moral should guide the behaviour of a driverless car?
- And how do we settle such issues?

Project ideas

- Risks and autonomous systems: How will the risk landscape change and how can we adapt to the new situation?
- Responsible AI: How will different distributions of responsibility affect the long-term development of AI?
- Conceptual and societal implications of new, human-created life (synthetic and/or machine life)

Current initiatives

- Development of inter-disciplinary master course on societal perspectives on AI
- Samtech: think tank with a social science perspective on digitalisation and new technology

Thank you for your attention!
